HAIL: THE MOTHER

By MAHANAMBRATA BRAHMACHARI

"Alone I stand, unify I all
Who is to second me in the Universe?"
—X.5

IN the Second Chapter of the holy Chandi the manifestation of the Divine Mother is depicted in highly symbolic language. It begins with a tale of war—a war between the devas and the asuras which is so often spoken of in the Hindu scriptures.

A significantly moral war standing for a full hundred years! Hundred years esoterically symbolises the completion of a life's cycle. Man's life is indeed a story of continued struggle. "Struggle for existence" has been an oft-quoted phrase in modern science. The struggle continues in both physical and moral planes. Godliness in man stands always at war with animality in his constitution. This is the eternal war between the devas and the asuras, between Ahura Mazda and Ahirman as expressed by the great Zorothustra.

The gods being defeated, the asuras have occupied the throne of the heavenly kingdom. As a result, the Satanic instincts reign supreme in the domain. The immortal devas are hovering on earth like so many mortals being driven from their celestial abode. The Devas put the heads together and hit upon a plan. Brahma took the lead and proceeded towards the abode of Vishnu and Shiva. Brahma typifies the creative energy and so do Vishnu and Shiva, the power of preservation and destruction respectively. The Trinity embody the totality of energy and hence can never be subdued by any demonic power. Before the Trinity the devas narrated the pathetic tale of their great disaster—the fall from their Divine status. They piteously craved for redemption.

Vishnu, who has been called Chakri and holds the wheel of eternal activity that sustains the Universe, flew into a rage. Passion and compassion

moved the Divinity. The story of the demonic brutalities was instrumental, as it were, in pushing out of the Divine body, His all-swallowing energy in the form of effulgent light. Furious rays oozed out of His fiery face. The august sight brought terrific excitement in Brahma and Shiva. The creative and destructive energies came out of their glowing bodies and took the form of light. Sympathetically, the half-dead Gods regained their lost vigour and were furiously enraged. Divine wrath was transformed into fiery rage.

A mystic unification of all these luminous energies took place instantaneously. The flash spread far and wide like burning mountains. The accumulated glow of the flaming energy appeared in a great motherly figure. The entire creation was all aglow with the soothing luminous light of Her face. Reverentially the gods gazed at her with eyes full of joy and wonder. "Mother", all in one voice exclaimed delightfully. Passionately did She smile and from the depths of darkness and despair peeped forth the morning light of power and glory.

The different parts of the body of the Mother are the embodiment of energies of the different deities. Mysteries appear to be pictorially figured.

The power of Shiva found expression in the Mother's face. The term Shiva connotes purity and goodness and Mother's countenance is the embodiment thereof. The nectar of immortality is manifested in the sweetness of Her smile. The blue locks of cloudish hair represent the darkness of death. Whosoever demonically ventures to touch it embraces destruction.

THUNDER & KINDNESS

Mother is possessed of innumerable arms which represent the power of Vishnu—the strength to uphold and maintain the cosmic transformation. The same hand does caress the children and kill the demon simultaneously exhibiting loving kindness of mother and devastating boldness of thunder. So do conflicting qualities miraculously co-inhere.

The condensed form of the soothing rays of the full moon found expression in Mother's breasts so affectionately giving two kinds of man's food, physical and spiritual as well. Mother's breast sustains the body as does her loving kindness the soul. Both are bounteously supplied by the Mother Divine.

The feet stand for the creative energy, Brahma. Creation is invariably represented by motion. Motion expresses life and creativity. Mother's movement entails the procession of endless creation and transformation.

The pure sacrificial fire formulates Mother's organ of sight Unlike mortals she possesses three eyes, representing the sun, the moon, the fire—the trinity that dispel darkness. One eye takes notice of matter-of-fact and the other enjoys the aesthetic beauty of the Universe and the third, the eye of Supreme Wisdom—for the realisation of highest beatitude. The essence of that highest truth is embodied in the person of Mother's own self, and hence by the instrumentality of the third eye, She realises her own Supreme Self, and Her self-enjoyment accounts for the theatre of cosmic manifestation.

The two eye-brows of the Divine figure represent the two *sandhyas*. By *sandhya* is meant conjunction which we come across twice within a day's cycle —day and night—night and day—one indicating man's affinity with his fellow-being and the other unification of one's soul with the Supreme. In the first conjunction we find mankind united and in the second we dedicate ourselves to the feet of the Mother. Thus the eye-brows speak volumes.

Earth is pictured as Mother's lap—the safest refuge of human children. Man's existence on earth verily signifies his perpetual stay in Her all-embracing and all-enduring lap—the most cozy place to ensure security. No location is so peaceful and tranquil as it is.

HER GLORIOUS FORM

Such was the great manifestation of Mother Durga substantially embracing in one person the essence and energies of all the deities. The joy of the gods knew no bounds in beholding the most perfect and holy embodiment of the totality of universal energies the Mother. Their heart-felt reverence found expression in bountiful offerings.

Shiva—the holder of Trisula—brought out a similar weapon from his own and offered it in Her mighty arms. Trisul is, in fact, a symbolic weapon having three sharp ends for the destruction of three bodies of man—material, mental and moral—thereby helping him to reach spiritual excellence, transcending all that is mundane.

Another wheel of righteousness was made anew from the original one held by Lord Krishna and was presented to Mother's hands. The wheel eminently preserves the cosmic rhythm of the Universe and in Mother's hand brightly shone as the emblem of Law and Order.

Prajapati, the God of pro-creation, brought forth a presentation of a wreath of alphabets (akshamala). The letters of alphabet represent the eternal Logos called Sabda Brahma. The sound's symbol shone proudly round the holy neck of the Mother. The solar god dedicated the bright glaze of his own unextinguishable flame to the pores of the Mother's skin.

The burning rays of the rising Sun thus constitute the effulgence of Her body. The apparel round the Mother's waist is the emblem of maya—the principle of obscurity and the other on Her breast symbolically features Her unbounded mercy for human children. These two are the unblemished gifts of the ocean-of-milk-signifying illumined intelligence.

The marine god offered a wreath of lotuses—an unfaded one that shone gorgeously round Her graceful neck. This loving gift of a devout son graced the beloved Mother.

The custodian of heavenly wealth Kubera—symbolising vital energy — offered a vessel to drink from. The unemptied vessel contains life's ambrosia —the sweetest gift from the sweetest lover. This is the way how everyone offered the best of his possessions.

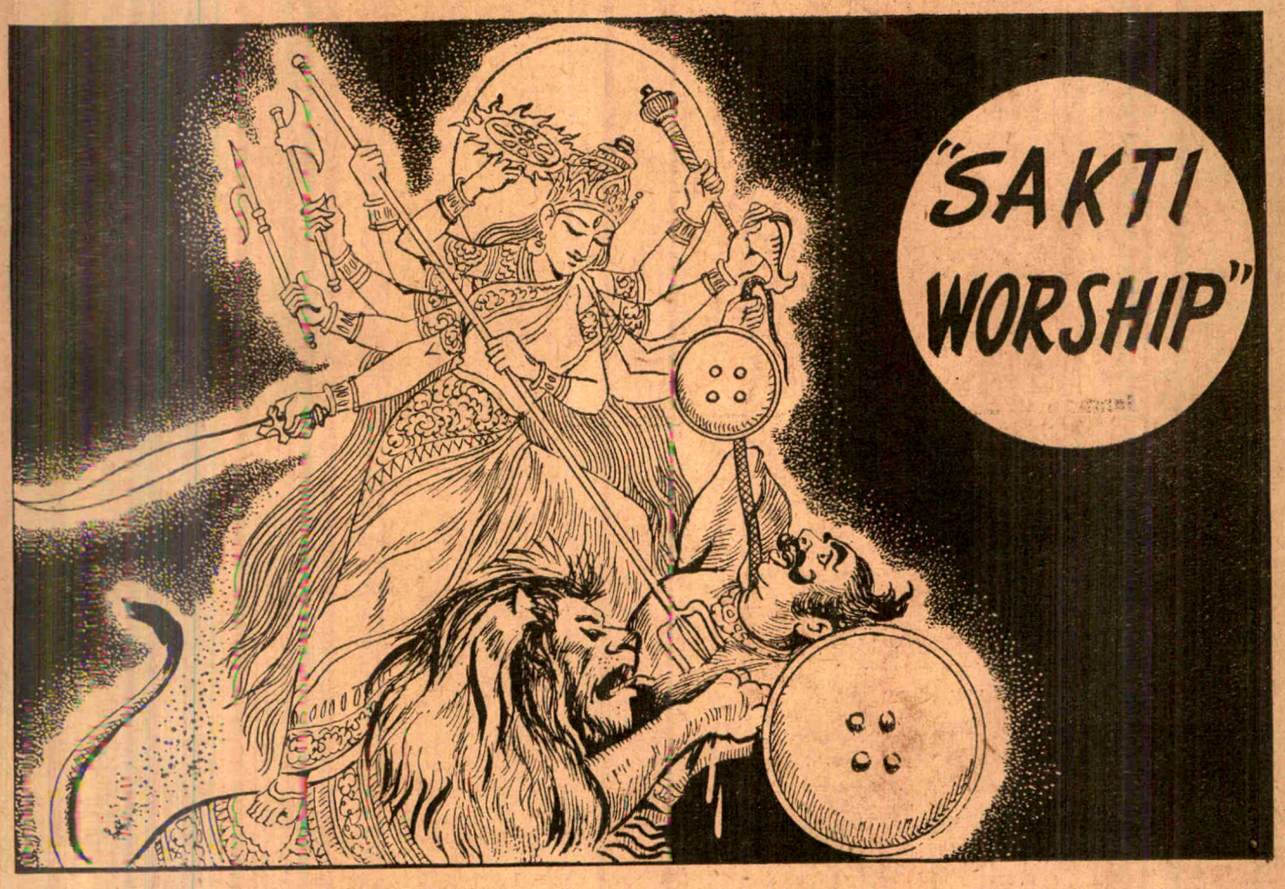
GODS DANCE IN JOY

Being endowed with the gifts of the devotees the Mother burst into a fit of laughter. The thunderous sound vibrates far and wide terrifying the asuras and making the gods dance.

Thus comes the Mother year after year. We assemble to see Her glorious morning face with wistful eyes. The immortals have offered their rich outpourings. What have we, the poor mortals, to bring forward? Mother longs for no honour from Her child. She treasures in Her heart the sweet and loving call of Her devotee—a call that springs from the innermost being.

United we stand before Her benign presence and beseech Her blessings with hands folded and heads bent. We pray in unison :

"Mother, thou art the ocean of bliss;
Casteth thine loving glance at us.
Stretcheth thine soothing arms to shelter us within.
Uniteth the broken hearts of Bengal and bringeth joy to all."



By Dr. GAURINATH SHASTRI

M.A., P.R.S., D.Litt., (Professor, Sanskrit College and Lecturer, Calcutta University.

IT is difficult to trace the origin and growth of Sakti-cult in India. The origin, in particular, is shrouded in deep mysterious obscurity. In the opinion of some scholars Sakti-worship owes its origin to the non-Aryans of ancient India. And it was only in course of years that it came to be adopted by the Aryans. Others opine that the Sakta system of thought which acknowledges the authority of Agama literature as supreme, was essentially non-Vedic in origin. It is in the Great Epics, the Ramayana and the Mahabharata, that an ingenuous attempt is noticed to reconcile Vedic religion and the non-Vedic religion of the Sakta Agamas. From this fusion of a Vedic and a non-Vedic religion has evolved the modern form of Saktaism. Yet another school thinks that Sakti-worship is a direct development of religious practice as found in the Upanisads. The pioneers of Sakti-cult did not for a moment forget that the Impersonal Absolute of the Upanisads is the only one Ultimate Reality.

SAKTI CULT & VEDANTA

But human intelligence with its limitations cannot grasp the full significance of the transcendent conception of the Impersonal Absolute. Ordinary people can at best conceive of a personal deity which serves as the object of worship. So the Sakta theists invested the Impersonal Absolute with a distinct personality. The Saktas were not content with the conception of a personal god only. They affiliated the divinity with Sakti or cosmic energy. Hence, the personal god of Vedanta, viz., Isvara, came to be transformed into Sakti or Chandika, the Universal Mother in Sakta literature.

The conception of Chandika in the transcendent aspect runs parallel to that of the Impersonal Absolute in the Monistic Upanisads. But the latter, the static transcendent aspect of the unrestricted unconditioned and unqualified Absolute, cannot satisfy the many-sided needs and devotional activities of the theistic Saktas.

It is the dynamic aspect of the god-head—the active manifestation of a personal deity endowed with cosmic energy — that has a direct bearing on Sakta Tantras.

Accordingly, the Sakta-worshippers found it necessary to transform the Absolute into a personal deity, omnipotent, ubiquitous and omniscient. To the Saktas the conception of the personal god as Divine Mother is the sublimest and this position seems to be supported by the Upanisads which describe personal god as the source of the empirical

universe. From what has been said above it is clear that Mother Goddess is not merely a personification of cosmic material energy, but is rather Spirit-cum-Matter. It needs to be carefully remembered that Sakti of the Saktas is not identified with the self-evolving Primordial Matter in the Sankhya system of Indian thought. It is true that Sakti is often described as Prakriti in Tantric literature. But Sakti as Prakriti is not a non-intelligent principle, but is endowed with activity—it is constantly undergoing real transformations in the process of creation. Sakti is not merely a passive background for the active manifestation of Purusa. It is essentially dynamic and as much self-luminous as Purusa.

DIVINE MOTHER & MAYA

The Divine Mother again should not be identified with Maya as postulated in Monistic Vedanta. Maya as described by Sankara, the great apostle of Monistic Vedanta, is a purely illusory principle which by its inherent power of projection focusses the world-appearance on the Ultimate Reality. Sakti has been called by such different names as Maya, Yogamaya, Mahamaya, Visnumaya and the like in various Tantric texts and it is said that Sakti as Maya, Yogamaya etc., explains such events and phenomena as are realities and not fictions but baffle all human efforts to understand them. The Bhagavata Purana narrates the birth of Krishna in a cell in the prison-house of king Kamsa at Mathura where his parents were put in chains. But as soon as the baby was born the father found himself freed from chains, the iron gates were thrown open, the guards fell fast asleep and the father went out with the baby in his arms, crossed the turbulent waters of the Jamuna, reached the house of Nanda and came back.

All these events actually took place and there was no illusory principle working behind them. These supernatural incidents were not the work of magic. The Sakta would say that it was not the work of Maya but of Yogamaya which is an essentially conscious principle just on a par with the Transcendent Reality, or, to be strictly precise, Sakti and Transcendent Reality are but the two aspects or moments of one and the same Ultimate Reality.

SAKTI-WORSHIP & DEVI-SUKTA

Orthodox Indian Scholars traditionally trace back the beginnings of Sakti-worship to a hymn of the Rig Veda (X.125) technically known as the Devi-sukta or the Vak-sukta. In this sacred hymn, Vak, the spiritually enlightened daughter of Ambhrna, the seer, speaks out in the fulness and enthusiasm of her knowledge, identifies herself with the Primal Energy of Eternal Life. This hymn enjoys paramount importance in view of the fact that it has prompted Sanskrit grammarians to develop their thesis of the evolution of the universe out of Eternal Verbum which according to them is the Ultimate Reality.

Vak or supreme word is essentially a spiritual entity which assumes diverse manifestations in the form of words and meanings or objects. This Vak again is conceived as inseparably linked to Sakti or Kalasakti, the Time-force and this proves that the Eternal Verbum is a dynamic principle.

In the Narayana Upanisad belonging to the Taittiriya Aranyaka of the Taittiriya Samhita (i.e. the Black Yajurveda) one comes across a hymn addressed to the Divine Energy called Kanyakumari and Durgi. In another hymn the Divine Energy has been described as Durga, a goddess enveloped in flames of fire and eternally associated with the Supreme Universal Self and worshipped by devotees for the fulfilment of their desires here and hereafter. It is Durga who delivers the aspirants after liberation from the cycles of existences. To be brief, Durga stands for Brahmavidya, the delivering knowledge of the Supreme.

UMA OF KENA UPANISHAD

In the Kena Upanishad she is mentioned as a Divine Female, Uma Haimavati, who appears before Indra, Vayu and others to impart esoteric knowledge of the Supreme Being to them. Sankaracharya with his unassailable logic identifies her with Brahmavidya incarnate.

These references to the Divine Mother in Vedic literature unmistakably prove that Durga was a Vedic deity. Turning to the Great Epic, it may be pointed out that the worship of Sakti is found in several books of the Mahabharata. The Epic describes her as the fierce black goddess of destruction who was a sister of Lord Krishna, and who killed the demon in the form of a buffalo (Mahisasura) while dwelling in the Vindhya mountains.

MESSAGE OF THE SAPTASATI

In the Puranas, especially the Markandeya, she appears as the centre of the great Sakti-cult. The Devimahatmya portion of the Markandeya Purana contains an account of the glorification of the Great Mother, Goddess Chandika. The work is popularly known as the Saptasati (i.e. a work of seven hundred stanzas) or the Chandi.

It is one of the most sacred texts of the Saktas and ranks only second in importance and popularity to the celebrated philosophical song—the Bhagavadgita. In the Sakta temples all over India the Devimahatmya is regularly recited and in Bengal it is read with greatest solemnity during the Durga Pujas.

The Saptasati attempts a sort of compromise between the conflicting doctrines of Vedanta and Samkhya. The Upanisads declare that the Absolute has two forms—a higher (transcendental) and a lower (immanent). The Saptasati too speaks of the transcendent and immanent conception of Chandika. Prior to the first creation there was nothing else but uncaused, eternal and self-revealing Chandika. In the beginning of the first creation the transcendent aspect of the Goddess seemed to transform itself into an immanent one. Looked at from the empirical viewpoint of causation Chandika became Mahalakshmi—the Universal Cause.

In this causal state she is regarded as the equilibrium of the three elemental qualities—sattya (purity, intelligence-stuff), rajas (activity, energy, passion) and tamas (ignorance, inertia, matter-stuff). Thus Mahalakshmi closely corresponds to Isvara of the Upanisads.

In the beginning of a Kalpa (one particular cycle of creation) Mahalakshmi manifests herself as Mahakali due to the preponderance of the element of tamas. Mahakali is said to be first incarnation of the Great Goddess whose exploits are given in detail in the first section of Saptasati.

RITUAL and FESTIVAL

By C. RAJAGOPALACHARI

READING a recently published beautiful book on the teachings of the Compassionate Buddha I was confirmed in my mind that those who put the great and ancient religions of the world in the language of today render international service of the highest order. The condition of our times specially calls for such service. Things of eternal value require to be re-told again and again in the changing jargon of mankind. Arnold Toynbee laid his finger on the spot when he said that religion is the most important thing in life. This was the firm conviction of earnest men in the old days. Later it became commonplace and thereby soon lost its special meaning. When Toynbee says this in our times, it is as useful and important as it sounds strange. The great historian of this century has pointed out that a mutual understanding of nations at the religious level is the key to happy co-existence. Warren Hastings of British Indian history realised this, and so when he began to rule India as Governor-General on behalf of Britain, he proceeded to get the Bhagawat Gita translated into English so that his people may truly understand what kind of men and women they had the ambitious plan to govern. I have read this British satrap's preface to this English rendering of the Gita, a copy of which was available in a public library in Madras. It is a remarkable essay.

The teachings of the Buddha cannot be properly understood unless the religion of the Hindu people whom he taught is understood. This is the case also about the teachings of Jesus whose words and works cannot be rightly and fully understood unless one is familiar with the Old Testament.

There is nothing in the world more elevating than the words of the Dhammapada or the other recorded sayings of Buddha and his associates and successors. But we ought to remember one important thing. Purity of mind and action and the way of life comprehensively called compassion cannot be created by mere aphoristic admonition, without the faith and the reverence developed by direct contact with a holy person and subsequent tradition, such as are embodied in all the great religions of the world. When Jesus or Buddha taught, they could and did utilise the inheritance of faith and reverence that was already there. They could not but do it as it was there and could not be done away with. What either of them did was to add and subtract here and there. Buddha taught people to give up vain disputation over the unknowable and laid greater stress on rectitude and compassion than prevailed in the religion of his time. It was a rich gift to the people who had all the faith and reverence and all else that was requisite for absorbing the corrections as part of religion. But to attempt to isolate Buddhism from that background and to offer it in a filtered form to people as food for the spirit would be like seeking to put men on a diet of bleached rice or synthetic starch. Can one become learned by studying only the proof corrections of a book in print ? The teachings of the Buddha or of any other great teacher must be related to the time and context in which he taught. The doctrine of Karma was the foundation for the Buddha's teaching on which all that he imparted firmly rested. It was the root from which his instruction received sustaining life. He re-defined who a Brahmana was and gave that definition to all those that could receive that gift. After him those on whom his words and his life made holy impression built up an altogether new edifice of reverence, devotion and worship. The disciples of Buddha shaped him soon into a God as indeed he deserved to be. His teachings were clothed with divinity. Thus was supplied what was essential and what even now is essential, though we may not care to recognise it. A code of conduct or moral instruction cannot become a faith or religion that governs life unless divinity is attached to it.

We may not light-heartedly seek to undermine faith believing that mere aphorisms newly imparted can help mankind to restrain or guide themselves. Nor can we hope to improve any group of men by proselytisation. Even Buddhism intellectually accepted is not good enough as a new faith for any people brought up in Christianity or Hinduism or Islam. The teachings of the Great Ones of the world, Jesus or Mahomed or Gautama Buddha dressed in modern language can be precious gifts to people who still may continue to worship as they hitherto did. An understanding of religions other than one's own helps and enriches. We cannot have too much of good and sympathetic understanding of others. But it would be a grave error to imagine that rituals and festivals and temples and churches and mosques might be given up and that masses of men and women could live on aphorisms. Greatest common measures will be found to be dead matter on which life cannot subsist. What makes moral truth potent and living is Religion and Faith, rituals and festivals.

LORD CURZON—A RETROSPECT

By DR. R. C. MAJUMDAR

THE fifty years anniversary of the Boycott and Swadeshi Movement which was celebrated in Calcutta a few months ago naturally brings to our mind the career of Lord Curzon, the author of the Partition of Bengal which called forth this movement. Lord Curzon was the most unpopular Viceroy and he has been abused by all classes of Indians during the last fifty years. It is not my intention to whitewash his character, or even to condone his faults which are numerous, but I believe time has come when we might look at his career from a more detached point of view than has hitherto been possible. As is well-known, lapse of time changes our views in many respects. In this case, there has not only been a lapse of time but also a radical change of circumstances, and it is but fit and proper that we should try to re-value the services or disservices of Lord Curzon during his tenure of office in India.

To-day, the very first thought that occurs to us about Lord Curzon is a deep debt of gratitude that we owe to him. This may appear somewhat strange and it is, therefore, necessary to explain what I mean. A little reflection will show that but for the autocratic regime of Lord Curzon, our national spirit would not have been quickened to that degree which ultimately enabled us to achieve our independence within such a short time. It is a well-known fact in history that reactionary rulers often give a stimulus to public life, and that they are a blessing in disguise. Lord Lytton, a worthy peer of Lord Curzon, stirred Indians into organized political activities which years of agitation could perhaps not have called into being. Lord Curzon's administration similarly called into being a politically united Bengal and re-awakened national consciousness which, growing in volume and gradually expanding all over India, created that atmosphere and brought into being that national life which perhaps would not have been possible in normal course in the next half a century. It is, therefore, only proper to recognise, now that we have achieved independence, that both Lord Lytton and Lord Curzon were our benefactors without intending to be so. To the former may be ascribed that impetus which gave rise to the Indian National Congress, and to the latter, the Great Swadeshi Movement, the real beginning of our struggle for independence, which led us to success within 42 years.

STRANGE CONTRADICTIONS

In some respects, Lord Curzon's career offers a great contradiction between words and deeds. The most serious charge against him is undoubtedly his systematic habit of flouting public opinion, and yet, we find the following remarkable utterance in this respect in one of his letters to Sir A. Godley, dated January 27, 1904 :

> *"Public opinion daily becoming more powerful cannot be ignored—to contend that it does not exist, that it has not advanced in the last fifteen years or that it may be treated with general indifference is to ignore the great change which is passing over this country, and which I believe History will recognise myself as having done much (whether wisely or unwisely) to accelerate; viz., the lifting of India from the level of a Dependency to the position which is bound one day to be hers, if it is not so already, namely that of the greatest partner in the Empire."*

This strange contradiction between profession and practice makes one feel that Lord Curzon, though conceding the principle in the abstract, reserved to himself the right to decide when public opinion was to be adhered to and when it was not necessary to do so. It is only fair to remark that though Lord Curzon was undoubtedly guilty of systematically flouting public opinion, the authorities before and after him, at Home or in India, are not known to have given much consideration to public opinion in India in any vital matter, though perhaps none of them revealed himself so directly or crudely by actions.

UNIVERSITY REFORMS

Before coming to the Partition of Bengal, which is the most serious charge against him, I would like to say a few words about two others which were usually brought against Lord Curzon. One was the officialising of the universities. While this charge is undoubtedly true as an abstract principle, it is also necessary to remember two things, first of all, we have to compare the new constitution of the university formulated by him with the existing one. Nobody could regard that as in any way suitable for modern times. So, at best, Lord Curzon supplanted one bad system by another. In the second place, we should also remember that it was under the system introduced by Lord Curzon that the University of Calcutta made the greatest progress in its history. This is, of course, due to the personality of Sir Asutosh Mookerjee, but can we altogether blame a system which, however bad it is, still leaves enough opportunity for a man of outstanding personality to do good to his country by improving the educational system beyond all recognition ?

"UNTRUTHFULNESS" OF INDIANS

Another serious charge against him is his accusation of untruthfulness against all Indians in his address at the Convocation of the Calcutta University on February 11, 1905. There is no doubt that the words were in bad taste and reflected the arrogant spirit of an imperialist, but if anybody goes through

FEARS PROVED FALSE

By C. C. BISWAS
Minister of Law, Government of India

EIGHT years ago, I sat on a Commission charged with the task of drawing a line across the map of what was then known as Bengal.

The Province was to be partitioned. God—or Geography, if you please,—having failed to indicate a natural boundary between the two proposed parts, human ingenuity had to be requisitioned for working out the artificial frontiers.

I can still recall the heavy heart with which I addressed myself to this melancholy assignment. Was it not almost exactly what Curzon, in his anxiety to curb the growing spirit of nationalism in the country, planned and perpetrated, though with temporary success? To those of us who in their youth had witnessed the mass resentment and determined resistance to that sinister move, the proposed partition of the Province by consent after four decades was almost a historical irony.

My feeling, however, was not only of sorrow but of concern also.

The partition of Bengal was merely a projection on the provincial level of a plan which had been accepted on a higher national plane. A big slice of the Indian territory was being cut to carve out a separate State for Muslims who, according to the queer logic of their leaders, were supposed to belong to a different nationality. The vivisection of the country was the price which Nationalists in India were being made to pay for the attainment of freedom.

The political unity of India, which has often been paraded by the champions of British imperialism as a British contribution to this country, was, in fact, a natural response to her geographical conditions. A familiar contrast with Europe would be as instructive on this point as it is on several others. For, whereas the configuration of Europe—its long indented coast line, its peninsulas, its inland seas and islands, its high mountain ranges — has fostered the growth of separate nations and their seclusion from one another in separate States, the continuous and unalluvial plains marked out India, though not much smaller than Europe in size, to become, in due course, a single political unit. Long before the advent of the British Raj, when lack of quick means of transport and communication was a serious obstacle in the way of expanding the authority of Central administration to far flung areas, the country had come and remained, though for short durations, under the ultimate control of one single government. Aided by the strength of western science and technology and also the adoption of English as *lingua franca*, the British, no doubt, accelerated the process of unification. More pronounced had been India's economic unity which again, unlike in Europe, developed as a natural corollary to the country's political homogeneity, without being impeded by physical frontiers of jealously competing and potentially hostile States. The division of India, therefore, constituted an immediate threat to her economic stability, also.

BLEAK FOOD POSITION

I felt particularly worried over the food position. Shortage of foodgrains, especially of cereals, had been India's biggest headache for a number of years. Although the origin of the problem could be traced back to the separation of Burma, its gravity was not fully realised till the outbreak of hostilities in the Far East when imports of rice from abroad ceased completely. The devastating famine which followed, stalking over this unfortunate Province of Bengal in 1943, was still a gruesome memory. Viewed in this perspective of scarcity, post-partition food prospects looked particularly disheartening. The surplus States of West Punjab and Sind, endowed with most modern and extensive irrigation facilities, had so long been the granaries to the deficit provinces in India. They now lay on the other side of our border. In terms of foodgrains, that meant a loss of nearly eight lakh tons per year. Repercussions of the partition on the food front could well be gauged from the fact that while 82 per cent of the population of the pre-partitioned country remained in India, only 77 per cent of the total production of foodgrains went to her share.

If in recent years I have tried to keep myself posted with the salient facts about the country's food position as well as its agricultural development, it is because of the doubts and apprehensions which haunted me during my association with the Radcliffe Commission. Later, my association with the Government of independent India provided me with the opportunities of acquiring a more intimate knowledge of the situation than would have been possible from a less close quarter.

According to a recent official review of agricultural production, the total production of cereals during the year 1954-55 was 55.3 million tons. This represents an increase of more than 11 million tons over that of 1947-48. Wheat production in the current year has established an all-time record at 8.5 million tons. The production of millets and other minor cereals reached 22.6 million tons. Indeed, the agricultural year which ended in last June witnessed a remarkable increase both in the acreage and in the production of cereals in India as compared to the year of our Independence. The total production of cereals, it appears, not only exceeded the quantity aimed at for the fourth year of the Five-Year Plan, but even crossed the target fixed for 1955-56 by 2.8 million tons. Similarly, the acreage

INDUSTRY IN THE SECOND PLAN

By N. KANUNGO
Minister Of Industries, Govt. of India.

SOON after the end of the current year, we will be completing the period of our First Five-Year Plan. Hence preparations are going on to decide our programme for the Second Five-Year Plan which will commence in 1956 and run upto 1961.

As is natural in a democratic country, the scope and contents of the Second Five-Year Plan are being widely discussed all over the country. When we think of it, planning is as much necessary in our individual lives, as in that of a nation. We plan out our work for the day, if we want to get through most of our work properly. So also in a family, planning for education of children, building a house, going out on a trip or celebrating a ceremony have to be planned years, months or weeks ahead. Planning for the nation was not a live issue because we were not free to do so. Even then, the Congress got together the best brains of our country as early as 1940 and under the chairmanship of Shri Jawaharlal Nehru set up a Committee for Planning which devoted a great deal of labour in preparing a plan. How necessary is planning for a nation, may be realized from the fact that even in the worst days of the last war the Government of the U.K. were working on plans for reconstruction and rehabilitation of their country.

THEN AND NOW

With the advent of independence, we launched upon our first period of planning in conditions which were far from normal. Apart from instability and scarcity all over the world, as a result of the terrible World War, our shortages in every necessity of life, particularly in food, could not claim our singleminded devotion, because of the events following the partition of the country and the uprooting of large masses of population. The magnitude of the shock may be understood when we realise that the displacement and migration of population involved was the largest in volume in recorded history.

Under conditions of acute crisis all round, we launched upon our First Five-Year Plan which inevitably gave the highest priority to agricultural production and irrigation. Then, cereals had to be counted in ounces, cloth in yards, sugar in tolas, salt and kerosene in chhataks and so on, for every necessity of life. Memory of those days is like a bad dream. All necessities of life are in plentiful supply all over the country now, though it cannot be said that every one of our population is able to secure as much as he needs.

It does not need any statistics to show that we as a nation are extremely poor and the standard of living of the bulk of our population is extremely low. In the ultimate analysis, the wealth of a Nation consists of the volume and variety of the goods that its people produce and the political system under which it can ensure an equitable distribution of that wealth. For the last two centuries and more the only goods that we have been producing are the fruits of agriculture. Industrial production—whether in organised factories or by craftsmen—is too little compared to the size of our population, extent of our country and the resources in raw materials available.

DAWN OF MODERN INDUSTRIES

In the 16th and 17th centuries, methods of industrial production were the same all over the world. It was the skill of the craftsman which was the only means of production of material wealth. Even in those days fine steel, and fine chemicals were produced but the time and labour involved were enormous. India had the advantage of its climatic conditions, availability of resources and raw materials and above all the trained intelligence and skill of its men and women which enabled the nation to achieve abundant production of material wealth judged by the standards of those days. This enabled her to engage in a large volume of trade with the rest of the world.

With the advent of steam power the entire technique of production of goods underwent complete change which, in other words, is known as the Industrial Revolution. The impact of the Industrial Revolution affected all countries of the world but in different ways. In Europe, all nations adapted themselves to the change in technology, but Asia (including India) was deliberately used as a supplier of cheap raw materials to European countries and a consumer of their manufactured products. This was made possible because India was under the domination of an industrialised nation. How India would have reacted to the impact of the Technological Revolution if she were a free nation, is a matter of idle speculation now. The fact remains that for centuries she remained outside the pale of technological advances, not only of the steam age but of the subsequent age of electricity as well. Perhaps it is not an unmixed evil that she has escaped the Industrial Revolution at the time when it was spreading in Europe. It certainly caused a great deal of misery and social upheaval. Perhaps now we may be able to avoid many of the shocks through which

PLACE-NAMES OF UTTAR PRADESH

By Dr. NANDALAL CHATTERJI

M.A., Ph.D., D.Litt., University Of Lucknow

PLACE-names of a country possess a peculiar-historical significance, but this is hardly realised by an average citizen. That place-names often supply valuable clues to an understanding of the evolution of the civic life of a country is a fact which invests the study of toponymy with a deep and abiding interest of its own. And toponymy is of more than usual importance in our country, because the deliberate christening of a town or a village has never been a normal feature and place-names are ordinarily self-evolved in India. The manner in which a place-name has grown, the pattern which it has assumed, and the source as well as the implication of any particular toponymal prefix or suffix are matters of more than passing interest, though it is a pity that Indian toponymy has not yet received the attention it deserves.

With the attainment of India's freedom, however, the subject has acquired a special meaning, for there is now a popular demand for the re-naming or at least for the re-spelling of many old and familiar place-names. The place-names in Uttar Pradesh as those in any other part of India, indicate the local history and traditions no less than local life and public opinion. The sources from which the materials of nomenclature are derived also amply illustrate the composite character of the culture of the local people.

Though the appellatives are of various types, they are usually composite terms wherein some stock termination is compounded with a legendary or historical cognomen. In other words, the generic base in such names is coupled with a descriptive characteristic such as *pur* (city), *garh* (citadel), *ganj* (mart), *abad* (abode), or *sarai* (inn) The toponymal termination alone is rarely used as a name. The unusual instance of the town of PUR in Muzzaffarnagar District may be cited in this connection Most of the familiar place-names are thus compound ones, such as MIRZAPUR (the city of Mirza) in which the base is clearly distinct from the name suffix. There are, however, some derivative names wherein the base has been disintegrated, altered or concealed as in the name of AHRAULI which was originally ABHIRPALLI (village of cow-herds).

THREE GROUPS OF NAMES

The toponymal suffixes commonly met with may be classified under three groups, with well-defined characteristics, that can be named Metropolitan, Pastoral and Denominational. The Metropolitan group is numerically the largest one, and it includes place-names which have terminations like *pur, nagar, ganj, abad, shahr* and *sarai*, which convey the sense of either an administrative or commercial town. The Pastoral group comprises place-names terminating in *gaon, khera, dih, jhil* and the like which signify diverse associations of village life. The place-names of the Denominational group end in suffixes like *dwar, math, prayag, esar, dham* and so on, appellatives which reflect some religious or sectarian aspects and associations.

Among the place-names of the Metropolitan group, there is a very large admixture of the Muslim element, though Hindu names are no less prominent. The indiscriminate use of Sanskrit, Arabic and Persian terms illustrates the cosmopolitan character of our place-names, and throws some light on the cultural synthesis that came about in the national life of India in medieval times. The Muslim element is noticeable only in this group, for the Muslim ruling classes had very little to do with life in the villages where Hindu influence remained naturally strong. The remaining two groups, therefore, are almost entirely of Hindu origin.

The most numerous family of place-names belonging to the first group, or for the matter of that in any group, comprises those which terminate in *pur*. The suffix *pur* is sometimes modified as *pura, purwa* or *puri*. Some European scholars have presumed, on the analogy of the Greek *polis*, that *pur* signifies a walled or fortified city. But this interpretation does not seem to be well founded. In Sanskrit, GOPURAM means the principal gate such as that of a temple. It may be that originally it was meant to be opened in the morning when the herds were taken out for grazing and shut in the evening when they returned from pasture. The bucolic association of the word is in keeping with the early social economy of the Aryans.

To begin with, therefore, *pur* may have meant a gateway, but in due course the implication expanded as the ancient Aryan life itself transcended the isolation of forest surroundings, and was merged in an urban civilisation. Names ending in *pur* finally came to mean a cluster of dwellings rather than a pastoral enclosure. The suffix was usually coupled with proper names or titles but was compounded with old village names only when the places were no longer wholly agricultural. It was normally never added to the names of natural objects like trees. On the whole, the names formed with *pur* are mostly of early or late medieval origin, and are due as much to Muslim as to Hindu influence.

SOME MUSLIM COGNOMEN

Among the appellatives with some Muslim cognomen and the suffix *pur* are Akbarpur, Alipur, Fatehpur, Ghazipur, Jaunpur, Mirzapur, Shahjahanpur, Sultanpur, etc. The names compounded with some Hindu cognomen include Bhagwanpur, Gangapur, Gorakhpur, Hamirpur, Kashipur, Lalitpur, Ranipur, Sitapur, etc. Muslim names are derived from both Arabic and Persian, while Hindu names are taken from Sanskrit, Prakrit, etc. The names are mostly personal, though there are certain generi

appellations signifying a class or an official title, e.g. Mirjapur, Shaikhpur, Sayyidpur, Dhimarpur, Gujarpur, Rajapur, etc. Some of the names which now seem to be Muslim were in fact originally Hindu. Ghazipur is a name obviously given by the Muslims, yet it may be an adaptation of the original Hindu name of GARJPUR, according to Sir A. Cunningham who suggests in his Ancient Geography that GARJANPATI is a title of the God of War. In 1874, the Govt. of the N.-W. Provinces published a list of place-names according to approved spellings in Hindustani and Roman characters (vide Resolution No. 2286 dated the 25th of September, 1874). In this list, Cawnpore appears as *KANPUR* in Urdu and KANHPUR in Hindi. Now, KANHPUR takes us etymologically to the well-known Hindu name of *Kanh* or *Krishna*. According to some KANPUR may be a corruption of KHANPUR. Again KANPUR is also sometimes associated with KARNA which in Sanskrit means ear, and is a familiar proper name in the Mahabharat. In other words, *KANPUR* has, it is assumed, evolved out of the original *KARNAPUR* and its subsequent corrupt form of KARANPUR.

NAMES AFTER PERSONS

It is indeed very difficult to identify the persons after whom certain towns are named, for the local traditions in such cases are vague and ambiguous. BADLAPUR (in Jaunpur District) and CHANDPUR (in Bijnor District) may be as much commemorative of BADAL KHAN and CHAND KHAN as of *BADLA SHAHU* and *CHANDAMAL*. Again, *SHIKARPUR* (in Bulandshahr District) may have originated from *SHIKAR*, but this is a name used by Muslims and Hindus alike. *SHIKAR* may be a corruption of *SHUKR* or *SHUKUR* (Muslim), or of *SHIKAR* (Hindu).

TILBEGUMPUR (in Bulandshahr District) is an interesting example of the coupling of a Hindu name with the title of a Muslim lady. The town originally belonged to the *BHATTI* Rajputs who were later converted to Islam; and so its half-Hindu and half-Muslim name may have been adopted after the conversion.

SAHARANPUR is commonly taken to have been named after a Muslim saint, SHAH HARAN, whose mausoleum still exists there. But, it is likely that the name is an adaptation of the Sanskrit word, SADHARAN (i.e. ordinary).

JAUNPUR is another such ambiguous name of which the origin is doubtful. Was it the town of *YAVANA* i.e., non-Aryan (foreigner), or the town of *JUNA*, Sultan of Delhi ?

NAMES WITH NAGAR

Nagar is a common suffix added to place-names of the Metropolitan group; and its history is to some extent similar to that of *pur*. The basic name may be both Hindu and Muslim, e.g., Azamnagar, Dildarnagar, Muzaffarnagar, Jaswantnagar, Ramnagar, Srinagar, and so on. The source of the word *nagar* is doubtful. *Nagar* is sometimes associated with the *NAGA* people, but it is not clear how the name of a primitive tribe came to mean a city. It has also been derived from *NAGA*, a mountain, meaning therefore a place with houses as high as mountains. A more plausible theory connects *NAGAR* with the Sanskrit word *LANGALAM*, a plough. *Mr. CROOKE* has mentioned the use of the word *NAGAR* in north Oudh in the sense of a heavy plough with a perpendicular frame. The plough is said to have gradually assumed the connotation of a ploughed land, then a settled land and finally of an inhabited town.

NAMES WITH GANJ

Ganj is another suffix signifying a town. It is a Persian word which means a store or a storehouse. Such store-houses meant for the use of the military were usually built by the Muslim rulers on the strategic highways, and therefore it is hardly surprising that a major portion of the names ending in *ganj* are associated with Muslim names, e.g., Aliganj, Basharatganj, Fatehganj, Hussainganj, Kadirganj, Mansurganj, Nawabganj, Shahganj, Wazirganj, etc. Hindu names coupled with *ganj* are usually such as are common to the mercantile community, e.g., Chetganj, Dataganj, Gursahaiganj, Hanumanganj, Maharajganj, etc. It may be pointed out here that the Persian word, *ganj*, is similar in origin to Sanskrit *Ganja*, meaning a mine, a treasury or a mart; but as a name-suffix its use was popularized by the Muslims.

NAMES WITH ABAD

From *Nagar* we pass to *Abad* which in Persian means a settlement or abode. *Abad* is also familiar as an element in place-names, e.g., Allahabad, Begumabad, Faizabad, Farrukhabad, Ghaziabad, Jahanabad, Khalilabad, Moradabad, Najibabad, Rasulabad, Shikohabad, Zafarabad, etc. According to some authorities, *Abad* comes in fact from Sanskrit *Avas* (abode), but the names ending in *Abad* are Muslim, though Allahabad, for instance, may be an adaptation of the ancient Indian name of ILA.

NAMES WITH GARH

The next suffix *Garh* is from Sanskrit *Gadah*, a fort, fence or ditch. This is generally associated with the small fortified towns of the petty chiefs of medieval times, though bigger forts are implied in names like Aligarh or Fatehgarh. Compounded with Hindu proper names we find Bijaigarh, Madhogarh, Parichhatgarh, Pithoragarh, Saktesgarh, etc. Among those that are compounded with Muslim names are Aligarh, Azamgarh, Fatehgarh, Hasangarh, Khairagarh, Najafgarh, etc.

SHAHR & SARAI

The next termination — *Shahr* — is the Persian counterpart of the Sanskrit word Nagar, but its use as a name-suffix is rather limited, and the only notable instances are Anupshahr, Bulandshahr and Machlishahr.

Sarai meaning rest house is another component which is used either as a prefix or as a suffix, e.g., Khetasarai, Moghulsarai, Sarai Aqil, Sarai Mahiuddin. The Persian word SARAI, it may be added, reminds one of the Sanskrit word SALA (hall or shelter), or ASRAYA (refuge).

PASTORAL NAMES

The Pastoral and Denominational groups comprise names which are of purely Hindu origin. Muslim names are conspicuous by their absence in these groups. As ancient Indian life was indirectly centred on agriculture, these two groups illustrate a new phase of Hindu life.

The PASTORAL names are reminiscent of life in the village with its presiding gods and its agricultural set-up — the cultivated land, the cattleshed and the grove, the ditch, the mound, the mud fort and the flowing stream. The common bases are GAON (as in Chirgaon), KHERA (as in Kankarkhera), DIH (as in Unchdih), and BAHAT (as in Talbahat) which all signify a village.

Certain suffixes relate to some familiar object in or around the village. BHIT meaning a mound

The Development Of Village Industries Along With Agriculture

By Dr. HAREKRUSHNA MAHTAB

Governor of Bombay

HOUSEHOLD and hand-industry is a new expression used by Mahalanobis in his Planframe, I suppose this expression will not be required to mean literally an industry which is carried on by hand without the use of machines or an industry which is carried on in a household but not by several families in a village co-operating together. A warning on the interpretation is necessary because of the opinion about this industry which is held by some constructive workers since the time Gandhiji laid all stress on it. However much one may talk about it, it is not practical for an average family to carry on any industry entirely by itself for the production of any goods. Even in agriculture, a family has to secure the co-operation of its neighbours either on cash payment or on some material consideration. Even in the ancient days, the Varnashram was intended to secure co-operation among families without any deviation from generation to generation. The four castes gradually became subdivided into a number of sub-castes as the population increased and as the life became more complex. When the needs became larger and larger, labour became more and more complex resulting in division of the main castes into a number of sub-castes. Gandhiji laid stress on self-sufficiency in the family in a general way, but that was and is even now interpreted literally to the extent of *reductio ad absurdum*. Since Gandhiji's name is connected with the industry and since there are many who have made it a religion for themselves to interpret literally what Gandhiji said, it is necessary to clear one's mind as to what the underlying principle of Gandhiji was and then to apply that principle according as the circumstances demand. Gandhiji's principle can best be described in his own words (Tendulkar, Vol. IV, page 34):—

> *"If we could have electricity in every village home, I should not mind villagers plying their implements and tools with electricity. But the village communities or the State would overpower houses just as they have their grazing pastures."*

Gandhiji was against highly organized factories because they deprive workers of their home life. He did not like people to flock to the towns deserting their villages. But it would be very much to the liking of Gandhiji if villagers, while remaining in their homes in the villages, were provided with some work which would increase their income substantially, whatever might be the character of the tools and implements used by them for the work.

EMPLOYMENT, WORK & WAGES

It is not my purpose to cross swords with those who hold views different from the above. The subject may be discussed on its own merit and, if necessary, even new lines of work may be chalked out if they prove to be practical and beneficial to the common man as well as to the nation. Theory and practice have to be harmonized. To labour hard to earn even a few pice rather than sit idle is good in theory provided there is mental reconciliation to one's fate. But in practice one will not labour for eight hours to earn, say, four annas while one sees another earning two rupees with much less labour. Discontentment is the result of this psychological resistance to the counsel of reconciliation based more or less on the old Varnashram. Employment means work on remunerative wages. Nobody is in a mood to work on any wages for he had the alternative to agitate. To offer employment on very low wages is impractical unless the State comes forward to enforce something like Varnashram with an iron rod as in the olden days. Faith in fate and in Varnashram having disappeared, rightly in my opinion, we have to approach the problem in a practical manner.

Village industry should be organised in such a manner as to change the character of India's economy from agricultural to industrial, thus providing for a higher standard of living which is in view. Obviously, agricultural economy cannot give the same standard of living as industrial economy. The standard of living which is now aimed at by the Plan and also wished for by the people can be attained only by industrial economy and not by agricultural economy, however much agriculture may be improved.

IMPROVED MACHINERY

In order to bring about industrial economy in the villages, it is necessary to link industry with agriculture at the village level. If this is done, industries will have scope for natural growth in the country. The following is the method by which this object can be attained. The processing of all agricultural products, e.g., rice, wheat, oil-seeds, etc., may be done on the spot in the village or, say, within a radius of five miles from the place of production. Such processing cannot be done with old implements, such as dhenki, ghani, etc., for the old village economy has changed completely. Today the village, like the town, is in the grip of money economy. The village is not an isolated place now as before

nor are the villagers the same old unsophisticated people as they were some years back. Because of the spread of education, development of contact with cities through industrial labour which is drawn from villages, and of communication, the village today demands about the same amenities as the townspeople have or are going to have. The old economy was in terms of goods inasmuch as storage of goods was the standard of wealth. The needs were few and there was no necessity for selling stocks as today. But now the villager is in need of selling his agricultural products as soon as possible so that he may have money to meet other demands, such as clothes, better food, medicines, education of his children, etc. He sells away the raw products of agriculture as he cannot process them with the old implements even if he wants to, nor can he find labour in the village to do the job on the wages offered. Few have the mind and the patience to do very hard work for hours only to earn paltry wages. Even if a few hands are available to do the work, it is not physically possible to process all agricultural products on the spot with the old implements. The result is that the agriculturist is compelled under circumstances to sell mostly raw products to be processed at a distant place. The loss incurred by the agriculturist on this account is the profit which is shared between the trader and the mill at a distance. But the agriculturist will be in a position to sell the processed goods if he gets the help of small improved implements which are to be plied with electricity.

INDUSTRIALISING VILLAGES

The following picture with regard to only one agricultural product will give an idea of how the whole scheme will operate. In order to enable the agriculturist to sell processed paddy, i.e., rice, each village will require at least one hauler. If he can sell rice instead of paddy, an agriculturist having about 20 acres of dry land gets an additional income of about Rs. 300/- annually even after paying about three annas per maund as hauling charges. The cost of a hauler is about Rs. 3,000/-. This amount may be contributed by the villagers co-operating together or even by an individual or by the Panchayat. The return on the capital will be about Rs. 60/- per month, excluding about Rs. 30/- which is to be paid per month to the mechanic who will ply the machine. The cry that those who live upon dhenki will be unemployed is baseless as I have found from experiment. Conversion of paddy into rice consists of three processes — first, boiling, second, husking and the third, sifting. The hauler does the most painstaking work, namely, husking only. The dhenki huskers earn more by doing more of either or both of the remaining two processes for which the agriculturist easily pays out of the margin of profit which accrues to him. Of course, there will be a little inconvenience for a short interval till the adjustment is made. This is inevitable during the period of change-over from one kind of occupation to another.

EXPANSION OF INDUSTRIALISATION

Then the scheme proceeds : If each village has at least one hauler working, each district will require the setting up of a plant to manufacture haulers and their spare parts. Each police station will require a full-fledged repairing shop. All these will open up new avenues of employment to the villagers. One can easily imagine the situation when along with the rice-hauler, oil processing machines, small spinning machines of 10 to 100 spindles, rope-making machines, etc. will work in the villages. The industry will thus develop from the village to the district headquarters, which will ultimately be connected with the basic heavy industries. According to this scheme, rice mills, oil mills, atta mills, etc., have to be completely decentralized. The textile industry for internal consumption will also be decentralized. So also the sugar industry. For all these small machines are available today. With regard to jute, I have no idea whether there are small machines or whether they can be made easily. If that can be done, then the jute industry also should be decentralized to the level of the regions where jute is grown. So far as the textile industry is concerned, it can be decentralized to the level of the area where cotton is grown—and cotton can be grown in almost every area. If the weavers are to be helped materially, there should be small spinning machines of about 200 spindles in a large number of areas spread over the whole country as the population of weavers is spread far and wide.

It is not necessary for the State to take any drastic steps against the existing rice mills, oil mills, textile mills, etc., for when the village industries begin getting established on the lines suggested above, the bigger mills will automatically disintegrate. The village industries run with the help of electricity can easily compete with largescale industries for the former are almost free from overhead charges, cost of transport, interest on capital, high labour wages and a number of other items of expenditure which the latter have to incur.

AGRICULTURAL DEVELOPMENT

Agriculture will have to be organized also in accordance with the needs of the areas. Particularly, cotton and cane cultivation will have to be introduced in all areas. When electricity is available in the villages, it will be possible to build up cold-storage plants in suitable central places so that fruits, vegetables, fish and milk can be preserved for some days at least to enable them to be marketed. It is a regrettable fact that in villages large quantities of vegetables get rotten and are thrown away because all of them cannot be sold on the weekly or bi-weekly market days. They cannot be preserved even for a few days to be marketed in places at a little distance where there is a demand for them. Similarly, large quantities of fish get rotten and are wasted because they are much in surplus of the needs of the place but cannot be preserved for being marketed elsewhere. This is also the case with milk. The agriculturist instinctively does not undertake more production of vegetables, etc., because he feels and he has the experience that his articles cannot be marketed. The fact that cold-storage arrangements give incentive to the agriculturist to grow vegetables, particularly potatoes, is within my own personal knowledge. Even the families in villages can have small refrigerators to preserve perishable edible articles during the period between the two market days in the week.

This is the skeleton of the integral scheme of development of agriculture, village industry and the basic industries which, I think, is practical and will show results almost immediately.

JAPANESE METHODS

There is always the loose talk of introducing the Japanese method of small scale industries in India. That method is roughly this that large industries get component parts manufactured by small

(Continued on Page 268)

RAIL TRANSPORT

By BEJOY PROSAD SINGH ROY

WITH only a few months to go for the completion of the First Five-Year Plan and the Second Five-Year Plan in the offing, increased interest is being evinced in the transport position of the country, as it is being increasingly realised that an adequate transport facility is an essential pre-requisite for industrial development of a country. Industrial production not only requires a constant and steady supply of raw materials but also a quicker disposal of the manufactured product; and if facilities are not available for this movement, production and distribution cannot but be hampered. It is, therefore, essential to ensure transport capacity of the country ahead of transport requirements otherwise the very objective of planning will be jeopardised.

The First Five-Year Plan has given a fillip to our industries and to a great extent been helpful in consolidating the economic position of the country and creating favourable condition for an industrial evolution. During this period, the agricultural and industrial production have maintained a steady upward trend, the percentage increase in production in certain industries in 1954 being as much as 200. Industries have been set up in new regions and with the completion of the Multi-purpose Projects, many more new industrial sites are likely to develop.

RAILWAYS' SLOW GROWTH

Unfortunately, lack of adequate transport facilities has been a barrier against full utilisation of the benefits accruing from the quicker tempo of industrial activities. The main transport system is the Railways which handle the vast bulk of the country's traffic accounting for as much as 80% of the nation's goods and 70% of the passenger. Even so, a comparative study of the Railways in India with that of other industrial countries shows how slow had been the growth of our Railways in the course of the last hundred years. The total mileage is only 34,275 and there is only 29 miles of Rail per 1000 Sq. miles as compared to 75 in U.S.A. and 555 miles in the U.K.

During the last 20 years the Railways were put to intensive and extensive use with little opportunity for rehabilitation and particularly during the war period the stress and strain which the Railways had to suffer was enormous with little or no provision for renewals and replacements. The result was that there was considerable arrears of renewals of rolling stock and by March 31st 1951, it accumulated to 2,554 locomotives, 6,895 coaching vehicles and 47,256 wagons against the normal figures of average annual renewals of 190 locomotives, 650 coaching vehicles and 5,000 wagons. It is expected that the total stock for replacement by the end of 1955-56 will be 3,696 locomotives, 9,916 coaching vehicles and 73,371 wagons. If the programme of the Railways for procurement of rolling stock is achieved, the total number of over-aged locomotives at the end of the Plan period would be 1,985 as against 2,554 with which the Plan started. So far as wagons are concerned by 1955-56 the number of over-aged wagons will be reduced to 14,078. This reduction in the number of over-aged rolling stock will no doubt be conducive towards improvement of the situation but it is feared that unless there is an increase in the transportation capacity, it will not be of material benefit to the economic development of the country. Although in 1953-54, Railways carried 11 per cent more goods than in 1951 and about 35 per cent more than in 1938-39, the figures do not give any indication of the total traffic that could have been moved if there had been adequate capacity for doing the same. It needs no reiteration that the successful functioning of trade and industry is dependent to a great extent as to how quickly and cheaply the goods can be transported from the centres of production to those of consumption.

DIFFICULTIES OF INDUSTRIES

It is an accepted fact that presently the Railways are not in a position to move the traffic currently offered. It is estimated that the traffic requirement will be about 1,09,000 wagons including the replacements, whereas about 61,000 were proposed to be obtained by March, 1956, thus leaving a deficit of about 48,000 wagons. The Planning Commission has visualised an annual increase of 2% in traffic i.e. 10% in five years' time and has programmed the expansion of Rail capacity on that basis. Even assuming that the supply efforts of the Railways will be able to increase the capacity as provided in the Five-Year Plan, still additional traffic resulting from increased agricultural and industrial output will require immediate expansion of all forms of transport.

Under the Five-Year Plan a sum of Rupees four hundred crores has been allotted for Railway development, major portion of this amount is being spent on rehabilitation and replacement of old and over aged rolling stock, which could not be replaced during the last 20 years, only 5% of the total allotment being ear-marked for the opening of new lines. Consequently, even after 4 years of the Plan, the available transport facilities have lagged far behind the actual requirements. As a result, inadequacy of rolling stock has been responsible for the inability of Railways to cater fully to the needs of the industries as well as of the general public. Whereas in 1951-52 a railway wagon has travelled only about 40 miles per day, in 1954 it travelled 41 miles and if the average speed for a goods-train is 12 miles per hour, it means that a railway wagon can put up efficiency of only 3½ hours per day which it must be admitted is far from satisfactory.

Apart from the over-age of rolling stock, there are other bottlenecks in railway transport such as the non-availability of wagons, absence of transhipment facilities at the break of gauge points such as Mokamaghat, Agra and Sabarmati etc. The limitation at Mokamaghat is due to ferry crossing across the river. The Railways have already made a provision for a bridge over the Ganga near Mokamagha and the plan has been sanctioned. The completion of the bridge at Mokamaghat will however take some years and unless in the meantime some effective measures are taken to improve transhipment difficulties hitherto experienced at this point will continue.

P35653

FARAKKA WILL BE A GREAT BOON

To overcome the transport inconvenience caused due to non-existence of uninterrupted and direct rail connection between North Bengal and Assam and South Bengal, a proposal was made to construct a barrage across the Ganga at Farakka. This barrage is contemplated to be a combined barrage and bridge project which apart from offering a direct link between the different parts of Bengal and

Assam will keep the navigational channel of the Hooghly River alive and flush out the port of Calcutta which is threatened due to constant silting. If this proposal is accepted by the Planning Commission, and it is included in the Second Five-Year Plan, the rail transport facilities between Bihar, West Bengal and Assam will greatly improve and it will directly contribute to the development of industry and commerce in these States.

COAL MOVEMENT BY VESSELS

Owing to the scarcity of wagons and other difficulties enumerated above, the industrial production has suffered due to shortage of raw materials and particularly the supply of coal so very vital for the industries. The figure for the daily requirement of wagons for coal industries today is 3,600 whereas the daily average loading is 3,400 wagons only, thus presently there is a deficiency of 200 wagons a day which not only affects the supply of coal but its raising also. The Second Five-Year Plan has fixed the target of coal production at 60 million tons and for the movement of the increased production additional 1,680 wagons a day will be required. The number of wagons that will be available at the end of the Second Five-Year Plan will not be adequate to provide for this additional number and in such eventuality production of other industries will suffer due to shortage of coal. In order to overcome this difficulty it is necessary to make available the required numbers of wagons to the coal industry by making greater use of alternative form of transport wherever possible. Coal is particularly suitable for movement by sea and it is therefore essential to ensure that the movement of coal between two ports should be exclusively entrusted to coastal vessels. The wagons which will be thus released can be utilised for inland traffic and provision of permanent volume of cargo for the coastal shipping will also be helpful in keeping it in full trim. It is important for a country like India with her long coast line to have an adequate and efficient coastal shipping not only for emergency but also as a second line of defence. Coastal shipping of the country cannot develop nor can it provide efficient service without having a proper co-ordination with the Railways. It is a matter of satisfaction that the Ministry of Transport is fully alive to this problem and has appointed the Rail-Sea Co-ordination Committee and the Railway Freight Structure Committee to probe into the question and devise ways of establishing co-ordination between the two forms of transport.

NEED OF NEW FREIGHT STRUCTURE

The present freight structure for transport by goods train which has been in force from 1st October, 1948, was evolved as a result of detailed investigation. Since then, however, far-reaching changes have taken place in the economic activities of the country and big changes are envisaged in the Second Five-Year Plan. The development of Railway facilities will also be considerable and there is a need for a fresh examination of the freight structure. It is hoped that the Committee will examine the issues involved in all its aspects and will evolve a new freight structure which will meet the grievances of all the interests concerned.

Indusfrial development has been stressed in the Second Five-Year Plan which is in the stage of finalisation. The Plan envisages an all-round increase in production, the percentage of increase in some of the important industries would be as follows:—

	Units	1955-56	1960-61	Percentage increase
Food Grains	(Million Tons)	66.0	76.0	15.15
Steel finished	"	1.6	4.5	181.25
Coal	"	37	60	62.16
Aluminium	(tons)	12,000	30,000	150.00
Cement	(Million Tons)	4.6	10	117.39
Fertilizers (Ammonium Sulphate)	(000 tons)	450	1,350	200.0
Soda Ash	"	78	200	156.41
Caustic Soda	"	33	100	203.03
Cotton Textiles	(Million yards)	4,700	5,500	17.02
Sugar	(Million tons)	1.5	2.1	40.00
Paper	"	140	200	42.85
Bicycles	(Nos. in 000)	500	1,000	100.00
Oilseeds	(Million tons)	5.6	7.0	25.00

The successful implementation of the Plan will depend on a large measure on the transport system keeping pace with the economic development. In the Second Plan, the total capital outlay on the railway is expected to be about Rupees one thousand and five hundred crores as compared to the provision of Rupees four hundred crores in the First Plan. As a long-term measure, the Railways are contemplating to increase the overall capacity by 50% in the next five years for all the restricted goods.

RAIL-SEA CO-ORDINATION

It is however unlikely that the Railway transport alone will be sufficient to cope with the increased movement that will be required. Therefore the coastal ships should be put to greater use, thereby reducing the pressure on the Railways. Although Railways are State managed and the coastal shipping privately operated, an important point to be borne in mind is that an adequate merchant fleet on the coast is always maintained in full trim. In order to achieve this, competition between Rail and coastal shipping should be eliminated. To ensure co-ordination of movement between shipping and railways, there should be no movement of bulk cargoes by rail between any two ports, and also in respect of general cargoes, the port to port movement by the rail route should take place only if the consignments offered are in small quantities. It is also desirable to introduce rail-cum-sea through booking arrangements for greater facilities for movement of cargo.

The Railways should be apprised of the tonnage expansion programme of the Indian Shipping and the need for providing ships with adequate coastal cargoes, including coal, salt and petroleum products of the newly-established refineries. It will be a tragedy if the Railways were to divert the cargo as a result of its superior strength or as a consequence of its rate manoeuvring policies. Rail-sea co-ordination should be based on the full and economic employment of coastal ships and on strict adherence to not diverting any cargo now moving or suitable for movement in future by sea to the rail route. It is essential that there should be co-ordination in the development and lop-sided development should be avoided. If and only if there is such co-ordination between the two forms of transport, the Railway wagons now employed in carrying cargo from port to port will be released for profitable utilisation in inland movement. Thus by co-ordination and planning of the available transport facilities within the country, we can ensure successful fulfilment of the Second Five-Year Plan.

Further such development of large tracks in the country will be helpful in opening up regions abounding in minerals, forests and other resources which have remained unexplored and undeveloped. In anticipation of the future requirements of traffic in the context of large-scale industrial development, the Government have appointed the Rail-Sea Co-ordination Committee to evolve measures for full utilisation of the transport facilities and thus ensure development of industries at the speed visualised in the Second Five-Year Plan.

The Planning Of Mental Frame In The Plan-Frame For Employment

By D. N. BHATTACHERJEE

UNEMPLOYMENT is the foremost problem with the Five-Year Planners. From day to day, the queues at the altars of the Employment Exchanges are getting longer and longer. To those 6 lakhs of people striving for jobs there, unemployment is no ghost of theory, but it is a devil of daily experience. And these unemployed persons, however huge their number may be, represent only a small fraction of the countless multitude of idle hands that are lying beyond the survey of statisticians. I mean the unemployed and under-employed masses, often disguised in different walks of subsistence, whose number may better be speculated than being actually calculated. Even a conservative guesswork will show that leaving aside the volume of spare-hands in agricultural sector, the number of wholly unemployed amongst the non-agriculturists will be no fewer than 3.4 million while the extent of under-employed in that same sphere will be about 4.9 million man-years. If we add to these the possible number in employable population every year, we can fairly arrive at an approximate estimate of non-agriculturist man-power for which the 2nd Five-Year Plan will have to find employment.

The total strength of present population of India is estimated at 383.7 million and 40% of this is assessed to be her total employable population. Out of this, the 1956 figures of total employment stand at 152 million of which the quanta of agricultura and non-agricultural employment are 109.5 million and 42.5 million respectively. It can be easily seen therefore, that the present incidence of unemployment in non-agricultural sector is 20% of its employable man-power. If in terms of the present trends the annual increase in population is 4.5 million and if 40% of this annual growth has to be added to the unemployment figures here, the 2nd Five-Year Plan will precisely be required to provide further employmen to 17.3 million non-agricultural people in the event of its aiming at full employment within five years in the above sector. Besides this assessment of unemployment in the above planned ector, there exists a much bigger proportion of unemployed people crowding over agricultural pursuits, which constitutes a major part of the private sector in our country and which has remained mostly unplanned so long. The ratio of percentages of agricultural and non-agricultural man-power is found to be as 72 : 28. This 72% of the total employable persons that solely depend on agriculture cannot be altogether ignored and completely set apart for self-employment. These poor children of the soil should also be given their due share of consideration at the hands of the planning authorities and called upon to harness all their strength to cultivate and create more national income. The problem of unemployment, among other things, is, therefore, no mean dilemma for the economists, and it is only in the fitness of things that the question of full employment has been given the top priority in the Draft Plan-frame.

ENORMITY OF TASK

Of course, with a clever jugglery of statistics and a twist of imagination it would not be at all difficult to reverse the calamitous picture and to deduce a paper solution to this acute demand of the day. If during the next five years the total population increases to 409.7 million, the total employment will also rise up from 152 million to, say, 163 million, taking 11 million to be the quantum of new employment during the period as proposed in the plan-frame. On the basis of assuming 40% of the total population to be the number of employable persons, it conclusively proves that we shall not have more than ½% of employable strength as unemployed by the year 1961. This by no means appears to be a matter of worry since it is commonly accepted that unemployment, till it is below 3% of the total employable hands, is no threat to the advancement of a country's economy.

Such a complacent view of the situation, however, cannot be without its pitfalls, and even the best of standpoints would instantaneously collapse if we merely take into account the case of non-agricultural unemployment separately, where it has already been seen that unemployment is 20% of the employable total and that is 17 points higher to make it worse than the stipulated danger limit of 3%. Thus evidently the enormity of the task before the planners called for the best of their prudence to cope with this nation-wide problem and this they have fully taken cognisance of, in drawing up the blueprint of the next Five-Year Plan.

11 MILLION NEW JOBS

To open up adequate employment opportunities to another 11 million people within the next plan-period, the statisticians and the economists are found to have joined their hands in planning the national investment most profitably both in long-term and short-term projects of development. Of the total planned outlay of 4300 crores in the public sector, they have made the allocations in the following way :—

(1) Rs 1100 crores i.e. 26% of the total investment	towards	Mining and Industry
(2) Rs 950 crores i.e 22% of the total investment	,,	Agriculture, Irrigation and Rural Development.
(3) Rs. 1700 crores i.e. 39% of the total investment	,,	Transport, Communication Construction and Social Service.
(4) Rs 100 crores i.e. 25% of the total investment	,,	Stock-holding operations.

In private sector again where the total planned investment is proposed to be Rs. 2200 crores, the

following ceilings are given for different budgetary heads :—

(1) Rs. 400 crores i.e. 18% of the total amount	towards Industry.
(2) Rs. 200 crores i.e. 9% of the total amount	„ Agriculture and Irrigation.
(3) Rs. 100 crores i.e. 5% of the total amount	„ Electricity, Transport and Communication.
(4) Rs. 400 crores i.e. 18% of the total amount	„ Stockholding.
(5) Rs. 1100 crores i.e. 50% of the total amount	„ Construction.

Taking the expenditures together, whereof we can expect some 11 million jobs to be newly created, the employment potential in different fields may be estimated as follows :—

(1) 1.5 million in Agriculture and allied pursuits.
(2) 1.7 million in Mining and Factory Industry.
(3) 3 million in Household Industry and Construction.
(4) 2 million in Trade and Transport (excluding Railways).
(5) 0.4 million in Communication, Railways, Banks and Insurance.
(6) 2.4 million in Professions, Services and Miscellaneous activities.

The above is only a broad approximation and the impact of all-round development activities as envisaged in the proposed plan, along with the Refugee-Rehabilitation enterprises, may even lead to offer greater sources of employment, if the proposals of the planners work up to their expectations.

CONTROVERSIAL ISSUES

But here the opinions differ. There has started a good deal of controversy over a number of vital issues of the draft plan-frame and some of the disquieting questions raised are :—

(i) How far deficit financing is safe and dependable for financing the Plan ?
(ii) How to check the spiral of inflation in spite of more employment and wider circulation of money ?
(iii) How to balance the demand and supply of productions of small-scale cottage industries, medium-scale consumer goods industries and large-scale producer goods industries ?
(iv) How to bring about co-ordination between Agricultural and Industrial Sectors as also between Public and Private Sectors ?

It is no wonder that in an underdeveloped country like India where the investable surplus is too meagre and where the resources and services of people have to be commissioned only in democratic and peaceful methods, planning would entail lots of such conflicting points. But in view of our setting out for a common goal i.e. the maximum good of the maximum number of our people in the minimum possible time, for which no compromise or sacrifice can be too much for us, it can be well assumed that a comfortable measure of agreement on the main grounds of dispute can never be far off.

While leaving the physical aspects of the Plan-frame to coagulate and precipitate after necessary exposure to expert opinions, we should meanwhile focus our attention to another very important factor that has not yet received the share of emphasis it actually deserves. It is not the body of Planning that can by itself soar up to the peak of our expectations, but it is the soul — the linchpin of human mechanism — that is the driving force behind. However abstract the idea may seem at the outset, the material success of any planning can hardly be achieved without adequate spiritual preparation on the part of its constituents.

By drawing in the idea of morale within the folds of material well-being, we do not intend to underestimate the technical procedure and executive mechanism so very essential for planning activities. We fully appreciate that for successful implementation of the plan-projects, extensive industrialisation is an immediate imperative on our country and for that it is a crying need with us that technical training and scientific education must be widely provided for without any delay. We also warmly welcome the useful suggestions of necessary reforms in administrative and organisational set-ups to expedite their activities, as also of the formation of a National Labour Force to ensure the mobility of labour from one place to another according to the nature of local demands. These and many other constructive suggestions of the propounders of the plan will perhaps meet with the desired approval from all corners. But then, this must not be the be-all and end-all of their responsibilities. In their memorandum of the 10th April, 1955, the panel of economists have not only pointed out the lack of technical training in our country but have also raised their finger to the significant problem of lack of training "in disciplined or regular hours of work". Although the implications of this observation have not been clarified in details there, it is obvious that they have hinted at the importance of the training of human mind so that it may be alive and equal to the task entrusted to it.

However perfect a planning might be, it would at best give out sufficient opportunities to work, but in spite of all abundance of work and working facilities and work tools, how can the work be carried out if we have no mind to work? Without employing our mind in the faithful performance of the duties ordained by our employment, we cannot fully utilise the existing capacities of our employed man-power. It is, therefore, not by creating the millions of new jobs alone that the distress of the country will be ended, but to bring about the real wealth and welfare of the nation there must also be created a congenial mental atmosphere whereby everyone can put his heart and soul into his job.

SPIRIT OF FELLOWSHIP

To fight for economic progress of the nation on the one hand and to fight sporadically for some dispensable factional demands on the other are efforts that counteract each other and defeat the purpose of either. Non-co-operation in the form of strikes and slow-downs has become so very common these days, that inter-relation between the employers and the employees is growing to be almost inimical. Until there is an all-round attempt to root out this undermined evil and unless there is a definite improvement in the mental attitude of our personnel there will be no preventive for the disputes and discords that hamper production, disturb market and dislocate employment. Human relations play a very important role in conjoint activities and without a spirit of real fellowship, industrial enterprises where good many people have to work together for any joint production can but make a very little headway.

Even in the case of individual enterprises, the psychological factor has its own place of influence. The 12 million people now engaged in small industries like tailoring, metal works, handlooms, carpentry, tobacco manufacture etc. and in construction works, who will have a further reinforcement of 3 million during the next five years, must be skilled in their vocational training no doubt, but in the perspective of the newly emergent India, they will also be required to equip themselves with mental qualities like perseverance, alertness and endurance. Other gifts of mental discipline, placid temper and courteous demeanour, are so much demanded of the

(Continued on Page 258)

RAW MATERIALS FOR INDUSTRIAL DEVELOPMENT

By SURESH CHANDRA ROY

M.A., LL.B., J.P. President, Indian Council of Economic Affairs.

THE change in the proportion of raw materials entering into India's foreign trade has occurred during the last fifty years is a striking development to which frequent attention has been drawn by students of Indian economics. From the position of supplier of raw materials to the industrialised nations of the West, India has now come to depend on imports for some of the main raw materials necessary to feed her growing industry. During the years 1951 to 1954, out of total exports of the average annual value of Rs. 603 crores, raw materials accounted for Rs. 135 crores, less than 23 per cent., while exports of manufactured goods valued at Rs. 307 crores constituted more than fifty per cent of the total exports. This change in the pattern of exports has been accompanied by a corresponding change in imports. Imports of raw materials amounted to Rs. 201 crores out of total imports of Rs. 678 crores while manufactures amounted to Rs. 301 crores. The figures show that while imports and exports of manufactured articles were more or less equally balanced, the value of raw materials imported was one and a half times the value of the raw material exports. The figures for the year ending March 1955 are given in the following table.

	Exports		Imports	
	Value-crores of rupees	%	Value-crores of rupees	%
Food, drink & tobacco	199	34.8	116	19.0
Raw materials	118	20.5	187	30.6
Manufactured goods	250	43.7	304	49.8
Others	5	1.0	3	0.6
Total	572	100.0	610	100.0

Two factors, one positive and the other negative, have brought about this transformation in the national economy. Even under conditions of foreign domination industrial development, which was proceeding at a slow pace, received powerful impetus during the two world wars. The process has been accelerated after the attainment of independence. Industrial development has led to greater utilisation of produce and materials which were formerly exported in the unprocessed state. It has also been responsible for the increase in the value of the exports of manufactures and for the change in imports from consumer goods to producer goods. The scale of industrial development that has actually taken place cannot by itself account for the large increase in the imports of raw materials. The main contributing factor is the Partition, as a result of which raw cotton and jute which were major items of export in the past, figure in the list of India's imports.

GAPS IN RESOURCES

While the change in the categories of goods that enter into India's foreign trade reflects more economic utilisation of our resources as a result of industrialisation, and is to that extent gratifying, it also reveals wide gaps in indigenous resources of the essential materials of industry. The problem of shortage of raw materials will assume greater importance with the accelerated pace of industrialisation set by the second five-year plan. In contrast with the first plan now coming to its conclusion which was mainly concerned with the agricultural sector, the tentative draft of the second plan lays greater stress on industry. Its twin objective is to provide additional employment by the creation of twelve million new jobs, mainly through the development of home industries, and to lay the basis of heavy industry which will ensure a rapid pace of industrial expansion in the future. Even during the first plan India experienced acute shortages of some essential materials, especially during the Korean War, when stockpiling by the U.S.A. created a world-wide shortage of strategic materials. Industrialisation under the second plan will make progressively greater demands on raw materials.

The publication of the draft plan frame has touched off many controversies. But the discussions have been mainly concerned with the adequacy or otherwise of the targets and allocations. When resources are mentioned they are thought of in terms of money or of the quantum of savings available for investment. Not much attention has been devoted, at any rate in public discussions, to the material resources necessary for the attainment of the planned targets or of the extent to which the requirements can be met from indigenous production. The actual position of many essential materials is such that it leaves no room for the complacent assumption that, once finance could be found and technical organisation set up, raw materials will

be forthcoming in abundant measure. The problem of maintaining a regular supply of raw materials calls for as much careful and detailed planning as the various projects of industrial development. Even a small shortage or a temporary interruption of imported supplies will upset the financial estimates of the plan and throw the entire programme out of gear.

INDUSTRIAL PLANNING

For a country like India, which has neither the Imperial power which enabled Britain in the nineteenth century to control the resources of a vast empire or the incomparable economic strength of the U.S.A. which enables it to command the resources of the entire world regardless of price, Industrial Planning must of necessity be based mainly, if not exclusively, on the effective utilisation of resources available within the country. The plan must be designed to secure

(i) The optimum utilisation of the resources of raw material of which the country has a surplus;

(ii) Strict economy in the use of materials in which the country is in deficit, side by side with measures to meet the deficit by increased production or discovery of new sources of supply or of substitutes.

The plan for industry must be supplemented by a Plan for foreign trade which will deploy the country's exportable surplus of raw materials so as to further the objectives of the plan, by securing in return a steady supply of the imports of essential raw materials not produced in the country.

The soundness of any plan for industry will, therefore, have to be judged in the light of a detailed evaluation of the raw material resources of the country. The supply position of each item must be investigated in detail and the result correlated with the targets for the various manufacturing industries which use that material so as to evolve a workable plan that will really add to the wealth of the country. The cursory survey of India's raw materials position that is attempted here is indicative rather than exhaustive and is intended to draw attention to this important aspect of industrial planning rather than to serve as a comprehensive evaluation.

The main raw materials of industry can be conveniently classified under the following heads: (1) Metals and metallic ores; (2) Textile fibres; (3) Chemicals; (4) Fuel; and a few other individual items like rubber, mica, sulphur which do not come under the categories mentioned above.

METALS AND ORES

Iron and Iron ore: Among the metals iron is easily the first in order of importance. India is well placed in respect of abundant supplies of high grade iron ore. We have also a well established iron and steel industry consisting at present of three units. Three more units will be established in the next few years. The magnitude of India's iron ore reserves, of which only a very small fraction is utilised at present, is the main justification for the emphasis placed on the expansion of the iron and steel industry in the Second Five-Year Plan which, however, is criticised in some quarters as excessive in relation to our financial resources. Current requirements of steel are estimated at 2.5 million tons per year against production which reached 1.12 million tons in 1954. During 1954-55 India imported 366,983 tons of iron and steel of the value of Rs. 27.91 crores. Internal demand for iron and steel, it is estimated, will be of the order of six million tons by 1960-61. The target for iron and steel in the Second Five-Year Plan has been fixed at 1.8 million tons of pig iron for foundries and 5 million tons of finished steel. A considerable proportion of imports consists of special grades and alloy steels which are not now manufactured in the country. It is essential, therefore, that expansion plans for the iron and steel industry should provide for the production of special steels and alloys which are now imported. In this context it is satisfactory to note that the Planning Commission has recently sanctioned a Rs. 12-crore scheme for stepping up the output of steel at Bhadravati from 25,000 to 100,000 tons including stainless, tool and alloy special steel.

Apart from iron ore, the only important metallic ores of which India has adequate resources sufficient to leave a surplus after meeting current demand of Indian industry are manganese and aluminium. In respect of other metals like copper, lead, zinc, tin, nickel etc., indigenous resources are either deficient or non-existent. This fact should be kept in the forefront in planning for industrial development.

Manganese: India is the largest world exporter of manganese. We cannot derive much satisfaction from this distinction when we consider that the entire output of manganese ore is at present being exported. Very little of it is processed within the country. The needs of Indian industry for the processed metal are met by imports. The quantity and value of manganese ore exports for the last three years are given below:

	Tons	Rs. - Crores
1952-53	14,39,678	21.78
1953-54	15,67,949	24.23
1954-55	9,44,877	12.43

Most of the world production of manganese ore is used by the iron and steel industry in the form of ferro-manganese. 30 lbs. of ferro-manganese are required for making one ton of steel. Manufacture of five million tons of steel, which is the target fixed in the Second Five Year Plan will require 67,000 tons of ferro-manganese. This will cost at current import prices about Rs. 6 crores. During 1954-55 India imported 3567 tons of ferro-manganese valued at Rs. 33.37 lakhs. The production of ferro-manganese in India at present is in an incipient stage. Some quantity is produced by Tatas in blast furnaces for their own use. The Bhadravati Iron and Steel works have also produced ferro-manganese in electric furnace on an experimental basis. The most promising line of development for manganese is to convert the ore into ferro-manganese both for domestic use and for export of the surplus in place of the crude ore. In this connection it is gratifying to learn that a private concern has come forward to start a ferro-manganese factory costing Rs. 1.5 crores at Srikakulam (Andhra). The factory will have total capacity to produce 30,000 tons of ferro-manganese per annum.

THE VERSATILE METAL

Aluminium: Aluminium is a versatile metal with a wide range of use, from the manufacture of decorative panels and utensils to aircraft and in shipbuilding. In India aluminium is mostly used for domestic utensils for which it is not quite suitable. India has extensive deposits of the raw material,

IN THE BLACK MAN'S COUNTRY

By Dr. SUNITI KUMAR CHATTERJEE

Chairman, West Bengal Legislative Council

MY plane, in the B.O.A.C. service, left Tripoli in Libya after 12 in the night, and crossing the Sahara we arrived at Kano in the northern section of Nigeria, at about 7-30 in the morning. Of course, during the night, one cannot see anything from plane and one simply passes over vast spaces of the country. When the plane flies at a sufficiently high altitude, it passes through clouds which prevent one from seeing the earth below even during day times and even when one is lucky in getting a side seat from where one could have a look at the outside world through the window.

At Kano the plane stopped for about half an hour and we could get a shave, and then we had enough time to post a few letters to Lagos, the capital of Nigeria, addressed to African friends whose acquaintance I had made before. Kano is a town which has got its special cachet. It is in the Black Man's Country, but here the Black Men have been profoundly influenced by the Arab and Berber world — the world of Islam.

"ANOTHER PAKISTAN IN MAKING"?

The local people who speak the Hausa language —one of the most important, even international, species of the African continent—are now Muslims, although apart from the Mallams or Muslim priests, their Islam sits rather lightly on them. In their life and notions still a great many relics and ideas of their pre-Muslim pagan religion and thought persist. The people of the Northern Province of Nigeria are rather backward in education, and their Muslim leaders, have up till now been resisting English education, the full benefit of which has been received by the peoples of the southern area, and those in the western and eastern provinces of Nigeria—men of the Yoruba, Ibgo, Ibibio, Ijaw and other species.

In the future history of Nigeria, these diversities of attitude among the people of the Northern Province and those of the two southern provinces will lead to complications, and may in all probability bring about a division of the country. Another Pakistan appears to be in the making in Northern Algeria.

In the little stationery and newspaper shop (which was also combined with a post office) at the airport at Kano, the assistant in charge was an African from the South—not a local man. He was a young man looking like an ungainly lad, a black Christian from Ibgo country. He was ignorant but at the same time quite a fussy individual, who had to consult the postal directory for finding out how much an air-letter would cost from Kano to Lagos, which were both in the same colony; and the air of importance which he assumed did not conceal his inefficiency or want of knowledge in such a simple matter.

There were several Hausa policemen in attendance, but they did not seem very smart or military-like, compared with our Bhojpuri or Punjabi policemen.

"WHITE MAN'S GRAVE"

We boarded the plane, and immediately after we took off we received from our air-hostess a packet in the form of a flat paper-board with a tissue-paper cover, holding 10 tablets of Paludrine. There was a caption at the top of this packet—"the B. O. A. C. takes good care of you : Take one tablet every evening with a glass of cold water to avoid Malaria." This gave me an idea of precaution that is necessary for the white men and other persons not accustomed to the climate.

A Russian Tsar had once said that Russia had two very great Generals—General January and General February—who always made short work of foreign invaders (like Napoleon and his French army) who found themselves on Russian soil. The severity of Russian winter was a great asset in keeping away foreign aggressors. So too in Bengal our rainy season, during the months of Asharh and Sravan, used to make it exceedingly difficult for North Indian invading armies on our terrain.

For the various African peoples of West Africa the very climate has been a great asset. Fortunately for them, the tropical diseases which have been found there and from which local people have acquired an immunity proved to be fatal for the Europeans sojourning there for long. The country acquired an evil reputation among the Europeans as "the White Man's Grave." This has prevented White colonisation in the Black Man's country in West Africa.

Consequently, the people have no foreign intruders to sit tight over them. Had it not been this,—there were other factors too, including, it must be said, the presence of a long series of able and sympathetic British administrators in the British West African colonies,—the plight of the local Africans would have been as bad as in South Africa and Rhodesia and Tanganyika and Kenya. Europeans there must take special precautions to resist the climate, and tablets and injections are the rule. Too much Paludrine gives quite an unhealthy yellow complexion to a great many Europeans that I have seen, and it is only natural that the B. O. A. C. Air

Line people would underline the necessity of taking great care for their health to the European and other foreign passengers coming to West Africa.

LITTLE FRIEND

In our plane there was a number of British children who were sent home to Britain for school, and they were coming to various places in West Africa to spend two months of their vacation with their parents. Two little girls thought it a great fun to help the Air Hostess when she was serving refreshments to the passengers and they incidentally appreciated very much the little packets of sweets which many of the passengers, who received them from the catering service of the plane, presented these little girls with. There was not that feeling of stand-offishness among the little white boys and girls, and I found how a little British boy was speaking in perfect friendship and sociability with a big burly African gentleman, a Muslim (from his long robe and red turboosh or Fez cap). They were chattering merrily in English, and the very affectionate way in which the African gentleman was regarding his little friend and fellow-passenger reminded one of a similar situation in Rabindranath's story, *Kabuliwala*.

We landed at Accra, capital of Gold Coast, at about 10-30 A.M. There were the usually fussy scenes at disembarkation, and the whole scene was quite new and exotic and "oriental," even for an Indian. The smart airport officers and policemen were all black Africans, and their white teeth and the whites of their eyes flashed in a spirit of friendliness and good humour in their jet-black faces, and they were moving about and looking after the passengers. Quite a lot of people were gathered there, some in uniforms and others in a medley of European and native African dress, but it appeared that by far the larger number was dressed in the distinctive dress of the Akan people of Gold Coast and of the adjacent areas. The men wore a big piece of unsewn cloth, generally in gorgeous colours, in the style of a Roman toga. The cloth covered the left shoulder and exposed the right shoulder and right arm, and the exposed black or bronze skin showed wonderfully athletic types of physique, in the midst of multi-coloured garments with the most refreshing colour schemes. They had sandals on their feet, and every one seemed to move with dignity of kings—I should say of Roman Senators.

At the station I found Raja Rameswara Rao, Commissioner for India in Gold Coast and Nigeria, accompanied by one of the secretaries of the Indian Establishment at Accra, Sri Narendra Singh, and the head assistant of the office, Sri Gopala Nayar, to receive me at the airport. Through the courtesy of our Foreign Affairs Ministry in New Delhi, intimation was sent to the Commissioner of my forthcoming visit, and I had also sent him a wire from Tripoli. Raja Sri Rameswara Rao and Sri Singh were fine types of Indian aristocracy. They were full of dignity, and they were highly cultured gentlemen with family traditions which take us back to Indian history of pre-Muslim times. Raja Sri Rao is one of the first Jagirdars of Hyderabad, and he claims descent from Vijayanagara line of Emperors. Highly educated, he has been selected to represent India as a diplomat in West Africa, a country which is full of problems of all sorts and where a person of culture and vision, innate goodness and sympathy for the entire human race is required. During my week's stay in Gold Coast, it was a most pleasant experience to know intimately Raja Sri Rao and his charming wife, and also to form the acquaintance of Sri Narendra Singh. This gentleman is the scion of a Rajput ruling family from Hamipur State in Madhya Bharat.

COURTESY EVERYWHERE

I had no difficulty in finishing the formalities of passport and custom examination, particularly when the latter was waived in my case as a visitor from India known to the popular Indian Commissioner. There were Gold Coast officials, and some Ministers and others, also in native garb, happened to be present at the airport, and I was introduced to one or two of them; and I found nothing but perfect courtesy everywhere. We came out of the station, and our luggage was looked after by Sri Gopala Nayar who, as his name shows, hailed from Kerala, and was most efficient and courteous. Outside the station there was quite a crowd, and it seemed that some Ashanti notability (the Ashantis are most important section of the Akan people, who are numerically most prominent in Gold Coast) had just arrived, and his friends had come to give him a rousing reception. In the crowd I found an Ashanti gentleman dressed in a yellow or saffron dress, and he looked exactly like dark-skinned Hinayana Buddhist monk. Only he had what Buddhist monks in the southern Buddhist countries do not have, namely, a head-band in the same saffron colour to match.

There were representatives of the Press, and bulbs were flashed and photos taken. In the local English paper the *Daily Graphic* of the day, there was already news of my coming and our pictures were published later. I was taken from the station through a suburban area of the town to the residence of Raja Sri Rao. There I met the Rani Sahiba, Srimati Santa Rao, and their little daughter, Devi. We could at once see it was the residence of a man of high culture. On the walls of the hall original paintings of Basohli and Hill Rajput Schools were hung, and in a corner of the sitting room there was a very distinctive library of books relating mainly to Africa and to Art, both Indian and foreign. I was made a guest of the Gold Coast Government during my first stay for 3 days in Accra. It was arranged by the Raja Sahib that I was to stay at the State Guest House, but was to have my meals with him and his family. The Guest House was within a stone's throw from the Commissioner's residence.

I was given a tentative programme for the whole of my stay in Gold Coast and Nigeria. After my arrival at Accra in the morning of the 28th of July, 1954, I was to leave and arrive at Lagos, the capital of Nigeria, on the 3rd August. From Accra my programme had been prepared, and I was to come to Kumasi, centre of the Ashanti people and of most of its traditions and culture and art, on 31st July for a 2-day stay.

AT STATE GUEST HOUSE

After coffee with Raja Rao in his bungalow, I was taken to the State Guest House. It was, like most of the houses near about, made mainly of wood, with wooden floors and walls, but quite upto-date with all amenities. I soon made friends with servants in the Guest House, and I got to know a

(Continued on Page 266)

WEST BENGAL'S SECOND FIVE-YEAR PLAN

By TARUN KANTI GHOSH
Deputy Development Minister, West Bengal

A planned economy in a democratic set-up at times appeared to be a paradox. When India's First Five-Year Plan for the development of the country was announced, involving an expenditure of Rs. 2,249 crores, it was considered unrealistic and impracticable both in attaining the targets and also in securing resources to finance it. But the striking progress made during the plan period in various sectors have shown that planned development is possible with the determination to accomplish it and above all with the active co-operation and consent of the people.

Considerable progress has been made in West Bengal by implementing the State's First Five-Year Plan. The target of expenditure in various nation-building activities which was estimated at the outset at Rs. 69 crores, 9 lakhs and 60 thousand, had to be raised to Rs. 77 crores, 32 lakhs and 53 thousand owing to the inclusion of a few more projects in the original plan and owing to some adjustments in the original plan. The progress achieved in the First Plan, though considerable, has not yet been able to remove the ills from which this truncated State of West Bengal has been suffering since Partition. We have not yet been able to rebuild the State according to our needs and aspiration and more concentrated efforts have to be made to revitalise the economy of the State. That is why this State has prepared the blueprint of a more ambitious and elaborate plan of development better known as the State's Second Five-Year Plan to be implemented during 1956-61.

EMPHASIS ON RURAL ECONOMY

The basic principle on which West Bengal's Second Five-Year Plan has been drawn up is that it aims at a balanced growth of the various aspects of the life of the people of the State. The State has not concentrated, therefore, on economic planning only but also attempts a comprehensive coverage including health, education, housing and other Social Welfare measures. To build a sound national economy, we cannot afford to rebuild one sector of the economy neglecting the other. Our object is, therefore, a balanced growth of development of all the sectors of our economy so that the entire structure may receive the impetus of a healthy growth.

The Chief Minister of the State, Dr. B. C. Roy, has made it clear on a number of occasions that all planning should start from the bottom. Our first task would be to revitalise the moribund rural economy of the State on which the bulk of our population depends. The State's economy can be durable on a consolidated base—a sound rural economy. West Bengal's Second Five-Year Plan has been formulated with greater emphasis on the need of developing our rural economy during the Second Plan period. But this does not mean that we have under-estimated the need of developing other sectors. Due consideration has been paid in extending and improving the social services like improving people's health, extending educational facilities etc.

TARGET OF RS. 255 CRORES

The Planning Commission of India have recently approved the State's Second Five-Year Plan in principle. Excluding the Ganga Barrage schemes to be executed by the Development Corporation, and certain other schemes like Urban water supply and Sunderban Embankment which have been reserved for separate consideration, and excluding the schemes for refugee rehabilitation, to be financed by the Government of India, West Bengal's total target of expenditure comes to Rs. 255 crores.

The Ganga Barrage which would cost Rs. 30 crores in the next five years will be financed by the Government of India.

The paramount need to-day is the improvement of agriculture in the State. The Second Five-Year Plan proposes to raise and distribute adequate improved seeds, purchase and distribute fertilisers and fertiliser mixtures. It is also proposed to distribute organic manures like bonemeal, sludge and town-compost to the needy cultivators in order that they can raise the level of their yield. Development of agriculture would also depend on adequate irrigation facilities. A number of small irrigation and drainage schemes would be taken up during the Second Plan period. To encourage pump irrigation, it has also been tentatively proposed to distribute about 200 pumping plants per year during the Second Plan period. The cultivators would be expected to pay 50% of the plant at the time of taking delivery and the balance has to be paid within a year from the date of supply. Among other measures proposed to be taken for developing agriculture in the State, mention may be made of mechanical reclamation and cultivation of land, plant protection, soil conservation, agricultural marketing, education and research.

ANIMAL HUSBANDRY AND FOREST

The programme for improving the Animal Husbandry in the State comprises in upgrading the cattle. For this purpose, artificial insemination services would be continued in the existing centres in the State. As the availability of sufficient fodder is an essential factor for improvement of the livestock, a

large number of improved fodder production demonstration plots would be established all over the State.

To improve the milk supply in the State, a scheme named Greater Calcutta Milk Supply Scheme has been included in the Second Plan. It aims at abolishing Khatals in the city and to colonise the milk animals and their owners in rural areas.

The schemes under the conservation and development of Forests comprise in further afforestation of 50,000 acres of waste lands which are not suitable for agriculture, creation of new forests and industrial plantations in different parts of the State for prevention of soil erosion and supply of raw materials to paper mills and match factories. Besides, provision has also been made for creating shelter belts by means of afforestation along the sea coast to protect cultivable land along the coast against damage by sand, strong winds and tidal bores. Among the other important schemes, mention may be made of creating teak plantations, improvement of communication facilities in the forest areas and various welfare activities for the labourers working in forests.

VILLAGE CREDIT AND FISHERIES

The economic life of rural Bengal can never be improved unless the cultivators are rescued from the clutches of the village money lenders. In order that they can depend on their own pulled resources, it is necessary to urge them to take to co-operation. In West Bengal's Second Five-Year Plan, a number of schemes have been adopted which would aim at an integrated development of rural credit on co-operative lines.

In order to further develop the fisheries in the State, 11 different schemes excluding the Deep Sea Fishing Schemes are proposed to be implemented during the Second Plan period. It is proposed to increase the area under pisciculture by about 1 lakh acres through (a) financial help in the form of short, medium and long-term loans, (b) assisting in production and distribution of fry and fingerlings at reasonable prices, (c) training fishermen in improved method of pisciculture and (d) research for better production.

The works started in C.D.P. and N.E.S. Blocks are proposed to be carried through the Second Plan period. Of the 243 rural thanas in West Bengal, 61 thanas would be covered by the end of the First Plan period. Work will start in the remaining 181 thanas during the Second Plan period.

SCHEMES FOR IRRIGATION

Irrigation was given a high priority in our First Five-Year Plan so that State's agriculture had not to depend on uncertainties of rainfall. Out of 118 schemes of the First Five-Year Plan with an estimated cost of Rs. 15.38 crores, most of the schemes will be completed within the Plan period leaving 3 to be completed by the first 3 months of 1956-57. In the Second Plan, altogether 87 schemes are proposed to be executed to extend the irrigation facilities in drought areas. Besides, there are 3 more schemes which had partly been executed during the Five-Year Plan period and to be completed during the Second Plan period. Before the commencement of the execution of the First Five-Year Plan, the total irrigated area in West Bengal was 24,70,700 acres. With the completion of the schemes under the First Five-Year Plan, additional 15,82,800 acres would be brought under irrigation facilities. When all the schemes under the Second Five-Year Plan would be executed, a substantial portion of the potentially culturable lands would be brought under irrigation.

PROGRESS IN POWER DEVELOPMENT

Considerable progress has been made in the development of power in the State during the First Plan period. 15 schemes were taken up during that period and power is now being supplied in bulk and also in retail through a grid of 197 miles of transmission lines. The Second Plan for power projects consists of 11 schemes proposed by the West Bengal State Electricity Board. The objective of these schemes are expansion of the scope of the schemes already started under the First Plan and extension of power facilities to wider areas of the State by executing new schemes.

The need of developing the decadent cottage industries of the State is of paramount importance because the rural economy can never be revitalised without an established cottage industry. The intolerable pressure of population on land has to be minimised to save agriculture from further deterioration and this pre-supposes revival of cottage industries offering subsidiary occupation in villages. Under the First Five-Year Plan, a number of schemes were successfully implemented in promoting industries like mat, khadi, gur, hand-made paper etc. In preparing the Second Five-Year Plan, we worked on the principle of "keeping the eye on the village." Work started under the First Five-Year Plan would be carried through and more new schemes to promote ghani, coirs, pottery, blacksmithy, ceramics and such other cottage industries would be executed during the Second Plan period.

ROADS AND ROAD TRANSPORT

The development of roads and road transport has also been given priority in our Second Five-Year Plan. The Plan for the first five-year included development of 380 miles of new State highways, 1617 miles of district roads and 196 miles of village roads apart from the development of National Highways undertaken from the Central Roads Fund. It will be possible to undertake a larger programme of works for the Second Plan with reasonable augmentation of existing resources, both technical and material. The programme envisages works on 3,248 miles of roads, 1,155 miles of which are being carried over from the First Plan programme. Besides, the Plan also envisages improvement of 2,000 miles of existing municipal roads during the Second Plan period.

The State transport services for Calcutta will be extended in the Second Plan period 552 private buses operating on 26 routes in the City will be replaced by State buses by the end of the Second Plan period.

DEVELOPMENT OF EDUCATION

West Bengal's Second Five-Year Plan on Education aims at a balanced development of various aspects of education particularly those which could

(Continued on Page 272)

INDO-CHINA PAST & PRESENT

By Dr. KALIDAS NAG, D.Litt. (Paris)

NEARLY two thousand years ago, the Greek Geographer Ptolemy significantly named the area, now known as Indo-China, to be "Trans-Gangetic" territories. So the *Artha-Shastra* of Kautilya, completed before Ptolemy, shows detailed knowledge of the Indians relating to Suvarnabhumi and the *Ramayana* also refers to Suvarna-dwipa conclusively proved by Dr. R. C. Majumdar and other historians to be the general name for Sumatra, Java etc. of the group of islands under Insulindia or Island India. No wonder then that Ptolemy, in 150 A.D., transcribed from Sanskrit into Greek the name of Java as 'Java-diu' or 'Sava-diu', showing that the maritime expansion of the Indians up to Indo-China and Indonesia were known to the Greco-Roman traders and geographers.

Subarna-bhumi or Burma was known to the Ashokan missionaries (3rd century B.C.) and thence Buddhism and Brahmanism gradually entered, by the land and sea routes, the zones known as (1) Siam or Thailand, (2) Kamboj or land of the Khmers, (3) Laos, (4) Champa or Cham country (Viet-Nam). Thus "Hinduized" kingdoms flourished in these areas for over one thousand years (4th to 14th century A.D.), sapped one another's strength through mutual fights and ultimately fell victims to Western Colonial Powers.

Burma was till 1945, a British territory; Siam, theoretically free, was at first under French influence, but now, virtually an American Protectorate. America goes on extending her influence into Cambodia, south Laos and south Viet-Nam, provoking counter-groupings in the Communist-influenced Pathet Laos, north Viet-Nam and the infiltrated zones of Cambodia and Cochin China.

Thus France, once dominating the whole of Indo-China, is forced gradually to retire or submit to American leadership. So the British, dominating once the major sea-routes and ports from Rangoon and Singapore to Hong Kong, are accepting their colonial zones restricted to Malaya, and north Borneo under one High Commissioner posted at Singapore. Recognizing promptly the Chinese People's Republic, the British have saved so far their only prosperous port in the Far East — Hong Kong. The Communists are still giving headache to the British planters and rulers of Malaya for the zones are infiltrated by the Soviet-inspired Chinese passing through Burma and Siam which jointly form the northern boundaries of Malaya. No wonder then that the Western Powers are desperately trying to maintain the *status quo* by strengthening their economic and military resources in this troubled area, and raising a bulwark against the communist pressure from the north by building SEADO (Asian counterpart of NATO), involving Pakistan, Siam, South Indo-China and the Philippines. The Western Manila Pact provoked movements for Asian solidarity and freedom as demonstrated by the Bandung Conference which opened up the larger perspective of Afro-Asian security which necessitates regrouping of nations on the Indian Ocean basin.

The Japanese, by defeating, for a time, most of the Western colonial powers, indirectly helped the freedom movement in South East Asia. That movement is working out naturally in the progressive emergence of free and quasi-free States like Indonesia (freed from the Dutch) and the Philippines (liberated by the U.S.A.). The colonial Malaya is already offered self-government by the British, and the Indo-China to-day is a vast wreckage of the over-centralized French colonial empire.

I visited Indo-China in 1924 and also in 1939; but little did I suspect that the apparently solid structure of French imperialism there would collapse so rapidly. From British Hong Kong I travelled through Hai-Phong to Hanoi, the seat of the French Government, and visited their major Research Institute — (Ecole Francaise d' Extreme Orient) the French School of the Far East. The French were badly defeated by the Viet-minh soldiers of Ho Chi Minh who was recently given grand receptions in Peking and Moscow. The French lost the whole of North Indo-China and are struggling desperately, with American aid, to maintain some fragments of South Viet-Nam, just as the defeated Dutch are frantically clinging to Western New Guinea claimed as Irian by the Government of Free Indonesia. Cambodia, Laos, Siam etc. are in the "melting pot" in this critical age of transition from Western colonialism to Asian self-sufficiency.

VIET-NAM : ITS PEOPLE & CULTURE

This vast area is mostly inhabited by the Annamites of Chinese lineage, who are subdivided into three groups :—

(*a*) North Viet-Nam, formerly known as Tonking, with an area of 115,700 sq. miles and a population of about 10 million souls.

(*b*) Central Viet-Nam hitherto called Annam : area 6000 sq. miles with a population of 7 millions.

(*c*) South Viet-Nam or Cochin China : area — 26,476 sq. miles : Population — 5,628,472.

(*d*) Ethnic minorities are represented by non-Annamite races like the Thai, Meo and Lolo tribes in Tongking. In South Annam there are primitive races like the Moi (in the hill tracts) enjoying special status like the Tribals of India.

French intervention in Indo-China started as early as 1787 under the corrupt French monarchy swept away by the Revolution of 1789. After a century we find a French Protectorate over Annam rati-

UNITY OF INDIAN LITERATURE

By PRIYARANJAN SEN, M.A., P.R.S., Kabyatirtha

INDIA is a sub-continent; nay, it is something more. "What is there in the world which we do not find in India ?"

It is an exaggerated idea, perhaps, but it rightly emphasises the variety of interests, of phenomena, of ideas, that make up the background of Indian life.

Let us just think of the Puja season, fast approaching. The whole of India responds to the call of the Puja; there is a wave of festivity, an atmosphere of joy, an elation of the spirit, almost a spiritual experience. We cannot treat it only as a festival for Hindus only; it is a national holiday mood. For a vast country like India, it is necessary to have bonds that unify, that cement the union, that link together the different regions, distant from one another. Local variations there must be, from the very nature of things, but when we look at the similarities, the differences tend to disappear. It is good for us to look at the similarities, if only to check the fissiparous tendencies that have been our bane in the past. There are many threads running through the web of Indian life, and literature is one of them.

But is India one ? There are so many different languages. We were told in the past by our friends of the West that we were not a nation and we could never be one, because of the many languages that are spoken, the many scripts that are written, the many literatures that are produced in the country. The idea was unacceptable to us; we felt we *were* a nation. And after a grim struggle, we feel that we have been welded into a nation in spite of the bogey of "250 languages and more" that have been counted. The first half of the twentieth century has seen us fiercely battling to prove our claim of being one nation. Even now, the language question is no doubt a thorn at our side. For the teacher, it is a source of endless worry. How many languages has the young learner to pick up ? The mother-tongue has no doubt the first claim, and then the regional language. Then comes the Hindi language, the *Rashtrabhasa*, to bind the different States of India together, to solve the one language problem, to be used as common currency between State and State. But, then, it is necessary, so thinks the educationist, to undergo also the discipline imposed in learning a classical language like Sanskrit or Persian. Finally, there is no questioning the utility (not futility, whatever the extreme nationalist might say) of learning English — the key to the world's knowledge and the vast treasury of books containing the world's wisdom. Does it mean the picking up of five languages ? As many as five ? No wonder the strain is heavy and the young hopefuls are bent down by the load of knowledge they have to carry.

DIFFERENCES ONLY APPARENT

But let us take courage; the differences are more apparent than real. At any rate, in spite of them, Sir Asutosh organized the study of Modern Indian Languages in the University of Calcutta about 40 years ago. He did not neglect the four main languages of the South — Tamil, Telugu, Malayalam and Kanarese — and he made arrangements also for teaching the languages of the North — Bengali, Assamese, Maithili, Oriya, Gujrati and Urdu. Sir Asutosh saw that the study of the modern languages of India would not be successful, if it was not based on the study of Pali, Prakrit, Persian or Pushtu out of which they had sprung. He called it the study of national literature, and encouraged it by organizing, as I have said, a course of studies for the M.A. Examination which made it compulsory for a candidate to study two modern languages, one main, the other subsidiary, as well as two basic languages. It was his dream that some day there would be available a band of scholars who would introduce one language to another, say Urdu to Assamese or Gujrati to Oriya, who could serve as liaison officers in a cultural exchange so that, after a few years, researches into their mutual relations would be easily undertaken. He offered stipends to students for each language, and teachers for these languages were available in the University of Calcutta.

Sir Asutosh was not alone in his struggle. Ten years or a little more before, Justice Sarada Charan Mitra of Calcutta High Court had started *Ekalipivistara Parishad* and a paper *Devanagar* which used to publish articles written in the different languages of India in Devanagar type. Kanarese, Tamil, Urdu, Gujrati articles by prominent writers were transliterated into Nagri. At least one impediment — the impediment of script — was removed, and the idea of one language, one script, one literature was kept in view.

The *Hans*, a monthly magazine, published from Banaras, edited by the gifted writer, Munshi Premchand was a venture on similar lines. Even since Mahatmaji had entered the arena of Indian politics, he was keen on the propagation of the State Language, one language which would serve as the unifying link between one province of India and another. He had chosen Hindi, and later on made it clear that this Hindi was to be recognised as written in two scripts and that it was to be a language freed from the dominance either of Sanskrit or Persian — it was to be the language of the common man. A worker was available in Munshi Premchand, who had resigned his Government job and turned a nationalist working on the cultural side. He thus came to bring out a paper, the *Hans*, — "the magazine working for a commonwealth of literatures of India," under the editorship of Karanjalal Munshi and himself, — which would make available through Hindi the achievements of other Indian literatures.

PREMCHAND'S LETTERS

I have in my possession two letters written by Premchand. I offer no excuse for quoting them below in extenso :

I

7th Dec. 1935.

Dear Sir,

Sherlock Holmes

The HOUND OF THE BASKERVILLES

By

Sir Arthur Conan Doyle

"You know my methods," and not one in a million book-lovers mistakes as to whose methods, for there is one Sherlock Holmes, creation of Sir Arthur Conan Doyle. "The Hound of The Baskervilles" is one of the startling demonstrations of his "methods" by which he unravels the mysteries of a lethal legend of a flaming hell-hound haunting an ancient baronial hall. Narrated by Dr. Watson, the hair-raising and breath-taking sequences also give a good account of the narrator himself.

(Published by arrangement with the estate of Sir Arthur Conan Doyle. World rights reserved by King Features Syndicate, inc.)

CHAPTER–I

HERLOCK Holmes, who was usually very late in the mornings, save upon those not infrequent occasions when he was up all night, was seated at the breakfast table. I stood upon the hearth-rug and picked up the stick which our visitor had left behind him the night before. It was a fine, thick piece of wood, bulbous-headed, of the sort which is known as a "Penang lawyer." Just under the head was a broad silver band, nearly an inch across. "To James Mortimer, M.R.C.S., from his friends of the C.C.H.," was engraved upon it, with the date "1884."

"Well, Watson, what do you make of it ?"

Holmes was sitting with his back to me, and I had given him no sign of my occupation. "How did you know what I was doing ? I believe you have eyes in the back of your head."

"I have, at least, a well-polished, silver-plated coffee-pot in front of me," said he. "But tell me, Watson, what do you make of our visitor's stick ? Since we have been so unfortunate as to miss him and have no notion of his errand, this accidental souvenir becomes of importance. Let me hear you reconstruct the man by an examination of it."

"I think", said I, following as far as I could the methods of my companion, "that Dr. Mortimer is a successful, elderly medical man, well-esteemed, since those who know him give him this mark of their appreciation."

"Good !" said Holmes. "Excellent !"

"I think also that the probability is in favour of his being a country practitioner who does a great deal of his visiting on foot."

"Why so ?"

"Because this stick, though originally a very handsome one, has been so knocked about that I can hardly imagine a town practitioner carrying it."

"Perfectly sound !" said Holmes.

"And then again, there is the 'friends of the C.C.H.' I should guess that to be the Something Hunt, the local hunt to whose members he has possibly given some surgical assistance."

"Really, Watson, you excel yourself," said Holmes, pushing back his chair and lighting a cigarette. "I am bound to say that in all the accounts which you have been so good as to give of my own small achievements you have habitually underrated your own abilities. It may be that you are not yourself luminous, but you are a conductor of light. Some people without possessing genius have a remarkable power of stimulating it. I confess, my dear fellow, that I am very much in your debt."

He had never said as much before, and I must admit that his words gave me keen pleasure. He now took the stick from my hands and examined it for a few minutes with his naked eyes. Then with an expression of interest he laid down his cigarette, and, carrying the cane to the window, he looked over it again with a convex lens.

"Interesting, though elementary," said he as he returned to his favourite corner of the settee. "There are certainly one or two indications upon the stick. It gives us the basis for several deductions."

"Has anything escaped me ?" I asked with some self-importance.

"I am afraid, my dear Watson, that most of your conclusions were erroneous. When I said that you stimulated me I meant, to be frank, that in noting your fallacies I was occasionally guided towards the truth. Not that you are entirely wrong in this instance. The man is certainly a country practitioner. And he walks a good deal."

"Then I was right."

"To that extent."

"But that was all."

"No, no, my dear Watson, not all — by no means all. I would suggest, for example, that a presentation to a doctor is more likely to come from a hospital than from a hunt, and that when the initials 'C.C.' are placed before that hospital the words 'Charing Cross' very naturally suggest themselves."

"Well, then, supposing that 'C.C.H.' does stand for 'Charing Cross Hospital,' what further inferences may we draw ?"

"Do none suggest themselves ? You know my methods. Apply them !"

"I can only think of the obvious conclusion that the man has practised in town before going to the country."

"I think that we might venture a little farther than this. Look at it in this light. On what occasion would it be most probable that such a presentation would be made ? When would his friends unite to give him a pledge of their good will ? Obviously at the moment when Dr. Mortimer withdrew from the service of the hospital in order to start in practice for himself. We know there has been a presentation. We believe there has been a change from a town hospital to a country practice. Is it, then, stretching our inference too far to say that the presentation was on the occasion of the change ?"

"It certainly seems probable."

"Now, you will observe that he could not have been on the staff of the hospital since only a man well-established in a London practice could hold such a position, and such a one would not drift into the country. What was he, then ? If he was in the hospital and yet not on the staff he could only have been a house-surgeon or a house-physician—little more than a senior student. And he left five years ago—the date is on the stick. So your grave, middle-aged family practitioner vanishes into thin air, my dear Watson, and there emerges a young fellow, under thirty, amiable, unambitious, absent-minded, and the possessor of a favourite dog, which I should describe roughly as being larger than a terrier and smaller than a mastiff."

I laughed incredulously as Sherlock Holmes leaned back in his settee. "As to the latter part, I have no means of checking you," said I, "but at least it is not difficult to find out a few particulars about the man's age and professional career." From my small medical shelf I took down the Medical

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

Directory and turned up the name. There were several Mortimers, but only one who could be our visitor. I read his record aloud :

"Mortimer, James, M.R.C.S., 1882, Grimpen, Dartmoor, Devon. House surgeon, from 1882 to1884, at Charing Cross Hospital. Winner of the Jackson prize for Comparative Pathology, with essay entitled 'Is Disease a Reversion ?' Corresponding member of the Swedish Pathological Society. Author of 'Some Freaks of Atavism' (Lancet, 1882). 'Do We Progress ?' (Journal of Psychology, March, 1883). Medical Officer for the parishes of Grimpen, Thorsley, and High Barrow."

"No mention of that local hunt, Watson," said Holmes with a mischievous smile, "but a country doctor, as you very astutely observed. I think that I am fairly justified in my inferences. As to the adjectives, I said, if I remember right, amiable, unambitious, and absent-minded. It is my experience that it is only an amiable man in this world who receives testimonials, only an unambitious one who abandons a London career for the country, and only an absent-minded one who leaves his stick and not his visiting-card after waiting an hour in your room."

"And the dog ?"

"Has been in the habit of carrying this stick behind his master. The marks of his teeth are very plainly visible. The dog's jaw, as shown in the space between these marks, is too broad in my opinion for a terrier and not broad enough for a mastiff. It may have been—yes, by Jove, it *is* a curly-haired spaniel."

He had risen and paced the room as he spoke. Now he halted in the recess of the window.

"My dear fellow, how can you possibly be so sure of that ?"

"For the very simple reason that I see the dog himself on our very door-step, and there is the ring of its owner. Don't move, I beg you, Watson. He is a professional brother of yours, and your presence may be of assistance to me. Now is the dramatic moment of fate, when you hear a step upon the stair which is walking into your life, and you know not whether for good or ill. What does Dr. James Mortimer, the man of science, ask of Sherlock Holmes, the specialist in crime ? Come in !"

The appearance of our visitor was a surprise to me, since I had expected a typical country practitioner. He was a very tall, thin man, with a long nose like a beak, which jutted out between two keen, gray eyes, set closely together and sparkling brightly from behind a pair of gold-rimmed glasses. He was clad in a professional but rather slovenly fashion, for his frock-coat was dingy and his trousers frayed. Though young, his long back was already bowed, and he walked with a forward thrust of his head and a general air of peering benevolence. As he entered his eyes fell upon the stick in Holmes's hand, and he ran towards it with an exclamation of joy. "I am so very glad," said he. "I was not sure whether I had left it here or in the Shipping Office. I would not lose that stick for the world."

"A presentation, I see," said Holmes.

"Yes, sir."

"From Charing Cross Hospital ?"

"From one or two friends there on the occasion of my marriage."

"Dear, dear, that's bad !" said Holmes shaking his head.

Dr. Mortimer blinked through his glasses in mild astonishment. "Why was it bad ?"

"Only that you have disarranged our little deductions. Your marriage, you say ?"

"Yes, sir. I married, and so left the hospital, and with it all hopes of a consulting practice. It was necessary to make a home of my own."

"Come, come, we are not so far wrong, after all," said Holmes. "And now, Dr. James Mortimer———"

"Mister, sir, Mister—a humble M.R.C.S."

"And a man of precise mind, evidently".

"A dabbler in science, a picker up of shells on the shores of the great unknown ocean. I presume that it is Mr. Sherlock Holmes whom I am addressing and not——"

"No, this is my friend Dr. Watson."

"Glad to meet you, sir. I have heard your name mentioned in connection with that of your friend. You interest me very much, Mr. Holmes. I had hardly expected so dolichocephalic a skull or such well-marked supraorbital development. Would you have any objection to my running my finger along your parietal fissure ? A cast of your skull, sir, until the original is available, would be an ornament to any anthropological museum. It is not my intention to be fulsome, but I confess that I covet your skull."

Sherlock Holmes waved our strange visitor into a chair. "You are an enthusiast in your line of thought, I perceive, sir, as I am in mine. I presume that it was not merely for the purpose of examining my skull that you have done me the honour to call here last night and again today ?"

"No, sir, no; though I am happy to have had the opportunity of doing that as well. I came to you because I recognized that I am myself an unpractical man and because I am suddenly confronted with a most serious and extraordinary problem. I have in my pocket a manuscript——"

"I observed it as you entered the room," said Holmes.

"It is an old manuscript."

"Early eighteenth century, unless it is a forgery."

"How can you say that, sir ?"

"You have presented an inch or two of it to my examination all the time that you have been talking. It would be a poor expert who could not give the date of a document within a decade or so. I put that at 1730."

"The exact date is 1742." Dr. Mortimer drew it from his breast-pocket. "This family paper was committed to my care by Sir Charles Baskerville, whose sudden and tragic death some three months ago created so much excitment in Devonshire. I may say that I was his personal friend as well as his medical attendant. He was a strong-minded man, shrewd, practical, and as unimaginative as I am myself. Yet he took this document very seriously, and his mind was prepared for just such an end as did eventually overtake him."

Holmes stretched out his hand for the manuscript and flattened it upon his knee. I looked over

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

his shoulder at the yellow paper and the faded script. At the head was written :

"Baskerville Hall," and below, in large, scrawling figures : "1742."

"It appears to be a statement of some sort."

"Yes, it is a statement of a certain legend which runs in the Baskerville family. With your permission I will read it to you".

Holmes leaned back in his chair, placed his finger-tips together, and closed his eyes, with an air of resignation. Dr. Mortimer turned the manuscript to the light and read in a high, crackling voice the following curious, old-world narrative :

"Of the origin of the Hound of the Baskervilles there have been many statements, yet as I come in a direct line from Hugo Baskerville, and as I had the story from my father, who also had it from his, I have set it down with all belief that it occurred even as is here set forth. Learn then from this story not to fear the fruits of the past, but rather to be circumspect in the future, that those foul passions whereby our family has suffered so grievously may not again be loosed to our undoing.

"Know then that in the time of the Great Rebellion (the history of which by the learned Lord Clarendon I most earnestly commend to your attention) this Manor of Baskerville was held by Hugo of that name, nor can it be gainsaid that he was a most wild, profane, and godless man. This, in truth, his neighbours might have pardoned, seeing that saints have never flourished in those parts, but there was in him a certain wanton and cruel humour which made his name a byword through the West. It chanced that this Hugo came to love (if, indeed, so dark a passion may be known under so bright a name) the daughter of a yeoman who held lands near the Baskerville estate. But the young maiden, being discreet and of good repute, would ever avoid him, for she feared his evil name. So it came to pass that one Michaelmas this Hugo, with five or six of his idle and wicked companions, stole down upon the farm and carried her off. When they had brought her to the Hall the maiden was placed in an upper chamber, while Hugo and his friends sat down to a long carouse, as was their nightly custom. Now, the poor lass upstairs was like to have her wits turned at the singing and shouting and terrible oaths which came up to her from below, for they say that the words used by Hugo Baskerville, when he was in wine, were such as might blast the man who said them. At last in the stress of her fear she did that which might have daunted the bravest or most active man, for by the aid of the growth of ivy which covered (and still covers) the south wall she came down from under the eaves, and so homeward across the moor, there being three leagues betwixt the Hall and her father's farm.

"It chanced that some little time later Hugo left his guests to carry food and drink—with other worse things, perchance—to his captive, and so found the cage empty and the bird escaped. Then, as it would seem, he became as one that hath a devil, for rushing down the stairs into the dining-hall, he sprang upon the great table, flagons and trenchers flying before him, and he cried aloud before all the company that he would that very night render his body and soul to the Powers of Evil if he might but overtake the wench. And while the revellers stood aghast at the fury of the man one more wicked or, it may be, more drunken than the rest, cried out that they should put the hounds upon her. Whereat Hugo ran from the house, crying to his grooms that they should saddle his mare and unkennel the pack, and giving the hounds a kerchief of the maid's he swung them to the line, and so off full cry in the moonlight over the moor.

"Now, for some space the revellers stood agape. But anon their bemused wits awoke to the nature of the deed which was like to be done upon the moorlands. Everything was now in an uproar, some calling for their pistols, some for their horses, and some for another flask of wine. But at length some sense came back to their crazed minds, and the whole of them, thirteen in number, took horse and started in pursuit. The moon shone clear above them, and they rode swiftly abreast, taking that course which the maid must needs have taken if she were to reach her own home.

"They had gone a mile or two when they passed one of the night shepherds upon the moorlands, and they cried to him to know if he had seen the hunt. And the man, as the story goes, was so crazed with fear that he could scarce speak, but at last he said that he had indeed seen the unhappy maiden, with the hounds upon her track. 'But I have seen more than that,' said he, 'for Hugo Baskerville passed me upon his black mare, and there ran mute behind him such a hound of hell as God forbid should ever be at my heels.' So the drunken squires cursed the shepherd and rode onward. But soon their skins turned cold, for there came agalloping across the moor, and the black mare dabbled with white froth, went past with trailing bridle and empty saddle. Then the revellers rode close together, for a great fear was on them. Riding slowly in this fashion they came at last upon the hounds. These, though known for their valour and their breed, were whimpering in a cluster at the head of a deep dip or goyal.

"The company had come to a halt, more sober men than when they started. Most of them would by no means advance, but three of them, the boldest, or it may be the most drunken, rode forward down the goyal. Now it opened into a broad space in which stood two of those great stones, still to be seen there which were set by certain forgotten peoples in the days of old. The moon was shining bright upon the clearing, and there in the centre lay the unhappy maid where she had fallen, dead of fear and fatigue. But it was not the sight of her body, nor yet was it that of the body of Hugo Baskerville lying near her, which raised the hair upon the heads of these three dare-devil roysterers, but it was that, standing over Hugo, and plucking at his throat, there stood a foul thing, a great, black beast, shaped like a hound, yet larger than any hound that eye mortal eye has rested upon. And even as they looked, the thing tore the throat out of Hugo Baskerville, on which, as it turned its blazing

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

eyes and dripping jaws upon them, the three shrieked with fear and rode for dear life, still screaming, across the moor.

"Such is the tale of the coming of the hound which is said to have plagued the family so sorely ever since. To Providence, my sons, I hereby commend you, and I counsel you by way of caution to forbear from crossing the moor in those dark hours when the powers of evil are exalted.

"[This from Hugo Baskerville to his sons Rodger and John, with instructions that they say nothing thereof to their sister Elizabeth.]"

When Dr. Mortimer had finished reading this singular narrative he pushed his spectacles up on his forehead and stared at Sherlock Holmes. The latter yawned and tossed the end of his cigarette into the fire.

"Well ?" said he. "Do you not find it interesting ?"

"To a collector of fairy tales".

Dr. Mortimer drew a folded newspaper out of his pocket.

"Now, Mr. Holmes, we will give you something a little more recent. This is the *Devon County Chronicle* of May 14th of this year. It is a short account of the facts elicited at the death of Sir Charles Baskerville which occurred a few days before that date." Our visitor readjusted his glasses and began :

"The recent sudden death of Sir Charles Baskerville, whose name has been mentioned as the probable Liberal candidate for Mid-Devon at the next election, has cast a gloom over the county. Though Sir Charles had resided at Baskerville Hall for a comparatively short period, he had won the affection of all who had been brought into contact with him. Being himself childless, it was his openly expressed desire that the whole countryside should, within his own lifetime, profit by his good fortune, and many will have personal reasons for bewailing his untimely end. His generous donations to local and county charities have been frequently chronicled in these columns.

"The circumstances connected with the death of Sir Charles cannot be said to have been entirely cleared up by the inquest, but at least enough has been done to dispose of those rumours to which local superstition has given rise. There is no reason whatever to suspect foul play, or to imagine that death could be from any but natural causes. Sir Charles was a widower, and a man who may be said to have been in some ways of an eccentric habit of mind. In spite of his considerable wealth he was simple in his personal tastes, and his indoor servants at Baskerville Hall consisted of a married couple named Barrymore, the husband acting as butler and the wife as housekeeper. Their evidence, corroborated by that of several friends, tends to show that Sir Charles's health has for some time been impaired, and points especially to some affection of the heart, manifesting itself in changes of colour, breathlessness, and acute attacks of nervous depression. Dr. James Mortimer, the friend and medical attendant of the deceased, has given evidence to the same effect.

"The facts of the case are simple. Sir Charles was in the habit every night before going to bed of walking down the famous yew alley of Baskerville Hall. On the fourth of May he had declared his intention of starting next day for London, and had ordered Barrymore to prepare his luggage. That night he went out as usual for his walk, in the course of which he was in the habit of smoking a cigar. He never returned. At twelve o'clock, Barrymore, finding the hall door still open, became alarmed, and, lighting a lantern, went in search of his master. The day had been wet, and Sir Charles's footmarks were easily traced halfway down the alley where there is a gate which leads out on to the moor. There were indications that Sir Charles had stood for some little time here. He then proceeded down the alley, and it was at the far end of it that his body was discovered.

It was at the far end of the alley that Barrymore discovered the body of Sir Charles Baskerville.

One odd fact is the statement of Barrymore that his master's footprints altered their character from the time that he passed the moor-gate, and that he appeared from thence onward to have been walking on his toes. One Murphy, a gipsy horse-dealer, was on the moor at no great distance at the time, but he appears by his own confession to have been worse for drink. He declares that he heard cries but is unable to state from what direction they came.

"No signs of violence were discovered upon Sir Charles's person and, though the doctor's

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

evidence pointed to an almost incredible facial distortion—so great that Dr. Mortimer refused at first to believe that it was indeed his friend and patient who lay before him—it was explained that that is a symptom which is not unusual in cases of dyspnoea and death from cardiac exhaustion. This explanation was borne out by the post-mortem examination. The coroner's jury returned a verdict in accordance with the medical evidence.

"It is understood that the next of kin is Mr. Henry Baskerville, if he be still alive, the son of Sir Charles Baskerville's younger brother. The young man when last heard of was in America."

Dr. Mortimer refolded the newspaper and replaced it in his pocket. "Those are the public facts, Mr. Holmes, in connection with the death of Sir Charles Baskerville."

CHAPTER—II

I MUST thank you, Dr. Mortimer, said Holmes, "for calling my attention to a case which certainly presents some features of interest. "That article, you say, contains all the public facts ?"

"It does."

"Then let me have the private ones." He leaned back, put his finger-tips together and assumed his most impassive, judicial expression.

"In doing so," said Dr. Mortimer, who had begun to show signs of some strong emotion, "I am telling that which I have not confided to anyone. My motive for withholding it from the coroner's inquiry is that a man of science shrinks from placing himself in the public position of seeming to indorse a popular superstition. But with you there is no reason why I should not be perfectly frank.

"The moor is very sparsely inhabited, and those who live near each other are thrown very much together. For this reason I saw a good deal of Sir Charles Baskerville. With the exception of Mr. Frankland, of Lafter Hall, and Mr. Stapleton, the naturalist, there are no other men of education within many miles. Sir Charles was a retiring man, but his illness brought us together. Within the last few months it became increasingly plain to me that Sir Charles's nervous system was strained to the breaking point. He had taken this legend which I have read you exceedingly to heart—so much so that, although he would walk in his own grounds, nothing would induce him to go out upon the moor at night. The idea of some ghastly presence constantly haunted him, and on more than one occasion he has asked me whether I had on my medical journeys at night ever seen any strange creature or heard the baying of a hound.

"I can well remember driving up to his house one evening, some three weeks before the fatal event. He chanced to be at his hall door. I had descended from my gig and was standing in front of him, when I saw his eyes fix themselves over my shoulder and stare past me with an expression of the most dreadful horror. I whisked round and had just time to catch a glimpse of something which I took to be a large black calf passing at the head of the drive. So excited and alarmed was he that I was compelled to go down to the spot where the animal had been. It was gone, however, and the incident appeared to make the worst impression upon his mind. I stayed with him all that evening, and it was to explain the emotion which he had shown, that he confided to my keeping that narrative which I read to you when first I came.

"I saw his eyes stare past me with an expression of the most dreadful horror." I whisked round....

"It was at my advice that Sir Charles was about to go to London. His heart was affected, and the constant anxiety in which he lived, however chimerical the cause, was having a serious effect upon his health. I thought that a few months among city distractions would send him back a new man. Mr. Stapleton, a mutual friend, was of the same opinion. Then came this terrible catastrophe.

"On the night of his death, Barrymore the butler sent Perkins the groom on horseback to me. As I was sitting up late I was able to reach Baskerville Hall within an hour. I checked and corroborated all the facts which were mentioned at the inquest. I followed the footsteps down the yew alley, saw the spot at the moor-gate where he seemed to have waited. I remarked the change in the shape of the prints after that point, noted that there were no other footsteps save Barrymore's on the soft gravel, and finally I carefully examined the body which had not been touched until my arrival.

"Sir Charles lay on his face, his arms out, his fingers dug into the ground, and his features convulsed as if by some strong emotion. There was certainly no physical injury of any kind. But one false statement was made by Barrymore at the in-

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

quest. He said that there were no traces upon the ground round the body. He did not observe any. But I did—some little distance off, fresh and clear footprints."

"A man's or woman's ?"

Dr. Mortimer looked strangely at us for an instant, and his voice sank almost to a whisper as he answered : "They were the footprints of a gigantic hound !"

I confess at these words a shudder passed through me. Holmes leaned forward in his excitement to stress. "You saw this ?"

"As clearly as I see you. The marks were some twenty yards from the body and no one gave them a thought. I don't suppose I should have done so had I not known this legend."

"What is the alley like ?"

"There are two lines of old yew hedge, twelve feet high and impenetrable. The walk in the centre is about eight feet across."

"Is there anything between the hedges and the walk ?"

"Yes, a strip of grass about six feet broad on either side."

"I understand that the yew hedge is penetrated at one point by a gate ?"

"Yes, the wicket-gate which leads on to the moor."

"So that to reach the alley one either has to come down it from the house or else to enter it by the moor-gate ?"

"There is an exit through a summer-house at the far end."

"Had Sir Charles reached this ?"

"No; he lay about fifty yards from it."

"Now, tell me, Dr. Mortimer—and this is important—the marks which you saw were on the path and not on the grass ?"

"No marks could show on the grass."

"Were they on the same side of the path as the moor-gate ?"

"Yes; they were on the edge of the path."

"You interest me exceedingly. Another point. Was the wicket-gate closed ?"

"Closed and padlocked."

"How high was it ?"

"About four feet high."

"Then anyone could have got over it ?"

"Yes."

"And what marks did you see by the wicket-gate ?"

"None in particular."

"Good heaven ! Did no one examine ?"

"Yes, I examined, myself."

"And found nothing ?"

"It was all very confused. Sir Charles had evidently stood there for five or ten minutes."

"How do you know that ?"

"Because the ash had twice dropped from his cigar."

"Excellent ! This is a colleague, Watson, after our own heart. But the marks ?"

"He had left his own marks all over that small patch of gravel. I could discern no others."

Sherlock Holmes struck his hand against his knee with an impatient gesture. "If I had only been there ! Oh, Dr. Mortimer, to think that you did not call me in earlier !"

"I could not, Mr. Holmes, without disclosing certain secrets to the world; I have already given my reasons for not wishing to do so. Besides, besides——"

"Why do you hesitate ?" pressed Sherlock.

"There is a realm in which the most acute and experienced of detectives is helpless——"

"You mean that the thing is supernatural ?"

"I did not positively say so."

"No, but you evidently think it."

"Well, I learned that several people had seen a creature upon the moor which corresponds with this Baskerville demon, and which could not possibly be any animal known to science. They all agreed that it was a huge creature, luminous, ghastly, and spectral."

"And you, a trained man of science, believe it to be supernatural ?"

"I do not know what to believe."

Holmes shrugged his shoulders. "I have hitherto confined my investigations to this world," said he. "In a modest way I have combated evil, but to take on the Father of Evil himself would, perhaps, be too ambitious a task. Yet you must admit that the footmark is material."

"The original hound was material enough to tug a man's throat out, and yet he was diabolical as well."'

"I see that you have quite gone over to the supernaturalists. But now, Dr. Mortimer, tell me this. If you hold these views, why have you come to consult me at all ?"

"To advise me what I should do with Sir Henry Baskerville, the heir, who arrives at Waterloo Station"—Dr. Mortimer looked at his watch—"in exactly one hour and a quarter. After the death of Sir Charles we located this young gentleman who had been farming in Canada. He is reputed to be an excellent fellow. I speak now not as a medical man but as a trustee and executor of Sir Charles's will."

"There is no other claimant, I presume ?"

"None. The only other kinsman whom we have been able to trace was Rodger Baskerville, the youngest of three brothers of whom poor Sir Charles was the elder. The second brother, who died young, is the father of this lad Henry. The third, Rodger, was the black sheep of the family. He came of the old masterful Baskerville strain and was the very image, they tell me, of the family picture of old Hugo. He made England too hot to hold him, fled to Central America, and died there in 1876 of yellow fever. Henry is the last of the Baskervilles. Now, Mr. Holmes, what would you advise me to do ?"

Sherlock considered for a little time, then remarked, "Put into plain words, the matter is this. In your opinion there is a diabolical agency which makes Dartmoor an unsafe abode for a Baskerville—that is your opinion ?"

"There is some evidence that this may be so."

"Exactly. But surely, if your supernatural theory be correct, it could work the young man evil in London as in Devonshire."

"Your advice, then, is that the young man will be as safe in Devonshire as in London. He comes in fifty minutes. What would you recommend ?"

"I recommend, sir, that you take a cab, call off your spaniel who is scratching at my front door, and proceed to Waterloo to meet Sir Henry."

"And then ?"

"And then you will say nothing to him at all

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

until I have made up my mind about the matter."

"How long will it take you to make up your mind ?"

"Twenty-four hours. At ten o'clock to-morrow, Dr. Mortimer, I will be much obliged to you if you will call upon me here, and it will be of help to me in my plans if you will bring Sir Henry with you."

"I will do so, Mr. Holmes." He scribbled the appointment on his shirt-cuff and hurried off in his strange, peering, absentminded fashion. Holmes stopped him at the head of the stair.

"Only one more question, Dr. Mortimer. You say that before Sir Charles's death several people saw this apparition upon the moor ?"

"Three people did."

"Did any see it after ?"

"I have not heard of any."

"Thank you. Good-morning."

Holmes returned to his seat with that quiet look of inward satisfaction which meant that he had a congenial task before him. I knew that seclusion and solitude were very necessary for my friend in those hours of intense mental concentration during which he weighed every particle of evidence, constructed alternative theories, balanced one against the other, and made up his mind as to which points were essential and which immaterial. I therefore spent the day at my club and did not return to Baker Street until evening. It was nearly nine o'clock when I found myself in the sitting-room once more.

My first impression as I opened the door was that a fire had broken out, for the room was so filled with smoke that the light of the lamp upon the table was blurred by it. As I entered, however, my fears were set at rest, for it was the acrid fumes of strong coarse tobacco which took me by the throat and set me coughing. Through the haze I had a vague vision of Holmes in his dressing-gown coiled up in an armchair with his black clay pipe between his lips. Several rolls of paper lay around him—Ordnance maps of Devonshire. Holmes unrolled one section and held it over his knee. "Watson, here we have the particular district which concerns us. That is Baskerville Hall in the middle."

"With a wood round it ?"

"Exactly. I fancy the yew alley, though not marked under that name, must stretch along this line, with the moor, as you perceive, upon the right of it. This small clump of buildings here is the hamlet of Grimpen. Within a radius of five miles there are, as you see, only a few scattered dwellings. Here is Lafter Hall, which was mentioned in the narrative. There is a house indicated here which may be the residence of the naturalist—Stapleton, if I remember right, was his name. Here are two moorland farmhouses, High Tor and Foulmire. Then fourteen miles away the great convict prison of Princetown. Between and around these scattered points extends the desolate, lifeless moor. This, then, is the stage upon which tragedy has been played."

"It must be a wild place."

"It has certainly a character of its own. There are points of distinction about it. That change in the footprints, for example. What do you make of that ?"

"Mortimer said that the man had walked on tiptoe down that portion of the alley."

"He only repeated what some fool had said at the inquest. Why should a man walk on tiptoe down the alley ?"

"What then ?"

"He was running, Watson—running desperately, running for his life, running until he burst his heart and fell dead upon his face."

"Running from what ?"

"There lies our problem. There are indications that the man was crazed with fear before ever he began to run."

"How can you say that ?"

"I am presuming that the cause of his fears came to him across the moor. If that were so, and it seems most probable, only a man who had lost his wits would have run *from* the house instead of towards it. If the gipsy's evidence be true, he ran with cries for help in the direction where help was least likely to be. Then, again, whom was he waiting for that night, and why was he waiting for him in the yew alley rather than in his own house ?"

"You think that he was waiting for someone ?"

"The man was elderly and infirm. We can understand his taking an evening stroll, but the ground was damp and the night inclement. Is it natural that he should stand for five or ten minutes, as Dr. Mortimer, with more practical sense than I should have given him credit for, deduced from the cigar ash ?"

"But he went out every evening."

"I think it unlikely that he waited at the moor-gate every evening. On the contrary, the evidence is that he avoided the moor. That night he waited there. It was the night before he made his departure for London. The thing takes shape, Watson. We will postpone all further discussion of this business until we meet Dr. Mortimer and Sir Henry Baskerville in the morning."

CHAPTER—III

OUR clients were punctual to their appointment, for the clock had just struck ten when Dr. Mortimer was shown up, followed by the young baronet. The latter was a small, alert, dark-eyed man about thirty years of age, very sturdily built, with thick black eyebrows and a strong, pugnacious face. He wore a ruddy-tinted tweed suit and had the weather-beaten appearance of one who has spent most of his time in the open air, and yet there was something in his steady eye and the quiet assurance of his bearing which indicated the gentleman.

"This is Sir Henry Baskerville," said Dr. Mortimer.

"Why, yes," said he, "and the strange thing is, Mr. Sherlock Holmes, that if my friend here had not proposed coming round to you this morning I should have come on my own account. I understand that you think out little puzzles, and I've had one this morning which wants more thinking out than I am able to give it."

"Pray take a seat, Sir Henry. Do I understand you to say that you have yourself had some remarkable experience since you arrived in London ?"

"Nothing of much importance, Mr. Holmes. It was this letter, if you can call it a letter, which reached me this morning".

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

He laid an envelope upon the table, and we all bent over it. It was of common quality, grayish in colour. The address, "Sir Henry Baskerville, Northumberland Hotel," was printed in rough characters; the post-mark "Charing Cross," and the date of posting the preceding evening.

"Who knew that you were going to the Northumberland Hotel ?" asked Holmes, glancing keenly across at our visitor.

"No one could have known. We only decided after I met Dr. Mortimer."

"But Dr. Mortimer was no doubt already stopping there ?"

"No, I had been staying with a friend," said the doctor. "There was no possible indication that we intended to go to this hotel !"

"Hum ! Someone seems to be very deeply interested in your movements." Out of the envelope he took a half-sheet of foolscap paper folded into four. This he opened and spread flat upon the table. Across the middle of it a single sentence had been formed by the expedient of pasting printed words upon it. It ran :

As you value your life or your reason keep away from the moor.

The word "moor" only was written in ordinary ink.

"Now," said Sir Henry, "perhaps you will tell me, Mr. Holmes, what in thunder is the meaning of that ? It seems to me that all you gentlemen know a great deal more than I do about my own affairs."

"You shall share our knowledge before you leave this room, Sir Henry. I promise you that," said Sherlock Holmes. "We will confine ourselves for the present to this very interesting document, which must have been put together and posted yesterday evening. Have you yesterday's *Times*, Watson ?"

"It is here in the corner."

"Might I trouble you for it—the inside page, please, with the leading articles ?" He glanced swiftly over it, running his eyes up and down the columns. "Capital article this on free trade. Permit me to give you an extract from it : 'You may be cajoled into imagining that your own special trade or your own industry will be encouraged by a protective tariff, but it stands to reason that such legislation must in the long run keep away wealth from the country, diminish the value of our imports, and lower the general conditions of life in this island.'

"What do you think of that ?" cried Sherlock in high glee, rubbing his hands together with satisfaction.

Dr. Mortimer looked at Holmes with an air of professional interest, and Sir Henry turned a pair of puzzled dark eyes upon me. "I don't know much about the tariff," said he, "but it seems to me we've got a bit off the trail so far as that note is concerned."

"On the contrary, I think we are particularly hot upon the trail. There is so very close a connection that the one is extracted out of the other. 'You,' 'your,' 'life,' 'reason,' 'value,' 'keep away,' 'from the.' Don't you see now whence these words were taken ?"

"By thunder, you're right !" exclaimed Sir Henry.

"By thunder, you're right !" exclaimed Sir Henry.

"If any possible doubt remained it is settled by the fact that 'keep away' and 'from the' are cut out in one piece".

"Well, now—so it is !"

"Really, Mr. Holmes, this exceeds anything which I could have imagined," said Dr. Mortimer, gazing at my friend in amazement.

"So," said Sir Henry, "someone cut out this message with a scissors——"

"Nail scissors," said Holmes. "You can see that it was a very short-bladed scissors, since the cutter had to take two snips over 'keep away.' "

"That is so. Someone cut out the words and pasted them with paste——"

"Gum," corrected Sherlock.

"With gum on to the paper. But I want to know why the word 'moor' should have been written ?"

"Because he could not find it in print."

"Why, of course, that would explain it. Have you read anything else in this message, Mr. Holmes ?"

"There are one or two indications, and yet the utmost pains have been taken to remove all clues. The address, you observe, is printed in rough characters. But the *Times* is a paper which is seldom found in any hands but those of the highly educated. We may take it, therefore, that the letter was composed by an educated man who wished to pose as an uneducated one, and his efforts to conceal his own writing suggest that his writing might be known, or come to be known, by you. Again, you will observe that the words are not gummed on in an accurate line, but that some are much higher than others. 'Life,' for example, is quite out of its proper place. That may point to carelessness or it may point to agitation and hurry upon the part of the cutter. On the whole I incline to the latter view, since the matter was evidently important, and it is unlikely that the composer of such a letter would be careless. If he were in a hurry it opens up the interesting question why he should be in a hurry, since any letter posted up to

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

early morning would reach Sir Henry before he would leave his hotel. Did the composer fear an interruption—and from whom ?"

"We are coming now rather into the region of guesswork," said Dr. Mortimer.

"Say, rather, into the region where we balance probabilities and choose the most likely. Now, you would call it a guess, no doubt, but I am almost certain that this address has been written in a hotel."

"How in the world can you say that ?"

"If you examine it carefully you will see that both the pen and the ink have given the writer trouble. The pen has spluttered twice in a single word and has run dry three times in a short address, showing that there was very little ink in the bottle. Now, a private pen or ink-bottle is seldom allowed to be in such a state, and the combination of the two must be quite rare. But you know the hotel ink and the hotel pen. Yes, I have very little hesitation in saying that could we examine the hotel waste-paper baskets around Charing Cross until we found the remains of the mutilated *Times* leader we could lay our hands straight upon the person who sent this singular message. Halloa ! Halloa ! What's this ?"

He was carefully examining the foolscap, upon which the words were pasted, holding it only an inch or two from his eyes.

"Well ?"

"Nothing," said he, throwing it down. "It is a blank half-sheet of paper, without even a water-mark. I think we have drawn as much as we can from this curious letter; and now, Sir Henry, has anything else of interest happened to you since you have been in London ?"

"Well, it all depends upon what you think worth reporting."

"Anything out of the ordinary routine of life."

Sir Henry smiled. "I don't know much of British life yet, for I have spent nearly all my time in the States and Canada. But I hope that to lose one of your boots is not part of the ordinary routine of life over here."

"You have lost one of your boots ?"

"Well, mislaid it, anyhow. I put them both outside my door last night, and there was only one in the morning. I could get no sense out of the chap who cleans them. The worst of it is that I only bought the pair last night in the Strand, and I have never had them on."

"If you have never worn them, why did you put them out to be cleaned ?"

"They were tan boots and had never been varnished. That was why I put them out."

"Then I understand that on your arrival in London yesterday you went out at once and bought a pair of boots ?"

"I did a good deal of shopping. Dr. Mortimer here went round with me. You see, if I am to be squire down there I must dress the part, and it may be that I have got a little careless in my ways out West. Among other things I bought these brown boots and had one stolen before ever I had them on my feet."

"It seems a singularly useless thing to steal," said Sherlock. "I confess that I share the belief that it may have been mislaid."

"And, now, gentlemen," said the baronet, "it seems to me that I have spoken quite enough about the little that I know. It is time that you kept your promise and gave me a full account of what we are all driving at."

"Your request is a very reasonable one," Holmes answered. "Dr. Mortimer, I think you could not do better than to tell your story as you told it to us."

Thus encouraged, our scientific friend drew his papers from his pocket and presented the whole case as he had done upon the morning before. Sir Henry listened with the deepest attention.

"Well, I seem to have come into an inheritance with a vengeance," said he when the long narrative was finished. "Of course, I've heard of the hound ever since I was in the nursery. It's the pet story of the family, though I never thought of taking it seriously before. But as to my uncle's death—well, it all seems boiling up in my head, and I can't get it clear yet. You don't seem quite to have made up your mind whether it's a case for a policeman or a clergyman."

"Precisely."

"And now there's this affair of the letter to me at the hotel. I suppose that fits into its place."

"It seems to show that someone knows more than we do about what goes on upon the moor," said Dr. Mortimer.

"And also," said Holmes, "that someone is not ill-disposed towards you, since they warn you of danger."

"Do you mean danger from this family fiend or do you mean danger from human beings ?"

"Well, that is what we have to find out."

"Whichever it is, my answer is fixed. There is no devil in hell, Mr. Holmes, and there is no man upon earth who can prevent me from going to the home of my own people, and you may take that to be my final answer." His dark brows knitted and his face flushed to a dusky red as he spoke. It was evident that the fiery temper of the Baskervilles was not extinct in this their last representative. "Meanwhile," said he, "I have hardly had time to think over all you have told me. I should like to have a quiet hour by myself to make up my mind. It's half-past eleven now and I am going back right away to my hotel. Suppose you and your friend, Dr. Watson, come round and lunch with us at two."

"Is that convenient to you, Watson ?"

"Perfectly."

"Then you may expect us. Shall I have a cab called ?"

"I'd prefer to walk, for this affair has flurried me rather."

"I'll join you in a walk, with pleasure," said Dr. Mortimer.

We heard the steps of our visitors descend the stair and the bang of the front door. In an instant Holmes had changed from the languid dreamer to the man of action.

"Your hat and boots, Watson, quick ! Not a moment to lose !" We hurried together down the stairs and into the street. Dr. Mortimer and Baskerville were still visible about two hundred yards ahead of us in the direction of Oxford Street.

Holmes quickened our pace until we had decreased the distance which divided us by about half. Then, still keeping a hundred yards behind, we followed into Oxford Street and so down Regent Street. Once our friends stopped and stared into a shop window, upon which Holmes did the same. An

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

instant afterwards he gave a little cry of satisfaction and, following the direction of his eager eyes, I saw that a hansom cab with a man inside which had halted on the other side of the street was now proceeding slowly onward again.

"There's our man, Watson! Come along! We'll have a good look at him, if we can do no more."

At that instant I was aware of a bushy black beard and a pair of piercing eyes turned upon us through the side window of the cab. Instantly the trapdoor at the top flew up, something was told to the driver, and the cab flew madly off down Regent Street. Holmes looked eagerly round for another, but no empty one was in sight. Then he dashed in wild pursuit amid the stream of the traffic, but the start was too great, and already the cab was out of sight.

"There now!" said Holmes bitterly as he emerged panting from the tide of vehicles. "Was ever such bad luck and such bad management, too? Watson, if you are an honest man you will record this also and set it against my successes!"

"Who was the man?"

"I have not an idea."

"A spy? A shadow?"

"Well, it was evident from what we have heard that Baskerville has been very closely shadowed by someone since he's been in town. How else could it be known so quickly that it was the Northumberland Hotel which he had chosen?"

While diverted by that speeding cab, Dr. Mortimer and the baronet had vanished. "There is no object in our following them now," said Holmes. "The shadow has departed and will not return. We must see what further cards we have in our hands and play them with decision. Could you swear to that man's face within the cab?"

"I could swear only to the beard."

"And so could I—from which I gather that in all probability it was a false one. A clever man upon so delicate an errand has no use for a beard save to conceal his features. Come in here, Watson!"

He turned into one of the district messenger offices, where he was warmly greeted by the manager. "Ah, Wilson, I see you have not forgotten the little case in which I had the good fortune to help you?"

"No, sir, indeed I have not. You saved my good name, and perhaps my life."

"My dear fellow, you exaggerate. I have some recollection, Wilson, that you had among your boys a lad named Cartwright who showed some ability during the investigation."

"Yes, sir, he is still with us."

"Could you ring him up?—thank you! And I should be glad to have change of this five-pound note."

A lad of fourteen, with a bright, keen face, had obeyed the summons of the manager. He stood now gazing with great reverence at the famous detective.

"Let me have the Hotel Directory," said Holmes.

"Thank you! Now, Cartwright, there are the names of twenty-three hotels here, all in the immediate neighbourhood of Charing Cross. Do you see?"

"Yes, sir."

"You will visit each of these in turn."

"Yes, sir."

"You will begin in each case by giving the outside porter one shilling. Here are twenty-three shillings."

"Yes, sir."

"You will tell him that you want to see the waste-paper of yesterday. You will say that an important telegram has miscarried and that you are looking for it. You understand?"

"Yes, sir."

"But what you are really looking for is the centre page of the *Times* with some holes cut in it with scissors. Here is a copy of the *Times*. It is this page. You could easily recognize it, could you not?"

"Yes, sir."

"In each case the outside porter will send for the hall porter, to whom also you will give a shilling. Here are twenty-three shillings. You will then learn in possibly twenty cases out of twenty-three that the waste of the day before has been burned or removed. In the three other cases you will be shown a heap of paper and you will look for this page of the *Times* among it. The odds are enormously against your finding it. There are ten shillings over in case of emergencies. Let me have a report by wire at Baker Street before evening. And now, Watson, it only remains for us to find out by wire the identity of Cabman, No. 2704, and then we will drop into one of the Bond Street picture galleries and fill in the time until we are due at the hotel."

CHAPTER–IV

HOLMES had the power of detaching his mind at will. For two hours the strange business in which we had been involved appeared to be forgotten, and he was entirely absorbed in the pictures of the modern Belgian masters. He would talk of nothing but art, of which he had the crudest ideas, from our leaving the gallery until we found ourselves at the Northumberland Hotel.

"Sir Henry Baskerville is upstairs expecting you," said the clerk. "He asked me to show you up at once when you came."

As we came round the top of the stairs we met Sir Henry himself. His face was flushed with anger as he held an old and dusty boot in one of his hands. So furious was he that he was hardly articulate and, when he did speak, it was in a much broader Western dialect than any which we had heard from him in the morning.

"Seems to me they are playing me for a sucker in this hotel!" he exclaimed. "They'll find they've started in to monkey with the wrong man unless they are careful. By thunder, if that chap can't find my missing boot there will be trouble. I can take a joke with the best, Mr. Holmes, but they've got a bit over the mark this time."

"Still looking for your boot?"

"Yes, sir, and mean to find it."

"But, surely, you said that it was a new brown boot?"

"So it was, sir. And now it's an old black one."

"What! You don't mean to say——?"

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

"That's just what I do mean to say. I only had three pairs in the world—the new brown, the old black, and the patent leathers which I am wearing. Last night they took one of my brown ones, and to-day they have sneaked one of the black. Well, have you got it ? Speak out, man, and don't stand staring !"

An agitated German waiter had appeared upon the scene. "No, sir; I have made inquiry all over the hotel, but I can hear no word of it."

"Well, either that boot comes back before sundown or I'll see the manager and tell him that I go right straight out of this hotel."

"It shall be found, sir—I promise you that if you will have a little patience it will be found."

"Mind it is, for it's the last thing of mine I'll lose in this den of thieves. Well, well, Mr. Holmes, you'll excuse my troubling you about such a trifle ——"

"I think it's well worth troubling about. And in connection with your case, I can say we hold several threads in our hands already. The odds are that one or other of them will guide us to the truth."

We were joined by Dr. Mortimer and had a pleasant luncheon in which little was said of the business which had brought us together. It was in the private sitting-room to which we afterwards repaired that Holmes asked Sir Henry what were his intentions.

"To go to Baskerville Hall at the end of the week."

"I think that decision is a wise one," said Sherlock. "I have ample evidence that you are being dogged in London. Did you know that you were followed this morning from my house ?"

Dr. Mortimer started violently. "Followed ! By whom ?"

" That, unfortunately, is what I cannot tell you. Have you among your neighbours or acquaintances on Dartmoor any man with a full, black beard ?"

"No—or, let me see—why, yes. Barrymore, Sir Charles's butler, is a man with a full, black beard."

"Ha ! Where is Barrymore ?"

"He is in charge of the Hall."

"We had best ascertain if he is really there, or if by any possibility he might be in London. Pray get me a telegraph form. 'Is all ready for Sir Henry ?' That will do. Address to Mr. Barrymore, Baskerville Hall. What is the nearest telegraph office ? Grimpen. Very good, we will send a second wire to the postmaster, Grimpen : 'Telegram to Mr. Barrymore to be delivered into his own hand. If absent, please return wire to Sir Henry Baskerville, Northumberland Hotel !' That should let us know before evening whether Barrymore is at his post in Devonshire or not."

"By the way, Dr. Mortimer, who is this Barrymore, anyhow ?" asked Sir Henry.

"He is the son of the late caretaker. They have looked after the Hall for four generations now. So far as I know, he and his wife are as respectable a couple as any in the county."

"At the same time," said the baronet, "it's clear enough that so long as there are none of the family at the Hall these people have a mighty fine home and nothing to do."

"That is true."

"Did Barrymore profit at all by Sir Charles's will ?" asked Holmes.

"He and his wife had five hundred pounds each."

"Ha ! Did they know that they would receive this ?"

"Yes; Sir Charles was very fond of talking about the provisions of his will."

"That is very interesting."

"I hope," said Dr. Mortimer, "that you do not look with suspicious eyes upon everyone who received a legacy from Sir Charles, for I also had a thousand pounds left to me."

"Indeed ! And anyone else ?"

"There were many insignificant sums to individuals, and a large number of public charities. The residue all went to Sir Henry."

"And how much was the residue ?"

"Seven hundred and forty thousand pounds."

Holmes raised his eyebrows. "I had no idea that so gigantic a sum was involved," said he.

"Sir Charles had the reputation of being rich, but we did not know how very rich he was until we came to examine his securities. The total value of the estate was close on to a million."

"Dear me ! It is a stake for which a man might well play a desperate game. And one more question, Dr. Mortimer. Supposing that anything happened to our young friend here—you will forgive the unpleasant hypothesis !—who would inherit the estate ?"

"Since Rodger Baskerville, Sir Charles's younger brother, died unmarried, the estate would descend to the Desmonds, who are distant cousins. James Desmond is an elderly clergyman in Westmoreland."

"Thank you. These details are all of great interest. Have you met Mr. James Desmond ?"

"Yes; he once came down to visit Sir Charles. He is a man of venerable appearance and of saintly life. I remember that he refused to accept any settlement from Sir Charles, though he pressed it upon him."

"And this man of simple tastes would be the heir to Sir Charles's thousands."

"He would be the heir to the estate because that is entailed. He would also be the heir to the money unless it were willed otherwise by the present owner, who can, of course, do what he likes with it."

"And have you made your will, Sir Henry ?"

"No, Mr. Holmes, I have not. I've had no time, for it was only yesterday that I learned how matters stood. But in any case I feel that the money should go with the title and estate. That was my uncle's idea. How is the owner going to restore the glories of the Baskervilles if he has not money enough to keep up the property ? House, land, and dollars must go together."

"Quite so. Well, Sir Henry, I am of one mind with you as to the advisability of your going down to Devonshire without delay. There is only one provision which I must make. You certainly must not go alone."

"Dr. Mortimer returns with me."

"But Dr. Mortimer has his practice to attend to, and his house is miles away from yours. With all the goodwill in the world, he may be unable to help you. No, Sir Henry, you must take with you someone, a trusty man, who will be always by your side."

"Is it possible that you could come yourself, Mr. Holmes ?"

"If matters came to a crisis I should endeavour

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

to be present in person; but you can understand that, with my extensive consulting practice, it is impossible for me to be absent from London for an indefinite time."

"Whom would you recommend, then ?"

Holmes laid his hand upon my arm. "If my friend would undertake it there is no man who is better worth having at your side when you are in a tight place. No one can say so more confidently than I."

The proposition took me completely by surprise, but before I had time to answer, Baskerville seized me by the hand and wrung it heartily.

"Well, now, that is real kind of you, Dr. Watson," said he. "You see how it is with me, and you know just as much about the matter as I do. If you will come down to Baskerville Hall and see me through I'll never forget it."

The promise of adventure had always a fascination for me, and I was complimented by the words of Holmes and by the eagerness with which the baronet hailed me as a companion.

"I will come, with pleasure," said I. "I do not know how I could employ my time better."

"And you will report very carefully to me," said Holmes. "When a crisis comes, as it will do, I will direct how you shall act. I suppose that by Saturday night all might be ready ?"

"Would that suit Dr. Watson ?"

"Perfectly."

"Then on Saturday, unless you hear to the contrary, we shall meet at the ten-thirty train from Paddington."

We had risen to depart when Baskerville gave a cry of triumph, and diving into one of the corners of the room he drew a brown boot from under a cabinet.

"My missing boot !" he cried.

"May all our difficulties vanish as easily !" said Sherlock Holmes.

"My missing boot !" cried Sir Henry Baskerville.

"But it is a very singular thing," Dr. Mortimer remarked. "I searched this room carefully before lunch."

"And so did I," said Sir Henry. "Every inch of it."

Holmes sat in silence in the cab as we drove back to Baker Street, and I knew from his drawn brows and keen face that his mind, like my own, was busy endeavouring to frame some scheme into which all these strange and apparently disconnected episodes could be fitted. All afternoon and late into the evening he sat lost in tobacco and thought.

Just before dinner two telegrams were handed in. The first ran :

Have just heard that Barrymore is at the Hall.

BASKERVILLE.

The second :

Visited twenty-three hotels as directed, but sorry to report unable to trace cut sheet of Times.

CARTWRIGHT.

"There go two of my threads, Watson. There is nothing more stimulating than a case where everything goes against you. We must cast round for another scent. Even Cabman 2704 did not help much but he may later on. He called, said his bearded fare gave his name as 'Sherlock Holmes' and ordered him suddenly to speed to Waterloo Station. The cabman had no idea that Sherlock Holmes was shadowing his 'Sherlock Holmes.' Really, Watson, this time we've got a foeman worthy of our steel."

Sir Henry and Dr. Mortimer were ready upon the appointed day, and we started as arranged for Devonshire. Mr. Sherlock Holmes drove with me to the station and gave me his last parting injunctions and advice. "I will not bias your mind suggesting theories or suspicions, Watson," said he; "I wish you simply to report facts in the fullest possible manner to me."

"What sort of facts ?" I asked.

"Anything which may seem to have a bearing however indirect upon the case, and especially the relations between young Baskerville and his neighbours, or any fresh particulars concerning the death of Sir Charles. One thing only appears to be certain, and that is that Mr. James Desmond, who is the next heir, is an elderly gentleman of a very amiable disposition. I really think that we may eliminate him entirely from our calculations. There remain the people who will actually surround Sir Henry upon the moor."

"Would it not be well in the first place to get rid of this Barrymore couple ?"

"By no means. You could not make a greater mistake. If they are innocent it would be a cruel injustice, and if they are guilty we should be giving up all chance of bringing it home to them. No, no, we will preserve them upon our list of suspects. Then there is a groom at the Hall, if I remember right. There are two moorland farmers. There is our friend, Dr. Mortimer, whom I believe to be entirely honest, and there is his wife, of whom we know nothing. There is this naturalist, Stapleton, and there is his sister who is said to be a young lady of attractions. There is Mr. Frankland, of Lafter Hall, who is also an unknown factor, and there are one or two other neighbours. These are the folk who must be your very special study."

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

CHAPTER–V

THE journey was a swift and pleasant one, and I spent it in making the more intimate acquaintance of my two companions and in playing with Dr. Mortimer's spaniel. In a very few hours the brown earth had become ruddy, and red cows grazed in well-hedged fields where the lush grasses spoke of a richer, if damper, climate. Young Baskerville stared eagerly out of the window and cried aloud with delight as he recognized the familiar features of the Devon scenery.

"I've been over a good part of the world since I left it, Dr. Watson," said he; "but I have never seen a place to compare with it."

"I never saw a Devonshire man who did not swear by his county," I remarked. "You were very young when you last saw Baskerville Hall, were you not ?"

"I was in my teens at the time of father's death and had never seen the Hall, for he lived in a little cottage on the South Coast. Thence I went straight to a friend in America. I tell you it is all as new to me as it is to you, and I'm as keen as possible to see the moor."

"Are you ? Then your wish is granted, for there is your first sight of the moor," said Dr. Mortimer, pointing out of the carriage window.

Over the green squares of the fields and the low curve of a wood there rose in the distance a gray, melancholy hill, with a strange jagged summit, dim and vague in the distance, like some fantastic landscape in a dream. Baskerville sat for a long time, his eyes fixed upon it, and I read upon his eager face how much it meant to him, this first sight of that strange spot where the men of his blood had held sway so long and left their mark so deep.

The train pulled up at a small wayside station and we all descended. Outside, a wagonette with a pair of horses was waiting. Our coming was evidently a great event, for station-master and porters clustered round us to carry our luggage. It was a sweet, simple country spot, but behind the peaceful and sunlit countryside there rose ever, dark against the evening sky the long, gloomy curve of the moor, broken by the jagged and sinister hills.

The wagonette swung round into a side road, and we curved upward through deep lanes worn by centuries of wheels, high banks on either side, heavy with dripping moss and fleshy ferns. Bronzing bracken and mottled bramble gleamed in the light of the sinking autumn sun. Still steadily rising, we passed over a narrow granite bridge and skirted a noisy stream which gushed swiftly down, foaming and roaring amid the gray boulders. Both road and stream wound up through a valley dense with scrub oak and fir.

An outlying spur of the moor lay in front of us. On the summit, hard and clear like an equestrian statue upon its pedestal, was a mounted soldier, dark and stern, his rifle poised ready over his forearm. He was watching the road along which we travelled.

"What is this, Perkins ?" asked Dr. Mortimer of our driver.

"There's a convict escaped from Princetown, sir. He's been out three days now, and the warders

"There's a convict escaped from Princetown, sir."

watch every road, but they've had no sight of him yet. The farmers about here don't like it, sir, and that's a fact. You see, it isn't like any ordinary convict. This is a man that would stick at nothing."

"Who is he, then ?"

"Selden, the Notting Hill murderer."

I remembered the case well, for it was one in which Holmes had taken an interest on account of the peculiar ferocity of the crime. The commutation of his death sentence had been due to some doubts as to his complete sanity. Our wagonette had topped a rise and in front of us rose the huge expanse of the moor, mottled with gnarled, craggy cairns and tors. A cold wind swept down from it and set us shivering. Somewhere on that desolate plain was lurking this fiendish man, hiding in a burrow like a wild beast, his heart full of malice against the race which had cast him out. It completed the grim effect of the barren waste, the chilling wind, and the darkling sky. Even Baskerville fell silent and pulled his overcoat more closely around him.

The road grew bleaker and wilder as now and then we passed a cottage, walled and roofed with stone, with no creeper to break its harsh outline. Suddenly we looked down into a cuplike depression, patched with stunted oaks and firs, twisted and bent by the fury of years. Two high, narrow towers rose over the trees. The driver pointed with his whip and said, "Baskerville Hall."

Its master had risen and was staring with flushed cheeks and shining eyes. A few minutes later..

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

we had reached the lodge-gates, a maze of fantastic tracery in wrought iron, with weather-bitten pillars on either side, blotched with lichens, and surmounted by the boars' heads of the Baskervilles. The lodge was a ruin of black granite and bared ribs of rafters, but facing it was a new building, half constructed, the first fruit of Sir Charles's occupancy.

Through the gateway we passed into the avenue where the wheels were again hushed amid the leaves, and the old trees shot their branches in a sombre tunnel over our heads. Sir Henry shuddered as he looked up the long, dark drive to where the house glimmered like a ghost at the farther end. "It's no wonder my uncle felt as if trouble were coming on him in such a place as this," said he. "It's enough to scare any man. I'll have a row of electric lamps up here inside of six months."

The avenue opened into a broad expanse of turf, and the house lay before us. In the fading light I could see that the centre was a heavy block of building from which a porch projected. The whole front was draped in ivy, with a patch clipped bare here and there where a window or a coat of arms broke through the dark veil. From this central block rose the twin towers, ancient, crenellated, and pierced with many loopholes. To right and left of the turrets were more modern wings of black granite. A dull light shone through heavy mullioned windows, and from the high chimneys which rose from the steep, high-angled roof there sprang a single black column of smoke.

"Welcome, Sir Henry! Welcome to Baskerville Hall!"

A tall man had stepped from the shadow of the porch to open the door of the wagonette. The figure of a woman was silhouetted against the yellow light of the hall. She came out and helped the man to hand down our bags.

"You don't mind my driving straight home, Sir Henry?" said Dr. Mortimer. "My wife is expecting me."

"Surely you will stay and have some dinner?"

"No, I must go. I shall probably find some work awaiting me. I would stay to show you over the house, but Barrymore will be a better guide. Good-bye, and never hesitate night or day to send for me if I can be of service."

The wheels died away down the drive while Sir Henry and I turned into the hall, and the door clanged heavily behind us. In the great old-fashioned fireplace behind the high iron dogs a log-fire crackled and snapped. Sir Henry and I held out our hands to it, for we were numb from our long drive. Then we gazed round us at the high thin window of old stained glass, the oak panelling, the stags' heads, the coats of arms upon the walls, all dim and sombre in the subdued light of the central lamp.

"It's just as I imagined it," said Sir Henry. "Is it not the very picture of an old family home? To think that this should be the same hall in which for five hundred years my people have lived."

I saw his dark face lit up with a boyish enthusiasm as he gazed about him. The light beat upon him where he stood, but long shadows trailed down the walls and hung like a black canopy above him. Barrymore had returned from taking our luggage to our rooms. He stood in front of us now with the subdued manner of a well trained servant. He had a square black beard and pale, distinguished features.

"Dinner will be ready in a few minutes, sirs," he announced. "You will find hot water in your rooms. My wife and I will be happy, Sir Henry, to stay with you until you have made your fresh arrangements, but you will understand that under the new conditions this house will require a considerable staff."

"What new conditions?"

"I only meant, sir, that Sir Charles led a very retired life, and we were able to look after his wants. You would, naturally, wish to have more company, and so you will need changes in your household."

"Do you mean that your wife and you wish to leave?"

"Only when it is quite convenient to you, sir."

"But your family have been with us for several generations. I should be sorry to begin my life here by breaking an old family connection."

I seemed to discern some signs of emotion upon the butler's white face. "I feel that also, sir, and so does my wife. But to tell the truth, sir, we were both very much attached to Sir Charles and his death gave us a shock and made these surroundings very painful to us. I fear that we shall never again be easy in our minds at Baskerville Hall."

"But what do you intend to do?"

"I have no doubt, sir, that we shall succeed in establishing ourselves in some business. Sir Charles's generosity has given us the means to do so. And now, sir, perhaps I had best show you to your rooms."

A square balustraded gallery ran round the top of the old hall, approached by a double stair. From this central point two long corridors extended the whole length of the building, from which all the bedrooms opened. My own was in the same wing as Baskerville's and almost ext door to it. These rooms appeared to be much more modern than the central part of the house, and the bright paper and numerous candles did something to remove the sombre impression which our arrival had left upon my mind.

But the dining-room which opened out of the hall was a place of shadow and gloom. It was a long chamber with a step separating the dais where the family sat from the lower portion reserved for their dependants. At one end a minstrel's gallery overlooked it. Black beams shot across above our heads, with a smoke-darkened ceiling beyond them. A dim line of ancestors, from the Elizabethan knight to the buck of the Regency, stared down upon us and daunted us by their silent company. We talked little, and I for one was glad when the meal was over and we were able to retire into the modern billiard-room.

"My word, it isn't a very cheerful place!" said Sir Henry. "I don't wonder that my uncle got a little jumpy if he lived all alone in such a house as this. However, if it suits you, we will retire early, and perhaps things may seem more cheerful in the morning."

I drew aside my curtains before I went to bed and looked out from my window. It opened upon the grassy space which lay in front of the hall door. Beyond, two copses of trees moaned and swung in a rising wind. A half moon broke through the rifts of racing clouds and I saw, beyond a broken fringe of rocks, the long, low curve of the melancholy moor. I closed the curtain, feeling that my last impression was in keeping with the rest.

And yet it was not quite the last. I found myself weary and yet wakeful, tossing restlessly from side to side, seeking sleep which would not come. Far away a chiming clock struck out the quarters of the hours, but otherwise a deathly

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

silence lay upon the old house. Then suddenly, in the very dead of the night, there came a sound to my ears, clear, resonant, and unmistakable. It was the sob of a woman, the muffled, strangling gasp of one who is torn by an uncontrollable sorrow. I sat up in bed and listened intently. The noise could not have been far away and was certainly in the house. For half an hour I waited with every nerve on the alert, but there came no other sound save the chiming clock and the rustle of the ivy on the wall.

The fresh beauty of the following morning did something to efface from our minds the grim impression which had been left upon both of us by our first experience of Baskerville Hall. As Sir Henry and I sat at breakfast the sunlight flooded in through the high mullioned windows, throwing watery patches of colour from the coats of arms which covered them.

"I guess it is ourselves and not the house that we have to blame!" said the baronet. "We were tired with our journey and chilled by our drive, so we took a gray view of the place."

"And yet it was not entirely a question of imagination," I declared. "Did you happen to hear someone, a woman I think, sobbing in the night?"

"That is curious, for when I was half asleep I did fancy that I heard something of the sort. I waited quite a time, but there was no more of it, so I concluded that it was all a dream."

"I heard it distinctly, and I am sure that it was really the sob of a woman."

He rang for Barrymore promptly and asked him whether he could account for our experience. It seemed to me that the pallid features of the butler turned a shade paler still as he listened to his master's question.

"There are only two women in the house, Sir Henry," he answered. "One is the scullery-maid, who sleeps in the other wing. The other is my wife, and I can answer for it that the sound could not have come from her."

And yet he lied as he said it, for it chanced that after breakfast I met Mrs. Barrymore in the long corridor with the sun full upon her face. She was a large, impassive, heavy-featured woman with a stern set expression of mouth. But her telltale eyes were red and glanced at me from between swollen lids. It was she, then, who wept in the night, and if she did so her husband must know it. Yet he had taken the obvious risk of discovery in declaring that it was not so. Why had he done this? And why did she weep so bitterly?

Already round this pale-faced, handsome, black-bearded man there was gathering an atmosphere of mystery and of gloom. It was he who had been the first to discover the body of Sir Charles, and we had only his word for all the circumstances which led up to the old man's death. Was it possible that it was Barrymore, after all, whom we had seen in the cab in Regent Street? The beard might well have been the same.

How could I settle the point? Obviously the first thing to do was to see the Grimpen postmaster and find whether the test telegram had really been placed in Barrymore's own hands. Be the answer what it might, I should at least have something to report to Holmes.

Sir Henry had numerous papers to examine after breakfast, so that the time was propitious for my excursion. It was a pleasant walk of four miles along the edge of the moor, leading me at last to a small gray hamlet in which two larger buildings, which proved to be the inn and the house of Dr. Mortimer, stood high above the rest. The postmaster, who was also the village grocer, had a clear recollection of the telegram.

"Certainly, sir," said he, "I had the telegram delivered to Mr. Barrymore exactly as directed."

"Who delivered it?"

"My boy here. James, you delivered that telegram to Mr. Barrymore at the Hall last week, did you not?"

"Yes, father, I delivered it."

"Into his own hands?" I asked.

"Well, he was up in the loft at the time, so that I could not put it into his own hands, but I gave it to Mrs. Barrymore and she promised to deliver it at once."

It seemed hopeless to pursue the inquiry any farther then. It was clear that, in spite of Holmes's ruse, we had no proof that Barrymore had not been in London all the time. But what interest could he have in persecuting the Baskerville family? I thought of the strange warning clipped out of the leading article of the *Times*. Was that his work or was it possibly the doing of someone who was bent upon counteracting his schemes?

I prayed, as I walked back along the gray, lonely road, that Holmes might soon come here to take this heavy burden of responsibility from my shoulders.

Suddenly my thoughts were interrupted by the sound of running feet behind me and by a voice which called me by name. I turned, expecting to see Dr. Mortimer, but to my surprise it was a stranger. He was a small, slim, clean-shaven, prim-faced man; flaxen-haired and lean jawed, between thirty and forty years of age, dressed in a gray suit and wearing a straw hat. A tin box for botanical specimens hung over his shoulder and he carried a green butterfly net in one of his hands.

CHAPTER—VI

OU will, I am sure, excuse my presumption, Dr. Watson, said he as he came panting up to where I stood. "Here on the moor we are homely folk and do not wait for formal introductions. I am Stapleton, of Merripit House."

"Your net and box would have told me as much," said I, "for I knew that Mr. Stapleton was naturalist. But how did you know me?"

"I have been calling on Mortimer, and he pointed you out to me from the window of his surgery. As our road lay the same way I thought that I would overtake you and introduce myself. I trust that Sir Henry is none the worse for his journey?"

"He is very well, thank you."

"We were all rather afraid that after the sad death of Sir Charles the new baronet might refuse to live here. It is asking much of a wealthy man to come down and bury himself in a place of this kind. Sir Henry has, I suppose, no superstitious fears in the matter?"

"I do not think that [illegible]

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

"Of course you know the legend of the fiend dog which haunts the family ?"

"I have heard it."

"It is extraordinary how credulous the peasants are about here ! Any number of them are ready to swear that they have seen such a creature upon the moor." He spoke with a smile, but I seemed to read in his eyes that he took the matter more seriously. "The story took a great hold upon the imagination of Sir Charles, and his nerves were so worked up that the appearance of any dog might have had a fatal effect upon his diseased heart. Have you any better explanation ? Or has Mr. Sherlock Holmes ?"

That name took away my breath for an instant, but a glance at Stapleton's placid face showed that no surprise was intended. "It's useless for us to pretend that we do not know you, Dr. Watson," said he. "If you are here, then it follows that Mr. Sherlock Holmes is interesting himself in the matter, and I am naturally curious to know what view he may take."

"I am afraid that I cannot answer that question."

"May I ask if he is going to honour us with a visit himself ?"

"He cannot leave town at present. He has other cases."

"What a pity ! He might throw some light on that which is so dark to us. But as to your own researches, if there is any possible way in which I can be of service I trust that you will command me. If I had any indication of the nature of your suspicions or how you propose to investigate the case, I might perhaps even now give you some aid or advice."

"I assure you that I am simply here upon a visit to my friend, Sir Henry, and that I need no help of any kind."

We had come to a point where a narrow grassy path struck off from the road and wound across the moor. From over a distant rise there floated a gray plume of smoke.

"A moderate walk along this moor-path brings us to Merripit House," said he. "Perhaps you will spare an hour that I may have the pleasure of introducing you to my sister."

My first thought was that I should be by Sir Henry's side. But then I remembered the pile of papers and bills with which his study table was littered. And Holmes had expressly said that I should study the neighbours upon the moor. I accepted Stapleton's invitation, and we turned together down the path.

"It's a wonderful place, the moor," said he. "I have only been here two years. The residents would call me a newcomer. But my tastes led me to explore every part of the country round, and I should think that there are few men who know it better than I do."

"Is it hard to know ?"

"Very hard. You see, for example, this great plain to the north here, with the queer hills breaking out of it. Do you observe anything remarkable about that ?"

"It would be a rare place for a gallop."

"You would naturally think so and such a thought has cost several their lives before now. You notice those bright green spots scattered thickly over it ?"

"Yes, they seem more fertile than the rest." Stapleton laughed.

"That is the great Grimpen Mire," said he. "A false step yonder means death to man or beast. Only yesterday I saw one of the moor ponies wander into it. He never came out. I saw his head for quite a long time craning out of the boghole, but it sucked him down at last. Even in dry seasons it is a danger to cross it, but after these autumn rains it is awful. And yet I can find my way to the very heart of it and return alive. By George, there is another of those miserable ponies !"

Something brown was rolling and tossing among the green sedges. Then a long, agonized, writhing neck shot upward and a dreadful cry echoed over the moor. It turned me cold with horror, but my companion's nerves seemed to be stronger than mine.

"It's gone !" said he. "The mire has him. Two in two days, and many more perhaps, for they get in the way of going there in the dry weather and never know the difference until the mire has them in its clutches. It's a bad place, the great Grimpen Mire."

"And you say you can penetrate it ?"

"Yes, there are one or two paths which a very active man can take. I have found them out."

"But why should you wish to go into so horrible a place ?"

"Well, you see the hills beyond ?" They are really islands cut off on all sides by the impassable mire, which has crawled round them in the course of years. That is where the rare plants and the butterflies are."

"I shall try my luck some day."

He looked at me with a surprised face. "For God's sake put such an idea out of your mind," said he. "Your blood would be upon my head."

"Halloa !" I cried. "What is that ?"

A long, low moan, indescribably sad, swept over the moor. It filled the whole air, and yet it was impossible to say whence it came. From a dull murmur it swelled into a deep roar, and then sank back into a melancholy, throbbing murmur.

Stapleton looked at me with a curious expression in his face. "The peasants say it is the Hound of the Baskervilles calling for its prey. I've heard it once or twice before, but never quite so loud."

I looked round, with a chill in my heart. Nothing stirred over the vast expanse save a pair of ravens, which croaked loudly from a tor behind us.

"You are an educated man. You don't believe such nonsense as that ?" said I. "What do you think is the cause of so strange a sound ?"

"Bogs make queer noises sometimes. It's the mud settling, or the water rising, or something."

"No, no, that was a living voice."

"Well, perhaps it was. Did you ever hear a bittern booming ? It's a very rare bird—practically extinct—in England now, but all things are possible upon the moor. Yes, I should not be surprised to learn that what we have heard is the cry of the last of the bitterns."

"It's the weirdest, strangest thing that I've ever heard."

"Yes, it's an uncanny place altogether. Look

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

at the hillside yonder. What do you make of those ?"

The whole steep slope was covered with gray circular rings of stone, a score of them at least. "What are they ? Sheep-pens ?"

"No, they are the homes of our ancestors. Prehistoric man lived thickly on the moor and, as no one in particular has lived there since, we find all his little arrangements exactly as he left them. Neolithic man grazed his cattle on these slopes, and he learned to dig for tin when the bronze sword began to supersede the stone axe. Look at the great trench in the opposite hill. That is his mark. Oh, excuse me an instant ! It is surely Cyclopides."

A moth had fluttered across our path, and Stapleton was rushing in pursuit of it. The creature flew straight for the great mire, and my acquaintance never paused for an instant, bounding from tuft to tuft behind it, his green net waving in the air.

I was standing watching his pursuit with a mixture of admiration and fear lest he lose his footing in the quagmire when I heard the sound of steps and, turning, found a woman near me upon the path. She had come from the direction of Merripit House.

I could not doubt that this was the Miss Stapleton of whom I had been told, since I had heard someone describe her as being a beauty. She had a proud, finely cut face, so regular that it might have seemed impassive were it not for the sensitive mouth and the beautiful dark, eager eyes. With her perfect figure and elegant dress she was, indeed, a strange apparition upon a lonely moorland path. Her eyes were on her brother as I turned, and then she quickened her pace towards me.

"Go back !" she said. "Go straight back to London, instantly !"

I could only stare at her in stupid surprise. Her eyes blazed at me.

"Go back !" she said. "Go straight back to London"

"Why should I go back ?" I asked. I've only just come here."

"Man, man !" she cried. "Can you not tell when a warning is for your own good ? Go back to London tonight ! Hush, my brother is coming ! Not a word of what I have said. Would you mind getting that orchid for me among the mare's-tails yonder ?"

Stapleton had abandoned the chase and come back to us breathing hard. "Hallca, Beryl !" said he, and it seemed to me that the tone of his greeting was not altogether a cordial one.

"Well, Jack, you are very hot."

"Yes, I was chasing a Cyclopides. What a pity that I should have missed it !" He spoke unconcernedly, but his small light eyes glanced incessantly from the girl to me.

"You have introduced yourselves, I can see."

"Yes. I was telling Sir Henry that it was rather late for him to see the true beauties of the moor."

"Why, who do you think this is ?"

"I imagine that it must be Sir Henry Baskerville."

"No, no," said I. "Only a humble commoner, but his friend. My name is Dr. Watson."

A flush of vexation passed over her expressive face. "We have been talking at cross-purposes," said she.

"Why, you had not very much time for talk," her brother remarked with the same questioning eyes.

"I talked as if Dr. Watson were a resident instead of being merely a visitor," said she. "It cannot much matter to him whether it is early or late for the orchids. But you will come on, will you not, and see Merripit House ?"

A short walk brought us to it, a bleak moorland house, once the farm of some grazier in the old prosperous days, but now put into repair and turned into a modern dwelling. An orchard surrounded it, but the trees, as is usual upon the moor, were stunted and nipped, and the effect of the whole was mean and melancholy. We were admitted by a strange wizened, rusty-coated old manservant, who seemed in keeping with the house. Inside, however, there were large rooms furnished with an elegance in which I seemed to recognize the taste of the lady. As I looked from their windows at the interminable granite-flecked moor rolling unbroken to the farthest horizon I could not but marvel at what could have brought this educated man and beautiful woman to live in such a place.

"Queer spot to choose, is it not ?" said he as if in answer to my thought. "And yet we manage to make ourselves fairly happy, do we not Beryl ?"

"Quite happy," said she, but there was no ring of conviction in her words.

"I had a school," said Stapleton. "It was in the north country. The work to a man of my temperament was mechanical and uninteresting, but the privilege of living with youth, of helping to mould those young minds, and of impressing them with one's own character and ideals was very dear to me. However, the fates were against us. A serious epidemic broke out and three of the boys died. The school never recovered from the blow, and much of my capital was swallowed up. And yet, if it were not for the loss of the charming companionship of the boys, I could rejoice over my own misfortune for, with my strong

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

find an unlimited field of work here, and my sister is as devoted to Nature as I am. All this, Dr. Watson, has been brought upon your head by your expression as you surveyed the moor out of our window."

"It certainly did cross my mind that it might be a little dull—less for you, perhaps, than for your sister."

"No, no, I am never dull," said she quickly.

"We have books, we have our studies, and we have interesting neighbours. Dr. Mortimer is a most learned man in his own line. Poor Sir Charles was also an admirable companion. We knew him well and miss him more than I can tell. Do you think that I should intrude if I were to call this afternoon and make the acquaintance of Sir Henry ?"

"I am sure that he would be delighted."

"Then perhaps you would mention that I propose to do so. We may in our humble way do something to make things more easy for him until he becomes accustomed to his new surroundings. Will you come upstairs, Dr. Watson, and inspect my collection of *Lepidoptera* before lunch with us ?"

But I was eager to get back to my charge. I resisted all pressure to stay for lunch, and set off upon my return journey.

Before I had reached the main road I was astonished to see Miss Stapleton sitting upon a rock by the side of the track.

"I have run all the way in order to cut you off, Dr. Watson," said she breathlessly. "I must not stop, or my brother may miss me. I wanted to say to you how sorry I am about the stupid mistake I made in thinking that you were Sir Henry. Please forget the words I said, which have no application whatever to you."

"But I can't forget them, Miss Stapleton," said I. "I am Sir Henry's friend, and his welfare is a very close concern of mine. Tell me why it was that you were so eager that he should return to London."

"A woman's whim, Dr. Watson. When you know me better you will understand that I cannot always give reasons for what I say or do."

"No, no. I remember the thrill in your voice. I remember the look in your eyes. Please, please, be frank with me, Miss Stapleton. Tell me then what it was you meant, and I will promise to convey your warning to Sir Henry."

An expression of irresolution passed for an instant over her face, but her eyes hardened again when she answered. "You make too much of it, Dr. Watson. My brother and I were very much shocked by the death of Sir Charles. We knew him very intimately, for his favourite walk was over the moor to our house. I was distressed therefore when another member came to live here, and I felt that he should be warned of the danger which he will run. That was all which I intended to convey."

"I would ask you one more question, Miss Stapleton. If you meant no more than this when you first spoke to me, why should you not wish your brother to overhear what you said ? There is nothing to which he, or anyone else, could object."

"My brother is very anxious to have the Hall inhabited, for he thinks that it is for the good of the poor folk upon the moor. He would be very angry if he knew that I had said anything which might induce Sir Henry to go away. But I have done my duty now and I will say no more. I must get back, or he will miss me and suspect that I have seen you. Good-bye !" She turned and had disappeared in a few minutes among the scattered boulders, while I, with my soul full of vague fears, pursued my way to Baskerville Hall.

CHAPTER—VII

FROM this point onward I will follow the course of events by transcribing my own letters to Sherlock Holmes which lie before me on the table.

BASKERVILLE HALL,
OCTOBER 13th.

My Dear Holmes :

My previous letters and telegrams have kept you pretty well up-to-date as to all that has occurred in this most Godforsaken corner of the world. The longer one stays here the more does the spirit of the moor sink into one's soul, its vastness, and also its grim charm. When you are once out upon its bosom you have left all traces of modern England behind you, but, on the other hand, you are conscious everywhere of the homes and the work of the pre-historic people. On all sides of you as you walk are the houses of these forgotten folk, with their graves and the huge monoliths which are supposed to have marked their temples. If you were to see a skin-clad, hairy man crawl out from the low door, fitting a flint-tipped arrow on to the string of his bow, you would feel that his presence there was more natural than your own.

If you have not had any report within the last few days it is because until today there was nothing circumstance occurred; but, first, I must keep you in touch with other factors in the situation.

One is the escaped convict upon the moor. There is strong reason now to believe that he has got away, which is a considerable relief to the lonely householders of this district. A fortnight has passed since his flight, during which he has not been seen and nothing has been heard of him.

We are four able-bodied men in this household, so that we could take good care of ourselves, but I confess that I have uneasy moments when I think of the Stapletons. They live miles from any help. There are one maid, an old manservant, the sister, and the brother, the latter not a very strong man. Both Sir Henry and I were concerned at their situation, and it was suggested that Perkins the groom should go over to sleep there, but Stapleton would not hear of it.

Our friend, the baronet, begins to display a considerable interest in our fair neighbour. It is not to be wondered at, for she is very fascinating. There is something tropical and exotic about her which forms a singular contrast to her unemotional brother. Yet he also gives the idea of hidden fires. He has certainly a very marked influence over her, for I have seen her continually glance at him as she talked as if seeking approbation for what she said.

Stapleton came to call upon Baskerville on that first day, and the very next morning he took us both

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

Hugo is supposed to have had its origin. It was an excursion of some miles across the moor to a place which is so dismal that it might have suggested the hound story. Sir Henry was much interested and asked Stapleton more than once whether he did really believe in the supernatural. Stapleton was guarded in his replies. He told us of similar cases where families had suffered from some evil influence.

On our way back we stayed for lunch at Merripit House, and it was there that Sir Henry made the acquaintance of Miss Stapleton. From the first moment that he saw her he appeared to be strongly attracted by her, and I am much mistaken if the feeling was not mutual. He referred to her again and again on our walk home. They dine here tonight. One would imagine that such a match would be very welcome to Stapleton, and yet I have more than once caught a look of the strongest disapprobation in his face when the baronet has been paying some attention to his sister.

By the way, your instructions never to allow Sir Henry to go out alone will become much more onerous if a love affair be added to our difficulties.

The other day Dr. Mortimer lunched with us. He has been excavating a barrow at Long Down and has got a prehistoric skull which fills him with great joy. The Stapletons came in afterwards, and the doctor took us to the yew alley at Sir Henry's request to show us exactly how everything occurred upon that fatal night.

One other neighbour I have met since I wrote last. This is Mr. Frankland, of Lafter Hall, who lives some four miles to the south of us. He is elderly, red-faced, white haired, and choleric. His passion is for the British law, and he has spent a large fortune in litigation. He fights for the mere pleasure of fighting and is equally ready to take up either side of a question. He is said to have about seven lawsuits upon his hands at present. Apart from that he seems a kindly, good-natured person. Being an amateur astronomer, he has an excellent telescope with which he lies upon the roof of his house and sweeps the moor all day in the hope of catching a glimpse of the escaped convict. There are rumours that he intends to prosecute Dr. Mortimer for opening a grave without the consent of the next of kin because he dug up the neolithic skull.

And now, having brought you up-to-date on the escaped convict, the Stapletons, Dr. Mortimer, and Frankland of Lafter Hall, let me end on that which is most important and tell you more about the Barrymores, and especially about the surprising development of last night.

First of all about the test telegram which you sent from London in order to make sure that Barrymore was really here. I have already explained that the testimony of the postmaster shows that the test was worthless. I told Sir Henry how the matter stood, and he at once had the butler up and asked him whether he received the telegram himself. Barrymore said that he had.

"Did the boy deliver it into your own hands ?" asked the baronet.

Barrymore looked surprised, and considered for a little time. "No," said he, "I was in the box-room at the time, and my wife brought it up to me."

"Did you answer it yourself ?"

"No; I told my wife what to answer and she went to write it."

In the evening he recurred to the subject of his own accord. "I could not quite understand the object of your questions this morning, Sir Henry," said he. "I trust that they do not mean that I have done anything to forfeit your confidence ?"

Sir Henry assured him that it was not so and gave him a considerable part of his old wardrobe, the London outfit having now all arrived.

Mrs. Barrymore is of interest to me. She is a heavy, solid person, intensely respectable, and inclined to be puritanical. You could hardly conceive a less emotional subject. Some deep sorrow gnaws ever at her heart. Sometimes I wonder if she has a guilty memory which haunts her, and sometimes I suspect Barrymore of being a domestic tyrant.

Last night's incident brings all my suspicions to a head. You are aware that I am not a very sound sleeper and, since I have been in this house, my slumbers have been lighter than ever. About two in the morning, I was aroused by a stealthy step passing my room. I rose, opened my door, and peeped out. A long black shadow was trailing down the corridor. It was thrown by a man who walked softly down the passage with a candle held in his hand. I could merely see the outline, but his height told me that it was Barrymore.

I waited until he had passed out of sight and then I followed him. When I came round the balcony he had reached the end of the farther corridor, and I could see from the glimmer of light through an open door that he had entered one of the rooms. All these rooms are unfurnished and unoccupied, so that his expedition became more mysterious than ever. The light shone steadily as if he were standing motionless. I crept down the passage as noiselessly as I could and peeped round the corner of the door.

Barrymore was crouching at the window with the candle held against the glass. His profile was half turned towards me, and his face seemed to be rigid with expectation as he stared out in the blackness of the moor. For some minutes he stood watching intently. Then he gave a groan and put out the light. Instantly I made my way back to my room, and very shortly came the stealthy steps passing once more upon their return journey.

Long afterwards when I had fallen into a light sleep I heard a key turn somewhere in a lock, but I could not tell whence the sound came. What it all means I cannot guess, but there is some secret business going on in this house of gloom which sooner or later we shall get to the bottom of.

* * *

SECOND REPORT OF DR. WATSON
BASKERVILLE HALL,
OCTOBER 15th.

My Dear Holmes :

If I was compelled to leave you without much news during the early days of my mission you must acknowledge that I am making up for lost time.

Before breakfast I went down the corridor and examined the room in which Barrymore had been on the night before. The western window through which he had stared so intently has one peculiarity above all other windows in the house—it commands the nearest outlook on to the moor. There is an opening between two trees which enables one to look right down upon it. It follows that Barrymore, since only this window would serve the purpose, must have been looking out for something or somebody upon the moor. The night was very dark, so that I can

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

hardly imagine how he could have hoped to see anyone. It had struck me that it was possible that some love intrigue was on foot. That would have accounted for his stealthy movements and also for the uneasiness of his wife. The man is a striking-looking fellow, well equipped to steal the heart of a country girl, so that this theory seemed to have something to support it. That opening of the door which I had heard after I returned to my room might mean that he had gone out to keep some clandestine appointment.

I had an interview with the baronet in his study after breakfast, and I told him all that I had seen. He was less surprised than I had expected.

"I knew that Barrymore walked about nights, and I had a mind to speak to him about it," said he. "Two or three times I have heard his steps in the passage, just about the hour you name."

"Perhaps then he pays a visit every night to that particular window," I suggested.

"Perhaps he does. If so, we should be able to shadow him and see what it is that he is after."

"Then we shall do it together tonight."

And now for a most significant detail: the baronet has been in communication with the architect who prepared the plans for Sir Charles, so that we may expect great changes to begin here soon. It is evident that our friend means to spare no pains or expense to restore the grandeur of his family home. When it is renovated and refurnished, all that he will need will be a wife to make it complete. And there are pretty clear signs that this will not be wanting if the lady is willing, for I have seldom seen a man more infatuated with a woman than he is with Miss Stapleton. Yet the course of true love does not run as smoothly as one would expect under the circumstances. Today, for example, its surface was broken by a very unexpected ripple.

After our conversation, Sir Henry put on his hat and prepared to go out. I did the same.

"What, are *you* coming, Watson?" he asked, looking at me in a curious way.

"That depends on whether you are going on the moor," said I.

"Yes, I am."

"Well, you know what my instructions are."

Sir Henry put his hand upon my shoulder with a pleasant smile. "My dear fellow," said he, "Holmes, with all his wisdom, did not foresee some things which have happened since I have been on the moor. You understand? I am sure that you are the last man in the world who would wish to be a spoil-sport. I must go alone."

It put me in a most awkward position. I was at a loss what to do and, before I had made up my mind, he picked up his cane and was gone. Soon after, I set off in the direction of Merripit House. I hurried along the road without seeing anything of Sir Henry, until I came to the point where the moor path branches off. There I mounted a hill from which I could command a view. Thence I saw him at once. He was on the moor path, about a quarter of a mile off, and a lady was by his side who could only be Miss Stapleton. They were deeply absorbed in conversation, when I was suddenly aware that I was not the only witness of their interview.

A wisp of green floating in the air caught my eye, and another glance showed me that it was carried on a stick. It was Stapleton with his butterfly-net. He was much closer to the pair than I was, and he appeared to be moving in their direction. At this instant Sir Henry drew Miss Stapleton to his side. His arm was round her, but it seemed to me that she was straining away from him. Next moment I saw them spring apart. Stapleton was running wildly towards them, his net dangling behind him. He gesticulated with excitement in front of the lovers.

What the scene meant I could not imagine, but it seemed to me that Stapleton was abusing Sir Henry who offered explanations. The lady stood by in silence. Finally Stapleton turned upon his heel and beckoned in a peremptory way to his sister. The baronet stood for a minute looking after them, and then he walked slowly back the way that he had come, the very picture of dejection.

I was deeply ashamed to have witnessed so intimate a scene without my friend's knowledge. I ran down the hill therefore and met him at the bottom. His face was flushed.

"Halloa, Watson! Where have you dropped from?"

I explained everything to him: how I had found it impossible to remain behind, how I had followed him, and how I had witnessed what had occurred. For an instant his eyes blazed, but my frankness disarmed his anger, and he broke at last into a rather rueful laugh.

"By thunder, the whole countryside seems to have been out to see me do my wooing—and a mighty poor wooing at that! Where had you engaged a seat?"

"I was on the hill."

"Quite in the back row, eh? But her brother was well up to the front. Did you see him come out at us."

"Yes, I did."

"Did he ever strike you as being crazy?"

"I can't say that he ever did."

"I dare say not. I always thought him sane enough until today, but you can take it from me that either he or I ought to be in a strait-jacket. He came running at us with a face like a mad man. He was white with rage, his eyes blazing with fury. What was I doing with the lady? How dared I offer her attentions which were distasteful to her? Did I think that because I was a baronet I could do what I liked? If he had not been her brother I should have known better how to answer him. As it was I told him that my feelings towards his sister were such as I was not ashmed of, and that I hoped that she might honour me by becoming my wife. That seemed to make the matter no better, so then I lost my temper, too; and answered him rather more hotly than I should perhaps, considering that she was standing by. So it ended by his going off with her, as you saw. Just tell me what it all means, Watson, and I'll owe you more than ever I can hope to pay."

I tried one or two explanations, but, indeed, I was completely puzzled myself.

However, our conjectures were set at rest by Stapleton himself that very afternoon. He came to offer apologies for his rudeness and, after a long private interview with Sir Henry, the upshot of their conversation was that the breach is quite healed. We are to dine at Merripit House next Friday as a sign of it.

"I don't say now that he isn't a crazy man," said Sir Henry, "but I must allow that no man could make a more handsome apology than he has done."

"Did he give any explanation of his conduct?"

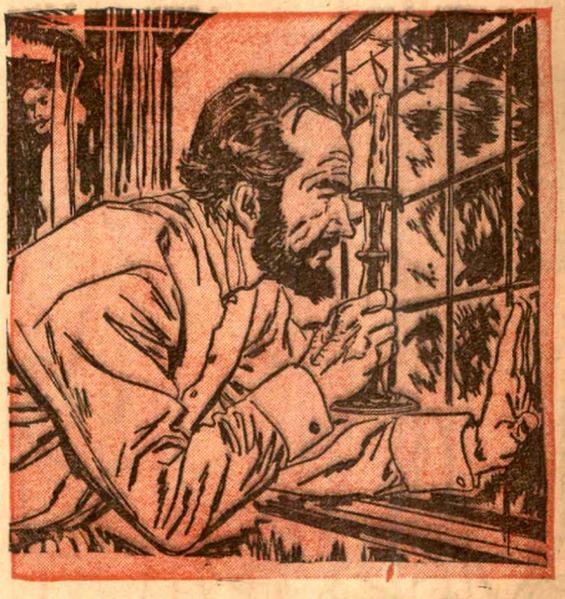
"His sister is everything in his life, he says.

That is natural enough, and I am glad that he should understand her value. They have always been together and the thought of losing her was really terrible to him. If she had to leave him he had rather it was to a neighbour like myself than to anyone else. But in any case it was blow to him, and it would take him some time before he could prepare himself to meet it. He would withdraw all opposition if I would promise to let the matter rest for three months and to be content with cultivating the lady's friendship during that time without claiming her love. This I promised, and so the matter rests."

So there is one of our small mysteries cleared up. It is something to have touched bottom anywhere in this bog in which we are floundering. And now I pass on to another thread which I have extricated out of the tangled skein, the mystery of the sobs in the night, of the tear-stained face of Mrs. Barrymore, of the secret journey of the butler to the western lattice window. All these things have been thoroughly cleared by one night's work.

I have said "by one night's work," but, in truth, it was by two nights' work, for on the first we drew a blank. The next night Sir Henry and I lowered the lamp and sat smoking cigarettes without making the least sound. One struck, and two, and we had almost for the second time given it up in despair when in an instant we both sat bolt upright in our chairs. We had heard the creak of a step in the passage.

Very stealthily we heard it pass until it died away in the distance. Then the baronet gently opened the door and we set out in pursuit. Already our man had gone round the gallery, and the corridor was all in darkness. Softly we stole along until we had come into the other wing. We were just in time to catch a glimpse of the tall, black-bearded figure, his shoulders rounded, as he tiptoed down the passage. Then he passed through the same door as before, and the light of the candle framed it in the darkness and shot one single yellow beam across the gloom of the corridor. We shuffled cautiously towards it, trying every plank before we dared to put our whole weight upon it. We had left boots behind, but even so, the old boards creaked beneath our tread. It seemed impossible that he should fail to hear our approach. However, the man is rather deaf. When at last we reached the door and peeped through we found him crouching at the window, candle in hand, his white, intent face pressed against the pane, exactly as I had seen him two nights before.



We found him crouching at the window, candle in hand, his white face pressed against the pane.

CHAPTER—VIII

SIR Henry walked into the room and Barrymore sprang up from the window and stood, livid and trembling, before us. His dark eyes were full of astonishment as he gazed from the baronet to me.

"What are you doing here, Barrymore ?"

"Nothing, sir." His agitation was so great that he could hardly speak. "It was the window, sir. I go round at night to see that they are fastened."

"On the second floor ?"

"Yes, sir, all the windows."

"Look here, Barrymore," said Sir Henry sternly, "we have made up our minds to have the truth out of you. Come, now ! No lies ! What were you doing at that window ?"

The butler wrung his hands together like one who is in the last extremity of doubt and misery. "Don't ask me, Sir Henry—don't ask me ! I give you my word, sir, that it is not my secret, and that I cannot tell it."

I took the candle from the trembling hand of the butler and observed, "He must have been holding it as a signal. Let us see if there is any answer." I held it as he had done, and stared out into the darkness. Then I gave a cry of exultation, for a tiny pin-point of yellow light suddenly transfixed the dark veil.

"There it is !" I cried.

"No, no, sir, it is nothing—nothing at all !" the butler broke in; "I assure you, sir———"

"Move your light across the window, Watson !" cried the baronet. "See, the other moves also ! Now, you rascal, do you deny that it is a signal ? Come, speak up ! Who is your confederate ?"

Barrymore's face became defiant. "It is my business, and not yours. I will not tell."

"Then you leave my employment right away."

"Very good, sir. If I must I must."

"And you go in disgrace. By thunder, you may well be ashamed of yourself ! Your family has lived with mine for over a hundred years under this roof, and here I find you deep in some dark plot against me."

"No, no, sir; no, not against you !" It was a woman's voice and Mrs. Barrymore, more horror-

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

struck than her husband, was standing at the door.

"We have to go, Eliza. This is the end of it. You can pack our things," said the butler.

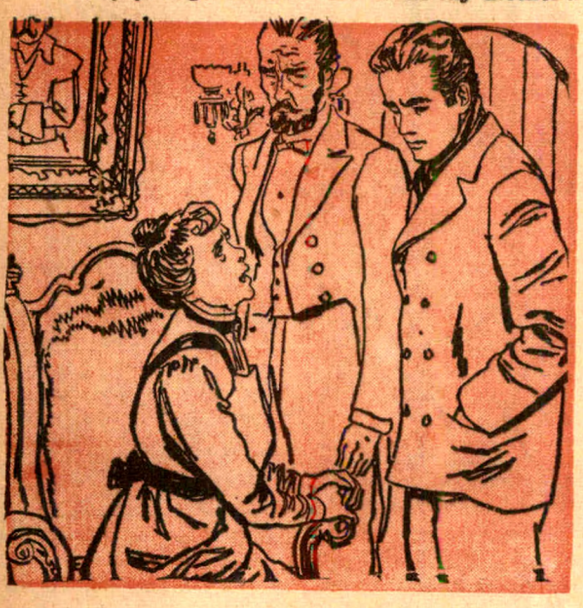
"Oh, John, John, have I brought you to this ? It is my doing, Sir Henry—all mine."

"Speak out, then ! What does it mean ?"

"My brother is starving on the moor. We can't let him perish at our very gates. The light is a signal to him that food is ready———"

"Then your brother is———"

"The escaped convict, sir. My name was Selden, and he is my younger brother. He broke my mother's



"The escaped convict, sir—Selden, the criminal."

heart and dragged our name in the dirt. But to me, sir, he was always the little curly-headed boy that I had nursed and played with years ago. That was why he broke prison, sir. He knew that I was here and that we could not refuse to help him. When he dragged himself here one night, with the warders hard at his heels, what could we do ? We took him in and fed him and cared for him. Then you returned, sir, and my brother thought he would be safer on the moor than anywhere else, so he lay in hiding there. But every second night we made sure if he was still there by putting a light in the window, and if there was an answer my husband took some bread and meat to him. Every day we hoped that he was gone, but as long as he was there we could not desert him. That is the whole truth, and you will see that if there is blame in the matter it does not lie with my husband but with me."

"Is this true, Barrymore ?"

"Yes, Sir Henry. Every word of it."

"Well, I cannot blame you for standing by your own wife. Forget what I have said. Go to your room, you two, and we shall talk further about this matter in the morning."

When they were gone we looked out of the window again. Sir Henry had flung it open. Far away in the black distance there still glowed that one tiny point of yellow light.

"How far do you think it is ?" asked the baronet.

"Not more than a mile or two off."

"Well, it cannot be far if Barrymore had to carry out the food to it. And the convict is waiting beside that candle. By thunder, Watson, I am going out to capture him !"

"I will go with you," said I.

"Get your revolver and put on your boots. The sooner we start the better."

In five minutes we were on our way. Now and then the moon peeped out, but clouds were driving over the face of the sky and, just as we came out on the moor, a thin rain began to fall. The light still burned steadily in front.

"Are you armed ?" I asked.

"I have a hunting-crop."

"We must close in on him rapidly, for he is said to be a desperate fellow. We shall take him by surprise."

"I say, Watson," said the baronet, "what would Holmes say to this ? How about that hour of darkness in which the power of evil is exalted ?"

As if in answer to his words there rose suddenly out of the vast gloom of the moor that strange cry which I had heard upon the borders of the great Grimpen Mire. It came with the wind through the silence of the night, a long deep mutter, then a rising howl, and then the sad moan in which it died away. Again and again it sounded, the whole air throbbing with it, strident, wild, and menacing. The baronet caught my sleeve and his face glimmered white through the darkness.

"My God, what's that, Watson ?"

"I don't know. It's a sound they have on the moor. I heard it once before."

"Watson," exclaimed the baronet, "it was the cry of a hound !"

My blood ran cold in my veins, for there was a break in his voice which told of the sudden horror which seized him. "Come now, Watson, didn't you think yourself that it was a hound ?"

"Stapleton was with me when I heard it last. He said it might be the call of a strange bird."

"No, no, it was a hound. My God, can there be some truth in all these stories ? You don't believe them, do you, Watson ?"

"No, no."

"And yet it was one thing to laugh about it in London, and it is another to stand out here on the moor and hear such a cry as that. And my uncle ! There was the footprint of the hound beside him as he lay. I don't think that I am a coward, Watson, but that sound seemed to freeze my very blood. Feel my hand !"

It was as cold as a block of marble

"I don't think I'll get that cry out of my head. What do you advise that we do now ?" asked Sir Henry.

"Shall we turn back ?"

"No, by thunder ! We have come out to get our man, and we will do it. We after the convict, and a hellhound after us. Come on !"

We stumbled slowly along, with the black loom of the craggy hills around us, and the yellow speck of light burning steadily in front. Sometimes the glimmer seemed to be far away upon the horizon and sometimes it might have been within a few

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

yards of us. But at last we could see whence it came, and then we knew that we were indeed very close. A guttering candle was stuck in a crevice of the rocks which flanked it on each side so as to keep the wind from it and also to prevent it from being visible, save in the direction of Baskerville Hall.

"What shall we do now ?" whispered Sir Henry.

"Wait here. He must be near his light. Let us see if we can get a glimpse of him."

The words were hardly out of my mouth when we both saw him. Over the rocks, in the crevice of which the candle burned, there was thrust out an evil yellow face, a terrible animal face, all seamed and scored. Foul with mire, with a bristling beard, and hung with matted hair, it might well have belonged to one of those old savages who dwelt in the burrows on the hillsides. The light beneath him was reflected in his small, cunning eyes which peered fiercely to right and left through the darkness like a crafty savage who has heard the steps of the hunters.

Something had evidently aroused his suspicions. Any instant he might dash out the light and vanish in the darkness. I sprang forward, and Sir Henry did the same. The convict screamed out a curse and hurled a rock that splintered against the boulder which had sheltered us. I caught one glimpse of his short, squat, strongly built figure as he turned to run. At the same moment the moon broke through the clouds. We rushed over the brow of the hill, and there was our man springing over the stones with the agility of a mountain goat.

We were both swift runners and in fairly good condition, but we soon found we had no chance of overtaking him. We saw him in the moonlight until he was only a small speck. We stopped and sat panting on two rocks.

And it was then that a most strange and unexpected thing occurred. We had risen from our rocks and were turning to go home. The moon was low upon the right, and the jagged pinnacle of a granite tor stood up against the lower curve of its silver disc. There, outlined as black as an ebony statue on that shining background, I saw the figure of a man. He stood with legs a little separated, his arms folded, his head bowed. He might have been the very spirit of that terrible place. He was not the convict. This man was far from the place where the latter had disappeared. Besides, he was a much taller man. With a cry of surprise I pointed him out but in the instant I turned to grasp Sir Henry's arm the man was gone.

I wished to go in that direction and search the tor, but the baronet's nerves were still quivering and he was not in the mood for fresh adventures. He had not seen that lonely man upon the tor. "A warder, no doubt," he remarked later. "The moor has been thick with them since this fellow escaped." Well, perhaps his explanation may be the right one, but I should like to have some further proof of it.

* * *

EXTRACT FROM DR. WATSON'S DIARY

So far I have been able to quote from the reports which I have forwarded during these early days to Holmes. Now I have arrived at a point where I am to abandon this method and trust to my recollections, aided by the diary which I kept at the time. I proceed, then, from the morning which followed our abortive chase of the convict.

October 16th. A dull and foggy day with a drizzle of rain. The house is banked in with rolling clouds, which rise now and then to show the dreary curves of the moor. It is melancholy outside and in.

This morning after breakfast, Barrymore asked leave to speak with Sir Henry, and they were closeted in his study some little time. Sitting in the billiard-room I more than once heard the sound of voices raised. After a time the baronet opened the door and called for me.

"Barrymore considers that he has a grievance," he said.

The butler was standing very pale but very collected before us. "I may have spoken too warmly, sir," said he, "and if I have, I am sure that I beg your pardon. At the same time, I was very much surprised when I heard you two gentlemen come back this morning and learned that you had been chasing Selden."

"But the man is a public danger," said the baronet. "You only have to get a glimpse of his face to see that. Look at Mr. Stapleton's house, for example, with no one but himself to defend it. There's no safety for anyone until Selden is under lock and key."

"He'll break into no house, sir. I give you my solemn word upon that," protested Barrymore. "But he will never trouble anyone in this country again. I assure you, Sir Henry, that in a very few days the necessary arrangements will have been made and he will be on his way to South America. For God's sake, sir, I beg of you not to let the police know that he is still on the moor. They have given up the chase there, and he can lie quiet until the ship is ready for him. You can't tell on him without getting my wife and me into trouble, so I beg you, sir, to say nothing to the police."

"But how about the chance of his holding someone up before he goes ?" demanded Sir Henry.

"He would not do anything so mad, sir. To commit a crime would show where he was hiding."

"That is true," said the baronet. "Well, Barrymore——"

"God bless you, sir, and thank you from my heart ! It would have killed my poor wife had he been taken again."

"I guess we are aiding and abetting a felony, Watson ? But, after what we have heard, I don't feel as if I could give the man up. All right, Barrymore, you can go."

The man turned, but he hesitated and then came back. "You've been so kind to us, sir, that I should like to do the best I can for you in return. I know something, Sir Henry, but it was long after the inquest that I found it out. I've never breathed a word about it yet to a mortal man. It's about poor Sir Charles's death. I know why he was at the gate at that hour. It was to meet a woman."

"And the woman's name ?" asked Sir Henry.

"I can't give you the name, sir, but I can give you the initials. They were L.L."

"How do you know this, Barrymore ?"

"Well, Sir Henry, your uncle had a letter that morning. He had usually a great many letters but that morning, as it chanced, there was only this one letter, so I took the more notice of it. It was from Coombe Tracey, and it was addressed in a woman's

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

hand. I thought no more of the matter, and never would have done had it not been for my wife. Only a few weeks ago she was cleaning out Sir Charles's study—it had never been touched since his death—and she found the ashes of a burned letter in the back of the grate. The greater part of it was charred to pieces, but one end of a page hung together, and the writing could still be read. It seemed to us to be a postscript, and it read : 'Please, please, as you are a gentleman, burn this and be at the gate by ten o'clock.' Beneath it were signed the initials L.L."

"Have you got that slip ?"

"No, sir, it crumbled all to bits soon after we moved it."

"And you have no idea who L.L. is ?"

"No, sir, but if we could lay our hands upon her we should know more about Sir Charles's death."

"I cannot understand, Barrymore, how you came to conceal this important information."

"Well, sir, we were both very fond of Sir Charles, and—and it's well to go carefully when there's a lady in the case. Even the best of us——"

"Very good, Barrymore, you can go." When the butler left us Sir Henry turned to me. "Well, Watson, what do you think of this new light ?"

CHAPTER-IX

OCTOBER 17th. All day today the rain poured down, rustling on the ivy and dripping from the eaves. In the evening I put on my waterproof and walked far upon the sodden moor, the rain beating upon my face and the wind whistling about my ears. God help those who wander into the great mire now, for even the firm uplands are becoming a morass. Nowhere was there any trace of that lonely man whom I had seen on the same spot two nights before.

As I walked back I was overtaken by Dr. Mortimer driving over a rough moorland track which led from the outlying farmhouse of Foulmire. He insisted upon my climbing into his dog-cart for a lift homeward. I found him much troubled over the disappearance of his little spaniel. It had wandered onto the moor and had never come back. I gave him such consolation as I might, but I do not fancy that he will see his little dog again.

"By the way, Mortimer," said I as we jolted along the rough road, "I suppose there are few people living within driving distance of this whom you do not know ?"

"Hardly any, I think."

"Can you, then, tell me the name of any woman whose initials are L.L. ?"

He thought for a few moments. "There is Laura Lyons—but she lives in Coombe Tracey. She is Frankland's daughter."

"What ! Old Frankland the crank ?"

"Exactly. She married an artist named Lyons, who came sketching on the moor. He deserted her. The fault from what I hear may not have been entirely on one side. Her father refused to have anything to do with her because she had married without his consent and perhaps for one or two other reasons as well. So, between the old sinner and the young one the girl has had a pretty bad time."

"How does she live ?"

"I fancy old Frankland allows her a pittance, but it cannot be more, for his own affairs are cossiderably involved. Her story got about, and several people here did something to help her earn an honest living. Stapleton for one, and Sir Charles for another. I gave her a trifle myself. It was to set her up in a typewriting business."

I have only one other incident to record. This was my conversation with Barrymore just now, which gives me one more strong card which I can play in due time. Mortimer had stayed to dinner, and he and the baronet played ecarte afterwards. The butler brought me my coffee into the library, and I took the chance to ask him a few questions.

"Well," said I, "has this precious relation of yours departed, or is he still lurking out yonder ?"

"I don't know, sir. I've not heard of him since I left out food for him last, and that was three days ago."

"Did you see him then ?"

"No, sir, but the food was gone when next I went that way."

"Then he was certainly there ?"

"So you would think, sir, unless it was the other man who took it."

I sat with my coffee cup halfway to my lips. "You know that there is another man then ?"

"Yes, sir; there is another man upon the moor."

"How do you know of him ?"

"Selden told me of him, sir, a week ago or more. I don't like it Dr. Watson—I tell you straight, sir, that I don't like it."

"Now, listen to me, Barrymore ! I have come here with no object except to help your master. Tell me, frankly, what it is that you don't like."

Barrymore hesitated for a moment. "It's all these goings-on, sir," he cried at last. "Look at Sir Charles's death ! The noises at night. There's not a man would cross the moor after sundown if he was paid for it. Look at this stranger hiding out yonder, watching and waiting ! What's he waiting for ? What does it mean ?"

"About this stranger," said I. "Can you tell me anything about him ? What did Selden say ?"

"Selden saw him once or twice, but he is a deep one and gives nothing away. At first he thought that he was the police, but soon he found that he had some lay of his own. A kind of gentleman he was, as far as he could see, but what he was doing he could not make out."

"And where did he say that he lived ?"

"Among the stone huts where the old folk used to live. Selden found out that he has got a lad who works for him and brings all he needs. I dare say he goes to Coombe Tracey for what he wants."

* * *

A DELICATE INTERVIEW

The recent extract from my private diary has brought my narrative up to October 18, a time when these strange events began to move swiftly towards their terrible conclusion. I had no opportunity to tell the baronet what I had learned about Mrs. Lyons, for Dr. Mortimer remained with him at cards until it was very late. At breakfast, however, I informed him about my discovery and asked him whether he would care to accompany me to Coombe

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

Tracey. At first he was eager to come, but on second thoughts it seemed to both of us that if I went alone the results might be better. So I left Sir Henry behind and drove off upon my new quest.

When I reached Coombe Tracey I told Perkins to put up the horses, and I had no difficulty in finding Mrs. Laura Lyons in her rooms which were central and well appointed. A maid showed me in and as I entered the sitting-room a lady, sitting before a typewriter, arose with a smile of welcome. Her face fell, however, when she saw that I was a stranger. She sat down again and asked me the object of my visit.

The first impression left by Mrs. Lyons was one of extreme beauty. Her eyes and hair were of the same rich hazel colour, and her cheeks, though freckled, were flushed with the exquisite bloom of the brunette, the dainty pink which lurks at the heart of the sulphur rose. Admiration was, I repeat, the first impression. But the second was criticism. There was something subtly wrong with the face, some hardness, perhaps, of eye; some looseness of lip which marred its perfect beauty. But these, of course, are after-thoughts. At the moment I was simply conscious that I was in the presence of a very handsome woman, and that she was asking me the reasons for my visit.

"I have the pleasure," said I, "of knowing your father."

It was a clumsy introduction, and the lady made me feel it. "There is nothing in common between my father and me," she said. "I owe him nothing, and his friends are not mine. If it were not for the late Sir Charles Baskerville and some other kind hearts I might have starved for all that my father cared."

"It was about the late Sir Charles that I have come here to see you."

"What can I tell you about him ?" she asked, and her fingers played nervously over the stops of her typewriter.

"Did you correspond with him ?"

She looked up with an angry gleam in her hazel eyes. "What is the object of these questions ?" she asked sharply.

"The object is to avoid a public scandal."

She was silent and her face was still very pale. At last she said softly, "Well, I'll answer; what are your questions ?"

"Did you write to Sir Charles ?"

"I certainly wrote to him once or twice to acknowledge his generosity."

"Have you ever met him ?"

"Yes, once or twice, when he came into Coombe Tracey."

"But if you saw him so seldom and wrote so seldom, how did he know enough about your affairs to be able to help you ?"

She met my difficulty with the utmost readiness. "There were several gentlemen who knew my sad situation. One was Mr. Stapleton, a neighbour and intimate friend of Sir Charles's. It was through him that Sir Charles learned about my affairs."

"Did you ever write to Sir Charles asking him to meet you ?" I continued.

Mrs. Lyons flushed with anger again. "Certainly not !"

"Not on the very day of his death ?"

The flush faded in an instant, and a deathly face was before me. Her dry lips could not speak the "No" which I saw rather than heard.

"Surely your memory deceives you," said I. "I could even quote a passage of your letter. It ran : 'Please, please, as you are a gentleman, burn this letter, and be at the gate by ten o'clock.' "

I thought that she had fainted, but she recovered herself by a supreme effort, gasping, "Is there no such thing as a gentleman ?"

"You do Sir Charles an injustice. He *did* burn the letter. But sometimes a letter may be legible even when burned. You acknowledge now that you wrote it ?"

"Yes, I did," she cried, pouring out her soul in a torrent of words. "I did write it. Why should

"Yes, I did," she cried. "I did write it."

I deny it ? I have no reason to be ashamed of it. I wished him to help me. I believed that if I had an interview I could gain his help, so I asked him to meet me."

"But why at such an hour ?"

"Because I had only just learned that he was going to London next day and might be away for months. There were reasons why I could not get there earlier."

"But why a rendezvous in the garden instead of a visit to the house ?"

"Do you think a woman could go alone at that hour to a bachelor's house ?"

"Well, what happened when you did get there ?"

"I never went. I swear it to you on all I hold sacred. I never went. Something intervened to prevent my going."

"What was that ?"

"That is a private matter. I cannot tell it."

"Mrs. Lyons," said I at the close of the inconclusive interview, "you are putting yourself in a very false position by not telling all that you know. If I have to call in the police you will see how seriously you are compromised. If your position is

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

innocent, why did you in the first instance deny having written to Sir Charles upon that date ?"

"Because I feared that some false conclusion might be drawn from it. The matter is a very private one."

"The more reason why you should avoid a public investigation."

"I will tell you, then. If you have heard anything of my unhappy history you will know that I made a rash marriage. My life has been one incessant persecution from a husband I abhor. The law is upon his side, and every day I am faced by the possibility that he may force me to live with him. At the time I wrote that letter to Sir Charles I had learned that there was a prospect of my regaining my freedom if certain expenses could be met. It meant everything to me—everything. I knew Sir Charles's generosity, and I thought that if he heard the story from my own lips he would help me."

"Then how is it that you did not go ?"

"Because I received help in the interval from another source."

"Why, then, did you not write to Sir Charles and explain this ?"

"So I should have done had I not read of his death in the paper next morning."

The woman's story hung coherently together. I could only check it by finding if she had, indeed, instituted divorce proceedings against her husband at or about the time of the tragedy.

But first I must turn back to that other clue which was to be sought for among the stone huts upon the moor. So I drove back and noted how hill after hill showed traces of the ancient people. Barrymore's only indication had been that the stranger lived in one of these abandoned huts, and many hundreds of them are scattered over the moor. But I had my own experience for a guide since it had shown me the man standing upon the summit of Black Tor. That, then, should be the centre of my search. From there I should explore every hut upon the moor until I lighted upon the right one, and find out, at the point of my revolver if necessary, who he was and why he had dogged us so long. He might slip away from us in the crowd of Regent Street, but it would puzzle him to do so upon the lonely moor. On the other hand, if I should find the hut and its tenant should not be within it I must remain there, however long the vigil, until he returned. Holmes had missed him in London. It would indeed be a triumph for me if I could run him to earth.

Luck had been against us again and again in this inquiry, but now at last it came to my aid. And the messenger of good fortune was none other than Mr. Frankland standing outside his garden gate that opened on to the highroad along which I travelled.

"Good-day, Dr. Watson," cried he with unwonted good humour, "you must really give your horses a rest and come in to have a glass of wine and to congratulate me."

I was anxious to send Perkins and the wagonette home, and the opportunity was a good one. I alighted and sent a message to Sir Henry that I should walk over in time for dinner. Then I followed Frankland into his dining-room.

"It's a great day for me, sir—one of the red-letter days of my life !" he cried with many chuckles. "I have brought off a double event. I have established a right of way through the centre of old Middleton's park, slap across it, sir, within a hundred yards of his own front door. What do you think of that ? We'll teach these magnates that they cannot ride roughshod over the rights of the commoners, confound them ! And I've closed the wood where the Fernworthy folk used to picnic. These infernal people seem to think that there are no rights of property, and that they can swarm where they like with their papers and their bottles. Both cases decided, Dr. Watson, and both in my favour. I haven't had such a day since I had Sir John Morland for trespass because he shot in his own warren."

"Did it do you any good ?"

"None, sir, none. I am proud to say that I had no interest in the matter. I act entirely from a sense of public duty. I have no doubt, for example, that the Fernworthy people will burn me in effigy tonight. But I could tell them what they are dying to know."

I had been casting round for some excuse to get away from his gossip, but now I began to wish to hear more of it. "Some poaching case, no doubt ?" said I with an indifferent manner.

"Ha, ha, my boy, a very much more important matter than that ! What about the convict on the moor ?"

I started. "You don't mean that you know where he is ?" said I.

"I may not know exactly where he is, but I'm quite sure that I could help the police lay their hands on him. Has it never struck you that the way to catch that man was to find out where he got his food and so trace it to him ?"

He certainly seemed to be getting uncomfortably near the truth. "No doubt", said I; "but how do you know that he is anywhere upon the moor ?"

"I know it because I have seen with my own eyes the messenger who takes him his food."

My heart sank for Barrymore. It was a serious thing to be in the power of this spiteful old busybody. But his next remark took a weight from my mind.

"You'll be surprised to hear that his food is taken to him by a child. I see him every day through my telescope upon the roof."

Here was luck indeed ! And yet I suppressed all appearance of interest. A child ! Barrymore had said that our unknown was supplied by a boy. It was on his track, and not upon the convict's, that Frankland had stumbled.

"I should say that it was much more likely that it was the son of one of the moorland shepherds taking out his father's dinner," I remarked.

"Indeed, sir !" said he, pointing out over the moor. "Do you see that Black Tor over yonder ? Well, do you see the low hill beyond with the thornbush upon it ? It is the stoniest part of the whole moor. Is that a place where a shepherd would be likely to take his station ? Your suggestion, sir, is a most absurd one."

I meekly answered that I had spoken without knowing all the facts. My submission pleased him and led him to further confidences.

"You may be sure, sir, that I have very good grounds before I come to an opinion. I have seen

the boy again and again with his bundle. Every day, and sometimes twice a day, I have been able—but wait a moment, Dr. Watson. Do my eyes deceive me, or is there at the present moment something moving upon that hillside ?"

It was several miles off, but I could distinctly see a small dark dot against the dull green and gray.

"Come, sir, come !" cried Frankland, rushing upstairs. "You will see with your own eyes and judge for yourself."

The telescope, mounted upon a tripod, stood upon the flat leads of the house. Frankland clapped his eye to it and gave a cry of satisfaction.

"Quick, Dr. Watson, quick, before he passes over the hill !"

There he was, sure enough, an urchin with a little bundle upon his shoulder, toiling slowly up the hill. When he reached the crest he looked round him with a furtive air, as one who dreads pursuit. Then he vanished over the hill.

"Well ! Am I right ? But not one word will the constables have from me, and I bind you to secrecy also, Dr. Watson. Not a word ! You understand !"

"Just as you wish."

Then I left him to hunt for that boy.

CHAPTER—X

THE sun was already sinking when I reached the summit of the hill. The barren scene, the sense of loneliness, and the urgency of my task all struck a chill into my heart. The boy was nowhere to be seen. But down beneath me in a cleft of the hills there was a circle of the old stone huts, and in the middle of them there was one which retained sufficient roof to act as a screen against the weather. At last my foot was on the threshold of the stranger's hiding place.

A vague pathway among the boulders led to the dilapidated opening which served as a door. All was silent within. Throwing aside my cigarette, I closed my hand upon the butt of my revolver and looked in. The place was empty.

But there were ample signs that I had not come upon a false scent. This was certainly where the man lived. A litter of empty tins showed that the place had been occupied for some time, and I saw, as my eyes became accustomed to the checkered light, a pannikin and a half-full bottle of spirits standing in the corner. In the middle of the hut a flat stone served the purpose of a table, and upon this stood a small cloth bundle—the same, no doubt, which I had seen through the telescope upon the shoulder of the boy. Beneath it lay a sheet of paper with writing upon it. This was what I read, roughly scrawled in pencil : "Dr. Watson has gone to Coombe Tracey."

It was I, then, and not Sir Henry, who was being dogged by this secret man ! He had not followed me himself, but he had set an agent—the boy, perhaps—upon my track, and this was his report. Possibly I had taken no step since I had been upon the moor which had not been observed and reported. If there was one report there might be others, but there was none. Nor could I discover any sign which might indicate the intentions of the man who lived in this singular place, save that he must be of Spartan habits and cared little for the comforts of life.

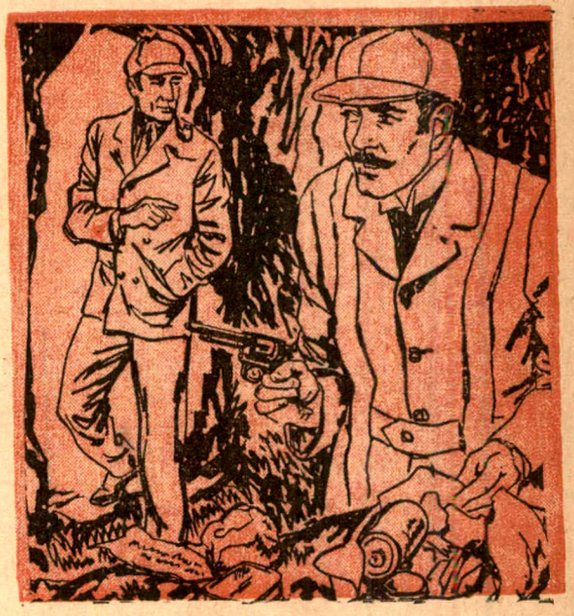
Outside the sun was sinking low and the west was blazing with scarlet and gold. All was sweet and mellow in that evening light as with tingling nerves but fixed purpose, I sat in the dark recess of the hut and waited for the coming of its tenant.

And then at last I heard him. Far away came the sharp clink of a boot striking upon a stone, coming nearer and nearer. I shrank back into the darkest corner and cocked the pistol in my pocket, determined not to discover myself until I had an opportunity of [illegible] of the stranger. There was a long pause which showed that he had stopped. Then once more the footsteps approached and a shadow fell across the opening of the hut.

"It's a lovely evening, my dear Watson," said a well-known voice. "I really think that you will be more comfortable outside than in."

For a moment or two I sat breathless, hardly able to believe my ears. Then my senses and my voice came back to me. "Holmes !" I cried—"Holmes !"

"Come out," he said, "and please be careful with the revolver".



"Come out," he said, "be careful with the revolver."

His gray eyes danced with amusement as they fell upon my astonished features. In his tweed suit and cloth cap he looked like any tourist upon the moor, and he had contrived, with that catlike love of personal cleanliness which was one of his characteristics, that his chin should be as smooth and his linen as perfect as if he were in Baker Street.

"I never was more glad to see anyone in my life," said I as I wrung him by the hand.

"Or more astonished, eh ?"

"Well, I must confess to it."

"The surprise was not all on one side, I assure you. I had no idea that you had found my associate

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

retreat, still less that you were inside it, until I was within twenty paces of the door."

"My footprint, I presume ?"

"No, Watson; I fear that I could not undertake to recognize your footprint amid all the footprints of the world. If you seriously desire to deceive me you must change your tobacconist; for when I see the stub of a cigarette marked Bradley, Oxford Street, I know that my friend Watson is in the neighbourhood." He paused, then said, "So you actually thought that I was the criminal ?"

"I did not know who you were, but I was determined to find out."

"Excellent, Watson ! And how did you localize me ? You saw me, perhaps, on the night of the convict hunt, when I was so imprudent as to allow the moon to rise behind me ?"

"Yes, I saw you then."

"And you have no doubt searched all the huts until you came to this one ?"

"No, your boy had been observed, and that gave me a guide where to look."

"The old gentleman with the telescope, no doubt. I could not make it out when first I saw the light flashing upon the lens." He rose and peeped into the hut. "Ha, I see that Cartwright has brought up some supplies. What's this paper ? So you have been to Coombe Tracey, have you ?"

"Yes."

"To see Mrs. Laura Lyons ?"

"Exactly."

"Well done ! Our researches have evidently been running on parallel lines, and when we unite our results I expect we shall have a fairly full knowledge of the case."

The sun had set and the air turned chill, so we withdrew into the hut for warmth. There, sitting together in the twilight, I told Holmes of my conversation with the lady. So interested was he that I had to repeat some of it twice before he was satisfied.

"This is most important," said he when I had concluded. "It fills up a gap which I had been unable to bridge in this most complex affair. You are aware, perhaps, that a close intimacy exists between this lady and the man Stapleton ?"

"I did not know of a close intimacy."

"There can be no doubt about the matter. They meet, they write, there is a complete understanding between them. Now, this puts a very powerful weapon into our hands. If I could only use it to detach his wife."

"His wife ?"

"I am giving you some information now, in return for all that you have given me. The lady who has passed here as Miss Stapleton is in reality his wife."

"Good heavens, Holmes ! Are you sure of what you say ? How could he have permitted Sir Henry to fall in love with her ?"

"Sir Henry's falling in love could do no harm to anyone except Sir Henry. He took particular care that Sir Henry did not *make* love to her, as you have yourself observed. I repeat that the lady is his wife and not his sister."

"But why this elaborate deception ?"

"Because he foresaw that she would be very much more useful to him in the character of a free woman."

All my unspoken instincts, my vague suspicions, suddenly took shape and centred upon the naturalist. "It is he, then, who dogged us in London ?"

"So I read the riddle."

"And the warning—it must have come from her !"

"Exactly."

"But are you sure of this, Holmes ? How do you know the woman is his wife ?"

"Because he so far forgot himself as to tell you a true piece of autobiography upon the occasion when he first met you, and I dare say he has many a time regretted it since. He *was* once a schoolmaster in the north of England. Now, there is no one more easy to trace than a schoolmaster. Investigation showed me that a school had come to grief under atrocious circumstances, and that the man who owned it—the name was different—had disappeared with his wife. The descriptions agreed. When I learned that the missing man was devoted to entomology the identification was complete."

The darkness was rising, but much was still hidden by the shadows.

"But where does Mrs. Laura Lyons come in ?" I asked.

"That is one of the points upon which your own researches have shed a light. Your interview with the lady has cleared the situation very much. I did not know about a projected divorce between herself and her husband. In that case, regarding Stapleton as an unmarried man, she counted no doubt upon becoming his wife."

"And when she is undeceived ?"

"Why, then we may find the lady of service. It must be our first duty to see her—both of us—tomorrow. Don't you think, Watson, that you are away from your charge rather long ? Your place should be at Baskerville Hall."

The last red streaks had faded in the west and night had settled upon the moor. A few faint stars were gleaming in a violent sky.

"One last question, Holmes," I said as I rose. "Surely there is no need of secrecy between you and me. What is the meaning of it all ? What is he after ?"

Holmes's voice sank as he answered : "It is murder, Watson—refined, cold-blooded, deliberate murder. Do not ask me for particulars. My nets are closing upon him, even as his are upon Sir Henry, and with your help he is already almost at my mercy. There is but one danger which can threaten us. It is that he should strike before we are ready to do so. Another day—Hark !"

A terrible scream—a prolonged yell of horror and anguish burst out of the silence of the moor. That frightful cry turned the blood to ice in my veins. Holmes had sprung to his feet, and I saw his dark, athletic outline at the door, his shoulders stooping, his head thrust forward, his face peering into the darkness. "Hush !" he whispered. "Hush !"

The cry had been loud on account of its vehemence, but it had pealed out from somewhere far

on on the shadowy plain. Now it burst upon our ears, nearer, louder, more urgent than before.

"Where is it ?" Sherlock whispered; and I knew from the thrill of his voice that he, the man of iron, was shaken to the soul. "Where is it. Watson ?"

"There, I think." I pointed into the darkness.
"No, there !"

Again the agonized cry swept through the silent night, louder and much nearer than ever. And a new sound mingled with it, a deep, muttered rumble, musical and yet menacing.

"The hound !" cried Holmes. "Come, Watson, come Great heavens, if we are too late !"

He had started running swiftly over the moor, and I followed at his heels. But now from somewhere immediately in front of us there came one last despairing yell, and then a dull, heavy thud. We halted and listened. Not another sound broke the heavy silence of the windless night.

I saw Holmes put his hand to his forehead like a man distracted. He stamped his feet upon the ground. "He has beaten us, Watson. We are too late."

"No, no, surely not !"

"Fool that I was to hold my hand. And you, Watson, see what comes of abandoning your charge ! But, by Heaven, if the worst has happened we'll avenge him."

Blindly we ran through the gloom, blundering against boulders, forcing our way through gorse bushes, panting up hills and rushing down slopes, heading always in the direction whence those dreadful sounds had come.

A low moan had fallen upon our ears. There it was again upon our left ! On that side a ridge of rocks ended in a sheer cliff which overlooked a stone-strewn slope. On its jagged face was spread-eagled some dark, irregular object. As we ran towards it the vague outline hardened into a definite shape. It was a prostrate man face downward upon the ground, the head doubled under him at a horrible angle. The gleam of the match which Sherlock struck shone upon the ghastly pool which widened slowly from the skull of the victim. And it shone upon something else which turned our hearts faint within us—the body of Sir Henry Baskerville !

We caught the one clear glimpse of it, then the match flickered out, even as the hope had gone out of our souls.

"The brute ! the brute !" I cried with clenched hands. "Oh, Holmes, I shall never forgive myself for having left him to his fate."

"I am more to blame than you, Watson. In order to have my case complete, I have thrown away the life of my client. It is the greatest blow which has befallen me in my career. But how could I know—how *could* I know—that he would risk his life alone upon the moor in the face of all my warnings ?"

Then as the moon rose we climbed to the top of the rocks over which Sir Henry had fallen, and gazed over the shadowy moor, half silver and half gloom. Far away, miles off, in the direction of Grimpen, a single steady yellow light was shining. It could only come from the lonely abode of the Stapletons. I shook my fist at it as I gazed.

"Why should we not seize him at once ?"

"Our case is not complete. The fellow is cunning to the last degree. It is not what we know, but what we can prove. If we make one false move the villain may escape."

"What can we do ?"

"There will be plenty for us to do tomorrow."

Together we made our way down the precipitous slope and approached the body, black and clear against the silvered stones. Tears blurred my eyes as I said, "We must send for help, Holmes ! We cannot carry him all the way to the Hall—Good heavens, are you mad ?"

He had uttered a cry and bent over the body. Now he was dancing, laughing and wringing my hand, shouting, "A beard ! A beard ! The man has a beard !"

CHAPTER–XI

A BEARD ? I asked in astonishment.

"It's not the baronet—it is—why, it's my neighbour, the convict !"

With feverish haste we had turned the body over, and that beard was pointing up to the cold, clear moon. It was indeed the same face which had glared upon me in the light of the candle from over the rock—the face of Selden, the criminal.

Then in an instant it was all clear to me. I remembered how the baronet had told me that he had handed his old wardrobe to Barrymore who had passed it on to Selden.

"Then the clothes have been the poor devil's death," said Holmes. "It's clear enough that the hound has been laid on from some article of Sir Henry's—the boot which was abstracted in the hotel, in all probability—and so ran this man down. There is one very singular thing, however : How came Selden, in the darkness, to know that the hound was on his trail ?"

"He heard him".

"To hear a hound upon the moor would not frighten a hard man like this convict into such a paroxysm of terror that he would risk recapture by screaming wildly for help. By his cries he must have run a long way after he knew the animal was on his track. How did he know ? How——" Sherlock stopped abruptly, then said softly, "Halloa, Watson, what's this ? It's the man himself, by all that's wonderful and audacious ! Not a word to show your suspicions—not a word !"

A figure was approaching; I saw the dull red glow of a cigar. The moon shone upon him, and I could distinguish the dapper shape and jaunty walk of the naturalist. He stopped when he saw us, and then came on again.

"Why, Dr. Watson, that's not you, is it ? You are the last man that I should have expected to see out on the moor at this time of night. But, dear

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

me, what's this ? Somebody hurt ? Not—don't tell me that it is our friend Sir Henry !" He hurried past me and stooped over the dead man.

"Who—who's this ?" he stammered.

"Who — who's this ?" Mr. Stapleton stammered.

"It's Selden, the man who escaped from Princetown."

Stapleton turned a ghastly face upon us, but by a supreme effort he had overcome his amazement and his disappointment. "Dear me ! What a shocking affair ! How did he die ?"

"He appears to have broken his neck by falling over these rocks. My friend and I were strolling on the moor when we heard a cry," I said.

"I heard a cry also. That was what brought me out. I was uneasy about Sir Henry."

"Why about Sir Henry in particular ?" I could not help asking.

"Because I had suggested that he should come over. When he did not come I was surprised, and I naturally became alarmed for his safety when I heard those cries. By the way"—his eyes darted from my face to Holmes's—"did you hear anything else besides a cry ?"

"No," said Sherlock; "did you ?"

"No."

"What do you mean, then ?"

"Oh, you know the stories about a phantom hound, said to be heard at night upon the moor. I was wondering if there were any evidence of such a sound."

"We heard nothing of the kind," said I. "No doubt that anxiety and exposure have driven him off his head. He rushed about the moor in a crazy state and eventually fell and broke his neck."

"That seems the most reasonable theory," said Stapleton, and he gave a sigh which I took to indicate his relief. "What do you think about it, Mr. Holmes ?"

My friend bowed his compliments. "You are quick at identification," said he.

"We have been expecting you in these parts since Dr. Watson came down. You are in time to see a tragedy."

"Yes, indeed. I will take an unpleasant remembrance back to London with me tomorrow."

"I hope your visit has cast some light upon those occurrences which have puzzled us ?"

Holmes shrugged his shoulders. "One cannot always have the success for which one hopes. An investigator needs facts and not legends or rumours. It has not been a satisfactory case."

Stapleton still looked hard at him. Then he turned to me to say, "I would suggest carrying this poor fellow to my house, but it would give my sister such a fright that I do not feel justified in doing it. I think that if we put something over his face he will be safe until morning."

And so it was arranged. Resisting Stapleton's offer of hospitality, Holmes and I set off to Baskerville Hall, leaving the naturalist to return alone. Looking back we saw the figure moving slowly away over the broad moor, and Sherlock said, "We're at close grips at last. What a nerve the fellow has ! How he pulled himself together in the face of what must have been a paralyzing shock when he found that the wrong man had fallen a victim to his plot. We have never had a foeman more worthy of our steel."

Sir Henry was more pleased than surprised to see Sherlock Holmes, for he had for some days been expecting that recent events would bring him down from London. He did raise his eyebrows, however, when he found that my friend had neither any luggage nor any explanation of its absence. Between us we soon supplied his wants, and then over a belated supper we explained to the baronet as much of our experience as it seemed desirable that he should know. But first I had the unpleasant duty of breaking the news to Barrymore and his wife. To him it may have been an unmitigated relief, but she wept bitterly in her apron. To all the world he was the man of violence, half animal and half demon; but to her he always remained the child who had clung to her hand.

"I've been moping in the house all day since Watson went off in the morning," said the baronet. "If I hadn't sworn not to go about alone I might have had a more lively evening, for I had a message from Stapleton asking me over there.

"I have no doubt that you would have had a more lively evening," observed Holmes drily.

"But how about the case ?" asked the baronet. "Have you made anything out of the tangle ?"

"I think that I shall be in a position to make the situation rather more clear to you before long. There are several points upon which we still want light."

"Well," said Sir Henry, "Watson and I heard the hound on the moor, so I can swear that it is not all empty superstition. I had something to do with dogs when I was out West, and I know one when I hear one. If you can muzzle that one and chain him I'll be ready to swear you are the greatest detective of all time."

"I think I will do that if you will give me your help without question. If you will do this I think the chances are that our little problem will soon be solved. I have no doubt——"

He stopped suddenly and stared fixedly up over my head into the air. "What is it ?" we both cried.

"Excuse the admiration of a connoisseur," said he as he waved his hand towards the line of portraits

We are three

Gour Dutt

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

which covered the opposite wall. "Watson won't allow that I know anything of art, but—these are a really very fine series of portraits."

"Well, I'm glad to hear you say so," said Sir Henry, glancing with some surprise at my friend. "Barrymore has been coaching me in the names. I think I can say my lessons fairly well."

"Who is the gentleman with the telescope ?"

"That is Rear-Admiral Baskerville, who served under Rodney in the West Indies."

"And this Cavalier opposite to me—the one with the black velvet and the lace ?"

"Ah, he is the cause of all the mischief, the wicked Hugo, who started the Hound of the Baskervilles !"

Holmes said little more, but the picture of the old roysterer seemed to have a fascination for him, and his eyes were continually fixed upon it during supper. It was not until later, when Sir Henry had gone to his room, that Sherlock led me back into the banqueting-hall, his bedroom candle in hand, and held it up against the time-stained portrait on the wall.

"Do you see anything there ? Is it like anyone you know ?"

"There is something of Sir Henry about the jaw."

"Just a suggestion, perhaps. But wait an instant !" He stood upon a chair, and holding up the light in his left hand, he curved his right arm over the broad hat and round the long ringlets.

"Good heavens !" I cried in amazement. "The face of Stapleton !"

"Ha, you see it now—an interesting instance of a throwback, which appears to be both physical and spiritual. The fellow is a Baskerville—that is evident."

"With designs upon the succession."

"Exactly. This chance of the picture has supplied us with one of our important missing links. We have him, Watson, we have him ! Before to-morrow night he will be fluttering in our net as helpless as one of his own butterflies."

I was up betimes in the morning, but Holmes was afoot earlier still, for I saw him as I dressed, coming up the drive. "Yes, we should have a full day to-day," he remarked. "The nets are all in place, and the drag is about to begin."

"Have you been on the moor already ?"

"I have sent a report from Grimpen to Princetown on the death of Selden. And I have also communicated with young Cartwright, who would certainly have pined away at the door of my hut, as a dog does at his master's grave, if I had not set his mind at rest about my safety. And now to see Sir Henry. Ah, here he is !"

"Good-morning, Holmes," said the baronet. "You look like a general who is planning a battle with his chief of the staff."

"That is the exact situation. Watson was asking for orders."

"And so do I."

"Very good. You are engaged to dine with our friends the Stapletons tonight."

"I hope that you will come also. They are very hospitable people, and I am sure that they would be very glad to see you."

"I fear that Watson and I must go to London."

"To London ?"

"Yes, I think that we should be more useful there at the present juncture."

The baronet's face perceptibly lengthened. "I hoped that you were going to see me through this business. The Hall and the moor are not very pleasant places when one is alone."

"My dear fellow, you must trust me implicitly and do exactly what I tell you. You can tell your friends that we should have been happy to have come with you, but that urgent business required us to be in town. We hope very soon to return to Devonshire. Will you remember to give them that message ?"

"If you insist upon it. But—I have a good mind to go to London with you," said the baronet. "Why should I stay here alone ?"

"Because it is your post of duty. Because you gave me your word that you would do as you were told."

"All right, then, I'll stay."

"One more direction ! I wish you to drive to Merripit House. Send back your trap, however, and let them know that you intend to walk home."

"To walk across the moor ?"

"Yes."

"But that is the very thing which you have so often cautioned me not to do."

"This time you may do it with safety. If I had not every confidence in your nerve and courage I would not suggest it, but it is essential that you do it. And as you value your life do not go across the moor in any direction save along the straight path which leads from Merripit House to the Grimpen Road, and is your natural way home."

"I will do just what you say."

I was much astounded by this programme, though I remembered that Holmes had said to Stapleton on the night before that his visit would terminate next day. So we bade good-bye to our rueful friend, and a couple of hours afterwards we were at the station of Coombe Tracey and had dispatched the trap upon its return journey. A small boy was waiting upon the platform, who asked, "Any orders, sir ?"

"You will take this train to town, Cartwright. The moment you arrive, send a wire to Sir Henry Baskerville, in my name, to say that if he finds the pocketbook which I have dropped he is to send it by registered post to Baker Street."

"Yes, sir."

"And ask at the station office if there is a message for me."

The boy returned with a telegram, which Holmes handed to me. It ran : Wire received. Coming down with unsigned warrant. Arrive five-forty. LESTRADE.

"That is in answer to mine of this morning. He is the best of the professionals, I think, and we may need his assistance. Now, Watson, I think we cannot employ our time better than by calling upon your acquaintance, Mrs. Laura Lyons."

She was in her office and Sherlock opened his interview with a frankness which considerably amazed her. "I am investigating the circumstances which attended the death of the late Sir Charles Baskerville," said he. "My friend, Dr. Watson, has informed me of what you have communicated, and also of what you have withheld in connection with that matter."

"What have I withheld ? she asked defiantly.

"You have confessed that you asked Sir Charles

to be at the gate at ten o'clock. We know that that was the place and hour of his death. You have withheld what the connection is between these events."

"There is no connection."

"In that case the coincidence must indeed be an extraordinary one. But I think that we shall succeed in establishing a connection, after all. Mrs. Lyons, we regard this case as one of murder, and the evidence may implicate not only your friend Mr. Stapleton but his wife as well."

The lady sprang from her chair. "His wife!" she cried. "His wife! He is not a married man. Prove it!!"

Sherlock shrugged his shoulders. "I can do so," said he, drawing some papers from his pocket. "Here is a photograph of the couple taken in York four years ago. It is indorsed 'Mr. and Mrs. Vandeleur,' but you will have no difficulty in recognizing him, and her also, if you know her by sight. Here are three written descriptions by trustworthy witnesses of Mr. and Mrs. Vandeleur, who at that time kept St. Oliver's private school. Read them and see if you can doubt the identity of these people."

She glanced at them, and then looked up at us with the set, rigid face of a desperate woman, then said, "This man had offered me marriage on condition that I could get a divorce from my husband. He has lied to me, and why—why? I imagined that all was for my own sake. But now I see that I was never anything but a tool in his hands. Ask me what you like; there is nothing which I shall hold back. One thing I swear to you, and that is that when I wrote the letter I never dreamed of any harm to the old gentleman, who had been my kindest friend."

"I entirely believe you, madam," said Holmes. "The sending of that letter was suggested to you by Stapleton?"

"He dictated it."

"I presume that the reason he gave was that you would receive help from Sir Charles for the divorce expenses?"

"Exactly."

"And then, after you had sent the letter, he dissuaded you from keeping the appointment?"

"He told me that it would hurt his self-respect that any other man should find the money for such an object and that, though he was a poor man himself, he would devote his last penny to removing the obstacles which divided us."

"And then you heard nothing until you read the reports of the death in the paper?"

"No."

"And he made you swear to say nothing about your appointment with Sir Charles?"

"He did. He said that the death was a very mysterious one, and that I should certainly be suspected if the facts came out. He frightened me into remaining silent."

"Quite so. But you had your suspicions?"

She hesitated and looked down. "I knew him," she said. "But if he had kept faith with me I should always have done so with him."

"I think that on the whole you have had a fortunate escape," said Sherlock. "You have had him in your power; he knew it, and yet you are alive. We must wish you good-morning now, Mrs. Lyons, and it is probable that you will very shortly hear from us again."

CHAPTER—XII

ONE of Sherlock's defects — if, indeed, one may call it a defect—was that he was exceedingly loath to communicate his full plans to any other person until the instant of their fulfilment. The great ordeal was in front of us; at last we were about to make our final effort, and yet Holmes had said nothing, and I could only surmise what his course of action would be. My nerves thrilled with anticipation when at last the cold wind upon our faces and the dark, void spaces on either side of the narrow road told me that we were back upon the moor once again.

When we passed Frankland's house we knew that we were drawing near to the Hall and to the scene of action. We did not drive up to the door but got down near the gate. The wagonette was paid off and ordered to return to Coombe Tracey, while we started to walk to Merripit House.

"Are you armed, Lestrade?" said Holmes.

The little detective smiled. "As long as I have my trousers I have a hip-pocket, and as long as I have my hip-pocket I have something in it." Then he added, "My word, it does not seem a very cheerful place." The detective glanced at the gloomy slopes and at the huge lake of fog which lay over the Grimpen Mire. "I see the lights of a house ahead of us."

"That is Merripit House, the end of our journey. I must request you walk on tiptoe and not to talk above a whisper."

We moved cautiously along the track as if we were bound for the house, but Holmes halted us when we were about two hundred yards from it.

"This will do," said he. "These rocks upon the right make an admirable screen."

"We are to wait here."

"Yes, we shall make our little ambush here. Get into this hollow, Lestrade. You have been inside the house, have you not, Watson? Can you tell the position of the rooms? What are those latticed windows at this end?

"I think they are the kitchen windows."

"And the one beyond, which shines so brightly?"

"That is certainly the dining-room."

"The blinds are up. You know the lie of the land best. Creep forward quietly and see what they are doing—but for heaven's sake don't let them know that they are being watched!"

I tiptoed down the path and stooped behind the low wall which surrounded the stunted orchard. Creeping in its shadow I reached a point whence I could look straight through the uncurtained window.

There were only two men in the room, Sir Henry and Stapleton. They sat with their profiles towards me on either side of the round table. Both were smoking cigars, and coffee and wine were in front of them. Stapleton was talking with animation, but the baronet looked pale and distrait.

As I watched them Stapleton rose and left the room, while Sir Henry filled his glass again and leaned back in his chair, puffing at his cigar. I

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

heard the creak of a door and the crisp sound of boots upon gravel. The steps passed along the path on the other side of the wall under which I crouched. Looking over, I saw the naturalist pause at the door of an outhouse in the corner of the orchard. A key turned in a lock, and as he passed in there was a curious scuffling noise from within. He was only a minute or so inside, and then I heard the key turn once more and he passed me and reentered the house. I saw him rejoin his guest, and I crept quietly back to where my companions were waiting.

"You say, Watson, that the lady is not there ?" Holmes asked when I had finished my report. "Where can she be, then, since there is no light in any other room except the kitchen ?"

The dense, white fog was drifting slowly in our direction and banked itself up like a wall on that side of us, low but thick and well defined. Holmes muttered impatiently, "It's moving towards us, Watson—the one thing upon earth which could have disarranged my plans. His life may depend upon his coming out before the fog is over the path."

The night was clear and fine above us. The stars shone cold and bright, while a half-moon bathed the whole scene in a soft, uncertain light. Broad bars of golden light from the lower windows stretched across the orchard. One of them was suddenly shut off. The servants had left the kitchen. There only remained the lamp in the dining-room where the two men still chatted over their cigars.

Every minute that white woolly plain which covered one half the moor was drifting closer and closer to the house. Already the first thin wisps of it were curling across the golden square of the lighted window. Holmes struck his hand passionately upon the rock in front of us. "If he isn't out in a quarter of an hour the path will be covered. In half an hour we won't be able to see our hands in front of us."

"Shall we move farther back upon higher ground ?"

"Yes, I think it would be as well."

So we fell back before the fog-bank until we were half a mile from the house, and still that dense white sea, with the moon silvering its upper edge, swept slowly and inexorably on.

"We are going too far," said Holmes. "At all costs we must hold our ground where we are." He dropped on his knees and clapped his ear to the ground. "Thank God, I think that I hear him coming."

A sound of quick steps broke the silence of the moor. Crouching among the stones we stared intently at the silver-tipped bank in front of us. The steps grew louder, and through the fog, as though through a curtain, there stepped the man whom we were awaiting. He looked round him in surprise as he emerged into the clear, starlit night. Then he came swiftly along the path, passed close to where we lay, and went on up the slope behind us. As he walked he glanced continually over either shoulder, like a man who is ill at ease.

"Hist !" sounded Holmes, and I heard the sharp click of a cocking pistol. "Look out ! It's coming."

There was a thin, crisp, continuous patter from somewhere in the heart of that crawling bank. The cloud was within fifty yards of where we lay, and we glared at it, all three, uncertain what horror was about to break. I was at Holmes's elbow, and I glanced for an instant at his face. It was pale and exultant, his eyes shining brightly in the moonlight. But suddenly they started forward in a rigid, fixed stare, and his lips parted in amazement. At the same instant Lestrade gave a yell of terror and threw himself face downward upon the ground. I sprang to my feet, my inert hand grasping my pistol, my mind paralyzed by the dreadful shape which had sprung out from the shadows. A hound it was, an enormous coal-black hound, but not such a hound as mortal eyes have ever seen. Fire burst

A hound such as mortal eyes have never seen.

from its open mouth, its eyes glowed with a smouldering glare, its muzzle and hackles and dewlap were outlined in flickering flame. Never in the delirious dream of a disordered brain could anything more savage, more appalling, more hellish be conceived.

With long bounds the huge black creature was leaping down the track, following hard upon the footsteps of our friend. So paralyzed were we by the apparition that we allowed him to pass before we had recovered our nerve. Then Holmes and I both fired together, and the creature gave a hideous howl, which showed one at least had hit him. He did not pause, however, but bounded onward. Far away on the path we saw Sir Henry looking back, his face white in the moonlight, his hands raised in horror, glaring helplessly at the frightful thing which was hunting him down.

But that cry of pain from the hound had blown all our fears to the winds. If he was vulnerable he was mortal, and if we could wound him we could kill him. Never have I seen a man run as Holmes ran that night. In front of us we flew up the

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

track we heard scream after scream from Sir Henry and the deep roar of the hound. I was in time to see the beast spring upon its victim, hurl him to the ground, and worry at his throat. The next instant Holmes had emptied five barrels of his revolver into the creature's flank. With a last howl of agony and a vicious snap in the air, it rolled upon its back, four feet pawing furiously, and then fell limp upon its side. I stooped, panting, and pressed my pistol to the dreadful, shimmering head, but it was useless to press the trigger. The giant hound was dead.

Sir Henry lay insensible where he had fallen. We tore away his collar and saw there was no wound and that the rescue had been in time. Already our friend's eyelids shivered as he made a feeble effort to move. Lestrade thrust his flask between the baronet's teeth, and two frightened eyes were looking up at us.

"My God !" he whispered. "What was it ? What was it ?"

"It's dead, whatever it is," said Holmes. "We've laid the family ghost once and forever."

In mere size and strength it was a terrible creature which was lying stretched before us. It was not a pure bloodhound and it was not a pure mastiff; but it appeared to be a combination of the two—gaunt, savage, and as large as a small lioness. Even now, in the stillness of death, the huge jaws seemed to be dripping with a bluish flame and the small, deep-set, cruel eyes were ringed with fire. I placed my hand upon the glowing muzzle, and as I held them up my own fingers smouldered and gleamed in the darkness.

"Phosphorus," I said.

"A cunning preparation of it," said Holmes, sniffing at the dead animal. "There is no smell which might have interfered with his power of scent. We owe you a deep apology, Sir Henry, for having exposed you to this fright. I was prepared for a hound, but not for such a creature as this. And the fog gave us little time to receive him."

"You have saved my life. Now, help me stand up. What do you propose to do ?"

"To leave you here. If you will wait, one or the other of us will go back with you to the Hall. The rest of our work must be done, and every moment is of importance. We have our case; now we only want our man," said Sherlock. "It's a thousand to one against our finding him at the house," he declared as we retraced our steps swiftly down the path. "Those shots must have told him that the game was up."

"We were some distance off, and this fog may have deadened them."

"He followed the hound to call him off—of that you may be certain. No, no, he's gone by this time! But we'll search the house and make sure."

The front door was open, so we rushed in and hurried from room to room to the amazement of a doddering old manservant, who met us in the passage. There was no light save in the dining-room, but Holmes caught up the lamp and left no corner of the house unexplored. No sign could we see of the man whom we were chasing. On the upper floor, however, one of the bedroom doors was locked.

"There's someone in here," cried Lestrade. "I can hear a movement. Open this door !"

Holmes struck the door just over the lock with the flat of his foot and it flew open. Pistol in hand, we all three rushed into the room.

But there was no sign within it of that desperate and defiant villain. Instead we were faced by an object so strange and so unexpected that we stood for a moment staring at it in amazement.

The room had been fashioned into a small museum, and the walls were lined by a number of glass-topped cases full of that collection of butterflies and moths the formation of which had been the relaxation of this complex and dangerous man. In the centre of this room there was an upright beam, which had been placed at some period as a support for the old worm-eaten baulk of timber which spanned the roof. To this post a figure was tied, so swathed and muffled in the sheets which had been used to secure it that one could not for the moment tell whether it was that of a man or a woman. One towel passed round the throat and was secured at the back of the pillar. Another covered the lower part of the face, and over it two dark eyes—eyes full of grief and shame and a dreadful questioning—stared back at us.

In a flash we tore off the gag, unswathed the bonds, and Mrs. Stapleton sank upon the floor in front of us. As her beautiful head fell upon her chest I saw the clear red weal of a whiplash across her neck.

"The brute !" cried Holmes. "Here, Lestrade, put her in the chair ! She has fainted."

She opened her eyes again. "Is he safe ?" she asked. "Has Sir Henry escaped ? Is he safe ?"

"Yes."

"And the hound ?"

"It is dead."

She gave a long sigh of satisfaction. "Thank God ! Thank God ! Oh, that villain ! See how Stapleton has treated me !" She shot her arms out from her sleeves, and we saw with horror that they were mottled with bruises. "But this is nothing—

SHERLOCK HOLMES ● THE HOUND OF THE BASKERVILLES

nothing ! It is my mind and soul that he has tortured and defiled." She broke into passionate sobbing as she spoke.

"You bear him no goodwill, madam," said Holmes. "Tell us then where we shall find him."

"There is but one place," she answered. "There is an old tin mine on an island in the heart of the mire. It was there that he kept his hound and prepared a refuge."

The fog-bank lay like white wool against the window. Holmes held the lamp towards it. "See," said he. "No one could find his way into the Grimpen Mire tonight."

She laughed and clapped her hands in merriment. "He may find his way in, but never out," she said. "How can he see the guiding wands tonight ? We planted them together, he and I, to mark the pathway through the mire."

It was evident that all pursuit was in vain until the fog lifted. Meanwhile we left Lestrade in the house while Holmes and I went back with the baronet to Baskerville Hall. The story of the Stapletons could no longer be withheld from him. He took the blow bravely when he learned the truth about the woman he had loved. However, the shock of the night's adventures had shattered his nerves and soon he lay delirious in a high fever under the care of Dr. Mortimer. The two of them were destined to travel together round the world before Sir Henry had become once more the hale, hearty man that he had been before he became master of that ill-omened estate.

And now I come rapidly to the conclusion of this singular narrative, in which I have tried to make the reader share those dark fears and vague surmises which clouded our lives so long and ended in so tragic a manner. On the morning after the death of the hound the fog lifted and we were guided by Mrs. Stapleton to the point where they had found a pathway through the bog. It helped us realize the horror of this woman's life when we saw the eagerness and joy with which she laid us on her husband's track. We left her standing upon the thin peninsula of firm, peaty soil which tapered out into the widespread bog. From the end of it a small wand planted here and there showed where the path zigzagged from tuft to tuft of rushes among those green-scummed pits and foul quagmires which barred the way to the stranger.

Once only we saw a trace that someone had passed that perilous way before us. From amid a tuft of cotton-grass which bore it up out of the slime some dark thing was projecting. Holmes sank to his waist as he stepped from the path to seize it, and had we not been there to drag him out he could never have set his foot upon firm land again. He held an old black boot in the air. "Meyers, Toronto," was printed on the leather inside.

"It's worth a mud bath," said he. "It's our friend Sir Henry's missing boot."

"Thrown there by Stapleton in his flight."

"Exactly. He retained it in his hand after using it to set the hound upon the track. He fled when he knew the game was up, still clutching it. And he hurled it away at this point of his flight. We know at least that he came so far in safety."

But more than that we were never destined to know, though there was much which we might surmise. There was no chance of finding footsteps in the mire, for the rising mud oozed swiftly in upon them. As we reached firmer ground beyond the morass we all looked eagerly for them. But no slightest sign of them ever met your eyes. If the earth told a true story, then Stapleton never reached that island of refuge towards which he struggled through the fog upon that last night. Somewhere in the heart of the great Grimpen Mire, down in the foul slime of the huge morass which had sucked him in, this cold and cruel-hearted man is forever buried.

Many traces we found of him in the bog-girt island where he had hid his savage ally. A huge driving-wheel and a shaft half-filled with rubbish showed the position of an abandoned mine. Beside it were the crumbling remains of the cottages of the miners, driven away no doubt by the foul reek of the surrounding swamp. In one of these a staple and chain with a quantity of gnawed bones showed where the animal had been confined. A skeleton with a tangle of brown hair adhering to it lay among the debris.

"A dog !" said Holmes. "By Jove, a curly-haired spaniel. Poor Mortimer will never see his pet again. Well, I do not know that this place contains any secret which we have not already fathomed. In an emergency he could keep the hound in the out-house at Merripit, but it was always a risk, and it was only on the day designed to climax his efforts that he dared do it.

"Incidentally," continued Sherlock, "my inquiries show that the family portrait did not lie, and that this so-called Stapleton was indeed a Baskerville, the son of Rodger Baskerville, the younger brother of Sir Charles, who fled with a sinister reputation to South America, where he was said to have died unmarried. But he had one child whose real name is the same as his father's. He married Beryl Garcia, a Costa Rican beauty, and having embezzled public money, he changed his name to Vandeleur, and fled to England where he established a school in the east of Yorkshire which failed. The Vandeleurs found it convenient to change their name to Stapleton, and he brought the remains of his fortune, his schemes for the future, and his taste for entomology to the south of England. I learn at the British Museum that the name of Vandeleur has been permanently attached to a certain moth which he had been the first to describe."

After a pause, Holmes concluded, "I said it in London, Watson, and I say it again now, that never yet have we helped to hunt down a more dangerous man than he who is lying yonder" — he swept his long arm towards the huge mottled expanse of green-splotched bog which stretched away until it merged into the russet slopes of the moor.

SOME PAST LUMINARIES OF WEST BENGAL

By Dr. B. C. LAW

M.A., L.L.B., Ph.D., D.Litt., Hony. F.R.A.S. Hony. Member, Paris Asiatic Society.

WEST BENGAL in the 18th and 19th centuries saw many eminent persons who made themselves famous in different spheres of life. It can boast of the first Bengalee officiating Chief Justice of the Calcutta High Court in Sir Romesh Chunder Mitter, the first Indian Peer and the first Indian Governor of a British Indian province, and the first Law Member of the Viceroy's Executive Council in Lord S. P. Sinha, the first Bengalee Divisional Commissioner in Sir Romesh Chunder Dutt, the first Bengalee Vice-Chancellor of the Calcutta University in Sir Gooroodas Banerjee, the first Bengalee Sheriff of Calcutta in Rajah Digambar Mittra, the first Bengalee Port Commissioner in Maharaja Durga Charan Law, the first Bengalee Member of the Indian Civil Service in Satyendranath Tagore, the first Bengalee graduate of the Calcutta University in Bankim Chandra Chatterjee with Jadu Basu, the first Bengalee Justice of the Peace in Dwarkanath Tagore, grandfather of the poet Rabindranath, the first Indian Barrister in Ganendra Mohan Tagore, son of Prasanna Kumar Tagore, the first Indian High Commissioner in Sir Atul Chatterjee, the first Bengalee President of the Asiatic Society of Bengal in Rajah Rajendralal Mittra and the first Bengalee President of the Bangiya Sahitya Parishat in Sir Ramesh Chunder Dutt.

West Bengal is also proud of distinguished educationists, linguists, authors, poets, novelists, art critics, dramatists, experts in music, scientists, medical men, journalists, jurists, politicians, patriots, public men, philanthropists, patrons of learning, social and religious reformers, spiritualists, and merchants. In the following pages a brief account of some of the educationists, authors, linguists, poets, novelists, art-critics, scientists, jurists, and judges is given.

* * * *

RADHAKANTO DEB, who was born in Calcutta in 1784, the great grandson of Rajah Nabakrishna, Persian Secretary to Lord Clive, was an ardent student of Sanskrit literature. He tried to spread English education among his countrymen. He also advocated women's education. He was held in high respect by his countrymen for his exemplary character and unselfish devotion to literature. He is best known for his excellent and comprehensive Sanskrit Dictionary *Sabdakalpadruma.*

* * * *

RAM GOPAL GHOSE, who was born in Calcutta in 1815, received his English education from Derozio. He was the joint editor of *Jnanannesvana* and established a society for the acquisition of general knowledge. He placed the *Bengal Spectator,* a weekly publication, under the editorial charge of his friend Peary Chand Mitra. His deep interest in the cause of education is apparent from the support he rendered to David Hare. When the question of sending four students of the Medical College to England to complete their education was raised by Goodeve, Ram Gopal warmly supported him. The prejudice against crossing the sea was very strong at that time. Apprehending that the courage of the students might fail at the last moment, he stayed with them on board the ship the whole night before their departure to cheer up and encourage them and did not leave them until they had actually started. He was much in favour of women's education and sent his daughter to the girls' school established by Drinkwater Bethune. He was not only a man of culture but also showed his zeal and ardour in public matters. He took a most prominent part in every political movement of the day. He was the first to establish a society in England for political movement with the help of Mr. Adams, for the purpose of drawing the attention of the British public to Indian questions. He was distinguished for his great oratorical power. In 1864 when the Government of Bengal desired to remove the burning ghat from Nimtollah, he made an eloquent speech setting forth the grievances of

his countrymen. As a promoter of education, a patriot, a politician, a speaker, a social reformer, a successful merchant and a man of character, Ram Gopal was one of the foremost men of his time and did much for the advancement and enlightenment of the Hindu society.

* * * *

RAMTANU LAHIRI, who was born in 1813, was a free student of the school founded by David Hare now known as Hare School. He was a pupil of Derozio. Ram Gopal Ghose, Rev. K. M. Banerjee, Raja Digambar Mittra, Russik Mullick and Raja Dakshina Ranjan Mukherjee were his class fellows. He began his life as a teacher. He was a reformer in his days. He was famous for the courage of his opinion, his truthfulness and sincerity of his feelings. He led a blameless life and bore an exemplary character.

* * * *

K. M. BANERJEE, who was born in 1813, was educated at Hindu College. He embraced Christianity in 1832. He published 13 volumes of the *Encyclopædia Bengalensis* in English and Bengali with the help of the then Government. He published his works on the six *darsanas* or the philosophical systems of the Hindus. In recognition of his scholarship, the honorary degree of Doctor of Law was conferred on him. He was not only a man of culture but also an able administrator. He managed the Sunderban property of his son-in-law.

* * * *

PEARY CHAND MITRA, who was born in Calcutta in 1814, was a literary veteran, a devoted worker, a distinguished author, a clever wit, an earnest patriot and an enthusiastic spiritual enquirer. In advanced years he became a theosophist. He contributed many articles to the *Bengal Spectator*, *Bengal Harkara*, the *Englishman*, the *Indian Field*, the *Patriot*, etc. He worked hard for the improvement of women's education. He was the author of *Ramaranjika*, *Abhedi* and *Adhyatmika*. He used to write his books under pseudonym of Tek Chand Thakur. His *Alalergharer Dulal* or the *spoilt child* surpassed all his works in literary power and sense of humour. He was one of the founder members of the British Indian Association. His life was one of public usefulness. He was a true cosmopolitan in spirit but in manners a gentleman.

* * * *

MAHARSHI DEBENDRA NATH TAGORE, who was born in 1818, was educated at the Hindu College. In 1839 he founded the *Tattvabodhinisabha*. Its journal the *Tattvabodhini Patrika* contains many valuable and useful articles. Debendra Nath was an orator of repute. His stirring appeals to the human heart served to reclaim many a wanderer from the path of duty. His impassioned eloquence led greatly to the success of his high mission as a reviver of religion. He formally joined the Brahmo Samaj in 1842 and in the following year he introduced the Brahmic covenant. After the failure of Union Bank he showed a conspicuous sense of integrity by taking on his shoulder the debts which he could have repudiated as not personal. The consequence was grave. He was obliged to part with many of his valuable properties to clear the debts. Such a great sacrifice at once raised Maharshi Devendra Nath's reputation for honesty and upright conduct.

* * * *

ISWAR CHANDRA GUPTA was a born poet, famous not only for his witty and alliterative writings, but also for his patriotic themes. Born at Kanchrapara near Calcutta in about 1806, he exhibited his poetic ability and exceptional memory, when he was in his teens. With the aid of Jogendra Mohan Tagore, a grandson of Gopi Mohun Tagore, he started a Bengali Weekly, later a daily, *Samvadaprabhakara*. He helped in editing another newspaper *Samvada Ratnavali* and also published two more short-lived journals. He earned his living entirely by his writings. His contribution to the growth of Bengali literature is invaluable. He translated into Bengali a number of Sanskrit religious texts. He travelled many years to collect data on the life and work of the literary figures of ancient Bengal and published a number of valuable works, based on them.

* * * *

PANDIT ISWAR CHANDAR VIDYASAGAR, who was born in 1820, was educated at Calcutta Sanskrit College. He was the head *pandit* of the College of Fort William. In 1851 he became the Principal of the Calcutta Sanskrit College. In the Act of Incorporation of the Calcutta University established in 1857, he was named one of its first Fellows. The life of this eminent Bengalee may be studied from different aspects : (1) as an educationist, (2) as an author and editor of various publications, (3) as a social reformer and (4) as a philanthropist. He combined a fearless independence of character with great gentleness and simplicity of a child in his dealings with people of all classes. He was a stern disciplinarian and a model of patience and perseverance in literary work. He toiled with remarkable zeal and intelligence as a Government officer. His Sanskrit grammar in Bengali and his Bengali books are of immense educational value. He published a Bengali version of the *Betal Panchavimsati* which is regarded as a model of excellent style. He supported his advocacy of women's education by quotations from the ancient *sastras* and he co-operated with Drinkwater Bethune in the establishment of a girls' school and secured pupils for it from respectable families. He started the Metropolitan Institution in 1864 to impart higher and lower English education. He was an orthodox Hindu. He started widow-marriage movement and the anti-polygamy movement. The Hindu Widow Marriage Act was passed in 1856 and the first widow marriage took place in the same year. Iswar Chandra had a very soft heart. He had a firm faith in the ultimate triumph of truth and justice.

* * * *

BHUDEB MUKHERJEE, who was born in 1825, was eminent in his generation for his literary ability and character. He was a man of great strength of mind. He studied the Vedanta philosophy for some years at Benares. He then came back to his Chinsurah home in the District of Hooghly and established a *Chatuspathi* for Sanskrit learning. Among his writings *Parivarik-Prabandha*, *Samajik-Prabandha*, *Achara Prabandha* bear testimony to his wide culture, critical acumen and clear understanding of our Indian thought, liberal views on social subjects and his thorough grasp of eastern and western philosophy. He was never frivolous: his personal influence was elevating and his conversation was grave but cheerful, instructive and suggestive. In the opinion of the distinguished historian, Sir Roper Lethbridge, "Vidyasagar was the very ideal of a high-minded, benevolent and intellectual Brahmin of the old school; Krista Das was the model of the kindly, clever, versatile man of the world. But Bhudeb in his later years seemed to me to combine some of the best qualities of both these great men." The *Education Gazette* and the *Siksadarpana* or the 'Mirror of Teaching' were edited by him.

* * * *

RAJAH RAJENDRA LAL MITRA, who was born in 1824 at Sura in the suburbs of Calcutta, was a good Sanskrit and Persian scholar. He was at first a Medical student. He gave up the study of Medicine

Trends Of Low-Cost-Housing In India

By A. N. KERR, Engineer.

The writer of the article has made an extensive research on the line of Low-Cost-Housing and thinks "Improved proportion of materials" and "new method of design and construction" as stated in this article will be able to tackle successfully the vital problem of Low-Cost-Housing in India.

THE problem of tropical housing is of great importance. Half the population of the world lives in this region under sub-standard conditions. In large cities there is congestion all round and slums are numerous while in villages where 85 per cent of the population lives, accommodation is meagre and all civic amenities are generally absent. The accommodation generally consists of a tiny room shared by men, women and children. Tuberculosis, pneumonia and cholera etc., cannot be controlled. Sleep is often impossible. The morality question arises. Ventilation and light are inadequate, floors are dirty and muddy, roofs are low, dirty and inflammable. The lack of sanitation is almost always dangerous to health. The water supply is inconvenient and frequently contaminated.

The problem of improving these conditions is complex both from social and economic aspects. During the last world war there has been considerable devastation which was fought on the soil of some of the countries of the region. In some other parts there have been intense political changes which necessitated the movement of population on a large scale, rendering millions of people homeless.

The past few years during and after the last world war have seen a steep rise in the cost of living. Building costs have gone up by about 300 per cent or so, more than the increase in the cost of living. The building industry in India to-day is quite a major undertaking and it also involves a large number of labour force, machinery, capital and plays a significant part in all phases of our life. All types of building activity in housing, multi-purpose [illegible], roads, irrigation, transportation etc., call for a fair proportion of the national expenditure. We are at present in the midst of a vast development programme, and we can say it is just the beginning of rapid urbanisation, especially in industrial areas. An ever increasing need for houses is being felt, and now organised attempts are being made in India to tackle the problem of Low-Cost-Housing on a national scale.

But this attempt will be a modest one if the general price index of all the building materials are low.

Building costs to-day are about 300 per cent as high as they were in 1939, which is quite justifiable from the point of view of rise in the general price index. Unless the cost of living index comes down wages cannot be reduced and therefore cost of production will remain high.

HIGH BUILDING COST

The housing costs in India are still higher because of high price of raw materials including steel and cement. The prices of the bricks, sand, and stone aggregate are also higher, due to high price of coal and transport charges which have to be added to the costs of productions at the brick fields and quarry sites. The important factor, therefore, which has a bearing on the price of building materials is Railway transport. I think the Government should temporarily reduce the freight for carriage of building materials by the railways as a subsidy or concession for solving the acute housing problem in India, which in order of priority is only next to food. Unfortunately this transport stands in the way of reducing the cost of the building. I may mention here that in almost all the cases, the cost of mate-

(Continued From Page 73)

rials at the quarries, brick-fields or at factory, and the transport charges of the said materials at the site of construction are practically the same or sometimes more. Therefore, my appeal to the Government is, if they want to tackle this problem, that they should reduce the cost of the Railway freights in the way as I suggested above and I am sure this Low-Cost-House building could be possible on a large scale. Besides the transport cost as stated above lowering of building cost can be effected by:—

(a) Improvement of convertional building materials.
(b) Improved properties of materials.
(c) New method of design and construction standardisation of building components and their production.
(d) Mechanisation of construction techniques.
(e) Ancillary services for sanitation etc.

The cost of building materials comes to 70% to 75% of the total cost of the building. Considerable savings, therefore can be effected by economising on building materials alone.

Many new materials have been developed in various countries of the world and a large measure of prefabrication has been recommended in the building industry in order to speed up construction of urgently needed structures.

Basically it is correct to say that architects, engineers, and builders all over the world still largely favour the use of conversional materials used and tested over many years, namely cement, steel, sand, stone aggregate and bricks. Fortunately for the building industry, these materials are available in all parts of country, although transport by Railways or lorries is involved. None of these has to be imported in this country with the exception of steel and cement. Once the new proposed steel plant comes to production, we will be self-sufficient in steel also.

PAUCITY OF MATERIALS

In India there are thousands of building projects started without a complete survey of our material resources of this country, and even the priority projects are hindered in execution due to want of these vital materials. It is obvious that in order to lay good concrete for a cubic ft. of cement consumed in a particular project two cubic ft. of sand and four cubic ft. of stone chips are required. It also very often happens that permits for cement and steel are issued to the consumers, almost five to six times in quantities greater than actual availability of these materials in our country. The authorities issuing these permits are not aware of the actual stock position or production capacity in our country with the result that a wild goose chase takes place for the acquisition of these materials leading to very undesirable practices. Various other types of cement suited to the varying needs of different constructions are envisaged for production in India, and attempts are also being made in the country to produce cement using such waste products from Industrial plants as blast furnace slags etc.

The use of bamboo should be encouraged as a substitute for steel in reinforcing concrete and as building materials for walling etc. Attempts since some time past, have been made, in different parts of the world, to replace steel by some other more locally available and cheaper materials. Studies undertaken in Germany and India show that bamboo could be successfully used to replace the steel in concrete specially in building construction. These materials should be treated before they are used for building purposes. As the bamboo absorbs considerable quantity of water and consequently expands in volume it shrinks and reduces in volume when allowed to dry. Such changes are highly undesirable. Moreover, the differential thermal expansion between the concrete and the bamboo makes it unsuitable for use in concrete constructions. In my opinion this material could be used in Low-Cost-House building after proper treatment as suggested below :

(a) Cutting the bamboos at proper age and their proper seasoning.
(b) Seasoning the bamboo under mother earth or in the water.
(c) In the scientific way the impregnation of the bamboo with various solutions and other surface treatments to make bamboo waterproof and unaffected by the harmful effects mentioned above. A coat of resin dissolved in alcohol with a subsequent coat of white lead has proved highly beneficial.

LIGHTWEIGHT AGGREGATES

The light weight aggregates lead to the reduction of the deadweight of the structure and reduce difficulties in handling. This could be used in structures mostly as non-load bearing members like partition walls etc. This aggregate could be classified as follows :—

(a) Naturally occurring aggregates.
(b) Aggregates obtained as by-products of industries such as air cooled slags, cinders, saw dust etc.
(c) Specially manufactured aggregates, such as foamed blast furnace slags, and those manufactured by heating certain clays and slates etc.

In India there is good scope for manufacture of light weight aggregates, specially, from our vast resources of clays, shells, slates and blast furnace slags. The blast furnace slag quenched with water also gives a good result as aggregate for concrete.

Lime has been extensively used in our country 35 years back for the building industry in India. I see no reason why we should not use more lime for Low-Cost-Housing, than we do now to save cement. When the resources of our cement in our country is limited, the lime could be used in place of cement. This can be done if the quantity of lime is standardised, like that of cement, and powdered lime is sold in sealed waterproof paper bags of standared weight. The Indian Standard Institution can be asked to draw up a standard specification of calcined dry powdered lime which can be slaked before use in mortar and plaster work as well as in lime concrete. For large works pan-mortar can be used for mixing lime mortar in requisite proportion of sand and 'soorkey' and so on.

NEW CONSTRUCTION METHOD

While considering the question of economy in building costs, the main factor is economic design. New concepts in design have been successfully adopted in other parts of the countries such as prestressed concrete or concrete in shells in roofs that has resulted in considerable saving of materials. The specification should be modest, so that, the use of indigenous materials and locally available raw materials and manufactured goods is practicable.

The stabilised soil has great potentialities in many areas of the region. The improved properties of soil is an ideal material for Low-Cost-Housing. The soil is stabilised by mixing the proper quantity of soil with cement which varies from 8% to 15% by volume of the compacted mixture depending on the nature of the soil. The soil having a colloidal or clay content requires more cement. When the pro-

(Continued From Page 72)

and prepared himself for Law. He gave up the pursuit of Law in disgust. The Law examination papers of the year in which he appeared were stolen and the examination was declared null and void. His notable contributions entitled *Buddha-Gaya, History of the Antiquities of Orissa,* The *Indo-Aryans, Nepalese Buddhist Literature,* etc. are monuments of extensive and patient research, deep erudition and sound reasoning. He started the *Vividharthasangraha,* a Bengali Magazine and the *Rahasyasandarbha.* He was the first Bengalee President of the Asiatic Society of Bengal founded by Sir William Jones. In recognition of his services to literature and archæology he was granted a special monthly pension of Rs. 500/-. The University of Calcutta conferred on him the honorary degree of Doctor of Law.

* * * *

DINABANDHU MITRA was born in a village in the district of Nadia in 1829. After educating himself he took service in the Post and Telegraph Department. For his meritorious service the title of Rai Bahadur was conferred on him by the British Government. He was not only a dramatist but a poet. He closely came in contact with the celebrated poet Iswar Gupta. He used to write poems in the *Prabhakara* Magazine of Gupta. He made his name by writing the drama *Nildarpana.* It was translated into English by Mr. Long in 1860, who had to undergo imprisonment for translating it. Then he wrote *Nabin Tapasvini, Sadhabar Ekadasi, Lilavati, Kamalekamini, Jamaibarik,* etc. He was a great comic writer. He died in 1873.

* * * *

MICHÆL MADHUSUDAN DUTT was born at Sagardari in the Jessore district, which was then included in the 24-Parganas. In 1843 he was converted to Christianity. He made himself famous as a writer of prose and verse in English. He had knowledge of Greek, Hebrew, Latin, French, German and Italian. He was the creator of Bengali blank verse and he gave the first impetus to the creation of national drama and national theatre. Maharaja Sir Jatindra Mohun Tagore and Pratap Chandra and Iswar Chandra of Paikpara Raj family were his patrons. His masterpiece *Meghanadbadh-kavya* has immortalised him. His *Brojangana-kavya, Birangana-kavya, Krishnakumari* were his later productions. He was kind and charitable even in his straitened circumstances.

* * * *

LAL BEHARI DAY was born at Sona Palasi, a village in the district of Burdwan in 1826. In 1843 he was converted to Christianity. He is famous for his English style which is inimitable. He ably conducted the Bengali Journal *Arunodaya* and the English Journals *Indian Reformer* and *Friday Review.* His *Peasant Life* and *Folk Tales of Bengal* will be remembered for many generations to come.

* * * *

BANKIM CHANDRA CHATTERJEE was born in 1838 at Kantalpara in the 24-Parganas. He was the first Indian to take the B.A. degree in 1858 with Jadu Bose. His *Durgeshnandini* was his first attempt at Bengali novel-writing. In the *Indian Field* newspaper edited by Kishori Chand Mitra he wrote a serial story called *Rajmohan's Wife.* About 1873 he started the *Bangadarsana,* a monthly, devoted to criticisms and original articles. His *Kapalkundala, Bisavriksa, Krishnakanter Will, Chandrasekhar, Debichaudhurani, Rajsingha, Anandamath,* etc., are really important contributions to Bengali literature.

* * * *

RAMESH CHANDRA DUTT, who was born in Calcutta in the wellknown Dutta family of Rambagan, was noted for his fine literary works in Bengali as well as in English. He was the first among his countrymen to be the Commissioner of a Division in 1894. His devotion to culture was so very great that he taught Indian History in the University College of London. He completed a Bengali transiation of the *Rigveda* and wrote a number of excellent novels in Bengali e.g., *Madhavi-kankan, Bangavijeta, Jeevanprabhat, Jeevansandhya, Sangsar* and *Samaj.* Among his English works *Civilisation of Ancient India* is a notable contribution. He was the first President of the Bangiya Sahitya Parishat. He was an eminent member of the Indian Civil Service during the British Rule in India.

* * * *

HARAPRASAD SASTRI was born at Naihati in 1853. He was the Principal of the Calcutta Sanskrit College. He was a great Sanskritist and a well-known writer, editor, and translator. His descriptive catalogues of Sanskrit manuscripts are very useful. His *Valmikir Jai, Kanchanmala, Benermeye, Baudhyagano-doha,* are some of his notable contributions. He wrote thought-provoking articles in many well-known Journals of the east and west. He was well-versed in Mahayana Buddhism. Dr. Rajendralal Mitra found in him a very ardent and laborious helpmate. His unrivalled knowledge of Sanskrit literature and his highly critical acumen made him great. He was honoured by the Government of his time as well as by the learned academic societies and University.

* * * *

KALIPRASANNA SINGHA was born in Calcutta in 1840. His Bengali translation of the Sanskrit *Mahabharata* was a *monumental* work. The *Vidyotsahini, Samatattvaprakasika* and *Vividarthasamgraha* were some of the magazines conducted by him. He was the contemporary of Michæl Madhusudan.

* * * *

RABINDRANATH TAGORE, who was born in Calcutta in 1861, was a poet of international repute and was the first Indian to have won the Nobel Prize. His *Geetanjali* was his masterpiece. He showed his skill in every branch of literature, be it prose, poetry, short-story, novel, drama and even discourses on social, political, economic and educational matters. For some time he edited the *Bangadarsana* founded by Bankim Chandra. His lofty idealism drew largely and freely both on the ancient spiritual heritage of India and the new light of humanism shed by the dynamic civilisation of the west. He learnt Sanskrit from his father. He could enchant his audience with melodious recitation from the great Epics. His versatility knew no bounds. His songs mostly tuned to his own notations constitute a distinct school of music. He was honoured both by the East and the West.

* * * *

GIRISH CHANDRA GHOSH was a great dramatist and an actor also. He was born in Calcutta in 1843. He lost his parents at an early age. He started a theatre at Baghbazar where *Sadhabar Ekadasi* was staged. He successfully played the part of Nimchand. He was connected with several other theatres of his time e.g., National theatre, Star theatre, Minerva theatre and Classic theatre. He was the Manager of the Kohinoor theatre for some time. He wrote several Pauranic, historical and social dramas and

Biological Aspects *Of* FAMILY PLANNING

By S. S. SARKAR

FAMILY planning is likely to increase steadily in urban literate societies. Its biological pros and cons, however, appear to be unknown to the mass, although they appear to be almost overwhelmed with all sorts of literature on the subject.

It will, therefore, be not out of place to examine how far family can be planned and whether human interference in our reproductive lives can override the hidden powers of nature. It should, first of all, be emphasized that family planning does not mean total control of children, rather raise a few of them according to the will and economy of the parents. It obviously means spacing of children and the complete control of unwanted children. In other words, pregnancy has to be controlled and initiated according to will. While the former, *i.e.* control of pregnancy is to a certain extent possible with the modern methods available, it is comparatively difficult to initiate a pregnancy whenever one desires it. We will discuss these two points from the biological angle.

UNWANTED CHILDREN

It appears that children are in the majority of cases unwanted; they appear as a matter of chance. An idea of it will be obtained from the reports of the western countries. Dr. Eliot Slater writes: "In the families studied by Mrs. Woodside and me, the families that planned to those that did not were as 5 : 2; and yet in the planning families about one child in three was the result of an accident. Taking all families together there were more children that were accidental than had been planned".

That child birth is an accident will be apparent from the following table taken from a later British study on Family Limitation.

TABLE 1

Percentage of success in Family Planning (women who planned a definite number of children at marriage)

	A Birth control not used		B Birth control used				
	1 % with unwanted child	2 Total No. of women	3 % with unwanted child	4 Last pregnancy due to failure of birth control %	5 Control not used in inter-pregnancy period before final pregnancy %	6 Control abandoned in inter-pregnancy period before final pregnancy %	7 Total No. of women
Planners	14	74	24	17	17	43	216
Non-planners	6	367	23	22	30	25	446

The table shows a peculiar feature, firstly in the group A having a lower percentage of unwanted children than that of Group B, and the author of the survey interprets this "successful designing" as due to the sub-fecundity of the women participating in the survey. Turning to group B we find that there is practically no difference between the planners and the non-planners so far as the unwanted children are concerned. An exactly same picture is obtained when the columns 4, 5 and 6 are added up. They yield a percentage of 77 for both the planners and the non-planners.

WANTED CHILDREN

Data on this point are very few. The British survey mentioned above has published some data, shown in Table 2. Obviously this criterion has to be tested with two kinds of women : (1) those who abandoned birth control to have children but without success, and (2) those who did not use birth control but were not pregnant.

TABLE 2

Effect of birth control at the final inter-pregnancy period

Total No. of birth controllers	(1) Birth control abandoned to have a child without success		(2) Birth control not used in final inter-pregnancy period yet had no pregnancy	
	No.	%	No.	%
849	23	3	91	11

It will be seen that only 23 women out of 849 abandoned birth control to have a child without success and thus their families were less than the

THE Peacock Throne

By Prof. O. C. GANGOLY

AS has been well remarked, the fame of Shah Jahan (1627-1659 A.D.), the Fifth Great Moghul on the Imperial throne of Delhi, rests not on administrative abilities or military achievements, but on the glories of architectural monuments that he set up and the pomp and magnificence that he created in the atmosphere of his court.

The glamour and pageantry, and the lavish and luxurious appointments of his court, dazzled the eyes of his contemporaries as well as those of the foreign visitors and ambassadors, who were greatly impressed by the splendours and brilliance of his architectural creations as well as the grandeur of the appointments and trappings of his daily life.

The Taj, the Moti Masjid, the Diwan-i-Am and Diwan-i-Khas, all invested the atmosphere of Moghul India with dazzling brilliance, achieved by the expenditure of fabulous wealth and material resources, which became a legend, which is recorded in the pages of Bernier and Tavernier with impressive rhetoric, which convey to us the atmosphere of the time, vividly and graphically.

WHOSE IDEA IT WAS

If the Taj has occupied the place of the Seventh Wonder of the World, the Peacock Throne was no less a piece of wonderful craftsmanship, which captured the imagination of the foreign visitors who spread wild stories of its beauty and magnificence. Yet, the history and legend of the Peacock Throne have raised many problems, and queries, which are not easy to answer.

It is said that the idea of constructing the Peacock Throne was conceived by Tamerlane and completed by Shah Jahan as an ancestral ambition, fulfilled by expending enormous sums of money and tons of jewels accumulated during the three previous reigns.

According to Abdul Hamid Lahori, the Court historian, the object of constructing the Peacock Throne was not only to add a romantic grandeur to the royal pageantry but to utilise *"precious jewels of great value which had been accumulated in the Royal Treasury in course of time, so that sight-seers might share the beauty of those products of the mine and ocean, and also that a fresh glory might be added to the Sultanate."*

It is recorded that the great Emperor ordered that the most beautiful jewels worth 86 lakhs of rupees and gold worth fourteen lakhs should be made over to the Superintendent of the Goldsmith's Department for the purpose of making a superbly magnificent throne—5 yards in height, 3½ yards in

length, and 2½ yards in width. It is said that the royal craftsmen took seven years to fulfil the Royal commission.

BERNIER'S ACCOUNT

Bernier has left an eye-witness' record of the impression of this royal furniture:

"The throne was supported by six massy feet, said to be of solid gold, sprinkled over with rubies, emeralds and diamonds. I cannot tell you with accuracy the number or value of this vast collection of precious stones . . . . . but I can assure you that there is a confusion of diamonds as well as other jewels, and that the throne, to the best of my recollection, is valued at four Krores of Rupees . . . . . The construction and workmanship of the throne are not worthy of the materials, but two peacocks, covered with jewels and pearls, are well conceived and executed. They were made by a workman of astonishing powers, a Frenchman by birth, named La Grange, who . . . . . sought refuge in the Great Mogol's court, where he made his fortune" (written at Delhi the first of July 1663).

TAVERNIER'S STORY

J. B. Tavernier, a French dealer in precious stones, was at Agra during the winter of 1640-41. He has left a slightly different description of the Peacock Throne.

> *"The largest throne which is set up in the hall of the first court is in form like one of our field-beds, six feet long and four broad....., the under-part of the canopy is all embroidered with pearls and diamonds, with a fringe of pearls round about. Upon the top of the canopy, which is made like an arch with four panes stands a peacock, with his tail spread, consisting all of sapphires, and other proper coloured stones; the body is of beaten gold, encased with several jewels and a great ruby upon his breast, at which hangs a pearl, that weighs 50 carats. On each side of the peacock stand two nose-gays as high as the bird, consisting of several sorts of flowers all of beaten gold enamelled."*

There are some material differences of details in these descriptions of two eye-witnesses. Bernier says that the throne had *two* peacocks, but Tavernier assures us that there was only *one* peacock. This discrepancy can be explained, if we suppose there were more than *one* Peacock Thrones.

As a matter of fact, Tavernier says, "The Great Mogul has *seven* thrones some set all over with diamonds; others with rubies, emeralds and pearls".

It is not clear if all the seven thrones had Peacocks as decorative effigies, — very probably, they all had Peacock decorations. At least, we have evidence of two with Peacock emblems.

LORD CURZON'S STORY

Now, it is well known that in 1740, the celebrated Nadir Shah had carried away from Delhi a throne with a Peacock's emblem (*Takht-i-Taous*). And it was at one time believed that this throne was still preserved in the Council Chamber of the Shah's Palace at Teheran.

But this legend was exploded by Lord Curzon in his work on Persia (Vol. I, pp. 317-322, 1892). He was able to establish that what had hitherto passed off as the Peacock Throne, was not the famous Indian Throne at all, but a comparatively modern furniture, constructed by Mahammed Hossein Khan, Sadar, or High-priest of Isfahan, for Fateh Ali Shah, when the latter married a Isfahani young lady, whose popular sobriquet (for some unknown reason) was Taous Khanum or the Peacock Lady.

> *"The King is further said to have been so much delighted with the throne that it was made a remarkably prominent feature in the ceremonies that commonly ensue upon marriage."*

In further demolition of the theory of the survival of Nadir Shah's famous loot from Delhi, Lord Curzon alluded to a passage in Fraser's "Khorassan" in which he mentions that an old Kurd tribesman told him in 1822, that *"when Nadir Shah was murdered and his camp plundered, the Peacock Throne and the Tent of Pearls fell into our hands and were torn in pieces and divided on the spot."*

Lord Curzon seems to accept this report. He, however, seems to support the claim of another throne, which, according to him, could be associated with the original throne of Shah Jahan.

TAKHT-I-MARMAR

According to Malcolm (History of Persia, II, p 37) Nadir Shah was so fond of the real Peacock Throne of the Great Moghul — that he had an exact duplicate of it made in other jewels. This is quite distinct and a separate piece from the wedding present of Fateh Ali Shah. It is now known as the Takht-i-Marmar, or white marble throne.

Some writers have supposed this also to be an Indian throne, and to have belonged to Nadir's spoils. But there are other aspirants to be considered as the original throne of Shah Jahan. For, there are two marble pedestals, now distributed between two museums on either side of the Atlantic. One is in the Victoria and Albert Museum, London, and the other belongs to the Metropolitan Museum, New York. They came from the collection of Captain Tytler who was in charge of the Palace — after the capture of Delhi by the British troops — during the Mutiny and they were later on sold by his widow to the two Museums in 1892 and 1908.

These pedestals are supposed to be the survivals of a platform of marble richly inlaid with precious stones, on which the celebrated Peacock Throne once stood. They are small columns 22½ inches high, richly carved with square capitals 11 inches wide. The base is an octagonal strip likewise inlaid. There is no doubt that the style of the decoration is of the time of Shah Jahan, and is in the manner of the *pietra dura* work of the Taj.

These marble pedestals do not claim to be the actual Peacock Throne, but the supporting platform and the richness and beauty of the surviving legs worthily uphold the claim that has been made for them.

SHAH JAHAN'S FATE

There is yet another legend — recently revived. It has been said that Shah Jahan had no chance to sit on his Peacock Throne, as overtaken by his tragic fate he was imprisoned by his rebellious son.

This legend is based on the single testimony of Nicolas Manucci (who was in India between 1653 and 1708) : *"Their year commences on the 22nd March (Nauroz) at which time a great festival is*

(Continued On Page 83)

BIOLOGICAL ASPECTS OF FAMILY PLANNING

(Continued From Page 79)

planned size. The effect of (2) class of women is however difficult to explain. Although they desired more children they may have been relying on the sub-fecundity of the growing years and the approaching menopause. From our standpoint, however, the two groups can be combined since both the groups wanted children and failed to obtain them. They make up 14% in a small group of 849 women.

AGE AND FECUNDITY

Age is an extremely important factor for child-bearing in women. Fecundity in women has a peak period and it is usually observed between the ages of 20 and 30. With the increase of age and birth of children fecundity is gradually lowered. The British survey has found in women never practising birth control a pregnancy rate of 45, 23 and 17 per 100 years of exposure for the first five years, the second five years and the third five years respectively. This means that the pregnancy rate is nearly halved in the second five years thus making a fecund woman sub-fecund. Then among all normal men and women there is a certain percentage of involuntary sterile ones. Next to this sterile group comes those sub-fecund ones. Many one-child families belong to this group (those suffering from uterine disorders exempted). We have no methods to diagnose these sterile and sub-fecund women prior to their marriage. Some hereditary anomalies like adipose-genital dystrophy and a few mental disorders, like mongolian imbecility, etc. however indicate sterility.

The importance of age factor in pregnancy will also be apparent from the wide variations in the effective copulations necessary to produce a pregnancy in the various ages. There is only one American study to this effect, which shows that the total coitus rates per pregnancy varies between 288, 298, 381 and 1522 for the age groups, under 20, 20—29, 30—39 and 40—49 respectively. The rate for all ages works up to 351.

Whether continued birth control practices lead to sterility has been a subject of great controversy. The British survey, already mentioned, is of opinion that it "does not appreciably reduce the power to reproduce". Contraception and criminal abortion almost go hand in hand. Reproductive wastage in U.S.A. has been found to be about 20% among contraceptors as against 6.9% among non-contraceptors. American studies, however, indicate a fertility differential which is due to the combined effects of contraception, criminal abortions together with the habit of postponement of marriages. It is difficult to isolate the relative influences of each of the above factors.

THE REMEDY

Family planning should not be resorted to irrespective of age and the family history of the fertility of the woman concerned. For the sake of healthy children birth control should not be used on young mothers. We are not yet competent enough to isolate the different disorders of the endocrines although the close connection of the pituitary gland of the brain with the sexual functions is well established. Feeble-mindedness is said to be increasing in all countries, specially among women. Is it in any way connected with their sexual lives ? Family planning should be used at the higher ages of women, usually after 30, when with the weakening of the biological process of fecundity it is almost a natural process. With the data at our hands, we cannot yet say how far it is effective in spacing children as it involves the risk of not having the wanted child. The risk is greater in the case of sub-fecund women than the fecund ones.

PEACOCK THRONE

(Continued From Page 82)

held, as I have said, (III, 10). The palaces are decked inside and out with high and costly hangings, made by order of Shah Jahan along with the throne, like a Peacock, of which I have spoken (II, 34). This is of great value, and the maker never had the felicity of seating himself upon it. Aurangzib was the first who upon the day of his coronation, had the benefit of ascending this superb seat". (Irvine's Edition, Vol. II).

Manucci has never been regarded as a reliable recorder of facts, and many of his assertions have proved to be bazar gossips with no truthful foundation. No other contemporary record confirms his single assertion, that Shah Jahan, who had the throne made, never sat upon it. On the other hand, Bernier, an eye-witness, has asserted, on first-hand testimony, that Shah Jahan did sit on the famous Peacock Throne. *"Never did I witness a more extraordinary scene. The King appeared seated upon his throne, at the end of the great hall, in the most magnificent attire".*

Then he proceeds to give a description of the throne, which we have quoted above.

PAINTER'S EVIDENCE

In addition to Bernier's eye-witness record, we have another piece of evidence which confirms the fact that Shah Jahan *did* sit on his Peacock Throne. This piece of evidence is a contemporary miniature painting — painted by one of the court-painters of Shah Jahan. The picture here reproduced (Page 81) — is from the Wantage Collection, South Kensington Museum, London. In this picture, we find Shah Jahan actually seated on his celebrated royal throne. That it was one of the Peacock Thrones is proved by the canopy of the throne on which we find two effigies of Peacocks. This will dispose of the canard of Manucci that Shah Jahan never sat on it. The pedestals of the throne (in the picture) appear to resemble the pedestals of marble richly inlaid with jewels, which Captain Tytler's widow sold to the museums. These two pedestals are the only tangible remains of the celebrated throne, of whose legendary magnificence Bernier and Tavernier have left glowing descriptions.

A MOTOR TRIP IN EUROPE

By CHITRITA GUPTA

SUPERSTITION goes that if you start your journey on the first day of a month, you are never to come back. But that holds good only in Bengal, if it holds good at all. So we left England and started for the Continent knowing it was 1st of June. We stopped the night at Dover and had to miss breakfast to be in time to drive in our car in the great womb of a lovely white ferryboat which very smoothly swallowed us all—some five hundred passengers and two hundred cars and bicycles and all. The boat was white as foam, somewhat like the white cliffs of Dover.

Shores of England vanished quickly from our sight and for a while it seemed as if we were in a great ocean, with no signs of land anywhere. But the sea-gulls were all along with us and the flapping of their wings reminded us that appearance is deceptive, and land is quite nearby and that it is only a channel, fairly narrow at this point, which separates England from the rest of the Continent. She was a very fast boat, and soon the French coast peeped out of the horizon through the greyish vagueness of a very sunny morning. Within an hour and a half from the time we started from England, we found ourselves on the land of France, seated in our car amidst long lines of others on the quay, looking at a big signboard written in large letters reminding us that we were in France and that we should have to drive on the right hand side.

The old customs officer gave us a smart little "Namaskar" as he let us off with our car with an all-knowing broad smile.

We did not know Bolougne at all and neither did we care for it much at first sight. So we decided to proceed towards Paris and stop for the night somewhere on the way. The morning was cheerful. We started slowly, letting the others pass by. We knew from sad experience that French drivers are French drivers and it is silly to argue with the We reached Le Touquet, a little town on the co line and decided to halt there for the night. It a lovely little airport and a very favourite place English tourists who cross the channel by air fe and stay there for a week or so to return to Engl with pride and satisfaction that they had spent th leave in France. It is a quaint little place full hotels and shops. We stopped in a small hc overlooking the sea. We could only manage it it was "off season", still we found everything e wonderful except the prices. There were very f people but the shops were still full of cute lit things. But we just kept our eyes off them and r for Paris the next morning as if it would be a better as regards prices. Big cities are really bet in matters of expenses than small popular holic towns as the former cater for the rich as well poor, while the tourists' places are mostly meant those who go there with a view to spend th savings and to think they had a jolly good time

We reached Paris on a rusty afternoon. It not possible to say anything of Paris except that is a big city, and quite dirty. It is so differe from London. Every inch of London except the c portion is planned out with symmetrical houses a parks and squares. But Paris seems to have gro out of her own accord and that is her charm.

NIGHTS IN PARIS

Our plan was still uncertain. Mr. J. B., secretary of the French P.E.N., who came to see in the hotel suggested that we should come back France after the P.E.N. Congress and spend the r of the time there, mostly in the south of Fra near Nice. Mr. J. B. had just come back fr Dacca where he was invited to attend a write

(Continued From Page 85)

conference. "You cannot have any real impression of a country in such a short time", I told him, which gave him a point and he then reminded us that we could not see France by spending three nights in Paris. After a long discussion we decided to come back the same way and stay another three nights in Paris, of course not in a hotel, because an empty pocket can never reveal the true charm of a city specially like Paris. He said we must stay at the international club building of the P.E.N. This is only a few steps away from Champs' Elysses and is such a convenient place for writers who come to Paris from all over. He assured me that he would reserve two rooms for us. I remember, on our return, how we enjoyed staying there meeting French writers from California, Esthonia and Morocco, sipping coffee and talking and looking vaguely at the splendid gaiety of floodlit Champs' Elysses. It was such a contrast to London, where everything is closed after nine and even Piccadilly is dumb as dead at ten. But although nights were closed on the streets they were opened for the rich in the night clubs of Soho, and were suffocated for the poor in the ordinary pubs with smell of drinks and shouts of the drunk. But nights in Paris are open to all. Pavements are full of open air Cafes with groups of chairs under coloured umbrellas where any one may walk in and sit down for hours with a cup of Espresso Coffee or a glass of beer or champagne.

VENUS AND MONA LISA

From Paris, according to the A.A. we were to take Road no. 19 which would lead us to the Swiss border. We kept to the right while Parisians flew past us like an incessant throw of rockets. We did not have the slightest ambition to compete with them, on the contrary we were quite satisfied with our oriental speed. Seine kept us company by rolling along with us on the right, controlling her French spirit, and taming her speed by innumerable little bridges hiding here and there in the multitudes of buildings, stripping herself of all her glory as a river and submitting to the wishes of men, by being a mere sewage bearer. We took the Eastern road while from the hind glass of the car my two daughters saw Paris for the last time. The ugly silhouette of the Eiffel Tower stood like a guarding genie, scratching the clear blue sky with a dark deep scar. But the towers of Notre Dam swam in grace, like a pair of black swans on the greyish sea of innumerable clumsy buildings, vaguely shining under the mist of a bright sun.

We passed Louvre a few minutes ago while Lalli shouted goodbye to it. We could not devote much time to it this time just one visit to Mona Lisa, a trifle homage to that curious smile of pride and victory, mixed up together with a little affection with a twist of indulgence from the corner of the eyes revealing a true woman, proud and dignified yet soft with tenderness, like love itself, alluring and yet unapproachable. I never miss a chance of seeing her whenever I happen to be in Paris and try and think whatever she could talk for four years during her sittings before the great artist. Did they really love each other ? Or the expectation of love only ? It is so easy to discuss these things now while it must have been a dead secret in those days and meant such tremendous suffering for them.

But I did not care much for De Millo' Venus. This sculpture is a perfection of feminine form, they say. But I found it terribly commonplace in comparison with the most delicate and graceful female figures of our Ajanta caves. Not only the taste for beauty differs so much in the East and the West but real forms as well.

But letting aside the beautiful past and its wonderful art let us come back to this moving present which was passing quickly in a straight flat run under the wheels of our car, releasing each moment filled up with new land and new atmosphere, with such slow change in the scenery that it hardly showed the change at all. Fields were flat with occasional trees or poor huts but very natural specially to our eyes, while the English countryside is so picturesque that sometimes it seems almost on the point of being not only unnatural but artificial, as if you could frame them and hang them on the walls of your drawing room. I remembered when I first saw them several years ago, from a train while travelling from Liverpool to Bristol. My sore eyes which had its first impressions of England in Liverpool were soothed as they plunged in the oceans of fresh green, swaying in ripples and waves by the wind on both sides of the undulating earth. Big fat cows floated like little sail boats, neat little villages peeped through their pretty little curtains, while mothers pushed their blue eyed babies in lovely prams and men and their wives drove their tractors in their fields. I remembered how I breathed in the smell and drank with ecstasy and joy the beauty as it was held in a cup as it were before my eyes.

We passed many small villages which ran in the opposite direction with processions of different people, men, women, and children. Flickering scenes of French plains came like torrents of water, rushing to our eyes and fast moving away from them.

CARAVAN SHOP

It was a Sunday, and we could only bring some sandwiches and fruits as the children were all for a picnic. Lalli had been shouting for a long time that she was hungry enough to "eat" her picnic now. "The next nice spot," we assured her, "and we stop for a picnic". We could keep our promise very soon and stopped near a farm. There was a piece of lovely green between the hedged farm and the main road. A slim streak of water was bubbling round it. The place was knitted with white spots of daisies and a shaded lane cut it on its end. We brought our car to a halt suddenly. A lonely caravan stood there in another shaded corner. Khuku said it was a caravan shop, which indeed it was. We leaped out of the car and ran to the caravan as we heard music from there. A man was playing records and a woman preparing "Hot dogs" in an oil stove. So Khuku and her daddy finished off their lunch with a round of hot dog each and we all had a super picnic with icecreams as well. Air was fresh and there was a smell of nature everywhere. The sky was cloudless and blue. A long piece of barley field swayed in front of us while the place became full with the enchanting tune of "Moulin Rouge", that was being played from the caravan.

We lay on the grass on our back face to face with a wide blue sky while the little musical man sprayed on little thrills of music, and his big fat woman in a dotted apron served us bottles of cold orangeade, with a broad smile of rustic sympathy.

The run after lunch was flat and uninteresting and the sun being on one side kept on piercing me with its hot rays. We stopped for dinner at a little village, "Trois Maisons". "Three houses", cried Lalli. "Are these for the three bears ?" Quite possible, said her daddy. "But I see many more houses, whom do they belong to I wonder". "Perhaps the bears have grown large families and the houses probably belong to his sons, grandsons etc." "Is that so ?" Lalli widened her eyes and believed. In

(Continued From Page 87)

a moment Lalli had another idea. She started off, "It might be for the three little fairies, daddy," and I could see that soon there would be unending flow of questions and suggestions and so I pushed her a little forward and asked her to catch up with Khuku who was having a little run on the little garden in front of the small restaurant. We went in to try our luck. If it would be anything like it was in the morning we might get poulet Roti. But there was no sign of it though we saw chickens at the backyard of the hotel. Perhaps they were only to lay eggs which we had in our omelette. We thanked our stars, even to get that, with fresh new leaves of vinegared lettuce. It was half past eight but the daylight was still on. We paced around the back-yard of the hotel hand in hand all four of us while the fat red cow stared wildly at the bunch of foreigners. There were heaps of garbage on a corner and a smelly narrow canal flowed beside it. It was not very clean, on the contrary, quite dirty, and full of stench. But still it was a wonderfully peace-ful place and reminded me of our clumsy little vil-lages in the plains of Bengal.

SWISS BEAUTY SPOT

Then the two stops for the French and the Swiss customs to let the officers do their para-phernalia. It seemed so futile and just a show and meant nothing. But there was no way out of it. We always have to succumb to the show of civilisa-tion. The twilight was almost over and we were in the land of Helvetia. We stayed a few nights in a beauty spot of Switzerland on the bank of Rhine. The place was exquisitely decorated and surrounded by a park. We had a wonderfully peace-ful rest there after Paris, listening to the continuous music of the Rhine from our balcony and watching the quaint little town of Germany on the opposite bank.

We started for Vienna with a sweet memory of the country in boxes of Swiss chocolates presented to our daughters by the hotels.

We had to cross Austria right through the Alps, stopping a night in Innsbruck and another at Saltz-burg, two beauty spots of Austria. But these were too commercialised and too expensive for us. We were glad that we did not have to stay there long. We reached the border of Vienna on the 11th after-noon. As we saw long rows of trees, Pines, Chestnuts, Silverbirches and flashes of flowers, yellow and red, we recognised it to be the Viennese woods. We stopped our car, and got down and listened patiently, to find out if we too had the ears to hear the "Tales of the Viennese woods". "Will the fairies come out of the flowers if we keep quiet ?" shouted Lalli. "Yes", I whispered to her, and "so you must keep quiet". We strolled along the shady path strewn with dry leaves which crushed under our feet with a rhythmic murmur. I stopped for a while to hear the music of the forest with an yearning which some times springs up in the mind as if from nowhere and without any specific reason. But our ears were too deafened by the noises of modern cities and our eyes were too blurred with too many artificial brilliances. We could not be absorbed in Nature who of course waited patiently to receive us in her charm. Half our mind was calculating the time and the number of miles that would have to be covered. And just as we turned to move for our car the wonderful forest mocked and smiled at us with the twinkling of a pair of bright black eyes of a squirrel — a brown little squirrel was sitting on its hind legs with a hoisted tail under a chestnut tree and was eating a nut, holding it with its two hands, setting a pair of frivolous eyes on us, with a mixed expression of ridicule and curiosity. We had to bea it in mind and start for the city.

Vienna was lovely and sunny when we reache the city and the hotel booked by the Austrian P.E.N was extremely nice too. The other Indian delegat Dr. Hingorani was already there with the officer i charge of the legation of India — a very competen and nice man and his charming Australian wife.

Some other delegates from other countries cam in about the same time. We were all very anxiou to get ready soon. One of the American delegate perhaps showed a little impatience at the slow spee of the lift. The porter sensed it and remarked "Can't be helped sir, America may have money bu Vienna has time". The American admitted it wit a swear, but had to laugh at it too. As we entere our rooms we found on the table a bunch of flower and a note of welcome, from the Austrian P.E.N How very thoughtful of them !

The session opened next morning. It was grand experience indeed to see and hear the grea litterateurs from the different countries of the worl The sessions were held in a great big hall of theatre decorated with beautiful chandeliers wit cosy cushioned chairs. All the big officials includin the Education Minister and the Mayor were prese to welcome the representatives of world writers.

O TEMPORA, O MORES

I remembered the days of Vikramaditya and h gems. It was quite a tradition in our country fo the poets and writers to enjoy royal favour. N only the great kings as the ancient Mauryas, Gupta Kanishka and others, not to speak of Akbar ar Daraseko, it was even quite a fashion in rece times when the small Zaminders used to mainta the tradition of the past. It was an unbroken cha of customs for the kings and aristocrats to provi for the writers and honour them. We know Vidyapati and Joydeb being the court poets. B I am not so sure if it was the case in Europe to I do not know much about other European countri but Shakespeare never had a seat in the Briti Parliament neither did Shelley or Keats. Their far was established in the minds of the people and n in the royal courts. Thus sitting in the cushion box seat with a Greek poet and an American journ list on either side I reflected that though the la of England were more democratic, it also had tendency of being divorced from the social and cu tural sides of the people. The Government mig have been very just, but at the same time they we quite stiff and impersonal. But we were able digest many misrules in the past on account of personal touch and a friendly relation with our a cient kings and rulers.

The sessions were very impressive. Many em nent writers spoke. The theme of discussion w "Theatre as an Expression of Modern Age." It w so interesting to hear the different problems of d ferent countries about the development of drama a the theatre and the characteristic way in which ea spoke. The problem in America was that dram were becoming stereotyped, and developing more psycho-analytical complexes with deep set caus in childhood. The French speaker spoke with s cerity and tried to defend French theatres from t cheap entertainments with which they were alwa associated by the outsiders and laid stress on their trinsic artistic values. Italian speeches were a sincere but trembled with nervous emotion. As th

SOME PAST LUMINARIES OF WEST BENGAL

(Continued from Page 77)

comedies. *Grihalakshmi* was his last drama. He was a disciple of Ram Krishna Paramhamsa. He stood pre-eminent as an actor and dramatist of his age. He may be considered as the father of the Indian stage.

* * * *

DWIJENDRA LAL ROY was born in 1863. After taking his M.A. degree he went to England as a State scholar to study agriculture. He was appointed Deputy Magistrate. In spite of his heavy duties as a State servant he devoted himself to writing poems, dramas, etc. He wrote many well-known dramas, e.g., *Mewar Patan, Durgadas, Rana Pratap, Chandragupta, Shah Jahan, Banganari, Parapare, Vircha,* etc. His famous songs are known as *Amardesa, Amarbhasa, Amarjanmabhumi* and *Bharatvarsa.* He died in May 1913.

* * * *

ABANINDRANATH TAGORE, who belonged to the Tagore family of Calcutta, was an outstanding scholar of art and literature. He was born in 1871. He was accepted as an authority on ancient Indian art techniques. His contribution to juvenile literature and drama is unique. He was fortunate in having many good pupils, who made themselves famous in the domain of fine arts by his able guidance and valuable assistance.

* * * *

SAURINDRA MOHAN TAGORE, the younger brother of Maharajah Sir Jatindramohan Tagore, was a reviver, interpreter, and improver of ancient Indian music. In 1871 he founded the Bengal Music School situated on the Chitpur Road, Calcutta. His *Sangitsara* is a work on the theory of music. His *Jantrakosa* contains a full account in Bengali of the construction of musical instruments of various countries. His Bengali translation of Kalidasa's *Malavikagnimitra* and his English translation of the Sanskrit drama *Venisamhara* are worth perusal.

* * * *

BROJENDRA NATH SEAL was born in Calcutta on the 3rd September 1864. After finishing his brilliant College career he was appointed a Professor of English literature in the City College. He then served as the Principal of Morris College, Nagpur, and then as the Principal of Cooch Behar College. He was one of the best thinkers of his age. He visited England, France and other European countries. He helped Sir P. C. Ray in compiling the second volume of his *History of Hindu Chemistry.* He was subsequently appointed King George Fifth Professor of Philosophy in the University of Calcutta. He wrote his famous work, *Positive Sciences of the Ancient Hindus.* He remodelled the Mysore University according to his ideals. He was closely associated with the Indian Research Institute till his death and used to give valuable suggestions to its energetic Secretary, Sri S. C. Seal. He was aptly described as a moving encyclopædia. His life was dedicated to the quest after truth. He was undoubtedly one of the greatest philosophers of the world. He studied animal psychology, child psychology and abnormal psychology. He was well posted in Hebrew, Greek, Latin, and Anglo-Saxon-languages. He had keen interest in mathematics and taste for fine arts and archæology. Rabindranath wrote a poem felicitating his inexhaustible store of knowledge. He was equally praised by Dr. Sadler for his profou erudition and critical judgment. He died sudde on the 3rd December, 1938.

* * * *

HARINATH DEY, born in 1877 at Ariadah Dakshineswara, was a great linguist and a no scholar. West Bengal has not up till now seen a linguist like him. He mastered many langua and his English rendering of some Pali verses p lished in the *Herald* shows his rare skill in tran tion. His interpretations of many knotty points very suggestive and clear. He could easily solve riddles and make difficult matters quite intelligibl

* * * *

ACHARYA PRAFULLA CHANDRA RAY was born 1861 in the district of Khulna which was then cluded in the 24-Parganas. His notable work *Hist of Hindu Chemistry* will immortalise his name the world of scholarship. He was not only a C mist but an industrialist. He was one of the found of the Bengal Chemical and Pharmaceutical Wor He was very charitable and kind to the poor. H his vast erudition and critical judgment he w honoured both by the Government of his time a the Universities.

* * * *

RAMENDRA SUNDAR TRIVEDI, who was born 1864 at Murshidabad, was a great scientist. contribution in Bengali language to the domain science is great. He wrote valuable books entit *Prakriti, Jignasa, Karmakatha, Charitakatha a Vichitraprasanga.*

* * * *

PRASANNA KUMAR TAGORE, who was born 1803, joined the bar of the Sudder Dewani Ada in Calcutta as a pleader. He was a very success practitioner. He was one of the hereditary go nors of the Hindu College. Lord Dalhousie appoi him the clerk-assistant to the Legislative Council the Governor-General, a post in which he sho conspicuous ability. The creation of Tagore P Professorship in the Calcutta University was of his best acts. He was noted for his charity generosity, liberality and public spirit. In 1832 was one of those who expressed his opinion in address to the King of England for the dismissa the appeal of some Hindus against the abolitio Suttee by his Majesty in Council.

* * * *

DWARKA NATH MITTER, who was born in 1 in a village in the Hooghly district, received hi education in the Hooghly College. He was not well acquainted with Mathematics and English also well posted in French. He joined the ba the Sudder Dewani Adalat in 1856. He picke a good practice within a short time. He attra the notice of the two leaders of the bar, Rama Pr Roy and Sambhu Nath Pandit. In 1867 he raised to the Judgeship of the Calcutta High C in his 34th year. His merits were highly appreci by Sir Barnes Peacock, who was then the C Justice. The judgments of Dwarkanath give en evidence of his great learning, ability and rese By his premature death the country was dep of a most learned, upright, able and indepe judge.

* * * *

RAMESH CHANDRA MITTER, who belonged Kayastha family of the 24-Parganas, acquire putation of being one of the soundest lawyers. was offered a seat on the bench of the Calcutta Court after the death of Dwarkanath Mitter. D

ıe absence of Sir Richard Garth he acted as the fficiating Chief Justice. He had to retire from the ench at an early age on account of his ill-health. lis amiable character endeared him to all.

* * * *

SAMBHU NATH PANDIT was a well-known lawyer. Ie was born in 1820 at Bhowanipore in Calcutta. ı 1861 he was appointed a Government pleader. Ie was also a judge of the Calcutta High Court. Ie was the President of the Bhowanipore Brahmo amaj.

* * * *

GOOROODAS BANERJEE, who was born in 1844, as a brilliant student of the Calcutta University. e joined the Calcutta High Court bar in 1872, btained Doctorate in Law in 1876 and was appointed agore Law Lecturer in 1878. He was appointed judge of the Calcutta High Court in 1888, which ost he honourably held till his retirement in 1904. e was the first Bengali Vice-Chancellor of the alcutta University. Brought up in penury in early fe he did much for the betterment of the lot of eedy students and himself lived a simple austere fe till his death. His treatise on the *Law of ridhan* is recognised as the authoritative book on e subject. His Bengali book *Karma-o-gnana* won r him immense respect. Not only his positive terest in multifarious literary activities but also s own versatile scholastic attainments were widely cognised.

* * * *

SARADA CHARAN MITRA, who was born in 1848 a small but populous village of Panisahala in the strict of Hooghly, was a distinguished graduate of e University of Calcutta. After passing the Law amination he started practising in the Calcutta gh Court. His able arguments on facts frequently cited praise from the bench and the bar. He receiv- invaluable help and advice from Dr. Surya Kumar rvadhikari, who was his *de facto* guardian. He iciated as a judge of the Calcutta High Court and as confirmed in his post on the retirement of Sir oroodas Banerjee. He was deeply interested in ngali literature and in order to be able to serve more devotedly he stepped out of the High Court nch in 1908. He presided over many literary nferences and became President of the Bangiya hitya Parishat more than once. He was also the esident of the Sahityasabha. He published an notated edition of Vidyapati's works. His articles Vidyapati were published in some issues of the *achina Kavya Samgraha* jointly edited by him and ijukta Akshay Kumar Sarkar. He edited the *ayastha Patrika*. He wrote a very interesting ticle on the philology of the Bengali language for C. Mukherjee's magazine. He was an advocate a single script for the whole of India. Before he k his seat permanently as a judge he was deputed the then Government with Mahamahopadhyaya raprasad Sastri to report on the Budh-Gaya dis- te. His report was considered as a monument of rning, industry, and ability, and above all, im- rtiality.

* * * *

RASH BEHARI GHOSH, who was born in a village the Burdwan district, was a brilliant lawyer, a ceful orator, and above all, a great patron of hnical education in India. He started legal prac- e in the Calcutta High Court and in a few years lt up a great reputation in the profession. His course on the *Law of Mortgage in India* delivered the Tagore Law Lecture to the Calcutta Univer- y was acclaimed as highly authoritative. He atly helped in drafting the Civil Procedure Code 1908. Besides his profound knowledge of Law, he was distinguished for his mastery over the English language. After the partition of Bengal under Lord Curzon he came to associate himself with the national political movement and became the President of Indian National Congress in 1908. He made a princely gift of over fifteen lakhs to Calcutta University for technical and scientific education.

* * * *

WOOMESH CHANDRA BONNERJEE, was was born at Kidderpore, a suburb of Calcutta, will long be remembered for his being the first President of Indian National Congress, which had its first session in Bombay in 1885. He developed a keen interest in law when he was employed as a clerk in a solicitor's office. He was a well-known barrister and twice declined the offer of Judgeship of Calcutta High Court. He was the first Indian to be appointed Standing Counsel. He made his mark in the profession during the famous Contempt of Court proceedings against Surendra Nath Banerjea. In 1902 he went to England and carried on legal practice in the Privy Council. He died in England in 1906.

* * * *

ASHUTOSH MOOKERJEE was born in Calcutta in 1864. His father, who was a medical practitioner, hailed from the Hooghly district. Completing his brilliant academic career Ashutosh began practising at the Calcutta High Court. He was appointed a Judge of the Calcutta High Court in 1904 and officiated as Chief Justice in 1920. A brilliant scholar, an eminent jurist and a flourishing lawyer he made his deepest impress as a devoted and outstanding educationist. He held the position of the Vice-Chancellor of the Calcutta University for some years. It was through his bold and far reaching efforts that the University of Calcutta attained great fame and stature. He was the President of the Asiatic Society of Bengal. He used to encourage students and scholars alike to produce intelligent and useful work in the field of culture.

* * * *

SATYENDRA PRASANNA SINHA was the first and the only Indian who was honoured with a hereditary British Peerage. He was also the first Indian to be a Member of the Viceroy's Executive Council as well as to be a Governor of a British Indian Province. He was born at Raipur in the Birbhum district in 1863. He joined the Lincoln's Inn in England to study law. He came back to Calcutta after sufficiently qualifying himself to practise as a barrister in the Calcutta High Court. In recognition of his great success at the bar he was appointed Standing Counsel and later Advocate-General. He was elected President of the Indian National Congress. He had the unique distinction of being a Member of the War Conference in Britain during the First World War and representing the Government of India at the subsequent Peace Conference. He was appointed Under Secretary of State for India. In 1920, with the introduction of Montford Reforms he was given the full-fledged Governorship of Bihar and Orissa but due to ill-health he had to relinquish this office only a year after.

A MOTOR TRIP IN EUROPE

(Continued From Page 89)

spoke in French and German I took the earphone for listening in to the English rendering and looked at the poor translators who were shut up there in small glass cages in one corner of the room. I could see the incessant movements of their lips and the perspiration gathering on their forehead and could imagine what they were going through.

Anyway we really enjoyed the P.E.N. Congress, specially my husband who was present there as my guest, and attended all the receptions and parties scrupulously avoiding all meetings. He told them he preferred dinners to lectures and while we were shut up gaining knowledge about the theatre he had the whole Vienna to roam about with a couple of cameras hung on his back and a bright sun to help him. They all envied him and assured him that they would have liked to have done the same but were afraid to do so.

Besides the sessions and meetings our times were booked up with receptions and parties held in most luxurious palaces of Vienna, which are now reserved only for big receptions and banquets.

WEST & EAST

The most impressive one was at the palace of the Empress Maria Theresa. The 17th century palace is called Schonnbrunn, meaning the beautiful castle. All the members and delegates were there. There was an informal atmosphere all round inspite of it being a State reception given by the Chancellor. I remember Lord Pethick Lawrence being present there. He was an extremely nice man and told me how he had to argue about India in the Parliament, on his return from the Cabinet Mission. "But how are you going to keep up the standard and produce more riches and luxury when you have lost India and will ultimately have to lose all your Eastern territory ?" I asked him pointblank. "Yes", he agreed "we have lost the East but we have achieved something else — it is the atomic energy. If we could use it for peaceful developments we could do wonders." "But don't you think it is better to limit our wants somewhere and not to progress at such a fast rate ?" "Oh no," he said, "we must go on progressing. We the men of the West do not believe in such Eastern philosophy as yours. We must stop nowhere and ambition has no limit. Demand of hunger must be met, and the men would have to be provided for by some means or other. The world has still sufficient resources to provide for all". We all talked a good deal with each other that night. Schonnbrunn was really a Schonnbrunn with great big gilded halls of white marble beautifully decorated with chandeliers, exquisite flowers, and costly velvet curtains.

While I stood in the mirrored luxurious hall which was supposed to be the dressing room of Maria Theresa, I reflected once more what was after all real and what unreal and where are the values ? What different scenes were played here only two hundred years ago. How the Empress used to roam about in these rooms planning her daughter's marriage to France. She exists no more except in the pages of history and to her we did not exist at all. But still she was there, and we are here, only with a thin curtain of two hundred years between us. I looked out of the balcony. A great big moon was shining, flooding the tree tops of the garden, softening the marble figures into a haze of dreamy silvery light.

We had our last session in the great hall of the University and the last reception given by the Mayor in the Townhall. The Mayor presented us with a nice book about Austria. There was an autograph hunting expedition in the evening. My sari was an attraction and I remember how hesitantly they would come and would apologise to admire my dress, and would request for an autograph. We really cannot remember all the members and the delegates we met. Neither will they remember us, but still we cannot deny that even that short temporary meeting had a real effect on all of us. We talked and discussed about the fundamental affinity of our thoughts. And when we said goodbye amidst clicking of cameras all round, once more I thought that cultural movements were the only effective means of uniting the world for one great cause at the same time preserving the customary and the traditional distinction of races.

LOW-COST-HOUSING

(Continued From Page 75)

portion of clay is high, sand or gravel may be mixed in certain proportions to reduce the clay content per unit volume, and thus to reduce the cement required. Chemical and mechanical properties should be considered to decide soil and aggregate mixture.

Soil stabilisation when properly carried out produces materials which are not brittle and are not liable to crack like a purely concrete surface. This soil cement stabilised could be used in the walls, floors, pathways, etc., as Low-Cost building materials specially for the improvement of village.

The system of construction is known as "shell construction". The superstructure of the shell house type of construction is made in the shape of a catenary so that the dead load stresses are purely compressive. Since the bending movements due to live loads cannot altogether be eliminated an adequate moment resistance is provided by thickening the arch ring, ribbing the concrete by providing corrugations formed at no great expense by the use of hessian etc.

The explanation for the Low-Cost-Housing of the shell roof lies in the deadweight of the structure. The volume of the building materials used is only 20% of that required for a convertional flat roof house. In addition, this also leads to much reduction of cost of labour, transport and handling the materials etc. The above system could be used in the construction of Low-Cost-Housing in India, specially in urban areas.

STANDARDISATION

Mechanisation of building techniques for completing the construction of Low-Cost-Housing schemes quickly and economically will be feasible only if quite a good proportion of building components are standardised. Then only will it be possible to manufacture precast numbers on a large scale economically. The adoption of fabricated standard sized doors and windows with shutters will also bring down costs. Windows can be of metal or metal alloy while door shutters can be of plywood or pressed wood with a tongue veneer. Introduction of mechanisation by making use of plants and machinery such as hoist jobs, steel forms, tubular scaffoldings, wheel barrows, chutes for pouring concrete etc., will ultimately lead to economy in construction costs, reduce accidents and increase efficiency.

The ancillary services, health and sanitary etc., should not be forgotten in the Low-Cost-Housing. The barest minimum essential services like safe water supply, disposal of human excreta, disposal of refuse and storm water drainage etc., should also be taken into consideration in Low-Cost-Housing.

PRIMITIVISM IN MODERN ART AND CULTURE

By ASIT KUMAR HALDAR

PRIMITIVISM in art and culture, advocated by the modern Western scholar-critics, should be properly understood in the light of progress made in all aspects of creative activities of the world. It is generally told by the critics that Primitive Art is great and 'timeless' because it had no past or future. But actually, art of all ages can be ascribed as inimitable and timeless. On the other hand, primitive culture actually indicates a metamorphosis of a lower order of human progress. It cannot, therefore, dispassionately be taken as a criterion of fulfilment of its purpose. Any beginning that incites evolutive-dynamic action for progress, cannot be ear-marked as a final achievement or an ideal issue. From the origin of man there has been indeed an incessant influx of novelty into the old world of ours, predilection of which is strongly indicated in modern Western Art and pompous praise is bestowed upon it by our art-critics. Surrealist artists like Piccasso, Mettessi and Paul Klee are now in the forefront of publicity and their art has already captured the imagination of the young minds. These artists are imposing precocious fame to the primitive art in which aesthetic inspiration is subordinated to the impulsive thoughtless action. In other words, imperfect art technique of the undeveloped primitive artists' work is being superimposed on all age-long matured experiences and methods of art of the world. The chronological stages of cultural development in this ase is going to be shattered and a peculiar ideology is deliberately substituted to suit the purpose of such change in art to ensure modernity in outlook. Though such influence of primitivism in current art of the world may be ephemeral, it has already become widespread.

Let us examine closely the meaning of the word 'Primitive'. Primitive relates to unskilled simplicity of the pre-historic age and is actually opposed to the word 'Art' which denotes skill—a system or technique to facilitate performance of certain action of a civilized man. A tree can be cut down with its root and the trunk can be used as a seat, but an artist can fashion it into a chair by employing his imagination and skill. Art requires sophisticated artfulness and experiences and, therefore, cannot be compared with that of the primitive adventures. One cannot liquidate all aesthetic discrimination for the sake of modernism and novelty.

ART IN EAST & WEST

Novelty has somehow taken the place of originality in European art of our time. Art is, on the contrary, not just a human invention and contrivance, but a spontaneous aesthetic experience of his soul seeking suitable form in both universal and natural images, a symbol of his own feeling and expression. But in India, art has always been subjective and never attempted to be a photographic representation of natural form. To observe and to draw are, therefore, not the goal of the artist in India. He should visualise what he has seen or experienced and then re-create, becoming one with the object he paints. Indian art has always been non-secular, in a sense, that the mighty impulse of creation through imagination and meditation brings the artist nearer to the Cosmos itself. Artist's imagination is akin to the inspiration of the poet, the vision of the sages and intuition of the philosophers.

This form of conception in Indian art can be better illustrated when Lord Buddha gained his enlightenment under the Bodhi tree in Urubela. Buddha with his mind concentrated, purified, cleansed with the defilement gone,—supple, dexterous, firm and impassable, directed his mind to the knowledge of the remembrance of his former existence....he came to know his past life with their special modes and details. This became his first knowledge that he gained in the first watch of the night and his ignorance was dispelled and knowledge arose. Similarly he experienced super-human visions in the second watch of the night. In the last watch of the night he realised how to destroy his re-birth after leading a religious life, doing what was to be done;—there he knew nothing for him, beyond this world. This was the third knowledge that he gained and ignorance was dispelled, knowledge arose, darkness vanished and light revealed. Similarly, Indian art and religion are transcendent realization of form or manifestation of all forms and spirit in all its rich thoughts of exuberant variety.

GREEK FORMS IN ART

In the early stage of evolution, European art drew inspiration from the classical Greece with its well-poised athletic forms of male beauty and supple muscular form of female, which became ideals in art and gradually with the passage of time and with the invention of photography, values of such art diminished. Instead of reverting to the intuitional and imaginative art of Byzantine and Gothic School, they found solace in imitating undeveloped primitive art of the prehistoric ages. To give credit to such a 'progress' they had to invent a new ideology dissociated from romanticism, and rhythmic realistic forms of traditional motifs in art. As seed is realised in formation of a tree, similarly a primitive mind is considered, according to the psycho-analyst,

as the seed-mind of a grown-up sophisticated experience. A primitive mind rests in purity and is free from super-imposed knowledge and romanticism. In fact, decorative pattern, which contains no human emotion, occupies a distinguished place in this kind of modern ideology. Western world, therefore, has its sur-realist school which can go without tradition or discipline of the past experiences. In the matter of romanticism, naturalism and traditional discipline, Indian art never differed from Western school of painting. But on closer observation, other differences are noticeable. Indian art is realistic and keeps intact proportions of natural forms but does not deliberately imitate Nature. Indian art in this respect is a natural evolution of primitive expression and to some extent could be compared with the modern Western school of Impressionism. Though technique itself is not art, it is a vehicle of expressing art: and perfection of technique is a legitimate requirement for artistic creation. Academic discipline blended with country's art-tradition can make art unequivocally impressive. Moreover, with the artist's metaphysical depth and detachment, many new forms of expressions can be evolved in abstract transcendental plane which can derive profound sentiment and symbolical meaning. The thrill of imagination and subjective creation and emotional rapport with Nature, consolidates the sense of human perfection through art. Religions have produced gods and goddesses and the pagan Greek identified gods with ideal features of human forms. Christian art also followed the maxim. Whereas, Indian artists put several hands and heads and reshaped the standard of human form to create his God.

SUR-REALIST'S REPRESSED COMPLEXES

The artist's super-ego could build such images without hampering the realistic anatomical proportions of animals and human beings, whereas wilful eccentricity in sur-realist art expresses repressed complexes—vulgar and stupid. The refined meditation (dhyana) on the other hand, enabled artists of India to evoke pictures of gods and goddesses—the metaphysical expressions which stand for vehicles of the Universal and Eternal. Subjectivism in this way can remove such dissatisfactory approach to art, which is devoid of intellectualism. The artist can fashion his psychological and mental processes of aesthetic contemplation and remould his art in multifarious ways for his audience. Art has no fixed routine and artist can help the mind's adjustments according to the environment and suitability of time. A man of philosophical bent of thought may not like to live with a painting depicting a sublime landscape. He would, perhaps, prefer to see his own transcendental experience unfold in a picture. Similarly, a newly married couple would be happy to be with a picture of more optimistic nature. This kind of variegated emotional stresses can also be seen among the artists themselves and the infinite configuration of patterns of thought is frequently experienced in art. Adherence to the objective principle in relation with external forms is also illustrated in Indian art, whereas the modern European School is an adept of phantasy and consider it a supreme key to revalue the reality. A modern French art-critic, M. Andre'Breton observes: *"It is only at the approach of the fantastic, at a point where human reason loses its control, that the most profound emotion of the individual has the fullest opportunity to express itself; emotion unsuitable for projection in the frame-work of the real world and which has no other solution in its urgency than to reply on the external solicitation of symbolisms and myths."*

SYMBOLISM IN ART

Symbolism has limited scope in austere Christian and other religions and thus new symbolic forms had to be invented in modern Western art of Europe. Hindu, Buddhist and Jain symbols are to be found in their immensity of quality in painting, sculpture and architecture. Oriental iconography has developed the symbolism of pose, gesture of hands, *Ayudha, Bahana,* etc. most elaborately. In Vishnudharmottra we read: *"The Universe is regarded as the transformation of the Supreme Being. All transformation consists of Shyama, i.e. dark colour, and through that is the sustenance of worldly life. The Lord, the creator of all creatures assumes the KRISHNA form".* The universal mystical realisation in India of the oneness in diversity of form, flesh and spirit, brought about complex qualities of the deities. Shukra-Nitisara enjoins this method of visualisation upon the image-makers of India. In order that the form of an image may be brought fully and clearly before the mind, the image-maker should meditate: and his success will be in proportion to his meditation. No other way—not indeed seeing the object itself will achieve his purpose. In other words, the artist should attend to the images of gods by means of spiritual contemplation only. This spiritual vision is the best and truest standard for him. He should not depend upon the visible objects perceived by the external senses. That is the reason why mere imitation of Nature is never attempted by the Indian artists. His power of visualization and intuition was for his self-realization and was accepted as finer means.

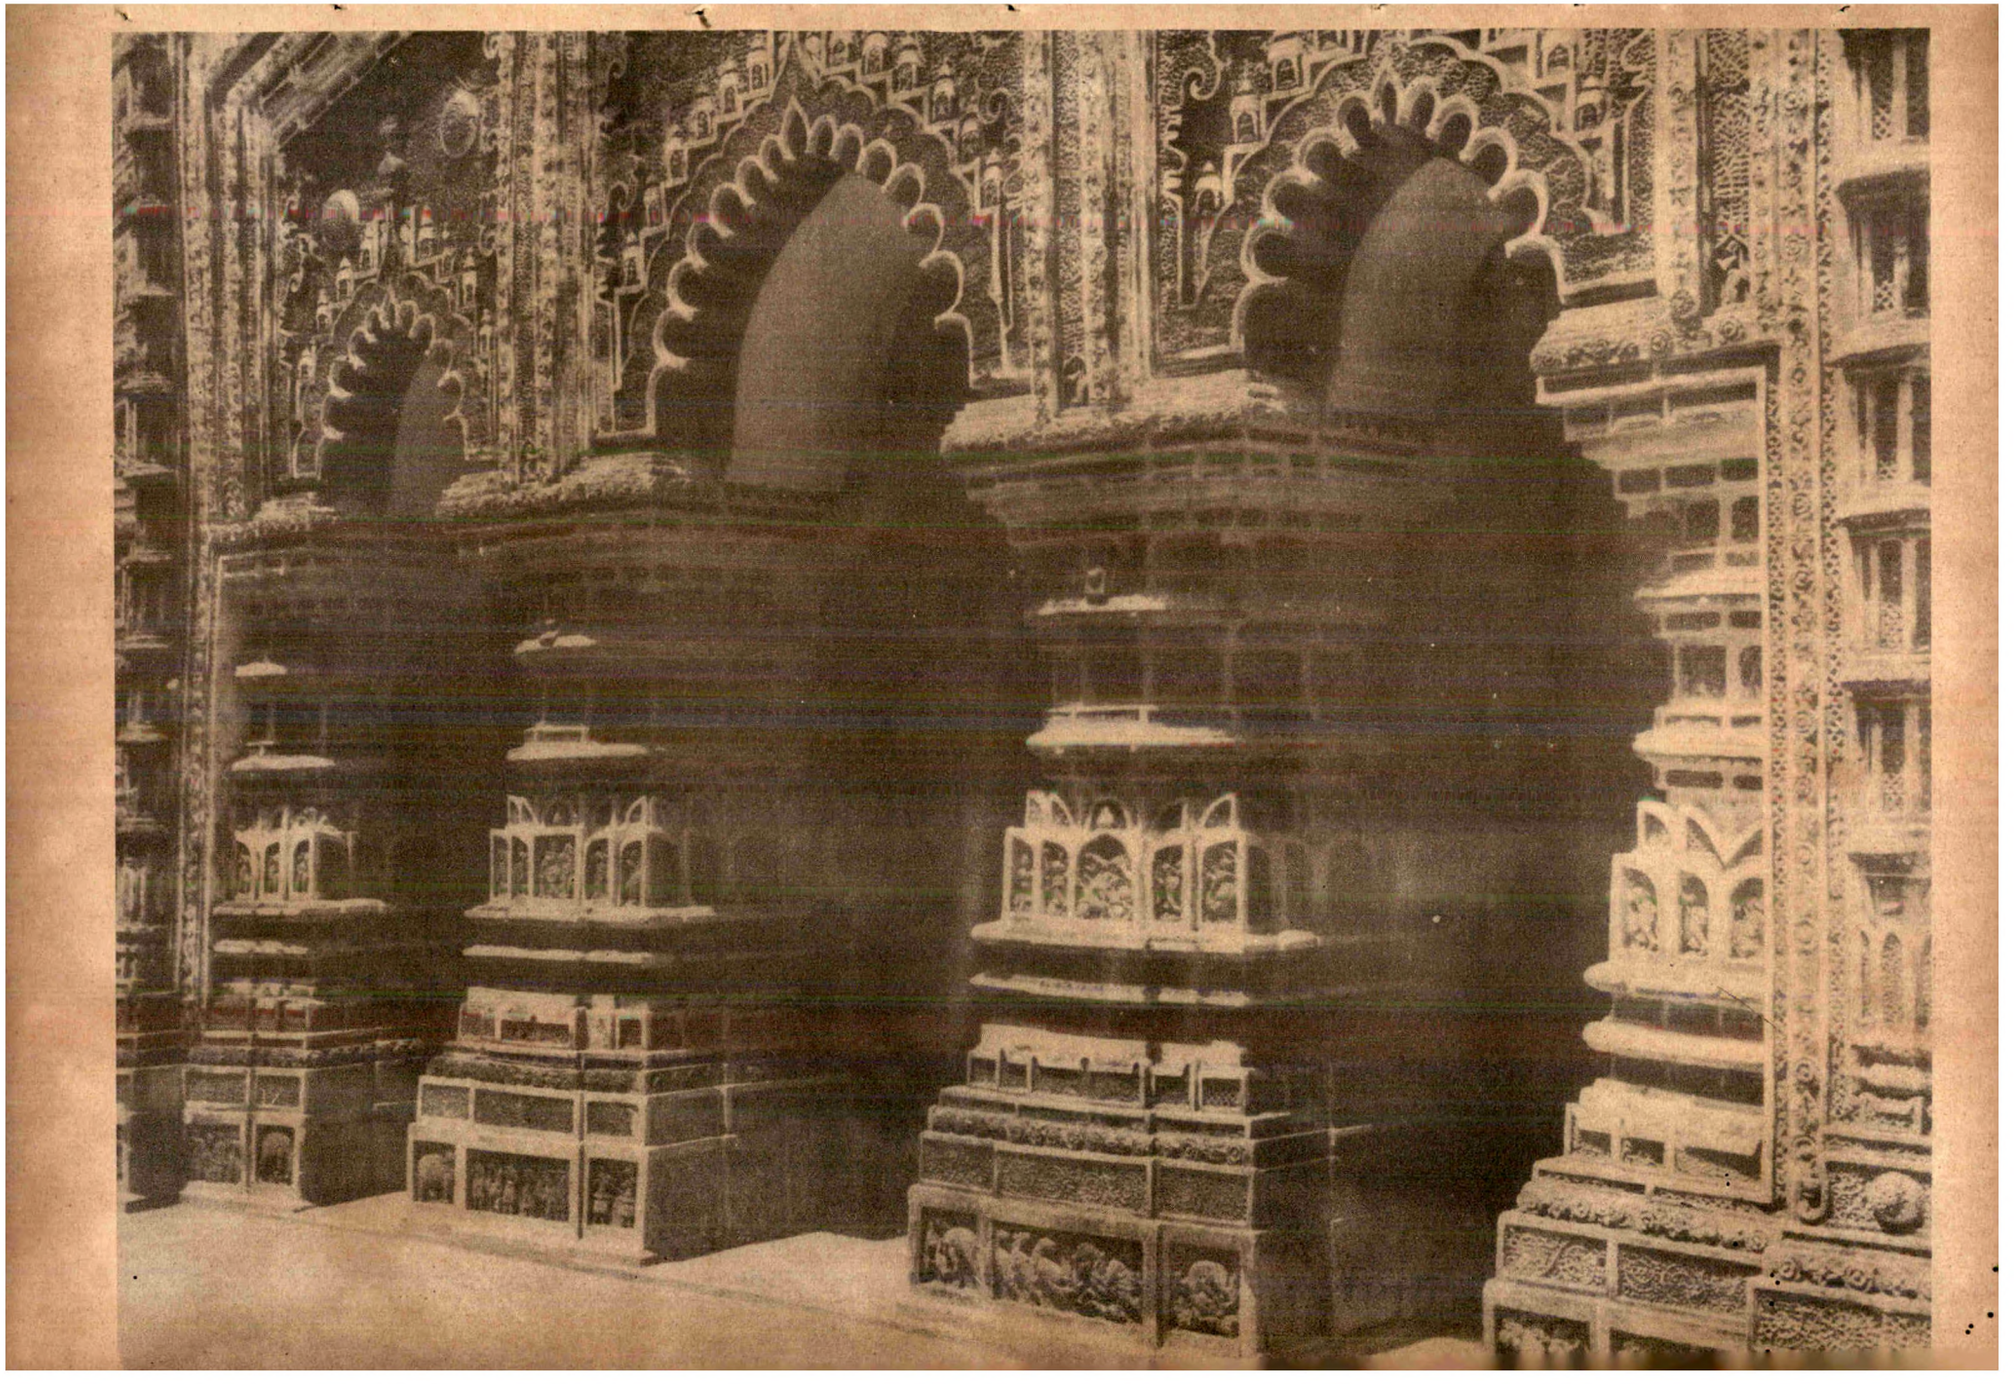
INDIA'S ROLE IN ART

Whatever good or bad the influence of the present psycho-analyst school might have on the art of Europe, it may not have a healthy development in this borrowed ideology in India. We should try to solve our peculiar problems by studying and understanding our old masters and then modernize it according to the present-day life and its spirit. Universalism attributed to such modern art-expression can never mean a uniformity in which all art should look alike. Rather, it should be a unity in diversity that is always observed in Nature, each country presenting its individual type of expression-forms. So, Indian art too should retain its creative individuality and typical Indian stamp rather than bear the uniform hall-mark prescribed by some other country. It should never be an amalgam of a hybrid expression of different schools of art, such as an admixture of ancient Chinese and Pre-Raphaelite techniques, but should be the sincere expression of an artist conveyed in his spontaneous creation.

To some modern art-critics of Europe, aesthetics seemed like sophisticated behaviourism and quite insignificant to labour upon. They do not value anything "beyond science" and cannot thus fathom the mystery of art and its nature. Even artists of Europe became victim of science. After the Gothic or Byzantine School, which was essentially aesthetic and of mystical nature, artists and critics began cultivating realistic forms in scientific manner and for the first time invented perspective and the process of light and shade. Again with the advent of the modern era they are falling back on the science of psychology. They have lost sight of the heart of a creator in Man who brings out his sincere expression without any calculated scientific sophistication. An artist may not be a "pundit" but still can be a creator.

The Sleeping City

Anil Dut



The old Tom cat

The tom cat is regarded as the totem animal of 'Sasti', the goddess of fertility, and it is forbidden that no cat should be killed. No child will be born or those living will die if a cat is killed against this injunction, traditional social taboo says.

By RAJ SEKHAR BOSE

AFTER the guardian deity of children, Sasti, had been duly honoured with a ceremony, Sukumari laid her new-born baby on a low wooden stool and bowed before her husband, touching his feet with her forehead. Sukumari was twenty-four and her husband, Gokul Goswami, fifty-four.

"How lovely you look !" exclaimed Gokul Babu, "Like Urvashi fresh from her bath in the sea !" She pressed the palms of her hands together and pleaded, "Please, I beg of you, release me. It is seven years since I came to you and I have borne six children. Five are dead. Only one remains. I cannot suffer any more. My health is gone. I shall surely die if I conceive again. And this baby too."

"God forbid," protested Gokul Babu, "Why should you die ? Children are born, live and die according to the will of God. That is to say, according to the karmas of their former lives. I see clearly now that you have completed your quota of suffering. Your bad luck is passing. From now on you have nothing more to fear."

Gokul Chandra Goswami was a Sub-registrar in Sheoraphuli. His job was a comfortable one. There was little work and his office was near his residence. He read a great deal, and was proficient in many Shastras. He even read English and Bengali novels and was considered learned. His circumstances were easy for he owned property dedicated to religious purposes and practised usury under an assumed name. Seven years before, Gokul Babu had gone on pilgrimage to the sacred places in the foothills of the Himalayas, completing the pilgrimage by climbing as far as Lake Manas and Kailas. When he came back he declared that he had been reborn and it was no longer possible for him to live with his family. He must have a new one. There was no difficulty. An orphan, the daughter of poor parents, Sukumari, came into his home. His first wife, Katyani, took her three children and went to live with her brother in Calcutta. A meagre monthly allowance her husband sent her was the only connection that remained between them. Her two daughters were married and lived with their husbands' families.

"Do not deceive me with false hope", Sukumari replied to her husband's effort at consolation, "I have read in the papers that a method of birth control has been found which our ministers in Delhi consider good. You are so well informed. Don't you know about it ? Go to Calcutta and ask the ministers there to teach you."

"Rot they know !"

"Ask the chief minister. I've heard that he is a doctor."

"Are you crazy, Sukumari ? What things you say ! You ! A respectable Brahmin wife in a pious Brahmin family ! A little learning is a dangerous thing ! You have learnt enough to read

Don't you know it is a great sin to arrest the processes of birth by artificial means?

newspapers. Now all sorts of wrong ideas are getting into your head. Don't you know it is a great sin to arrest the processes of birth by artificial means ? God created man and woman to multiply his subjects. Woman's duty is to conceive. It is so ordained. Do you wish to interfere with the will of God ?"

"I am an ignorant woman. I know nothing. I spoke of it because I have heard that it is done in most families nowadays, and I fear for my life. I do not know right from wrong. But who does not interfere with the will of God ? God sent you naked on to the earth. Why do you wear clothes ? Why do you shave ? Why do you make use of false teeth ?

"You must not say such things, Suku ! Radhamadhav ! Your tongue will drop out !"

"The tongues of the Delhi ministers haven't dropped out !"

"They will ! They will ! When their measure of sin is full ! If one follows the injunctions of the Shastras God's will is not infringed. It is a great sin not to follow them. Know once and for all that no one can escape his fate. In respect of children you have been unlucky and have suffered. When your luck changes you will be happy. We must submit to what is destined for us. These are very deep matters. I'll explain them to you sometime."

Sukumari, discouraged, was silent.

* * * *

Before six months had passed Sukumari became big with child once more. She fell ill. The doctor diagnosed her ailment as severe anaemia with various complications. If she were removed to Calcutta and given proper medical attention there was a chance of her pulling through, he said. "Don't you worry at all, Suku," said Gokul Babu lightly dismissing the doctor's advice, "You'll be well in no time. All you have to do is to get an amulet from our astrologer and keep on taking the pills Bidhu doctor has prescribed."

"I have not been away for a long time," Gokul Babu said to Sukumari just before the Pujah holidays, "I feel the need of a change." He added seven days' leave to the holidays and joined Naresh Babu, a lawyer friend who was travelling as far as Rameswar with his party. Sukumari was not to worry. He was leaving a maid with her, and the servant boy, Gupe. The wife of the milkman had promised to come to see her twice a day. He would be back for the Festival of the Lamps.

Not long after Gokul Babu's departure Sukumari took to her bed. Three weeks passed slowly and with difficulty. Then an evening came on which she felt her breath was failing. A lantern was burning but she could not see. Her baby lay beside her. Resting her hand on his head she prayed, "Holy Mother of the World, I am going. Who will look after my baby ? Oh Mother Sasti, Guardian of Children, take pity. Have mercy on my child ! Save him !"

Filling the room with light the goddess appeared. "What is it, child ? she asked tenderly.

"My life is ebbing out," Sukumari murmured, "I have heard, Mother, that children are born at your desire and live by your grace. You are She Who dwells in all things as Mother ! Mother dear, I am going, look after my child !"

The goddess ran her lotus hand over Sukumari's brow. "I shall make provision for your child," she promised, "Sleep in peace !"

Sukumari slept.

"Meni !" the goddess called.

A great cat appeared before her. Its head was black but the rest of its body was a pure white. On its forehead was a red mark in the parting of the black markings and its tail was ringed as though with bracelets.

"What is it you will, Holy Mother ?" asked the cat, standing on its hind legs and folding its forepaws reverently.

"You must take charge of this baby boy."

"But I am a cat, Mother !"

"Take human shape."

Instantly a handsome young woman stood in the cat's place. "Holy Mother," she said, "I shall take charge of this baby. But I have young ones of my own. What will happen to them ? My first litter has grown up and I do not worry about them. They can feed themselves by catching mice and crickets and rats, looking for scraps of food or stealing a little. But I have four little kittens who have not yet opened their eyes and are still on milk. What will happen to them ?"

"Turn back into a cat now and then to suckle them."

"But what will the head of the house think ? There'll be trouble if Goswami finds it out."

"Don't be afraid. If he finds out he too will turn into a cat".

"Will he turn back into a man ?"

"No, never. He will be a cat forever. So he will not be able to make trouble. You also need not stay here long. You will be free to leave as

By the flickering light of the lantern Gokul Babu saw a very pretty girl holding the baby in her arms.

soon as satisfactory arrangements are made for the care of the child."

The goddess vanished. Sukumari's infant son woke and began to cry. Meni took the baby to her. The hungry child gurgled with pleasure at the full breast.

* * * *

A hackney drove up and stopped in front of the house. Gokul Babu had returned. He was expected to rejoin his post on the day following the next. "Gupe!" he called, "Where are you? Come and carry my luggage in ! Has the maid left already ? What's the matter ? Why doesn't any one answer ? Suku, where are you ? Why don't you come out ? Come here a minute ?"

Nobody came. Gokul Babu was obliged to take his trunk and bedding out of the hackney himself, with the help of the coachman. He paid the fare and dismissed him. "How are you, Suku ?" he asked as he entered the house, "How is the baby ? Why didn't you write to me ?"

By the flickering light of the lantern Gokul Babu saw a very pretty girl holding the baby in her arms. She stood in front of him. "Who are you ?" he demanded.

"I am Menaka," she answered, "a distant cousin of Sukumari's. I received news that she was seriously ill and all alone. There was no one to look after the baby. So I came as quickly as I could."

"It is good of you to come, Menaka !" exclaimed Gokul Babu gratefully, "and since you have come, you may as well stay on. How is your cousin ? Her sleep seems to be sound. Is she running a temperature ? A high one ?"

"Sukumari has just died."

Gokul Babu wailed and beat his head with his fists. "Where have you gone leaving me all along," he cried, "What will happen to the baby ?"

"Hush, Cousin-in-law !" Meni reproved him, "There will be time enough to weep later. Now summon people. Make arrangements for cremation. Don't delay !"

Gokul Babu did as he was bid.

* * * *

"How lucky it is that you came, Menaka," Gokul Babu said a couple of days later, "I get my meals and the baby is alive. You are a fine girl. I think that since you have taken charge of us you should make it permanent by becoming the lady of the house and shining in my home".

"You are very impatient," Meni answered, "Why are you in such a hurry ? What will people say ? Let your grief for my cousin diminish. Complete the period of mourning and all the funeral rites. Then you may speak to me about it."

The funeral feast was over. Gokul Babu felt uneasy. Menaka's behaviour seemed to him very questionable. Unable to keep his peace he asked her, "Menaka, see here, your behaviour is very odd. You are an unmarried girl. How is it that you can give suck ? I have seen you nurse the baby. Have you had children ? Please answer plainly. However beautiful you may be, I cannot marry a bad woman !"

"Oh, so you have been spying on me !" Menaka retorted with a laugh, Venerable Goswamiji, don't be alarmed ! No blemish will you be able to discover in my character. I am wholly pure and, as they say, untouched by sin. You are learned and have read widely in the shastras. Have you never heard of a *payaswini* woman ? That is what I am. At times my breasts fill with milk for three or four months and then go dry again. You are fortunate to have such a woman in your house. Your half-dead son is alive now and well. He never got his fill of his own mother's milk".

Gokul Babu's suspicions were not allayed. But Menaka's beauty bewitched him. He was determined not to let her go whatever might happen. Within two months they were married.

* * * *

Gokul Babu's distress grew. Where did Menaka go every night so secretly ? And on Sundays she was missing for several hours during the noon. Perhaps she went out every day. How could he know ? Gokul Babu did not wish to displease his beautiful wife. He was completely at her mercy. She was his third. But one day he broke out, "Tell me, where is it you go ever so often ?"

"That is no concern of yours," Menaka answered proudly, "Surely I am not a slave. Do I ever ask you where you spend your evenings ?"

Gokul Babu decided that he ought not to keep quiet. He must find out to whom she went. He purchased a flash light and secreted it in the bedroom in a place where he could reach it easily without being detected by Menaka. That night he went to bed early and pretended to be asleep. About midnight Menaka got up and left the room silently. Gokul Babu followed her barefooted.

Menaka crossed the courtyard and went out by the back door. She entered a low thatched shed behind the house where firewood, coal and cowdung cakes were kept. Her figure was indistinct for she

was wearing a white sari and she vanished as soon as she entered the shed. Gokul Babu, with the help of his flash light, saw only a white cat lying in one corner. Four kittens were feeding at her teats. Of Menaka there was no trace.

"Menaka", Gokul Babu called, running his light around the walls of the shed.

"What is it ?" answered the cat, "Don't shout or you will frighten my kittens. Gokul Babu was so nonplussed that he dropped the flash light. But he saw as well as ever despite the dark and he felt no surprise. "Radhamadhav !" he exclaimed in a hurt voice, "illegitimate children in a Brahmin's house !"

"A fine Brahmin !" Meni answered, "You cannot see your face but you can put your hand behind you !"

Gokul Babu put his hand behind him and discovered that he had a full-grown tail. Even that did not surprise him. He went on indignantly, "You're a bad woman ! How many lovers do you have ?"

"I haven't counted them."

"Get out of my house this instant !"

"Who are you to turn me out, Goswami ? Don't you know that it is a matriarchal society ? Men are not the masters. They are of no importance, companions of the moment only."

Gokul Babu mewed furiously and tried to bite Meni. Meni gave a single leap and called, "Ur-rauo!" According to Sri Dipankar Bose, who is an expert in the language and customs of the cats, a mother summons her sons to her rescue with just such a sound.

Meni had a taste for novelty. From a wide variety of husbands she had obtained a motley array of sons. "What's the matter, Mother ?" cried the white, black, grey, brown, dappled and striped cats which presented themselves instantly in response to her call.

"Drive this wicked fellow away !" she said. Seven of her sons pounced tigerishly upon Gokul Babu who was now only a tom cat. He fled, scratched and bleeding. One of his paws was lame.

* * * *

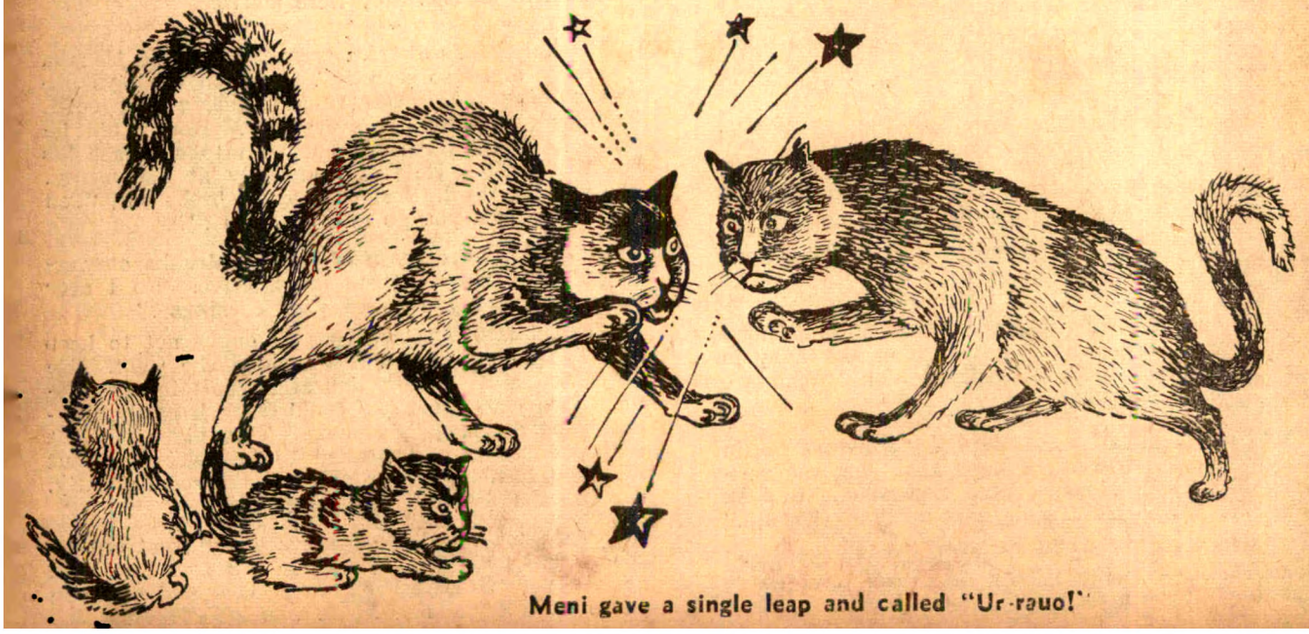
Three days later the first wife of Gokul Chandra Goswami received the following letter. "My revered Elder Sister, I am Menaka, your unfortunate younger sister, our husband's third wife. Last night Goswami quarrelled with me and left home. He vowed by his sacred thread, which he broke, that he would not come back. I am not capable of looking after his property. It is necessary for you to come immediately with your children and take possession of it. Our second sister, Sukumari, left a baby boy to our care who is now nine or ten months old. He is a lovely baby and you are sure to love him. I do not intend to stay here any longer. As soon as you come I will go to live with my mother. Yours obediently, Menaka."

Katyani did not delay. She returned to her husband's house and brought her children with her. Taking Sukumari's baby boy into her arms affectionately she said, "He will be as my own to me."

Menaka was indeed a fine girl. She asked for nothing. Katyani offered her a monthly allowance but Menaka protested. "I do not need it," she said, "I will not want for anything at my mother's". She even refused to take her train fare. But at the time of leaving she said, "Elder Sister, you are not a widow. Whether you ever hear from our husband or not, he is alive and you should eat fish for his sake. It will bring him misfortune if you do not. I have another favour to ask of you also. An old tom cat comes to the house daily. Take pity upon it, please, and give it the fish bones mixed with a little rice. And when you can, give it some milk. The poor creature is old and infirm."

"Do not worry about that, sister", Katyani assured her warmly, "I shall feed your poor tom cat."

(Translated from Bengali by Lila Ray and Ajit Mukherji)



Meni gave a single leap and called "Ur-rauo!"

The Life Insurance Agent

By AJIT KRISHNA BASU

AMLAN BARORI was a simple life insurance agent. If there was anything extra-ordinary about him, it was his extra-ordinary simplicity. His dress, his habits, his manners, his living, his diet.....everything was simple, as simple as his heart. Perhaps simplicity, the keynote of his character, was also the secret of his success, for he *was* a success as a life insurance agent.

How, or why, did he step into the world of life insurance? He told me about it one day. Years ago, when he was about eleven, he was with his mother, a widow, aboard a steamer navigating from Naraingunj towards Calcutta. On that same steamer was another widow, with her only child, a daughter of seven or so. Women become friends very easily, particularly when co-travellers, and the two widows soon became dear sisters. And their two children became playmates. The little girl knew she had lost her father for ever, but knew not what a tremendous loss it was. The boy of eleven knew, and he pitied the girl all the more.

The little girl's father had left no life insurance. The boy picked up this information from the conversation between the two widows. In fact only a month before the gentleman's untimely and unexpected death, a life insurance agent had approached him with a proposal for a twenty years' endowment policy for five thousand rupees, only to be rudely hounded out of the house. And just a month after that the gentleman died, leaving not a copper for his wife and child! He was repentant, on deathbed. but it was then too late.

The boy, Amlan Barori, was angry with the thoughtless husband and father, but he could partly forgive him for his repentance, though late. That insurance agent, however, he could not forgive for having given up the fight so easily. The fellow who could not convince a real prospect did not deserve to be in the line. He was inefficient; he stood too much on his own dignity, or rather *vanity*. Barori could not forgive the unsuccessful life insurance agent, for *his* cowardly retreat was responsible for the helplessness of the unfortunate widow and her fatherless daughter.

And then and there the boy Amlan Barori resolved that when he grew up to be a man he would become a life insurance agent; a doggedl tenacious one, not a selfish, cowardly, inefficier one like that worthless fellow. He would never giv up a prospect till he had his life insured. He woul coax and cajole, he would argue, he would plea he would do anything short of physical violenc Insults he would bear smiling even as Lord Jesu endured his crown of thorns, for all genuine ben factors of mankind must ever be prepared to receiv the worst possible treatment from those they a out to benefit.

Their fellow-journeying in the steamer wa short-lived, for the girl got down only a few st tions off with her mother. Young Amlan felt sudden shock, the like of which he had never fe before. He had felt deep sympathy for the gi and, unknown to himself, the sympathy ha deepened into something like love. It was only whe she had left the steamer and the steamer ha already started on its journey again, furrowin through the water of the broad and turbule river Padma, that Amlan remembered he had n even asked the girl's name. It was then that felt, though only hazily as a boy of eleven cou feel, that he had himself to blame for losing h for ever. Nor had Amlan's mother, as he lat came to understand, collected any information th might help in tracing them later.

* * * *

Time passed on. Days, weeks, months, yea Amlan Barori grew up to be a young man. Wh time came for choosing a career, he became a l insurance agent, taking his work more as mission than as a profession. He felt himself re ponsible for the future security of countless wou be widows and would-be orphans. He felt it holy duty to thrust life insurance policies on many husbands and fathers as possible. For th purpose he religiously studied the various arts persuasion. He had some knack for singing, a

he practised it so as to fascinate music-loving prospects through songs and make them sign on the dotted line. He studied horses and gave race tips to race-loving prospects. He regularly studied international politics through newspapers, not for any love for politics, but to enable himself to discuss politics with politically minded prospects. To make himself easily popular he even mastered some highly entertaining conjuring tricks. His tongue was fluent from his very childhood; he made it more fluent by habit, and made himself a mine of funny tales and anecdotes. In short, he learnt many things in order to popularise himself, for only popular agents, he felt, could popularise life insurance.

Amlan Barori went further. Before trying to sell life insurance to prospects he started to give them benefits in as many ways as he could. To give only one example, he moved heaven and hell to find a job for an unemployed graduate on the understanding that the said graduate would, on receipt of his first month's pay in the event of getting the job, get his life insured through Amlan Barori. When that particular graduate, however, got his first month's pay, he had his life insured all right, but not through Amlan Barori. That, however, is another story, and even that did not embitter Barori enough to make him give up his habit of obliging people by doing them as many good turns as he could, no matter whether he received any returns or not.

Incidentally, Amlan Barori's first case was Mr. Mahesh Mustafi, a small ledger clerk in a big bank. He was past forty and had just married for the second time after his first wife had died childless. Only a few days after his second marriage, a young clerk in the bank died. Young age could not prevent his death. This made Mr. Mustafi nervous, and conscience started tormenting him. He wondered whether he had done well by marrying second time so late in life. What would happen to his widow, and his yet unborn child, if he died all on a sudden? He maintained a ledger of other peoples' bank accounts, but himself had none.

Amlan Barori was a frequenter to that bank. He smelt Mustafi and found him an already converted prospect. Barori got Mustafi's life insured for five thousand rupees on a twenty years endowment scheme.

In the meantime, I have forgotten to say, Barori's mother had died, leaving Amlan a complete orphan. She had a desire in her heart to see the face of her daughter-in-law before she died; she died with unfulfilled desire, much to the sorrow of her son.

Amlan could not forget his sweetheart of the steamer. He could not remember her face even hazily. He did not know her name, for her mother had only called her "Khuku" (dear little girl), the common term of endearment, rather than a name, by which ninety per cent mothers of Bengal call their daughters some time or other. He did not know the name of the station at which she had got down from the steamer. There was no means of tracing her or knowing her whereabouts. It was also not possible for him to recognise her even if he ever chanced to meet her. He realised the utter stupidity of continuing to think of her, and the still greater stupidity of hoping against hope to find her out some day; but the head and the heart do not always walk on parallel lines, and he continued to think and hope.

Amlan's first case was a very lucky one, for case after case followed the first and went on fattening his commission account. He was single, and he was, as I have said at the outset, simple. He had no dependant. His wants were few, luxuries and addictions he had none. Earning much and spending but little, he went on fattening his bank account in the vague hope that some day it might be placed at the service of his long-lost but never-forgotten sweetheart whom he had met long ago for a short while in the steamer.

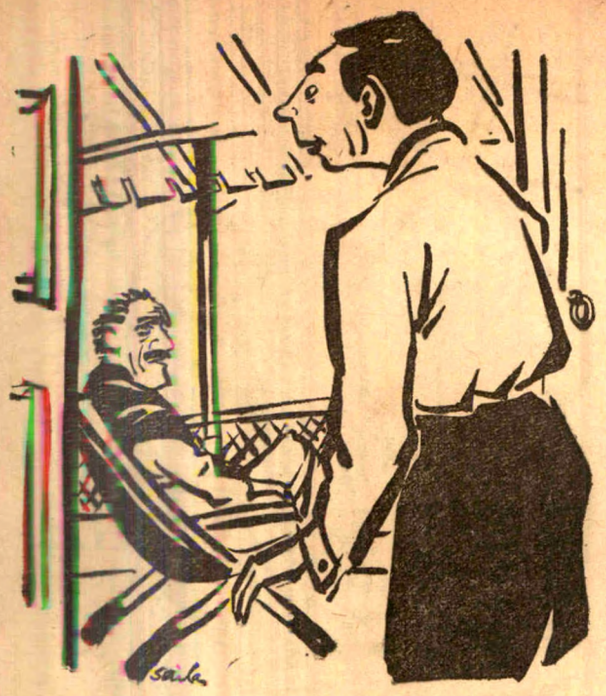
Mr. Mustafi, Amlan's first case, got transferred to another branch of the bank in another part of the city, and Amlan Barori lost touch with him. Mr. Mustafi, unable to afford a flat in the city where house-rent was exorbitant, lived a few railway stations away from the city, in Baruipur to be exact. Everyday he had to come to office partly by train from Baruipur station, and partly by bus or tram, and the journey to office and back took a very long time. And the journey was extremely strenuous too, the more so because of Mr. Mustafi's advanced age and weak constitution, not to mention the poor diet, better than which he could not afford.

* * * *

Ten years passed after the first case. In these ten years Barori satisfied his company beyond expectation and amassed a good sum of money in his bank. The dream of his sweetheart of the steamer-journey haunted him still. It was strange, even to himself, that such an unreasonable and impossible dream continued to haunt him. But it was true, it was strange but true. He was sad. But he was happy too with the tidy bank balance; it seemed as if he held it in sacred trust.

Then came a letter to him. It was addressed to the company, and the company had forwarded it to him for his attention and necessary action. It was a letter from Mr. Mahesh Mustafi, his first case. "I am at the farthest end of my resources now." Mr. Mustafi's letter said, in effect, "I cannot continue my policy. I am desperately in need of money. I want to surrender my policy to you, kind gentlemen. Give me ready cash immediately, whatever sum the surrender entitles me to. May God bless you, gentlemen."

It was an extra-urgent S.O.S. Amlan Barori had never heard a more desperate cry for help. And it had come from his own first case ! This Mr. Mustafi had, in a way, ushered him into this noble yet lucrative line! And all these years Barori had remained completely out of touch with this bene-



With some difficulty Barori recognised him as Mr. Mahesh Mustafi.

factor! Never cared to enquire about his welfare! Barori felt ashamed of his thoughtless ingratitude, and felt he must make amends.

The address was on the letter. To that address he hurried. Getting down at the Baruipur station Barori had not much difficulty in finding out Mr. Mustafi's house, which was a solitary one not far from the station. It was a small, very small tiled bungalow with a narrow verandah in front, facing west. Reclined on an armchair on the verandah was an emaciated gentleman looking almost vacantly at the sun setting down the horizon. With some difficulty, or perhaps without much difficulty, Barori recognised him as Mr. Mahesh Mustafi.

Even after the long gap of ten years, Mr. Mustafi at once recognised Barori. A faint smile of untold joy brightened up his disease-dull face. "Mr. Barori?" he said. There was no complaint, there was only joyous welcome in his voice, which put Barori at his ease.

"Yes, Mr. Mustafi," said Barori. "I come to see you. Sorry I couldn't keep touch with you all these days. I didn't know.....I mean I got your letter only yesterday, and....."

Trying to be easy, he became clumsy.

"My letter? Ah yes, my letter. To the company," mused Mr. Mustafi. "So kind of the company to have sent you, Mr. Barori. So kind, so kind." Mr. Mustafi seemed to feel overwhelmed by this much too unexpected kindness of the company.

"No, Mr. Mustafi. I mean, not *exactly*," said Barori. "I have come more on my own behalf than on the company's."

"God bless you, Mr. Barori," said Mr. Mustafi in a tone which left no doubt about his sincerity. "God bless you for coming. My near and dear ones, the few that I had, have all forsaken me. And I don't blame them. It is a dangerous, treacherous disease, you know. Not the galloping type to finish me off soon, but the creeping type which is finishing me by inches. Be seated, Mr. Barori, on that yonder stool. That's right. Don't come nearer. It is a dangerous disease, my friend."

Amlan Barori took his seat on the stool, wondering what to say next.

As if to give Barori a summing up of the situation, Mr. Mustafi said, "I have been a regular T.B. patient for over two years, Mr. Barori. Over two years without any income. Malati, my wife, noble, unfortunate paragon of a wife, earns a small amount by teaching, sewing and embroidery in a near-by girls' school. It will require her services no longer from next month. House rent is in arrear for the last six months, and the landlord has served notice. The grocers have stopped further supply, pending payment of arrears. Doctors have given me up as beyond their powers. The plains are not for me now, they say, and I must hasten to some hill station. A good idea, isn't it? But tell me, Mr. Barori, what amount can I have, and that *immediately, im-me-di-ate-ly,* if I surrender my policy to the company once for all? I have nearly paid three thousand in these ten years; can't I have a few hundred immediately? My wife, and my child will starve before my eyes if I can't, and we shall be in the streets, Mr. Barori. The very purpose of my insurance will be defeated if they starve to death."

"Please don't worry, Mr. Mustafi," said Barori. "I shall settle everything, now that I have come. You must not think of surrendering your policy; the policy *must* continue. Did you take up the policy only to give it up midway? That too would defeat the very purpose of your life insurance."

"Ah, Mr. Barori!" said Mr. Mustafi. "We are on the brink of a precipice, heading towards disaster. Down we go with a crash if we don't have some money immediately. I was thinking of committing suicide under a running train so that my wife and child could immediately benefit from my insurance money of five thousand rupees. But then I refrained, fearing that the insurance company might object to pay the money if they suspected suicide. Also, I shuddered to visualize how mad with sorrow Malati would be if I died that way. A true Indian wife, she holds her husband's life dearer than her own. She is a gem of a woman, Mr. Barori; and yet God has thought fit to pour such sufferings on her."

Mr. Mustafi paused for a while and then resumed, "I took this insurance policy for the future protection of my wife and children, even though my income was too low to make both ends meet. I had to cut out milk and fish from the diet, and had to live very close to starvation level, to save

enough surplus for the insurance premium. Add to that the heavy strain of the daily journeys to and from the bank, and my poor constitution. It all told severely on me, and you see the result. I might not have got this T.B., Mr. Barori, if I had not bound myself to this insurance."

This gave another shock to Barori. Was Mr. Mustafi hinting that *he*, as the insurance agent, was thus responsible for his T.B.? But no, there was absolutely no complaint in Mr. Mustafi's tone; he was certainly not thinking that way at all, but was just lamenting the circumstances in a somewhat impersonal manner. And yet, complaint or no complaint, Barori felt some responsibility in the matter, the more so because Mr. Mustafi was his very first case.

"I have three hundred rupees with me, Mr. Mustafi," said Barori. "I shall bring you more tomorrow. You can repay it later, and pay me only the 2 per cent bank interest. I could arrange a loan for you against your policy, from the company, but they would charge you 6 per cent interest. Why pay so much quite unnecessarily?"

"But.....but....." said Mr. Mustafi.

"There is no *but* in it," said Barori. "Besides, it is more to *my* interest that your policy continues as before, and I shall see that it does. I shall win a grand bonus, you see, if all policies booked through me run without a hitch for fifteen years, out of which I have already completed ten. Your discontinuing will spoil my record, and I simply can't afford it. In fact it will be more profitable for me to pay all your premiums henceforward, than to allow the policy to be surrendered or paid up."

This was of course bluff; but Barori *had* to bluff, for Mr. Mustafi, he felt, might refuse to accept charity or obligation. And Mr. Mustafi was the very first case in his career of life insurance.

Mr. Mustafi, he thought, would last at most for one year more, and it would be a blessing for him to leave his suffering body. It would be no good to lengthen his stay. Barori would pay the premiums till Mr. Mustafi's death so that his family might get the full benefit of the insurance. That, Barori felt, would satisfy his conscience and repay his indebtedness to Mr. Mustafi.

As he was thinking, a lady's voice startled Barori. "Will you have your meal now, dear? Cooking is finished," it said.

"What does the Panjika (almanac) say, Malati?" asked Mr. Mustafi. "I can eat any time up to...?"

"Six fiftyfive," said the lady from behind the window. "And it is about five thirty now."

Evidently Mr. Mustafi (or was it Mrs?), given up by doctors, had become superstitious enough to eat by the almanac, thought Barori.

"Plenty of time left," said Mr. Mustafi. "I shall eat later, Malati. Now come out here, and meet my very good friend, Mr. Amlan Barori."

Mrs. Mustafi came out in the verandah and smilingly greeted Amlan with joined palms. Amlan

"Pray be seated Mr. Barori" she said sweetly. "I am sitting here."

stood up from his seat in honour to her, and offered his counter-greeting.

"Pray be seated, Mr. Barori," said she sweetly. "I am sitting here." She sat down on the verandah, and Amlan took back his seat.

As Amlan looked at her face, he remembered that girl companion on the steamer, then about seven years old, twenty years ago. And this lady before him looked about twentyseven! Was it a mere co-incidence, or....? Amlan's pulse-beats became more rapid, and in a moment his decision was changed.

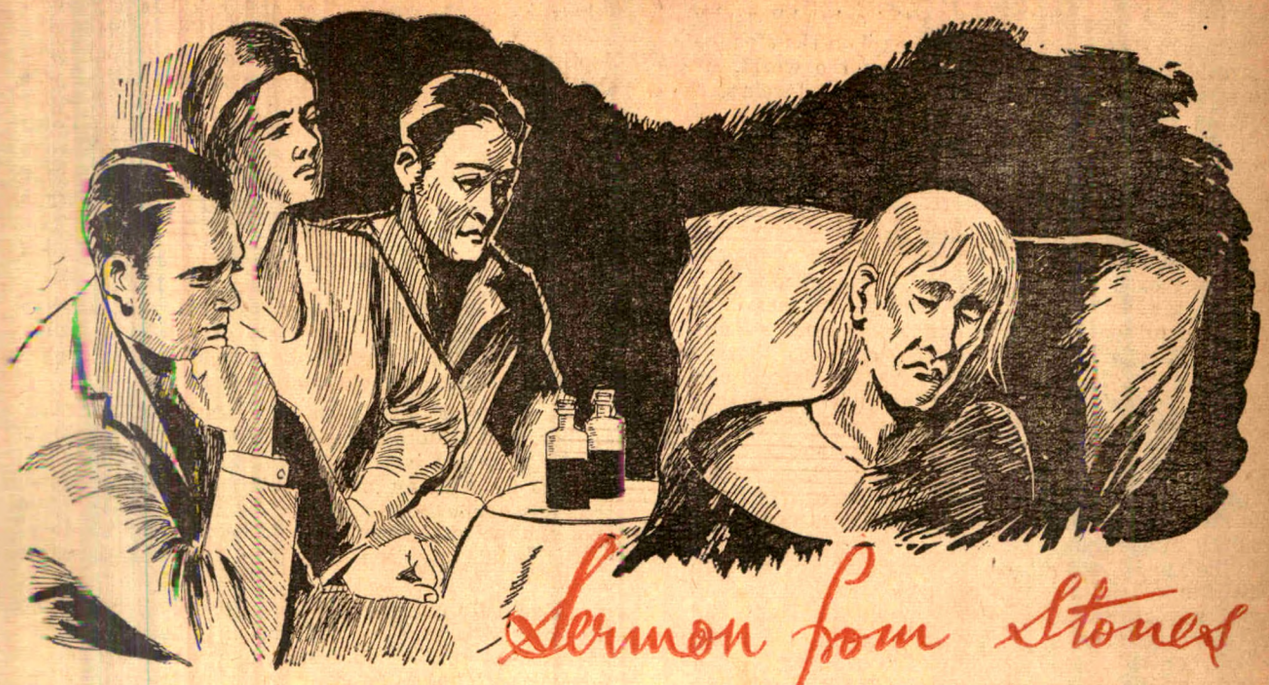
"My friend has a beautiful little house in a very healthy hill station, Mr. Mustafi," said Amlan, telling a downright lie in the tone of downright truth. "A very rich friend. I shall arrange so that you may stay there as long as you like, free of rent, for he never rents it out. And living is exceedingly cheap there too. Besides, there is the hermitage, close by, of a Swamiji whom I know. He and his disciples will always be helpful. There is, too, a first class sanatorium, near by, run by a Mission. I know the authorities of the sanatorium, and medical help will always be available to you; I shall arrange that."

It is perhaps a happy coincidence, too", continued Amlan, "that I am personally going there on leave for six months, which I may extend up to a year. I have worked for ten years incessantly, you know, and have well earned a long holiday. I have earned too much in these ten years to need any further earning for quite some years more. I shall stay in Swamiji's hermitage, close by you, and can always look after you. It will be splendid. It is settled that we all start in a few days."

"But....but...." Mrs. Mustafi hesitated.

"Of course we shall pay up all the dues here before we start. Leave that to me. I shall manage it from the loan, of course," said Barori, reassuring her. "There is a small school as well as kindergarten

(Continued on page 111)



Sermon from Stones

By MARGUERITS DARNTON

IN the silence of the room three people watched the dying woman with awe and wonderment. The air was not heavy with pathos and sorrow, for it was obvious to all that some wonderful thing was being experienced by the departing soul. No one could tell what this thing could be, but the dying face was radiant with some inner light, was happier than it had ever appeared in any earthly circumstance, and seemed to emanate that elusive particle of divinity which we believe to be part of every human soul.

These people watched the outward signs with wonder, but they would have been still more spell-bound if they could have seen inside that awakening mind, for she could see in that same room what their eyes, still veiled by healthy and vital humanity, were incapable of seeing. Only by those whose link with life is frail can things immortal be truly discerned and understood. Here indeed was unfolding the mystery of fifty long years of toil, disappointments, and searchings. All the tears, the questionings, were as the snowflakes in the first sweet breath of spring, melted into nothingness, no longer of any account now that life was once more surging through the veins of nature.

("Ah, yes," a small voice said, "even in the dullest days when chill winds almost froze your very soul, and all the world seemed like an enemy ready to break and destroy a struggling human being you felt that somewhere there must be Reason, that some day all the whys would have their answers. And that day has dawned. Behold it in its true glory, and rejoice." The voice ceased.)

Once again the eyes beheld a face so beloved for many years, lost for a-while among the turmoil of ordinary life, dead for some time now but always a treasure of memory whose worth was above all else. A face beloved! — so easy to say or write, and yet how few had ever touched such depths as she had known. At times when during his earthly life—shorter than hers—they had come close, they had been one mind, one spirit. How that love had dispelled the darkness when it had seemed unbearable!—how it had made even suffering worth while!

In life she had thought that no love could be as great as her love for him, but at that moment it arose and engulfed her, expanding from its former chrysalis and revealing greater beauty and infinite dimensions. She realised that their love was as everlasting as God Himself, and that her earthly life, so recently came to its close, was only one of many others in which they had struggled together towards the light of absolute perfection. She also knew that if her life had run as smoothly as she had desired then the greatest good and the greatest love could never have been appreciated in their fullest sense. In a room filled continuously with the warmth and light of the sun the wonderful cheer and warmth of the fire on the hearth are unnoticed, but in a bare and ill-lit room that same fire would give an immense measure of comfort and happiness. Life is like that: amidst trouble and sorrow and darkness love has much greater powers to shine and to lift the hearts of men.

"Dear God," she murmured softly within herself, "in this my utmost happiness and fulfilment, let me but look once more upon those days when everything seemed wrong and You sent him back to me, for as I can no longer feel pain and agony of soul I can read them as You meant them to be read."

Thus, as she prayed she watched, and saw what she had begged to see.

* * * *

Andrea sat alone, as she was accustomed to do these days. She was thirty years of age but very serious and grave for her years, for life had brought much suffering. It had held little pleasure — except perhaps an extraordinary love for the past in any form, which sometimes she thought must be a longing for something in another life which had been joyous and happy. On looking at a Saxon church or an ancient temple she was always filled with a love and reverence that were almost nostalgic. Even as a girl she had felt that reincarnation was indeed a fact, and now in maturer years and with a vast experience

behind her, it seemed that it was the only philosophy in the world that could adequately explain the strange vicissitudes, the seeming injustices of the world. It was strange too that she had always been fascinated by those religions which embraced reincarnation in their doctrines. For some reason unknown to her the East seemed to be a far away home from which she was for a while absent but would ultimately return.

Tonight, having settled her daughter Margaret in bed, and the day's tasks being finished, she pondered over such things. The day had been a wearying one, for she had just attended to the last legal matter connected with the death of her husband and all that that involved. She was now face to face with the task of creating a new life for herself and the child. Would it be better than those years that had been spent in a marriage that was just a mockery ? She felt guilty at her lack of sorrow for her dead husband, ashamed of the fact that it was actually a relief to have the chance of a new start. And yet new starts in life did not always have the expected results. They needed extraordinary wisdom.

She had thought that marriage to a man with identical interests to her own would be a wonderful adventure. How soon disillusionment had embittered her heart, and how quickly she had found herself in a morass of despair which drew her deeper and deeper into its vicious grip. For several long years she had been weak under tribulation, until she felt that she could no longer go on, and then quite suddenly there had grown a resolve within her mind that she must help herself, she must have faith in her philosophy that everything in life held a hidden purpose, that although the purpose may never be disclosed there must surely be greater strength after facing any trial with courage and the determination to overcome it. Above all she realised that to those who had sufficient faith not only in life but in themselves to reach out to God and ask His guidance, there was a way, as the poet said, "from the lowest depth to the loftiest height." From that moment she had always been aware of a strength that was not her own.

When at last, overcome by fatigue, she lay down thankfully in bed, she prayed sincerely, as she always did before giving herself over to sleep, for a deeper understanding of life and for strength and courage to face whatever may come.

The following morning she was very busy for Margaret was going to stay with a friend of Andrea's who loved the little girl and thought that Andrea herself should have some rest. When at last her friend had taken Margaret she was filled with a mixed emotion of loneliness and peacefulness.

A hot cup of coffee had a stimulating effect on her, and feeling refreshed she thought longingly of the little old book shop which for years she had to pass by with an ache in her heart and a regret that she could no longer buy any of its books. The best change in the world would be to enter its doors with the full intention of buying something however small.

Excitedly she put on her coat and slipped along the road with an almost forgotten eagerness. When at last she reached the shop she stood for a few seconds with bated breath, and then went in. The musty smell of ancient volumes assailed her like the fragrance of a rose garden, the rows of untidily arranged books were indeed a paradise to her vision. She took all in with the glance of a connoisseur, for she knew books well, and one look sent her over to a large heavy volume on a rather high shelf, dusty and neglected, undoubtedly very old, with beautiful gilt tooling from the hand of a craftsman.

In her excitement she was unusually clumsy, and besides, the shelf was high. Before she knew what

She looked up greatefully at her helper.

was happening the beautiful volume was on the floor. The fear of what may have happened to it left her feeling very shaken.

She tried to pull herself together, but someone else had picked up the book. He handed it to her with a gentle assurance that the book had suffered no damage. She looked up gratefully at her helper, but at the same moment as she looked into those friendly brown eyes she was startled as she had never been before. What in the name of heaven could it be that produced that thrill of recognition which pierced her whole being when she looked into the eyes of a stranger ? She knew him, but how, where, and when ? Many times she had read of such things but she had never expected to experience it herself.

However, the pause was only momentary, for soon the stranger, observing her discomfort, was talking about books to put her at ease again. He was not of her race, but from her beloved East — India, as he explained later on. But even the fact that he was an Indian and therefore held an especial interest for her could not explain the strange link between them that was there from the first moment. She could not concentrate on books or on anything else; her heart raced madly, all her senses were disturbed and agitated. Hardly knowing what she was doing, she purchased a small early volume of Shelley and prepared to leave the shop. Her new friend was also leaving, and they walked together down the road in the spring sunshine towards the park. Soon she learnt that he was lecturing at the university, a post which he had taken for five years, of which only one more year was left in England.

It was a strange friendship. No one could say that it had developed quickly, for it had not needed to develop — it seemed as old and natural as any friendship could be. It was as though she had met what an Easterner would call her soul-mate. No two people could be so completely at ease or could know so much of one another in one meeting unless they had met before, and she knew that it was not in this life.

Perhaps she had really come across a vivid piece of evidence for reincarnation !

* * * *

Time passed so quickly, and Andrea realised with dismay that daylight was fading and twilight creeping silently upon these two people to whom in the new but old companionship time meant nothing. She had found herself opening to her friend and unfolding all her inmost thoughts, her troubles, her hopes, despairs and aspirations. The comfort and the feeling of safety that she felt were quite unlike all other acquaintances, and when they parted, with the knowledge that they would meet again the following day, her heart sang with a joyous melody. Could it be that "He" had really come ? — The one companion whom ancient philosophies had taught her must be somewhere in the world ? — That was certainly the conviction that was growing in her soul.

In bed that night at first she did not sleep, but it was not the restless sleeplessness that besets an anxious mind, it was a new awareness of a miracle.

She loved this man, not with a reckless infatuation but with a deep wonderful love which could only be born of long association. She felt that somewhere in the lost passage of time she had loved him and that she had merely picked up the threads once more.

Finally she thanked God for this revelation, and then sank into the deep sweet sleep of a happy and contented mind. For the moment all troubles were forgotten and all anxieties smoothed away.

Each day they met, sometimes in the park, and often in her home. Andrea was so grateful to Joan her friend for these solitary weeks during which she could sort out her emotions and revel in her new happiness; and when Margaret returned it was to a mother renewed in mind and body. Margaret herself formed a very deep affection for her adopted uncle.

During the weeks that followed a new fear grew in Andrea's mind, a fear of how she would feel when he returned to his own country — a thing which was absolutely inevitable. During hours of great happiness she tended to forget it because it seemed impossible at such times that time should be so short, but often when she was alone it loomed up like a spectre.

In days when material questions were very depressing he was there with help and advice, and the tender solace with which these were given changed the whole face of life. Problems had to be faced and tackled but they were much lightened because of the sharing of them.

Spring had changed to summer, summer to autumn, and winter had spread its icy grip over the land, but even cold and desolate days were brightened by love, real deep indescribable love. When the new Spring arrived they both realised how the past year had gone on fleeting wings, drawing them ever nearer to the inevitable day of parting, and too soon arrangements had to be made for his journey home.

Always there was an obstinate feeling that surely there had been some mistake; that such companionship could not be broken up. However, with the rapid inevitability of such things, the day did come, and she tried so hard not to show how her heart was breaking. Of course he knew, but still she must appear braver than she felt. They had made plans to meet again if it should be at all

possible, but such plans, so intangible, were of little comfort in great distress.

He went. How long would it be before they met again ?

* * * *

One evening, Margaret, now a slim and lively schoolgirl, returned to find her mother quietly sitting at the open window staring at the distant hills, no near sound or sight impinging on her senses. At first the girl was startled and afraid; she called her mother, but there was no response, only a fixed stare and a look of utter weariness upon her face. Then Margaret noticed a paper, dropped unconsciously onto the floor. It looked like a cable, and in her terror she picked it up to see if it would give some clue to her mother's shocked appearance. Smoothing it out she read ——

"Nirmal died today. Taking urgently needed medical supplies through treacherous country to a village stricken with cholera."

Young as she was, Margaret understood why her mother was so troubled, and she knew also why she was staring at the hills. A few years ago, she remembered, often when she was safe in bed, a friend would come and sit by her while mother and uncle Nirmal went for a long walk into the wooded hills. She understood more than anyone could guess her mother's growing silence since uncle Nirmal left England.

Her own sorrow was great, for she too had loved uncle Nirmal, but she knew that no sorrow could equal her mother's. She crept quietly from the room, knowing that her mother would like to be alone.

Andrea, the dying woman, watched this last scene, and she smiled a wonderful smile as she felt in her hand a small leather notebook. Nirmal was very near to her now, holding out both hands, and he knew well the contents of that book, for she had brought it to him long ago. Since his death she had guarded it carefully.

It was as if their hands met, and he took her in his arms. She sighed a last earthly sigh, and went with him.

Margaret was first to see the book. She took it gently from the dead fingers, and tremblingly opened it. Every word was written by her mother's own hand. She started reading :

SERMON FROM STONES

In the beginning, when God became the father of His universe, He wished to purify the souls of His children, that they may finally reach perfection and blend again with His own spirit.

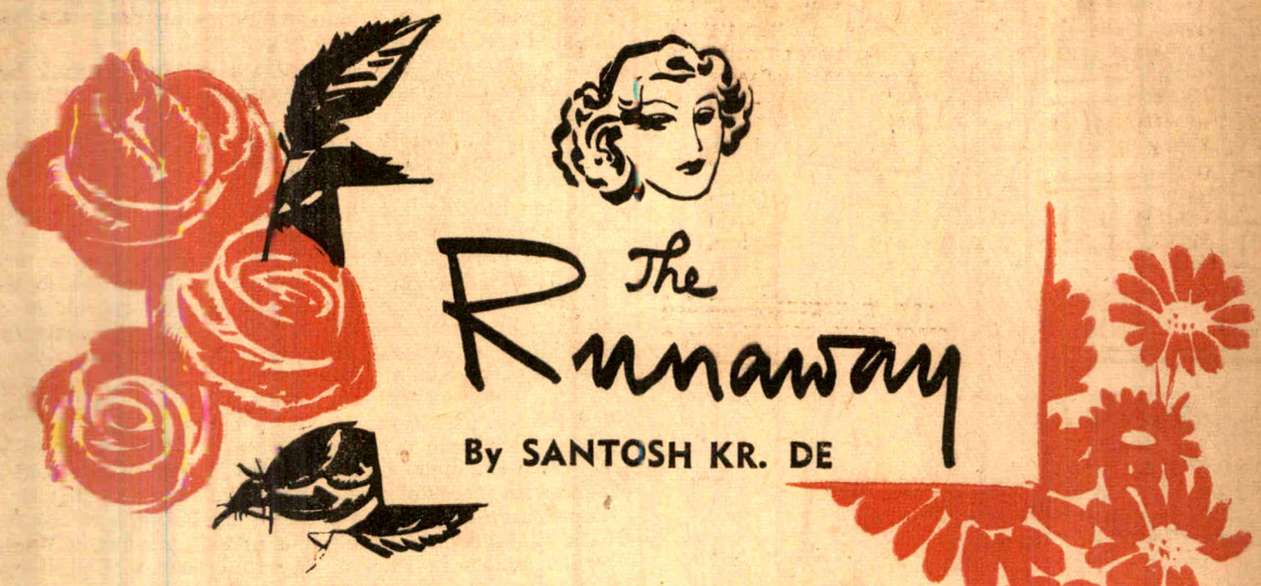
Three rules had they to learn before this perfection could be won, — justice, sacrifice, and love.

These souls, his children, were sent to the earth school as often as was necessary, to learn there each time a little more of these three rules.

In order that each soul may be tested to the full it was divided, and yet the two halves remained united by part of their Intuition. Each half possessed an equal share of justice, sacrifice, and love; but to each was added material of a grosser kind during its

(Continued on page 112)

Her mother quietly sitting at the open window staring at the distant hills.



The Runaway

By SANTOSH KR. DE

I CHANCED upon Swaminathan at the Great Eastern, and asked him about Sabita. Drink had already had its effect on him, and he said, "Ah, Sabita! Ask me no more about her. I know little about her except that she is in New York, may be."

So Sabita had not made a husband of Swaminathan? I felt surprised, and Swaminathan read it in my face.

"She is incapable of loving or yielding to love," said he in return to my jest. "She merely wanted to go to the States with me at my expense, and that she did. She reached the States and forsook me for a new friend."

"Ultra-modern," I said.

"Better call her an atomic girl," said Swaminathan. "Her highest ideal is drinking life to the dregs. She feels that the flame of life may go out any moment; any moment the whole body may vanish in smoke; and that in this atomic age love, constancy and chastity are hopelessly out-of-date."

Swaminathan said more about Sabita's life in the States, but I paid no heed. As I came out of the brightly illumined and merrily crowded bar of the Great Eastern, my mind went on humming "So Sabita has not come back! Sabita has stayed in New York!

** ** **

Sabita Rahaman. The beauty queen of the city. In health, in beauty, in education, in manners, in everything she was simply fascinating, and no man could escape her spell. I too could not. I pined in love for her, and, fool that I was, I tried to win her love. She easily ignored me altogether, and married my friend Abbas Rahaman, the famous artist, and the only child of a wealthy father. It was I who had introduced them. And not long after that they (perhaps I should rather say Sabita) invited me to their wedding.

For some years after that I did not see Sabita. In fact I studiously avoided all chances of meeting her. Then one night I chanced upon Sabita in the street, unexpectedly. I was returning from the Lakes rather late after my usual evening stroll. Sabita was unaccompanied, except by an animal she was leading by a chain. A dog, obviously, though I could not clearly see it in the semi-darkness. Sabita left me behind to a certain distance and then, as if on second thought, turned back. As we came face to face, we recognised each other unmistakably.

Probably she remembered the many evenings that we had walked round the Lakes together. "You are still fond of the Lakes, I see," she said, unhesitatingly.

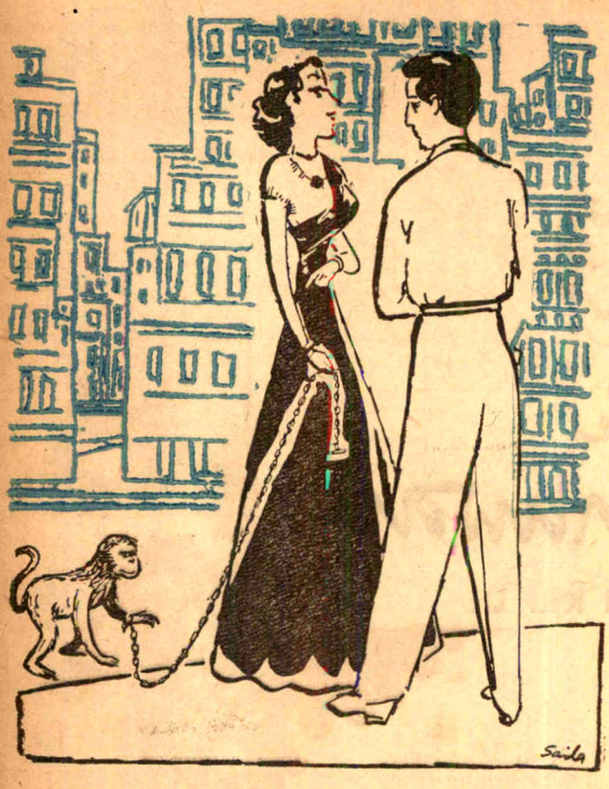
I felt a strange joy to think that Sabita had not forgotten me. But do people *really* forget, or merely pretend to forget?

We walked together and reached the well-lit highway. She was the same Sabita, I found, only a little more aggressively attractive. She was dressed in ultra-modern style as before; her magnificent coiffeur was garlanded with fragrant flowers, as before. The passers-by could not help looking at her as they passed.

"If you are not in a hurry," she said, with perfect ease, "would you mind walking a distance with me? I want to buy some flowers".

Together we went to a florist's, where Sabita was received with great respect. Sabita selected some flowers, including a bunch of lovely roses. As I was about to pay the florist, Sabita stopped me. "I don't have to pay cash here," she said. "The price will be debited to Rahaman's account".

It was a sudden rude shock to me. I suddenly realised that Sabita was the married wife of Rahaman. In the bright yet mellow light of the florescent lamp I looked at Sabita, and I looked at the animal she was leading by a chain. I noticed that the chain was golden and the animal was — a monkey! Not a dog, but a monkey. It was strange...



I noticed that the chain was golden and the animal was — a monkey!

surpassingly strange. I wondered why I had not noticed it before.

Sabita did not fail to notice the wonder in my eyes. "How do you like this simile, or symbolism, or whatever you may call it ?" she asked. "I mean the symbolism of this golden chain and the monkey. It is a symbol of your friend Rahaman. I care little for the animal, but I care for this golden chain. It is made of genuine gold, real gold, no doubt about it."

"What do you mean ?" I said. Rather, the words escaped through my lips.

"Your friend has run away from me." she said. "You don't know, it seems. How will you ? You never came my way since my marriage. Were you broken-hearted, or jealous, or what, I wonder ? I noticed how you studiously avoided the hotels, clubs, cafes and cabarets you knew I frequented. You loved me. Perhaps you haven't yet outgrown it. Perhaps that is why you still seek solace beside the Lakes. You loved me but couldn't marry me. Your friend merely married me, but couldn't love me. No, my friend, he didn't love me. And that is why he could so easily run away to England, where, I understand, his art has received good appreciation. Now we are legally separated, and he will stay on in England".

I felt astounded. Rahaman, I knew, had been head over heels in love with Sabita. Her unparalleled beauty had maddened him and conquered him, and he had completely succumbed to her. How could he make himself run away from so beautiful a wife ? How could he be so inhuman, so inconsiderate, so cowardly ? And he an artist of genius !

Sabita read my mind in a moment from my eyes, and smiled. "No," she said. "Your friend was not inconsiderate. He has left me his house, his car, his bank balance, in short all his movable and immovable property excepting his artistic requisites and his Secretary, Camelia. Rahaman has left me more than well provided for."

The mystery deepened. I too knew Camelia. She first came to Rahaman as a model and sat for several paintings. Then she became Rahaman's personal secretary too, and soon made herself nearly indispensable to Rahaman. She simply adored the artist in Rahaman. And when Rahaman married Sabita, Camelia gave her quite a costly present.

Those past days came flashing back on my mind. I had presented a collection of lovely conch shells to Rahaman, and Rahaman had displayed them on the fireplace in the drawing room. The shells reminded Rahaman of the sea they had come from, and he often became lost in contemplation of the beauty of sea-waves. One day I found the shells missing, and I enquired about them. "I removed them from there", said Sabita. "Don't they spoil the neatness of the room ? This is a drawing room, not an exhibition or a museum of curios. Your friend nearly flew into a rage for their removal; but I always like the drawing room to be very neat."

This caused some bitterness between Rahaman and Sabita. Matters came to a crisis about a small miniature statue of a nude woman. On the glass-top table Rahaman prepared small imitation hills and lakes with pieces of stone of various sizes and shapes, placed the statue against the stony background, and took photographs of the whole arrangement from different angles in such a way that they looked like genuine photographs of a completely nude girl standing on the hilly shore of a lake about to take the plunge or after her bath. Some of these photos won international prizes in photographic exhibitions.

"I became so angry," said Sabita, recollecting, "that I broke the statue to pieces. If you want to portray the feminine form divine, why not borrow from real life ? Why all this fraud of photographing dolls and false hills on your table top ?"

The contrast between the two women — Sabita and Camelia — became clearer in my mind's eye. One exquisitely beautiful, scorning the artist's worship of beauty. (Or was it, perhaps, jealousy ? Was Sabita jealous of the statue, the little lifeless doll that Rahaman brought into life in his wonderful photographs ?) The other woman in the studio, always serving the artist, silently but surely, keenly feeling in her heart of hearts the artist's aspirations and his intense joys and sorrows. The calm loveliness (I will not call it beauty in the same sense that Sabita was beautiful) of Camelia soothed me even in mere memory, wonderfully grand in its wondrous simplicity.

"Your friend was in reality an utter puritan," Sabita went on. "His ultra-modernity was a mere hoax, mere garb. An eye-filling streamlined house in South Calcutta, a giant luxury car, a stylish chauffeur, photographic studio in European quarters, no end of wealthy westernised customers. And that Camelia, or is it Magnolia ? I really cannot remember her ugly name. That awful girl as a bait for the westernised, sophisticated customers. All, all mere outward show. Hollow man, that's what I call him, for all his inside was hopelessly prudish, puritanic, centuries behind the times. He hated night clubs, hated mixed cocktail parties — and what fun in cocktail parties unless they are *mixed ?* — and he hated men dancing with women, or women with men ! Just think of it ! He ought then to have married a girl that could be kept locked up in a harem."

There was anger in her heart, it seemed, but more sorrow and disgust than anger. More words seemed to be steaming within her, and I waited in silence, showing my genuine eagerness to listen.

"I persuaded, nay, nearly forced him to sip a few pegs now and then", she continued, after re-

If you want to portray the feminine form divine, why not borrow from real life?

covering her breath. "But he soon gave up liquor entirely. He wouldn't hear of touching a peg. I couldn't keep him away from home after ten at night, and by eleven at night — which is practically evening-time for all fashionable people in a metropolis like this — Rahaman would be snoring. Disgusting. As if he was a petty officer worth six hundred a month! Or worse. It became impossible for me to move with him in *society*, till I had to move *alone*. Couldn't help. Why live in civilised society if you shun parties and clubs and all that like plague?"

Sabita's tragedy became plain to me now, clear as daylight. She was all for fun, luxury, admiration. She wanted to parade her glamorous beauty in "civilised" circles; to become the cynosure of countless admiring sophisticated eyes. She could not afford to fall asleep at home by eleven at night, when "civilised" life in swell clubs barely get started. In short, Sabita was all for sophisticated life, but sophistication was disgustingly foreign to Rahaman's nature. Rahaman was no mere professional photographer and painter. He was a *born* artist, artist to his finger tips, artist to the core of his heart, artist to the very bottom of his soul. No wonder he could not keep pace with his ultra-sophisticated wife. No wonder he *had to leave* her and run away, to save his artistic life.

As for Camelia, I think it was not Rahaman who took her away with him; it was Camelia who accompanied him, for did not she adore, even worship, the artist in Rahaman? And was not Camelia infinitely closer to Rahaman's soul than Sabita?

But what will Sabita do? The path she has chosen for herself is one for speeding and speeding along — in which there is no halt, no rest, no peace, no bliss of soul. She, alas, does not know whom she is laughing at scornfully by keeping the monkey golden-chained.

Swaminathan is my friend and fellow businessman. I do not know how he picked up acquaintance with Sabita, or Sabita with him. I am glad that I did not introduce them to each other. Swaminathan, a bachelor, is a frequenter of parties, clubs and all that. May be they met in a party, and became "friends". Swaminathan thought they were in love, and hoped Sabita would marry him.

Swaminathan had to visit the *States* (as the United States of America are called in high society) in connection with his business. Sabita did not miss this opportunity, and accompanied him. At *his* expense, of course, in more senses than one.

Swaminathan came back, but Sabita did not. She had even been dreaming of New York, the *Mecca* of high life, and now she *is* there in her dream city.

But will she find her salvation there? In running after the will o'the wisp is she not running away from light?

(*Translated from Bengali by Ajit Krishna Basu*)

Life Insurance Agent

(Continued from page 104)

there where you will find pleasure in working. The pay will be small, but enough for your expenses there. I know everybody who is anybody there, and I shall settle everything."

And he, past master of persuasion, persuaded them. He paid off the house-rent arrears, the grocers' bills, and all other dues; and fixed up everything by writing to a friend in Swamiji's hermitage. Then one day he started for the hill station with Mr. and Mrs. Mustafi and their daughter, aged seven. It would mean a good deal of expense every month for him; but what was all his money for?

* * * *

Barori wondered whether his long waiting had at last been crowned with success. Perhaps Malati Mustafi was *not* that same girl Barori had met in the steamer. But then, perhaps she *was*. It was the possibility of this second "Perhaps" that made Barori, the life insurance agent, give up his career and dedicate himself to the service of the death-marching husband of Malati.

Was Malati his steamer-companion of twenty years ago? Or was she not? Barori could try to verify it by asking her "Do you remember ever having travelled by a steamer from Naraingunj about twenty years ago?" But Amlan dared not. For, suppose she said "No"? It would be a shattering disappointment to Barori. And then, if she said "Yes", if Barori knew for certain that the girl he had met in the steamer long ago, and for whom he had been waiting so long, hoping against hope, was *this* unfortunate would-be widow of an advanced T.B. patient going to meet his doom, his shock would be no less shattering.

Better, therefore, he thought, to remain uncertain on the point; and he never asked her the question.

(*Abridged into English by the author himself from his original story in Bengali*).

SERMON FROM STONES

(Continued from page 108)

sojourn in the world. To one half was added manly strength and courage, but a physique more delicately balanced, and with the emotion of possession much stronger than the other half. This was MAN. The second half was not given great physical strength, but as compensation was given the power of creation and of mothering any living thing. This was WOMAN.

In both man and woman passion played a part, always testing, trying, tempting. It was the fire within the heart, ready to destroy, — or purge and purify. Always in each was Conscience trying to gain victory over worldly life, to teach the soul to forsake its grosser shell and to reach out to the Divine light of the Father.

These two halves were sent out into the world wherever the Father wished, with the truth of their being veiled for a while from their memory, to mix with other souls and struggle to work out their destiny. A will was given unto each that they may carve out a Karma for themselves.

One promise was made to the departing souls,— that the Father would watch over them and bring them together some time on the earth for as long or short a time as He deemed wise.

Thus it came about that the Father was surveying His universe, for He had a soul which was ready to take again an earthly life, one which was needing a finer test. And as He looked upon the earth He saw two peoples of a different kind, — the one poor and oppressed but with the greatest wealth in all the world of knowledge of His truth and love, the other great in discoveries of the earth and blinded by power and the desire to rule. "The greatest test of all," He said, "shall be for one soul to be divided among such peoples. Go, my children, to these places and see if you can be of use in solving the problems created there. Added to this will be the new difficulty when you are called together in these roles. But if you keep your eyes ever towards the light and your hearts ever open to spiritual truths, your minds closed to the temporal pleasures which are of no account but merely serve to take man's mind from God, then you shall be much nearer to the perfection required of you.

With these words He drew the veil of memory and set the divided soul upon its journey, at the same time plucking two pieces of rock, rugged and natural, from the highest mountain of the earth, and flung them far apart into the oceans there, saying "Just as these two pieces of rock shall be flung about and tormented in the savageries of the oceans, coming at last together upon the same shore, better and not the worse for their experience, so shall the two souls come through the storms of earthly life, unharmed, made better by their hardships, meeting together for a while that they may be strengthened and fortified, and find spiritual love in one another. Then they shall move on to greater work with greater strength.

"Sweet is the sunshine after rain,
And sweet the joy that follows pain."

It is strange that in a single moment of time a whole life can be illuminated and changed. I speak as she who was sent down to learn those lessons of justice, sacrifice, and love, among a race of people foreign to my soul, where the ruling power is of material possession and social status. What care they for the spirit ?—Naught !—It has become as a fairy tale, rather sweet but merely phantasy. The so-called real and tangible things of life are for the pleasures of man and man will excercise his right by grasping and plundering lest at death he should have missed something that his neighbour had. What does it matter that elsewhere in the world are people ground down by poverty and disease ? What the eye does not see the heart does not grieve. Thus here in a gross material world most people surround themselves with their precious possessions, dreading the time when they shall lose them. Even the gift of love, which the Father bestowed as an uplift of the soul, has been sullied, trampled upon, and made into a thing of shame and contempt. Love in this form has come between the Father and his children. Men of the west have become intoxicated with the idea that because they are outwardly more fair — a mere accident of climate — they are in all ways superior in the world. Their very fairness has blackened their souls.

It is thus I came to the world. I have been sickened by its materialism and its injustice, heartbroken by its terrors and desolations, shackled by my human limitations. At times it has seemed intolerable, at others a glimmer of light has broken through to show the promise of a nobler thing after the soul has emerged from the struggle just as a beautiful butterfly is the product of an ordinary caterpillar held in strict confine for a while to effect the change.

Sometimes the way has been easy; sometimes very hard; sometimes stumbling or falling by the way, at others led on by the guidance of God Himself.

But through all—both sorrow and joy—there has been a dreadful and desperate loneliness that no human being could dispel, and often have I cried, "Oh God, my Father, surely in this world somewhere is he who complements myself !—he whom I know exists, but only through the intuition of my heart. If it is Thy will may I find him." How strange this knowledge was, how so impossible and yet how certain.

The Father pitied the child. "I will lift up mine eyes unto the hills from whence cometh my help. My help cometh from the Lord which made heaven and earth. He will not suffer thy foot to be moved, He that keepeth thee will not slumber.

How often have I gone out to those beloved hills of God, carried away in dreams and taken there by music. There the soul is refreshed and bathed in the love of God, and there one can see the true nature of the earth.

And suddenly HE was there ! Yes, with certainty I knew it. Straight from the country of my hills. He stood there by my side and in one flash the truth was revealed. Oh strange perversity of life ! that he to whom my heart is joined, to whom I could give my very life, must prove to be my greatest test, my greatest love, my way to God. Not for us the pleasures of this earthly frame, but the experience of a purer love.

So it happened that while this tremendous revelation was new upon me, whilst I was forming my resolves, my steps led me to the quiet and peace of a little church. I knelt in prayer, alone with my Father, thanking Him that the world could no longer be a lonely place,—and happy, so happy !

From there I walked in peaceful solitude along the shore, and there upon the sand lay two small white stones flung apart into the oceans, one not from these native seas, perfect, their roughnesses all smoothed away not by gentle handling, but by the torment of the oceans.

You are Joking

REMAINS of THE ASHES

By PREMENDRA MITTER

HERE on the first floor the verandah is narrow. The staircase is broken at places. Still, before the evening sets in, the chair and the table are placed up here—because the distant hills and the river can be seen from this place.

The argument is rather weak. Definitely nobody looks at the hills and the river these days. Perhaps once that view had some significance, but now it has not. What had been a pleasure, has now turned to a senseless habit.

Perhaps many things of this household, something much deeper, can be traced from the simple placing of these chairs on the verandah. This story aims at that.

* * * *

Jagadish Babu is the first to come and sit. The low easy-chair is there only for him. His great luxury is reclining with closed eyes, with two fat hands on the two handles on either side and with his two legs placed on the stool in front. If he could, he would not ordinarily talk. Seen all of a sudden, he looks like having fallen asleep.

Surama follows a bit later. Carelessness lingers on her sari and toilette. Perhaps carelessness is there in her nature. And she asks as soon as she turns up. "Are you asleep so soon?"

Jagadish Babu moves just that little in his easy-chair to let her know he is not sleeping.

Of course, Surama is not eager to get the answer. She poses the question out of habit. Then, perhaps, she gets up on the point of sitting down on the wicker settee and says, "My goodness, I have forgotten to bring my *Dokta*-box."

Jagadish Babu mutters with closed eyes, "Why not call the servants?" Surama sits down again and says, "But I have sent him to the market. Well dear, why don't you go and get it for me?"

There are no signs of movement in that easy-chair to show that Jagadish Babu has heard anything; at least, he has no eagerness to get up.

But in reality, it turns out after some time that Jagadish Babu gets up from his easy-chair with great strain. Jagadish Babu may have some love for his own comforts and luxury, but the attention and care for the comforts of his wife are stronger than that.

But Jagadish Babu does not have to take the trouble of going. The doctor is seen on the steps.

Surama says, "Wait, you needn't go. Doctor, fetch my *Dokta*-box before you sit. I have left it probably on my bed. And I am afraid I did not put out the light of that room. Go and switch it off."

No orders these. Instead there is that sweetness of a request but even that sweetness is somewhat mechanical.

It is likely that there is a lot of sweetness in many things about Surama—her features, her voice and her manners. Those sharp lines of her body have quietened with time but even now they show traces through the dishevelled dress and toilette. Surama's beauty has not yet become a page out of history. History there has been of another aspect of her character, but that need not be related now.

The doctor puts out the light of the bed-room, fetches the *Dokta*-box and then sits down across the table, facing Surama, his back towards the hills and the river. He had never had the urge to look at the hills and the river. All along he had been taking his seat in this particular position.

Even in the gloom of the hazy dusk, the doctor looks somewhat shabby, not only in dress and looks, but even his mind seems to be indifferent about everything. It is a fact that the defects of his dress are the first to strike your eyes. A closed neck coat on baggy, faded trousers—the collar not buttoned simply because the button is missing. Probably all day long he visits his patients with this coat on. The pocket on one side is torn a little, perhaps, with the weight of the stethoscope. A few loose papers show themselves through that gap. Apparently there had been some very recent attempts at a hairdo, but that too with absolute negligence.

The weary lines of indifference on the doctor's face do not appear very prominent probably because

of the brightness of his eyes. The eyes are still awake in this lifeless, drowsy man. Who knows what treasure they have to guard?

Silence reigns for a while. Surama has her *pan* accessories with her as usual and she is busy preparing them with care. Jagadish Babu lies still in his easy-chair. The doctor after making a very minute examination of his nails, perhaps waits only for Surama to do away with her *pan* business.

Surama has finished preparing *pans*. She puts one in her mouth and still remains silent for some time, her looks fixed in front. Then suddenly she asks, "Have those flower-grafts of yours arrived as yet, Doctor?"

Jagadish Babu with closed eyes, says "Would they ever? You could have had the flowers of Paradise with greater ease."

Surama laughs out and says, "Why do you think that Doctor is so worthless? If he was not there, do you think our water-pump could have been set all right again?"

A sleepy voice comes out of the easy-chair, "No, I don't. If someone else had looked after that pump, real water would have come up."

The three of them laughed. This happens to be an old joke of this household.

Surama says, "Really I wonder how you go on with your practice. Do they take your medicines in good faith?"

"Why shouldn't they ? Once they take that, they hardly get a chance to accuse him."

Surama picks up a little lime out of the *pan*-box, puts it to the tip of her tongue and says laughing, "Dear, to tell you frankly, you have a grudge against Doctor. Do you see nothing good in him?"

"That is due to a defect in his eyes—so many other good things escape his eyes," Doctor speaks out at last.

Surama smiles and says, "That is true. How could he see if his eyes were always shut?"

"I don't keep them shut for nothing. There would have been a duel if I opened them ever so slightly."

The doctor's silence seems a little awkward beside the loud laughters of Surama and Jagadish Babu. Is there a shadow of pain in his eyes, as he looks at Surama's face?

Surama stops her laughter and says: "Well I had almost forgotten. But you will have to get up now, Doctor."

"Just now? Why?"

"No, it has to be just now. Brother has sent some parcels and they had been lying in the station since yesterday. He could not make time for once to-day. You must go and fetch them for me."

The Doctor hesitatingly says, "Would it matter if I went in the morning?"

"Would it ? Would it matter if you went after a month? Would it not be better if the things were lost for ever?" Surama's tone is now clearly more bitter than sweet.

"Would they get lost in one night?" The doctor tries to argue with a little humility in his voice.

Surama's reply comes louder, "I can't enter into [illegible] that you won't be able to go? It had been a mistake to have asked you."

The doctor is very much embarrassed and gets up, "Did I say I won't be going? I thought that a night will not matter."

"How do you gain by that night? You have nothing pressing in your hands. You would have been sitting idle otherwise."

That is not incorrect. The doctor comes here only to sit and idle, and he had been idling for many years now.

He picks up his hat and says, "Come along, Jagadish Babu, let's go. The car is there—we shall have a nice drive."

Surama objects even before Jagadish Babu, "Strange suggestion, I should say. Shall I be sitting here all alone?"

The doctor smilingly suggests — "Why ? Of course, you will be going with us."

"Won't it be better to bring up the whole household or better still the whole locality to fetch those parcels? Really, I don't know what you are becoming day by day."

The doctor turns about and descends down the stairs in silence.

"What you are becoming day by day!" Does the doctor think about this, as he drives down to the station in his car ? Perhaps not. The turbulent sea of worry and emotion has long become still and quiet. Perhaps those days never come back even in remembrance. Perhaps those old leaves of memory are buried deep somewhere, very deep. He is now completely fixed in a definite pattern of life. He himself could never know when the fire had gone out completely, leaving ashes behind, ashes.

Oh yes, the fire was ablaze once. But that is probably a story of some other person. He can recognise that Amaresh only from a distance and that, too, indistinctly. He has no ties with that person.

* * * *

There was a time when the boy had not hesitated to stand up against the whole world with supreme courage.

The girl had perhaps found a scope to ask him in a frightened voice, "you have come here, of all places?"

"I could have gone farther."

"But"——

"Do you worry about what they would think? But what you yourself think is of far greater importance to me."

"Well, I," the girl had hung her head down in silence.

Amaresh had fixed her with a piercing look and said, "You have not even the courage to think, Surama."

Surama had lifted her face and uttered in a low voice "No."

"I have come here only to infuse that courage Surama. I shall wait for that."

Surama had remained silent.

Amaresh said again, "Are you thinking how long we shall be able to wait thus? If necessary, till eternity, but I don't think that would be necessary."

It is likely that Jagadish Babu had entered the room at that moment. Perhaps he looked much the same as now.

A short, chubby gentleman—a quiet, harmless creature. That he has attained material success

through struggle from the lowest rung of life was not in the least betrayed by his features. From his looks, one would suppose that fate had so long been very favourable with him. This perhaps is true as far as Surama is concerned. He had said as he entered the room, "have you not yet changed your

Suddenly Amaresh grasped one of her hands and said, "Don't remain so quiet, Surama.....

travelling clothes? No, don't detain him now, Surama. He had a whole night of strain. Let him first have a nap after wash and meal."

Amaresh said laughing, "The blame of detention lies with me, not her."

Jagadish Babu had laughed aloud. Even Amaresh could not dream that. He could look so ugly when he laughed.

Amaresh had enjoyed with painful pleasure the look of that face, distorted with laughter, as he was standing behind Surama.

Then he got up and said, "All right, let us get up then."

Jagadish Babu, as he escorted him, had said, "You have chosen a very bad time, Amaresh Babu. You won't be able to see anything here in this tremendous heat. It is a bother to go out these days."

"That may not be a very bad piece of luck," he had answered to the astonished look of Jagadish Babu, "and then the summer must come to an end one day."

"But where shall I find you then," was there a tinge of suspicion in Jagadish Babu's voice ?

"Find me surely you would. I am afraid you would find me a bit too much."

Doctor Amaresh had not told a lie. Really a signboard of Dr. Amaresh was found to be hanging by the side of a street in this dirty, poor town, a few days later.

Jagadish Babu remarked "You won't get the returns of an English degree here, doctor. This woodland is all right for the wood-cutters but will it suit you ?"

Doctor Amaresh had laughed and said, "Is there nothing else to suit but timber business and medical practice ?"

And after that Doctor Amaresh was seen everyday on the narrow verandah of Jagadish Babu's house. It did not matter if he was not seen in the houses of his patients so much.

"Turn about your chair, Doctor," Jagadish Babu had said.

"Why, to see your hills and river ? Their value is all gone since your trade mark was branded on them".

"Doctor, with the dissection of dead bodies your heart too has dried out." And then Jagadish Babu had asked with astonishment, "Why are you getting up, Surama ?"

"Half a moment," Surama had gone in.

Doctor Amaresh with a strange smile had said "Girls cannot stand arguments. Isn't it, Jagadish Babu ?"

Jagadish Babu did not answer. It seemed as if he was thinking about something with a grave face.

Doctor Amaresh had again said, "That little thing is the pity."

Jagadish Babu had replied gravely, "And even that is not meant for all."

The coming and going of the Doctor in this house had perhaps

beginning but gradually it was tolerated—perhaps it had become easy even with Jagadish Babu.

"I shall have to stay a few days out in the woods, Doctor. One has to be on the spot during the counting. Do keep an eye on the household. Of course, you don't have to be asked about that."

The Doctor laughed and said, "No, you needn't, you may even ask me not to come and see the result."

Jagadish Babu had smiled.

Surama too had smiled and blushed. Perhaps she blushed because she had smiled. Perhaps there was no other reason for her to blush.

* * * *

Strangely it was Surama who had once spoken so sharply, "But I can't stand this life any longer."

"And I hope you shouldn't."

"No, you leave me. How do you gain by killing me and yourself like this?"

"There are still ways left to live."

"When that way was not chosen earlier—"

"I am not to be blamed for that, Surama. You didn't know your own mind. I didn't know the value of opportunity. But why should we accept the cruel pranks of fate?"

"You don't know what you are saying. That is not to be, that is not to be." Surama's voice grew pointed with emotion.

"Do you worry about it? Is there no such great thing for which the supreme price of committing a crime can be paid?"

"I can't follow your words, I am frightened."

"You shall be able to follow them. I wait for that day."

Did that waiting come to a success? That day they went to see the woods, taken in lease for timber business by Jagadish Babu. The whole day had been spent in the excitement of a grand picnic in the mysterious surroundings of the forest. Towards the evening all of them went out for a walk around.

In that pathless forest, Amaresh and Surama had, somehow, separated from the others. This separation was not perhaps completely accidental. Amaresh, too, perhaps had no hand in it.

Surama had said, "A few moments later one might lose his way in this forest."

"Ways might be lost even outside forests."

Surama replied a little impatiently, "I don't like this sort of talk from you always."

"You don't like it because you must be having a pain somewhere within you. These talks you can't tolerate because you don't want to know yourself."

Surama had gone a little in silence. The gait of her tall and graceful figure against the canvas of the forest had seemed to have been moulded with all the exquisitenness and sweetness of Nature herself.

Amaresh had, perhaps, halted in silence for a little while only to feast his eyes with that serene sight. Then he had said "Surama we too may find a way out of this wood instead of losing it."

Still Surama was speechless.

Suddenly Amaresh grasped one of her hands and said "Don't remain so quiet, Surama. Confess that you have no pride of tenacity, you possess only the shame for your weakness. One can't live for ever with the treasure of feeling and it's not fair to live like that, Surama."

Surama replied almost indistinctly, "Tell me what I can do."

Amaresh placed his right foot on the trunk of the tree and said "Do you see this felled tree? It had fetched a value to the timber business. But it had a far greater, far more real value of its own than that. You too are not the timber for the trade, you belong to the woods."

As Surama did not utter a word, Amaresh added, "Excuse me if I cannot speak it out to-day at ease. Everything is so mixed up in my mind."

Surama had come still closer to Amaresh, and resting her hand on his chest had said slowly in a choked voice "You give me courage, you."

* * * *

But they could not go away at that moment. The obstacle rose from an unexpected angle. Jagadish Babu suddenly got ill—seriously ill. Surama and Amaresh had spent the whole night and the day without the wink of a sleep by the bedside and silently waited for that hour of liberation. Perhaps they would not have to wait much longer. This happpened to be their final test, the fundamental price for the new life to come.

Jagadish Babu recovered from his illness but they had to wait for a few more days, a few more. Surama's little weakness lay in removing those little hindrances, preparations for the last take off. She might be allowed a little time just to give her a chance to get back courage from within. Amaresh does not want to apply the slightest of force, let every root disentangle itself by its own will, let every bound be broken. His patience is mountainous.

Doctor Amaresh had waited—for a few days, for many days, for far too many days.

By and by the fire had died away, it is not known when. It is not known when the fire had become pale and colourless like last year's petals, they had all become colourless. Colourless and cheap and commonplace. They have been fixed in the framework of habit, they have all become torn and pale in the dirt of this earth.

The doctor is perhaps the most lifeless of all, lifeless and weary. Because the fire was in him—because it had burnt him through and through.

The doctor still comes and sits in his earmarked chair everyday, with his back to the hills and the river. But that is out of sheer habit.

The doctor runs to the station to take delivery of these parcels but that is only obedience.

(Translated by Prashanta Chakravarty)

FOSSIL

By SUBODH GHOSE

ANJANGARH was a native state exactly eight-and-a-half square miles in extent. A tiger cub, though small, is still a tiger. It was a kingdom. There was a Maharaja. There was an army, a police force, a Keeper of Records, a Nazir and so forth. The Maharaja had more than twenty titles. He was Lord of the Three Worlds, Shepherd of Men, Defender of the Faith and the Subduer of Enemies. Criminals had been impaled on stakes in accordance with the hallowed injunctions of religion not more than two generations ago. Now that was no longer possible. Offenders were stripped naked instead and bees set upon them.

Although the ancient fortress had long lost its splendour the stone masonry was still intact. Two rusty cannons, like the weathered skeletons of a pair of wild elephants, stood beside the great gate. Pigeons had built their nests in the cannon mouths and laid their eggs there in complete security. Tired dogs rested in their shade. Turbans and swords decorated the halls of the castle and brass and iron shields clung to its walls like cakes of dung.

A minister and eight chieftains, the Prefect of Police, the Amin or Surveyor, the magistrate and the Keeper of Records formed the administration. The Maharaja looked after the welfare of his subjects with the help of the combined wisdom of his Kshatriya and Moghul officers. The unprecedented oddness of this Government made life so uncomfortable for the people that half of them had fled. They were working as coolies on the sugar plantations of distant Mauritius.

The eight-and-a-half square miles of Anjangarh consisted of barren hills, rough rocky uplands and stretches of cactus and wild neem. Kurmis ar Bhils brought water in buffalo hides from the hidde springs in the hills four miles away, watered the fields and grew maize, barley and jonar.

Every year there was a dispute between th Kurmis and Bhils and the state revenue departmer The peasants were unwilling to surrender their cro to the royal treasury. The State took half. T Maharaja maintained an excellent polo team. T royal stables echoed with the neighing of more tha a hundred of the best polo ponies. The Mahara cherished these divine creatures from Sydney te derly. They could not be fed on oil cake and bra Maize, jonar and barley had to be provided.

The revenue officer was forced to call in the polic In the clubbing and spearing of the Rajput poli heroes Kshatriya heroism sparked and flamed. an hour all protest was silenced. The rebellion w subdued.

Even the wild endurance of the defeated Bh gave way. They left the kingdom in droves, signir up in the camps of the recruiters of labour. Son went to Delhi with their wives and children, son to Calcutta, others to Shillong. They did not mal the mistake of returning.

Only the Kurmis were unwilling to go awa They had lived in this part of the country for seve generations. Their mud huts, large and small, we cool in the shade of the wild neem. Their ear had the sweet smell of mustard. Every throb their blood bound them to it. They tilled the fields without grudging their labour, rebelled at th harvest and were put down as regularly as th

seasons came and went, involving in their course all their days and nights. No alternative seemed possible.

But mercy and piety were not entirely absent from Anjangarh. Every Sunday destitutes numbering a thousand or more gathered in the spacious ground in front of the fortress. Flattened rice and molasses were distributed from the royal storehouses. On the last day of the month the Maharaja himself appeared in all his magnificence, riding an elephant auspiciously painted with sacred signs. He blessed his subjects. And on his birthday the Ramlila was sung in the castle courtyard. His subjects were invited. But as is usual wherever power is displayed to excess, the lathi was present everywhere. In every crowd and with every shout of triumph some unfortunate heads were broken. The flattened rice, the royal blessings and the Ramlila songs were all distributed to the accompaniment of blows. The subjects had grown accustomed to receiving them in that way.

Although the state was administered and revenue collected by big stick methods it was becoming more and more difficult to maintain the dignity of the crown. There were the expenses of the chamber of princes and the maintenance of the polo team. Little by little hands were laid on the royal safes containing ancestral gold and silver.

At this critical juncture a legal adviser who had studied English law was brought into the court. His name was Mukherji. Mukherji had broad, strong shoulders. He quickly became a great source of strength to the ruler both in polo and in the affairs of the state. By degrees he became the de facto minister and the minister himself was reduced to signing documents.

Mukherji was an idealist. Still interlaced with his thinking was the dream of American democracy about which he had read in his history books as a child. And although he was young he was extremely cool-headed. He believed that the truly courageous are never defeated and that one who works for good never comes to grief.

Mukherji spent every ounce of his ability in forwarding the best interests of the state. Young and old, in fact everyone who lived in Anjangarh, came to know their Agent Saheb. He was as sympathetic as he was strict. The subjects both loved and feared him. It was at Mukherji's suggestion that the lathis were withdrawn. He caused a furore in the office by auditing the accounts with hair-splitting precision. The boundaries of the state were delimited all over again and a census of the population taken. Even the pair of cannons lost their rust and began to shine with polish.

It was Mukherji the law agent who discovered the hidden subtefranean wealth of Anjangarh. Anjangarh held treasure in the bowels of her earth. Layers of mica and asbestos lay in the folds of her granite ribs. He showed them to businessmen in Calcutta. The rocky uplands were leased for lacs and lacs of rupees. Anjangarh recovered her vanished glory.

A vast palace in the Gwalior style was built beside the fort and decorated with a marvellous mixture of marble, mosaic, concrete, and Venetian blinds. Expensive limousines, tourers and sedans of German manufacture stood in the royal garages. In the royal stables newly imported Irish ponies kicked and frisked. A power house proclaimed the new life and prosperity of Anjangarh with its day and night drumming.

A fresh tide of life had really come to Anjangarh. The businessmen formed a Mining Syndicate. Gravel roads were built in the mining area. Coolie lines, tube wells, a club bungalow, a garden with flowers and a gymkhana appeared one by one. The Kurmis crowded into the coolie lines. Their wages were paid to them in cash. They made offerings of pigs to their gods, drank rice wine and pounded their drums in the evening, raising a tumult in the colony.

The Maharaja was contemplating the construction of two new polo grounds. And the palace garden was to be enlarged by the addition of eleven more cottahs of land. He also thought it would be nice to have an Italian band master on a salary.

Mukherji spread the map of Anjangarh on a table and lost himself in plans for his irrigation scheme. Ten canals were to run parallel across the state, from north to south. Here and there he placed large dams with strongly-built sluices. All the water of the Baroka rains was to be caught and cleverly made to flow over Anjangarh's stony bosom, like blood through arteries. Every Kurmi tenant was to have three cottahs of land of his own. There would be winter and summer crops of rice and an extra rabi crop as well. There must be three crops a year. The land on the north was to be turned into a nursery for potatoes and tobacco. On the southern plot he would grow sugar cane, barley and wheat. Then.....

Then there would be, gradually, a bank. A tannery. A paper mill. The royal treasury was no longer negligible. This was the auspicious hour. Mukherji would change the face of Anjangarh with each new estimate as though with the strokes of an artist's brush. He would prove that the ruling of a state is not an affair of the big stick: it is an art.

A school. To this the Maharaja gave a plain answer. No. Mukherji stood up. He would see whether the Maharaja could be made to change his mind or not.

The Maharaja tugged fiercely at his beard and pushed a couple of papers over to Mukherji. "Take a look at these". he said.

The first paper read :

All-powerful Court and Lord of the Court, Maharaja !

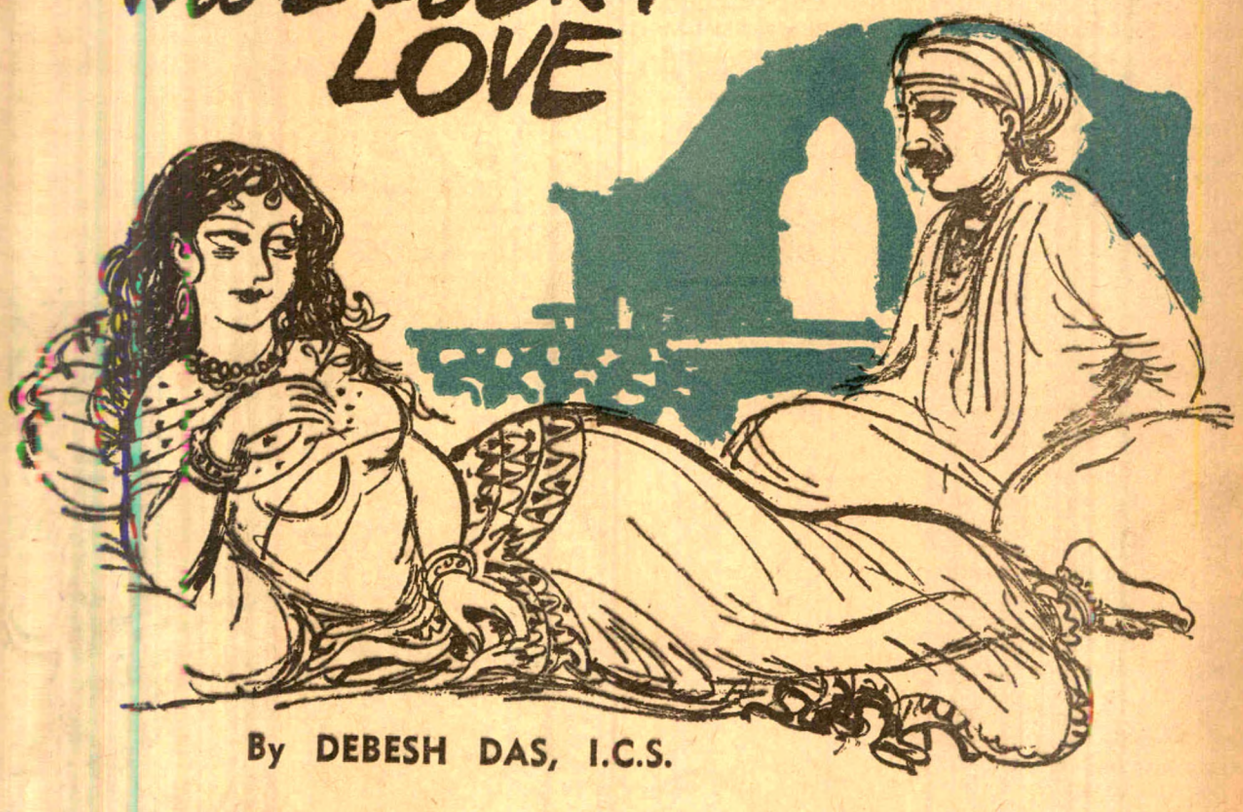
You are the father of your subjects. We eat because you grant us food. Therefore, let the Court not touch this year's crop of maize, barley and jonar. We shall give the Court as much as is its legal due and take a receipt.

Your obedient servant,
Dulal Mahato
(Baklam Khas on behalf of Kurmi community)

The second paper read : "The Maharaja's men have entered one of our mines and taken away four Kurmi workers after beating up their wives. We

(Continued On Page 125)

The DESERT LOVE



By DEBESH DAS, I.C.S.

In RAJOARA, the celebrated book of belles lettres on Rajasthan, the author has dealt with Rajput glory, ancient and new, pulsating with the quivering intensity of our new born freedom. In this story the writer reveals the innermost heart ache of another type of Rajasthani whom we do not associate with the glorious tales of Rajput chivalry.

NEITHER love nor sweetheart engaged thought at that time.

Rather I was feeling a little inclined towards communism. I am just a work-a-day man, hard put to make two ends meet. I did not go to the Ballard Pier of Bombay for fun or for dramatising the departure of some friend for Europe. All that I wanted to see was the seascape at the time when an ocean going ship sails away. I noticed many eyes filled with tears and many more rubbed with the handkerchief even though dry. I heard the steward shouting on the deck "Friends ashore, friends ashore" and was surprised to find that many eyes became dry rather quickly as the friends came ashore They threw long chains of confetti on the deck and their friends held on to them till they snapped as the ship drew away. I resented this national wastage. What useless luxury, what a waste of money over coloured strips of paper. No doubt foreign education and outlandish customs have made these rich people heartless. They should have distributed the money spent on confetti to the porters. It is because of such things that leftist labourers are waging their war of the hammer and the sickle all over the world.

Mine, of course, is a non-violent war. All my energy is spent up in the battle for the bread. I have no part to take in the struggle between the rich and the poor.

I was noting the fading picture of the ship far away when I noticed a Marwari gentleman. His eyes glistened with tears more shiny than the diamond of his ring. These were not the miserly drops of tears brought out by the rub of a silk handkerchief.

Realising that I have noticed his tear he felt embarrassed. He tried to smile away but could not wipe them off. I was considerate and looked another way.

Poor fellow! Perhaps he is unable to bear the separation. On the top of that he has been found in tears.

Still I could not check the temptation of having another good look at him. I sent a stolen look towards him. All things stolen are nice. Indeed, like stolen love. This time, however, I was caught. Apparently he himself was waiting to be looked at. I was a little non-plussed when he himself came to my rescue and asked, "What are you thinking, Sir? Is it some friend of yours?"

Just some friend? Of course, judging from the more or less blank look on my face he could not

have thought of anybody else. I merely said, "No Sethji, nobody."

"No? Then was it a friend of some friend of yours?

"No. I just came to see how farewells take place."

"You're lucky Babu Sahib. Ram Ram."

I was going away as after this there was nothing more to talk about.

Suddenly I stopped. Eureka. Here I was standing right in front of a living drama. Why else would this gentleman, apparently a businessman as hard boiled as an egg, as hard a nut as the ripe coconut should consider me lucky that I did not have to bid farewell to anybody?

"Ram Ram, Sethji. I don't understand why you consider me lucky.

He tried to explain this away. He did not mean anything in particular.

"No Sethji, you are not a man to pass any remark unnecessarily. It must have had some significance. Probably you are unhappy that somebody has sailed away just now. That is why you are considering me lucky".

During the war the ocean experienced countless depth charges by the combatants. But I am sure that no depth charge has ever brought out such an attractive prize.

I went with this businessman to his room in a luxury hotel. He responded to by sympathetic approach. I felt that he was finding himself unable to bear the burden of his memories alone in the room.

After some brief preliminaries, little spells of hesitation and more silence, Manohar Babu started to reminisce. A youth from the deserts of Rajasthan, he came to Bengal in search of fortune. Quite early in the day his business in scrap iron was in clover. His profits went sky high and so did his desires.

This is not an unusual thing for a cut and dried businessman, starved of love, of the softer influences of life. We, the educated middle classes, discuss such affairs with just a disapproving smile.

"Have you heard of the name of Shirin Begum?"

No, I have not. He explained that she was neither a film actress nor an ordinary street woman. Names like hers could only be heard in the private conversation of the gay rich. At this stage probably I betrayed a sneering smile.

Manohar interrupted my thoughts, "No, no. What you are thinking of is not correct."

I smiled again, "But how can you say so without knowing what I have been thinking of."

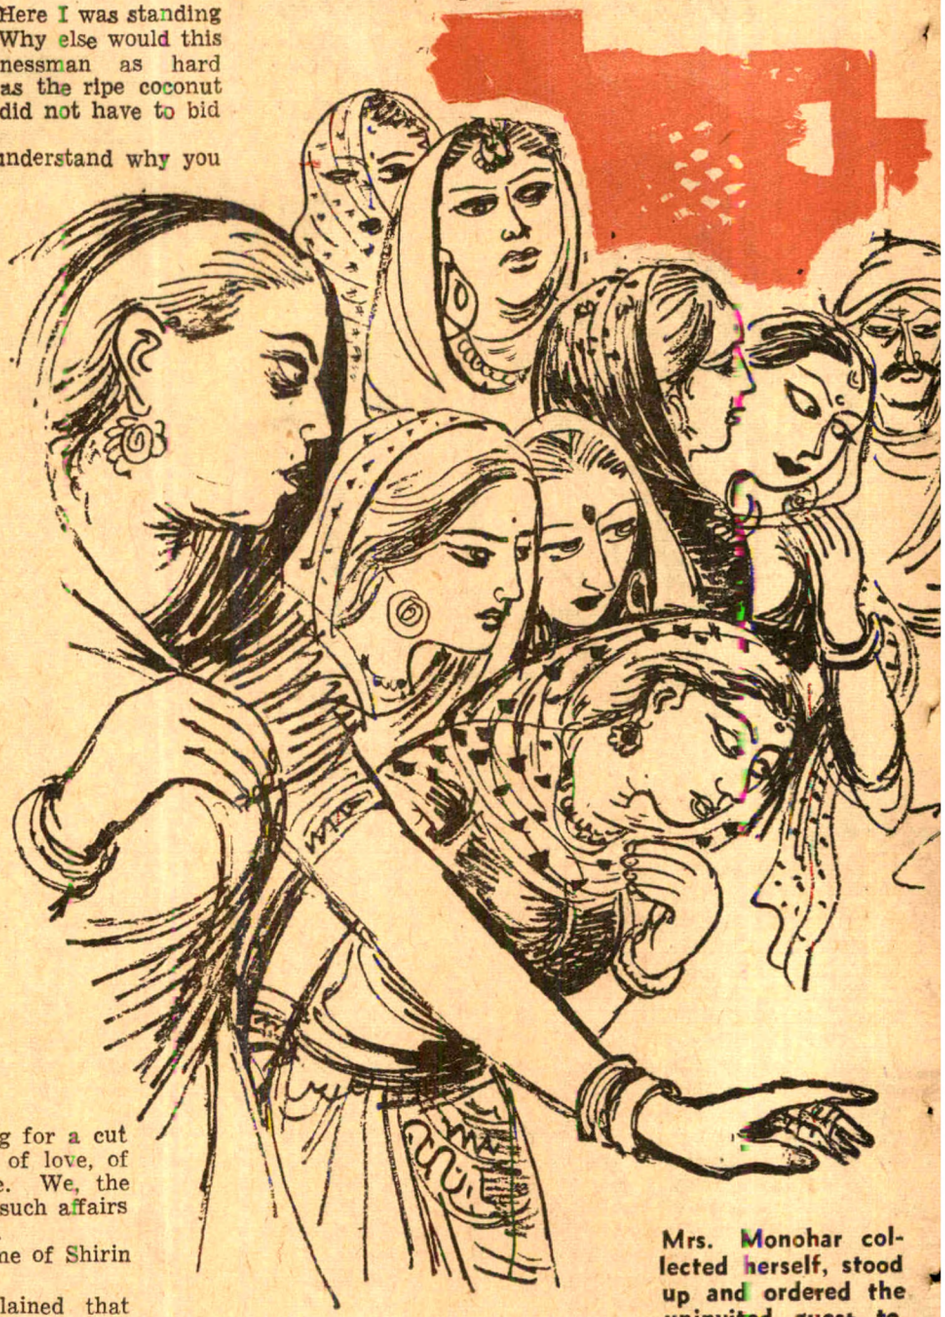
"Probably you don't like my story."

"No, no, Sethji. I like your story all right. I have a perfectly open mind about it and I am very curious."

"Yes, you would be curious. I myself am inclined to be curious about it."

"What's the matter, Sethji?"—I sounded very soft and sympathetic.

"You have probably had University education. You will understand. You may not make light of my affair. I came in for speculation in brass. But my luck struck a gold mine."



Mrs. Monohar collected herself, stood up and ordered the uninvited guest to clear out.

II

This was not unusual in ancient India, the golden period of Indian History as they say. Love out of the wedlock was sometimes the love preferred and the girl beyond one's reach was the girl of destiny.

Indeed those expansive days of India before she came under foreign domination had also a code of morality and an outlook befitting the liberty of the people. You were not bound to be in love with only the woman you have married. It was admitted that

love was as free to blossom outside the wedlock as in the progressive countries of the West these days. The laws of the Medes and the Persians were not offended, nor any code of ethics shocked if love and marriage did not find fulfilment in the same person. The throat of ancient India was not parched dry in the desert of love.

"Why should it be," asked Manohar Babu. After all, it is love outside wedlock which inspired many great men in the past. Love unapproved by society is no more than the unexplained patches on the face of the moon making it all the more interesting. Where would have been the victor of Trafalgar without the inspiration of Lady Hamilton? asked Manohar Babu.

I was surprised. A millionaire in scrap irons was not supposed to know all this philosophy. Where did he learn all these things? What does it matter to an uneducated businessman whether he deals in the brass of wedded life or the gold of inspiring love?

The struggle between the brass and the gold, however, came to a head. Manohar Babu had his family, wife, children and relations. He gave his full attention to both his family and the business. But he gave his heart to a girl versed in the enchanting ways of a cultured nautch girl. Indeed he admitted that it was the inspiration of Shirin Begum that brought him success in business. Also that the profits he derived were much more than what he gave back to his mistress.

Somewhere in the mind of the half-starved middle class lurks an eternal critic. He raised his head and reminded me, "If you want to live, try to

live like this. Life needs inspiration. Look how this businessman has put to use even the love he has bought from the market."

But Manohar had enough troubles. At first his wife did not mind so much his husband visiting professional women. Of course she was grieved and ever shocked at such developments, but she had to put up with them somehow. The situation however became desperate when she found him attached firmly to a particular girl. It does not matter if the bee flies from flower to flower. But it must not get entangled in a particular blossom. But Manohar refused to give up Shirin. Why should he do so? Has he neglected his wife or his business on her account? The devoted wife could have said a lot in reply, but she was an orthodox woman brought up behind the purdah. She did not have much to say. But she tried to strike on a tender point. She asked, "Is there no other dancing girl in Calcutta except Shirin? Why don't you visit other women also? Or is it that no other woman allows you to enter her parlour?"

The husband was, however, not to be beaten in arguments. He smiled, "Nobody's gate is closed to money. I can go wherever I want to. But you ought to be pleased that I do not visit any girl except one. That's the surest proof of my basic goodness."

The wife became all the more enraged, "If you are a good man, why do you keep a mistress?"

The word Shirin means sweet and Manohar had indeed acquired a lot of sweetness from her. He smiled sweetly and said, "Why don't you understand that nobody could blame me in the society if I had two wives."

A dancing girl must remain a dancing girl. She must not be allowed the honour and stability of an approved society. Her exploitation from outside cannot cause much harm.

That is why the wife was angry. She cursed him, "You have gone to the dogs. You are worse than the fashionable young men who have had English education.

III

The trouble did not stop here. The wife was unhappy and the children kept aloof. Relations started a whispering campaign. But nothing daunted Manohar. He drew closer to Shirin.

Shirin had naturally got much experience in this line — an experience derived from the book of life itself. She understood very well that she must now give him more sympathy and make him forget the family unhappiness. No girl companion of even the Red Lamp districts of Paris could have tackled the situation with greater tenderness. But I was surprised to hear that Shirin was a University Graduate. My surprise was all the greater because the only connection Manohar had with the University was to drive past it at break-neck speed toward the share market.

The matter, however, came to a head on the occasion of Manohar's daughter's marriage. The young bridegroom came

to the bride's house on horse back according to the custom. There was an English band party to provide music and plenty of illuminations. Mrs. Manohar came out of purdah to receive the bridegroom in person and was waving before him the traditional lamp burning camphor when a much brighter light flashed before all eyes. Mrs. Manohar looked helpless and pathetic as she looked at the fair stranger. In a Marwari marriage women of the bridegroom's party do not come to the bride's house to witness the marriage. So who could this lady be? Gradually Mrs. Manohar collected herself, stood up and ordered the uninvited guest to clear out. Here at this auspicious moment there was no place for a mere nautch girl.

The girl beat a hasty retreat to her car but the bride's father himself ran after her calling piteously 'Shirin, Shirin.' He caught hold of her hand as she got into her car and asked "Why did you come here?"

She felt a little embarrassed and said, "You cannot invite me here. I know that, still I had to come. How could I keep away from your daughter's marriage ? I wanted to have a look at her at least from a distance".

"Then do come in for a minute. Do grace my house with your presence for a while".

"No, no. That's impossible. Your home is just a dream to me. A dream which will never come true. You belong to me, but I am not your wife. I shall never have any right over you".

"Still do come in once."

"No, no. You are forgetting your society. But please do not behave like this. Hurry back to the marriage."

But the society did not hurry to forget Manohar's misadventure. Leaders of the society started shouting at and abusing him. They made it clear that they could never allow him to be regularly in love with a Muslim nautch girl. Another elder went still further in his condemnation, while the guardian of the bridegroom shouted to the latter to come away from the marriage altar.

The ceremony was about to be broken up. There was much anger and criticism and the society elders tried their best to assert their moralistic outlook on life. But the younger group came to rescue and even pointed to the past life of those elders. They also broadly hinted that those activities did not bring them any blame, but Manohar's present attachment has been brought up for censure only because of his daughter's marriage. The elders immediately protested that whatever they might have done they never tried to bring bad name to their caste and society. They never mixed up youthful indiscretions with stable family life. Manohar must give up all connections with Shirin

Heredity, family and honour belong to all times. They are worth preserving throughout whole life. It is for their sake that man works hard and goes home at the end of the day. But do they necessarily give him rest, contentment and inspiration ? His days may be filled up with work and success, but nights with darkness, stark and empty.

But Manohar did not have to announce any choice on the spot. His wife declared that she guaranteed the departure for good of the dancing girl from her husband's life. Her daughter's marriage must be concluded.

IV

That day there was not a drop of tear in Shirin's beautiful eyes but they were full of words.

But even words were lost when a few days later she went privately to the office of an attorney, a common friend of herself and Manohar. After a great deal of hesitation and silence she surprised him by saying that she wanted to give away her two houses to Manohar by a deed of gift.

The solicitor was surprised. Was it that Manohar was wanting to make a gift of two houses to her ? No. It was the lady who was making a gift to the rich businessman. The attorney was surprised and ultimately said that probably she had not given the matter careful consideration. After all why should she give away her property to one who is a friend for the time being only ? In any case the property was not earned from Manohar alone. Shirin admitted all that and pleaded that the solicitor need not go into the problem of understanding the motive of her action.

While conceding all that he insisted on acquainting Manohar with this proposal as both of them were his clients and friends as well.

Shirin implored him not to tell Manohar anything at least for the few days she was still in the country. She also said she had prepared for a new spell of life abroad after parting with all that she had as her property in the country.

The solicitor sent a message to Manohar who came to the office immediately and caught hold of her hand shaking with emotion. The solicitor discreetly coughed a little and left the room as it was inconvenient to light his cigarette under the fan.

Manohar would not even hear of the transfer of property. He asked her straight, "To which country would you go ? Where ? Why ? Why didn't you even tell me ?" Shirin replied, "For long I had thought of going to England and take some degree there and start some independent profession".

"But this profession also is quite independent."

"Yes, independent indeed. All our independence is sacrificed in the effort to please the visitor. Have we got anything called our own ? Even our own will ?"

"Goodness Heavens, Shirin ! Which will of yours has not been done ? Have I ever gone against your wishes ?"

"That is, of course, true. But still it is impossible to forget that I have got no separate existence of my own. My profession consumes my whole life. The whole of it is one big shop window. I have to arrange it and fashion it according to the sweet will of the customer".

"But the customer has begged you to wind up the shop. I did not want you to continue this life any more".

"That is what I most object to. Who are you to me that I shall wind up my profession only to depend on you for the rest of my life and according

to your wishes ? On the other hand, who are you not to me that I shall still continue a profession that brings bad name to you ?"

"Then ?"

"Then the only way is to leave this country".

"Then you will be leaving me also".

"No I am going away from you because I do not want to leave you. At the same time if I do not leave you I cannot get you either".

"I don't understand Shirin, I don't understand at all".

"Do I also understand anything ? But it's certain that I will leave you for your own sake".

"You are talking in the language of fiction, Shirin. I don't understand anything. Please do talk in plain language".

"Listen. The plain fact is that you will have to leave either me or your society. I too shall have to leave either you or the country in which you are. Our profession does not understand this type of giving up. It is quite usual to give up a patron to pick up another. But I am closing my counter for good. Nobody would see Shirin Begum in the world of dancing any more. Please bid good-bye to me and lighten my burden by taking my two houses".

Her beautiful eyes became sad and tender while those of Manohar sparkled in a determined way. He replied, "That's exactly what I have not achieved as yet. I have made money in various ways, have cheated many rivals in business. The only thing that was left for me was to become rich by getting hold of your property. My society has given me up and I too shall bid good-bye to it. But that's because I want to have you with me and not on account of your property".

"Why ? Does my property also smell of the dancing girl ? Or, my money has the stamp of my profession ?"

"No, no. Not for that. Everybody will say that I have misappropriated a woman's money and you have gone away because I have given you up. Never mind all that. But how can I face the whisper that I have cheated you of your property ?"

"But————"

"But it is not the question of money. I can't part with you. You are mine and mine you shall remain.

Shirin was firm in her reply. "I am neither your property nor your married wife. I feel like giving up this line and going abroad. What right have you got to stand in my way ?"

Manohar had no words for sometime. Then he said "No question of right, of course. Can money ever beget any right ? But certainly my heart has some right over you. You are wanting to go away

"Why? Does my property also smell of the dancing girl ?"

only because my mind casts some influence over yours. Otherwise you would not have wanted to go".

Books give you knowledge but brains intelligence. Defeated in argument, the learned girl took a different line.

"Whatever that may be," she said, "I won't allow you to leave your society. I am just a dancing girl. I can't let you forget your home or society, or your world for my sake."

Manohar had his answer ready. He replied, "If you were just a dancing girl so far as I am concerned, I would have taken to many others in course of time. The society would not have blamed me for that, nor even my wife. But you are just you and this is where the difficulty arises."

But Shirin had offered him a ready solution. Unfortunately Manohar would not accept it. On the other hand, he asserted that she was much more to him than his own wife, that she gave him such happiness as a wife could never give him.

Shirin was shocked and protested "For Heaven's sake, don't say so. Even uttering such things is a sin. It is a sin to belittle the small oil lamp lit up in the evening in your home because the neon lights of the Red Lamp districts of Paris are more fascinating. The lamp I could not light up in your home will shine in my mind for ever. Please do pray for that much happiness for me."

Manohar shook his head stubbornly and said, "No, no, I am a practical businessman. Such nice sentiments cannot befool me. I shall set up a new

home with you in another country. I shall open a new career in Singapore. Please do come along with me."

But Shirin was not to be persuaded and said, "Wherever you go, your home and family and society remain for you. I can't allow you to go away and leave them in the lurch. If you still want to go, you should go alone. I shall not be with you."

Manohar said, "No, no, you must come along with me. I want to go because of you."

Shirin parried, "No, you will stay on for my sake and I shall go away so that you can stay back."

Manohar implored, "But how can I stay on? I repeat that you are much more my own than my wife. I have had more happiness from you."

This time Shirin was not angry. She was sympathetic and tender. While passing her fingers delicately through his shaggy hair, she consoled him, "Please don't say such things. What I offer is only rose-coloured syrup, but your wife gives you water for quenching your thirst. You will not understand it now, but only when she will not be with you. That you get more cheer from me is because I have learnt it as an art. Making customers cheerful is my profession."

Manohar protested, "Don't harp on your profession, Shirin. I am a professional man myself and realise very well what you do as profession and what as your heart's desire."

Shirin's voice was cold but hands were warm as she held them out to clasp his right hand and said, "Still I tell you, please forget me. Don't stand in my way. Let me go. Let go."

After this there were no more words. Where argument lost persuasion won.

V

Suddenly I heard Manohar shaking me by the hand and saying, "Babu Sahib, probably you are thinking that this is a got up story."

I protested, "No, no, why should I think so? If it were not true, why should you tell this to a stranger?"

"Then why are you looking away through the window? Probably, you don't like it."

I felt a little embarrassed. Not that I was sceptical or unwilling to listen to his story. Actually thoughts of a different nature were continuously assailing me. I was thinking about those poems and dramas of the expansive days of independent India in which professional women used to cheer up the life of their aristocrat customers. Did those girls ever find themselves in such a situation? Could they lay aside their acting in the back stage and make a new home, blow the conch shell and light the evening lamp while praying for the welfare of the husband? Was the door of normal society open to them? Could they put on their forehead the deep red vermilion of the chaste house-wife?

I smiled a little awkwardly and said, "Sethji, I have liked your story very much but not its conclusion. You must be feeling very unhappy."

"No, no, Babu Sahib, don't talk of my unhappiness. But just think how much my Shirin will feel miserable. She has gone abroad alone and for my sake. That indeed is a great joy in the midst of my sorrow."

May be this is a sure evidence that love has after all blossomed in the desert.

But I replied, "Sethji, that is a big thing in life. If you can get joy in the midst of sorrow, that is the biggest thing one could achieve in one's life."

"But I did not get this even a little while back," murmured Manohar.

I tried to console him, "I am sure that joy had taken shape much earlier. Otherwise you would not have called in a stranger to share the joy with you."

"But what about my wife?" he went on looking at me with eyes full of question.

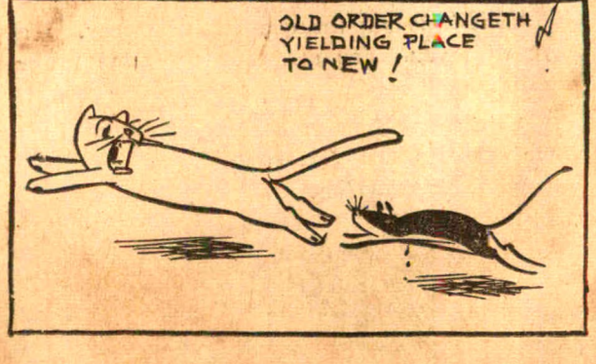
I tried to pacify him, "Now that you are happy, you will certainly be able to tolerate her."

The hard boiled businessman, the man without any education in psychology interrupted me to say, "You are right. You are right. I am sure my wife will no longer be meaningless to me. Otherwise, Shirin's voluntary exile will go in vain. Now I shall try to make my wife happy. I am sure I shall be able to do so. I have neglected her for long."

Manohar became absent-minded.

With all my pride of university education and reading of novels full of complicated psychology, I kept quiet with my head down. I could feel in my heart the paddle of the steamer bellowing its way through the blue ocean, blue with the pangs of separation. A clear picture took shape before my eyes in a quiet cabin—Shirin looking at the evening star alone. All alone.

Is that star—the evening lamp which she could not light under the sacred Tulsi plant in Manohar's home? Is it that lamp that mirrors itself in the star far away in the sky? Light, more light, give me more light from the lamp of life.



FOSSIL

(Continued From Page 118)

consider this a violation of our rights and claim immediate compensation from the Maharaja." It was signed, "Yours faithfully, Gibson, President, Mining Syndicate".

"Just see, Mukherji," commented the Maharaja, "how insolent they are !"

"I see," answered Mukherji.

The Subduer of Enemies struck the table and cried in a dreadful voice, "Heads !" He was on the point of bursting, "Cut off their heads and bring them to me ! I'll sit here and feast my eyes on them ! I'll look at them for two days and two nights !"

Mukherji reassured him. "Do not worry, Your Royal Highness", he said soothingly, "I shall find out what it is all about."

Old Dulal Mahato had returned to Anjangarh after many years in Mauritius. He had brought with him seven rupees in cash and asthma to comfort his old age. And with his return a change had come into the lives of the Kurmis. A restlessness developed and became noticeable.

The Kurmis learnt from Dulal what cash payment means. You put luggage belonging to a gentleman into a compartment of the train at Faijabad station and receive an anna coin right into the palm of your hand !

"Brothers", said Dulal, pointing to himself, "this old man has been cheated once for every white hair on his head. He doesn't trust anybody any more. Cash down. Everything. Pick up your money with one hand before you salaam with the other."

He was on the point of bursting, "Cut off their heads and bring them to me !"

Dulal spoke with the Syndicate foreigners as with equals. He discussed the wage rates of the coolies, their weekly payments, days off, allowances, medical and other arrangements on behalf of the Kurmis and obtained definite concessions. The Syndicate took pains to humour Dulal. "Come on, Mahato," they said, "We'll build twenty dozen coolie lines for your workers. We'll employ them all."

Dulal agreed. The foreigners kept their promises to him.

All the Kurmis in the state gathered in the wild neem jungle at the invitation of Mahato. He removed the turban from his white head and stood up. "Today we have met to found our association, our mandal," he said, "Now consider what ought to be done. Learn to know your enemies and your friends. We must not be afraid any longer. We shall never forgive anyone who tries to put a knife into our bellies or into our honour."

Dulal's thick throat shook like a broken conch with the intensity of his emotion. He spoke, "Brothers all, from today Mahato's life belongs to the Mandal and the life of the Mandal....."

"To Mahato," the crowd of Kurmis raised their thousands of lathis and shouted their answer in unison.

They beat their drums and even ran a flag up a pole. Then they went home.

Nothing escaped Mukherji, no matter how secret. He came to know of the event. He understood only that here was a cloud which harboured lightning. Something had to be done immediately while there was yet time. But the Maharaja must not know anything at all about it. A ruler so blinded by feudal arrogance and riddled with so many complexes about prestige would be difficult to manage. Blood might even be spilt, quite uselessly. It was better for him to give fight himself in a gentlemanly way.

Peons informed the Maharaja that the Kurmis had not come to work on his polo field and in his garden, work they were accustomed to do *begar*, without pay. The Kurmis now declared it was a sin to work without pay. To do so would bring misfortune to the state.

Mukherji was sent for. Dulal Mahato was summoned. Mahato bowed to the ground before the Maharaja and stood with his hands respectfully folded together. He seemed as timid as a lamb and to be, actually, trembling in every limb.

"It is you who are at the root of this devilry !" the Maharaja hurled the accusation at him.

"I am the dust of your slippers," answered Mahato.

"Shut up !"

"Yes, Your Highness !"

"Shut up !" the Maharaja thundered. Mahato stood without moving, like a wooden doll.

"Break off all connection with the foreigners instantly ! No Kurmi can work in the mines without my permission !"

"I shall communicate your desire to my people, Your Highness".

"Go !"

Dulal bowed and left. Mukherji was then commanded to serve a notice on the Syndicate. They were not to engage any Kurmi to work for them without the permission of the Maharaja.

The replies came in due course. A signed letter from Mahato stated that, as the Kurmis went without food unless they received wages for their labour,

and the Syndicate paid them cash they were unable to discontinue their work in the mines. They hoped that the Court would not place obstacles in their way. They, the Kurmis, intended to open a temple of their own in the following month. Would the Maharaja be pleased to grant a thousand rupees from the royal treasury towards expenses ? They also requested the Maharaja to permit them to gather wood and burn brush in the jungle without a licence during the coming winter.

The Syndicate, in response to the notice, informed the Maharaja that they were prepared to enter into a new agreement with His Highness's government but it was not possible at the moment. They would, however, be glad to consider it on the expiry of the existing agreement, i.e., after nine hundred and ninety-nine years.

"What do you think of it, Mukherji ? It seems to me I shall have to call in the police. I ask you, will you stop dreaming about your canals for once and turn your attention to the maintenance of my prestige ?"

The Maharaja spoke slowly but from the expression of his face and eyes it was plain that the wrath hissing in his thoughts was a hundred-hooded.

Mukherji addressed him with deference, "Do not worry about it, Your Highness. Give me time. I shall bring it under control."

Mukherji surmised that it was the Syndicate which was instigating Dulal's rashness. It was perniciously encouraging the agitation among the Kurmis. Until the link between them was broken there would be no peace in the kingdom. Nothing but misfortune could come of it. What was to be done ?

Mukherji went to Dulal Mahato. He stood outside his hut and called him. Mahato hurried out and invited Mukherji to seat himself upon a wooden stool. He took his turban off and, placing it at Mukherji's feet, took his own seat on the ground at a respectful distance. Mukherji explained the situation to him carefully and at the end of his speech broke down emotionally, exclaiming, "What are you doing, Mahato ? You are the children of your king ! Sometimes children commit offences, sometimes parents ! But no one calls in outsiders to desecrate the home ! The Syndicate is feeding you well today but they won't look at you once their purpose is accomplished. Then it will be the court that will keep you alive with flattened rice."

Dulal put out his hand and rested it on Mukherji's feet. "I give you my word, Honourable Agent, I shall do as you say. The Maharaja is like a father to us. We are prepared to die for him. May he grant our petition without delay."

Mukherji left without waiting for a second question or a second answer. No ! The symptoms of delirium were appearing, aggravating the symptoms of disease !

Mukherji had to forego his bath, his change of clothes and his meal that day. He drove straight to the office of the Syndicate.

"See here, Mr. Gibson, please keep your hands off the relationship between the Maharaja and his subjects. The Maharaja has guaranteed you all facilities for your business."

"Mr. Mukherji," Gibson answered, "We are not money-makers only. We have a mission as well. We have always fought for wronged humanity. If necessary we shall fight again."

"You have turned the Kurmis into coolies by appealing to their greed ! How can agriculture thrive in the state ? Tell me !"

In his agitation Mukherji disclosed the real reason for his perturbation.

"Whether agriculture survives or not, money will. Can you deny that ?"

"Stop arguing and think of co-operation, Mr. Gibson. All you have to do is to obtain the sanction of the Maharaja when you engage coolies. The Maharaja will be pleased and that will certainly be of advantage to you in other ways.'

"Sorry, Mr. Mukherji," with a twisted smile Gibson lit a cigar.

Mukherji reddened to his ear tips. He rose, pushed the chair noisily aside and left the office.

McKennon came in and asked, "What's the matter, Gibson ?"

"Mukherji, that monkey of an administrator ! I told him a few things to his face. I refused to accept any terms."

"Good. There's this irrigation scheme of his. Be careful. Fight it at any cost. Otherwise there will be a disastrous shortage of labour. The business is expanding now".

"Don't worry. We have tamed Mahato. I'll use him to spoil all the plans of the state."

They exchanged laughter. "Let me see," McKennon said, "Mahato is waiting outside, I think."

Gibson took Mahato aside. In a secluded room of the office he said to him, "The petition is ready. Sign it. All the points have been touched. I'll send it to Delhi by today's mail."

McKennon slapped Mahato on the back as he left, "Don't be afraid, Mahato, we are with you.

He spoke, 'Brothers all, from today Mahato's life belongs to the Mandal and the life.....

If your lands and houses are expropriated our lines are always open to you. Don't be afraid."

* * * *

Mukherji sat in his office deep in thought. He did not feel like touching his pen. He had nothing more that was encouraging to say to the Maharaja. Perhaps it was no longer possible for him to pilot his affairs. It was time to hand over the reins. Surely the brains of these people had withered in their skulls ! Each, in his separate stupidity, was engaged in a game that leads to suicide. But perhaps it was he himself who had made the mistake !

The Maharaja sent for him. He was received in the ruler's private apartments. The minister and the police chief were present. The faces of both looked shrunken. The Maharaja was pacing impatiently around and around the couch. He began to blaze as soon as he saw Mukherji.

"Take it ! Take it ! Take the throne and rule this state ! I spit on it ! I'm leaving !"

Mukherji, speechless, looked at the minister. The minister handed him a letter. It was a note from the Political Agent. Many complaints had been received about the internal administration of the state. More and graver complaints were coming in daily. He hoped the ruler would be able to remedy them without delay, before interference was necessary.

The police chief frowned. "Your policy of conciliation is responsible for this, Agent Saheb", he said.

Taking his cue from the police chief the Maharaja cried, "Certainly. It is true. I know all about it Mukherji. I am not blind."

"Know all ? What are you saying, Your Highness ?"

"Stop ! I know everything ! How could the traders who live by selling the dirt of my kingdom dare do this otherwise ? Who gives them secret encouragement ?"

The Maharaja seemed unable to breathe. He sank down upon the couch. A peon fussed about him in an attempt to restore him. The minister, the police chief and Mukherji turned away and gazed silently in different directions.

The Maharaja cleared his throat and resumed the subject. "My chief of police," he cried, "it is you who must save my honour !"

"So be it !" said the minister, "You punish the Kurmis with your police and I shall involve the Syndicate in a civil law suit. Disputable phrases can be found in the contract without much difficulty"

The Maharaja stole a glance at Mukherji and quickly withdrew his eyes. But Mukherji had seen. The ruler's eyes were wet.

Tears in a lion's eyes ! Mukherji divined how much pain there was behind them even though he himself was, by nature, as timid as a rabbit. So ? He had not looked at the matter from that point of view. He had been wrong. He went up to the Maharaja and announced quietly, "I have been mistaken, Your Highness. Kindly grant me leave and permit me to depart. I shall return if you ever send for me."

The Maharaja softened instantly. "No, no Mukherji, what things you say ! Where will you go ? Of course people are talking but let them ! I do not believe what they say ! The policy must be changed. It is necessary to be more firm. I cannot put up with the buffets of these toads any longer, Mukherji."

A weariness like a chill winter cloud, a sense of emptiness and exhaustion, came over Mukherji slackening his muscles, making his joints weak. He gave up going to office. In the afternoon he dressed in breeches, threw a dozen mallets over the shoulder of a boy and appeared on the polo ground. Throughout the game he kept his pony at full gallop, riding like a storm. He struck right and left, hitting under the pony's neck, taking daredevil chances. Now and then a mallet would split and the splinters fly in all directions. The flannel on the legs of his black waler and the martingale dripped with the sweat that streamed from the horse's body and the foam of his mouth. Still Mukherji charged, maddened by the desire to score. His opponents were so nonplussed that they saved themselves by turning aside as best they could, making off at an easy trot. Even during the intervals of play Mukherji refused to rest. He raced round and round the field at a fast canter. He would lean against his saddle and close his eyes as though drinking in his speed.

Afterwards the Maharaja reproved him. "Your game is very rough, Mukherji."

* * * *

The sun went down that day just as it always did behind the hills of Anjangarh. The Maharaj was dressed go out on the lawn when a peon

'Don't worry. We have tamed Mahato. I'll use him to spoil all the plans of the State."

brought word that shaft Number 14 had caved in and was still collapsing. Ninety coolies, Kurmi men and women, were entombed.

"The best of news !" the Maharaja rubbed his cheeks and shouted in terrible jubilance, "Now my enemy is in my power. He must be crushed without mercy. Call the minister at once !"

The minister came but he had a look in his eyes like a dead fish. "Bad news !" he announced.

"What bad news ?"

"Kurmi women were cutting wood in the wild neem jungle without a permit. The forest ranger obstructed them. The Kurmis beat up the ranger and his guard and drove them away."

"And then ?"

"The police arrived and fired. It would have been better if they had used grapeshot. Instead they fired with old muskets and used buckshot. Twenty were killed and more than fifty wounded. The dead are still lying in the wild neem jungle."

The Maharaja was silent. The Political Agent's inevitable note floated before his eyes like the bright sharp point of a spear.

"Has the news spread ?"

"The Syndicate certainly knows."

The Maharaja sent for Mukherji. "This is what is the matter, Mukherji," he explained, "Now show your Bengali brains ! Find a solution !"

After thinking a long time Mukherji said, "First all get hold of Mahato. Without delay."

Carrying lathis and lanterns about fifty of the Maharaja's men set out through the dark for Mahato's hut, moving at top speed.

"I am not well, Your Highness," Mukherji apologised, "Please excuse me. I think I'm going be sick."

Shaft No. 14 had caved in. The owners were fully frightened. The ceiling of the third seam had not been properly timbered. This was the cause of the disaster. At intervals a great boom came like a cry out of the depths of the earth and with it a shower of dust and gravel. The quartz pillars were snapping like firecrackers under the pressure and crumbling. The pithead had already been cordoned off with barbed wire.

Coolies who ran up from their lines were turned back half-way. "Go on with your work ! Nothing's happened !" they were told, "Nobody has been hurt. Nobody killed."

The owners stood in a group at a distance and talked in low voices in the dark. "There is no way to fill it up," Gibson said, "It will keep on caving in for another two days. Burn up the attendance book and make a new one dated as from today."

"What good will that do ?" asked McKennon, "The Maharaja must already know about it. And there is Mahato. How are you going to explain to *him ?* The papers will know of it by tomorrow morning. They'll splash the scandal for days. Then there'll be an inquiry. One of those awful Gandhi people may be on it. Do you see ?"

That night no lights were lit in the club house but a chandelier in a room of the palace blazed with a hundred bulbs. Mukherji was summoned once more.

It was an unprecedented spectacle, the Maharaja, his minister, and the police chief with Gibson, McKennon, Moore and Patterson ! Glasses and decanters knocked against each other on the long mahogany table.

The Maharaja greeted Mukherji with smiles. "Mahato has been taken, Mukherji," he said, "It was lucky you suggested it while there was still time."

"We have been spared a great deal of clumsy annoyance", Gibson agreed, "It is fortunate for all of us."

The police chief whispered to Mukherji briefly the decision that had been taken at the meeting and what they considered it their duty to do. Mukherji sat with his head bowed in his hands, silent.

"Be strong, Mukherji," Gibson slapped him on the back, "It is administration !"

About midnight a car once more drove up to No. 14 pithead. People gathered in the dense darkness. Durwans took Mahato's body out of the police van. It was wrapped in a blanket. A truck came up, loaded with the bodies from the wild neem jungle. Throwing the corpses one by one into the hungry mouth of the mine the durwans turned away and sat down to cook their supper.

Mukherji's eyes were wet with the light intoxication of champagne and cigar smoke. Lounging on the car's bumper he gazed at the pithead and dreamt of other things, of a far distant future.

A hundred thousand years after, a party of scientists, sent out to enrich the collection of some museum, would look with greedy curiosity at the fossilised skeletons of their sub-human ancestors, half-animal in build but with straight backs and unbowed necks. And they would examine their implements, some crude iron things. These people had, it would appear, been trapped suddenly by a disaster in the layers of quartz and granite. The scientists would handle the stony bones and speculate. Of the blood stains on them that day there would be no trace.

(Translated by Lila Ray & Ajit Mukherji)

Ajanta – where Time stands Still

By N. G. JOG

WHO was it who first came here two thousand and more years ago and has stayed for all time ?

What spiritual search, mysterious quest or mere wanderlust made him roam these remote recesses of the Vindhya mountains and plumb this forest-clad gorge?

What star guided his footsteps to this amphi-theatre designed by nature?

What divine visions rose in his mind as he paused here and said:

Let this be my retreat from the world. Let this be the everlasting abode of beauty.

Let this be the haven of peace. Let this be my surrender to the Buddha!

* * * *

One had, of course, heard of Ajanta before, read about it in learned books, seen its paintings re-produced in glossy folders. One may be even flaunting a scene or two on the walls of one's home.

But it is an unforgettable experience to climb to the cliff-side gallery and to be greeted by the semi-circle of caves stretching over a whole mountain.

It is a revelation when one enters the cavernous gloom of the first cave and reaches back, step by step, century by century, into the dawn of history.

And as the guide switches on the spotlight and illumines the vista, one finds oneself standing with straining eyes and gaping mouth at the unearthly splendour unrolled before one in endless succession.

Walls on walls, columns on columns, leaping into life with their plenitude of colour and cornucopia of carving.

Even the ceiling is a vast tapestry in stone, a myriad maze of intricate designs of flowers and birds and animals and geometrical patterns.

TIMELESS

One stands and stares into the immense grandeur of it all, into the breath-taking beauty of it all, into the timelessness of it all.

Cavernous gloom. Did I say "gloom?" Even the gloom does not seem to have been an accident. It descends like a deliberate curtain.

It helps you to travel back into time, to attune to the ethereal atmosphere, to adjust yourself to a different dimension as it were.

It momentarily makes you forget your companions, makes you feel yourself like a silhouette flitting in a void. Even the babbling of the guide comes like an echo from the distant past. You half expect one of the myriad figures to step out of the wall, and materialise in flesh and blood before you.

The gloom helps to summon the artist in oneself, to use one's inward eye, to invoke the faith one might have lost.

And it is as good that the gloom compels one to concentrate only on a single fresco. It would be physically impossible to take in one sweep the dazzling splendour of it all.

For no painting stands by itself. Each is part of a whole. It is difficult in the dimness to distinguish the wealth of details, to demarcate the episodes, even to separate one scene from another. All develop

and swell together into a symphony of line and colour. All merge into each other like the flowers into the tree, like the waves into the sea, like the clouds into the sky. And all converge to that pivotal presence of the Buddha.

And at least for the time being you feel humbled and purged, feel ashamed of the transient passions and pursuits of your puny self. One's ego perceptibly shrinks in that illuminating gloom.

WHAT HUMAN HANDS...

Could all this be the work of man, of the unaided hands of primitive man? This burrowing through the solid face of a mountain, this chiselling, inch by inch, vast halls and dormitories, Chaityas and Viharas, this carving these giant statues and stupas, delicate friezes and cornices, this imperishable painting of the life of the Buddha over and over again, this creation of these cameos of grace abounding?

One looks at it all and wonders. One doubts and is dumbfounded as he goes from one cave to another. One begins to feel, that mere mortal hands could never have been able to hammer these monumental edifices into shape out of solid rock even if they had laboured from generation to generation and from century to century.

Verily, some superhuman agency must have done all this. And one is half inclined to believe the local legend. Long long ago, it runs, gods and goddesses came here one night to disport in this bewitching glen. They swiftly dug huge halls out of the hillside for their spree. But they so lost themselves in enjoyment that they forgot to return to heaven at cock's-crow as they were strictly enjoined to do. An irate Indra banished them for ever, and transformed and froze them into the frescoes and sculptures of Ajanta.

Who can say after gazing on them that this legend might not be true?

What is there at Ajanta to make you so irrational?—the reader may well ask. The only reply to this would be: what is *not* there?

Here are those imprisoned gods and goddesses. Here are also their attendant angels and apsaras, self-exile yakshas and yakshinis. Here are kings and commoners, queens and dancing girls, priests and rogues.

Here is the serried procession of life portrayed through the stories of the Jataka. Here is the myriad life of the Buddha through his many fabled manifestations not only as man, but as bird and beast.

JUST LIFE

Here is not only earth soaring to heaven, but heaven cascading down to earth. Here is the divine and the human intermingled into a perfect whole.

Above all here is life. Not just an extract and episode of life, but life entire, "just life itself, all life, with its joyous impulses of body and spirit, the forward stride of adventure, the haltings of the mind and turns upon itself, its abandonment to sorrow, its renunciation, its victories."

It is futile to pick a fresco, and say that this represents Ajanta. For everything and everybody here is true to life, as large and vivid as life.

Here is love and laughter, revelry and fiesta. Here is the cavalcade of conquest, the thrill of the chase, the mundane pursuits of the market-place, the daily rounds of the home.

Here is man in his many moods from the glory victory to the bliss of surrender.

Here is ancient womanhood with lissome limbs, rounded breasts and uninhibited gestures which should shame our modern puritans and prudes, censors and cassandras out of their inverted profanity.

It is surprising indeed that these Buddhist artists should lavish so much attention on the portrayal of the female form.

One meets some of the most beautiful women of all time here. Any Apsara of Ajanta disdains to look at a pin-up girl of Hollywood, and successfully challenges Venus de Milo herself.

Some of these feminine frescoes are veritable fashion-plates from the collyrium in their eyes to the *henna* on their toes.

With what deft hand and astonishing detail are these women portrayed. See this princess at her toilet.

Note her ultra-modern hair-do, slightly disarranged by the breeze. As an artist remarked while watching her, "One is almost tempted to set back the truant hair to its proper place."

The dominating theme, of course, is of the Buddha. All the legendary reincarnations and chequered episodes of his life are delineated here. Two are etched on one's memory: The first is the Prince Siddhartha deserting his wife Yashodhara and infant son Rahul at the dead of night.

The second is the yellow-robed Buddha returning after many long years of frustration and ultimate enlightenment and greeting Yashodhara and Rahul—with a begging-bowl!

Both these scenes make us miss a few heart-beats, but one wonders which is the more poignant of the two.

Life always comes out triumphant over death in the paintings and carvings of Ajanta. There is rapture here, the joy and zest of living, the inspiration and exaltation of the supreme artist.

NIRVANA IN BRUSH

But the keynote is one of dedication, of surrender.

The succession of artists who came to Ajanta must have renounced life to immortalise it. Their dynamic energy and inspired craftsmanship sprung from their devotion.

They worked with a faith, *for* a faith. Every morning as they picked up their brushes and palettes, chisels and hammers, they must have rededicated themselves anew to their mission and chanted together the prayer: Surrender to the Buddha!

They sought Nirvana in their work. For them Nirvana was not an end and cessation of being, but a bubbling, joyous becoming.

And verily they attained it in the creation of so much deathless beauty.

And over it all presides, carved in an alcove in the centre of each cave, the towering giant figure of the Buddha benignly watching the procession of life unrolling before him.

Ineffable peace is on his face, infinite compassion flows from his half-closed eyes, and his hand is raised in silent benediction.

He towers above us physically and spiritually and in that ageless atmosphere of Ajanta in the dimness of the mountain's belly he becomes a living, effulgent presence.

He is the Enlightened One. He not only gives a

My Views of Art

By UDAY SHANKAR

THERE are no bounds to the depth or to the expansion of any art which, like dancing, is the expression of life's urge We must never shut it within the bounds of a stagnant ideal, nor define it as either Indian or oriental or occidental, for such finality only robs it of life's privilege which is freedom. I feel it deep within my heart that the path to the realisation of my dream stretches long before me where new inspirations wait for me and where I must create in a limitless field new forms of living beauty. I have to unfold ever new possibilities in the revelation of beauty and truth, my creations will not be a mere imitation of the past nor burdened with narrow conventions of provincialism.

HINDU ART

The essence and soul of the art of Indian dancing, taken in a compact whole, is spiritual, which is the guiding element in all Hindu art. That inherent sentiment you can never change, however much you can embellish it outwardly. In the modern age, you are at liberty to ornament the soul of your country in the most up-to-date fashion without destroying or marring it. You may be dressed up in European style, but your soul is Indian. The outward infringement and cover is the window-dressing. By that you cannot judge what is the real actual inward object. It helps you more to realise the inner spirit through a modern perspective with which your eyes are trained.

I take the help of the modern to understand and make others understand the ancient, I take the West to exhibit the East, I take the modern art of presentation to show the spirit of India. I do not believe in westernising my creations, but I endeavour to show the true India to the West. I am a seeker of the truth of beauty, whatever is beautiful to me is real art.

SCIENCE & TRADITION

The modern scientific way of presentation becomes imperative and inevitable to exhibit a thing of beauty and a piece of aesthetics. I apply it with folded hands and apologies to benign tradition and technique. But, for a lover of beauty the crude and mundane science has no place. I cannot sacrifice the spirit which is the essential factor, the soul of India's art, for the sake of the rude, cut and dried rules and regulations.

An artist is a creator, he is wedded to beauty and possesses liberty to the free exercise of his talents as far as infusing life to divine creations are concerned ignoring the hard shackles of the codified principles.

I respect pure, simple, unalloyed tradition, untouched and not disfigured by the whims and ignorance of the artists. The spurious dance number taken out from the old humdrum monotony under the garb of new creations are legion and are like soldiers, who are out of steps with their company or like false notes in music which constantly disturb the peace of their surroundings Dictates of script

janta—Where Time Stands Still

ntinued From Page 130)

v meaning to life, but a new slant to history, a erent perspective to Time itself.

or time has verily stood still at Ajanta. How many pires have risen and fallen, how many conquerors ve come and gone, how many kings been laid into dust in the last two thousand years!

But the Buddha has remained serene and sup- ne as he was when hewn out of the scarp by those known, immortal artists. All the turbulence of his- y over the centuries is no more than so many bles of air.

How many generations of visitors has He watch- coming to this once not easily accessible place r the centuries. They have been trekking their y there not only from all corners of India but from tant lands, from the Chinese Yuan Chwang who t to Ajanta in the fifth or sixth century to thou- ds of foreigners visiting the land today.

HILISTINES AND VANDALS

Not all of them were worshippers. Many of them e philistines or downright vandals who dis- red the frescoes or even chipped His limbs for a nto.

or a thousand years Ajanta flourished and pros- as a teeming Budchist monastery and seat of ng and a centre of pilgrimage. It was being and expanded over all these centuries without its artistic intensity and fidelity to those who conceived this miracle in a mountain. The many are in various stages of completion and decay, a master mind seems to have inspired and guided all.

And strange as it may seem, for a thousand years epic in rock reverted to a state of nature. For e reasons we cannot even remotely guess the mo- ery was deserted by the faithful, its vast trea- s of art were forsaken.

Ajanta was swallowed by the forest. Its priceless s became the lairs of wild beasts. Ajanta was lost an. True to its name it became unknown until it accidentally discovered by an English hunter in

Through all the previous centuries it was sub- to the ravages of nature. And since then, lately, it suffered irreparable damage from the of men.

Ajanta of today, is thus only a fragment of the that it once was. But even what remains is in- parable, and unsurpassed anywhere else in the d. All the vaunted resources of modern science unable to fathom the secrets of the ancient mas- let alone restore a single inch of the original tings.

But all through these vicissitudes, through all centuries of glory and decay and revival, the dha has remained aloof and apart, calmly watch- this ebb and flow of time, the ever-recurring cycle nature.

And below Him in the lovely glen the trees bur- n as green and the waters flow as crystal-clear as y did when the first visitor happened here two usand and more years ago, and stumbled into a ment of Eternity.

MY VIEWS OF ART

(Continued From Page 131)

tures and conventions should be preserved in mu- seums and worshipped by devotees for generations.

ART & THE PEOPLE

A cultural revival cannot be achieved simply by offering the public the so-called finished products of art, especially those dealing with subjects of past periods. It can only be achieved where there is a real contact of feelings and the breakdown of any rigid barrier between the professional artists and the au- dience. To the modern it is necessary to manifest true beauty. You have got to have culture resting on the whole nation; a pyramid of which these men re- present the top, the base being the people a truly national culture. And so, if we are going to make a great change, it must be a national one, and every- one must be in it. We shall have a vital art when we have a vital democracy.

Dance artists should now cast aside cheap and hackneyed repetitions or rehashes of the old conven- tions, and should endeavour to bring through their efforts real truth and beauty, social and national welfare and exercise a deep influence on the mass minds conducive to their physical, intellectual and moral uplift.

For the artist the universe is a source of un- ending inspiration. Truth hidden in the depths of the heart finds expression through the artist's efforts in dance, music and poetry. Today I feel I should give more to the public; there is so much for the artist to give, so much for him to take from the people. I fervently believe that I can come closer and unite through art for does it not bring out the subtle bond that deep down unites us?

No living artist can help being swayed by the rising forces of the age. Ancient class art, with all its sophistry, its refinement, its ideology is there; but then there is also, and more evident today than ever, the life of the masses with its vigour, vitality, simplicity and the creative progressive spirit into some aspects of which the artists have striven to the best of their ability to give the spectators some glimpses.

"MY" WAYS

While they watch the programme, they may possibly feel confused. They may not find a meaning to each movement or note. But if they take it in its entirety, they will find it harmonised together by the ever present vein that pulsates life with unabated vigour. In the programme I try to voice our cultural aspirations, our dreams, where strife is subordinated to the demands of the spirit of beauty in life. That is my humble contribution, my loving offering to my spectators.

Puja Greetings

PROSPECTS OF HOMO SAPIENS

By Dr. SIVATOSH MOOKERJEE,
M.Sc., Ph.D. (Edin.), Head of the Department of Zoology, Presidency College, Calcutta.

THE human race to-day faces the most critical and challenging period of its existence. Some openly express that all hopes and aspirations, dreams and glory of mankind will be reduced to radioactive rubble and there is no escaping it. Others are more hopeful and believe that the present dark cloud will pass off from the horizon and future of mankind will be assured. However, it is not easy to make any prophecy about the evolution of any species without considering all the aspects. It will be not only incomplete but also an untrue picture of future possibilities of man if the whole question is looked at from a single angle. Biologists have been convinced that factors, unforeseen and unpredictable, may arise with all suddenness in the life-time of an animal and may upset the future course of evolution. This is more true in cases of human beings who leave nothing undisturbed in this earth. However, it does not mean as a necessary corollary that the future of mankind is completely sealed in gloom and despair and there is no hope for it.

For inestimable millions of years, the world has witnessed that no animal or plant is completely static in its existence and impervious to the impacts of the surrounding changes. The evolutionary dynamics of the species help to accommodate the organism to the changes and new channels of advancement open up and thus the animals survive many planetary disturbances. It is idle to think about the immutability of all species in all eventualities. Evolutionary constancy of a species is meant for a definite set-up of environment.

At the present time, the human race is enjoying such a stability in the evolutionary system. Homo sapiens is at the height of evolutionary ladder. But he is apt to make dangerous commitments by creating new biological situations and new surroundings which may not be congenial to human survival. The self-transforming power of man is continuously directed to create new environmental situations for his own living. It is not unnatural that the human being would interact with the laws of his own unfolding. Thus he runs the risk of discontinuity of his heredity at a dramatic phase of expectation. Either the evil in himself or one somewhere else may seal the future path of progress and bring the human evolution to a standstill.

UNTEMPERED PROPHET

In a way Homo sapiens is an untempered prophet because of his unique brain-power. Though he himself is the continuation of a long process of evolution, he is different from the rest of the animals. Man is a cerebral animal and stands on a distinguishable pedestal of life. The power of conceptual thought of Homo sapiens cannot be shared by any one else in this world. The responses of mind and heart are his own. Unlike any other animal, senses predominate over smell in human beings. Man has the power of articulate speech. The length of post-maturity period is far more longer in his case than in any other animal's. The meaning of life in human beings never ends in the act of reproduction. It means more than that. Man can give guidance to and has control over his destiny to a certain extent. He has mental activity of far-reaching effects. He can transmit the value of experiences to the members of the subsequent generations of his species. These, in their turn, become living forces in the future evolution. These experiences are utilised by the descendants as fruitful wedges for their wider control over environment. From these respects, Homo sapiens is the path-breaker in the evolutionary process.

SCIENCE OF EUGENICS

Homo sapiens is well adjusted now to the present environment and his genetic out-fits are comparatively sound, though there are some minor weaknesses in them. He is a comparatively newcomer to the world and his activities form a thousandth part of the entire process of biological evolution. It is reasonable to presume that his genetic probabilities are not fully exhausted. The chances of showing further genetic variability and adjustment should be considerable in the comparatively youthful genotype of human beings. That is, there is a likelihood of the genotype being able to endure adverse situations. The power of genetic recombination, it can be believed, has not been fully utilised in Homo sapiens. Human beings have become conscious of improving their heredity and that has led to the development of a new Science of Eugenics. The question of artificial selection of genes is becoming an important issue in the race betterment. Gene-borne diseases like idiocy, colour blindness may be averted by suitable and controlled matings.

From the above point of view, the virility of human genetic outfit will remain undisputed. Though man has a few genetic drawbacks, like overcrowding of teeth, intra-uterine struggle, susceptibility to bacterial infection etc., it is likely that if not otherwise disturbed the human race will enjoy a long span of existence.

RISKS OF OWN ACTIVITY

Biological soundness of the gene-complex in Homo sapiens cannot be cited as the permanent basis for future evolution. Because, the context of the soundness is limited and related to the present-day set-up. This is easily changeable and the hereditary out-fits are likely to operate in a different way. The premium of the cerebral activity of Homo sapiens has become so important that it will have to pay a dividend to the survival value of the entire species. The deliberate control of natural phenomena are likely to produce far-reaching effects on the question of the survival of the human race. Human beings are constantly trying to create new environments round them which may be different from that of Nature. The force of Science, with its application and its consequences is always at work in the midst of Homo sapiens. Every discovery has a corresponding change in the world. The technological appliances can produce extraordinary changes and the human race has got to face the emergency of the new situation. Among the many outstanding achievements of man, the most important is his success in lifting the veil from the face of atoms. He can let them loose if he wants. The atom-smashing device has given almost an incalculable source of energy which can kill by its blast many things for many miles around it. The knowledge we have already obtained about the aftermath of radiation is full of horror, awe, and despair. The human genotype will not be able to survive the radiation blast if it receives the radiation directly. However, the indirect effects are still more calamitous. The human gene-complex by the effects of indirect radiation will easily lose its present equili-

Bhatkhande And His Contributions TO HINDUSTHANI MUSIC

By BIRENDRA KISHORE ROY CHOUDHURY

I THINK what Vedavyas was to the Vedas, was Bhatkhande to North-Indian Music. Like Vedavyas, Bhatkhande was the first to collect everything which was worth collecting; then he arranged them in proper order and, lastly, commented upon them in a way that was never before attempted or achieved.

In the reign of Alauddin, the great Nayak Gopal of the Deccan was the first to give some scientific basis for Hindusthani music. Thereafter, even during the reign of Akbar and the golden days of Mian Tansen, it was a Deccani Pandit, Jagannath Kaviraj, who was the first to trace and indicate the proper ways of exposing and expanding the Ragas and Raginis. So, also in the 20th century, it was another Maharashtra Brahmin (Deccan), Bhatkhande, who for the first time collected all the prevalent modes of Dhrupad and Kheyal and thereby paved the path for the scientific development of the Indian music.

During the reign of Akbar the Great, the exponents of higher Indian music were united in their outlook and exposition of the Indian music. Such great luminaries as Swami Haridas, Baba Ramdas, Mian Tansen, Jagannath Kaviraj and others of the period will shine as immortals for ever. But, thereafter, during the declining days of the Moghul Empire, the intellectual field, just like the political one, was greatly disturbed and disruption followed. Gradually the successors of great musicians gave up research work in the field of music and kept themselves busy with trifling technicalities. The famous Dhrupads and Kheyals of yore began to be interpolated at the hands of unfit musicians and being thus permeated by technicalities, mannerisms and all sorts of exaggerations, classical Hindusthani music headed for its speedy death. Basic Ragas were branched off and distorted, only to clog the path of pure music. But the successors of some famous schools (Charanas) such as the Seni, Kawal and others kept themselves far above such defilement of Indian music. In this way a time came when public exhibitions of Indian music were all full of technicalities, mannerisms and interpolations while the real great musicians of the period were either pining in privacy or were walled off from the public by the Nawabs and Rajas of the time. At this juncture Bhatkhandeji appeared.

HIS BIRTH AND TRAINING

On 10th August, 1860, Bhatkhandeji was born in Bombay in a simple but cultured middle class Brahmin family of the Deccan. From the very early age he was nurtured in an atmosphere of devotional music. In time he graduated in Law from the University of Bombay and started practising the same with great success. During this period he also acquired a great and intricate knowledge of Indian music.

After having some training in Sitar from a famous disciple of Ali Hossain, the great Binkar of Rampur, and in Dhrupad from Ramji Boowa, he joined the 'Gayak Uttejak Mandal.' Gradually, as time passed he was seized by the idea of propagating higher Indian music amongst the cultured people of India at any cost. For this purpose he started travelling throughout the length and breadth of this sub-continent and started collecting all the materials of all the famous schools of Indian music prevalent at that time. Thus after mastering the Dhrupads and Kheyals of the Gwalior schools of music he started to learn under Mohammad Ali Kuthiwal of Jaipur. (Mohammad Ali, Sadek Ali and Asak Ali are all Kheyalis of the Kawali School and their Ragas are very perfect). He also imbibed the style of Alap from the great Dhrupadi Zakruddin Khan of Jaipur.

Panditji published many of the songs thus collected with accurate notations in form of books and also recorded many of them on the gramophone records. After this, under the pseudo-name of Chatur Pandit, Panditji published a Shastriya treatise on music in Sanskrit entitled 'Lakkhya Sangit' in 1910.

The basic structural conception of Hindusthani Raga and Raginis could be found elsewhere, such as in Sangit Darpan and other treatises which followed the principles of six Ragas and thirty-six Raginis. Thereafter, in Nagmath-a-Asrafi, the exponents of Seni school codified their conception of the Ragas and Raginis and more scientifically indicated their modes of expounding the same. Lately, Raja Sourindra Mohan Tagore also wrote, in Bengali, treatises on Indian music following the principles of Sangit Darpan and other previous works. In spite of the great help rendered by the above works there was a dire necessity of a well-planned grammar of Hindusthani music and its modes.

And this need was supplied by Panditji by basing his grammar on the ideas of ten *Thats* which followed the principles of *melas* of South India. My own view is that the theory of *Thats* and that of Raga-Raginis (in modified form) may easily co-exist in the structural basis of Hindusthani music, in a happy relation that exists between true poetry and true grammar. At present this treatise of ten *Thats* by Panditji has been accepted as the accredited grammar of Northern Indian music and its value as a help for the scientific study of Indian music has been established beyond doubt.

After this, to elucidate the elaborate basic rules of Lakkhya Sangit, Panditji started to publish an encyclopaedic works in various volumes under the

HINDUSTHANI MUSIC

(Continued From Page 137)

name of 'Hindusthani Sangit Paddhati.' The illustrations of his Paddhati are found in his 'Kramik Pustak Malika' completed in six volumes, which is indeed a monumental work. After having finished his collection of Dhrupads and Kheyals of Gwalior and Jaipur, Panditji approached the Darbar of late Nawab Bahadur of Rampur and there he was able to collect with the help of the late Nawab rare gems of higher Indian music from the famous Binkar Ostad Wazir Khan and from the famous player of Sursringer and Dhrupadi Sahjada Chhamman Sahib. He published many of these rare collections also in the pages of 'Kramik Pustak Malika.'

But Panditji did not stop here. He knew that only by such rare collections and publications of the same, the great cultured mass of India could not be sufficiently moved to strive for a revival of higher Indian Music. For this, he organised the Nikhil Bharat Sangeet Sammilani or the All-India Music Conference. For the first time this conference was held at Baroda under the kind patronage of the then Gaikwad of Baroda in 1916. Thereafter, the Music Conference was held in Delhi in 1918 with great eclat. In the conference Mohammad Ali Khan Sahib, a lineal descendant of Mian Tansen the Great, and the famous Sitari Nihal Sen, Dhrupadi Jakruddin and Alla Bande Khan and others participated and it was presided over by the Nawab Bahadur. Thereafter, started the life-long friendship between Chhamman Sahib and Panditji. The next All-India Music Conferences were held at Banaras and Lucknow with great success.

In this way the great Pandit paved the way for the dissemination of higher Indian music to the cultured people at large.

COLOSSAL ACHIEVEMENT

Similarly, Panditji felt the need of sincere institutions to educate the public in higher Indian music and to keep up the heritage for ages to come. So, it was at his instance and enthusiasm that the then Maharajas of Baroda and Gwalior founded schools for the study of higher Indian music in their realms and Panditji accepted the management of the said institutions.

The last colossal achievement of Panditji was to establish a Hindusthani Sangit Vidyapith at Lucknow. Formerly, it was known as Marris College of Music.

To make this last great undertaking a complete success, Panditji was greatly helped by the provincial Government of U. P., the Nawab of Rampur, Raja Nawab Ali Khan and Chhamman Sahib; Raja Nawab Ali Khan, at the enthusiasm of Panditji published the notations of a great deal of songs of the Seni school from the said college and was one of the active workers for the foundation of Lucknow Marris College.

At present, the said institution is famous as Bhatkhande Sangeet Vidyapith. In this very institution Panditjii nurtured the talents of Sree Ratanjankarji and made possible the flowering of his genius who is indeed a fit and great disciple of his great Guru.

The great Panditji breathed his last in the year 1936. He has been a beacon light for his successors in the field of North-Indian classical music and as was his last wish, all the musical devotees should now proceed further and further in the researches, revivals and reshapings of classical music which will influence the masses and enlighten the intelligentsia. We should not stop at what has already been achieved, but our goal should be towards the infinite.

We should remember what the world-teacher of this century, Sri Aurobindo said, "We do not belong to the past dawns but to the noons of the future."

PROSPECTS OF HOMO SAPIENS

(Continued From Page 135)

brium and the chances of rapid mutation will greatly be increased. Most mutations are dangerous and that will threaten the very survival of Homo sapiens. If human beings cannot make themselves free from their own achievements, the catastrophe is imminent. Thus measured against man's own power it is an imperative necessity for the human species to avoid the fatality which means discontinuation of life.

FOOLISH EXCUSES FOR WAR

One of the mortal dangers of the future evolution of Homo sapiens is the war between the members of his own kind. This struggle is avoidable and not necessary for safeguarding the prospects of the future evolution of any particular group. All human beings come under one species, *Homo sapiens*. No colour, nationality, race, religion or any other difference can dispute the oneness of the human species. There have been claims to advocate inherent superiority and inferiority of some races. The struggle between the members of the same species is thought unavoidable and some wrongly presume that it has always an evolutionary advantage. However, the struggle within the members of the same species, as it is understood now, has a very short range importance and does not pay much premium to major evolutionary advancements. That is why its consequence is bound to be limited. In the human sphere, intra-specific struggle as it is pointed out, has been replaced by the struggle for fulfilment of life.

The world is not yet completely free from the threats. Those who want to mix up war with the intra-specific struggle do it with a purpose. The intra-specific struggle works with the help of selection and its way of working is certainly different from mass slaughter. The biological struggle is always referred to the selection or elimination of hereditary qualities and not for open fight. But a feeling against war has been raging already. Racial idiosyncracies, false prejudice, suspicion and distrust make people antagonistic to each other. Biologically speaking, war cannot be launched in the name of 'struggle' to achieve further evolution. The conception of selection has also undergone a great change. Selection does not work only in elimination of species but also acts in safeguarding the evolutionary gain. For the human species now, consolidation of the genetical achievement is by far the most important issue because the trends of human evolution has taken the course of intellectual and cultural evolution. From this point of view, man stands alone and his ethics of life are not necessarily the same as of other animals. Any foolish excuse for war for the perpetuation of Homo sapiens is thus untenable.

Mass dilemma is gradually clearing up and the spirit of international co-operation between the members of the species will be needed most. The idea of making a world forum and working for all mankind means biologically the banishment of war between the members of the same species. This idea when practised will alone forbid the colossal risk of man's extermination and throw open new lines of cultural evolution. The challenge before Homo sapiens is how man will create his own prospects and react to it. Inspiring future is waiting for Homo sapiens if he works for humanistic evolution of a creative nature, otherwise not.

FIELD TOOLS FOR SOCIAL SCIENCE

By Dr. MINENDRANATH BASU, M.Sc., P.R.S., D.Phil., F.R.A.I. (Lond.)

MATERIAL resources like coal, iron, oil, forest, soil, etc, are better organised than human resources like energy, intelligence, inherent goodness of man, etc. This unbalancing is not due to absence of scientific knowledge of the principles of society but absence of dissemination of such knowledge.

To-day the Government of every country is spending millions for finding out the destructive agencies, but a microscopic fraction of it is not spent to overcome the necessity of such destructive works. To-day we do also find that in every country best scientific methods are applied for gaining knowledge of the material resources but social problems are left to 'the rule of thumb, untested theories and selfish political manipulation.'

Scientific method provides basis for prediction. Prediction helps planning, as for example, metallurgy predicts the nature of the products of a blast furnace and the engineer plans fabrication on it. Social science should help in understanding and control of social interactions. After the first great war the League of Nations, and after the second U.N.O., UNESCO, W. H. O. are the organisations to attempt for the solution of the modern world problems on sociological knowledge.

Sir Crompton, the pioneer of the Atomic Energy Research, once told that Man has achieved his goal to some extent by destructive agency but let him now apply social relations with other men so that peace may reign on him. This can also be clarified just as a medical doctor has a basic doctrine that he should prevent disease and save life, so that the social scientist tends to operate on a basic doctrine that he should prevent friction and violence in human relations, and that he should save lives and aid in establishing peaceful and self-respecting relations between man and man. Recently Dr. Saha has said on his return from Finland Peace Conference and Russian Atomic Energy Conference, that if there be any atomic warfare in this world the whole human civilisation will be ruined. But if the atomic energy be utilised for the welfare of mankind the golden era will make its appearance on this world.

GREGARIOUS ANIMAL

Man is a gregarious animal, he likes to live in society and each individual influences the other and also the environment. Sociology—the science of society or the science of social process, studies the 'interaction of its type that seems to result from contact between human individuals.'

'The study of actual normal behaviour is the greatest unmapped field of sociology in all countries.' All modern science is rooted in observation and every scientist knows full well that observations form the important and primary factor. The process of initial observation is for the social sciences what corresponds with the Natural History stage in the Biological Sciences. Two principal difficulties in observation are met with:—

(1) Social phenomena cannot be directly perceptible,
(2) Emotional entanglement of the social investigator is noticed.

The social scientist has one important asset in the form of documents i.e. personal documents in the form of (1) letter, (2) diary, and (3) autobiography. But here some sort of distortion may be introduced by the investigator. Suppose personal documents are not recorded by the informant, being illiterate. There are documents of other kinds i.e.

(1) Primary source—Eye witness events described,
(2) Secondary source—Hearsay evidence.

The most satisfactory type of documents are those technically known as Records. A record is defined as documents intended to convey instructions regarding transactions or to aid the memory of the person involved in the transaction—

These are (1) Written records,
(2) Verbal records,
(3) Gramophone records.

Lastly come the reports—they differ from records in that they are usually written after the events. But the most important availability of material from the field should be case history records.

THE "IMPONDERABILIA"

Some practical applications are necessary to note about an event, as for example participant observation. In it an interpretation of an event can only be correct when it is not composed of two points of view—the outside and the inside. Thus the view of the person who was a participant in the event whose wishes and interests were in some way involved, and the view of the person who was not participant but only an observer—these two coalesce into one final synthesis.

Dr. Malinowski, the creator of Functional School of Anthropology, during his field-work at first collected his data living with his local friends, the white people. He began to suspect that this was a flaw in his technique of collection of data, so he cut off from the white peoples' company and set up his camp in a native village. There living in the village he was able to observe the customs etc., of the native people and so he achieved a group of what he called the "imponderabilia" of actual life which cannot usually be recorded by questions or from documents. Some degree of participation is, in fact, obligatory to the social worker particularly to the anthropologist. Observation is a basis for research work and any schedules used, will be purely informal and personal shorthand devices. Practice is a device by which power of observation can be developed. So thorough and careful observations in the interests of any social situation, remain an indispensable part of the process of achieving insight, for which interviews form an essential part. An interview can be defined as a meeting of persons face to face on some points. In short it is a purposive convention whose purpose can vary widely to include, as for example a meeting to arrange for a course of action, to collect information and to select candidates for some posts etc. Oldfield in his Psychology of Interviews has said that 'An interview is normally non-symmetrical in that the

Calcutta Office :—7, Council House Street, CALCUTTA—1.

(Continued From Page 141)

initiator plays a relatively active role while the other parts—informant or candidate plays a relatively passive role.' This is really true in the field-studies in Anthropology when one calls for an informant. We can classify interviews mainly into—

1. Potentate—an appeal for permission i.e., results of experience in the course of a particular research programme.
2. Experts—for technical information, but a social scientist particularly an anthropologist does not like to fall into the trap that truth can be obtained from expert opinions.
3. People—to mass people for ordinary fact and feelings. If any one wants to know or find out something about a person, the best way is to ask him or his friends.

INDIRECT APPROACH

The informant in an interview should be given some sort of freedom to choose the subject matter for discussion. The interviewer on the other hand should have the opportunity to enlarge his understanding of the issues raised. All these interviews are scientifically known as Formative. Five rules should be adopted for a new interviewing technique, called Indirect Approach. They are :—

(1) The interviewer should listen to the speaker (informant) in a patient and friendly way.
(2) The interviewer should not show any kind of authority.
(3) The interviewer should not give any advice or moral instruction.
(4) The interviewer should not argue with the informant.
(5) The interviewer should talk and put questions under normal conditions and in a friendly way.

There are three different methods of collecting data in the field by a social scientist—

(1) Narrative method—Narration is the most important factor. In this method the informant is required to narrate certain facts on the basis of analysis made from his experiences. A particular case is not investigated by a general account. Different men narrate in different ways.
(2) Direct observation method—In this method the investigator (or interviewer) does not depend on his informant but relies on his own personal observations in the field. In this it is not possible to account for the past events.
(3) Genealogical or case history method—Here concrete cases are studied and the investigator takes upon himself the duty of analysing or synthesising, as the case may be, instead of putting it on the shoulders of the informants. In this investigation a large number of concrete cases are collected and analysed and the conclusion drawn by the investigator. So by this method the survey of the village and the preliminary census and the details of the social structure of every human society can be easily understood.

CASE HISTORY METHOD

Genealogical or Case History method is the most convenient way of collecting data in the field of social science. But difficulty arises on one point—if the unit of investigation (people, custom, institution or area of land—as the case may be) be a very large one. Here samples are only studied. The sample varies according to the size of the unit. If the unit be a large one 2 per cent sample is sufficient but when its size is smaller it goes upto 10 per cent. The samples to be studied by a social scientist should be random samples which should be found out by tippet method. But in intensive studies the unit should be a selected one and not a random sample.

Investigation in the field of social science is a means to an end and not an end in itself. These investigations are usually undertaken for various purposes such as—administrative, legislative, political, economic, commercial, industrial and scientific. The purpose influences the nature and scope of investigation.

In every aspect of human life practical knowledge is more valuable than theoretical. To study the methodology of field-work, practical work in the field is more effective than any theoretical one. Before going to the actual field it is essential that one should equip himself both intellectually and materially.

Intellectual equipment are:—

(1) Language—Good interpreter is necessary for language difficulty and expression of thought.
(2) Study of the people—Preliminary knowledge of the people is essential; any literature or published materials should be consulted.
(3) Study of allied subjects like Geography, Geology, Botany, Zoology is necessary. Along with these climatic conditions particularly temperature, rainfall, humidity as well as fauna and flora are also necessary, as these are the factors of economic life of the people. The field investigator should carefully make a chart of these.

Material equipment are :—

(1) Provision for habitat — Equipment of tents for movements, folding and easily movable furniture like table, chairs, camp-cot, cooking apparatus etc.
(2) Dress—Simple convenient dress suitable for climate and beddings according to habitat. A mosquito net is essential.
(3) Other things like first aid medicines and personal comfort articles.
(4) Mechanical Aids—Maps, settlement plans, magnifying lenses, scales, measuring instrument boxes, drawing pencils, papers, erasers, knife, clips, pins and small note book.
(5) Photography—Cameras with films etc.

With these field appliances a social scientist should go to the field for his data. Really speaking social sciences like Anthropology are not a laboratory science—their laboratory is the field. Field is the testing place of their theoretical knowledge. The real field-work is a scientific discipline and routine. This makes vigorous demands on the patience, perseverance and sense of humour of the social scientist. A social scientist when fully equipped with his field tools, can ease a difficult situation for studying the people among whom he lives and works, because from them he can gather data that will throw light on the problems of his social science.

Multi-Purpose Food For The Masses

By V. BALU, Publicity Director, Meals For Millions Association Of India

GOOD nutrition is the foundation of national health. A marked improvement in health due to better feeding is being observed in many advanced countries to-day. Nutrition is now regarded as a branch of public health and recognition is being given to the fact that a great deal of unnecessary suffering and ill-health can be prevented by proper feeding.

It is true that we need to know much more about the status of nutrition of our people than we do to-day. We have to have more thorough and comprehensive reports to find out what per cent of our population suffer from the effects of faulty diet as well as from the lack of food altogether. All the same, we have overwhelming evidence of the existence of a great deal of *chronic underfeeding* among our people, day by day, month after month and year after year.

Our food problem may have been solved and famine virtually eliminated, thanks to the merciful monsoons and the energetic efforts of our Government; but hunger and the question of nutrition still remain. Our attempts till now have been largely directed towards obtaining adequate food supply *in quantity*, but serious attention has got to be paid to the *quality* as well.

LITTLE PROTEINS & VITAMINS IN DIETS

The normal diet of most people in India, and especially the poor South Indian diet, is rather deficient in quality and variety. Far too little of body-building proteins, vitamins and minerals are consumed, and this is a sad factor, for, these materials are so vital for human well-being.

Rice contains proteins which are nutritionally superior to wheat and many other vegetable proteins, but the amount present in our diets is very small. The magnitude and character of the poverty afflicting the people is pathetic; it denies them the milk, fruits, vegetables and other protective foods available to the well-to-do. There are also other difficulties; even where animal proteins are available, Hindu and other religions forbid the eating of meat. Add to this the ignorance and the spirit of resignation to fate among the masses which shuts off even the desire for "better living" !

Thus, the problem of malnutrition offers both a challenge and an opportunity for our leaders and others who have the welfare of the future men and women of our country at heart. Needless to point out that a social problem of this great and gigantic nature can be met only by concerted efforts of the Government, scientists, social workers and benevolent private enterprises.

IMPORTANCE OF PROTECTIVE FOODS

Malnutrition is not confined to India alone but is rampant in other countries also. Several crusading scientists in different parts of the globe have and still are working hard in their laboratories to evolve inexpensive and satisfying food concentrates for the masses, using wasted or unused nutritional sources. Such supplementary foods will not only help to fight malnutrition and hunger but by their protective action also develop effective resistance in the people to common ailments and other diseases.

The importance of providing protective foods especially to children who respond very well to better nutrition, needs no emphasis. A lot of suffering and a high incidence of mortality among children are the result of malnutrition. Recently, it has been found that a set of disorders which Indian children suffer from, due to chronic under-nourishment, is akin to a common African disease known as "Kwashiorkor". This is essentially a deficiency disease and can be cured by the administration of concentrated protein foods. It is, therefore, gratifying that our leaders should have decided upon a programme of feeding school children in selected Community Project areas, with protective foods during the Second Five-Year Plan period.

(Where rossogolla attained its perfection)
CALCUTTA.

Professor John Yudkin, eminent nutritionist of London, tasting 'Jamoons' prepared from the Indian Multi - Purpose Food.

(Continued From Page 145)

In 1946, Dr. Henry Borsook, a well known biochemist of the California Institute of Technology developed the Multi-Purpose Food which provides at minimum cost (2 annas) in minimum bulk (2 oz.) a high quality palatable protein food fortified with vitamins and minerals. Two ounces of MPF is called a "meal" because its nutritive value is equivalent to that of "most meals". With the sole object of popularising and distributing this food, a humanitarian cafeteria owner started a non-profit organization of private citizens called the "Meals for Millions Foundation" in Los Angeles, California.

The MPF formula bears some slight resemblance to the war-time diet recommended by nutritionists; principally constituted of soybean meal, it has travelled extensively and has had sensational success. Thanks to the energy and unabated efforts of a devoted staff of the Foundation, forty millions of MPF "meals", paid for by more than $1,000,000, contributed by thousands of Americans, have been distributed, during the past 8 years, to different parts of the globe through voluntary agencies.

INDIAN MPF PALATABLE

During the past few years, scientists at the Indian Institute of Science, Bangalore, and the Central Food Technological Research Institute, Mysore, working on this problem have evolved a palatable, low cost food of high nutritive value. In developing this food, they have utilized food by-products like groundnut cake, since use of even several thousands of tons of such a food will not make a dent in the country's food supply.

Extensive studies have shown that specially prepared groundnut cake flour and slightly roasted Bengal gram flour with added minerals and vitamins

PATRIOTIC BENGALI SONGS

By KESHAB CHANDRA GUPTA

IN estimating the history of the struggle for the freedom of our motherland, a definite place of honour should be reserved for patriotic songs. The two National Anthems adopted by our Republic are priceless gems of inspiration. The "Bande Mataram" song should not be regarded as a mere urge for revolution but as a revelation. It stirs up the very soul as it points out the supreme beauty of our motherland—material, intellectual and spiritual. The expression "Bande Mataram" (Hail Mother) has the magic sanctity of a *mantra* to stimulate inner consciousness.

Many able poets all over our country composed songs and poems to awaken us. "Whoever wants to live bereft of liberty?" — asked Rangalal. The gifts of the top trio—Bankim, Rabindranath and Dwijendralal — bear stamps of genius. Poems and rhymes obtain easy entrance to the heart, if the poet and the composer can locate the right chords which await vibrations.

India is undoubtedly the land of poetry. From the remote Vedic Age, eternal truths about life and its manifestations have been unfolded in inimitable verses—full of rhythm, melody and appealing force. Scriptures and literature, however, stretched their mission beyond the material view of existence and often aimed at transcendence. Even in books of conduct, meant for our guidance in the day-to-day existence, we trace an under-current of other-worldliness. The ancient literature of India extolled ideals that saints and prophets enunciated.

The culture that was out to preach the serious display of immanence in the gross, could not but be cosmopolitan. Parochial patriotism, in the sense in which we understand it to-day, was almost unknown in the past. The state was synonymous with the kingdom of the ruling king. Loyalty was a rule of conduct and its limits expanded or shrank with the boundary of the royal dominions. Supermen and supreme thoughts belonged to Bharat as a whole, and not to any particular region. Every tract of India, for example, felt the same pride in Ram Chandra, Krishna or Goutama Buddha. They were as dear to the enemies of Ajodhya, Dwarka or Kapilavastu the kingdoms, as to the citizens of those states, in all ages.

GREATER THAN HEAVEN

A well-known Sanskrit verse described the land of one's birth as sacred to him as his mother and both extolled the glory of heavens. But the land of birth did not mean a homogeneous geographical extension. In its material sense the land of birth referred to the family house, or at best the countryside of nativity. But in its spiritual sense the motherland claimed the wealth of revelations, scriptures, literature, as well as the holy places of Bharat as a whole. Nobody ever cared to know the nature and extent of the State in which Krishna or Sidhartha was born or the relations of those States to the one in which his own ancestors saw the light of the day. The Indian had a generous disregard for chronology in appraising values.

The most glorious period of India's expansion started with the adoption of Buddhism by Emperor Asoka. One of the greatest figures in world-history, Asoka himself was a messenger of the message of Lord Buddha. His ambition manifested itself in the conquest of the then known world, not by the sword, but by the nobleness of India's culture. He had acquired fresh values through the eight-fold path chalked out by the Buddha, for the guidance of humanity to the goal of Nirvana. Naturally Asoka's outlook was cosmopolitan. The eras that followed expanded India through her culture; but nobody cared to foster the idea of nationality as the Greeks or the Romans defined it.

There followed a period of decadence in Northern India in political outlook, just before the invasion of the Muslims. India was divided into small rival states. They were led by the ambition of the chiefs with some of whom statecraft meant personal aggrandisement, including murder of rivals and influential opponents.

During the days of the Muslim domination, the outlook of nationality deteriorated. Everything that appeared grand in Hindu culture and every spot associated with heroes and their preachings, claimed respect and personal pride in the consciousness of the Hindu. Local nationalism or racial solidarity seldom entered the precincts of his thought. To the Muslim convert and his children as well as to those of the immigrants, India the land of their birth seemed foreign. We find praises of India in the writings of the historian Al-Beruni. Akbar, the Great thought in terms of India. But that never improved the outlook of the Muslim. He regarded the land from which came the Holy Quoran as sacred. That was the place connected with the life and activities of the Great Prophet. The Indian Muslim resorted to the traditions of the Arabs, the Persians, the Turks and the Saracens to warm himself up. The heroes of his own motherland were Kafirs and meant nothing to him.

NATIONALISTIC SPIRIT

Foreign rule came with the British. The Indian failed to understand the men from across the seas who ruled them, before the introduction of English education in the land. The clever Indian, educated in English schools, studied their history and obtained glimpses into the secret of the foreigners. He discovered that a handful of men could govern this vast sub-continent with its past traditions, simply because of their spirit of nationalism. Batches of men came to rule the country which they left after their youth was passed away. Their home was in a small island but they were proud of every grain of dust of that distant land across the seven seas. The most remarkable trait of their character was extreme cohesiveness of every individual who belonged to Great Britain, in their treatment of the people and problems of the conquered country. This was in strange contrast with the state of affairs that had prevailed in India. Every individual here was a distinct entity for all purposes and it was beyond comprehension how a Nawab, a pundit and a petty tiller of the soil could claim the same privileges and could be regarded as units of the same great mass.

Those who had ears heard and those who had eyes saw. One of the greatest of such men was Rishi Bankim Chandra. The marvellous success of the foreigners lay in unity. They possessed a wonderful instinct of nationalism that embraced each and every person who lived in their country. It was not limited to a mere homage to the king. Bankim

vanted to rouse the national consciousness of his countrymen through the "Bande Mataram" song.

The genius of Bankim lay in his analysis of the nind of his countrymen. He synthesised the elements discovered in the process. *Mantras* had a harm over the Indian mind. He started his song vith an overture to the mother country in an ncantation of two words, simple expressive and nspiring—"Bande Mataram."

What followed in the song proved the excellent ower of the Rishi in reading the inner thoughts of is people. The Indian was essentially a worshipper f Nature, a silent poet. The physical charms of his ountry fascinated him. The flowing *rills* became eak in summer, then swelled and moved in all their ory, bringing fertility to the land. Different seasons stered bunches of luscious fruits. The Indian joyed the cool, gentle breeze. This material aspect his beautiful country prompted the poet to caterically mention her material charms.

"The mother that is. the land. is profusely atered," said the poet. "She is lovely in her ferity. She is dark-green with crops. Her breeze is ol. She is gay with flowers, adorned with clusters trees. She is radiant with her smiles and is full sweet songs."

In the concluding lines of the song, the poet ain paid homage to her material aspect.

"I salute thee, on lotus-throned, pure, nonpareil mother, profusely watered, and beautifully fertile."

But the poet was quite alive to the background the Indian mind where lurked a hankering for sdom, faith and the inner spirit of eternal consusness. So in a thundering voice he wanted us to n in the chorus.

"Thou art wisdom, faith thou art, thou art the heart and inner consciousness. Thou art life in this body."

The poet included in his song the spiritual insation. The country represented not only the uties of nature in abundance, but was rich with spiritual force which had gained strength from eration to generation, by the advent of saints and es, prophets and avatars. Bankim Chandra lysed the inner spirit of India's make-up which sidered his motherland sacred, both for physical spiritual excellence. Herein lay the genius of kim.

JRCE OF STRENGTH

The country was then in the hypnosis of the sical prowess of the foreign conquerors. It was very well to go into rhapsody over the flow of er in the channels of our meandering streams, orchards of luscious fruits and green corn fields. pile of wisdom of ages had not sundered the kles of our enslavement. The dominant race strength and vigour which alone could keep a on free.

Bankim anticipated this source of despondency. pointed out the source of our strength which, n, lay stored in our body and mind. His enunon was marvellous.

"There issues a chorus full of rhythm, from thirty crores of throats.
Twice thirty crores of arms carry sharp weapons.
Who says thou art weak?
Thou wieldest immense strength.
To thee mother I bow
Our deliverer, slayer of enemies."

cool consideration will unfold the wisdom of im Chandra whose psychological analysis disred the real constituents of the national mind. The combination of materialistic and spiritual ideal he beautifully detected. The result of his research was depicted in forceful rhythmic language. It found the inner spirit of his countrymen and resulted an upheaval due to a strong urge for liberty. We understand why words are divine, for the combination of a couple of words—Bande Mataram—acted as an effective formula to foster determination for liberty.

"Bande Mataram, the battle cry of the *children,"* said Lord Ronaldshay, "became the war cry not only of the revolutionary societies, but of the whole of nationalist Bengal, which differed from the societies in method only and not in aim."

I have given the words of the poet as literally, as I could render them into English. To the Indian reader the original words of Rishi Bankim Chandra are well-known. In what follows, I will try to give my own translation of the words of Rabindranath and Dwijendralal, to illustrate my points.

But I shall fail in my duty if I omit here the poem of Sri Aurobindo, which is a liberal rendering of the epoch-making song:

Mother I bow to thee!
Rich with thy hurrying streams,
Bright with thy orchard gleams,
Cool with thy winds of delight,
Park fields waving, Mother of might, Mother free.
When the swords flash out in twice seventy million hands
Thy dreadful name from shore to shore
With manly strength who are mighty and stored
To thee I call, Mother and Lord!
Thou art wisdom, thou art law,
Thou our heart, our soul, our breath.
Thou the love divine, the faith
In our heart that conquers death.
Thine the strength that nerves the arms,
Thine the beauty, thine the charms,
Every image made divine,
In our temples is but thine,
Thou art Durga, lady and queen
With her hands that strike and her swords of sheen.
Thou art Lakshmi, lotus throned,
And the Muse, a hundred stoned,
Pure and perfect without peer,
Mother, lend thine ear.
Mother sweet, I bow to thee,
Mother great and free!

We notice the same psychological insight in the patriotic poems of Rabindranath. He regarded his motherland as an embodiment of physical beauty and her culture, a store-house of wisdom and eternal truths about life.

AN IDEAL INDIAN MIND

I am always inclined to take Rabindranath's as a supreme pattern of an ideal Indian mind. His love of life and nature, in all their forms and the concept of interdependence, reveal a charming undercurrent of understanding throughout his vast literary creation. He is as cosmopolitan in outlook as our ancient seers. But his essentially modern mind could not disregard the practical value of parochial cohesiveness which constituted the effective aspect of what the modern word nationality connoted. The preaching of world-peace becomes lip-deep if every unit of the universe is not allowed freedom to act and think in its own way.

The poet of the universe was intensely patriotic. His loyalty to his nation embraced every speck of dust of his motherland, her plants, fruits, flowers and her streams and hills, not to speak of her children

high or low. In a soul-stirring poem he made the following declaration—

"I received the message to-day that the dark-green earth is my pure mother;
She is the home of beauty and a storehouse of food."

When we analyse his innumerable poems and songs, composed to whip up our drooping spirit, we find that he wanted to wake us up through our instinctive love of Bharat, for her material as well as spiritual beauty. Take one of his early popular songs where he addresses the motherland as charming the mind of the universe. His opening lines describe the physical beauty of the land.

"The blue waters of the sea wash thy feet,
The dark-green edge of your raiment flutters in the gentle breeze,
The heaven kisses thy brow the Himachal mountain,
Thou art crowned with white snows."

But she possesses charms other than material.

"The first dawn appeared in thy sky,
The music of the Sama Veda was first chanted in thy hermitage garden,
In thy forest home what a mass of wisdom, faith and poems made their first appearance."

The poet often alluded to the sanctity of our country. He said in a song,

"In her temple that penetrates heaven exists the altar of the God of Life.
He is worshipped everyday with flowers."

Is this not a marvellous description of her body and spirit?

When the struggles of our patriots for freedom were very keen and the passion of the rulers for suppression violent and vulgar, Rabindranath's nature was terribly shocked. Innumerable songs and poems poured forth from his pen. There was hardly any trace of passion or intolerance in those compositions. He simply reminded us of the material, intellectual and spiritual wealth of Bharat. His love was deep and views ever optimistic.

"There is wealth in the midst of thy poverty,
In your silence lies concealed
Your flame-coloured Mantra. Grant that to us.
We shall throw off the robes of the strangers to wear your piece of cloth as a garment."

GOLDEN BENGAL

I witnessed in my early youth the profound sincerity and pleasure with which crowds of people used to sing the "Sonar Bangla" song. Those were the days of the first partition of Bengal.

"Oh my golden Bengal, I love thee
Thy sky and thy wind for ever play the flute in my life.
In Falgoon the fragrance of thy paddy fields creates intoxication.
O mother in Agrahayan what sweet smile have I seen in your loaded cornfields."

But it must be admitted that our indifference to his call for freedom sometimes filled the poet with just regret. He sang—

"If nobody comes in response to your call, you proceed alone, proceed alone, proceed alone."

In a paroxysm of despair, the poet sang—

"If in rain and storm, others close the doors of their dark room,
You proceed alone, making a bonfire of the ribs of your breast."

He loved his countrymen but sometimes he felt aggrieved on account of their apathy to respond to his appeal. Towards the close of his life, he scolde us. Said the poet :

"A country is the creation of man. If ma manifests himself, then the country is revealed. Ou responsibility for explanation will increase in propo tion to our loud proclamation about the motherlan as well-watered, richly fertile and cool with breez The question would arise as to how far can huma prosperity grow with the bounty of nature which an indirect gift. If through the agency of man, wat dries up, fruits decay, the breeze becomes poisonou with virus, the corn-fields become sterile, then a that poetic talk will not conceal the shame of th country".

This stray admonition was meant to be a co rective. Rabindranath's nature was ever forgivir and generous. His love for Bharat was full of r ligious fervour. He sang —

"Oh, Bharat, hear the poet's song on this New Year's Da
With fresh delight we have brought offerings for the worship of your fe
We have brought our physical strength
We have brought the devotion of our heart
We have brought our sense of religion
We have brought our life
We have brought the best of our offerings to dedicate to you

I would not multiply instances. It cannot denied that these patriotic songs played a promine part to rouse in us the requisite spirit for the mo war that brought us freedom.

The National Anthem very briefly takes through the extent of our motherland and her pow of absorption. But we find the same respect f the physical glory of India as for her spiritu history. Its expression of hope and the exhortati for unity is brilliant.

The song that asks the heart to quietly awak in the holy land of pilgrimage asks the Brahm in the end to purify himself and clasp everyone the hand. The country which proclaimed the i manence of Brahma in each particle of His creati branded classes as untouchable. It is an enigma.

A MISCHIEVOUS CANARD

A good deal of fuss was made by some perso who alleged that the Great Charioteer of Ma Destiny in the National Anthem, "Jana Gana Ma Adhinayaka", referred to King George the Fif Rabindranath himself refuted the suggestion.

"I should only insult myself", wrote the po "if I cared to answer those who consider me capa of such unbounded stupidity as to say in praise George the Fourth or George the Fifth as the eter charioteer leading the pilgrims on their jourr through countless ages of the timeless history mankind."

Sri Probodh Chandra Sen has informed public fully about the genesis and end of the stu allegation, in his booklet, "India's National Anther The song concluded the first day's sittings of Indian National Congress at Calcutta, held in 19 as also in 1917. In May 1947, Pundit Nehru sou the opinion of all the States about the suitabil of the song as the National Anthem of the Ind Union. He had the desired approval.

On the 12th December 1947, The Amrita Ba Patrika took up the question and discussed it. was proved that the allegation was "a mischiev canard". Said the Patrika, "That such a prepost ous proposition can be seriously made, passes comprehension."

Its charming tune and the inspiring mess

Prime Minister Jawaharlal Nehru is as deeply interested in the development of films as he is in the maintenance of International peace. In this picture he is seen discussing with Debika Rani, once a topmost film star of India, at a Film Seminar held recently in New Delhi.

FILM INDUSTRY IN ASIA

THE story of the development of film industry in Asian countries is as romantic as that of the heroes and heroines. While there is an under-flow of unity among them each of the Asian countries—China, Japan, Pakistan, Burma, Indonesia, Philippines, Hongkong and India — has a characteristic of its own. The following article makes a comparative study of these characteristics. Of special interest are the short notes on the attainments of the stars who have helped to put these countries prominently on the film map of the world. An added attraction is the wealth of pictures accompanying the article.

INDIA

INDIA ranks third in the world in the number of annual films produced, close on the heels of the U.S.A. and Japan. It now turns out some 250 pictures annually, 42 years after the making of the first Indian picture. An average dramatic feature 12,000 feet long and production cost sometim comes up to as high as 1,000,000 dollars in U. money, a fantastic figure in the light of India economy. Most of the pictures are, howeve quickies produced in a short period with lower pr duction costs somewhere around U.S. $400,000.

The first Indian picture was produced in Bo bay in 1912, 16 years after a motion picture w first shown in India. Produced by Sir D. G. Phalk it was *Raja Harischandra* featuring King Hari chandra, an important hero in Indian mythology. few years later appeared another mythological pi ture *Nala Damayanti* by J. F. Madan. It was t first picture ever produced in Calcutta that continue to be India's Hollywood until the beginning of Wor War II. With the making of the first talkie film 1931, the modern Indian motion picture indust was established. Initial years saw only 30 pictur

roduced per annum. But in 1949, the annual pro-
uction figure reached the peak of 289, then ranking
cond in the world.

00 PRODUCERS AND 60 STUDIOS

Unlike that of the U.S. and many other leading ovie-producing nations, the motion picture in-
ustry of India rests in the hands of 300 producers 1954). The phenomenon is due to the fact that ere is no joint stock company existing for the rpose of movie-making. An Indian movie producer the man who finances all the expenses to make picture and puts into his pocket all the net profit, any. Sometimes he gets some good advance money om the distributor (there are 700 of them now) ho get the distribution right of the picture. There e about 60 studios most of which are located in mbay, Calcutta, and Madras, the three centres of Indian movie industry. 3,200 theatres, a handful f them air-conditioned, are scattered all over the untry.

Motion picture industry in India plays a vital le in fighting illiteracy and raising the cultural andard of the people. To most Indian youths, orts and the silver screen are the main media of creation even in remote towns and villages. It is ported about 2,000,000 people see the movies ery day all over India. Where there is no movie use, mobile theatres make regular rounds to give e local folk opportunities to keep up-to-date with ings going on in the country and the world.

ANGUAGE BARRIER PROBLEM

Language difficulties have always been a major oblem in raising the cultural standard of India. ere are more than 200 dialects and 30 foreign nguages spoken in India to-day. Indian pictures e accordingly dubbed in in various dialects. Break-wn of the language used in 221 pictures produced 1951 follows: 99 in Hindi (official national ton-e); 39 in Bengali; 26 in Tamil; 20 in Telugu; 16 Marathi; 6 in Gujarati and the rest in ten other alects. This trend is interesting when viewed in nection with movements towards reorganising ates of India on linguistic basis. Hindi pictures ich have an all-India market are mostly produced Bombay, the centre of Indian film-making industry er World War II. Bengali films are made mostly Calcutta, some of which find their way into East kistan where majority of the population speak ngali. (Pakistan-India partition was a severe blow Calcutta moviemakers). Madras, the new-comer the scene of India's movie making, is turning out mil, Telugu, and Marathi pictures for the vast ith India markets.

ALISM VERSUS RELIGION

Themes of Indian pictures are roughly divided ler four categories: (1) Mythological ones based Hindu tales; (2) Biographies of legendary or torical heroes; (3) Action and costume dramas ked with sword-swinging heroes, and their allur-ladies, most of them based on tales from the abian Night and (4) Serious ones treating social blems centreing on the lingering caste sys-and other feudalistic customs.

Categories (1) to (3) are favourite themes of nbay pictures. They are full of music and dance ch can be understood even by the non-Hindi-aking fans all over India. Technically, Bombay-le pictures are of higher quality. From the artistic point of view Calcutta pictures are hopes of to-morrow. They reflect realistically what is going on both in the life and minds of contemporary Indians who were once called "inscrutable." Also, these pictures reflect conflicts between the old and new, struggle towards modernization, and various social dilemmas and paradoxes. To appreciate "Indian Realism," however, viewers need to understand the Hindu religion which influences the life of the majority of Indian people to-day.

INTERNATIONAL RECOGNITION

Since independence, Indian films have been steadily drawing the admiring attention of the world outside. Although India's films cannot be said as yet to have found a regular commercial window in the foreign market, they have undoubtedly found a placing on the film-map of the world. There is a new appreciation of and a new demand for the truly representative films of India which can claim to reflect the culture, art, traditions, social patterns of India and the basic approach to life of her millions. It is possibly due, in a large measure, to the new prestige India has gained in the eye of the world, thanks to the capable piloting of her affairs in the international set-up by Nehru, her man of destiny. Along with that prestige, there is a growing demand in foreign countries for an intimate glimpse of all the facets of her people's lives, their arts, their religions,—and naturally their films too. In response to this universal demand, the Government acted with far-sight in arranging to send our pick of truly good films, representative of our real Indian character, to the various international film festivals. And at these festivals, despite the great initial handicap of our language unintelligible to the foreigners some of our films were acclaimed to be of sterling merit in their contents, histrionics and execution. Films like *Do Bigha Zamin, Bhagwan Sri Krishna Chaitanya, Munna, Aandhiya* and *Awara* have been received with genuine praise and given high tributes. In the field of documentaries and shorts, India's efforts have been awarded high honours which can be gauged from the unique reputation achieved by many Indian documentaries at the different festivals. In this latter field, India's technicians have shown a wonderful knack and have shown high rate talent. The fillip had certainly been given to this new creative urge of documentary productions by the courageous initiative taken by the Government of India in setting up a regular system of production under the Ministry of Information and Broadcasting.

ATTEMPTS FOR OVERSEAS MARKET

The incentive to the achievement of international honour for Indian films was no doubt first supplied by the Government of the land when they took courage by both hands in initiating a grand-scale Film Festival of International films shown at different centres, where chosen representatives of different film-producing countries came with their pick of films and exchanged their ideas of film-making with our film people. They went back carrying a new love for Indian films and a new faith in its potentialities. This found concrete expression in the invitations that flowed out to India from abroad to send their films for international showing.

Attempts are now being made to examine the possibilities of finding a regular overseas market for Indian films in principal countries of the West and East. Already our films are being exported to various foreign countries like Africa (except South Africa)

including places like Madagascar, Kenya, Uganda, Tanganyika, to Asian countries like Afghanistan, Burma, Ceylon, Iran, Indonesia, Indo-China, Aden, Malaya and other countries of the Middle East. Of course we have yet to find a regular show-window in European and American countries. But hopes are growing in that direction also, and its realisation may not be far off.

AMBITIOUS JOINT VENTURE PROJECTS

Whatever be the present position of Indian films being regularly exported to the bigger international markets, one very notable thing has happened nearer home. India has caught the eye of the foreign film-producers as a large potential market for undertaking joint ventures in production here, on the Indian soil, of films with international prospects. During the recent years, India, particularly its key-centre of film production, Bombay, has been the nursery of many new and ambitious film projects of joint venture with foreign partnership and with typical Indian story materials. This has opened up the bright vista of large-scale employment of skilled technical and histrionic labour and of the Indians gaining rich new experience through this collaboration on an extended sphere. These ventures, when executed, will be righly expected to create or expand a new channel for exporting Indian films abroad and showing there on a reciprocal basis.

Indian technicians are being sent out abroad for foreign training in various spheres of film work and the day should not be far off when their fruits of practical study should greatly enhance the qualitative merit of our films. Already plans are under consideration for opening of factories for the manufacture of raw stock and other film accessories for which we have now to depend helplessly on the foreign countries.

STAR SYSTEM VERY POPULAR

In India, on the American model, the star system has proved very popular. Already, there are a large number of stars of regional or country-wide following who have seen to the commercial boosting up of film productions and have created a remarkable hunger for star-adoration. This has both its good side and bad, as in America, and Indian producers are now beginning to think of turning more to the inherent story values of the films than the stars who take away the cream of film earnings.

Another sizeable difficulty India's producers have to contend with is the distraction or dissipation of the commercial possibility of a production through the competition of regional language pictures. For this, Bengali films and Tamil-Telegu films considerably shift the attention of Bengali and South Indian picturegoers from the Hindi film which is the lingua franca of India. This creates unfair competition among Indian pictures themselves and takes away from the over-all possibility of a film's commercial returns. These different regional productions are naturally reared on different regional tastes and tendencies and a rational solution of this problem is still eluding her film producers. Otherwise, Indian films have a wonderful prospect of reaching down to the innermost or farthest corners of the country with their strong visual appeal and are a wonderful means of informati for huge rural populace.

Here are some of the film stars whose pictu appear elsewhere:

SUCHITRA SEN is the raging sweetheart of t Bengali screen at the moment. It is doubtful if a other Bengali star achieved such feverish popular in such a short period as this young lady whose e ceptionally good looks and glowing youth are her f tune. She first leapt into fame in Devaki Bos *Bhagwan Srikrishna Chaitanya* in the role of *Vishn priya*. Along with Uttam Kumar, she forms a roma tic team the appeal of which has yet to be excel by any other pair. She has just played her first Hi role as *Parvati* in Bimal Roy's remake of *Devdas* Bombay and, should she be a similar success on t Hindi screen as on the Bengali, a bright future a far wider canvas is awaiting her. Her new film is Devaki Bose's current offering, *Bhalobas* built around her colourful personality.

UTTAM KUMAR is the male heart-throb of t Bengali screen, than whom a more popularly acclai ed star the Bengali screen has not yet produced. is the producer's dream, so far as characterisation the fresh glow of romantic youth is concerned. He at his liveliest when he is the "Beau Ideal" of Suchit Sen, the two together as young partners in the lo game on screen creating a sheer sensation result in long queues before the cinemas. What marks Uttam Kumar's screen characterisations is his e and natural style of acting which makes you for he is acting at all and brings life to his roles. He also the most welcome romantic "hero" on the Be gali stage of today, as will be evidenced from unique popularity in *Shyamali*. Uttam's rise to fa was marked from the film *Basu Paribar* before wh he had been struggling for a footing on the scre His next films include *Sabar Upare, Sagarika* a *Chira Kumar Sabha.*

NALINI JAYANT is one of the popular lead ladies of the Hindi screen on the younger side. She as much at home in roles of young romance as those calling for fine shades of serious histrionics mellow tragedy-acting. She was an immediate sen tion when she first appeared on screen at the ten age of sixteen. Her extra ounce of popularity derived from her skill as a dancer. Although screen appearance extends over quite a number years, it seems that has hardly taken away from t keen edge of her popularity. Her most recent succ is in *Munimji.*

MEENA KUMARI, according to many pictu goers, represents the finest shade of beautiful roma tic charm on the Hindi screen. She drew salvos praise in the notable film *Baiju Bawra* as the roma tic inspiration of the hero and has ever since be steadily coming up in each successive appearan While she is one of the most looked-for leading st of the Hindi screen, she is equally a rage with Be gal's countless picturegoers and for this she must grateful to Bimal Roy in whose Hindi version *Parinita,* she stole her way to the heart of Ben with her delicately sensitive handling of the role the young heroine of the story. Her recent success in *Azad* which is having a bumper run everywhe Meena Kumari is possibly most desired by filmgo as the romantic screen counterpart of Dilip Kuma

SABITRI CHATTERJEE is one of the most pendable stars of the Bengali screen whose app as a character artiste is as strong as in any ot shade of romantic acting. Her versatility as a tra dienne and a comedienne is a matter of keen app

iation of both screen and stage lovers, an easy flight ver all ranges of expressions with consummate grace narking out her style of acting. She first struck veryone with her remarkable dramatic promise in he stage-play *Nutan Ihudi* and was chosen for the rst screen role in the hectic comedy *Pasher Bari* in hich as its ebullient and young romantic heroine he became an instant idol of picturegoers' fine exectations, but her popularity possibly reached its ighest peak in *Shyamali* as its deaf-and-dumb eroine.

KAVERI BOSE is the newest sensation on the engali film firmament and at a time when Bengal's lm-makers were desperately looking for a new emmine face, Kaveri's advent was hailed with unoncealed glee by filmgoers as the sweet and soulful *aikamal* girl. She exuded in it a fresh glow of youth nd maiden-like simplicity, coupled with a remarkle ease and unconscious poise of acting, which ruck everyone as a fresh breath of breeze and put er feet firmly on the road to popularity. Possibly no her screen heroine has been blessed with such a irst of popular acclamation in her very first appearnce as this teenager actress whose additional qualies of a first-rate dancer stand her in excellent stead all her future screen designs. Although she has ot quite repeated the flushing success of her first le in her second there will be little doubting the armth of soulfulness in her acting which is sure to e rewarded with a steady rise to fame. Her next big signments include the name role in the film verons of *Shyamali* and *Drishti*.

DILIP KUMAR is the busiest and most popur hero of the Hindi screen whose spell of romantic peal is a matter of delight for picturegoers throughout India. It is difficult to choose his successful pearances one from the other but among his meorable appearances one certainly remembers with armth the films like *Daag, Andaz* and *Aan*. Two of s most recent thundering successes are *Azad* and *saniyat* in both of which he scores an easy triumph h his carefree and yet intensively emotional style acting. Possibly the most significant role of his eer will be as *Devdas* in Bimal Roy's remake of the at Chandra classic in which he plays the leading e.

MADHUBALA, known as the Venus of the Indian een, is an actress whose beauty is of the classic del and makes her one of the most sought for nale stars of the Hindi screen. She scaled the ghts of fame in that famous film *Mahal* which de her the film darling of picturegoers. She has, wever, yet to show her dramatic mettle as firmly the other leading actresses, beyond what she ieved in *Mahal*. She has also tried her hand at film duction with some success.

NARGIS is described as the finest dramatic iste among the female stars of the Indian screen. is one who is possessed of a peculiarly fascinatcharm of personality and although her beauty is he irregular variety, she radiates an exquisite cefulness and dignified femininity that find elot expression in each of her screen portrayals. is undoubtedly the finest tragedienne on the di screen and her remarkable poise and restrainxpression give her a ring of elusive charm which yet to be attained by any other Indian female . She is at her best in her romantic screen partnip with Raj Kapoor. Her recent smashing suc- is in *Shree 420*. Among her other notable mphs are *Barsaat* and *Awara* and *Andaz*. She is daughter of the famous singer Jaddan Bai. When she came to Calcutta last her unique popularity was proved delightfully anew.

SANDHYARANI is believed to be the screen Cinderella of the Bengali screen whose spell of radiant popularity seems to be increasing with maturity in years. This girl seems to typify with wanted grace the roles of unsophisticated and coy maidenly charm while her roles as the young wife or the sweet mother fit her like the proverbial gloves and are always greeted with loud acclaim. Never seeming to grow up, this sweet 'evening queen' of the Bengali screen has probably enjoyed the longest spell of popularity that ever came the way of a star. To count her film successes is a nearly impossible task although one can easily think of her in rapturous terms for her beautiful and warmly human performances in *Bindur Chheley, Mane-na-Mana, Sahar Theke Dure, Nishkriti, Bidhilipi*. Her most recent film is *Mahanisha*. She was first hailed as a sweet, new screen thing of immense charm in Sailajananda's *Nandini*. Sandhya occupies a unique place in the heart of Bengal picturegoers.

ANUBHA GUPTA is among the most capable artistes of the Bengali screen whose gifts of emotional expression in roles of sensitive depth have been proved to the hilt in film after film. She was first discovered in *Bish Bachhar Agey* but won raving popularity as *Thakurjhi* in Tara Sankar's *Kavi* and *Bowrani* in *Ratnadeep*, thanks to the wonderful handling and understanding by Devaki Bose. Her recent success is in *Anupama* in which she brought out the poignant psychology of the Bengali working girl. Among her future films is *Kalindi*.

BIKASH ROY is one of the two most popular heroes of the Bengali screen but is a positive idol of filmgoers when in roles with a shade of villainy. It is difficult to forget his stylish and personally polished acting in *Bhuli Nai* and *'42* while as the hero of *Ratnadeep*, he surprised everyone with his fine flair for character acting. He is as much capable in serious roles as in those of light comedy. He has now turned to the production and direction along with his screen acting and is expected to make his mark there in the same easy manner as his acting. He was formerly on the acting staff of AIR where he is still possibly the most popular hero.

RAJ KAPOOR is the most carefree and ebullient hero of the Hindi screen whose innocently roguish charm and irrepressible youthful dash instantly win over any picturegoer. In popularity, he is quite in the same class with Dilip Kumar and many believe that if he chooses to eschew a certain studied kind of deliberate over-acting, the smart appeal of his screen acting will acquire a new grace and depth. He is now possibly the most popular director-actor-producer of India and in all the three realms he has proved his mettle in unmistakable terms. His *Awara* created wild popularity in Russia where he is said to be even more popular than our Prime Minister, and that is saying a lot. His recent towering success is in *Shree 420* in which as its hero he cultivates a style of acting so akin to Chaplin's. As a producer, he combines idealism with showmanship.

JAPAN

THE Japanese film industry, ten years after the war, ranks to-day the 2nd in the world in annual production of pictures. More than 300 pictures are turned out in a year by six major film companies —Daiei, Toho, Shochiku, Shin Toho, Toei, and Nikkatsu — and several independent productions.

More than 700 feature films and 300 newsreels are exported annually, bringing back some 1,500,000 U.S. dollars to the Japanese film companies. To Okinawa, 350 pictures are exported a year, while over 120 go to South-East Asian markets. Foreign films imported number about 200 a year. Most of these foreign pictures are from Hollywood. French, Italian and British films are also boxoffice favourites. Once in a year or two, films from other parts of the world including Russia, Scandinavia and Mexico are also imported. Boxoffice incomes from these foreign pictures occupy as much as 35 per cent of the total annual revenue of Japan's theatrical business.

More than two million people see movies everyday all over Japan.

HISTORY OF OVER HALF CENTURY

Behind the present-day high level achievement of Japanese film industry is more than a half century long history. It was in 1899 when the first dramatic feature was produced in Japan by an all-Japanese staff and cast. The first motion picture was introduced from the U.S. in 1897. 1912 saw the birth of the first full-fledged motion picture company — present Nikkatsu — with a capital of 27,000 dollars. An amazing phenomenon in early days was the fact that no actress worked in Japanese moviedom. "Oyama", world-famous Kabuki actors who always play female roles, also had major parts on the silver screen until 1921 when Shochiku was established and employed actresses for the first time in the history of Japanese moviedom. The first Japanese talkie — *Madame and Mrs.* — was produced by Shockiku in 1932 with a tremendous boxoffice success. By 1935 all Japanese pictures entered the age of talkies. In 1936 Toho entered the field which until then was monopolized by Nikkatsu and Shochiku. In those early days, most of the moviemakers were leftist-minded. In the form of "samurai" pictures or comedies, miseries of the poor were picturized in many a Nikkatsu film, while Shockiku specialized in turning out tear-jerkers and melodramas, the tradition of which won a unique position for Shockiku in Japanese film industry. Toho pictures gained popularity by portraying hopes and troubles of the contemporary youths.

IMPACT OF THE PACIFIC WAR

Shortly before the outbreak of the Pacific War, Nikkatsu and several minor productions were amalgamated into the Daiei by order of the Government. Daiei, Shockiku, and Toho were the only three film companies which continued production during the war. For several years following the war-end, Japanese film industry had been on the verge of collapse. Productivity was low because of war-damages, while Hollywood pictures literally flooded Japanese movie markets. The management tried to overcome the crisis by mass discharge of studio personnel. The organized moviemakers fought back by going on strike. Their slogans included "Protect Japanese film industry," "Influx of Yankee films must be checked," "Japanese pictures for the Japanese," etc. Month-long Toho studio strike resulted in the birth of another movie company—Shin Toho Company—in 1948.

MacArthur-backed purge of Communist and fellow travellers of the moviedom as well as the press, radio, and government offices was enforced in 1950. The purgees, among whom were veteran film directors Tadashi Imai, Kozaburo Yoshimura, Fumio Kamei etc., organized independent productions and turned out anti-war and anti-fascist pictures. Most of their pictures drew boxoffice success and the age of independent productions came to fore. In the meantime, Toei which specializes in producing medium-length "samurai" pictures or detective films mainly aimed at teenage fans, was established. In March, 1954, Nikkatsu resumed its production after nearly 15 years. To-day, six major companies,—Daiei, Shochiku, Toho, Shin Toho, Toei, and Nikkatsu—are vying for supremacy in Japanese movie markets where new pictures are released every week in major cities all over the country.

THE HIGHEST PAID ACTOR TODAY

Japanese film industry is the biggest of the nation's entertainment enterprises. Boxoffice incomes per year amount to 125,000,000 U.S. dollars of which 65 per cent is those from Japanese films. Production costs of Japanese pictures are 70,000-100,000 U.S. dollars for an average feature.

Release of some 10 new pictures every week contributed to the birth of a number of young actors and actresses who star in programme pictures and quickies, most of which feature sword-swinging "samurais" or trigger-quick detectives aimed at teenage fans. Typical among the screen idols among the teenagers is 23-year-old Kinnosuke Nakamura who has starred in more than 30 pictures since his debut in April, 1954. Kazuo Hasegawa is the highest paid Japanese film actor who has been maintaining his popularity as "The Most Handsome" and talented "samurai" player for the past 30 years. Ever-increasing popularity of Nakamura and his good rivals, Senjaku Nakamura and Chiyonusuke Azuma, reflects Japanese teenagers' mental trend. They seem to appreciate sex appeal reversely. The age of he-man and she-woman is gone and she-man and he-woman age has come. Naturally, Kinnosuke Nakamura and Senjaku Nakamura are both former "Oyama", Kabuki woman impersonators.

MANY INTERNATIONAL PRIZES

Daiei's *Rashomon* (Machiko Kyo—Toshiro Mifune) was the first Japanese feature film that made the world recognize high-level artistic and technical standard of Japanese film industry. It won 1951 Venice Grand Prix and many other international prizes and was shown in many countries of the world. In 1952, two pictures were awarded international prizes, Daiei's *Tales of Genji* at Canne and Shin Toho's *Life of Oharu* at Venice. In 1953, Deiei's *Ugetsu Monogatari* won the Silver Prix at Venice while *Entotsu No Mieru Basho* was awarded the top prize at Berlin. A Grand Prix was copped again when Daiei's Eastman-colour *Gate of Hell* won the top prize at 1954 Canne International Film Festival, while at Venice Toho's *Seven Samurais* was given a high award the same year. At South-East Asia Film Festivals, Shockiku's Eastman-colour *Golden Demon* and Daiei's *Tales of Shunking* won the highest prizes in 1954 and 1955 respectively.

LEADING STARS

Here are some of the film stars whose pictures appear elsewhere :

MACHIKO KYO seen in the picture with her make-up, hairdo, and costume for the role of Yang Kwei-fei, world-renowned historical Chinese Beauty Queen, lives up to her international fame as a typical Oriental beauty.

The curvacious actress has already won two Grand Prix, one for *Rashomon* and the other for

Gate of Hell. She also won a 1955 American Academy Award for her supurb acting in *Gate of Hell.* More recently, *Tale of Shunkin* starring her, won the Golden Harvest Award at the 2nd South-East Asia Film Festival held in Singapore in May this year. In Japan, she has been given various top prizes for the past six and a half years since her film debut in 1949.

The ex-boogie-woogie stage dancer who is now 31 years old, has never been married and is one of the few film stars without a scandal.

HIDEKO TAKAMINE, only 31, is the most talented film actress of Japan in her prime. She monopolized all the top prizes from various organizations for the best actress of 1954. Her popularity is, however, 26-year-long since her film debut in 1929. When the war ended, Hideko had to face a crisis in adapting herself for a woman's role from that of acute teenager. Takamine went to Paris all alone to spend several months in a backstreet apartment house in preparation for her rebirth. She came back from Paris to become a most talented character actress on the Japanese silver screen. Her book *'Lone Traveller in Paris'*, a best-seller, shows her all-round talent and a bit cynical attitude towards life mixed with humour. She married an up-and-coming film director and scenario-writer Zen Matsuyama last year. Two of her pictures are among the top ten boxoffice hits during the first half of 1955.

MICHITO KOGURE is a well-known leading lady of the Japanese films, whose sketch of a geisha girl in the film *Miyamoto Musashi* focusses popular attention on it. In the picture she is being given the final touch before shooting by her director Kenji Mizoguchi who is noted as the greatest film director to depict Japanese women on the screen.

CHO-CHO SAN-KAORU YACHIGUSA has made a successful debut in the international filmdom, as heroine in *Madame Butterfly,* the first Italo-Japanese joint production filmed in Italy last year. She is a popular member of the Takarazuka Girls' Opera Troupe. Her first picture was made in 1951 when the nation was hit by "teenage star" boom.

PAKISTAN

PAKISTAN'S film industry is still in an embryonic stage, with less than five films produced annually. There are altogether three major film studios in the country located in Lahore and Karachi. Pioneers in Pakistan moviedom are mostly India-trained. They came to Pakistan with the national independence, leaving behind their fame in India, to start from the scratch and to lay a firm foundation for the nation's film industry. Close co-operation is maintained between Pakistan and Indian filmdoms so far as stars and technicians are concerned, as in the case between Hongkong and Taiwan. Pakistani stars are still invited to Bombay, the Hollywood of India, for joint film making.

LEADING STARS

In the picture published elsewhere *RANA* of the Malaka Pictures (Karachi) is seen in "farak" dress with "Rupota" around her neck. She poses an exotic beauty and can well be called Pakistan's counterpart of Dorothy Lamour.

SABIHA is a leading film star in Pakistan. In the picture elsewhere she is seen in *Qatil,* a latest Pakistani film produced by Kamal Pictures.

CHINA

FILM industry in Taiwan rests in the hands of a few motion picture companies which together produce about 10 pictures every year. Movie halls in Taiwan number some 320, most of which are in Taipei and other major cities of the island nation.

As the total number of domestic productions are not enough to meet the demand of the local movie fans, pictures from Hongkong, America, and Japan find a good and steady market in Taiwan. Language difficulties are out of the question in the case of Hongkong pictures while Japanese pictures are also enjoyed by the public most of whom understand Japanese, due to the long period of Japanese occupation of the island before the war.

Taiwan moviemakers work in close co-operation with their Hongkong counterparts. Sometime a Taiwan star plays the title role in a Hongkong film. Sometime, it is the otherway round.

LEADING STARS

Here are some of the stars whose pictures appear elsewhere :

MU HUNG, in her tight-fitting Mandarin dress is China's counterpart of America's Marilyn Monroe for obvious reasons. The 24-year-old glamour girl established her name by her supurb acting in *By the Hillside,* Nationalist China's entry to the 2nd South-East Asia Film Festival held in Singapore in May this year.

CHANG CHING-WEN is an actress who usually personates a hot tempered woman. Since her film debut last year, she is steadily winning her popularity throughout the country.

WU CHIN-HUNG whose popularity in Nationalist China is tremendous may well be called a veteran film queen.

BURMA

"SILENT AGE" yet goes on here. Burma is a young country and so is its movie industry. It seems the "silent age" is yet to continue for some time in Burmese flickers.

Of the 40-odd pictures Burma produces annually, less than one-seventh are talkies. Throughout Burma there are 150 movie houses, two thirds of which have no sound system for showing talkies. Moviegoers number only 55,000 a day.

Although there are some 100 motion picture companies, the bulk of them have no camera nor studios of their own. Only four of them are what might be called full-fledged film companies.

Government's encouragement to Burmese moviemakers is given in the form of Academy Awards for the year's best actor, actress, supporting players, and directors.

LEADING STAR

KYI KYI HTAY, petite and pretty, (picture elsewhere) is one of the few born talents on

Burmese celluloid. Starting her stage career at the age of three, she was given the Best Actress Award in 1952.

INDONESIA

INDONESIA turns out some fifty pictures a year to be shown in its six hundred movie houses all over the nation.

Major film companies number only three. The Government, on the other hand, has been producing newsreels, educational and cultural films as one of the important weapons to combat the high illiteracy ever since the national independence. Government-operated mobile movie show groups make regular rounds from island to island throughout the country. Government students are sent overseas to study modern techniques in movie making.

LEADING STARS

TITIEN SUMARNI, "Queen" of Indonesian silver screen, 1954, is seen in her dazzling national costume in the picture published elsewhere. She was voted the most popular and the most beautiful star, and the best actress in a nationwide public poll.

NANA MAYO (picture elsewhere) is one of the most popular up-and-coming actresses of Indonesian moviedom.

PHILIPPINES

THE Philippines is the fourth biggest movie-producing country in Asia, following Japan, India, and Hongkong. About 100 pictures are produced every year by 14 motion picture companies in the country. On the other hand, about an equal number of American films are imported every year.

Movie-goers per day are estimated at one million throughout the nation which has 500 movie theatres. Manila is proud of its movie theatres which are equipped with up-to-date air-conditioning and other facilities.

Unlike in other Asian nations, most of the pictures made here are dubbed in English which is taught on compulsory basis in the country. Even Tagalog pictures are superimposed with English. Hollywood influence is dominant in her pictures. Melodrama makes up the bulk of them, while historical dramas drawn from the Philippine history are also popular themes.

The Philippines is a member nation of the Federation of Motion Picture Producers in South-East Asia which already sponsored annual South-East Asia Film Festival twice since its founding in 1953.

LEADING STARS

In the pictures published elsewhere are the three stars in the Philippine filmdom whose names are all-time drawers of boxoffice success. Actor *JOHHNY REYES* is the winner of the Best Actor Award in the recently-held 2nd South-East Asia Film Festival in Singapore, while his actress-wife *TESSIE QUINTANA* (c) is considered one of the most talented and popular senoritas on the Philippine silver screen. *ROSA ROSAL* (r), who usually portrays a third party, has come to star in several pictures in these few years.

DE LA ROSA in a Tyron-Power-like makeup (picture elsewhere) gets his costume checked before studio shooting of a historical feature. At right is actress Elena Acosta, up-and-coming starlet who was picked to co-star with the most handsome actor in the Philippine moviedom.

HONGKONG

THE sunny, scenic Hongkong is the dream-making factory for millions of Chinese movie fans turning out an average of 200 pictures annually.

Dubbed in Mandarin (official Chinese tongue) and Cantonese dialects, Hongkong-made pictures find their way into vast overseas markets in South-East Asian countries, Taiwan, North and South America and anywhere that has a Chinese community. In turn, millions of dollars are brought back to Hongkong moviemakers from all over the world.

In Hongkong there are about 50 movie theatres. It is estimated that 70,000 people a day go to the movie theatres.

Seven is a lucky number and Hongkong has seven major film companies which are proud of their up-to-date equipment and facilities. Also, there is a large number of independent producers, actors and actresses.

DREAMS ARE MADE AT NIGHT

Hongkong moviemakers are mostly night workers because of the sub-tropical sun in the daytime. Seldom can movie fans see Hongkong stars loitering on the street or dining in a swanky restaurant. While most people are sweating it out in offices, "stars" are taking their siesta in their deluxe beds. When other Hongkongites start to hit the hay, the "stars" rise to make dreams on celluloid.

Hongkong pictures are made in two Chinese dialects. Pictures in Mandarin (official Chinese tongue) occupy about 25 per cent of the total annual production of feature films. They are usually of higher quality than those in Cantonese, another popular Chinese dialect dominant in the Hongkong area.

Production costs of Mandarin pictures range between 16,500 and 40,000 U. S. dollars. Cantonese films, mostly quickies, are produced with costs ranging between U.S. $8,500 and U.S. $16,500.

LOCATION CRAZE HITS THE COLONY

The year 1954 brought a new trend in Hongkong movie industry. Craze for location-shooting outside the tiny colony was prompted by an influx of foreign location teams. Two American location groups visited Hongkong in 1954 and in early 1955. Clark Gable, William Holden, Susan Hayward, and other stars were among the groups. A Japanese location team followed, bringing Keiko Kishi who was picked recently by David Lean of Britain to star in *The Wind Cannot Read* and other Japanese stars.

The frequent visits of movie-makers from abroad prompted their Hongkong counterparts to realise that genuine background is far better than studio sets.

Towards the end of 1954, the first moviemakers group from Hongkong flew to Tokyo to participate in the making of Daiei's *Yang-Kwei-fei*. With the turning of the year, popular Hongkong actresses Li Li-hua, Lin Dai, and directors and producers visited Tokyo to find out possibilities of making Chinese or Sino-Japanese joint films in Japan.

A flow of Hongkong moviemakers went to Japan in spring this year to shoot locations with Japanese background.

As Japan appeared to be the most popular place

Patriotic Bengali Songs

(Continued From Page 151)

induced the Netaji to accept it as the song of his Army.

We must not forget the bold stand taken by poet Dwijendralal, a Government servant like Bankim, in his composition of patriotic songs. He loved the country with the same outlook. He rejoiced in her beauty, and felt proud in the glory of her spiritual past.

The poet in one of his well-known songs, admitted that the earth was replete with wealth and crops. But said the poet about our motherland,

"There is one country which is better
than the rest
That is made of dreams and hedged
with memories."

The poet described the physical charms of his motherland.

"Where are the sun, the moon, the
planets and the stars so bright"

Any one from other parts of the world could boast of his country in those terms. The poet however claimed all the beauties for his own country. He then sought to wake us up with memories of Buddha and Asoka, Nimai and Chandidas.

In the strain of Thomson, Dwijendralal, in a popular song, narrated the great events that were predicted when Bharat emerged out of the azure main. It did not end however with the characteristic craving for liberty of the British. Sang Thomson,

"When Britain first at Heaven's command
Arose out of the azure main
This was the charter of the land
And Guardian Angels sang the strain
Rule Britannia rule. Britannia rules the waves
Britons never shall be slaves."

In Bengal every poet wrote inspiring poems to help us in our struggles. Every Indian language has national patriotic songs which inspired patriots and martyrs. It will make a big volume when those songs and poems are all collected. We owe a deep debt of gratitude to these writers, composers and singers.

Film Industry In Asia

for scenic background for Hongkong films, the craze will continue for sometime.

Runde Shaw, is one of the foremost pioneers of Hongkong movie industry. It was in 1937 that this "Samuel Goldwyn" of China established the Nanyang Motion Picture Co., bringing a handpicked cordon of technicians and stars from Shanghai. Runde Shaw represents Hongkong on the 7-Nation Federation of Motion Picture Producers in South-East Asia that has been sponsoring an annual Asia Film fiesta since 1954.

LEADING STARS

Here are some of the stars whose pictures are published elsewhere :

LI LI-HUA, Queen of Mandarin Films, is at the height of her career in her thirties. She has been receiving highest remuneration in the Hongkong stardom. She organized a production of her own and has already made four pictures. She has oft-times won the best actress award in Hongkong by popular polls. Her name made newspaper headlines in Japan when she was given a special award at the First South-East Asia Film Festival held in Tokyo in 1954.

LIN DAI is on her way to the peak of her career, teaming with popular actor-director Yen Chung. The pair has come to establish recognition within the past few years as a sure drawer of box-office success.

LIU EN-CHIA, popular comedian, who has the knack of giving belly-laughs to the spectators, plays the part of an ox in the picture which pulls a cart-load of two Chinese beauties in a scene of his recent picture.

Multi-Purpose Food For The Masses

(Continued From Page 147)

makes a nutritive and palatable food. The nutritive value of this food may be further enhanced by the addition of black gram flour and sesame flour. When given to albino rats at 12% level as a supplement to the poor rice diet, this food results in a growth rate of 15-16 g. per week. Trials with humans have given similar encouraging results. It is estimated that 2 oz. of this food costing about an anna will supply a large portion of the minimum requirement of nutrients sadly lacking in our diets.

This food which has now come to be known as the Indian MPF can be used either as a *dhal* or in other preparations. Its palatability and versatility have been fully demonstrated. A large number of sweets and savouries besides biscuits and other appetizing dishes have been made from them.

PRODUCTION FOR MILLIONS SOON

Thus, the Indian MPF developed by the two Institutes in Bangalore and Mysore offer great promise since they represent high nutritional values in proportion to cost. While they will serve essentially as supplements to the poor Indian dietary, they can also, during times of emergency, supplant the staple food without spelling any deficiency diseases. Further collaborative studies are in progress at the two Institutes and within a short time, the Indian MPF will be produced for the millions who need it. Besides fighting starvation and malnutrition-caused-diseases, the Indian MPF will also play a leading role in preventing scourges like tuberculosis and thus result in measurable gains in national health.

Professor John Yudkin, an eminent nutritionist of London, says, "The production of Multi-Purpose Food from nutritious sources which would otherwise go to waste is a considerable step forward in the problem of dealing with malnutrition. The importance of the achievement is not only that MPF supplies those nutrients commonly lacking in the diets of under-nourished peoples but that it supplies them in a form which can be made into innumerable palatable foods and dishes. This lead given by Indian research workers at the Central Food Technological Research Institute, Mysore, and the Indian Institute of Science, Bangalore, will undoubtedly be followed by those responsible for eliminating malnutrition in so many other parts of the world. As a nutritionist, I am most impressed by this food which is so acceptable has such good keeping qualities and above all can be produced so economically."

A Meals for Millions Association of India (MMA) was formed in New Delhi on June 3, 1955 with Dr. Panjabrao S. Deshmukh, Union Agricultural Minister, as President, and Lady Dhanvanthi Rama Rau (Bombay), Mrs. Mary Clubwala Jadhav (Madras) and Dr. S. R. Sengupta (Calcutta) as Regional Vice-Presidents. Dedicated to the relief and prevention of malnutrition, this Association will have for its sole activity the popularisation of the Indian Multi-Purpose Food, about which more particulars can be had from the author, care of the Central Food Technological Research Institute, Mysore.

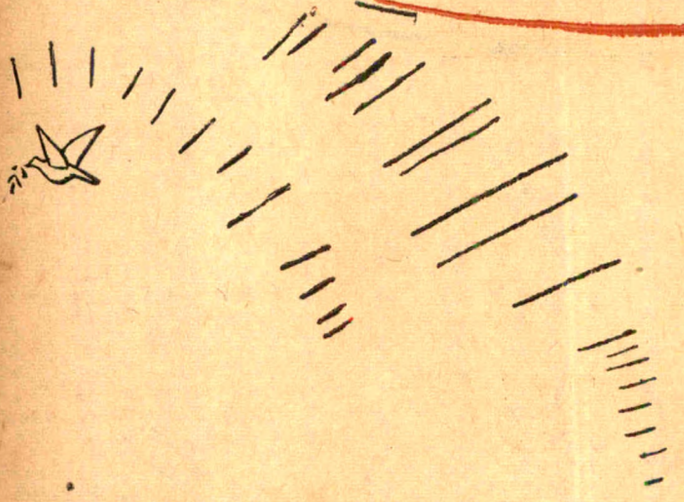
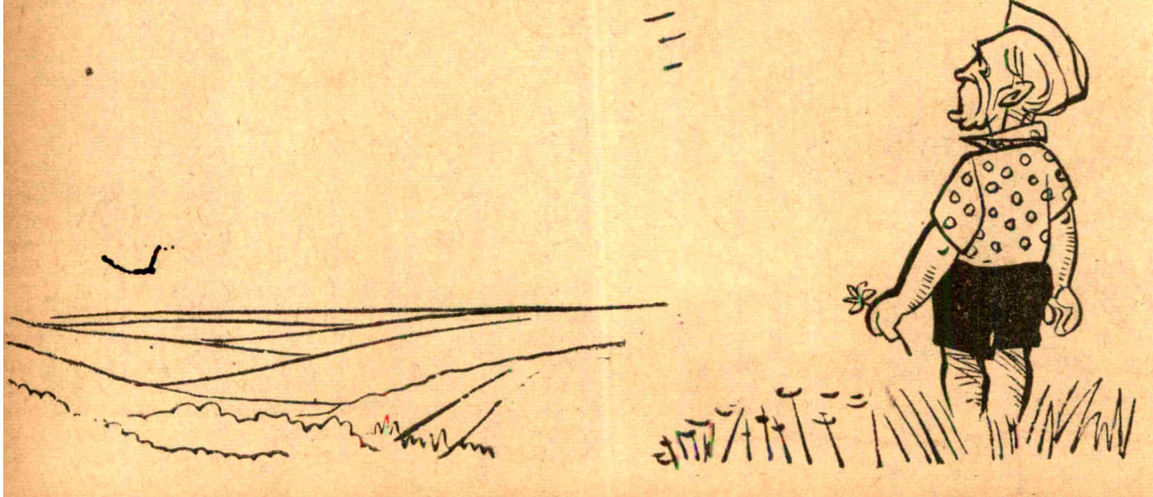
"BITTER RICE"



"BLUE BIRD"



PUJA LIGHTS

by M. A. Mazmudar

DEAR old Uncle sat sprawling on the solitary 'gadi', against a big bolster, in our large sitting-room. He was deeply engrossed in his contemplation of the string of coloured bulbs we had hung up over the entrance in honour of the festival. An occasional nod of his round bald head indicated that he was experiencing a feeling of profound pleasure. I sat cross-legged against a wall, trying not to listen to the various after-supper noises the old geezer on the gadi emitted from time to time. Auntie was busy in the kitchen, winding it up for the night. Cousin was upstairs, making our Heath Robinson swing, creak and cry with her weight which was a whale of a lot more than her age warranted. Things were at their sweetest and brightest when all of a sudden the electric lights went off. It was as if an invisible hand had plucked us from the dazzle and pitched us into a murky darkness. I stared into the woolly blackness till my eyes pained. And then knifing through the rayless murk came the frightened shriek of Cousin. I was up on my feet, feeling the wall behind with my hands, straining my eyes harder, seeing sable only.

"That little witch !" ground out Uncle. "Hey ! Do you hear ?"

"You mean me, Uncle ?" I asked, keeping where I was.

"Damn well you, idiot. Who else could it be ?"

"I am sorry, Uncle."

"Sorry be jiggered. Is this the time and the occasion to ask stupid and unnecessary questions ?"

"I only...."

"Shoot up there quick, or that little cuss will breathe her last. Secure the front-door first. You never know what bad characters are about. Light the old kerosene lanterns, and bring one here. Why isn't your fool of an aunt doing something about it at once ? Never met a sillier female in my life. I ought never to have married her. But I was forced to, that's what it was. Well, now what's the matter, hein ? Fuse gone, or the line dead ? What do the power-house loons mean by this ? And they ca'l this a festival ! Are you attending to me, nephew ?"

"Yes, Uncle."

"Well then what the blankety-blank do you mean by not carrying out my orders immediately you gastric ulcer ? Look alive, you pustule !"

"Oh, Ma, I'm no more !" Cousin pealed out from the room upstairs.

"Stop screaming, you little reptile !" Auntie transmitted from the kitchen.

"But I am dying !"

"I wish you were, you enemy of my former birth !"

"I want to come down ! I can't see anything O but it's so dark !"

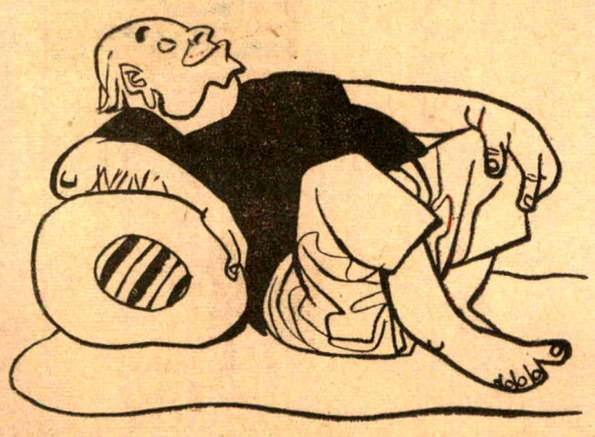
"You just keep your trap shut, you little snake I am coming."

NO NAVIGATOR IN DARK !

I must frankly admit that I have never enjoye much of a reputation as a successful navigator in state of utter lightlessness. I daresay there are me with a certain sixth sense who can nicely trace thei way through quite unrelieved darkness in the manne of cats. But, alas, I am not one of them. My min urged me to obey Uncle and make a bee-line for th stairs; my body urged me to stay rooted where was. I made a shuffling noise.

"You still there ?" rang out the old buster.
"Yes, Uncle," I told him, meekly.
"Why the dash dash dash don't you go ?"
"I'm going, Uncle."

And I made a couple of blundering movement then stood still. Great Ganapati ! I had forgotte the whereabouts of the exit ! I stretched my arm in front of me and slowly pivoted round. Good luc I contacted a wall. Something achieved, what ? grinned happily at the billowy blackness in front o me, and, my left hand pressing along the wall, cre cautiously forward, hoping to find the outlet th way. A corner of Uncle's gadi thrust itself in m way, caught my right foot, and dealt me a viole lurch that made my spine suffer a twinge of e cruciating pain. I went berserk with rage. I a



ministered to the offending corner the fruitiest kick of my life.

"Ooooh !" rose an anguished groan. Obviously, its source was the occupant of the gadi.

"Was it you, Uncle ?" I inquired, greatly taken aback.

"You just let me get at your damned throat !"

"I thought I was getting at that corner of your cushioned seat, Uncle. It came in my way and very nearly broke my spine. I'm very sorry, Uncle."

A voice resembling the noise of a saw working upon the toughest Malabar teak chopped up the darkness. I edged away from it, and was tripped up by the wooden threshold and hurled against the wall of the passage outside the sitting-room. It required unique self-control and effort on my part to steady myself after that murderous impact. When the last star had winked out of my head, I spread out both my arms so as to feel the walls, and charged ahead. It was of vital importance that the front door be secured against shady characters who take a disadvantage of such occasions. Half a minute of full careering, and then I ran full tilt against a body whizzing up from the opposite direction. However, I could contrive to maintain my perpendicular position in spite of the collision. But the body slumped down, and seized my legs.

"Ooooh !" the body moaned most wretchedly.

"That you, Anutie ?" I asked, gravely concerned.

"You addlepated bonehead !" sizzled the dear old relative, after taking a couple of deep breaths.

"I am awfully sorry, dear Auntie," I apologized. "Are you badly injured, dear Auntie ?"

"I'm just alive, you moron."

"Thank God, dear Auntie."

"What made you gallop so fast for the kitchen?"

"I thought I was heading for the front door, dear Auntie. Must be closed at once against nocturnal birds of prey at all hazards. Why haven't you lit our lanterns, dear Auntie ?"

"Oh, Ma !" screeched Cousin, lustily.

"That little coward will kill herself with fear," crackled Auntie. "I must hurry up to her. You'd better fasten the front door and get back to the store-room for the lanterns. They're there in a corner. You'll find the matches somewhere on the shelf beside the kitchen-door. I couldn't locate them in my haste."

"Light !" boomed out Uncle, still on his comfy seat.

"I'll see to it all, dear Auntie," I told Auntie.

"Light, woman !" yelled Uncle.

"Patience, man !" yelled Auntie.

"Talking back, are you ? Just let the lights be on once more and I'll show you your place in this house, you jelly-brained bit of no-good !" stormed Uncle.

"Silence !" shouted Auntie.

"Ma !" shrilled Cousin.

"I'm coming, you gutless weakling !" yapped Auntie.

OPERATION LANTERN

And we stumbled forward, the darkness so solid you could have driven a nail into it with a hammer. I left Auntie at the foot of the stairs, and then branched off towards the front door. I had not moved far when my eyes made out a tall obscurity which moved a couple of feet from me.

"Who's there ?" I demanded, loudly, my heart thudding against my ribs.

No response.

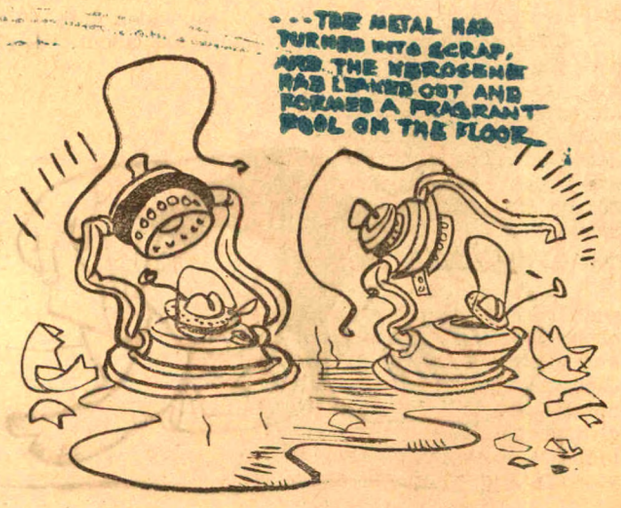
I summoned up all my courage, and let a tightly clenched fist go at what I thought was the head of the silent shape. A terrific bang and I kunckled under, hugging my fist to my pounding heart. The silent shape was not a night rover. It was our dear old front door, and my tightly clenched fist had struck it. The throbbing agony took a good few minutes to subside a little. The edge of the pain gone, I collected myself and barred the door almost scorching it with some white-hot expletives. And then my ears were assailed by cries of an unnaturally expiring animal, crisp knocks, and language raised to ignition point. Mother and daughter had met upstairs on a tide of mutual love.

"Light, you vixen !" thundered Uncle, helpfully.

I groped my way back to the store-room, and made a successful entry. Unfortunately, before I could start my search in it for the lanterns, I happened to step on something soft and warm and creepy, and jumped ceilingward. Obviously, one of the resident mice. But I didn't know the fact at the moment. I jumped high and landed on the broadest part of my anatomy. Incidentally *I located the lanterns.* But I did so with the anatomical territory aforementioned. To be precise, I had dropped plumb on the lanterns. The cursory tactile examination that followed revealed the disconcerting fact that the glass had reverted to its constituent particles, the metalwork had turned into scrap, and the kerosene had leaked out and formed a fragrant pool on the floor.

I had a very strong desire to join Auntie upstairs. I floundered out of the room, and somehow reached the stairs. When I was about half way up, there issued a blood-curdling triple shriek, and a human avalanche bore down on me and swept me down to the bottom of the stairs with it. As I discovered later, Uncle, wildly impatient, had stolen out of his room and up the stairs to give Auntie and Cousin a bit of his mind. Auntie and Cousin, their hands tightly linked, were on the landing, just about to come down. Auntie was naturally horrified to find a man coming up (she's one of the lucky ones who can sense such things in the dark). She had given him a mighty push. Uncle had seized her hand to save himself from hurtling down the stairs, and thus dragged mother and daughter after him. The party had encountered me midway and whirled me down.

We lay at the bottom of the stairs, sighing and groaning. "Oh, God !" we chorussed, and the lights flashed out, revealing to me the slightly comforting spectacle of a badly battered Uncle holding his head in his hands.



MOUSTACHES AND MANHOOD

By Animesh Chandra Roy Chowdhury

SEVERAL years ago, I contributed to the *Amrita Bazar Patrika Puja Number* an article entitled "Grow Beards—Will you ?" This year I am taking up my pen to write in defence not of beards, which are gone almost irrevocably out of sight, but of moustaches which still survive but show signs of steady decline. Moustaches and beards belong to the same fraternity and no wonder that they should share the same fate under the impact of modern blades and civilisation. The 'hairy excrescences of valour,' as Shakespeare would call them growing in close contiguity on the upper and lower lips, and chin and cheeks of man, like bushes springing from a single stalk are threatened with total extinction, and some heroic soul should raise his voice of righteous indignation and protest against the manner in which the whole fraternity are being wiped off today.

Of beards and moustaches, beards were the first to fall victims to the onslaughts of the modern god 'Decency' and now has come the turn of moustaches, which being the last bastion of masculinity must be preserved at any rate. Let me make my point clear beyond cavil or controversy. The time has come, when all of us who call themselves 'men' and want to maintain their masculinity band themselves together with a solemn vow, "Beards or no beards, we want moustaches; them we will not willingly let go."

Of beards and moustaches, moustaches certainly play the more important part in the physiognomy of men, and hence have the greater right to survival. Moreover, moustaches may well be grown without beards, without repugnance to our modern sense of decorum or decency, but beards without moustaches are a horror and an abomination! So if you vote for beards, *ipso facto* you vote for moustaches; but not *vice versa*.

MOUSTACHES TELL

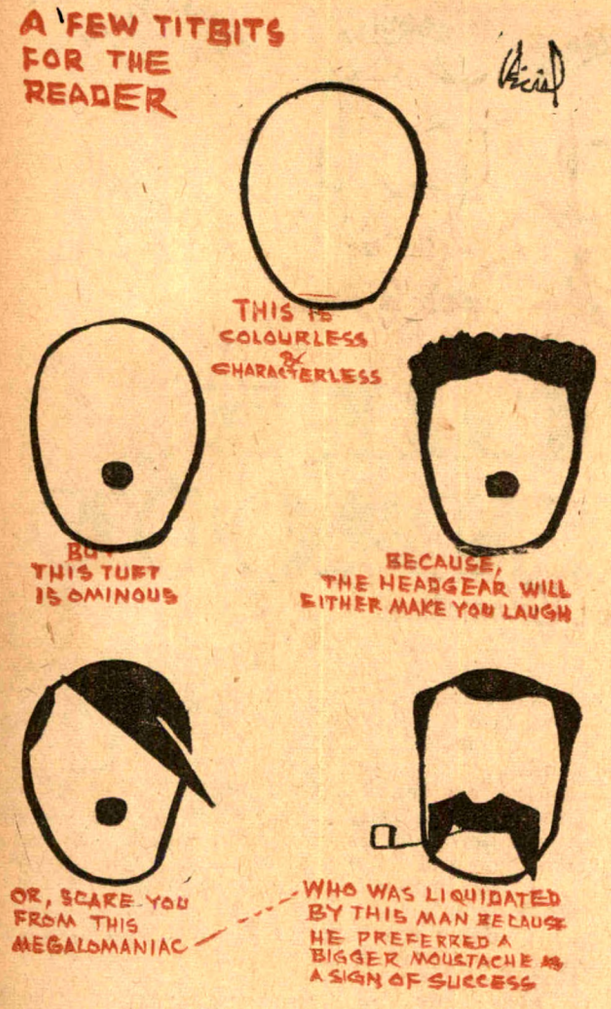
There are more reasons than one why you should cultivate moustaches, even to the exclusion of beards. First, because moustaches are the true and distinctive marks of manhood. Secondly, because they are the marks of character. Mouths speak but moustaches tell. Your mouth may utter untruths and give people false notions about you, but your moustaches can never lie,—they tell your fellow-men what you are and what you aspire to be. The face, they say, is the index of the mind, but nothing in the human face is so expressive and indicative of character as the moustaches. Think of the unmoustached, clean-shaven faces you see in the city streets; how colourless, characterless, bald and inane they appear to be! Even the hairy pates they may carry cannot retrieve that baldness or inanity. But if you come across here and there a moustached face, observe how it looks. The cut or curl, the turn or twirl, the upward or downward bend or curve of the moustaches following the curve of the mouth—everything tells eloquently about the character of the owner.

Moustaches vary with the minds and moods of men, and nothing can give us a better idea of the infinite variety of the human race than the manner in which moustaches are cut and worn, end-clipped or side-shorn, or allowed to grow luxuriantly on the upper lip, without let or hindrance like bushes, gradually encroaching on the spaces beyond. Short moustaches, long moustaches; thin moustaches, thick moustaches; 'pussy' moustaches, bushy moustaches, 'butterfly' moustaches, 'porcupine-quill' moustaches,—all have their value in the moustache market.

CHAPLINIAN WAY

These days some of the artists of the screen and stage are seen affecting a new style of moustache-wearing, a thin line of hair on the upper lip—so thin as to be almost invisible, as a bare apology for a moustache. They have brought about a hirsute revolution among younsters, who are crazy to follow their fashion. But even these "neo-film-star" moustaches have their value, for a thin line of hair is better than no hair on the upper lip and may serve as the thin end of the wedge in saving masculinity.

Chaplin, the greatest comedian of the world, set the fashion for another type of end-clipped moustaches, just a little tuft of hair in the middle of the upper lip beneath the nostrils which suited his clownish part very well, but when it came to be copied by one of the most powerful dictators in Europe, brought about the greatest tragedy on earth. Who could have suspected that moustaches that looked so funny and innocuous on the lip of Chaplin the jester, would appear so dangerously destructive on that of



Hitler, the Dictator. (When the true history of Germany is written, some future historian will undoubtedly trace the causes of Germany's downfall and Hitler's own to his too short, side-shorn moustaches!) All the veteran soldiers and Generals of Germany in pre-Hitlerite days used to wear long and picturesque moustaches. Think of the world-defying moustaches of Kaiser Wilhelm and Von Hindenburg which struck the very keynote of the character of the men who wore them.

THE SIKHS

In the long galaxy of moustached military faces in Europe, some striking ones were those of Lord Kitchener, and Lord Roberts, Sir John French and Marshal Joffre. In old days, it was the fashion for every soldier to wear a moustache and that is why, in English slang, an "old moustache" means an old soldier. But in these days of air raids and atom bombs, when personal prowess or military skill is of little avail, moustaches amongst soldiers are thinning and languishing day by day or fast disappearing and falling out of vogue. But for the Sikh veterans who consider the keeping of the hairy growth on their faces as one of the most sacred duties enjoined upon them by their great Guru, the Indian army would be but a poor spectacle having nothing to show in the way of picturesque moustaches and beards.

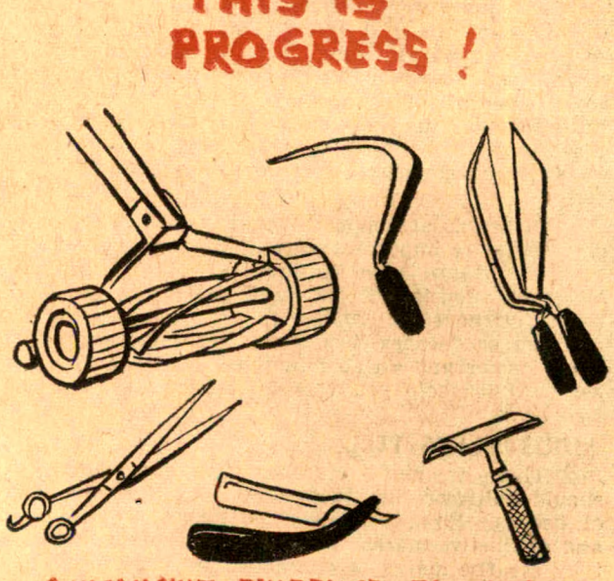
Among the greatest Generals of history, Napoleon appears without a moustache, and I wonder if it could not be said of him with greater truth that he lost the battle of Waterloo in a barber's saloon or a ladies' boudoir than that he lost it on the cricket fields of Eton. In the case of Julius Caesar, perhaps a pair of picturesque moustaches worn by him would have inspired more confidence in the minds of his subjects and saved him from the hands of assassins.

Bald pates and bushy moustaches go ill together. Perhaps that is why modern politicians most of whom think and worry themselves into premature baldness, are, willy-nilly, compelled to shave off their moustaches. Churchill because of his baldness had to bid good bye to his moustaches long ago, but why should Anthony Eden with beautiful locks of hair on his head follow his master's example in the matter of moustache keeping, though he follows his principles to the hilt? Eden and Bulganin both wear their moustaches with a grace that lends dignity to their statesmanly deportments. Is it not striking that Stalin with his picturesque pair of moustaches ruled Russia for quite a long time, which Malenkov without one could never do?

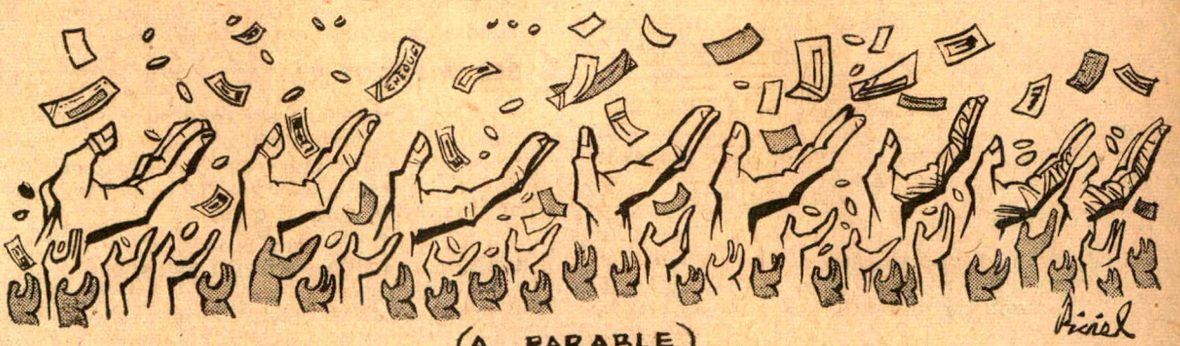
"ROYAL BENGAL TIGER"

There is no doubt about the fact that a man's personality is accentuated by a pair of prominent moustaches. Let me give one or two examples from our own country and province. Think of the late Sir Ashutosh Mookerjee whose bushy moustaches, coupled with his massive intellect, justified the title by which he is usually known—"the Royal Bengal Tiger." Think again of the veteran West Bengal Minister, who is most conspicuous among his colleagues because of his moustaches and saves the Assembly House from the dull, drab uniformity of clean-shaven faces.

All this leads me to the irresistible conclusion that it is the moustaches, and not the 'apparel' that 'oft proclaim the man.' Or I may go even further to remark that it is not manners but moustaches that maketh man, for your manners may be counterfeit, but your moustaches are genuine, unless it be that in attempting to disguise yourself or personate some one else for some purpose, you wear a pair of false moustaches that fall off at a touch, exposing yourself to all the gibes and taunts of by-standers! Grow moustaches of your own as long and thick as you can, but beware of wearing false moustaches!



WELFARE ESTATE



(A PARABLE)

By Krishnalal Shridharani

TIPU wanted to be like his gypsy Guru; free to travel; unbound to reach the sky; unfettered to become great.

The Guru would shake his head knowingly and sadly at Tipu's ambition : "My son, greatness is a bondage."

"I want to be big like you !" Tipu would beat his chest like Tarzan. "How people applaud the big !" Tipu would glow like a glow-worm.

"The applause is the sponge," the Guru would say. But Tipu emulated the wandering monk in spite of the gypsy's own advice.

As Tipu grew to manhood, prospective 'in-laws began to trip each other. They offered wealth. Sometimes Tipu would see a beautiful girl and his heart would be torn. But only for a moment. He knew that the path to greatness was too narrow for two, a lonesome trail.

Often Tipu saw his brothers playing in the lily pond with their attractive wives. For a moment he would think of marriage! At other times he found his brothers playing with their children in the park. And his heart ached. But only for a moment. His brothers and their wives were so happy, new babies kept on coming as regularly as bank calendars. A new face gave Tipu a new pang ! But only for a moment. He denied himself a wife and children because all his time was consumed by the pursuit of greatness.

"Come along, Tipu," his brothers and their wives and their boisterous children would say as they prepared for a picnic They knew how he would answer (I must finish my novel : It is time for my tuition : I have an appointment with the Anarchist : The Mayor is coming to see my paintings). So they would not wait for his apology.

By working day and night, by saving every penny, Tipu amassed fame and fortune early in youth. People whispered there-goes-Tipu when he went to the bazaar. The palace gates were open to him. Political leaders sought his advice. The University honoured him. His dinner table was always studded with visiting celebrities, and his garages were full of the latest models.

"Perhaps it is time I started on a world tour," thought Tipu as he woke up one morning. "I have more money than I can spend. And several foreign universities are eager to give the honorary degrees."

BROTHERS' UNION

By the time he had finished his *papita*, poached egg on *idali* and two cups of steaming coffee, his mind was made up. The secretary was called in to instructed to make all the necessary arrangemen and to send out a press release.

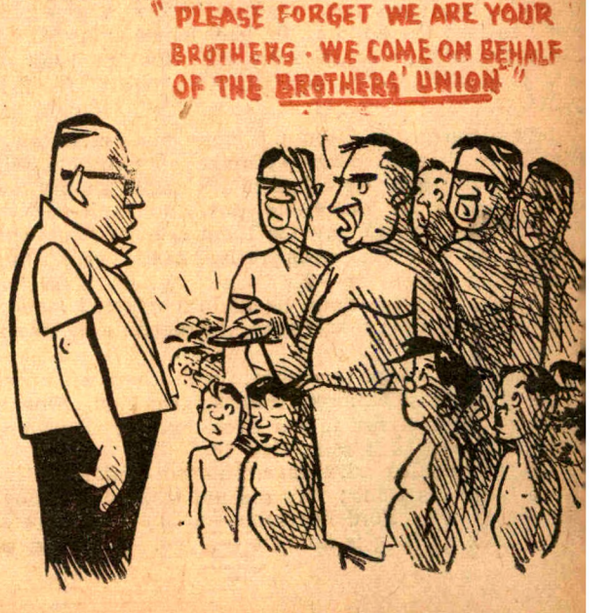
A week of fervent activities unfolded itself. The were Kashmir shawls that pass through an engag ment ring to be bought for the last remaining Kir There was an ivory fountain pen to be procured f the President of the United States of America wi which he wanted to sign the Peace Treaty officia ending the 8th World War. There were farew dinners. And there was the task of obtaining enou foreign exchange. Tipu was deep in it.

On the eve of his departure, Tipu's brothers ca in a delegation. The first thing they made cle was:—

"Please forget we are your brothers. Please for we are A, B. C, etc., approaching you for selfish en We have come on behalf of the Brothers' Union."

Tipu was quick to realize the entire impersonal of their approach. Tipu was quicker to realize t ethical impression that unions produce on pub opinion, because selfish axes being personal, unio cannot grind them. Tipu was duly impressed.

Finding him softened, one of his numerous b thers who had sired numerous children said to Tip



"Now look here, Tipu! How can you think of going on a world tour, throwing away your money on enjoying yourself, when we are starving? You have no wife, no children, and no responsibilities. You are free like a bird. But we have wives and dozens of children each one of us—a baker's dozens at that! They have no milk to drink, no money to buy textbooks. Our father's name is in mud because our children haven't anything decent to wear. We cannot make both ends meet because there are too many ends to tie. Now, aren't you ashamed of yourself? Don't you see your duty?"

By this time Tipu was ashamed and he had seen his duty. He decided to help his numerous brothers with their more numerous children even if it meant a postponement of his world tour.

GOD'S PLEASURE

He slipped a cheque in each brother's hand but with it he slipped a book on birth control by Usha Bhanot. The brothers accepted the cheques gladly,

but returned the books indignantly, saying: "Who are we to interfere with God's pleasure? Tipu was taken aback, and he felt guilty at his barrenness.

Months rolled by when Tipu realized with a wrench in his heart that his world tour was far from materializing. He felt like the Australian bushman who got a new boomerang and kept trying to throw the old one away. He worked harder and earned more to feed the children he had denied himself. But he could not keep up with the children that his sisters-in-law kept on bringing as a tribute to God's pleasure.

Tipu burnt the midnight lamp and produced a Five-Year Plan in order to make his brothers self-sufficient in food. He called in his numerous brothers with their more numerous sons, and explained the scheme. He was to buy for them a huge farm that should be run on co-operative basis, with Ford-Ferguson tractors and all. Tipu wanted to be free once more of obligations he hadn't incurred, and to sally forth on the narrow path of greatness, as free as a bird.

After few weeks, the numerous brothers with their more numerous children returned to Tipu. One of them, with holy fire in his eyes, exclaimed without any preface: "Is it fair, Tipu?"

Perceiving his advantage, this particular brother drove home his point: "We are not trained to plough the fields with Ford-Ferguson tractors. You are so clever that nothing is difficult for you. Is it fair, we ask?" This particular brother was vibrant with righteous indignation. "Must we plough the co-operative farm that you have set up, when you can do it in a twinkling of your eye!"

Tipu was humbled by his own realization of his self-selfishness. From the very next day he began to rise earlier to take out the Ford-Ferguson tractor to plough the Malabar Co-operative Farm that would make his numerous brothers and their more numerous children self-sufficient in food.

SERVANTS OF RAMA

The monsoon broke and soon the fields were green and lush through what the numerous brothers considered God's grace and the sweat of their brows. But there was a scourge. The monkeys were eating away swaying ears of corn.

All the brothers once more came to Tipu, not as individuals seeking personal gains, but as representatives of the Brothers' Union. 'What for all our efforts, if monkeys eat away what we grow?" a brother asked Tipu indignantly. They all knew that righteous indignation was what Tipu always deserved.

"Why don't you kill the monkeys to save the crops?" inquired Tipu innocently.

Wasn't it the last but one straw? "Kill sacred monkeys?" asked the same particular brother incredulously. "Are you out of your mind, brother Tipu? Kill the descendants of Hanumana who served Rama?" The effect was complete as no more words were necessary. "But if you have any scheme of killing the monkeys, brother Tipu, please do not make us partners in the cardinal sin by so much as an intimation of your diabolical design."

Tipu could not utter another sinful syllable. From next morning he began to get up earlier, at 4-00 a.m. At those wee hours, when his numerous brothers with their more numerous children would be fast asleep, and would not know what surreptitious things he was doing, Tipu would go to the fields and kill the monkeys that destroyed the crop. For Tipu knew that the only thing that stood between himself and the world tour were the responsibilities that he shunned and that his brothers never neglected to multiply.

Believing that their co-operative farm was *being fabulously in view* of the divine disappearance of the scare of monkeys, the numerous brothers with their more numerous children approached Tipu once more to say through one of their union ranks:—

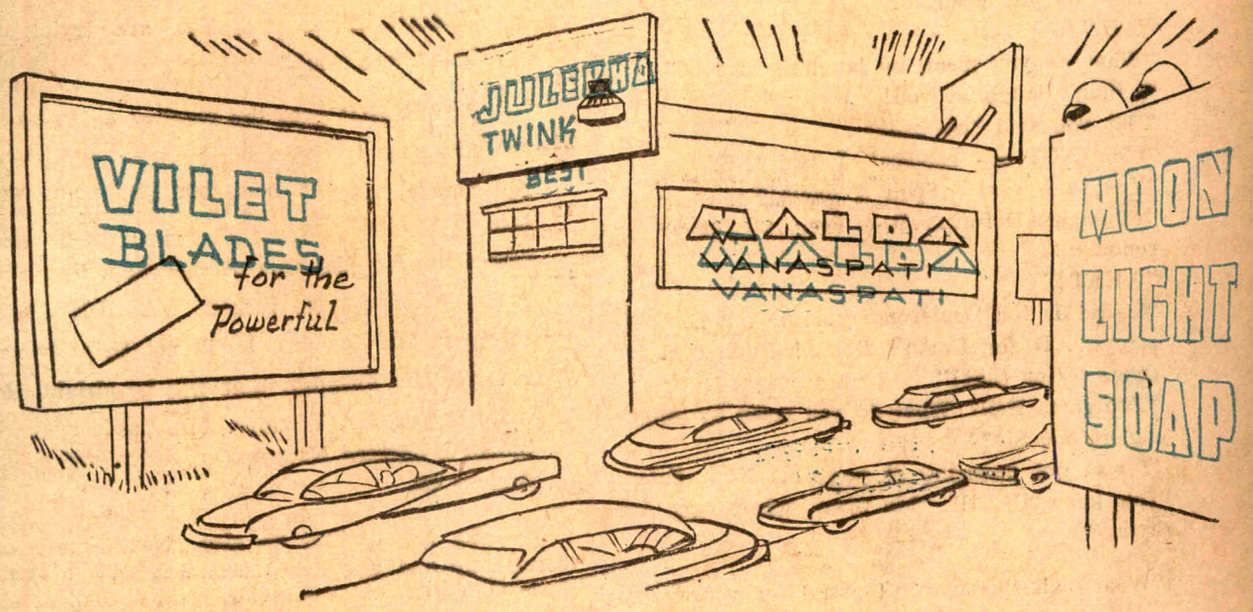
"Why are you so tight, brother Tipu? We are planning to earn so much more than you ever earned in your life. Why not lend us from what you have already earned to swell what we are planning to earn? I am thinking of your own unborn children rather than of our born children. In union there is strength. You must listen to organized reason. Besides, a mansion sits uneasy in a slum. Wars start that way. You should enrich others to save your riches. In your own interest you should give."

Tipu wrote out another cheque. This was not the first time he had been called a miser. He did not do much entertaining because he had to give money to his brothers. On the other hand, his brothers were reputed to be generous because they were free with money, knowing there was more where it came from.

"GIVE US SOAPS"

The rains were just right. There was neither a dry famine nor a green famine. In the Malabar Co-operative Farm there was a bumper crop. Tipu's brothers and their ever-increasing number of children had a huge feast to celebrate the victory of their

(Continued On Page 176)



IT'S ALL IN THE NAME

By Dude

SOMEBODY said somewhere: *"What's in a Name?"* And then to make it sound sillier added: "That which we call a rose by any other name would smell as sweet." Perhaps. But I am not a rose. and I have no desire to smell. But I do wish I had another. No, not smell. Name. I wish I had another name.

Why is it that a man has no say in the one thing which he has to carry with him right through his life,—if not thereafter? I mean his name. And still worse, his surname. Why must I have to bear the burden of the shortest name in town, any town? Aye, "bear the burden" is right. Listen.

Senor Don Juan Iturriberrigorrigoicoerotaberrico Oec Haa. Read that. It is no good wincing. Read that, I say.

(Printer fella-me-lad and friend-of-my-youth, I could not help it. It is all in the day's show. Live and let live. Let by-gones be bygones. Anyway, if I could knock it off without straining a ganglion, surely you can get it off the lino or whatever you play with without breaking the thing. Have a heart!)

That was the man whom Ripley met in Buenos Ayres when travelling in the Argentina. Believe Ripley or not. And Pa Maung, in his "Glass Palace Chronicle of the Kings of Burma," mentions the name of,——now, don't duck,——King Siritaribhavanadityapauranditasudhammarajamah Adbipatinarapatisithu. Again, Ripley speaking, not I. I have checked it up.

Jaidev of Gitagovinda fame used to subscribe himself as "Sripadmavaticharana charana chakravarti." In recent times, there was a man in Orissa with the modest cognomen of "Srinandanandanharichandanbhramarabar Ray." You think that a handicap? Particularly in calls on the telephone? You are wrong. It is a godsend.

You don't believe me. Well, listen to this saga. It happened at Delhi. It can happen anywhere. For I am still carrying the same old tin can tied to the tail, "DE." I ring a man up. He is "not in his seat," but.....

"Who is speaking?"
"De."
"Name, I asked your name. What's your name?"
"De."
"Beg your pardon, but can't you tell me your name?"
"De."
"What do you mean by 'he'gh'?"

"Not 'heigh'. De, pronounced Day."
"Ray?"

"No. De."
"How do you spell it?"
"D-E."
"What do you mean by laughing at me?"
"I didn't laugh at you!"
"But you said "hee-hee!"
"I did NOT say hee-hee! I said D-E."
"You said what? Spell it again!"
"All right. D for....D....for....D for Deuteronomy...."
"WHAT?"
"I said D for Deuteronomy....D for Dneiperstroy....D for Damn! Damn! Damn! D for Damn! Got that?"
"You go to Hell! What do you mean by swearing at me, Sir?"
"I was not swearing at you.....Now listen. You know DELHI, this town where we are living?"

"What's all this now? I asked for your name and you give me the name of the town!"
"I am not giving you the name of the town. I am trying to give you my name."
"WHAT! You want me to believe that your name is DELHI?"

"No, no. The first letter of Delhi,——D."
"I see. Why couldn't you say that before? And then what?"
"E."

"What do you mean by 'Ji'? Go on, spell the rest of your name!"
"I didn't say 'Ji'. I said E. E for....E for E for what? E for....let me see, E for Erysepelus. You know Erysepelus?"
"No, I don't know him. What has *he* got to do with your name?"
"Now look. You know Ettawah, town in U.P., don't you?"

"Again you are bringing in towns. Well, alright. I know Ettawah. Are you suggesting that the first letter of Ettawah is...."
"....the second letter of my name. Exactly. You have got it now."
"But that makes only D E. Go on, give me the rest."

"There is no 'rest.' That's my name."
"What do you mean? D E. D E. How can a man be just D E?"
"But I *am* DE. I can't help it but I am, Just DE, *bus*!"

"Did you say Dewas, or De Vyas?"
"No, no, not Dewas. Not De Vyas. Just DE."
"But it can't be!"
"It is."

"I don't believe you. You are trying to be funny, are you?"

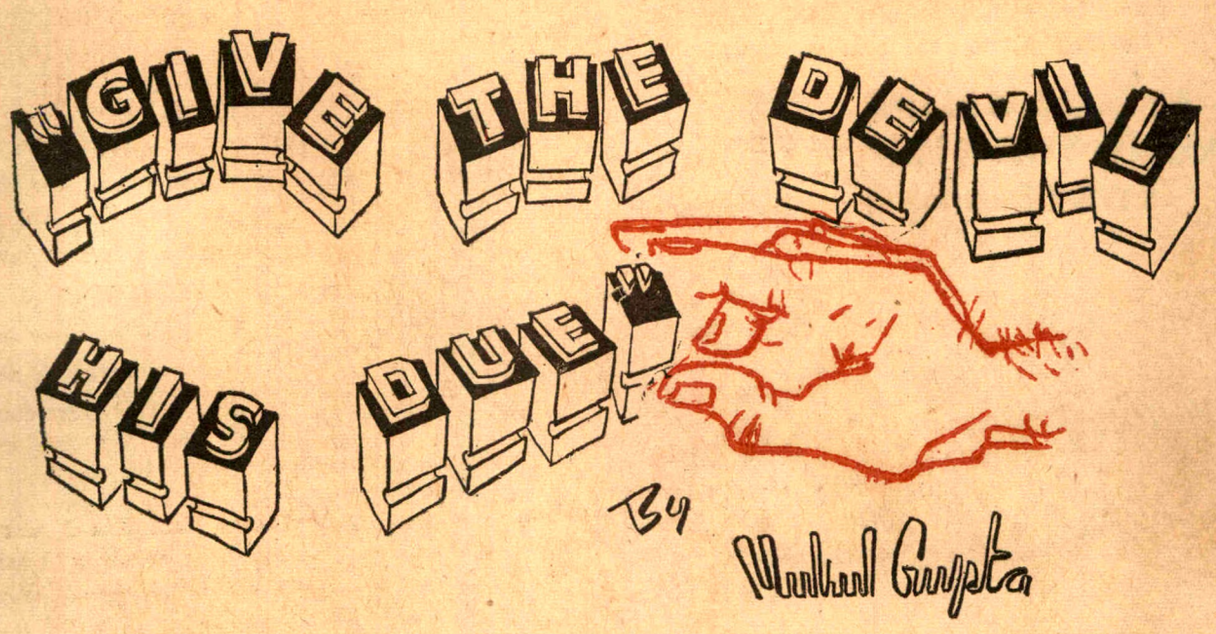
And BANG! goes the receiver on the hook.

And then I tried another tack. Better give the full handle instead of the surname only. So, the next time I gave my name as Asu De. And for fifteen minutes the man carried on a lively conversation with someone named "VASUDEV." "I am so sorry, Mr. Vasudev, I will not be at home then ....No, Mr. Vasudev, that will be alright. I shall write to you, Mr. Vasudev. Mr. Vasudev, Secretary, Indian & Eastern Newspaper Society, will that do?" And so on.

So, I gave that up also. Next time I rang a man up and was asked who was speaking, I said: "This is Lalchand Salimulla Aiyar speaking." When I went to Bombay, I added "Jijibhoy" to the front and "Tuntunwallah" to the rear. Jijibhoy Lalchand Salimullah Aiyar Tuntunwallah. And the clerk or servant would call my friend to the phone.

If, therefore, anybody in this town rings this number up and hears that it is Charuchandra Lalchand Salimullah Aiyar Mukherjee speaking, it will only be me, De. I believe that will go down with lesser trouble than the truth. "*What's in a name*," indeed.

IF YOU WANT TO KILL A STAMMERER, THEN TAKE HIM TO THE ZOO



THE Advertisement Manager was the least prepared for it ! Mr. Advertiser was obviously irate and annoyed beyond measure. The daily should not have treated so carelessly and frivolously his announcement in the Personal column which had such a meaningful significance for him and his dear wife. This was their first *wedding* anniversary. It should not have come out as the *welding* anniversary.

The Advertisement Manager was a resourceful man. He had perhaps been in such hot water before. "We regret the printer's devil," he pleaded, "but don't you agree the error has made your announcement all the more meaningful ? Hadn't you really been *welded* together — you and your sweet wife — on this date a year back ?"

Mr. Advertiser saw the subtleness of the explanation. Yes, what the Advertisement Manager said was true, very true indeed. He shed his anger before he left, happy in the novelty which the error had done.

The printer's devil creates many amusing situations. And here is a random harvest collected from the journalistic gardens all over the world.

"ACTING" HEAD OR "ACHING" HEAD

The *Daily Mail* had to announce the appointment of the Pro Vice-Chancellor of the Leeds University. The hyphen just changed its position and Professor Richardson found himself associated with vice : "New Pro-vice Chancellor of the Leeds University is Professor J. H. Richardson."

No better was the position of another professor — Professor Price— when the *Mexico City College Catalogue* announced his *acting* appointment as : "Professor J. K. de Price, B.A., M.A., has been appointed as Assistant Professor and *Aching* Head of the Department of Education."

These are not the only instances when the printer's devil did an unmerited mischief. Look at the discomfiture of the leading provision merchant of Detroit who was out to advertise his stuff, promising more meat and less bone, but found the advertisement next morning reading : "Here is the world's tenderest fresh beef. It is cut to give you more *meat-less* bone."

Modern Motoring and Travel, a journal of considerable repute, let down an inventor when he sought to invite, through the medium of its pages, the attention of the people to his cooking gadget which did not create any fume or bad odour trouble. The advertisement read : "Mr. Harding has invented a new kind of cooker which cooks perfectly, economically and *omits* no odour." Just an *o* for an *e* made all the mischief.

One must have pity for the young girl who badly needed a household job in which she claimed herself to be able to *do well* but whose advertisement in the 'Situation Wanted Column' read : "Wanted position by young woman, *to hell* with household work." Obviously, she did not expect any enquiry after it.

The Advertiser who wanted some one to do general *house-work*, must have been shocked to see the text of his advertisement coming out as : "Wanted : Woman to cook and do general *horse-*

work." No woman would surely volunteer for such hard job.

"MAILED FISH"

The Trade Union leaders of Brighton must have felt very damped to read next morning the report of their vigorous performance at the Trade Union Conference at Brighton. The TUC was prepared to be in friendship with all but it would never welcome a *mailed fist.* No wonder that the leaders were profoundly annoyed to see the morning paper having converted the ~~fist into~~ fish : "To the people of all countries, we offer the hand of friendship. But if the Governments extend a mailed *fish,* what then ?"

The *Philadelphia Evening Bulletin* did a disservice to the cause of the local Labour by omitting the "Sun" from Sunday. The Bulletin reported : "The Union is seeking a ten per cent increase plus improved benefits and double time for *any day* in which the workers work."

The house-owner of Pennsylvania, who expected to let out accommodation on attractive terms, was frustrated when he found that his advertisement about 'ever-falling' showers read something else in the *Sun* :

"Excellent country home, ten rooms, bath and *ever-failing* showers."

Decent housewives of Michigan, who were interested in learning new *hobbies,* naturally fought shy of taking advantage of the offer of the organisation which announced : "All women who are interested in crafts, sewing and new *hubbies* are requested to come to Armoury Wednesday morning.

Mrs. Hope of Cincinnati must have been rudely shocked to see her *rare* appearance being so frivolously reported : "Mrs. Hope made one of her *bare* public appearances when she presented the cup to the winner of the race."

No less perhaps would have been the embarrassment of Mrs. Winston Churchill if she had seen the *Malay Sunday Tribune* reporting her as : "Mrs. Winston Churchill told members of the YWCA Committee in Liverpool : Ninety per cent of the *mistresses* on YWCA hostel beds are not fit to sleep on." *Mattresses* are indeed a far cry from *mistresses.*

Rear-Admiral H. H. Good of USA was, really surprised to see an announcement in the *Washington Union Bulletin* saying: "Rear-Admiral H. H. Good will direct the *Alarmed* Forces Day Celebration for the State of Washington !" There was no cause for alarm in any case.

MINISTER OF 'EVIL' SUPPLIES

Two Ministers in India had certainly reasons to be offended with the Press. One of them — the Minister of *Health and Welfare* — found himself described as the Minister of *Health and Hellfare.*

The other — the Minister of *Civil Supplies* — had even the worse of it. He was described as the Minister of *Evil* Supplies.

But worse still was the description of the *Ministry of Housing* and Local Self-Government in the *Wolverhampton Express and Star*. It read : "About four acres of land would be provided for industrial development in slum clearance areas covering over six acres, a Wolverhampton Corporation solicitor told a public enquiry today. A compulsory purchase order made by the Council was the subject of the enquiry conducted by Mr. S. G. Bullstrode, an inspector for the *Ministry of Mousing* and Local Self-Government."

If the printer's devil causes amusing situations unwittingly, so do the texts of well-meaning advertisements by reason either of wrong punctuation or inappropriate placing of words. Take, for instance, the following from the *Chicago Daily Tribune* which reported as if Churchill was a cannibal : "Before the lunch Churchill conferred privately with Dulles. This conference had been set for yesterday afternoon but was put over because the 79-year-old Churchill took a long nap after a prolonged luncheon which included more than two dozen Congressional leaders."

MAGISTRATES CAUGHT DRINKING ?

The Magistrates of Liverpool had the charge of drunkenness put on their shoulders by being mentioned at the wrong place in the report of the *Liverpool Echo*. "Licensees in the Prestatyn Division," said the report "were congratulated on the fact that there had been only one case of drunkenness by the magistrates at the annual licensing meeting today." It was not the magistrates who were caught drinking; they were there to congratulate the licensees.

If one reads the following news item in the *Manchester Guardian*, one would naturally feel shaky about the future of Malta. Some friend of Mr. Mintoff of Malta was reported to have said that he had come to London for a ten-day long conference on the future of Malta. But the *Guardian* reported: "When I last met Mr. Mintoff, then the Leader of Opposition, it was in his home in Malta which is a rare thing on the island — a piece of modern architecture in a highly traditional setting. Now he is in London for the talks on Malta's *future which may last ten days*".

OMISSION THAT CAUSES FUN

Errors of omission are often as funny as errors of commission. If the printer's devil and misplacement of words produce amusing effect, so does the unintentional omission of certain words. Prime Minister Eden spoke on the recovery of Britain and in reporting him the *Northern Daily Telegraph* just missed to put in four words — "saying that Britain was" — and the result was :

"Despite rain, about 2,000 people heard the Prime Minister, who stood on a flag-draped lorry in the market square, with Lady Eden behind him .... producing, building, selling, earning, buying, saving and exporting more than she has ever done before."

Apart from printer's devil and ill-placement of words, not a little fun owes itself to what is called 'adjacent advertisements' or adjacent "news items". Apparently, one has got no connection with another, but slipping from one to the other makes an amusing reading. Take these two adjacent news items in the *Evening Standard* :

"132 pairs of nylons are to be bought for Essex policewomen. 50 pairs of handcuffs have been ordered for the police in Essex." Or, what effect do these adjacent advertisements in the *Irish Independent* make !

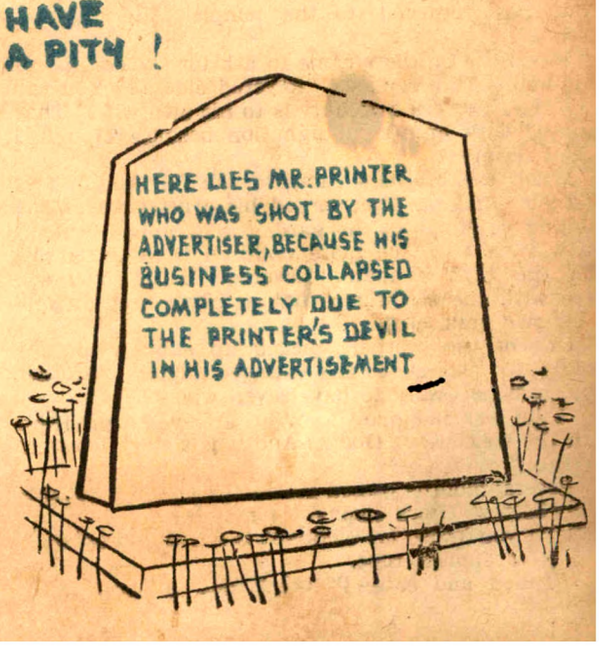
SPECIAL NOTICES

"Some like Sherry dark or pale.
But always give me Perry's Ale"

'Capital Idea'
Drink Dortmund Lager
Capital Bottling Co., Ltd.
Phone 78504 and 40444

Hydrochloric Acid
1 ton of 36 degree commercial hydrochloric acid for sale. Best offer. Box 37999

Does it not suggest that for a good drink, choose Perry's Ale, Dortmund Lager or Hydrochloric Acid, whichever you like ?



WELFARE ESTATE

(Continued From Page 170)

labours. Neighbours were invited, "and a good time was had by all," commented the local daily.

At last Tipu felt that he was free to start on his world tour. After packing, he came to say good-bye to his Guru. But when he returned home to pick up his luggage, his brothers were waiting on a deputation.

One of them spoke up : "Tipu, we do not know the merchants in the bazaar. Some time they keep us waiting for minutes. But all of them know you and respect you and all doors are open to you. It is so easy for you to sell the grain in our behalf."

To the town instead of the railway station Tipu went, and sold the grain. When he went to his brothers with the money that would make them self-sufficient, Tipu saw that several children suffered from ringworm. When Tipu said that cleanliness was next to godliness, his brothers protested :

"Have we any soap ? Have we any nurses ? You are so strong and healthy, and you are afraid of contagion. We are fearless. If you are afraid of the contagion, then you should send soap and nurses."

After sending soap and nurses to his brothers, Tipu went to his idol, the Gypsy, and cried out : "It seems my world tour will never start. There never seems to be any time for it, nor enough money I denied myself a wife and children. I never kept even a cocker spaniel", his eyes were moist. "I worked hard and won fame and fortune. I feel rooted as the yonder tree while I wanted to be a bird."

The Guru listened to the lament in silence, without so much as batting his eyes. Then he said : "Greatness is the ground that binds, I had warned you. The applause is the sponge. People praise you so that you would think for them and work for them."

"I know, I know," Tipu was in anguish. "But what is the remedy ? I am not happy here."

"To be happy is to be like them. They will bind you if you be yourself. It is the turtle's callus that helters his tenderness."

MAN'S FIRST DUTY !

All the way home Tipu pondered over what the Guru had said. On a sudden impulse, he sent messengers in all directions. "Tipu wants a bride ! Tipu wants a bride !" buzzed all the homes with marriageable daughters. He selected seven beauties, because his brothers had a head-start. He stopped killing monkeys in his brothers' collective farm and devoted most of his time to playing in the lily pond with his seven wives. The bazaars were buzzing : "Tipu has returned to the temple. He eschews violence."

When the brothers came to ask for ornaments for their wives, Tipu replied : "Revered elders ! You will agree that a man's first duty is to his own wife." They returned with unspent indignation because Tipu had quoted scriptures.

When the brothers came to ask for tuition fees for their children, Tipu spread his arms towards the toddling yearlings in the garden and replied : "Soon you will see with me more children than Anna saw with the King of Siam. Revered elders ! You will agree with the scriptures that a man's first duty is his own children."

One of the brothers picked up enough courage timidly to suggest to the changed Tipu : "Brother Tipu, is it necessary to have seven wives ?

Tipu was indignant : "Who are we to interfere with the pleasure of God ? And it is a duty I owe to the race."

Several months passed before the brothers returned to borrow Tipu's elephant for a day.

"Don't you know, my elephant is killed and eaten ?" Tipu gave enough rope.

"Killed and eaten !" cried out a brother in amazement. "But now you practise non-violence !"

"My elephant is killed because I practise non-violence," Tipu said enigmatically. Then he narrated the incident. It transpired that the King was to give a huge feast to his brother-princes for which he had ordered a hundred partridges. When Tipu heard of this, his soul rebelled at the thought of a hundred lives to be lost. So he requested the King to effect an economy in violence by serving elephant steaks, instead, and gifted away his own white elephant. The sin of killing the elephant was King's, but the merit of saving 99 lives was Tipu's. So the brothers' children had to do without their annual elephant ride.

Presently, Tipu requested the King to grant him a plot of land on the Jubilee Hill on which he planned to build a temple to God. The King demurred saying that the Jubilee Hill was like a city of temples already, and that there were more temples than worshippers, and that a school building was what was really needed. To this, Tipu put a poser : "What do you place first ? God or education ?" The King had to give in.

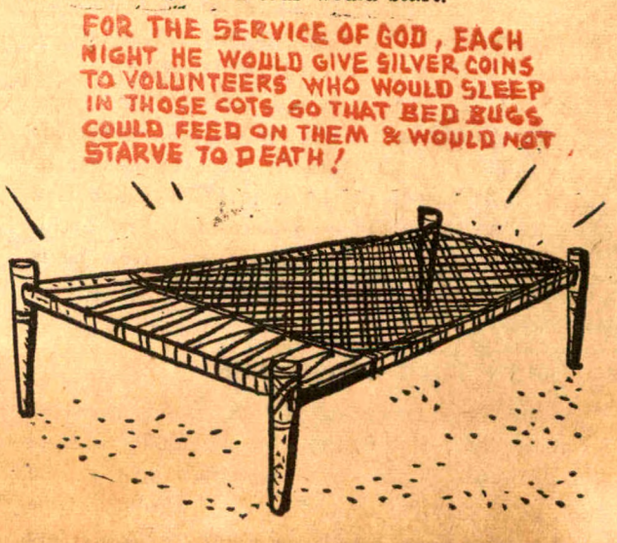
After that, whenever his brothers came to seek help, Tipu would say : "I keep enough for the bare necessities of my growing family. The rest goes to the service of God." People praised Tipu for preferring God to his own kith and kin.

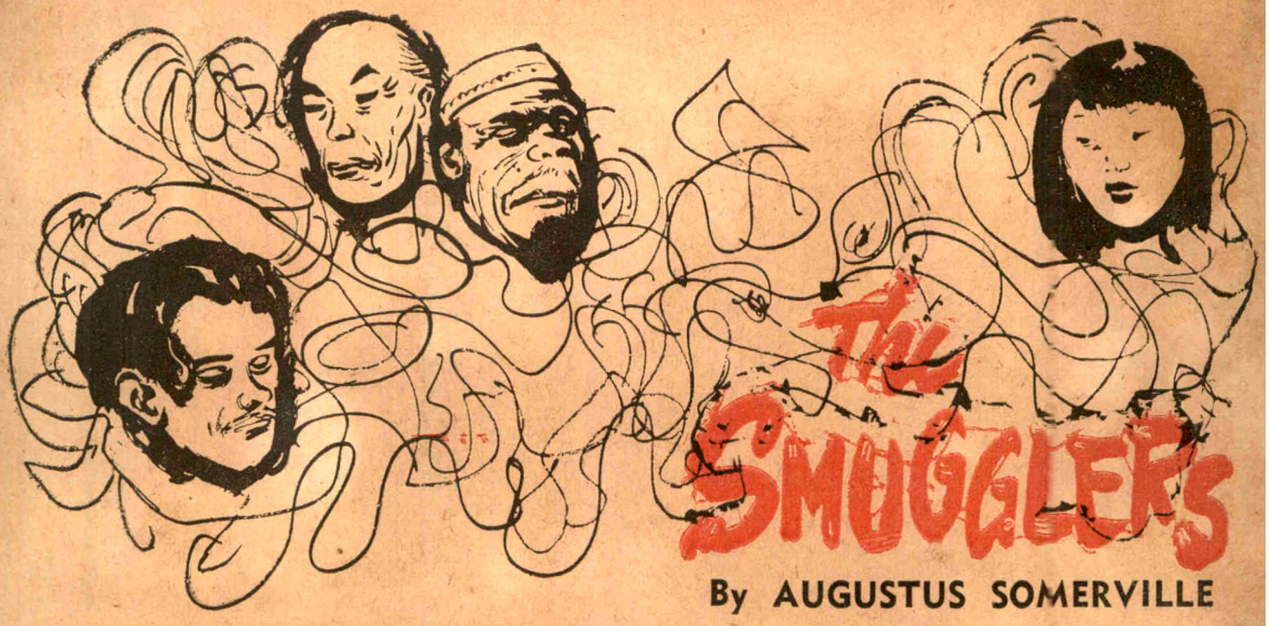
The city was full of multitudes who followed Tipu's creed of non-killing. These multitudes did not know what to do with bed-bugs. They were in a religious quandary. They could not very well commit the sin of killing bed-bugs, nor could they bear with them in their own beds.

Tipu spent a sleepless night thinking about the moral dilemma of his fellow devouts. With the rising sun he had an inspiration. He placed some empty cots and quilts in the temple he was building, and asked the devouts to deposit their bed-bugs in them.

Each night he would give silver coins to volunteers who would sleep in those cots and quilts so that bed-bugs could feed on them and would not starve to death.

Thus Tipu spent his fortune in raising a temple to God and in saving the lives of bed-bugs and in other good works. By now, he was like his brothers, and his residence and acres were barren. He organized these in what he renamed the Malabar Welfare Estate and invited his brothers to come and live with him in a common enterprise. It was the equality in impoverishment that gave them zest while they passed their time, waiting with Tipu for the day when the next world tour would start.





By AUGUSTUS SOMERVILLE

SAN LI crouched deep within the narrow confines of the slit trench. Overhead the bombers roared and the deep, soul-destroying crunch of the bombs as they rained on the unprotected city, filled him with such a deadly fear, that San Li swore that on the morrow, come what may, he would quit this accursed spot. Rangoon had dealt generously with him, but San Li was no sentimentalist; Calcutta could provide him with as rich a living, if only the Police could be induced to forget those indiscretions of the past.

His adopted son Abdul crouched trembling against him and San Li's mind, now definitely made up, brooked no delay in the furthering of his plans.

"Listen, son," he whispered, "this city is doomed. Tomorrow we leave. When you return home gather up all our valuables and hide them as I have instructed you. In the meantime I will try and secure passages on the steamer that sails at the end of this week."

But alas for San Li's much vaunted influence with dock officials; neither bribes, prayers nor threats, could secure for him the eagerly sought accommodation, and he returned to his foster son, filled with foreboding. The next evening, in company with many thousands of his fellow citizens, he fought and struggled for a seat on the train that travelled as far as Prome, and later joined that vast throng that crowded on the platforms, awaiting the time when they could join a group setting out for the trek over the mountains and through the densest forests on the long, sad trail to India.

Of his sufferings and strivings during those long, weary months, no records remain, but one thing is certain; no sooner did he reach Prome than San Li started organising a gang of cut-throats and robbers who preyed incessantly on the unfortunates who trekked with him those long weary miles to safety. The days grew into weeks and the weeks into months, until at last came the welcome news that Chittagong was but a couple of days' march ahead, and here fate dealt his final card. San Li who had overcome all the rigours of the road, who had survived the hunger, the thirst and the plagues that claimed its victims by the hundreds, now within sight of his goal, went down to a fatal attack of cholera. Knowing that death was inevitable, San Li called Abdul to his side.

"Listen carefully, son, to my final instructions," he gasped. "When I am dead, do not tarry by my side, take all the jewels we have accumulated and hide them about your person. Do not trust your companions. Once it is known that I am dead, they will slit your throat for my share of the loot. Also do not wait. As soon as it grows dark and the camp is asleep, slip out and make for Chittagong on your own. You know the pass words and the names of those in Calcutta who will befriend you. Go to them," and he relapsed into unconsciousness.

Abdul did as he was instructed. In the small hours of the morning he rose silently and slipped away, but before leaving he knelt by the side of the only man who really loved him, and whispered his last farewell. Soft as the words were, San Li heard them, and over his dying countenance there settled a wonderful calm.

Two days later, scarcely able to drag himself along, Abdul limped into Chittagong and collapsed on the station platform. Willing and merciful hands lifted him up and he was washed and fed, but when they attempted to remove the filthy, vermin infested rags in which he was clothed, Abdul resisted frantically, and the doctor thinking the poor fellow's mind was affected, signalled to the attendants to let him alone.

That night, in spite of his exhaustion, Abdul forced himself to sit up. From the hem of his ragged coat he extracted a small fortune in diamonds and rubies and these he concealed in a belt which he fastened tightly round his waist, and then only he slept. Next morning he awoke to find that his filthy

garments had been removed and fresh clothing had been provided.

Here he stayed a few days, resting and feeding, till a great part of his strength was restored, when he was placed on a train and a few days later arrived at Sealdah Station.

CUB RETURNS TO PACK

Here also, as at Chittagong, the train was met by a band of willing helpers, who attended to the sick and the wounded and as Abdul was now comparatively well, he was permitted to go home, once he had explained that he had relatives in Calcutta who would gladly keep him.

As he stood before the doctor's desk, filling in the necessary forms, an old Police Officer looked over his shoulder. Something in the boy's face had stirred a cord of memory and he looked closely at the entries in the form.

"Abdul?" he queried. "Have you no other name? Who was your father, lad and where did he live ?"

Almost did Abdul betray himself by giving the name of the one man who had been more than a father to him. "Abdul Hamid" he replied. "My father died in Burma many years ago." But that slight hesitation had not escaped the keen eyes of the old Police Officer, and as Abdul turned to leave the station, he made a slight motion with his hand to one of the crowd, who had gathered round the desk, and later as the boy boarded a tram that took him in the direction of China Town, this man followed every move he made.

When Abdul alighted at the entrance to Blackburn Lane, he paused a moment beneath the tree that stands before the little temple, known to all the inhabitants of this district as Cheena Kali.

Here he recalled the instructions given him by his foster father. "On your right as you stand by the temple, looking down the lane, are several small restaurants. The proprietor of one of these, an old man, named Mir Sahib, is a staunch friend of mine. Seek him out. He will assist you."

Abdul walked slowly down the lane. As he came opposite each shop, he paused awhile, scrutinizing the customers as well as the staff carefully. At last he paused at the entrance to one of the largest where sat a venerable looking Moslem collecting the money paid by the customers. Satisfied he entered and going to a table set well apart from the others, he ordered a simple meal. When the lad who served the food came to remove the plates, Abdul detained him. "Tell me, son, how is your master named?" he enquired, but the lad, with the impertinence of his class, replied rudely: "Go ask him yourself," indicating the old Moslem. This is all Abdul wished to make certain of, and rising he approached the proprietor.

"Salaam Ali Kum, Mir Sahib," he greeted him, bowing deeply. "Vale Kum salaam," the old man replied, looking up in surprise. He was not accustomed to courtesy from his customers, and the young lad intrigued him. "You are a stranger here," he continued. "Can I be of any service to you?"

Abdul hesitated, then going closer he set down the price of his meal on the desk and whispered, "The sun has risen."

"But it will set again" came the answer, without hesitation. With a quick look round the old man rose and calling to one of his assistants to take his place, he led Abdul through a narrow doorway, to the back of the shop, where he had his living quarters.

"Be seated friend," he invited courteously, "and give me your news. But first tell me of my old friend San Li. Is he well and prosperous?"

Abdul hung his head, sighing deeply, and the old man, seeing the dejected face of the lad, realised the truth.

"Ah, well," he murmured, "'its an end we must all come to some day — Allah rest his soul. But you must be the bearer of tidings, lad. Tell me of all that has befallen you, since your father left us."

And so Abdul gave him the whole story. From his carefully hidden store of jewels, he extracted two beautiful rubies, which he gave the old man. "These my father bade me give you as a token of his esteem and friendship, bidding me place myself in your hands."

Mir Sahib sat for a long while, contemplating the rubies, then with a sigh he stood up. "I grow old, son," he said, "and mayhap my brain is not as quick as it was in the old days when your father and I worked together. But abide here. Consider this humble dwelling your home, till such time as I have arranged ways and means of advancing your interests." With that he returned to the shop and Abdul was left to his own devices.

THE HUNT

Detective Inspector Bose, of the C.I.D. perused carefully the report that had just been handed to him. "So" he mused, "the wolf-cub returns to the pack." Before him were two other bulky files, and as he refreshed his memory with their contents, a grudging admiration filled his mind. San Li and Mir Sahib had been two of the greatest smugglers he had ever known. Working in unison and perfect accord they presented the most formidable combination that had defied the brains and organisation of his Department. With his fingers on the pulse of every international racket, San Li, worked in complete understanding with his Indian partner, and the two, with an ingenuity and cunning that had baffled the entire resources of the Police, had carried out successfully, coup after coup, that must have amassed for them a considerable fortune.

Inspector Bose was worried. Only a major undertaking could have induced San Li to send his adopted son to Mir Sahib at such a time and the method selected was perfect. No one would suspect a refugee, flying from the vengeance of the Japanese, to be a smuggler. By coming overland from Burma, San Li had overcome in one bold stroke, the usual Police surveillance, the Custom's check, and the many possible means by which the boy's true mission could have been suspected.

Unaware of the actual facts, Inspector Bose built up a crime of almost international importance, while Mir Sahib, knowing the workings of the Inspector's mind, hugged himself in joyful anticipation and as a preliminary precaution sent Abdul on a mission that took him far from the city.

A week later the Police struck. The search was organised and carried out with machine-like precision, but for all the evidence it yielded, it need never have occurred. Mir Sahib was questioned again and again. Yes, a boy answering to the name of Abdul

entered his shop on the morning mentioned, but to what had happened to him subsequently, Mir ib was completely unaware.

Inspector Bose, back at headquarters, sat at his k in an evil frame of mind. Mir Sahib had been dowed for weeks, his shop was under constant veillance, and still no trace of the missing boy ld be found. Suddenly he had an inspiration. To peon who came at his urgent summons, he gave lip of paper and a moment later was handed a file, t he opened with almost reverent care. The utiful, piquant face, that gazed up at him from cover page, filled him with a strange nostalgia, a mory of a hectic youth, that was now buried and

he beautiful piquant face that gazed up at m from the cover page filled him with a range nostalgia, a memory of hectic youth....

one. Below the photograph was the name and idress "Rose Lee". He read and taking a sheet of aper and a plain envelope from the rack before him, e wrote only one word, "come." Then addressing ne envelope, he gave it to his personal orderly with structions to post it immediately.

The months slipped by. Mir Sahib knew that all olice supervision had ceased and he was worried. hat devilment could they be planning he wondered and increased his own vigilance in proportion, but as the ensuing months brought no information, he decided that the Police had dropped the case and recalled Abdul. And this is where Mir Sahib made his first mistake.

Inspector Bose had placed one of his cleverest men to shadow Mir Sahib, and one day he reported the return of Abdul. Inspector Bose did not waste an instant. That very day the postman handed Rose Lee a letter in which there was just a line "the cub has returned."

Mir Sahib was a devout Moslem. It was his custom to attend the mosque that graces the entrance to Dhurrumtolla Street, every Friday, and this week he took with him his young protege. As Abdul stood, shoulder to shoulder with the old man, he intoned reverently the beautiful, age old prayer —

In the name of God, the Compassionate, the Merciful

Say — He is God alone.
God the Eternal,
He begetteth not and He is not begotten,
And there is none like unto Him.

and then he gazed towards the entrance where the impatient crowds went hurrying endlessly by, and in a moment the prayer was forgotton. Standing indolently, just before the entrance, was a beautiful Chinese girl. Mir Sahib heard the gasp of the youth by his side, as the young man's eyes took in the lines of her perfect figure, and he smiled indulgently, for had he not been young himself, and in that perfect figure he recognised Rose Lee, the fairest flower in China Town.

Leaving the Mosque, when the prayers had concluded, Mir Sahib, urged on by the young man at his side, approached the girl. Smiling gravely he introduced his companion and thereafter stood aside, filled with amazement.

With an impetuosity unusual in members of his race, Abdul insisted on escorting the girl back to China Town. A taxi was called and Mir Sahib relegated to an obscure position near the drive, leaned back silently while his companion questioned the girl as to where she was living, what were her hobbies, who were her friends and a thousand and one perfectly foolish questions, all of which Mir Sahib reflected he could have answered and in very much more detail.

Thereafter matters moved moved rapidly. Within a few weeks Abdul discovered that his quarters with Mir Sahib were unsuitable and he shifted ot a quiet but expensive flat in the heart of China Town. Over these extravagances Mir Sahib smiled indulgently. Youth, he reasoned, must be served, but when he learned that Rose Lee was also installed in this flat he grew alarmed. The work undertaken by Abdul needed not only careful handling, but complete secrecy and he doubted if this close association with a woman would ensure such secrecy.

Abdul, duly warned, retorted indignantly, "I could trust her with my life. She is incapable of any

mean act", and so this intimate association continued.

Now that mysterious but highly efficient grapevine, by which news filters into the right channels, duly acquainted Mir Sahib with the startling intelligence that silks, watches and opium in unheard of quantities were shortly arriving in Calcutta.

That morning Abdul, on his arrival at Mir Sahib's shop, had discovered seated at his side, an old Chinaman. The two were in earnest conversation when he arrived, but at his approach lapsed into silence. Piqued at this obvious sign of distrust, Abdul would have retired, but Mir Sahib backoned him to a seat beside the Chinaman.

"Abdul," he said, "this is Wang Ho, one of your father's most trusted friends. He brings important news and I am glad you are here to discuss it." He then went on to explain that the s. s. "Nupsan" had berthed that morning, and they were discussing how the valuable consignments of silk, opium and other articles eagerly awaited by consumers in various parts of the town were to be brought ashore, without the vexatious and officious knowledge of the Police and Customs Departments.

At the mention of the word silk, Abdul experienced a real thrill of pleasure. Now he would be able to satisfy the constant demands of his beautiful Rose.

That night as she lay cradled in his arms, Abdul whispered, "That silk dress you want. How many yards do you need?"

For a moment the girl tensed. "Oh, Darling," she murmured, "how sweet of you to remember, Never mind the length just now, only let me see and approve of the shade. Can you bring it tonight?"

"No," Abdul whispered, "not tonight, nor even tomorrow night. For you see, I have some important work to attend to and will have to leave you early. But after that, you can have all the silk you want."

The next morning Abdul hastened away early and no sooner had his form disappeared round a bend in the road, than the girl beckoned to a lad seated on a step opposite her door. "Take this, you know where, and hurry." On the little slip of paper was written "Tomorrow night. The silks only."

Inspector Bose read the slip and smiled. In a way he was sorry for Abdul. "The lad has not a chance," he murmured. "She would enmesh the Devil himself." But he had little time for sentiment. To the Sergeant who came at his urgent summons, his orders were clear and precise. "Don't arrest a soul," he concluded, "we do not want the silks and other trash. This is only chicken-feed; what we are after is the opium. An arrest now would warn them and the opium would never come out. Watch carefully and report when the silks are taken out. I will have them shadowed."

The next night, Abdul disguised as a ship's carpenter, in loose overalls and carrying a bag filled with tools, passed easily through the Police stationed at the Dock Gates. The "Nupsan" lay at the further end of the dock and as he climbed the gangway, an old Chinaman in whom he recognised Wang Ho paused a moment by his side to whisper — "Follow me." Quickly they crossed the decks, to where in the shadows stood several men. Here his bag was taken from him and another substituted and Abdul was led to where the other Chinamen were busy at work taking

'Oh Darling!' She murmured 'how sweet of you to remember. Never mind the length only let me see and approve the shade.....!'

up the deck planks. Here he worked with the rest of the gang, and when in the early hours of the morning, he was relieved by fresh hands, he took up his bag and followed the others back to the entrance of the docks. Here with a cursory check he was permitted to go but as he left he was conscious of the keen scrutiny of an old man seated at the desk, who smiled at him benignly.

"There goes our decoy, Sergeant Sen. He is taking out the watches and mighty smart about it too. Follow him and note the address to which he goes. We will rope in these receivers later."

THE TRUMP CARD

From Inspector Bose's point of view, that night had been a failure. Although he could now lay hands on the receiver of the silk and watches, his primary object had not been achieved.

He was kept well informed by Rose Lee of every move the gang made, but she was still unable to say when the opium would come ashore. He had doubled the number of watchers, promised larger rewards, but all to no effect, until finally the Port authorities informed him that the "Nupsan" was ready to put to sea again and would leave the docks next day. In desperation he sent an urgent message to Rose Lee.

That young lady had in the meantime been active in more respects than one. Abdul now hopelessly in her coils, hastened to gratify every wish, but Rose Lee knew instinctively that any attempt to pry into

s private activities would instantly rouse his sus-
cions, so she hit on an ingenious method of obtai-
ing the information she most wished to have.

The day she received the message from Inspector
ose, she set herself out to please. Abdul returning
om Mir Sahib's shop that evening found a radiant
ose impatiently awaiting him.

"Come, darling, let us go out tonight. I have not
een to a picture for weeks and I would like to dine
t one of the big restaurants in Chowringhee".

Abdul's instant and joyful agreement came as
omething of a shock. But Rose Lee was too skilful to
etrary her real motives. That night she played her
rump card.

"Abdul," she whispered, "I have a confession to
ake. You know we are Chinese and addicted to
pium smoking. It is true I don't smoke myself, but
oth my father and mother are heavy smokers, and
ave begged me to ask your help. Opium is impossible
o obtain now, and if you know of any source from
vhich we could buy a small quantity, they would be
o grateful to you."

At the word 'opium' Rose felt the man grow tense
n her arms. Instinctively she knew she had aroused
is suspicions, and a chill of fear crept down her
pine.

"No, Rose," he replied, removing her arms from
ound his neck, "I know of no source from which
pium could be purchased."

Desperate now and determined to allay his suspi-
cions, she flung herself on him with fierce abandon.
Abdul was young and this passionate affection, slowly
dulled his fears. Determined not to lose her advant-
age she renewed the attack.

"If not tonight, could you find out by tomorrow
night?"

Abdul considered. "No", he said finally. "Not
tonight and not tomorrow night, but after that I
may be able to get in touch with some people who
could supply it."

Rose was satisfied. The "Nupsan" was leaving the
docks tonight, so nothing would be done, but once
in the main stream an attempt would be made to
get the stuff away.

Inspector Bose considered the information care-
fully. Abdul's promise to supply her with opium on
the third day, indicated that the stuff was still on
board and that the attempt would be made the night
she lay on the river, or the next day as she sailed
down stream and he made his plans accordingly.

"MEAT" INSIDE HUSK

On the morning of the "Nupsan's" departure,
Inspector Bose sat on an easy chair on the front deck
of the Police launch. In his hands were a powerful
pair of binoculars and with these he scrutinized the
"Nupsan", carefully, as she drifted slowly down-
stream. Nothing unusual appeared to be taking place.
The activities on board were normal. At one place the
sweepers were busy cleaning the decks, and as he
watched he saw the men raise a large basket filled
with empty coconut shells which they dumped in the
river and returned for others.

Inspector Bose gave a shrug of disgust as he
watched the husks floating past the sides of the
retreating vessel. He remembered his own street and
the filth caused by careless consumers who no sooner
had they drunk the contents cast the empty shell on
the road, and hurried away indifferent to the con-
gestion and annoyance caused to the people of the
locality.

Thinking thus Inspector Bose swung the glasses
round, to survey the broad expanse of the river.
Carelessly he watched the fishing boats as they tossed
about on the waves caused by the passing of the
"Nupsan" and then he paused.

"Extraordinary," he muttered, "what do they
want with that filth. The streets of Calcutta will
provide tons of coconut shells —" and then the truth
flashed on him.

"Sergeant Sen", he called, "you see those fishing
boats gathering coconut shells from the river. Take
the boat we are towing and two serangs As I pass
one of those flats moored in mid-stream you will
drop astern and conceal yourself behind the flat.
From here watch these boats and when they
make for the shore follow them, but go cautiously,
so as not to arouse suspicion. On no account lose
sight of the coconuts, follow them to their destina-
tion, then come to Head Office and report"

Sergeant Sen did as he was ordered. From the
stern of the anchored flat, he watched the fisher-
men fill two large baskets with coconut shells and
then make for the shore. A little below Princep Ghat
they landed and assisted by two other men who
awaited their arrival, the baskets were lifted out and
removed to a jeep standing to the side of the road.

Quickly Sergeant Sen followed. Signalling to a
passing taxi, he bade the driver follow the fast re-
treating jeep and half an hour later, just as the
jeep turned into the entrance to China Town, he
stopped the taxi, and on foot followed the jeep as it
passed down Blackburn Lane and turned into a blind
alley at the back of Mir Sahib's shop. Here the
baskets were quickly unloaded and carried into the
premises. Through the open door Sergeant Sen
watched their final disposal in an old godown, then
he returned to Headquarters.

Abdul hurrying that evening to Mir Sahib's shop
to learn of the success of their scheme, stopped in
amazement as he noticed the watching crowd and

the armed constables patrolling before the entrance. Signalling to the urchin who served the customers, he enquired the cause of disturbance. The lad, hesitated, looking round carefully, then hissed, "Someone betrayed the Master. The opium has been found."

Abdul stepped back as if he had been struck. That word "betrayed" touched a chord in his memory. He now recalled the extraordinary ease with which the purchasers of the contraband silk, watches and other articles had been traced. All at once he realised the truth. He had been the decoy, for Mir Sahib had left to him the final disposal of these goods. He remembered now the number of times Rose Lee had insisted that he should bring her a length of silk or some jewellery and how the next day the shop he had visited had been raided and the contraband recovered.

For a long while Abdul stood at the street corner, his head down, his face pale with emotion. So, to satisfy this woman, he had betrayed his friends. Men who believed and trusted in him. And how cleverly she had led him on. Now too late, he realised the story of her parents wanting opium was only to get him to betray the date on which he knew the stuff would be sent ashore. And this was the end. Mir Sahib would be sent to jail and for that frail old man a term in jail was actually a life sentence.

Abdul fingered the long, slim, stiletto that hu from the money-belt, round his waist. Slowly made his way back to the house where he had sp so many nights of blissful happiness. He marvel that a woman, so fair and so loving, could be so v

Without knocking he opened the door of th bedroom softly. Rose Lee sat on the bed. Before were heaped all the jewels, the trinket and the mor he had given her. With a cry she sprang up to fa him as he entered. Something in his eyes must ha warned her, that her days for scheming were at end.

"I see you are packing for a long journey, Rose. is strange you never told me; I could have broug you some more silks and jewels."

Tongue-tied and trembling she could find words to answer him, and when he took her in h arms and fiercely crushed her to his breast, s made no sound at all, only sighed deeply a crumpled up in his arms.

Abdul laid her gently on the bed. With her silk scarf he wiped away the thin trickle of blood th oozed from her parted lips, then gathering up all t jewels and money, he left as noiselessly as he h come.

Rose Lee sat on the bed. Before her were heaped all the jewels, the trinkets and the money he had given her. With a cry she sprang up to face him.....

SYLVAN MOONLIGHT

By

NARAYAN GANGULI

MOONLIGHT had spread all over the forest. On both sides lay thick woods of sal trees, tall and luxuriant. But the sheds of leaves, dense as they were, were not matted with creepers and shrubs. The full moon was peeping through a network of leaves and branches. The forest looked enchanted amid the delusion of light and shade.

Shiukumari was gliding along the narrow walk. The water-pail at her waist was swinging to the graceful rhythm of her body—parched sal leaves under her feet seemed to sing in a wave of joy. In this eventide, it wasn't safe to pass through the jungle all alone. There were tigers and bears, there were elephants, musk-oxen and boars in plenty—what wasn't there in this vast forest? Yet Shiukumari was not afraid. That apart, the tigers of the Dooars are non-violent to the marrow, they won't claw a man if they can help it. People of this area firmly believed in this hearsay.

Through the forest Shiukumari was walking alone. Moonlight was glimmering upon the silver ornaments she wore. Odour of wild flowers was rising from thick-set bushes where the water of spring cut a deep wound upon the jungle's breast and flowed in a serpentine course. Drunk of the moonlight, a green-dove was whistling ceaselessly—deluded by the moon-lit night, the warbler too had sent away sleep from its eyes. Only a peacock was now and then screeching shrilly and beating wings—perhaps it had set upon somewhere a young of a python, finding it at a vantage point. Even amidst such magnificent moonlight and superb unconcealed beauty, the primitive violence of the wilds could not forget itself—the green-dove's melody and the peacock's screech were together making an exotic concept of fury and suavity.

At the wood's end lay an expanse of coarse sands—sands that hadn't the soft tenderness of silty mud nor the velvety smoothness of fine pearl-dust. Here the powdered stone-chips were sharp as gravels. The boulders the river Jaldhaka carried down from the Himalaya's heart during the peak of monsoon were lying scattered all over that vast sandy expanse looking like some gigantic turtles.

On that side stood the dark mountains of Bhutan and below them lay extensive wilds—endless ranging from the Dooars to Terai—the forefinger of resistance barring access, the inviolable rampart of the divine lord of the mounts, a dark revolt heaving from the earth's bosom under the light-washed firmament. And in front flew the furious hilly river Jaldhaka.

What a small river and how much water it contained! Doubtful hardly breast-deep. One could cross it on foot, it seemed. But that's all—in fact it couldn't be crossed by a boat even, let alone on foot. Gallons of water were gushing downward with a tempestuous current at thirty miles an hour, leaping from mountains to plains, from plains to the sea. It gave out the thunder-roars of a torrent that had woke up suddenly from a dream. The under-current was pushing onward a legion of sandy stones and heavy heaps of granite boulders. Stones clashed below—above, waters thundered breaking through coarse sands. Rumbles of so small a stream could be heard even a mile off.

The Jaldhaka was dazzling in the moon-light. The curved sword of a quiet sleeping light she was not—she looked exactly like what hillmen called "golden python." Roaring wildly, the stream was rushing forward zigzag like a hungry golden python—as if she was on an expedition against a prey that had slipped off her grabbing mouth.

The water-vessel at her waist, Shiukumari stood still awhile; forests at the back, wilds and hills on

the side opposite, and the river in between: the moon beaming in the sky.

Her mind was agog with joy; delighted, she felt a keen desire to burst into a song. It's on such a moon-lit night that her beloved was to arrive. The sloping spiral path had alighted along the mountain's side. Sal forests on both sides were shivering in wind. The hill tamarisks were ceaselessly hissing a monotonous sound. Smeared with the moon-beam hue, the wild plantain leaves were trembling. And down that path was trotting, a stallion—the rider was descending. A swing of intoxication touched the blood in the heart, all the veins and sinews stirred up in a restless and anxious abidance. The beloved was coming to a tryst.

Shiukumari had to stop again ere she had walked a few steps humming a tune. The heavenly music of sylvan moon-shine that the moon in the sky and the illusive earth were playing in concert suddenly lost its melody. Her body became eerie all over in a profound fright.

What's that whitish thing lying at the water-edge? A stone?—no, not that. Just in the evening she had washed herself over there—then it wasn't there! And within so short a time such a big stone couldn't possibly arrive there flying on the wind's lips! Then?

A man—yes, a man it must be! But how could a man appear here? Has someone killed him? Has an animal slain him? Both are possible.

A non-regulated area—here the tentacles of law were rather lax. The wild folk of this wild realm judged the right and wrong themselves — for that they did not need to run to courts at headquarters. And it was nothing unusual for some animals to move about waters after sunset; particularly, movement of bears in this part was a bit frequent.

Shiukumari hesitatingly stood motionless a few moments. What should I do? Should I move forward? An unknown danger may be lying there in wait, who knows! This jungle and this lonely river bank—what can I do if any peril comes upon me! . . .

But no good hesitating—let me see at least. The Bhutani maiden's intrepid unwavering mind gradually regained self-confidence—she slowly stepped forward that way.

Yes, it was a man—but an alien, a Bengalee. He lay by the water-edge senseless. Surely he had not been attacked by a bear, else his eyes and nose couldn't have been left intact. His body had no blood stain anywhere, neither did it bear any wound mark. His wears were quite in order and the gold buttons on his white shirt were glittering in the light. And, and—how strange, he was not dead! Swinging his whole body like waves, he was breathing heavily. The poor fellow had perhaps swooned for some reason.

Now she had nothing much to deliberate. Filling her pail with Jaldhaka's ice-cold water melted in moon-light, she knelt down beside the man in profound tenderness. Directly she fanned him a little with her veil after sprinkling some water upon his face and eyes, the long languid breathing of the

The poor fellow had perhaps swooned for some reason.

senseless gradually began to regain ease and natural colour. A few minutes more and Mahitosh opened his eyes. Bewildered and vacant was his look. All his thoughts seemed to be turning round within his brain at a quick measure like an indistinct nebula—piece by piece, broken in parts: they had no form, no shape, no consistency.

Shiukumari sped up fanning him and sprinkled some more water. The Jaldhaka's icy touch could startle even the dead, and Mahitosh had merely swooned! Slowly he raised himself up. Opposite him was a young maiden, staring at him with a solicitous and distracted look. There was moon-light in her dark eyes, moon-light on her handsome face,

moon-light on her ear-rings. Beside them was flowing Jaldhaka, murmuring sharply. It was not the police, nor the enemy chasing behind. All the restlessness of a roving, frightened, erratic life had as it were stopped here stock-still. Had a fairy descended beside him from the heaven resting upon wings of a dream? Had he, Mahitosh, died at last due to extreme fatigue and languor, and after death reached a wonderland! Marble-white alien nymph! She was staring at him with the unwinkling look of a statue, a look in which surprise and curiosity had burst into speaking at a time. Yet, it was not a marble-statue nor a fairy—it was a human being, yes, of flesh and blood!

"Where am I?" Mahitosh asked.

"On the river bank," the girl replied in broken Bengali with Hindi accent.

On the river bank! Mahitosh recalled—they were fleeing, he and Arabinda. Somewhere in the sal forest Arabinda was lost, he could not be traced out. But he could not stop, neither wait for him. Run, run, run hastily, much more hastily! The day before he had not had a bite of food, neither could he afford to sleep a wink the night over. Hunger and thirst had rendered his whole being rigid and limp. Then running and running he came across this water and rushed towards it like a drouthy beast. Thereafter? No, he could recall no more.

"How did you come over here?" the girl asked again.

Mahitosh did not answer. What would he, how could he? He listlessly spread open a pair of drowsy eyes heavy with languor and set them fixed at the deep dark wilds and the colossal horizon of black hills across the stream.

"Can you get up?" asked Shiukumari. "Then let's go our home." Mahitosh was still brooding. Where shall I go? Where will this unfamiliar mysterious maiden lead me? Which unknown world does her look invite me to?

Ultimately he rose to his feet. Owing to weariness his whole body was shaking, his head wanted to reel down to earth. Holding with one hand the water-jar at her waist, Shiukumari unhesitatingly extended the other toward Mahitosh: "Come, hold my hand and walk on."

Had it been some other time, Mahitosh would have hesitated. On account of his inborn training and natural instinct, even the very thought of seeking prop of the fair hand of an unknown, unacquainted young woman would have given his blood a swing. But his consciousness had not yet bloomed fully; as if he was visioning amid a drowse or a deep dream. Rays of the moon, sands of the bank, roars of the stream and murmurs of the wilds—all these had turned the whole universe into an unreality. Here mind would not question, heart would not falter. Against such an amazing background, everything was possible, everything normal.

Taking into his grip the girl's wet cold hand, Mahitosh dragged his legs along the sandbed reclining the whole of his body-weight on her well-built and well-shaped body. An aroma, entering into the blood through nostrils, seemed to slowly overpower his senses. But whether the maiden's body or the great forest or the moon in the sky was emitting that fragrance Mahitosh could not make out.

The jungle lay beyond the sandbed. A walk common for men, deer and bears ran through the sal forest. Fallen sal leaves sent back the rustling echo of the sound of steps. No peacock was screeching, but the breeze was carrying a green-dove's tippling tune. Nowhere could be heard roars of wild beasts —rather a stag's melodious call flashed into the ears: allured by such astonishingly charming moonlight, he was perhaps seeking his hind. Indistinct sounds, amorously emotional, were coming out from within the bushes—perhaps somewhere a couple of wild fowls had become maddened with the spell of an irresistible desire.

On a night as this would come the beloved—Shiukumari recalled. Shades quivered on each leaf of the wild plantain, all along the hilly tract—long sighs of distraction and affliction for separation swept over the tamarisk wood. And along the stone-paved path was coming the distant-dwelling beloved riding a trotting white stallion—to celebrate in the sal bower their first night of union.

Was she humming a song?—nothing he could realise. This silvery moonlight, this sylvan music, this mystery-pleasant rhythm of walking—all these together were slowly benumbing his consciousness. Gradually his heavy weight was pressing increasingly upon the girl's lean body. Had he fallen asleep again or lost senses completely?

* * * *

This part of the jungle was comparatively thinner; deforestation had lessened much of its density, and the other part bore little trace of it. The stroke of man's axe had fallen upon the forest's unimpeded domain. Wood was wanted for fuel, for shelter, for civilisation's endless needs, and even for the handle of the axe that destroys the forest. The lacerated jungle was growing leaner day by day. As its last protest, the great aged tree fell flat on the ground crashing underneath plants and trees, large and small, and heaps of shrubberies; to the unending demand of man the earth's original dwellers were silently giving themselves in. Only burning pangs piled up in the afflicted heart sometimes burst out in the shape of a forest fire. And that made a wonderful spectacle. Setting dry leaves on licking flames and burning shrubberies to ashes, flows of fire ran whizzing this way and that like the current of a stream. It rushed forward in a zigzag course—running straight, it suddenly took turn to the right or the left. The forest's heart-burning tossed about like a serpent of fire. For a day, for two days, for three days, the fire raged on till the blue clouds floating along from the summit of the Himalayas showered downpours painting every bough of the sal wood with the motley hues of a peacock's tail-feather. Where the jungle had grown thinner, there stood a small slum of the Bhutanees. This area was of course not within Bhutan—it was the extreme north of Bengal. It abounded in hills, springs, woods and tea-gardens. A small railway track passed through the dense forest a little way off to meet the needs of tea and timber—the trains that ran upon it were even smaller. The engine drove back at the sight of a wild elephant—train-running stopped if sal trees fell upon the track. This being a non-regulated area, people here didn't care much for the nuisance of police and outposts. A circle officer there was, but where he lived or what he did was, like the incorporeal Supreme Being, a subject of serious philosophical thought.

Here—a little way off the tea gardens and timber depots and the railway line—Kulabir ran his country-liquor shop—the spring from which tea

garden labourers and wood-hewers drew their elixir of life. The way through the jungle was not safe after sundown, there were chances of encountering troubles and perils.

Yet the coolies came — they could not but soak their throats with the strong intoxicant at least once at the day's end. Not that Kulabir's income was ample, but he could somehow make both ends meet.

Wheels of the night rolled on. The moon behind the jungle-screen was nearing the mid-sky. Hyenas were crying somewhere. Coolies left one by one; the sound of tambours and the lingering note of confused songs of the Santhal coolies slowly died down far off. Suddenly it struck Kulabir that his daughter hadn't yet returned. She had been to the river to fetch water, thereafter.....

His mind startled: she has not fallen prey to a beast, I hope! Shiukumari returned as he was about to go out sheathing his sparkling dagger. Not alone, Mahitosh too was coming resting upon her shoulders. It won't be correct to say he was coming, rather Shiukumari was carrying him along.

For some time Kulabir remained gazing at them astonished. Expanding wide his tiny Mongolian eyes, he asked mutteringly, "What's this?"

"Hush!" she said placing a finger on her lips. "Now give him some thing to eat, father, and get him a bed to sleep on. You'll hear in the morn whate'er you may want to."

* * * *

One of the legs of Kulabir was made of wood. He had returned from the war of 1914. Flanders, roars of cannons—western front. Blown by a shell-splinter, his left leg had perhaps taken refuge into the English channel.

On termination of the war, Kulabir came back home. The Bhutan Government gave him some landed properties, the reward for his loyalty. But those very properties ultimately turned out to be the cause of various troubles up with which the old fellow could not put. One fine morn, he loaded all he had upon a pair of ponies and arrived at the Dooars' jungles passing over Bhutan's hills and crossing Jaldhaka's ice-cold knife-edged current.

Since then days had been wearing on—ill and well, in weal and woe—some trivial, some considerable. The little girl of seven was now a bloomy virgin of nineteen. Day by day, Kulabir was becoming debilitated, spent-up. For want of a leg, some flagginess had crept into his body too, powerful as it was as a wild horse. Mostly for this reason Shiukumari had not been married so long: she was to her father what a stick is to a blind man.

It was hidden behind the night's gloom; now the radiant shine of the fresh sun revealed on the horizon the golden peak of the Kanchanjangha. The sal wood did not seem so very thickly spread. The great mountain's contour was drawn with a deep azure tint, and a luxurious growth of dense jungles extended all over like a mass of curly hairs.

Sitting on a charpoy and smoking a tobacco-pipe, Kulabir heard Mahitosh's story in details. His flat brownish face became overcast with a dark shadow of anxiety.

"How can I let you stay here, Babu? It's a British territory. Had it been my own country Bhutan, there would have been no difficulty, but here....."

Shiukumari came out holding a vessel of country-liquor. The maiden who had looked in the sylvan moonlight superbly dreamy showed now in the splendour of daylight a flat nose, and a pair of small eyes. The veil she wore had turned discoloured. Upon her fair face had fallen an unclean shade of habitual carelessness, in her neck's notches had collected dirt in a black mass. With fatigue removed and ease restored, the educated Mahitosh found all his dreams shattered on the rock of reality. She, this girl, was utterly commonplace, nothing more than any of those hill girls one met with here and there. The maiden who had, like a fairy, descended down resting on wings of light on the canvas of the sylvan moonlight and of the cutting stream whizzing past like a golden python was, alas,not the one standing before him.

Mahitosh cared not to utter a word; the answer came from Shiukumari : "No, father. The Bengalee Babu must be kept here a few days. The police will arrest him soon as he gets out of here. You are a free Bhutia, father, why do you object to giving shelter to a free Bengalee ?"

Now it was Mahitosh's turn to be taken aback. Strange, how could this dirty hill girl say such a thing ? Did it spring spontaneously from the free hill blood or was it influenced by this wild open world ? Mahitosh kept gazing at the girl : a well-built physique — it had more firmness than loveliness; the two small eyes bore a sharp look; from her ears hung a pair of heavy silver ornaments— these would have torn the ears had they been soft as those of a Bengalee girl. In an instant it was realised that she was indeed the brave woman capable of bearing the free soldiers of Bhutan.

But Kulabir was impressed by her argument. Yes, he belonged to a free nation that had not to carry the humiliation of foreign shackles day in and day out. Apart from that, he himself had fought a war—fought in bomb-devastated swampy trenches, under brilliant sparks of exploded shells, amidst incessant volleys of bullets and against sharp blades of bayonets. He did appreciate a soldier's honour. And Mahitosh was a soldier indeed : whoever fought for freedom was a soldier.

Thoughtfully smoking his tobacco-pipe, Kulabir said, "All right, stay here. Nothing to fear now— this time of the day none will drop in here, but in the evening when they all come from tea-gardens, you may have troubles should you chance to run into them." "You need not worry for that, father," Shiukumari assured, "I will manage all that."

Fast upon her gladdened glittering countenance Mahitosh fixed for once his grateful deep eyes.

"Awfully kind of you, Thapaji," he muttered in a choked voice. "Not at all, not at all, that is no kindness. Stay a day or two when you have come." Kulabir smiled a little, then walked into the room, his wooden leg making hard sounds. He could not rid himself of anxieties for hiding a fugitive in his house.

But though he got a shelter it would not be possible for him to stay here. Mahitosh began to think. These small huts of hillmen, these small cots of rope, this strong smell of liquor ! Those blue forests all around stood like a vast prison shutting the entire world out of sight. There were little means to know or guess from here whatever was happening in the large turbulent world abroad along with the rapid gyration of history. Was it a shelter or exile in the Andamans ?

Shiukumari came forward. Placing a hand upon Mahitosh's shoulder with the unhesitant ease of an innocent hill girl, she asked, "Bengalee Babu, what are you thinking of ?"

"What ! I am not thinking of anything," he replied absent-mindedly.

"No, you need not think of anything. You have nothing to fear, here the English won't find you out."

"Are you quite sure ?" a melancholy smile flashed upon his lips.

"Sure. But if you have to stay here, sitting

The Tricky Tiger

By
DHIRENDRA NARAYAN ROY
(Lalgola Raj)

I DO not know if you had ever been to the Maharli Shooting Block in the district of Chanda in South C.P. It is extremely hot there during the summer. Jungles and forests wither away during this time of the year and the green bosom of the land faces a complete desolation except for a few patches of browned grass and shrubs. The beasts also leave for elsewhere, maybe to some hilly tracts. The forest is calm and quiet, undisturbed by any human intrusion. The residual number of beasts that still stay on there, wander about as they like. They are even found to occupy the verandah of the Dak Bungalow and rest there comfortably. That place is then fixed up for their haunt instead of any use for human beings. There is none to stop them. The forest guard or the peon of the Bungalow finds it convenient to sanction his own leave and retire to sweet home. But in the rains the jungle becomes inaccessible, mainly because of hordes of insects and gnats who make it a risky affair to go there. After the rainy season, it becomes lush green and full of life when the fugitive beasts of the forest come back and again lay out their grand charm in the woods.

In the month of Aswin, when the Puja holidays set in, people are found to gradually make their appearance there. The jungle roads which are washed away by the rains are again taken up for proper repairs with earth works. The forest with men at work collecting jungle wood and produces before the winter would set in. The peans too are found to come here on shooting paigns during the Christmas.

WE START OFF

It was during the Puja Holidays that I hac to this forest. The roads were not till then repaired. I secured a letter of introduction fr friend of mine to the Divisional Forest Office was allowed by him to hold my expedition in Chanda. But the officer did not forget to ment his usual way, with a squint caressing his mous

"This is no time for hunting—the flower the bamboo has set in."

I looked at him askance. This time the carefully trimmed the pointed ends of his cosn cared moustache and explained to me clearly

"Flowering of the bamboo takes place thirty or fifty years, you see. We get its seeds and all old thickets dry up altogether The new of the bamboo become so thick that you car any animal even at a distance of three feet. A enter into the jungle—oh, it is impossible! I gi the pass, now try your luck.'

However, we arrived at the Dak Bungalow some food to last for some days, servants, a

Jhanu Gonda, the guide along with his followers, or seven in number. They are from the same k as the Baiyegas—about whom I have written in other hunting tales.

I had also a friend of mine with me, nicked 'Talkie.' They were two brothers—'Hockey' and kie.' The elder 'Hockey' was a good sportsman, cialising in Hockey, and the younger, 'Talkie', was rn speaker and could give a colourful account of talent live with jokes and humours. To crown all, was now after a chance in the films. Tall and he bore a decent appearance.

POET'S DREAM

There was only one road from Maharli to Ta-. It was a dense jungle all around. There is a in Taroba, so wonderful it appeared to be the m of an unknown poet. There was still another e Telinala—that could be found to contain r even in the furious summer. It was about a and a quarter from the Bungalow. Our hunting red round this spot.

It was with great difficulty that Jhanu could re three young buffalos from far off villages use baits are not easily available there. s are placed here and there to hold out allure-ts to the tiger. We roamed about in the forest six or seven days and every morning our duty isted in watching if any bait had been a 'kill.' s to fasten the baits in the morning and to take back in the Dak Bungalow formed our daily ramme—but there could be found no trace of tiger. I wondered if the tigers were suddenly erted to Vaishnavism or if they were launching n-co-operation. Some more days elapsed, when, ir great excitement we found one bait killed. The two, however, were untouched. We brought back to the Bungalow, and instructed Jhanu to a platform close by the "kill."

There was a pretty shower just before our ng on to the platform in the evening. We took eats on it tightly enough. Rain water had still rolling down the branches making intermittent is on the leaves—tap—tap—tap. At times, with mild wind, the branches of the trees shook and monotonous sound of water-drops was broken. s fell from the trees. I was listening to the of that endless dripping sound.

ACK OF GNATS

Soon I had the painful experience of a pincers of gnats from all sides and it upset me altor. The mosquitoes were attacking me vehement-t I kept quiet. I could not move my limbs lest ger should get any hint of my presence. To kill nats was beyond question as it would make s. I knew it for certain when a tiger had per-d a kill and tasted of its fresh blood, it would nly come back to it for his sumptuous feast, ime towards the evening. My waiting was for gust arrival. The night was intensely calm and the earth seemed deep in sleep,—only the stars e deep blue above were awake and below, was this weary yet incorrigible hunter in the weird realm of the woods.

The night rolled on to its end, but the tiger showed no sign of his approach.

Having had a sleepless night, I got down from the platform next morning and started for the resting place. I thought it was unusual that in spite of the kill the tiger did not come. But then he might come for lunch, so I came back to the spot at I P.M. and to my despair found that he really came and fed upon the beast and neatly escaped. The tiger was doubtless tricky for it would not allow any notice of its approach. Now I should be free from anxiety and so retired to our Bungalow. Sleep came down on my weary eyes.

FUTILE WAIT

Three days passed in vain, when on inspection I came across another kill out of the two remaining baits. Like the mite of a miser, I kept the last bait carefully in the Bungalow and set for arranging another platform. In the evening, when I went there fully prepared, to my utter dejection, I found that the vultures had torn the flesh of the animal beyond identification. Vultures fly in the sky, but their eyes are riveted to carcass below. Tigers take great care to hide their kills under the bushes but can seldom escape the eyes of these vultures.

What else could I do than breathe out a deep sigh in that forest and come back? There were certainly prospects for a good sleep but a great anxiety was there. Not only that, there were the pangs of loss of a sure game. 'Talkie' however was attempting to humour me with amusing stories and this and that, but I could not be pacified with bribes of consolation.

Next afternoon, our expert guide Jhanu, found out a suitable spot and erected the platform there. Close by it, our only remaining bait was kept to trap the tiger. When Jhanu and I went there, we found that the bait was still untouched. But the animal had a queer, frightened look in his eyes—his whole body trembled, his movements were strange—he wanted to trace out something dismal. This is most uncommon with them as generally they are mild in nature and give no sign. We moved forward and at a distance of about fifteen feet, we came upon the foot-prints of a leopard that had just crossed that road. My anxiety grew bitter, for the leopard was there so close by but the bait was yet unhurt. It was no doubt very uncanny.

MONKEY THE HERALD

On both sides of the unmetalled road there were the impregnable jungles—nothing could be seen through. Suddenly my eyes were attracted by some shrubs, and I guessed that the tiger must have gone through the shrubs as the long grasses that had been trampled down by him were trying to come back to their normal position. Perhaps, the tiger got hints of our approach and made good its escape nearby. My guess was substantiated by the cries of the black-faced monkey indicating that the tiger was nearby. Jhanu and I purposely began to talk aloud and proceeded onwards. In front of us stretched about a hundred feet of a gradually sloping land and I found that our 'Talkie' was coming from that direction. He was quite a Baboo and had a decent punjabi on with the front tuck of his cloth hanging low in elegance having made a flower at the end. He had fashionable shoes on with a fancy stick in hand and looked a full-

fledged Baboo. He had not yet bagged any bird or animal but was very bold indeed.

I cried aloud, 'Beware, the tiger is nearby. Be on the guard!'

We knew that tigers generally do not come where they suspect any human existence. So our conversation went on loudly.

He too replied:

"How can I be so, with only the stick in my hand? Besides, I too have heard something passing by."

"So please come to us, be quick."

'Talkie' was intelligent enough to fabricate his own language, and uttering them all aloud started to join me. In the midst of his panegyric we heard the atom bombs of his own peculiar laughter.

INCORPOREAL BEING?

Now we were three and when we came to the bait we found fresh pug marks of a leopard just on the prints of our shoes. The claws of tigers come out when they are on prowl, just like those of cats. But how strange—was the tiger incorporeal ? We waited for full one hour and then completely vexed, we unfastened the bait and proceeded towards the Bungalow. Suddenly Jhanu cried out.

"Look here, the bait bears taints of blood on its neck."

The position was perfectly clear to me now. Early in the morning, when we came for an inspection of the bait, the tiger must have jumped on it and left a wound on its neck, but could not break it. Getting scent of our approach, he had fled away.

Suddenly the idea came to me—I do not know how—that the tiger must be bagged today. Our last bait was in such a plight that it would not survive more than a day or two. So we finished our midday meals and went to the platform with the bait at 2 P.M. Generally a hunter takes his seat on the platform after the bait has been killed. We had been twice deceived and so adopted a different method. We fastened the wounded bait nearby and Jhanu and I got upon the platform and seated ourselves fully ready.

Jhanu was really an expert of forests—and was inferior to none either in words or deeds. This time, with the help of his followers, he had camouflaged

the platform so neatly with leaves and branches, it could not be detected from outside, and looked like a big shrub.

The day glided on to afternoon. Evening came and was almost over but "our Lord" was invisible. I did my evening prayers sitting on platform. Since I had my initiation to the Thread, I have never missed my daily prayers t a day except in illness. When I would be on hur I would perform it in mind.

The wrist watch recorded nine. How long sh I wait still? I was greatly perturbed. The disgu hours were to be passed with much difficulty. At time, the bait suddenly dropped down. I thoug was hopeless now, for no bait ever showed this tude if it was not free from any fear or anxiet gave up all hopes.

A ROYAL "DARSHAN"

But where there is a wil there is a way. after a peculiar buzzing sound like that of sand thrown over bushes and leaves came to my ears. mediately I could perceive that it was caused some running animal and then something stealthily near the bait and dropped down. Wit losing time I lighted the torch that was fixed or rifle and found that nothing was there, but the lay dead. What a worry—was it the act of the spirits? Otherwise where could the tiger go?

Darkness was dense all around but my light pierced through it and was focussed on this that object. When the light was projected on a about ten or twelve cubits from us, a gigantic tiger was there, full with the vehemence of p and strength, looking at us with burning eyes. appeared just like a still lightning—his gait was tremely majestic. The front and rear paws amply extended, the robust legs resembled the p of a massive building. His limbs expressed an in tion to the jaws of death. O, what a sight it wa

But I must not let it go—come what may.

I pulled the trigger. The tiger vanished.

The torch too was put out by the recoil o gun—I lighted it again but nothing could be Jhanu also had a torch: he too lighted it and re noitred around. Suddenly he gave out a cry:

"The tiger has been killed."

I wondered: there was no sound, no uproar tiger fell down and died—what was there in it be sure, I shot another round according to pra and found that there was no more of that flash lightning in the tiger—only the shot struck its that moved a little only to be still again.

DEVOTED YOUNGER BROTHER

Gracious Lord! Now we could come down the platform in perfect peace of mind. When I the tiger, it appeared to me that it was the bi of all I bagged as yet. The foot-prints led me t pect not more than a mere spotted leopard, b must thank my lot that, instead, I got a st Royal Tiger. Was it then that the younger br had left his claim over the bait in favour of elder brother? Brothers live separately—this is popular saying—and then the leopard must be a brother to the royal tiger. Besides, he should abi the law of primogeniture! It might be due to that a leopard and a royal tiger are generally seen to roam particularly in the same forest.

Our Talkie Baboo, with no arms or amm tion, had secretly hidden himself on the branch tree nearly, escaping our notice. I was startled touch on my back. Soon he gave out colourful l ters in which I found myself completely drowne drew out a tape from his pocket eulogizing me:

"Look here, I was confident that the terr

(Continued On Page

ntinued From Page 186)

and brooding over won't do. You have to work. e, let us fetch wood from the jungle."

This opportunity to do something seemed to lightened the load of an uneasy uncertainty. tosh rose up at once : "Let us go."

The path ran through the sal wood the lower on of which had been burnt here and there by t fires. Scorched, the sal plants stood like some posts. But they would not die merely because had been burnt. This was the preliminary of their life-force, their initial fire-crowning for ning in future the glory of forest-giants. The would render them lifeless for three or four burning their branches and foliage, but there- they would attain immunity from flames like orshipping eremites. With the passage of time, would grow taller and straighter and spread selves abroad—from the Dooars to Terai.

Birds on every bough—known and unknown, of us species, of motley shades. The playful run acocks and wild hens. Herds of deer appeared moment and vanished like a lightning flash. of spring water here and there; rich growth een bushes on both sides; tall grasses and hosts d flowers; clusters of blue-pink orchid blossoms ing every inch of the ground.

The pair walked along collecting firewoods and eaves. Mahitosh was feeling fine. Did he know e that the shape of life was so varied, so ant ? But no more could he gather grass-stalks ng down—his back was aching.

Bengalee Babu !" Shiukumari called.

Yes," Mahitosh raised eyes.

You are tired. Such works don't suit you, it ? Come, let us have some rest."

They sat on a heap of dry leaves at the foot sal tree. It was blue cold shade; there was a creeping shiver of breeze in the rough sal leaves; doves were calling; fluttering butterflies of varied colours were resting upon orchid buds; monkeys jumping from one branch to another; a quiet graceful sleeping wood. The ferocious night having ended, the wild forest-inmates were at this hour sunk in careless sleep inside bushes and grassy thickets.

you feeling frightfully uneasy, Bengalee Shiukumari asked almost inaudibly.

Shiukumari asked almost inaudibly, "Are you feeling frightfully uneasy, Bengalee Babu ?"

"No, not at all," Mahitosh heaved a long sigh.

"Not feeling uneasy ? Where have you chanced to come leaving your dear hearth and home ! It is a jungle, and we are all jungle-folk. There is no earthly reason why you should like it."

"Yet it's far better than a British jail," Mahitosh smiled.

"That of course I must admit."

Suddenly her mind grew laden with sorrow—only so much better, far better than a British jail ? Is here nothing better than that ? The jungle's calm cool shade—the sal flowers shaken down by breeze—the intoxicating moonlight at night — Jaldhaka's pleasing murmur—Kanchanjangha's golden crown. The wild plantain leaves on the stone-carved path on distant hills shake in wind, the sound of stones set rolling by some animal's fleeting legs make her imagine that her beloved from a far-away land is coming to a tryst riding a grey. She then feels a burning desire.....

But Mahitosh did not share Shiukumari's desire. Mother India in shackles—26th January—night-long devotion behind prison bars—the August movement —do or die. Away from that turbulent world, away from the swinging stirring great life, where has he been cast off ? Agitated Bombay—frenzied Calcutta. Cries of Bandemataram on every street—bludgeons—guns—blood—law and order. All these move round before the eyes like a motion picture. Separated from there, flung out by the rolling waves of that roaring sea, shall he ever lie inert on an unknown shore of life like the rocky sandbank of the African wilds ? Will a cold meteor ever lie sunk at the bottom of the deep sea of death, disorbed from the firmament where clusters of spinning stars and blazing nebulae are together forming a cataclysm of destruction and creation ? "You were kind enough to give me a refuge," said Mahitosh, "Don't know how I shall repay this debt."

"We don't accept repayment of the debt of kindness, Bengalee Babu," her voice grew sharp. "That is not our custom. But let us go now, the day is gone far."

The taunt took him by surprise. What was the meaning of this sudden cut ? It was indeed vain to try to comprehend a wild woman's character, incomprehensible as the jungles of the Dooars. Without a word, Mahitosh took up the small burden of wood.

A breach of measure had occurred in the sal wood's poetry, softened by shades. On the hill far off, a wild elephant gave out a cry that came by air like a grave thunder hushing up Jaldhaka's tumultuous murmur.

The meteor is displaced from its orbit : but it does not want to get cold—it burns within the heart without cease. Yet there's no way out; a shelter must at any cost be had for a few days till Arabinda returns.

And Mahitosh knew—at least his mind positively knew—Arabinda would come back. Wherever and

however might he be, he must find him out, by any means. One might evade even the claws of death, but to evade Arabinda's eyes—it was impossible; as if his two eyes, growing into millions, lay scattered everywhere—in the sky, air and forest.

Even so, days wore on. He gathered grass-straws, hunted wild hens with Kulabir's shot-gun and searched for deer. Walking through the jungles, he felt that perhaps Arabinda would presently appear before him from somewhere like a shadow-figure.

But Arabinda did not turn up. Instead, Shiukumari would appear from nowhere like the sylvan goddess—a water-jar held at her waist and a wet sari clinging fast to every nick and crease of her elegant body. Flashing a smile and darting a sharp glance, she would ask, "Got a game ?"

Mahitosh stopped startled, his look caged by her faultless physical grace. His heart got tinged. A confession of subconsciousness came out unconsciously : "I think I have got one."

"Really ?" her eyes were set on flames.

"Really." As if the unseen satan gave his shackles a pull—Mahitosh advanced step by step : "I seem to have got it after a pretty long search."

Not tarrying further, Shiukumari quickly vanished into the woods, raising in each of his blood corpuscles a violent wave of her luscious body movement. But the next moment he felt like rid of the stupor of a nightmare. He thought himself guilty, despicably fallen from his vow, devious from his devotion. Things have come to such a pass at last ! Rambling about wilds and woods, I'm making love to a hill girl throwing into oblivion the vow of the 26th January !

Mahitosh pressed his head with both hands. No, no more. What's this snare I am slowly getting enmeshed in ! A freedom's soldier I am—wailing of mother India in fetters echoes from Cape Comorin to the snow-capped peak of the Everest. What's this illusion I am gripped in ! Am I doing my duty in this fashion ?

At Kulabir's shop a rendezvous of liquor-greedy coolies and hillmen went on right from the evening till nine in the night. Handicapped by a wooden leg, Kulabir could not look after everything alone; Shiukumari assisted him. She served liquor-pots to customers along with a heart-robbing smile; their hearts became tinged—tinged with the hue of intoxication, with the colour of Shiukumari's mellow eyes. They paid more than due by mistake.

And during all these hours, Mahitosh sat silent on a cot behind the hut wearing a pair of Kulabir's loose shorts. For this period he had to go into self exile. Coolies came, came their headman. Sometimes some of the forest office staff stepped in. From his hiding Mahitosh could hear their bustle and uproar and snatches of unintelligible songs; their ribald reckless gusty laughter threatened to shake Kulabir's tiny thatch-hut. And—piercing through all these radiated a light sharp laugh—Shiukumari was laughing.

Mahitosh longed to rid himself of his illusion. But can anyone really get rid of it ? Shiukumari is laughing—the hill girl is laughing a practised laugh just to please her liquor-customers. That matters little to me. But does it not really matter to me ? Why then do I feel such heart-burning, why do I think she is deceiving me ?

The sylvan moonlight had ended, now had appeared the dark moon—and the wild darkness. Buried in the evening gloom, Mahitosh sat quiet, set upon by swarms of mosquitoes. Within his heart rose a helpless wail of woe—Arabinda, Arabinda ! Where have you gone now leaving me in the lurch ? Should I myself go away ? Should I get off at once through this sal wood shrouded in black gloom, wading across the sharp stream of the black-dyed Jaldhaka ?

But this idea too did not encourage him much. Someone seemed to have robbed him to the last ounce of all his strength. He was afraid of going away alone, of plunging into a fresh uncertainty once more. Was he imprisoned for ever in these jungles, within this small cottage of hillmen ? Did he lose his power to proceed forward ? Arabinda—if only he were here now !

Clamour in Kulabir's shop was gradually dimming down. No more could be heard Shiukumari's peals of laughter. There were now only sweet jingles ringing at intervals—Kulabir was counting coins striking them on the wooden box.

Suddenly a kerosene lamp's flickering light fell upon Mahitosh's face : before him was the fairy queen of the forest realm, a lamp in hand, an amusing look playing in eyes : "Come, Bengalee Babu, come inside. They have all left."

Spellbound, he got up. Shiukumari stretched her hand as easily as she did on the first day : "Come along, come along."

And that wiped everything off his mind. The heart-burn her reckless laughter had caused him a little while ago no longer pierced his ears. Has this girl completely fascinated him ?

* * * *

Days were passing on—but did not pass any further. Life's inevitable complexities appeared on the scene. One day Baldeo, the timber-merchant, showed his face at the liquor-shop under cover of darkness. Spreading a crooked smile all over his countenance, he asked, "How do you do, Shiukumari ?"

Her blood turned cold; Kulabir cast a timid suspicious glance. A dangerous devil he was, this Baldeo. Not addicted to liquor, he would not have come over this way had he not had a design in his sleeves. But what could it be ? Kulabir tried to guess.

He was a man of consequence, this timber-merchant—and as crafty as he was cruel. There was none that did not fear him. Yet, Shiukumari did never fear this man. One day between two lights, Baldeo had caught hold of her hands and made love to her. As much money you want—he had proposed.

But he could not finish. When he had raised his head coming round from the dizziness of a powerful slap, there was no trace of anyone on the river's sandy spread. Only the roars of waters had been laughing at him.

Baldeo had galloped his pony off. But Shiukumari knew well he had not forgotten the slap's burning pain—neither would he forget it so easily.

"I am quite all right," she replied pulling a long face.

"Yes, you look quite all right," again he smiled a savage smile. In his two narrow eyes shimmered a serpentine flash of hilly revenge.

Ordinarily Baldeo did not take drinks, but heaven knew what had happened to him today—he

went on quaffing liquor, pot after pot. Handing a tenner to Kulabir, he said, "Go on, Thapaji, go on."

The night grew on. All the customers left one by one, but Baldeo would not get up. Impatient, his pony was repeatedly striking ground with legs and chasing mosquitoes with tail-lashes. Baldeo did not fear encounters with wild animals on forest-ways; immeasurably strong in physique, he could slay a tiger with dagger-stabs.

He stepped forward soon as Kulabir went inside the room on some business. Fixing fast his blood-shot ferocious eyes upon Shiukumari's, he asked, "Have you given shelter to an absconder ?"

"Who has told you ?" She shook violently all over from head to foot.

"Can you throw dust in my eyes ?" Baldeo said riveting his gaze on the helpless face of the prey in his grip with the mirth of a satiated malice. "As many as seven eyes I possess. Right tomorrow the police will be informed. Not alone that Bengalee Babu, you too shall be handcuffed, and vour father as well."

A shriek came out of her parched throat.

"Listen, Shiu," he continued, "none else but myself knows this. I can save you, can also spare that Bengalee Babu, I can. But, look, not out of pity. Tonight I shall be waiting for you. If you come, there will be no trouble. If you do not, well, all of you shall go to police custody tomorrow."

With vacant speechless eyes, Shiukumari remained gazing at him.

Drawing his glittering dagger out of its sheath, he tested its edge as if purposelessly, and then said, "Money is no consideration. You will have whatever you desire if only you can satisfy me. Possibly you know I traded in timber during the war. But remember—tonight. Should you fail, do not blame me for what may happen tomorrow morning."

He rode on his horse staggeringly and galloped out of sight at full fling illuminating the woods with the dazzling flash of a seven-cell hunting torch.

But all this Mahitosh was not aware of; he was then sunk in a sound sleep lying on a rope-cot within the hut; without was blowing a gentle breeze raising a soft murmur among sal leaves; coming in through holes in the walls, it caressed him all over with its tender touch. He was dreaming. What dream ? Not of the 26th January, nor of the 9th August. The surging waves of the banner-bearing frenzied multitude have dived somewhere into the deep of oblivion. The sylvan moonlight lies asleep on Jaldhaka's rough sandy lap. Is it a marble figure fanning him with a veil after sprinkling water on his eyes and face ? Or a nymph of light descending from the heaven resting on wings of dreams ?

He woke up startled. Someone had dashed upon his chest. Heavy breaths fell upon his face—he could clearly feel tossings of an agitated expanding heart. In the dim light of the kerosene lamp he saw it was Shiukumari !

"Come, let us flee. Take me away."

Confounded by a sudden passion, Mahitosh ardently took the hilly girl in his arms and pressed her fast to his bosom : "Where shall we go ?" she was choked, her voice was shaking violently in an unbearable emotion : "Wherever you please."

Mahitosh was gradually regaining his senses : "But....how can I take you away ? Surely we can't run away from here empty-handed. There is danger at every step. Money, money is needed to

"Malyadan"

The Garlanding

Rabindranath Tagore

Translated By Sheila Chatterjee

THE morning had been rather chilly. At midday the breeze warmed up a little and began to blow from the south.

From the verandah where Jatin sat the meadow outside could be seen through a gap between a jackfruit tree on one side and a Sirish on the other at one corner of the garden. That empty meadow glimmered in the sunlight of early spring. An unmetalled road ran along one side of it. Emptying its load, a bullock cart was returning leisurely along it towards the village. The cartman with a *gamcha* on his head sang as if he had nothing to do in the world.

Just then from behind, a laughing feminine voice said, "What, Jatin, are you thinking of some one you knew in your previous birth?"

Jatin said, "Why Potol, am I so unfortunate that if I have to think I must draw on my previous birth ?"

The girl who was known as Potol among her relatives said, "Stop bragging. I am well informed of your affairs in this life, sir. Shame, shame! A grown up man, you could not bring home even just a wife! Even Dhana, that gardener of ours, has a wife. Quarrelling with her twice a day he lets the people of the entire neighbourhood know that he really has a wife. And staring at the fields you pretend as if you are meditating on someone's moon-like face! Don't I see through all these tricks? They are only a show put up to fool others. You know, Jatin, a known Brahman does not need a sacred thread to be identified by. Does that Dhana of ours stare out at the fields like you on the pretence of suffering separation? Even on the day of the greatest separation I have seen him spend his day with a hoe under the trees, but I never saw such a dreamy look in his eyes. And you, sir, in all your life haven't seen the face of a wife—you have grown old only dissecting dead bodies in the hospital and learning lessons by heart—why do you stare at the sky at midday with such a soulful look? No, I don't like all this nonsense. It makes me burn with irritation."

Jatin folded his hands and said, "Enough, enough, that will do. Don't shame me any more. Your Dhana is really blessed. I will try to follow h

ideal. I won't waste more words. I will exchange wedding garlands with the first *Kath-Kurani* (a girl who picks up stray bits of wood and twigs for a living) whose face I see on waking up. I can't bear such ignominy any more."

"Then this is final?"

"Yes."

"All right. Then come with me."

"Where will I go?"

"Come and see."

"No, no, some mischief must be brewing in your head. I will not move from here."

"All right, then sit here." Saying this, Potol walked away quickly.

* * * *

Let the parties be introduced. Between the ages of Jatin and Potol there was but the difference of one day. Because Potol was a day older than Jatin, he was unwilling to show her any kind of social respect. They were first cousins. They had all along played together. Because she was not addressed as Didi (elder sister or cousin), Potol had in her childhood complained much to her father and uncle against Jatin; but no form of punishment proved effective—she remained just Potol even to the only cousin younger than herself.

Potol was plump and round, full of the spirit of joy. No one in society had any power which could keep down her joking laughter. She had never been solemn before her mother-in-law even. At first there was much talk about it. But in the end all had to admit defeat and say, "That is her nature." After that it turned out so that the seriousness of the elders crumbled to dust, struck by Potol's uncheckable joyousness. Potol could not stand heavy hearts, long faces or worry anywhere about her. The air about her seemed loaded with electricity with her endless stories, laughter and jokes.

Potol's husband, Harakumar Babu, was a Deputy Magistrate transferred from the Bihar side and posted in the Excise Department in Calcutta. Through fear of plague he stayed in a rented garden house at Bally from where he travelled to Calcutta and back. He was about to bring his mother and one or two relatives from his country home as he would have to go often to the mofussil on inspection of excise work when Jatin, newly passed out as a doctor and without any practice or reputation came invited by his cousin to spend there a week or so.

Coming from a Calcutta lane into the midst of trees and shrubs Jatin sat in the shady quiet verandah, drowsy with the charm of a spring noon when the above mentioned teasing began.

When Potol went away, he settled down again comfortably in his chair, at peace for a moment. His mind wandered in the alleys of the fairy tales of childhood, following the mention of the *Kath-Kurani.*

Then again he was startled by Potol's laughing voice.

Dragging another girl by the hand, Potol came and placed her before Jatin. She said, "Listen, Kurani" (foundling girl).

The girl asked, "Yes, Didi?"

"How do you like this cousin of mine?"

The girl began to observe Jatin without em-

I won't waste more words. I will exchange wedding garlands with the first Kath-Kurani whose face I see on waking up.

barrassment. Potol said, "Well, isn't he good looking?"

The girl judged solemnly, inclined her head and said, "Yes, he is good looking."

Jatin, red with embarrassment, rose from his chair and said, "Oh! Potol, what childishness is this?"

"Am I being childish or are you behaving like an old man? You act as if you were older than all the hills and trees!"

Jatin fled. Running after him, Potol cried, "Oh Jatin, don't be afraid, don't be afraid; you won't have to exchange wedding garlands at once. There is no auspicious hour in these months of *Phalgun* and *Chaitra*. There is still time."

The girl, whom Potol called Kurani, remained amazed. Her age would be about sixteen. Her body was slim. Of the look of her face there is not much to be said except that there was one thing extraordinary about it—somehow it seemed to remind one of a wild deer. Bluntly speaking, it could even be called want of intelligence, but it was not idiocy; it was only immaturity of intelligence which had not spoilt the beauty of Kurani's face but on the contrary given it a distinction.

In the evening Harakumar Babu returned from Calcutta, saw Jatin and said, "So you have come, Jatin? It is good. You will have to do a bit of doctoring. While we were up country during the time of the famine we adopted a girl and have been bringing her up. Potol calls her Kurani. The girl's parents and she herself were lying under a tree near our bungalow. When we heard about them and went there we saw that her parents were dead. The girl was just alive. Potol has saved her life with great care. No one knows about her caste. If any one questions it Potol always says—'She is twice born, a Brahman. She died once and was born in our home again. Her former caste has got lost somewhere.' At first the girl had begun to call Potol 'Mother.' Scolding her, Potol said, 'Don't you dare call me Mother; call me Didi' (elder sister). Potol says, 'If such a big girl calls me Mother, I shall feel old.' Perhaps due to the starvation during that famine or due to some other cause she has something like a colic pain from time to time. You must examine her well and see what is wrong with her. Tulsi, go and call Kurani, will you?"

Kurani while doing her hair came to Harakumar Babu's room with her unfinished plait swaying down her back. She remained looking with her deer-like eyes fixed on them both.

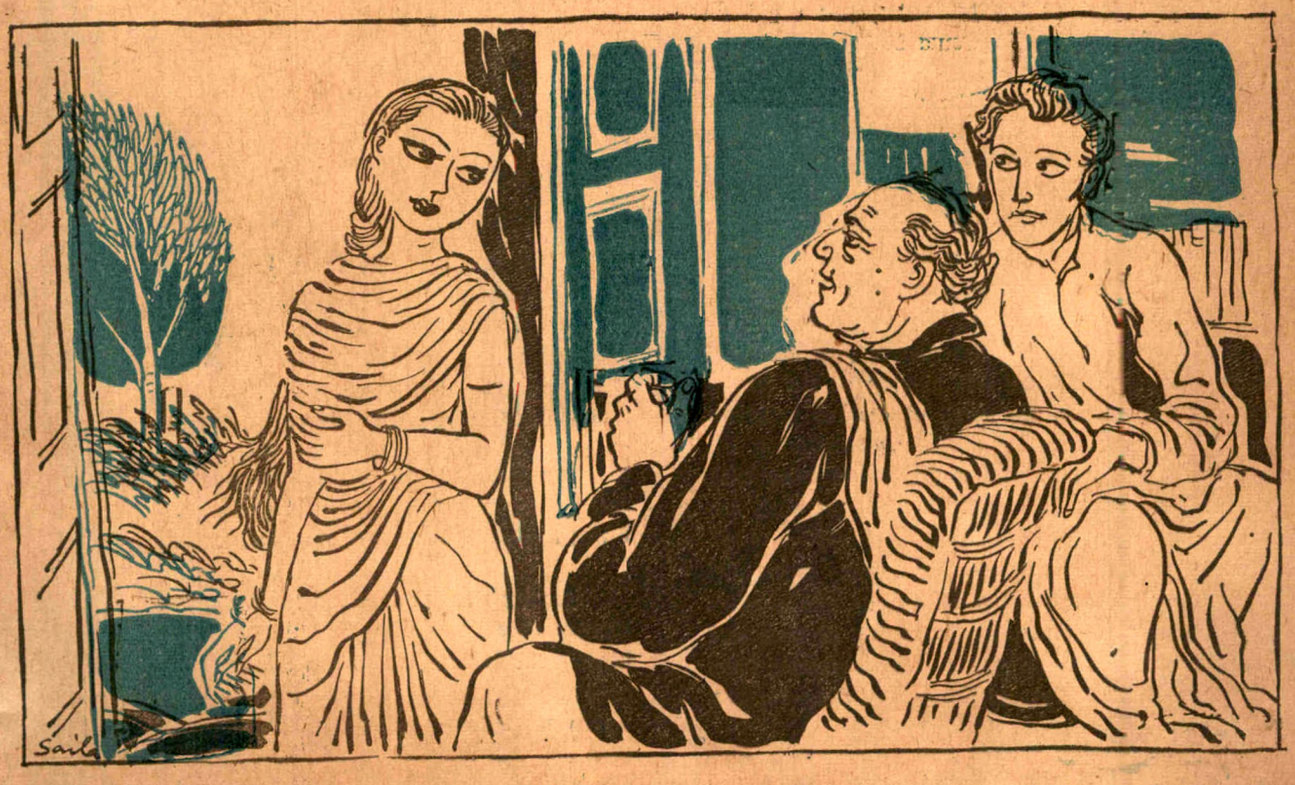
Seeing Jatin hesitate, Harakumar Babu said to him, "You are embarrassed for no reason, Jatin. She looks very much grown up but, as in a green coconut, there is only water splashing inside her. Up till now there isn't a sign of any kernel inside. She understands nothing. Don't mistake her for a woman, she is a forest deer."

Jatin began to carry out his medical duties. Kurani did not show any hesitation. Jatin said, "I don't find anything wrong with her physically."

Potol entered the room suddenly and said, "There is nothing wrong with her heart either. Do you want to have it tested?"

Saying this she went near Kurani and, touching her chin, said, "Kurani, do you like this cousin of mine?"

Kurani nodded her head and said, "Yes."
Potol asked, "Will you marry my cousin?"



She remained looking with her deer-like eyes fixed on them both.

Kurani again nodded her head and said, "Yes."

Potol and Harakumar Babu laughed out. Not understanding the cause of their laughter Kurani covered her face with a smile in imitation of theirs and looked on.

Jatin became red and embarrassed and said, "I say, Potol, this is really too much. It is all wrong. Harakumar Babu, you give Potol too much indulgence."

Harakumar Babu said, "Else I too can't expect any indulgence from her. But Jatin, you are so upset only because you don't know Kurani. I am afraid, with your embarrassment you will teach even Kurani to feel shy. Don't feed her with the fruit of the tree of knowledge. Everybody else has been joking with her—if in the midst of it all you show seriousness then it won't be fair to her."

Potol said, "That's why I could never get along with Jatin. Constant quarrelling has been going on between us from our childhood. He is too serious."

Harakumar said, "Is that why you have made a habit of quarrelling? Now that the cousin has slipped away....."

Potol said, "Lying again ? There is no fun in quarrelling with you. I don't even try."

Harakumar said, "I acknowledge defeat at the very beginning."

"As if it were a great achievement! If instead of admitting defeat at the beginning you could do so at the end, how happy I would be!"

At night Jatin opened the doors and windows of his bedroom and thought of many things. What a terrible shadow must have been cast on the life of the girl who had seen her own father and mother die of starvation! The cruel incident had made her so grown up. Was it right to make fun of her? The Creator had in His mercy cast a veil over her intelligence. If this veil were raised, then what terrible signs would be seen of the destructive play of Fate! That afternoon when Jatin was looking at the spring sky through the trees, the smell of distant jackfruit blossoms became fainter and was overwhelming his senses, his mind beheld the entire world hazy with a mist of sweetness; that unintelligent girl with her two deer-like eyes had dissolved that golden mist. The world, miserable with hunger and thirst—its body hardened with pain—which stands like a giant behind the songs of birds, the humming of bees and the murmur of leaves in the spring, appeared from behind the artistic beauty of the parted drop-curtain.

The next evening Kurani had an attack of that pain. Potol hurriedly sent for Jatin. Jatin came and saw that there were cramps in Kurani's hands and feet due to the pain; her body was stiff. Having sent for medicines Jatin ordered hot water to be filled in bottles. Potol said, "Are you so great a doctor that you can't rub her feet with a bit of hot oil? Can't you see, the soles of her feet are cold like ice?"

Jatin began to rub the soles of the patient's feet vigorously with hot oil. The treatment went on till late at night. Returning from Calcutta, Harakumar Babu asked again and again for news of Kurani. Jatin understood that Harakumar Babu's condition was coming to a standstill through Potol's absence after his return from work; that was the explanation of his frequent enquiry about Kurani. Jatin said, "Harakumar Babu is getting restless; you go, Potol."

Potol said, "Of course you will put the blame on someone else! I have understood who is restless. You will feel relieved if I go. Yet you blush with shame at every word. Who would know all this was hidden inside you?"

"All right, for heaven's sake stay here. Spare me. I shall be relieved only when you shut your mouth. I had misunderstood the situation—perhaps Harakumar Babu is at peace; he doesn't often get a chance like this."

When feeling soothed, Kurani opened her eyes. Potol said, "To make you open your eyes, your bridegroom has begged at your feet for a long time today. Is that why you took such a long time today to come round? Shame! Shame! Take the dust of his feet."

Understanding this to be her duty, Kurani at once solemnly made obeisance to Jatin, touching his feet. Jatin walked out of the room quickly.

* * * *

From the next day there began a regular campaign to tease Jatin. Jatin had sat down to his food when Kurani came and began nonchalantly to fan the flies away. Becoming concerned, Jatin said, "Let it be, let it be; there's no need for it." Surprised at this forbidding, Kurani turned her face round to glance once at the room behind and then again began to sway the fan. Addressing the one hidden inside, Jatin said, "Potol, if you worry me like this, then I won't eat. I am getting up now, leaving my food."

Saying this as soon as he was about to arise, Kurani threw down the fan. Jatin saw a line of intense pain on the unintelligent face of the girl. At once repentant, he sat down again. Jatin also had begun to believe that Kurani understood nothing, that she did not feel shame or sorrow. That day in one moment he saw that there was an exception to every rule, and no one could say from before when

that exception would suddenly take place. Kurani flung down the fan and went away.

Next day in the morning Jatin sat in the verandah. The *Kokils* had begun to clamour very much in the trees and the breeze was heavy with the fragrance of mango blossoms when he saw Kurani, a cup of tea in her hand, seem to hesitate a little. There was a look of pathetic fear in her deer-like eyes, as if she could not make out whether Jatin would be angry or not if she took his tea to him. Feeling sorry, Jatin went forward to her and took the cup from her hand. Could one inflict pain on this fawn in human form for a trifling reason? As soon as he took the cup he saw Potol suddenly appear at the other end of the verandah. Laughing silently, she shook her fist at him, as if to say, "Now you have been well and truly caught!"

That evening Jatin was reading a medical journal when startled by the smell of flowers he saw Kurani enter the room with a garland of *Bakul* flowers in her hand. Jatin said to himself, 'This is going too far. It is not right to allow further indulgence to this cruel joke of Potol.' He said to Kurani, "What a shame, Kurani! Don't you understand, your elder sister is making fun of you?"

Before his words were finished Kurani was about to go away, frightened and shrinking. Jatin then called her quickly and said, "Kurani, let me see your garland." Saying this he took the garland from her hand. A radiant happiness came out perceptibly on Kurani's face. At that moment a bubbling sound of loud laughter from someone unseen was heard.

* * * *

Next morning on going to Jatin's room to tease him Potol found the room empty. Only a piece of paper was written,—'I am running away. Shri Jatin.'

"Kurani, so your bridegroom has fled? Couldn't you keep him?" Saying this, Potol tugged at Kurani's plait and went away to her household work.

It took Kurani some time to understand the situation. She stood like a picture staring fixedly before her. Then slowly coming to Jatin's room she found it empty. The garland she had presented the previous evening lay on the table.

The spring morning was sweet and soothing; the sunlight had come through the shaking branches of the *Krishnachura* and, blending with shadows, fallen on the verandah. A squirrel ran about with its tail on its back and all the birds singing in many tunes failed in spite of all their efforts to finish what they had to say. The joy of life was bubbling over in this corner of the earth, in this portion of the world created partly by the shadows of thick leaves and partly by sunlight. In the midst of it all, the girl devoid of intelligence was unable to comprehend any reasonable meaning of her own life and of everything about her. What had happened? Why had it happened this way? And after that why did this morning, this house, each and every thing become so entirely empty? She, whose capacity to understand was limited, was suddenly lowered down one day by someone into the mysterious bottomless cavern of pain of her own heart—without even a lamp in her

Jatin then called her quickly and said, "Kurani let me see your garland".

hand. Who could draw her up again to this world, to this self-forgetful noise of trees, deer and birds where life overflowed of itself?

After finishing her household work, Potol came to look for Kurani and saw her in Jatin's deserted room lying on the floor, holding on to one post of the bed, as if she was entreating the empty bed by its feet, as if she was pouring down in fruitless hope at the feet of emptiness the bowl of nectar which was hidden in her heart. Crumpled on the floor, with dishevelled hair and disarrayed clothes, that girl seemed to be saying in the language of intense silence, "Accept me, oh, accept me. Do take me."

Becoming surprised, Potol asked, "What are you doing, Kurani?"

Kurani did not get up; she remained lying as she was. As soon as Potol came near and touched her, she began to sob wildly.

Potol then understood and said, "You silly girl, you have completely ruined everything. You are lost."

Potol told Harakumar of Kurani's predicament and said, "What an awful calamity has taken place! What were you doing? Why didn't you forbid me?"

Harakumar said, "I am never used to forbidding you. Would it have been any use even if I had done so?"

"What kind of a husband are you? If I make a mistake, can't you stop me by force? Why did you allow me to play this game?"

Saying so, she ran and putting her arms round the prostrate girl's neck cried, "Sweet sister of mine, tell me in full what you have to say."

Alas ! What language had Kurani in which to present in words the unspoken mystery of her own heart ? She lay with her entire heart pressed on a pain which was beyond expression. What that pain was, whether that happened to anyone else in the world or not, what people called it, — of that Kurani knew nothing. She could only speak through crying; to express the thoughts of her heart there was no other way.

Potol said, "Kurani, your Didi is very naughty, but she never even dreamt that you would believe her words like this. Why did you make such a mistake ? Kurani, look up once at your Didi's face, forgive her."

But Kurani's heart had then turned away. She could not look up at Potol's face at all. She remained hiding her face down between her arms even more closely. Without understanding everything properly, she was angry with Potol in a blind way. Potol then slowly disengaged her arms and got up, and standing silently like a marble statue by the window she stared at the row of areca palms glimmering in the spring sunshine while tears streamed down her eyes.

* * * *

Next day Kurani could not be seen any more. Potol used to dress her lovingly in fine clothes and jewellery. She herself was easy-going and took no care of her dress, satisfying all her desire of dressing up through Kurani. Those clothes and jewellery collected over a long time lay on the floor of the room. The Balas and bangles of her wrists, even the little clove-flower nose-stud she had taken off and left behind as if she had tried to rub off her body all the long love of her Potol-Didi.

Harakumar Babu informed the police so that they might search for Kurani. That year so many people were fleeing in so many directions on account of the plague that singling out one particlar person from the crowd of fugitives became difficult for the police. Having experienced much suffering and embarrassment through running after wrong persons a few times by mistake, Harakumar Babu gave up the search. She whom they had

"Why did you make such a mistake? Kurani look up once at your Didi's face, forgive her."

received from the lap of the unknown hid herself again in the lap of that same unknown.

* * * *

Through special effort Jatin had got himself appointed as a doctor in the plague hospital that year. One day having finished his midday meal at home he went to the hospital and heard that a new patient had been admitted into the women's ward. The police had picked her up from the streets.

Jatin went to see her. The greater part of the girl's face was covered by a sheet. First Jatin lifted her hand and felt her pulse. The pulse did not show much fever but extreme weakness. Then removing the cover from her face for examination he saw that it was none other than Kurani herself.

Meanwhile Jatin had collected all information about Kurani from Potol. Those two deer-like eyes of hers, shadowed with the unexpressed feelings of her heart, had constantly spread tearless sorrow on Jatin's meditating gaze during intervals of his work. That day the long eyelashes of her eyes closed in illness had drawn a line of darkness on her wasted cheeks. The moment he saw her, someone seemed to clutch at his heart. After moulding this one girl with such care, lovely and soft as a flower, why did the Creator float her down from famine on to plague ? How did the delicate heart, which lay exhausted on the bed that day, bear the blows of so many disasters, the burden of so much pain, in its little span of life ? Where did it hold them all ? Why did Jatin come into her life like a third calamity from somewhere and get entangled in it ? Suppressed sighs kept striking at the door of his heart — but the pressure of those blows struck at least one rapid sequence of notes of happiness on the strings of his heart. That love which is rare in the world had suddenly fallen of itself at noontide on a day in spring like a bunch of full blown *Madhavi* flowers at Jatin's feet without his asking for it. Who in this world could lay a claim to that love which fainted like this after coming up to the door of death, the love which was an offering fit for the gods ?

Sitting beside Kurani, Jatin began to feed her with sips of warm milk. She went on sipping the milk and after a long time opened her eyes with a sigh. Staring at Jatin's face, she tried to remember him like some distant dream. When Jatin shook her gently, placing his hand on her forehead and called her, "Kurani", then the last haze of her unconsciousness suddenly disappeared; she recognised Jatin, and at once a tear-softened veil of love came down over her eyes. A vast soft serenity gathered on Kurani's eyes like the heavy solemn-looking monsoon sky at the first gathering of clouds.

Jatin said with tender care, 'Kurani, drink up this little milk." Kurani sat up a little and, looking fixedly at Jatin's face from above the cup, she drank up that milk slowly.

A hospital doctor cannot sit all the time beside one patient. The work suffers, neither does it look well. When Jatin stood up to attend to his other duties, Kurani's eyes became full of anguish with fear and despair. Holding her hands Jatin consoled her, saying, "Don't be afraid, Kurani. I will be back again soon."

Jatin told the hospital authorities that the newly admitted patient was not suffering from plague; she had become weak only through want of food. It might be dangerous for her if she were kept there with plague patients.

With much special endeavour Jatin obtained permission to remove Kurani elsewhere, and took her to his own lodgings. He also wrote a letter to Potol giving her all the news.

* * * *

That evening there was no one in the room except the doctor and the patient. At her head a kerosene lamp shaded with coloured paper spread a shadowy dim light, and on the bracket a timepiece ticked away in the silent room, swinging its pendulum.

Placing his hand on Kurani's forehead, Jatin said, "How do you feel, Kurani ?"

Giving no reply to his question, Kurani kept Jatin's hand pressed down on her forehead.

Jatin again asked, "Are you feeling better ?"

Closing her eyes a little, Kurani said, "Yes."

Jatin asked, "What is this round your neck, Kurani ?"

Kurani tried to hide the thing, hastily drawing up her clothes. Jatin saw, it was a dried up garland of *Bakul* flowers. Then he remembered what that garland was. While the timepiece went on ticking, Jatin sat silently and went on thinking. This was Kurani's first effort to hide, her first attempt at concealing the feelings of her heart. Kurani had been a fawn. When did she become a young woman burdened with the sufferings of her heart ? The light and the heat of what sun had dispelled the fog overspreading her intelligence, and so suddenly revealed her shame, her anxiety and her sorrow ?

At about two or half past two at night Jatin had fallen asleep while seated in his chair. Suddenly waking up startled by the noise of a door being opened, he saw Potol and Harakumar Babu enter the room with a large bag.

Harakumar said, "Getting your letter I went to bed thinking I would come tomorrow morning,

At midnight Potol said, 'If I go tomorrow morning, I shall not be able to see Kurani. I have to go immediately'. Potol could not be persuaded anyhow to stay on there. Sending for a carriage we set out at once."

Potol said to Harakumar, "Go and sleep in Jatin's bed."

With a slight show of protest Harakumar went and lay down in Jatin's room. It did not take him long to fall asleep either.

Returning, Potol called Jatin to a corner of the room and asked, "Is there any hope ?"

Going near Kurani, Jatin felt her pulse and shook his head, signifying that there was no hope.

Not showing herself to Kurani, Potol took Jatin aside and asked, "Jatin, tell me the truth. Don't you love Kurani ?"

Giving no reply to Potol, Jatin came and sat down beside Kurani's bed. Holding her hand, he shook it and called, "Kurani", "Kurani".

Opening her eyes, Kurani said with but the hint of a serene sweet smile, "Yes, Dada Babu ?"

Jatin said, "Kurani, put this garland of yours about my neck."

Kurani kept staring at Jatin's face without a wink, no sign of comprehension in her look.

Jatin said, "Won't you give me your garland ?"

Receipt of this little indulgence of Jatin's affection revived in Kurani's mind a slight piqued feeling caused by his previous want of love. She said, "What's the use, Dada Babu ?"

Raising her head between his hands, Jatin said, "I love you, Kurani."

Hearing this, Kurani remained still for a moment. Then tears in abundance coursed down her eyes. Getting down by the bed, Jatin knelt and placed his lowered head near Kurani's hand. Taking the garland off her neck, Kurani put it round Jatin's.

Then Potol went near her and called, "Kurani."

Forcing brightness into her emaciated face, Kurani asked, "Yes, Didi ?

Going near her, Potol held her hand and said, "You aren't angry with me any more, sister ?"

With serene soft eyes Kurani said, "No, Didi."

Potol said, "Jatin, will you go to the other room for a while ?"

When Jatin went to the side room, Potol opened the bag and from within it took out all of Kurani's clothes and jewellery. Without disturbing the patient much, she wrapped carefully a red Banaras sari over her worn clothes. She slipped on a bangle on one hand after the other, and then two Balas. After that she called out, "Jatin".

As soon as Jatin came, Potol made him sit on the bed, and put into his hands a gold neck-chain of Kurani's. Raising Kurani's head slowly, Jatin put it round her neck.

When the light of dawn fell on Kurani's face, she did not see that light any more. The look of unfaded beauty on her face made one think that she was not dead — but she seemed immersed in a dream of bottomless bliss.

When it was time to take the dead body away, Potol fell on Kurani's breast and said crying, "Sister, you are fortunate. Your death has been happier than your life."

Looking at Kurani, at that serene peaceful picture of death, Jatin began thinking, "The Owner of the treasure has taken it away. He has not deprived me either."

Chaitra, 1309.
(March-April, 1902)

Mälyadän. — The reference is to the exchange of garlands between the bride and bridegroom which is an essential part of the Hindu wedding ceremony. According to one of the ancient forms of Hindu marriage, the Gandharva, only the exchange of garlands could be regarded as a complete wedding.

Kuräni — A foundling girl. Also 'Kuräni' is an abbreviation of Käth-Kuräni, a girl who picks up stray bits of wood and twigs for a living — hence a beggar maid. A figure of Indian fairy tales akin to Cinderella. Reference to a Käth-Kuräni was made by Jatin in a joke before he had met Kuräni.

Potol put into his hand a gold neck-chain of Kurani's ..... Jatin put it round her neck.

The BOX of JEWELS

By PREM CHAND

CHANDER PRAKASH had no choice after passing his B.A. except to take up a job as a private tutor. His mother had died when he was still quite young. The father also closed his eyes on the world the year Prakash passed his B.A. With his father's death, all his dreams of a successful career vanished from the horizon. His father had held a high office and with his assistance, Chander Prakash was certain of a promising career. The father's death put an end to all his hopes and his ambitions. Married as he was to an educated girl fond of good living, Chander Prakash found the meagre thirty rupees that he got as tuition fee not even sufficient for a bare living. But the Thakur Saheb whose son he taught provided him with a free furnished house next to his. This to some extent, compensated for the low salary; for, a house like that itself would have cost Prakash at least twenty rupees a month. The work was also light. He taught the boy only for two hours a day. The Thakur and the Thakurain were both very fond of Prakash and considered him almost as a member of the family. There was no household matter on which he was not consulted.

* * * *

It was evening. Prakash had just finished his lessons with his ward, Virendra, and was about to leave when the Thakurain came in and said, "Don't go just yet, son, there is something I have to consult you about." Prakash wondered what it could be which even Virendra was not supposed to know. Taking him aside, Umadevi, the Thakurain, said, "I have received a very good offer for Viroo. Should we get him married ?" Prakash smiled and said, "This is a matter which Viroo Babu alone can decide, I am afraid." "No, I want your opinion", said the Thakurain. Prakash hesitated for a moment and then said, "What can I say ? Undoubtedly, he is already twenty and is therefore of a marriageable age. But if he gets married he will not be able to study any longer." "So in your opinion," observed the Thakurain, "he ought not to get married as yet." "You are the best judge of this," replied Prakash, "I have put before you both the pros and cons." "In that case we had better get him married", said the Thakurain, "I am afraid if he is left alone for long he may fall into bad company." "There is no such danger", said Prakash, "so long as I am here; but there is no harm in getting him married either if you think that he ought to". "You will have to make all the arrangements", said the Thakurain. Prakash smiled and nodded assent.

The marriage was fixed and preparations began for it. Thakur Sahib was one of those people who completely lacked confidence in himself. In his eyes Prakash's degree was worth much more than his sixty years of experience. The entire arrangements for the marriage were therefore left in Prakash's hands. To be entrusted with spending nearly twelve thousand rupees was no mean honour. The poor tutor of yesterday found himself overnight as the sole manager of Thakur Sahib's affairs. The whole day was spent in talking to cloth merchants, grocers and electricians. If he had wanted, he could have easily made a little fortune on these arrangements. But his conscience did not allow him this meanness especially to a man like Thakur Sahib who had implicit faith in him. The day, however, jewellery worth five thousand rupees was purchased Prakash's feet tottered. Returning home he said to Champa, his wife, "What an unfair world this is. On one side there are people like us who can hardly afford a square meal; on the other are people like Thakur Sahib who spend thousands on jewellery alone. To-day he has purchased ornaments worth five thousand rupees for the daughter-in-law to be. Some of the pieces are really exquisite, masterpieces of good workmanship." Champa spoke in her usual jealous tone, "What satisfaction is that to me ? People like us are born only to slave their way through life." "God is such an unjust creature," said Chander Prakash, "we toil the whole day and

get just enough to eat at the day's end whereas people like Thakur Sahib enjoy life without doing any work, on money left behind by their forefathers." "It's one's stars that are to blame", replied Champa, "if your parents had left you money, you would have done the same. And why talk about jewels alone. I haven't even decent clothes to wear. I am wondering how I shall go to the Thakurain's house for the marriage. I hope I get ill. That will provide a good excuse." And saying this she started crying. Chander Prakash felt both annoyed and ashamed at

I am wondering how I shall go to the Thakurain's house for the marriage. I hope I get ill.' Saying this she started crying.

is situation. Trying to placate his wife, he said, I shall get you a new saree. Our days are also ound to turn some day. And if I am still alive nen, I shall cover you up with jewellery from head o foot." Champa smiled. "Your usual stories gain," she said, "I am satisfied if we keep on get- ng enough to eat." Prakash lowered his head and it his nails not being able to fulfil his boast im- ediately.

When they turned in at night after finishing their meals, the ornaments were still on Prakash's mind. "I could not even dream," he said, "that such beautiful jewellery could be made in this town. You would look like a queen if you wore them." "Jewellery hardly enhances one's beauty," replied Champa, "I have seen women who still look very ugly even after wearing jewellery." "What a selfish man Thakur Sahib is, really," said Prakash, "he did not even offer a piece for you after all the work I am doing for him." "Don't be childish", reprimanded Champa. "What is so childish about it"? argued Prakash, "Hadn't he been such a miser as I know him to be, he would have certainly offered a piece." "I haven't come across any one so far," observed Champa, "who would offer his own daughter-in-law's jewellery to somebody else just like that". But Prakash was not convinced. "I am no mere somebody else", he went on, "I am the tutor of his son and am looking after all the arrangements for the marriage. It won't have hurt him at all if he had given me a piece worth a hundred or two hundred rupees for you. But wealth has such a crippling effect even on the most enlightened minds that generosity and large-heartedness have no place with them."

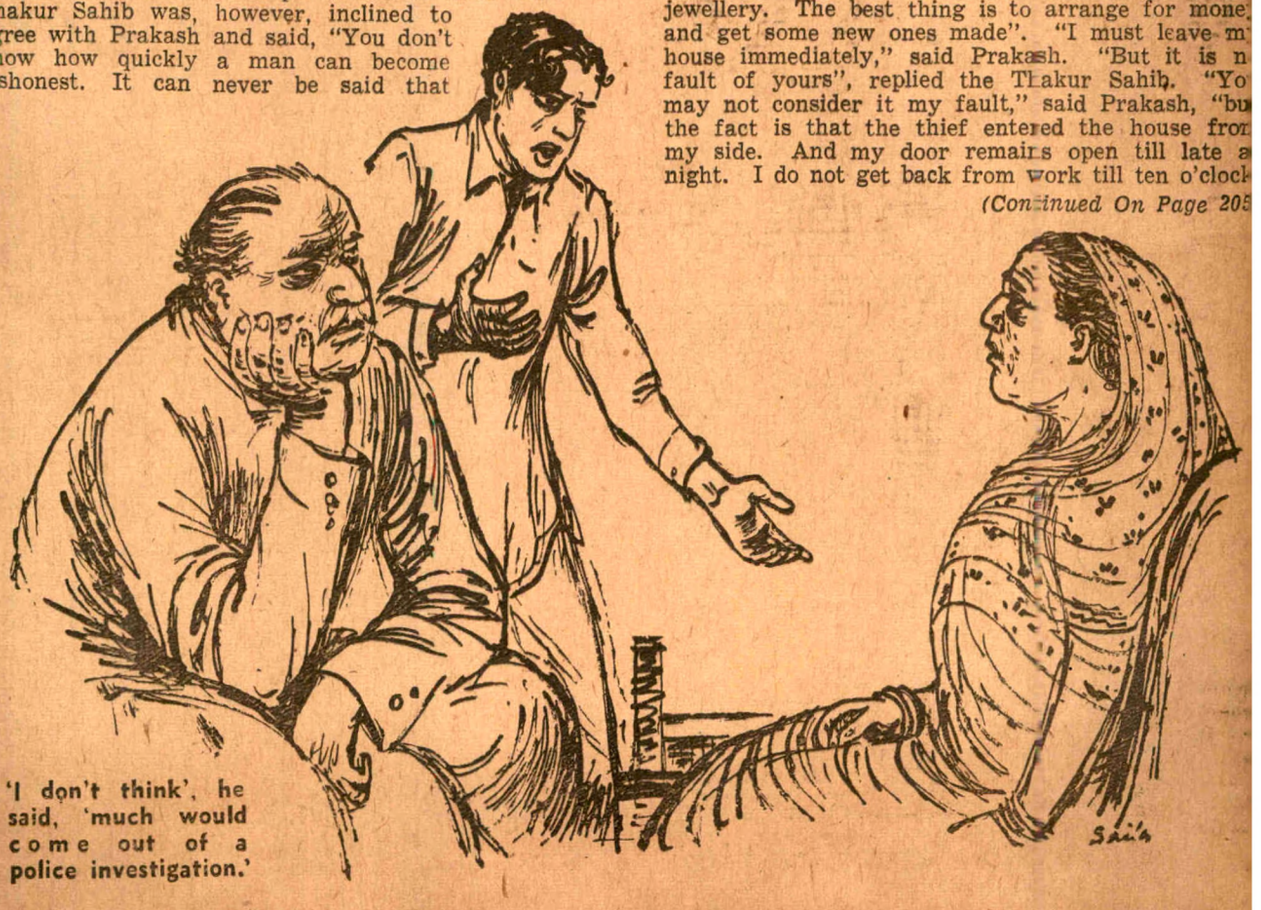
It was nearly getting on to midnight. Prakash could not sleep. The ornaments appeared again and again before his eyes and disturbed his sleep. Suddenly he got up. "Not even a thing on Champa", he said to himself, "this is the age for girls to enjoy themselves; but look at her. She has to go without even the smallest thing in life." And with these thoughts he stealthily walked out of the room, on to the roof of the house. The roof of Thakur Sahib's house was joined to his and only a five-foot wall separated the two houses. Prakash jumped over the wall and landed lightly on Thakur Sahib's side. There was a deadly silence in the house. "I had better go down the steps straight into Thakur Sahib's room", he said to himself, "if he wakes up I shall merely say that I heard footsteps coming towards the room and followed them. Nobody will doubt my words. If on the other hand, I can lay my hands on the box of jewels without waking anyone up I would have accomplished my mission. Everyone will blame the servants. I shall also say that they must be responsible for the theft. Nobody will even suspect me. After the marriage I shall leave the house and give the jewels to Champa one by one so that she won't also be any the wiser." Even in spite of a perfect plan however, Chander Prakash could notice a sinking feeling in his heart as he went down the steps.

* * * *

It was broad daylight. Prakash was still asleep. Suddenly Champa came running to him and said, "Get up. There has been a theft in Thakur Sahib's house last night. The thieves took away

the box of jewels." Prakash asked, without getting up, "Hasn't anyone been able to catch them ?" "Not a sound was heard", replied Champa, "and the surprising part is that they only removed the box of jewels. How they found the key and how they knew where it was kept is a mystery." "Must be the servants", replied Prakash, casually, "it cannot possibly be an outsider." "But all their servants are old hands", observed Champa, "they have been with the family for years." "It doesn't take long for a man to become dishonest", said Prakash, "they must have got the opportunity and took advantage of it." "Go and help them," said Champa, "The Thakurain is crying her heart out. She calls your name and says how carefully you chose every design and how many months you laboured getting them ready." Prakash got up and went to the Thakur Sahib's house. "Champa just told me about the theft, mother," he said to the Thakurain, feigning worried, "what a calamity." Thakur Sahib was sitting holding his head in his hands. "The surprising thing is," he said, "that no locks have been broken, no doors have been removed, there are no signs of any openings in the walls. From where could the thief have entered the house ?" Thakurain was still crying. "We are undone", she said, "the marriage is so near. But for your ceaseless efforts the jewellery would never have been ready in time. It must be an evil star under which it was purchased." Prakash whispered into Thakur Sahib's ear, "One of your servants must be responsible for the mischief." The Thakurain overheard him and opposed the suggestion. "No," she said, "it cannot be the servants. At times I have left as much as ten thousand rupees lying about in the house and not a pie has ever been lost." Thakur Sahib was, however, inclined to agree with Prakash and said, "You don't know how quickly a man can become dishonest. It can never be said that just because a man has not stolen before, he will never steal. I must report the matter to the police. They will conduct a thorough search and question every one. I am sure the culprit will blurt out the truth when the police manhandles him." Prakash shuddered at the suggestion. For, he thought, if the police did not find the culprit among the servants, they were bound to search his house also. And that would be his undoing. "I don't think," he said, "much would come out of a police investigation." Thakur Sahib was surprised. "You talk like a child, Prakash Babu," he said, "you think the thief will own up all by himself, without any effort on our part." And then as if on second thought, he added "Perhaps you are right. Perhaps it won't be any use reporting the matter to the police. I don't think we will get the jewellery back anyhow." "But something must be done", said Prakash. "It is no use," observed Thakur Sahib, "but if we could get a detective, it might help. But where can one get a detective here. The best thing is to keep quiet." "You can keep quiet," said Prakash "but I cannot. The thief must be found." "I have full faith in the servants," said the Thakurain again "Though I don't know how and from where the thief came but I am sure that the theft has been committed by an outsider. He can come from your side also, you know." Prakash's heart missed a beat "I close my door every night," he said, "the only possibility can be that he entered the house earlier in the evening and hid himself somewhere." .The three went up the roof. Footsteps were visible where Prakash had landed on Thakur Sahib's roof and continued towards Prakash's side. Thakur Sahib saw all this but kept quiet. Prakash said, "There is no doubt now that the thief entered the house from my side." Thakur Sahib nodded and said, "But this is hardly any help. Such clues won't bring back the jewellery. The best thing is to arrange for money and get some new ones made". "I must leave my house immediately," said Prakash. "But it is no fault of yours", replied the Thakur Sahib. "You may not consider it my fault," said Prakash, "but the fact is that the thief entered the house from my side. And my door remains open till late at night. I do not get back from work till ten o'clock

(Continued On Page 205



'I don't think', he said, 'much would come out of a police investigation.'

SYLVAN MOONLIGHT

(Continued From Page 192)

avoid them. We have to flee far off, and that is not possible without money."

"Money ?" Shiukumari got up. "How much you need ?"

"Two hundred—three hundred. I can then take you to Sikkim, over to Gangtok direct. That is better, over there we will start life afresh. Let what lies behind be left behind." Mahitosh looked intoxicated. "We will start life anew."

Two hundred—three hundred ! Shiukumari stood like a stone. Where can I have so much money ? A rummage of father's cash-box will bring out not a pie more than a score of rupees; who else better than I knows it !

Mahitosh greedily stretched his hands towards her. But she stepped aside. Two hundred rupees ! Baldeo will be waiting the night over. Thoughts began to boil together like melted metals of a volcano. Only once ! Pollution of a single night ! The life as will come thereafter will wash away everything along with its pure clean flow, will wipe out all her impurities, all the painful memories of the vicious nightmare.

"Come over to my breast," Mahitosh said.

"I am coming after collecting money," Shiukumari went out staggering like a drunkard. A fire was burning in her thoughts—as if she had drunk off a pot of strong wine. Knave is his hunger, this Baldeo's, for he is not prodigal enough to spend as much as three hundred just for a night's pleasure. This trick of his is only to take revenge—to ransack me by treading and crushing my youth as long as I will retain it. I am not the first woman to step into his snare !

But, for me it will be only one night's affair. For all my life lying before, I will give in to the basest defilement and the vilest humiliation of a single night. Then....tomorrow and day after ? By that time we were perhaps crossing over the hills of Bhutan on our way to Sikkim !

Shiukumari vanished into the dark in the manner of a delirious patient that tries to rise up and rush out, maddened by the tearing pain of intense fever raging in all the veins.

And Mahitosh lay on the bed—bewildered. What was this strange swing in all his blood ! He seemed to have been fascinated by a nocturnal spirit. His own past, his life's vow—all had turned false and illusive. The call of the new—the call of an unknown untasted life—a life so varied, so full ! This police chase—these troubled tantalised moments—what harm if he got over them and took a plunge, what loss if he let himself float on a wondrous ocean of adventures !

"Shiu, Shiu !" Mahitosh called in an ear-kissing voice.

Shiu did not come, it was Arabinda. Yes, Arabinda indeed. An inhuman man rose out of the woods; Mahitosh felt struck by a shiver of ice-melted water running through his whole body.

Flashing torch-light upon his face, Arabinda said in a thunderous tone stern in command, "I have found you out after a long search.

"Look, you have a lot to do besides making love to a hill girl over here. Get up."

"Where ?" the voice sounded confused, nervous.

"Twentyfive miles off. You will find there a nice shelter, our party men as well. It won't be hard to do from there underground work in the town. Rise up."

"Just now ?"

"Just now." Teeth in his mouth grated—in his left hand appeared a small revolver. "Why, have you become so ease-loving after passing a few nights in hillmen's home ?"

Mahitosh stood up like a mechanical toy—the hint of the revolver was a bit too obvious.

"A big horse stands ready outside," Arabinda said. "We both have to ride the same horse. Hurry up."

The torch went off. Country-liquor diffused its smell in the quiet dark inside the hut. At a distance the Bhutias were beating cymbals raising tremendous jingle-jangles—they were trying to drive out evil spirits.

Did the stepping sounds of evil spirits vanish along with those of horse-hoofs ?

* * *

Notes worth three hundred rupees earned through extreme humiliation and bitter pain !—the bunch of notes was soaking in sweat within her grip. Shiukumari was running fast through jungles panting. Thick black darkness—a person a cubit off was not visible. Shivers in sal leaves—flaming eyes of wild beasts here and there.

Mahitosh—where amid this black darkness would she find him ? The forest had swallowed him up, had sunk him into its womb leaving no trace. Yet Shiukumari was looking round in the dark. Lacerated by sal seedlings, her feet were bleeding, her whole body was getting scarred by thorns. So much darkness ! If in such impenetrable darkness a little light could be found !

Light was found. It turned sharper and sharper. Cracks of the leaves on fire—fear-stricken outcry of wild hens all around.

Not the sylvan moonlight — it was forest fire !

(Translated from Bengali by Sourin Choudhuri)

THE TRICKY TIGER

(Continued From Page 189)

the forest must be killed today and so I have come prepared with it."

I taunted: "You know everything much in advance—now just measure out how big it is."

I held the rifle under the arm and held two torches in both the hands. Talkie and Jhanu leaned over the tiger and measured him carefully not once but thrice to be sure and declared, "Oh, the tiger is as big as ten feet nine inches." It must have escaped the target of many a hunter and could be so big in size, I thought. Talkie Baboo's vociferations knew no bounds—he chose the best words he could manage:

"Oh, you have showed extraordinary courage and restraint in tolerating the intensive bites of mosquitoes—you have taken to fast—you have kept awake throughout the four periods of the night—and today is the closing ceremony. These must have brought you the *siddhi*. I give you the honoured decoration 'Giant Killer' and shall address you as such henceforth."

It is natural for man to be elated with praise on his success. I achieved it after a long waiting and that too with such a big game. I embraced Jhanu in my bosom and in my joy placed a caressing kiss on the rather unclean cheek that was full of pricking beards. Then I turned to Talkie and he, the ever-wakeful dainty creature, kept a few steps off from me and with folded palms, expostulated :

"Don't you do that I say. I don't care for any kiss from lips used elsewhere, you know!"

And then in his usual manner he laughed a laugh that reverberated in the dense forest.

THE BOX OF JEWELS

(Continued From Page 203)

It is quite probable that the thief may make another attempt, now that he knows the way. Champa is all alone in the house the whole day and is mostly busy in the kitchen. It is not possible for her to keep an eye on who comes in. The best way out is to close this route." The Thakurain got very perturbed. "Oh, don't do that son," she said, "we would be completely helpless without you." "That is very kind of you, mother," replied Prakash, "but I must move out as soon as possible. The theft is due entirely to my negligence, and I must suffer for it." When Prakash had gone, the Thakurain said, "What a decent boy he is. The mere fact that the thief came from his side is killing him." "One thing is certain," said the Thakur, "he will not live in this house any longer. We will probably have to pay him twenty rupees extra every month towards house rent." "I don't think he will accept that," observed the Thakurain. "He will have to," said the Thakur, "he cannot possibly live on thirty rupees a month."

* * * *

Prakash left the house the same day, aware as he was of the dangers of living there; but he spent the whole day at Thakur Sahib's house till the marriage took place. As a prelude to the offer of ornaments he said to Champa one day, "I have taken up a part-time job with a Seth Sahib on fifty rupees a month and am not going to withdraw a single pie out of it. It will all be used for your jewellery." Champa was beside herself with joy. Her faith in her gods strengthened.

Up till now there was no secret between Prakash and Champa. She had access to everything he had and knew what was where. But now Prakash kept to himself the keys to one of the boxes. Many times she enquired what it contained but he always evaded an answer or just said that he had packed up some of his old books that were lying about. Champa did not suspect anything.

One day she went into the room to give Prakash a betel leaf and found that he was sitting in front of the box looking at something inside it. Seeing Champa he immediately closed the box. Champa wondered why he was in such a hurry to close it but not being of a suspicious nature she did not give much further thought to the subject.

It was impossible for Prakash not to have a look at the ornaments whenever he got a chance. After all such a lot of wealth could not be left around without bothering about it. Whenever Champa was away he opened the box and made sure that the jewellery was there.

One day a theft took place in the neighbourhood. Prakash started sleeping inside the house. Even the heat of June was preferable to leaving the jewellery unguarded. Champa tried to persuade him many times to sleep outside but he was adamant. "The thieves do not risk their lives for nothing," Champa would argue, "what can they expect to find in this house ?" Prakash used to get annoyed at her insistence and would say, "For a poor man even the household utensils are valuable."

While cleaning the house, Champa once unwittingly moved the box to another corner of the room. Prakash immediately noticed the change when he came and enquired, "Did you move the box ?" "No", said Champa, "why should I ?" "Who moved it then ?" asked Prakash highly agitated, "after all there is nobody else in the house except you." "All right, I moved it," replied Champa, "what wealth is there in the box that you are so agitated." Prakash realised his mistake. Controlling his voice, he said "Oh nothing. I just noticed the change and wondered who had moved it." But he could not rest till he got an opportunity to look at the jewellery. As soon as Champa went into the kitchen, he opened the box and started examining the pieces. Champa had made 'Pakories' and thinking that Prakash liked them while they were still hot she took some to him. As soon as he heard her coming Prakash quickly slammed the lid of the box and locked it. Turning to Champa, he said, "What have you brought ? I don't feel hungry at all today. Oh you have made 'Pakories', have you ?"

Champa began to wonder again why Prakash always hurried to close the box as soon as she came. Her woman's curiosity was aroused. She was dying to know what it contained. Unable to find any keys that would fit it, she one day called a roaming locksmith and got a duplicate key made. Opening the box she was amazed to find jewelery in it. From the description she had heard of Thakur Sahib's stolen jewels there was not a moment's doubt in her mind as to where this jewellery had come from. Her head hung with shame. Closing the box she went and lay on the bed. "How could he stoop so low," she said to herself, "I have never bothered him for jewellery. And even if I have, it does not mean that he should go and steal it. Hasn't he a conscience left any more ?"

* * * *

From the day she discovered Prakash's secret Champa was not the same person any longer. She used to be sad and picked up quarrels with him on mere trifles. Whereas they had no secrets between them before, a wall now separated the two. Whereas they used to plan for the future together before and sympathised with each other, they now did not even talk to each other for days.

Many months passed by. A vacancy occurred in the city bank for an Assistant Manager. Prakash had passed the Accountants' examination and stood very good chances of getting the post. The only hitch was that the bank required a cash security of ten thousand rupees. He could not think of anyone who would lend him such a large amount. One day he casually mentioned it to Thakur Sahib. Thakur Sahib immediately suggested that he should apply. "But where will I get the money," said Prakash. "Don't bother about the money," said Thakur Sahib, "if all other requirements are met, the security will be arranged." Prakash was surprised. "You mean you will put in the security money," he asked, unable to believe his ears. "What is so surprising about that ?" replied Thakur Sahib.

Prakash came back to his house. Though the chances of his getting the job were bright now he was feeling restless and sad. Thakur Sahib's goodness was trampling under its feet his own wickedness to him. Reaching home he gave the news to Champa. She did not seem enthusiastic either and turned away her face. After a moment she said, "Why did you rope in Thakur Sahib ? It is a matter of money. A little slip on your part and the poor man will lose ten thousand rupees. We are all right as we are." Prakash smelt suspicion in her tone and said, "What do you mean by a little slip on my part ? You think I am so incompetent." "It is not that", replied Champa, "only it does not take long for a man to become dishonest." Prakash looked piercingly at her but could not fathom the hidden meaning of her remark. "Could it be," he wondered, "that she had come to know about the

box of jewels." To get an answer to this question he was impatient. As soon as they finished their meals, he asked again, "What were you thinking of when you said that it does not take long for a man to become dishonest ?" "I didn't have anything in particular in mind," replied Champa, "it was only a general statement." Prakash was not satisfied, and asked again, "So in your opinion all bank employees are liable to become dishonest." Champa wanted to get out of the argument, and said, "I was only thinking of the money you made in Thakur Sahib's son's marriage." Prakash felt relieved, smiled and said, "Oh you mean the commission. But taking a commission is no crime. Even the highest of officials take commission." Champa replied, her voice full of hatred, "To cheat a man who trusts you so implicitly even of a pie is a crime in my eyes. I would have considered you honest only if you had gone and returned to him all the money you got as commission. Look at his treatment towards you, during the last six months. You left the house of your own accord yet he still keeps on paying you twenty rupees a month extra. Whenever he gets anything from his lands he always sends some for you. You did not have a watch; he gave you his own. Whenever your servant is absent, he sends his own to do our work. During my illness he paid all the doctors' fees, and used to come twice a day to enquire after my health. And now he has offered to pay the security money on your behalf. It is no small matter. Most people will not make such an offer even to their close relations. Ten thousand rupees is after all no meagre sum. On top of it is the danger that he loses the entire amount on the slightest mistake on your part. One should be prepared to sacrifice even one's life for a person like Thakur Sahib instead of cheating him."

Prakash lay down after eating his food. His conscience was pricking him. Champa's words had brought him face to face with it and they struck him almost as a surgeon's knife strikes a ripe boil. He could see himself as he really was — lowdown, thankless and cruel. The words affected him almost as a social or political cartoon affects us when it portrays the baser side of our nature. They awakened in him his sleeping humanity. The box of jewels started pestering his soul.

* * * *

Prakash got the job in the bank, and held a feast to celebrate the occasion. Thakur Sahib, his wife, Virendra and his newly wed bride, all were invited. After the feast Thakur Sahib got up to go. Prakash said, "Dada, I don't let you go at this hour. You must stay here the night." Champa did not approve of the suggestion. There weren't enough beds in the house, nor enough beddings; nor was there space enough to accommodate them all. But Prakash kept on insisting, and Thakur Sahib ultimately gave in.

It was twelve o'clock at night. Thakur Sahib was sleeping upstairs. Prakash was in the verandah. The three women slept inside the room. Making sure that everyone was asleep, Prakash got up, removed the keys from under Viroo's pillow and went into the room. Opening his box he removed the box of jewels and went to Thakur Sahib's house. Many months ago also he had entered that house, like this. But whereas then he was out to commit a crime, today he was out to make amends for it. Whereas then his steps receded at every move he made, today they urged him to go on.

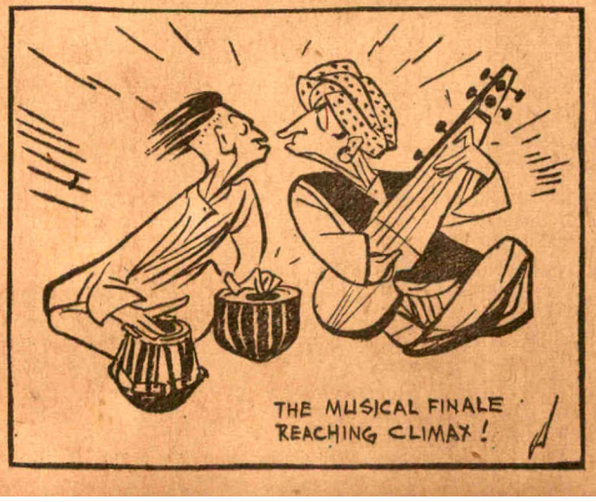
Going inside the house quickly, he deposited the box under Thakur Sahib's bed and came out. Even Hanumanji could not have felt such joy at bringing the piece of mountain with 'Sanjeevani' as Prakash was experiencing now. His feet refused to touch the ground. Viroo was still asleep when he came back. Slipping the bunch of keys under his pillow, Prakash went off to sleep.

* * * *

Thakur Sahib went home in the morning. Prakash used to go in the evenings to teach Viroo. Today he could not resist the temptation of going earlier and reached Thakur Sahib's house in the afternoon. The moment Virendra saw him, he shouted, "Babuji, it was a very lucky feast at your house yesterday. The box of jewels has been found." Thakur Sahib also came in and said, "It was really an auspicious occasion. Not even a thing is missing from the box." Prakash feigned surprise, opened the box and said, "It is really remarkable that the box should have come back after six months, without a thing missing. I cannot understand it." "You are not the only one," said Thakur Sahib, "nobody can understand it. I am inclined to agree with Viroo's mother that the supernatural has a hand in it." "If I had not seen it with my own eyes I would have never believed it," said Prakash. "The occasion must be celebrated," said Thakur Sahib, "you must come and dine with us tonight." "Did you consult any Pundits about the loss", asked Prakash. "Yes, a number of them", replied Thakur Sahib. "Then it must be due to their efforts", said Prakash, "that you have found the box."

Reaching home that evening, Prakash gave the news to Champa. She came running, embraced him tightly and started weeping. It appeared to her as if she had got back her long lost husband. "There is a feast at Thakur Sahib's house tonight", said Prakash, "we have also been invited." "I also want to feed a thousand beggars today", said Champa. "It will cost you a hundred rupees", retorted Prakash. "I don't care what it costs." replied Champa, "I am so happy today that I could spend a thousand rupees." Seeing her so happy tears rolled down Prakash's eyes.

(Translated by Madan Gupta)



MOY-DANAB

By TARASANKAR BANDOPADHYAYA

IT was a very big workshop — turning out fire bricks and supplying fire clay. All of a sudden with the very onrush of the war it went on expanding in body like the Vindya hill. Modern Vindya would not yield to any Durbasa. Rather it might yield to Basista — why might ? — it would. The day Basista would appear in the garb of peace it would then bow down its head. In other words, the workshop would go on expanding till the hostilities were over. The iron-works of the country were being supported by its production. Wagons for transport were arranged by the War Department. They were despatched by telegraphic message. The local railway staff always showed favour to the workshop authorities. Now it had stepped up. Under governmental order the police was to keep special eye on the workshop — to render immediate assistance as soon as there was any possibility of any disturbance. The manager of the workshop drew a salary of Rs. 1000. The officer-in-charge drew a pay of Rs. 125——; he too always showed favour — now the heavy burden of governmental order was tightly pressing down on the weight of the pay exceeding Rs. 875. Previously when the officer met the manager he would hail him with "good morning, Mr. Bose." Of course with reverence. But now that reverence had been mixed up with fear. With a touch of awe he would now address "good morning, Sir," if they met. Formerly he would wear a smile as he hailed. Now it had vanished. There was enough of adequate respect in past receptions but the reception of that day beat all records. The officer stood up from his chair and said "you, Sir ? Please come in ! Please come in ! Please !"

"I have come to have an entry in the diary."

"Diary ?"

"—Phani Mistri——; certainly you know him—that old mistri ?"

"Yes, Sir, I know him very closely. He's in your workshop from the very beginning."

—"Oh yes. That man."

"A hard drunkard."

"Yes."

"—But a ripe, experienced man."

The manager simpered.

The officer again expostulated, "He is a great well-wisher of yours, Sir. I am here for 5 years. Such a faithful man is rare."

The manager asserted — "But the man fled away yesterday with several machine tools."

"—Phani has stolen and fled !" The officer was surprised beyond measure.

"—Oh, yes. Please make an entry in the diary."

The manager stood up and said, "I was going to the station. But on the way I thought that I should personally go and inform. Other people too would come up. Please investigate into the matter personally."

He opened the door of his motor car and insisted "You must find that devil out. We shall reward you from our company for this work."

Though on the wrong side of sixty, Phani Mistri was no less active than a robust young man. Only he felt slightly fatigued now-a-days. Standing over at the site where parts of big machineries weighing 10 to 15 maunds were being lifted, he would feel chagrined. Suddenly he would come forward and stopping the operation cries make a face and shout "Hei-o ! Hei-o ! Hei-o ! Gluttons — all. Be off" Then he would put his shoulder under the lifting rod and slowly would erect himself. Blood would rush into his face and eye and it seemed that forthwith blood would burst out. The muscles of his back chest and hand would stiffen up like the hard, rocky uneven black earth. One could see through the chink of his expanded lips, the two sets of teeth — closely knit as the indented wheels of the machine are knit. He would move forward like an eel by the deft and two-fold application of his skill and the momentum of the iron-skeletoned machine.

Even yesterday Phani was there. Even in the evening he smoked his *biri* in the old engine room. Now and then he quaffed wine drawing the bottle from his pocket. Just at 8-30 P.M. he was found in the club-room listening to the Radio songs. Others might not make correct guess but he guessed correctly that between 8-30 P.M. and 9 P.M. some female singers would sing and he further discovered

that those songs were not recorded songs. So believing in the infallibility of his reasoning and judgment he would sit before the Radio and listen to the songs and would sense the proximity of the singer. Mentally he constructed the imaginary figure of the songstress and would shout "bravo" as the tune possessed him. Even yesterday he went through that routine.

In 1919 or 1920 immediately after the last great war, the foundation was laid for this workshop, It started with a three-roomed hut, a small kitchen, and a big shed — all straw-thatched — built on a stony tract of high land where formerly there was a forest of *Palash* trees. The total strength consisted of 5 people — the swarthy-coloured, big-bodied, large - mouthed, big - toothed, balled - eyed manager, one darwan, one office clerk, one goods clerk and that Phani Mistri. Two more local persons were added — one cook and one servant. Again the manager did not stay permanently. Coming in the night of Thursday, he would live there for 3 days from Friday to Sunday and would depart in the Monday morning after passing all these days in great uproar and excitement battering down the fabricated goods, ordering new ones and consuming wine and goat-flesh. As soon as the manager left, Phani was all in all. To talk about his learning, what he knew was no better than illiteracy. Under necessity he would send secret messages to the manager scribbling them in irregular lines of thick letters. "Dear Sir, something amiss here. The nearby foreign firm is after us for our removal and scheming vigorously. Please come sharp and every thing will then be told. The attitude of the goods clerk is doubtful. Please bring with you several numbers of 'Harinaran Boltu' and strong 'tape'." Then he put his signature in irregular English letters as P. Mistri which was of course unintelligible, long-drawn-out as it was looking either as undecipherable scrawling or as the signature of a pucca Burra Shaheb.

"Harinaran Boltu" is holding nut bolt and "tape" — belting. These are the self-made jargon of the industrial workers like many others as "shaftu" for shaft, "Tily" for trolley, "Valbu" for valve, "goz kak" for gauze cork, "Humbor" for hammer and the like that is found in constant use among them in the industrial area of that part of Bengal which is now included in Bihar.

* * * *

Some 25 years back before the workshop was founded, it was to strike this "Humbor" that Phani left his home to work in a colliery. Born in an iron-smith family, he joined it as a strong and able-bodied young man and it was in its iron-smith shop that he heard that hammer was called "Humbor". That colliery was owned by this company and the company at that time existed merely in name in the printed letter-head. The proprietor had an imposing figure and was given to high living. When he came to the colliery he brought along with him basketfuls of fruits, vegetables, foreign liquor in packed cases and soda water in baskets. If it was winter, there were big lobsters in addition as there would be Hilsa fishes in the rainy season and crabs as big as the skull of a tot. The colliery was named "Kuthi". Everything was on royal scale in the Kuthi at that time. Every labour group was presented with goat and wine was paid for. There would be feast in the officers' mess and they shared the store brought by their master. In addition money was sanctioned for goat. He halted in the Manager's Dak Bangalow. At the time of his departure, tips ranging from an eight-anna-piece to a five-rupee note flowed freely.

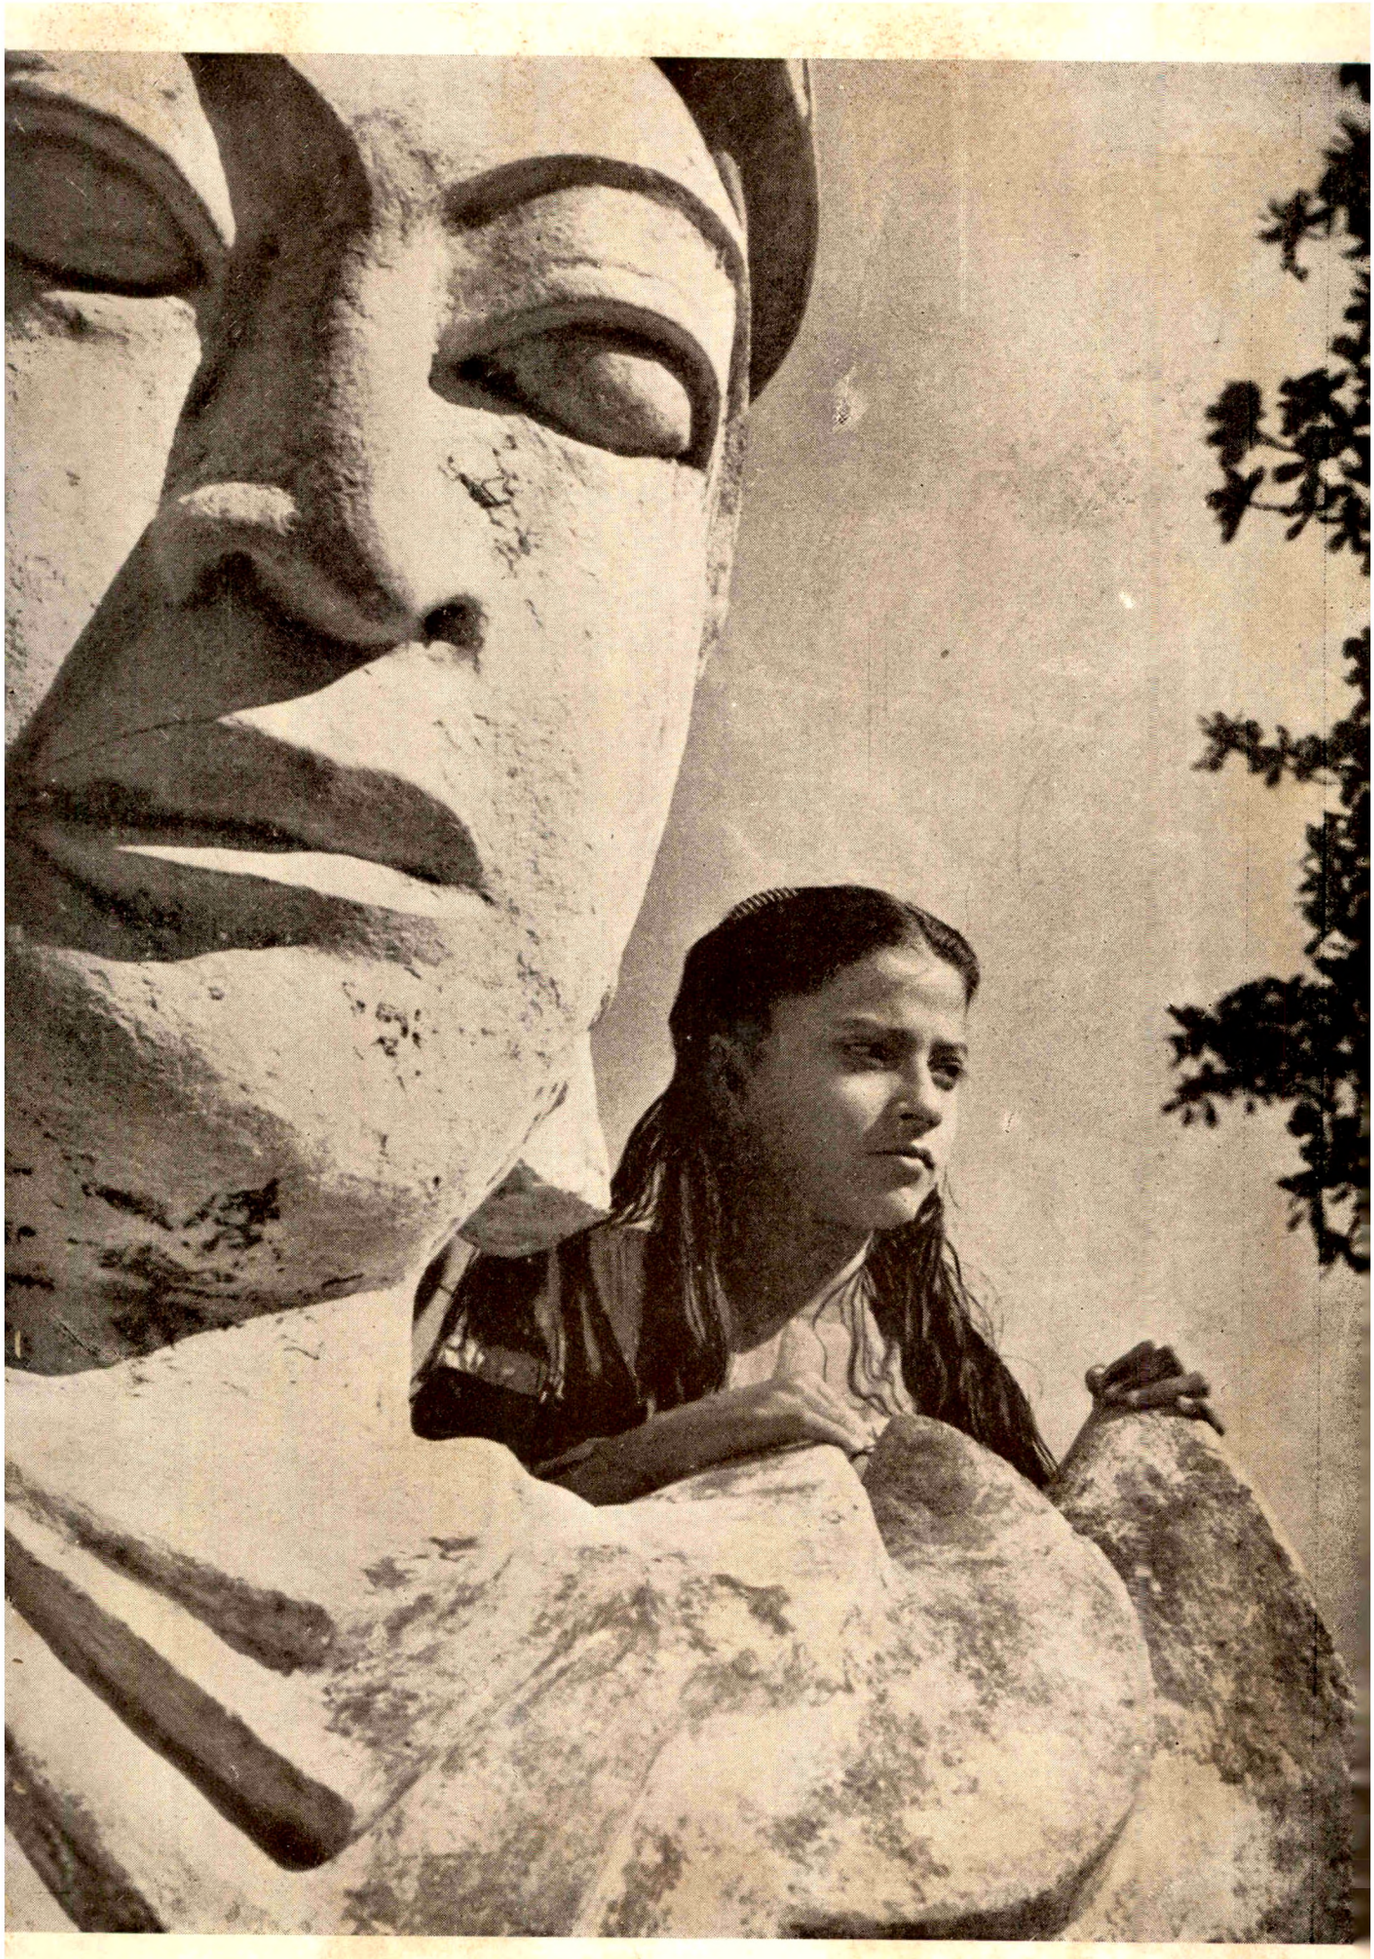
After the lapse of 4 years Phani fell into the good graces of his master. Then he left the hammer and became the junior mechanic. The senior mechanic, his preceptor, would usually sit idle and pat him. Phani worked like a demon and did not allow his preceptor to do anything. The old man too loved him dearly and unreservedly poured out to the dregs all his learning to his disciple — not merely his mechanical art but his character, philosophy of life and everything also. In a wondrous way he was taught all the secrets of the engine, boiler, pump shaft, pulley and of all mechanical gadgets. The old mechanic would piece together the opened parts of the engine and attaching the hose to the steam released its power. "Look at it !" — he would accost Phani.

The engine began to operate. The gleaming, oil-besmeared piston pushed in and out and made the master-wheel circle about at first slowly and then with faster to faster speed. At the pull of the belting attached to the wheel, all other wheels were set in motion and in the twinkle of an eye, the interior of the tin-shed began to reverberate with sounds. The roof above and the floor beneath the feet vibrated under the impact of the sound and the speed of the whirling machineries. Or he would tighten the brake or stop the steam and the engine too would come to a dead halt by degrees. With wonder-waiting eyes Phani looked on !

Step by step he mastered the details. Like a mature sitarist knowing the subtleties in musical notes he developed the sense of fine distinction in sound and could tell what sound the machine would produce with a small loose bolt. The loud flourish of the noises forming out of the varied machines was like a grand symphony or the buzz of the numerous strings of a gigantic iron sitar. As taught by the master he could instantly guess the wrong notes and knew where to tighten or where to loose. He acquired, at the hand of his teacher, that power of discernment in the matter of machine which is displayed by an Arab Sheik in case of a horse or by our villager in case of a cow. At the mere sight, he could tell the horsepower of the machine or the power it bore or the power to which it was reduced.

Simultaneously he was taught the art of charging sale commission in the matter of machine-transaction.

He was also taught — "The owner is the lord who maintains you. You are under his parental authority. The manager is to be bowed down to, to be recompensed with presents in place of commission but in reality, he is the devil incarnate. The owner offers service — the manager fires the opera-



ne Thinkers

Sudhir Bane

tive. You are pardoned by the owner inspite of your fault. Whatever good is done by you, the manager palms it off as his own."

Another lesson he learnt was the art of drinking. He was told that it was the veritable steam. Uncorking the bottle he would ejaculate "open the 'stop-kak'. Go on with the steam, guy ! The ten H.P. engine would gallop with twenty H.P."

Quaffing his measure, he would hand out the bottle with enthusiastic Hindi "Take it, fellow ! steam yourself up."

Another lesson was — "There is nothing more enjoyable than the flesh of a woman". "Why don't you look around ? — who is an exception ? — the Proprietor, the Manager, the Office Babus, the Darwan" ?

He took him to the brothel at Ranigunj. On entering into one of the hovels, he called out the girls and lined them up.

"Tell me, whom do you like ?" inquired the preceptor.

Another further lesson was — "If you are to injure anybody, injure your boss but never a poor man. Never, never. If you find a poor man caught in theft turn round your face and go away. If you are sitting then just turn round. Be warned, never do him any harm. If you do so, what's the difference between you and that roguish manager ?"

* * * *

This workshop was built by his own hand by Phani. After bringing the machineries, beams for the shed, rafters, angles, tees, bolts and nuts and commencing the work of construction he brought in old Enayet from the neighbouring European factory where even in his old age this white-bearded turbaned Enayet was passing his time as a junior mistri. On the other hand the work-shop here dealt with chinese clay — a job with which he was not familiar. Along with the fiendish manager, the proprietor came there on that day. A big goat was slaughtered before the evening and its one-inch-thick fat filled up the small tumbler. Two were sitting together uncorking the diminutive-sized flat whisky bottle. Phani was called up.

He sat with folded hands after making obeisance.

One longish fat bone of that big goat was being tackled by the manager between his teeth. His two big eyes were reddish like the Kootch seed. The owner sat demurely.

None spoke anything. After a brief silence, Phani broke the ice "my lord."

The proprietor turned round "I want a brick-mistri within a week."

Phani replied "I am trying my level best."

"Must be inside the week."

Perhaps at that moment the bone between the teeth of the manager was pulverised to dust. He rejoined "or I will chew up your head."

Phani scratched his head and replied "Let me try, sir."

The owner assured "Don't worry for money."

"As you please, sir." Phani bowed down and said "I am looking into it tomorrow."

"Stop."

"By your command."

"Take that. The bottle of wine."

Making another obeisance, he came out with the bottle in his hand. He drank it and danced on that day. He was presented with a bottle by the owner !

Uncorking the bottle he would ejaculate 'Open the stopkak. Go on with the steam, guy !'

— foreign brand. How delicious ! How intoxicating !

On the very next day, with fifty rupees cash down, he enticed away a handsome young female labourer from the European firm. The girl was in the keeping of Enayet.

On the next day, Enayet came to kick up a row. Phani ordered the Darwan to sit with the gun. It did not end in a row but there was a verbal duel. At the end, Phani prepared a chillum of ganja and argued "Let us avoid the disturbance. Come to our workshop as the senior mistri and you will get Rs. 10 more. The woman will live in your house and she will not have to do any work. She will have her daily wages".

Enayet could not give any reply to it.

Phani held before him the chillum and invited him to take a puff or two.

Enayet came and took his seat and puffed at the chillum. On the next day at dead of night he arrived with two more mistresses. His luggage was brought down by the cart of the workshop.

Thereafter the workshop went on with the swiftest speed. Kiln after kiln was being made by Enayet. Phani set up the boiler, the engine, the pump in the nearby river and the grinding machine to pulverise the earth to dust. The manager showed him many diagrams from the book. Phani made hand-made tools after those models. The carpenter fabricated varieties of moulds under his guidance. The workshop was in working order. The earthen articles made of black earth came out of the machine burnt, hardened and cream-coloured. The joy of Phani knew no bounds on that first day when the entire materials were released from the burnt kiln.

On that day, he enjoyed his drinking bout. On

his most favourite machine — on that engine — he laid himself down and kissed it and patted it profusely.

* * * *

Phani was all-in-all in that workshop. Every thing in it was in his finger-tips. He remembered all the accounts from the big machine down to the minute needle. The godown account could not be reconciled. One new "mercury level" was missing. Missing too were some trolly lines, several engine-parts that were newly indented. Even the pump that was first used was found to be lost. The goods clerk was in absolute desperation — he lived from hand to mouth and was the son of an ordinary householder and timorous. To top it, the darwan was keeping guard before his quarters under the order of the manager. Phani was absent from the place. He went to Raniganj on company's business. The senior mistri sent him to inquire about iron materials in a colliery. He spent there eight days in place of four. On account of sale commission he earned nearly hundred rupees out of which only rupees twenty and some annas were left in his pocket. Besides, he had a bill to the tune of rupees twenty five as travelling and halting charges. A gold ornament was presented to the girl with whom he lived there. Though not so much worth, it cost him rupees fifty.

On his arrival he found the workshop in a state of commotion. Even the owner had come down from Calcutta. Discussion was raging whether the goods clerk would be handed over to the police. The manager of the Calcutta office was in its favour. He was a pucca shaheb. Whenever there was any talk of showing mercy or of his being an old servant of the company, he would stop the discussion by saying "Rubbish".

The manager said "clap him into the room and give a good spanking."

The proprietor kept mum.

Phani heard everything and bowed down before him. He said "Let me try if I can reconcile it. About that old pump — it was not worth much."

The manager of the Calcutta office argued

The manager said 'Clap him into the room and give a good spanking!'

"whether it was or was not is not the point. Where is it gone?"

"Where can it go, sir? When the new pump was indented, it was taken out and thrown away in that site where the plinth of the new Dak Bangalow was being dug out. It is now covered with earth and can be found out if the earth is removed."

The matter was recalled by the manager too. Earth was forthwith removed and it was actually found out.

"Engine parts ?"

"Why, Sir ? They are fitted with the engine. They were taken direct from the station into the shed. I took them out and fitted them."

The owner and the two managers were taken before the engine. The fitted parts and their foreign trade marks were checked and found correct.

"The old parts ?"

"I am looking into them, Sir ?"

"Trolley lines ?"

"They are affixed in the new shed. Some tees were short. As they were lying idle, they were affixed there. Our Manager Babu was apprised of it."

This time the manager remembered it. "Oh yes. Now the old engine parts and the mercury level ?"

"Let me inquire about them, Sir." Taking the goods clerk along with him, Phani stepped out. The clerk gripped his hand and waited "mistri, save me !"

"Save ! what have you done with those parts ? You took them direct from me in the godown."

"—when my daughter was being married —" he could not finish it and wept out.

"Hum ! Sold at what price ? To whom ?"

"To that Marwari, the store-supplier. I borrowed rupees five hundred from him. There were repeated demands and even litigation was threatened. He took them. Price has not yet been settled."

"Hum ! I know the level was stolen by the bricklayer Ebrahim. But be warned ! Don't divulge it to anybody. Then you would be done for. Take the money and send some one to the bazar to have it."

Towards evening Phani appeared before the management and said "The level was with Ebrahim. While the engine was working, I had hastily to take it from the godown. It was handed over to Ebrahim as soon as I did with it. That assine fool kept it with him."

"Engine parts ?"

Phani scratched his head and went on, "Oh the dead bone ? Could there be their accounting ? With the indent of the new materials, the old rubbish was thrown away. They were lying scattered around the engine house for a pretty long time. They might be found by removing the earth or the workers might have taken them away."

The proprietor gripped in his hand the glass of wine. The Calcutta manager told Phani, "In that case you will have to pay for the same ?"

"Of course, as I am guilty."

The proprietor emptied the glass. "Well, Manager Babu, rupees fifty as reward to Phani. Please pay him now."

Phani bowed down and pleaded "Sir, the poor goods clerk borrowed rupees five hundred when his daughter was married. Without any fault of his, that poor man——"

He began to scratch his head.

The proprietor ordered "Let him have an increment of rupees ten."

* * * *

As if suddenly the time changed. At least Phani thought so. He relished the excitement of 1930

Swadeshi movement. He too wore Khadder, stopped sale of liquor in shops but distilled it near the river bank. But all those disturbances ceased and suddenly strikes in workshop came into vogue.

Phani was flabbergasted. He could not decide what side to take up. When the first meeting was convened, Dulu Singh—at one time a learner under him—proposed him to the chair. The first flush was not disliked by him. Sitting in the chair with garland of flowers around his neck, his chest was prettily extended.

But after some time, he became restless. What the speaker was driving at? "So long we were telling that the proprietors were in *loco parentis* to us. They were our masters and lords. We thought that they fed us, gave us our raiment. They taught us to say all those things all along and taught us to memorise them just as a pedagogue would teach to memorise the alphabets of the language. The owners are not our parents or lords. They might be owners of the workshops but no owners of the workers therein. They don't feed us or give us raiment. Not a single item of our daily ration—atta, salt, rice, curry and the like—is doled out to us out of grace. They have become partners of our bread. They coax us and impart wrong ideas and by that process they impose a share on our daily necessaries. Just ponder what bone-breaking labour we render from dawn to evening! We poke coal into the boiler, keep the engine going and from machine to machine we hop and work. We are heated by the fire in the kiln, we inhale dust in profusion and we are bespattered, all over the body with mud. It is because we work that the goods are manufactured. And those goods are sold by the owners and they make lots of money. They have *Polleau* and *Kalia* for their dishes, fine clothes for their dress and fine silken chaddar and costly shoes. They take their outings in motor cars, sleep in the high storey and daily thousands of rupees go into their coffers. They have all these at the cost of our living necessaries. On the other hand, if we protest, we are dubbed as traitors. Have we got any respect before them? We don't eat their salt, God has given us strength and with that strength we work and labour. What respect is there before those who cheat us of the earnings of our labour? They are traitors all."

In his presidential chair, Phani was exhausted by perspiration. He did not imagine that topic of that nature would crop up. Always he looked upon his proprietor as his master. His preceptor taught him not to do any harm to him. He got tips from his master, drank his tasted wine and felt tickled with his endearing abusive epithets hurled at him. He discovered streaks of affection in all these. What the man was imputing all about him? Had he not been the President, he himself would have started up a shindy. What the master would say when he would hear it? Besides the speaker was indulging in fantastic nonsense. To whom does the money belong? If they were driven like mongrels being too clever, they would die of starvation?

From his presidential chair he protested, "Well, Sir, what you are saying is entirely wrong."

From the speaker to everybody present—all felt a bit startled.

Phani continued, "Look here, Sir, the workshop did not spontaneously sprout up like a tree from the earth. Heaps of money were required. The owner advanced them from his pocket."

The speaker laughed and replied, "Just as the workshop is not a spontaneous growth like the tree from the earth, money too is not the fruit of a tree. It does not drop on the ground nor has it been collected from droppings. Neither has he manufactured money at home. He accumulated it too from the earnings of an old workshop like the present one—by forcible impost on the earnings of the labour of the poor workers."

Phani continued, 'Look here, Sir, the workshop did not spontaneously sprout up like a tree .....Heaps of money were required .....!!'

It hit back his memory. Phani recalled the story of the old colliery. His master amassed his wealth from it. But still such invectives could not be heaped on him. The speaker had no idea of his strength and worth.

He exclaimed, "you are talking all this! You are inciting the labourers. It's true they drive the machine but what would happen to you if you are all fired tomorrow?"

The speaker laughed and said, "Then too, the workshop would come to a standstill. The wheel of profit will not revolve."

Phani too laughed, "New men will be indented and you will be driven out. What then?"

"The newcomers too are labourers. What you will say to-day will be repeated by them to-morrow. If the workers of the world are united—then? Then what will the owners do? It is the proposition—let all the workers be united. If with the dismissal of one, the entire strength goes away and none from anywhere replaces it — then? What then?"

Phani was confounded. The labourers in the meeting raised a tumultuous roar. "Well said! Correctly said!"

The speaker insisted, "our wages should be increased."

"Of course."

"Our work-time should be curtailed."

"Urgently."

"—otherwise we would go on strike."

"Certainly, certainly."

In that meeting that youngster Dulu Singh

(Continued From Page 213)
whom Phani taught with his own hand twitted Phani as an effete, out-of-date, remittance man. He proceeded on, "when a tiger's cub is caught, man endearingly dopes it daily with opium. All through his life the tiger forgets that he is the lord of the forest. He simply dozes under its influence and thinks that the supplier of opium is his God and licks his palm. Our Mistri Shaheb is under similar influence."

The crowd burst into a loud guffaw. Phani drooped down his head. Had it been inside the workshop, Phani would have answered it with an iron rod right on the head of that Dulu Singh.

But that youngster Dulu was clever and he knew Phani. Phani saw through the game. Dulu yelled out with the laughter. "Be warned! Don't laugh. It is not a matter for laughter. Our Mistri Shaheb is really a tiger. You don't know his strength and worth. That tiger should be disentangled from the sway of the dope. Then we shall put him in front of us and wage our war. Brothers, let us shout—"Phani Mistri ki————"

The crowd thundered "—Jai".

The workshop went on strike.

* * * *

The old proprietor was dead. The old Manager was dismissed by telegraphic message. The new owner arrived with a new Manager. He was young in age; a pucca Shaheb in temperament and could speak English in perfect style. With their arrival, the leaders of the labourers' organisation were called in. That youngster Dulu Singh was their brain. Phani was not called in—much to his relief. The matter was settled with the labourers by the proprietor and the Manager.

After sun-set, Phani repaired to the Dak Bungalow for interview.

He bowed down and stood with folded hands. "What do you want?"—the new master queried.

"I am, Sir, Phani Mistri.

"I know it. But what's your business?"

Phani stood on silently.

The Manager said "you are the President of the Workers' Union ?"

With folded hands Phani replied, "Yes, Sir.

"The matter has been finalised with your deputationists. Have you heard it?"

"No, Sir."

"—You will hear it from them. The work must be commenced from to-morrow. Go."

Phani became elated at the mention of the commencement of work.

"Yes Sir, certainly, I am just going."

On coming out, he stood by the side of the workshop. What was previously a well lit house was now enveloped in darkness. He knew every inch of its land. The shed was his own making. He installed every machine in its place. In that encircling gloom, even he felt afraid to step forward. What a conglomeration of sounds was there in that workshop. The hiss-hiss of the steam in the boiler, the rhythmic croak of the engine, the beating swish of the whirling beltings, the roar of the mobile shafts, the din of the grinding machine and the vibratory jingle of the tin-shed under the impact of that grand clamorous medley — all, all were silenced. Silenced too were now those trills and tunes intoned by the labourers modulating them with the hissing sound of the boiler steam or the metallic twang of the rotating shafts or with the ringing musical note in the resonant hum of the tin-shed, emerging out of that odd cacophony. There was dreariness all around in the workshop as is perceived in the *Chandimandap* with the cessation of the Puja festivity. Everything here was his own handiwork. The silence in the workshop pained him on the first day of the strike. He attempted to enter into it, anxious-minded as he was. But that youngster Dulu stopped him. As he stepped into the gateway, he was pulled back —"who pulling?"

Dulu said, "It is I, will you leave us ? The fate of so many bread-earners is at stake."

The faces of the poor working people loomed up in his mind. He could not persuade himself to enter the shed.

On the next day, early morning, Phani came into the workshop ahead of all the workers. When the fire-man arrived, he cautioned him — "why so late? Go and throw coke. Generate steam quickly.

Eagerly he fixed his gaze at the steam-metre. Its needle was trembling like the hand of the clock. Blood coursed restlessly in Phani's body. The workshop was his handiwork. He pushed back the driver of the engine and took his seat in his place like the guide of the elephant.

The steam was pushing. Inside the cylinder, its power was expanding like the bulging nimbus cloud of the rainy day sky. The iron rod attached to the big iron wheel moved upward under the impact of the pushed piston and the wheels were moving. The working of the machine would soon be in full swing.

Singhee joined and said with a smile, "Here, in the early dawn?" Phani did not return a reply.

He again said "It's the doping influence of opium !" So saying just to taunt him he yawned and snapped his finger-tips.

Phani would have leaped on his shoulder to break his neck. But just at that moment, the new manager entered the shed. Dulu stalked past and did not bow down his head. He made a curt bow to the manager by lifting his hand. Phani said within himself "you are overreaching yourself. Don't show such airs. You will have to bend before the storm."

Phani himself stood up and respectfully bowed down.

The manager asked, "Are you not the fitter?"

"No, sir. I am Phani mistri."

"Where is the engine-driver?"

"There he is."

"Why are you here? Something wrong with the engine ?"

"No, sir. It is as fit as a virile horse."

"Then?"

Phani replied "I attend to everything." The manager said, "No. Everyone to his assigned post. The company don't expect extra work from you."

Phani perceived that his respect and influence were all gone and had vanished like the magic ball. He was no longer required in the office for consultation. None—be he a labourer or an office Babu—approached him and asked "mistri, save me." Phani who loved uproar so much now grew into a quiet man. But he had one consolation—somewhere in the workshop he was daily sent for. Without him, the workshop was immobile. The manager would anxiously ask Phani, "If the defect is not removed to-day, we shall be put to great loss."

He would instantly shift his coat and with his bare strong hands grip the tools and sit down for work—"Let me see."

The sounding hammer went on striking. Clenching his teeth he would be at grips with

bolts and nuts with the wrench, perspiring all the while. Sometimes he would look with fixed gaze at the machine and be in a pensive mood. The labourers would anxiously look at his face and ask him occasionally with fearful delicacy—"mistri!"

The mistri would reply in an assuring tone "stop—stop. Very near to completion."

On returning to his quarters, he would turn over the matter in his mind and would chuckle. Glass after glass was being filled with wine and quaffed. "Who is to shove him — the workshop is his handiwork ?"

* * * *

Just at that time, the war market set in. The business of the workshop stepped up by leaps and bounds. Phani sweated like a demon. Within a space of few days, he completed an entire shed. The strength of labourers multiplied four-fold and there was all-out labour throughout day and night. In the evening, high powered stove lamps would be pulled up by ropes through the pullies fixed at the tops of large sal posts that were planted. He himself would climb up to the roof-frame and tighten up bolts and nuts through the borings made by himself in the iron tees and angles over there.

The shed was to be fitted with electric installation. The new electrical engineer covered up all the walls of the entire workshop with fine electrical wirings and deftly joined them with the electrical contrivances. Rows of bulbs were hung from the roof to the various extremities. Poles were posted on the road-side and they too were brought under the bulb arrangement. Then one day he pushed the top of a machine no bigger than the top of a nail. The entire workshop was illumined like day-time. The illumination was confined not merely to the inside of the shed but it extended to the surrounding spaces of the workshop compound, the Bungalow, the mess even to the quarters of Phani.

"Am I to apologise ?"
"—Otherwise I will suspend you"

Phani leaped up with overflowing joy. He had seen the electric light, heard about its magical illusion but personally he did not know how to instal it in such a way. Nor had he seen such an installation. He resolved within himself that he would be a disciple of that young electrical engineer. The aged experienced mechanic was amazed at the skilful performance of that young man. Brimful of praise for him, he patted the back of that engineer and cooed "Bravo! wish you god-speed!"

The engineer stepped back and exclaimed—"what's that?"

Phani felt abashed—"No—No—No". He could not utter anything more. But the matter did not end there. It went up to the manager. Phani was sent for and he was told by the manager that he should apologise.

"Am I to apologise?"

"——otherwise I will suspend you for 15 days."

Phani could not prepare himself for an apology. He could not comprehend in any way that he committed a wrong. Said he "Then please suspend me, sir." He muttered within himself—"I shall also see. Let me see how you run the workshop after suspending Phani. Rot has already set in in the engine. Daily Phani is to hammer out that part at fault and that lad of an engineer won't be able to guess where and how packings with iron bits will be necessary."

On the third day, the workshop was closed.

Phani laughed within his sleeve. The labourers, on the other hand, were in commotion. They wanted dearness allowance, they wanted their necessaries of life at cheaper rates. Phani resolved that he would join with them this time and give himself up in the movement. Let the workshop be closed. He would not join his job even if sent for—never—never. He knew that the inert engine would not work without him. Let the bulbs alone illuminate. Let the still, silent machineries lie like the ponderous immobile hill. He knew the magical secrecy. The hill would not move till his word. Let the workshop remain closed. Let the labourers shout for want of wages. Let the manager become helpless after day-in-and-day-out-labour. Let the manager come first. Then Phani would go. He would touch it with his magic wand and the workshop would come to life at once The immobile hill would revolve and start working, the engine would be moving, the beltings would spin in wheels and shafts would rotate. Rows of buckets filled with earth would go up and come down, emptied of contents, the grinding machine would be whirling.

Suddenly Phani was startled to hear a sound. The grinding machine was moving! The workshop was in full swing! It was going on inspite of him! His handiwork was galvanised to life without his touch! He ran fast and entered into the workshop.

He found the workshop solitary — only the manager and the electrical engineer were standing in the electric shed. He solved the riddle. He heard that the workshop could be worked with electric power. It was being worked on that day. He was dumb-founded. There was no more any necessity for him. His handiwork, the workshop, was in full operation without his command. No more his command would be necessary. None would look up to him. He would not be required by the office. No labourer would approach him and say "Save me, mistri." The ring of youngsters like Singhee would jeer him by yawning. And that workshop too his own handiwork—was going on without his permission. It would no longer depend

Once upon a night..

By MANOJE BASU

THE wall-clock gave out one monosyllabic ring.... It was nine-thirty — still two hours and a half to go. Only then the light would be off in father's room and Niladri would let the Penal Code alone for the night. In the pitch dark he would be walking on tip-toe past the closed doors of his father's room.....But no, he could not think of doing so at the moment, by no means until midnight,—— even if the world was near its end.

Out in the street there was moonlight, a pale moonlight peeping through the mist. Niladri came out and paced about in the street walking right up to the corner and back. The street was empty. He looked up and then he could not believe his own eyes. Could he ever think of it coming off so early ? There was no light up there in father's room. How was that, — he thought. In the silence of the night he could now distinctly hear the sound of singing and drumming flowing out from Uncle Ashok's house. The soiree of devotional songs was still going on in full swing. Mother was already there as usual and was not expected until midnight. But the oldest of the family who should have shown the keenest devotion to such things, was seemingly the least inclined to budge an inch from his room. Songs drove him to distraction, be they devotional or mundane. He always preferred to stay in and go through his briefs if he had nothing else to do. But what could have happened on a day like this ? Did Uncle Ashok whisk him out of the house when he had come to see him in the evening ? One could never tell, really. Odd things do happen in life.

And so Niladri made up his mind. He quietly went up the stairs. Father's room was dark, the doors were closed.....Suppose the doors opened and a solid six-footer appeared before him !

Niley ! ——he would roar.

Yes, father ?

Where do you think you are going ?

He would mutter his destination.

What for ?

To look for a book.

I thought as much. Books grow wings I suppose. All the time they seem to be flying up here to roost. When does your examination start, my dear ? I'm sure you don't remember the date. Last time it was you who had sprouted wings for I could never find you in your hostel. Now that I have brought you back home your books are on the wing, flying upstairs and everywhere. Very interesting, I must say ! .....

* * * *

The moonbeams crept through the interlaced branches of the trees and spread across the terrace in a latticed pattern of shadows and light. Did people ever bother about law text-books or the Penal Code on such a moonlit night as this ? Niladri heaved a deep sigh and tiptoed into his bedroom, only to find more disappointment in store for him there. Just look at her, he thought. Did people ever sleep like a log on such a lovely night as this ?

It was his wife Uma. She was fast asleep. His mother usually kept her company in this room as long as Niladri kept busy with his preparations for the law finals in a room downstairs. To-night she was out, it was silent everywhere and this beauty was sleeping blissfully under a thin green quilt with

(Continued From Page 219)

her eyelids shut, eyelids that resembled a pair of rose petals.

It did not look like a feigned sleep. She was asleep really. A little away from the bed a dim light was burning.

Niladri called in a whisper, "Uma! ..... Umarani!!"

Uma stirred in her sleep and turned about clinging to her pillow. Her wristlets and bangles

Niladri called in a whisper, "Uma...Umarani...!!"

jingled with the movement. Niladri removed the quilt and uncovered her face. She at once gave a start and screamed.

"Who,—who is that?"

And someone was also heard shouting from the next room.

"What's going on there?"

Good gracious! It was Baradakanta himself, Niladri's father.

"Don't you worry, dear, I'm coming..... Where the devil are my wooden slippers?"

Uma sat up. Her sleep was now gone. Niladri's face turned pale. He looked about for a convenient exit to make an escape. The only way out was to slip through the passage outside, but along that passage came the hurrying clatter of a pair of wooden slippers. Niladri was the least inclined to face his schoolmasterly father. He was certainly not to be expected to approve of his son's conduct. He could not have his son neglecting his studies while the examination was close by and trying to keep tryst with his young wife.

Niladri pleaded with Uma.

"Darling, please tell him that it was nothing but a dream. Just nothing really. Good Lord, there he comes. Quick. Tell him that it was a cat or anything. Please ask him not to bother himself."

Uma tried to speak out but her throat seemed dry. The sound of the footsteps was coming nearer and nearer. On the other side of the bed lay a small pillow. There was only a moment to spare. With surprising agility Niladri got up on the bed, crawled over the pillow and took cover under the quilt.

Barada walked in with an anxious look on his face.

"What's the matter, dear," he asked.

Uma braced herself up. She felt quite at ease with her father-in-law.

"Nothing particular," she replied. "I've had a bad dream, that's all. I thought it was a thief."

"Thief!" Barada exploded. "Thief? Of course it was thief. I thought I had heard someone moving. Where's your mother-in-law? It's all her fault. She is still out there amusing herself at the *kirtan* party and here is a tiny daughter-in-law left all by herself in the room with doors left ajar. How can you help having thieves invited in?"

Uma smiled. "It wasn't a real thief, father. Only a silly dream. I woke up only to find a cat."

But Barada would have none of it.

"How does it matter if a real thief hasn't really come. I suppose one could sneak in if one wanted to. What kind of a woman is your mother-in-law to leave you here all alone by yourself?"

"I shall close the door and sleep," replied Uma. "When mother comes back I shall open the door for her. I won't get frightened, believe me. Please go back to your room, father. Sorry to have awakened you for nothing. Must have caused you a lot of bother."

"Oh no, not at all, not at all. I don't go to bed so early. You know that."

There was a small charpoy set against the wall. Barada pulled it near and perched it.

"I was quite awake," he went on saying. "I wasn't feeling well. So I switched the lights off and lay down with my eyes closed. But my brains refused to switch off. The statements of the witnesses in the case I am appearing in went on sizzling in my head. You know, I had to appear at an ugly case in the courts this afternoon. But wait, let me get a cigar. Then I shall tell you all about it".

As he left the room Niladri sat up on the bed. He did not look particularly pleased.

"It's your fault," he said with a trace of anger in his voice.

"Mine? How so?" Uma widened her eyes.

"Of course yours. Why did you scream?"

"Huh! How could I know it was you. I was asleep, wasn't I?"

"Why did you fall asleep so early," asked Niladri impatiently. "Can't approve of it."

"I suppose one can only approve of someone entering a lady's bedroom and lifting the quilt off her face while she has been sleeping."

"I should not have done that." Niladri's voice was heavy. "Not if I had the least idea of what was going to follow."

He left the room angrily but had to return immediately. There was no other way out and Barada was about to come back. The doors of Barada's room were now wide open. There was a light inside. He sat facing the door and was putting his stockings on. He was inconveniently observant. Even a fly could not escape his eyes and pass him by.

Niladri sighed once again. His voice was sad.

"I wouldn't have caused you any trouble, dad

ing. I just came in to look you up. I'd have gone back quietly. Why did you have to call father in and land me in a soup ?"

But Uma did not look sorry in the least. It rather seemed as if she was having a nice time of it with a smile quivering on her lips. She tilted her head and said, "If a look up was all you had come in for, it would have made little difference if I was asleep or dead. Trouble ? Don't you say that. You are most conveniently warm under the quilt and here I am shivering in the cold."

"There's no quilt downstairs and so I have come in here," said Niladri.

There was no time to say any more. The door chain over there rattled, which meant Barada was closing his door from outside and was coming down here thoroughly prepared to relax over a nice chit-chat.

Niladri looked at Uma. There was the look of a lamb in his eyes. "Please make it brief," he said, "For my sake, or else I shall die of suffocation under this infernal quilt."

Barada walked in and Niladri disappeared under the quilt. The old man tried to explain the delay. "Found my cigars," he said, "but couldn't find the match-box. Was feeling somewhat chilly as well and so I thought I'd better put on a warm slipover. There's been a slight delay.....didn't you feel frightened ?"

Uma assumed a carelessness and replied "Not at all. What should I feel frightened for ? Please go back and try to have a sleep, father. I have nothing to feel frightened about."

All this did not pass through Barada's ears. He coolly sat on the charpoy. Uma sat leaning on the bed.

"Are you feeling cold, my dear ?" asked the old man.

"You, had better wrap yourself up in that quilt. What have you heaped it on the pillow for ?"

"It's very warm," said Uma.

"What ? Warm ! What do you mean. With all these warm things I am still shivering. You are feeling chilly, I'm sure. Only you are not being able to realise it."

He was about to get up but before he could do so Uma quickly got down from the bed, came and sat on the floor near his feet.

He was a busybody and he did not really know what he would do next. Maybe he was thinking of picking up the quilt himself.

"I'm not at all feeling cold," said Uma. "I had a slight and that has been giving me the shivers. Now it's all gone. If I close my eyes I still see that cat — the cat which has large fiery eyes like those of a tiger.....Well, father, let's forget it all. Please tell me about the case you appeared in today."

This trick was known even to the children of the household. If one could make him talk about some interesting case he would forget everything else.

He started.

"There is nothing much to say, my dear. Just an ordinary case of theft. I volunteered to appear for the accused. Without any fee, of course."

He got excited soon.

"It doesn't matter whatever the law says on this point. I insist that there was nothing criminal about what the accused had done. You know, there was a tray of rasgollas inside a glass-case. This man had been starving for about three days and naturally he could not help smashing the glass. As he did so and was about to toss a couple of rasgollas into his mouth they grabbed him and handed him over to the police."

"So it *was* a case of theft after all."

"May be. But when one has been starving and there is food within reach I don't suppose even an angel can help grabbing it. I straightaway told the magistrate that if it had been myself——"

"——What do you think you would have done ?"

"I'd have given him the entire lot to eat", replied Barada. "Poor fellow ! Why can't anybody let him eat his fill ? I don't really understand why these shopkeepers are so hard on the poor."

"Everyone cannot be expected to have a heart of gold like yours," said Uma with a smile.

Under the quilt Niladri was sweating. How about a man who does not mind his son dying of suffocation under a quilt !

The parley however did not progress any fur-

You, had better wrap yourself up in that quilt. What have you heaped it on the pillow for ?

ther. Niladri's mother, Saudamini, was back soon.

Barada laughed.

"So,——my dear old wife has come back at last. That enthralling music is over, is it ?"

"Why ? Did my absence put anybody to disadvantage," asked Saudamini.

"Look at this poor little thing, your daughter-in-law. She is all alone by herself. Somebody ought to keep her company, don't you think so ?"

Saudamini smiled and looked at Uma. Then she came near Barada and said, "After all our son is at home, isn't he ? I don't suppose one should expect our neighbours to come and keep her company at this hour of night."

Barada frowned. "My dear ! Why should my son neglect his studies and mount guard over this little unimportant woman. His exam is near. He has a lot to study. He isn't a worthless gossip. He is my son."

Saudamini laughed.

"Well, if the son cannot", she said, "the son's father can. That would be quite as well. However, you may go now. It is not yet time for Nilu to come up. Let's have a nap in the meantime."

As Barada left Saudamini looked at the bed. The unusually large heap under the quilt surprised her. "What a useless servant we have," she exclaimed. "It must be his doing. That pillow is too big for you. If it takes all the space on the bed where are we to sleep ?"

Uma hurriedly said, "Please don't bother yourself about that, mother. I've been sleeping here quite comfortably. I don't think I shall have any difficulty at all."

Saudamini did not pay her any heed.

"Wait, I shall get you a smaller pillow. Let me go and keep it over there."

As she approached the pillow sat up.

"You ? Nilu !"

Niladri was about to break into tears. But the welling tears immediately evaporated and he stood thunderstruck. Barada had left his cigar box behind. He was now back to reclaim it. As he saw his son his brows puckered up into a frown.

"What are you doing here ?" he asked. "Are your studies over ? What's the time now ?"

Niladri assumed a sleepy voice, yawned and said, "It's past twelve....".

"Of course not. It's just seven minutes past eleven, and not a second more. When it is study-time your clock always runs faster than a race horse. Go now, you. Get back to your study downstairs."

Saudamini stopped him.

"No. He needn't go. Lot of mosquitoes down there. I don't want him to get malaria. If he has to study let him study here."

"Mosquitoes ? I don't see any," yelled the outraged father. "Do you want to make a cheese-doll out of your son ? I have been sitting up doing a lot of work myself. Mosquitoes don't come and trouble me."

Niladri looked at his mother with grateful eyes and said, "Mosquitoes come out only at night."

"Then come to my room and study", said the unyielding old man. "It's still fifty three minutes to twelve. Have you done with the chapter on Cheating ? I don't think so. If you get stuck up anywhere I might help. You'll find that quite convenient, won't you ?"

Barada looked at his son with piercing eyes. Niladri felt helpless. He nodded and said, "Well, yes, I think so...."

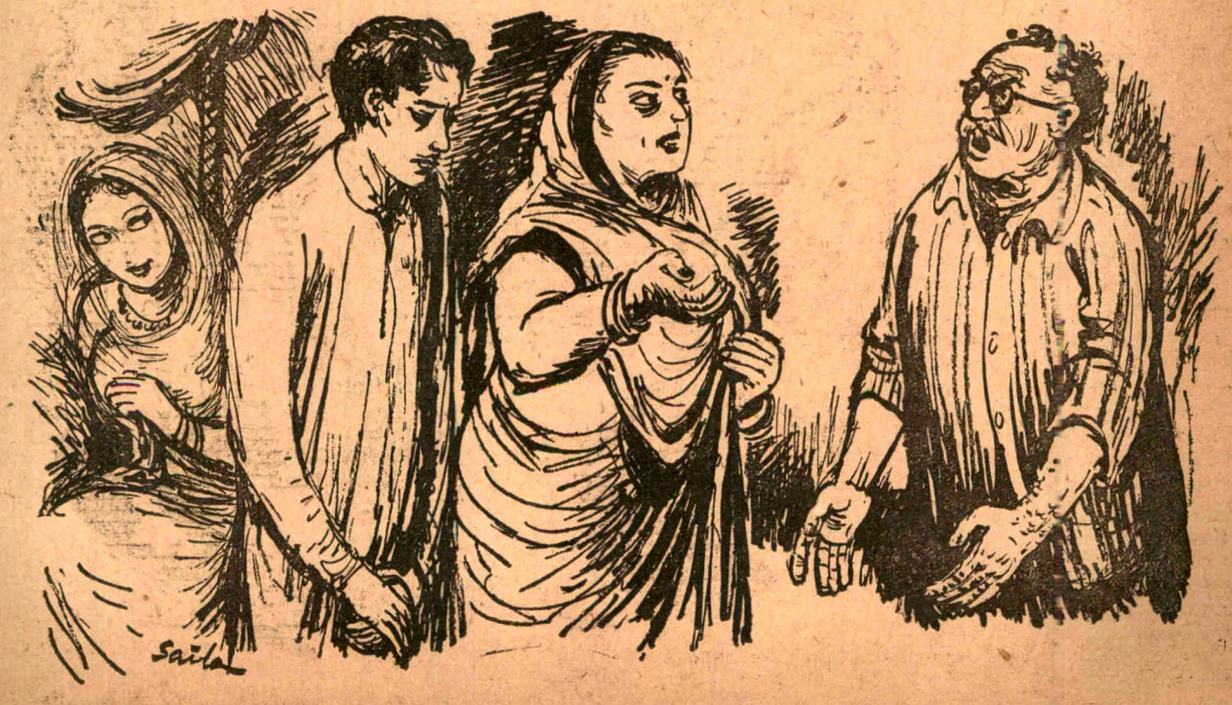
Mother came to his rescue.

"But I won't find it convenient at all," said she. "If he keeps the light on, which he must if he has to do his studies, I shall not be able to have a wink of sleep. You know I cannot sleep with lights on."

"Then you can sleep here in this room," said the old man. "When his studies are over he will come back here and you can go."

The old lady shook her head.

"Why ?" exclaimed the exasperated old man.



"Mosquitoes ? I don't see any", yelled out the out-raged father.

"My health is running down," said the old lady. "I cannot have half a sleep and then wake up and run about here and there. I don't care if your son cannot do his studies any more tonight."

Troublesome, really! Barada shook his head. What was to be done, he thought. He had another brainwave.

"All right. Let's take Uma to our room. She can stay there while Niley studies here. When it is twelve she can come back."

"That also will not do," said Saudamini. "I want to have a talk with you and it will not do to have her there."

Barada lost his patience. "Then what can we do? We cannot leave her here all along by herself."

"Ask Nilu if he is willing to———," began Saudamini.

"Certainly not. His law finals are very near." Barada felt pity for his wife. Silly woman! Does not even understand the importance of examinations, least of all the importance of the Penal Code which his son has got to learn by heart. He shook his head and said, "I cannot ask him to do that. How can he lay his books aside so early? Must have some sense."

"As if you have them," said Saudamini sarcastically. She called her son and said, "My dear, tonight you can study here in this room. I don't think Uma will disturb you. She will sleep quietly. Will that be inconvenient?"

The son seemed much gratified. He agreed that it would certainly not be inconvenient.

Barada was suspicious. "Are you sure," he asked.

"Yes," replied Niladri.

"How do you know it won't be inconvenient?"

He thought his son was too shy to protest. But he did not think it worthwhile to press the point.

He quietly left the room. At the door he turned round and said, "I should expect you to read out loud so that I may hear you from the other room. It also helps concentration, you know. I should also expect you to be thorough with the sections on Cheating. Tomorrow I might be asking you a question or two."

He went back to his room followed by his wife Saudamini. Niladri closed the door and fastened the latch. Uma was already down on the bed with her eyes closed.

"Uma!"

No answer.

"Umarani?"

"'Mm?"

Niladri came and sat beside her.

"Darling! open your eyes and look," he said. "Such a lovely night! Just open your eyes for once."

"Yes, lovely, isn't it," she said drowsily.

"What?"

"A night like this."

"But your face is turned on this side. Your eyes are closed. The open windows are on the other side. Are you really seeing anything?" asked Niladri.

Uma opened her eyes and peered into the eager face of her husband. She giggled and said, "A closed room is the loveliest at night."

"Good enough for sleeping, isn't it?"

Uma replied, "Well, you don't seem to admire sleeping beauty. Why? Is it because you are not being able to sleep yourself for you have got to learn your lessons? I suppose that's why you must grudge everyone the pleasure of a nap, mustn't you?

"It's a crime to sleep on a night like this," said Niladri.

Uma asked with an assumed innocence, "Does your Penal Code say so?"

"Yes. And do you know what's the punishment?"

Uma sat up quickly and said," Oh dear, no. Not now in any case. May be to-morrow. When your father asks you about your lessons, tell him all that."

Before Niladri could tell her something appropriate, there was someone knocking at the door.

"Niley——! Niley——!!"

It was Barada.

Niladri ran towards the table. He did not like the idea of being caught crooning into his wife's ears while he should have actually been studying.

Then he stood aghast. He had left his books downstairs. He searched about but could not find any handy book within reach. All he found was the old torn Mahabharata which belonged to his mother. He laid it open before him on the table and started reading as loudly as possible whatever he could remember of the sections he had learnt by heart from the Penal Code.

In the meantime Barada went on pounding on the door and shouting as loudly as he could.

The attentive pupil then got up and opened the door with a wistful look in his eyes.

Barada looked very pleased. He had apparently heard him reading. He walked straight in and went towards the bed where Uma was lying with her eyes closed, feigning sleep.

"Uma, are you sleeping," he asked. "I just came in to make sure."

A sleeping woman does not talk. So Uma's reply was not coming. He seemed relieved and turned towards his son.

"Why are you braying like an ass", he asked. "Hell of a lot of noise you are making. I thought may be it was disturbing Uma and she was not able to sleep. So I came in to find out if I could do anything about it."

Niladri scratched his head and replied, "I suppose it would be better if I read silently....."

"Of course not," Barada shook his head. "Everything has got to be learnt by heart and you cannot do that by reading silently. And since Uma is already asleep and the noise you are making is not disturbing anyone else, you might carry on as before. But be careful. She must not be disturbed on any account."

"Surely not," Niladri hastened to agree. "Look, she is fast asleep."

"Yes, but she may be awake any moment," said Barada. "I cannot rely on you. I shall come back a little while later and see if things are all right."

Niladri felt irritated but did not show it. He quietly replied, "It's very cold outside. Why should you take so much trouble?"

This infuriated the old man. "That's my look-out, not yours. I don't have a daughter of my own. She is like my own daughter. If I take any trouble on her account, it should not cause a pang of jealousy in your bovine heart."

"Well, I don't see how my getting up and opening the door now and again will help my concentration", he hastened to explain.

Barada noticed that all the windows of the room along the passage were closed.

Good gracious! You have changed the room into a Black Hole. That was why I could not hear

Sixteen annas

By NARENDRANATH MITTRA

THE Dacca Mail was to leave the platform at 10 P.M. but Lalmohan Saha arrived at the station two hours before time. He had with him a big trunk, two suitcases, a tiffin carrier and a bedding. With the help of a coolie he put his luggage at a corner. He had bought the tickets earlier. But only tickets would not help you now-a-days to get inside Dacca Mail with your luggage so easily. You have to take permit from the land customs office. They open each and every box and search thoroughly all your belongings to see whether you are carrying any contraband articles to Pakistan or not. They are unsympathetic in nature. A fortnight back Lalmohan sustained a heavy loss. The customs officer snatched away fifteen yards of shirting and five saris. Lalmohan entreated him to spare him—he had fallen at his feet and even tried to put two rupees in his hand. But the officer wanted to hand him over to the police. Lalmohan had somehow saved himself from the prison bars. He resolved to wind up this business. But the moment he set his foot in Calcutta he broke his promise. Business means profit or loss. You have to take risks. No business magnate gives up his profession even if he has to face a loss of hundreds of thousands of rupees.

Of course Lalmohan is not a business magnate —he cannot afford to lose a hundred, what to speak of hundreds of thousands. Still he could not abstain himself from it. This business is running a swell in Pakistan. Profit by three or four times. Various types of businessmen are engaged in this.

This time also Lalmohan invested three hundred rupees in shirting, saris and dhotis. He put all these in his boxes and bedding and covered them with fruits and vegetables. He has become more cautious this time. He would not go to the male customs officer once again. He would get his luggage passed through a lady officer and for this he would find out a woman to carry his belongings as hers.

He has marked that two or three young ladies work in this department. They just open the boxes of lady passengers and let them pass. The ladies department is the best place for getting his luggage passed. He would take this chance.

He has no woman with him He left his old mother at home. But what if he was not escorting one to Calcutta—somebody else was doing it. Harabilas Sil has brought his wife for medical treatment She would have to stay in a hospital for a week.

Lalmohan had gone to see her in the hospital thrice in seven days and given her fruits. He had proposed with a smile, "We would return to our home together." Harabilas had replied, "Surely."

Lalmohan had said to Sunayani, "I will have some luggage with me. If they question you just say that I am your brother-in-law."

"Oh, surely," Sunayani had smiled "but you will have to give me a nice sari at a cheap price."

"You need not worry," Lalmohan had assured her, "just come round and you will have lots of them."

The day and time had been fixed. Harabilas with his wife would go to-day. Lalmohan would accompany them as Sunayani's brother-in-law and all the luggage would be passed under her name.

OSTRICHES ON A SOUTH AFRICAN FARM: Here is a huge crowd called "Camel Birds" for the long neck, disproportionate head and curious feet.

Ostriches: 'Camel Birds' Of South Africa

By U. C. CHOPRA

THE flightless birds include not only the Kiwi of New Zealand but also the Ostriches of Africa and Western Asia, the Emu and Cassowaries of Australasia, the American Rheas, and Penguins—the aquatic birds of Southern Hemisphere, as well as several birds now extinct, such as the Moas.

The most familiar of them is the ostrich which is used to the wide-open plains and sandy deserts over which it has wandered undisturbed for centuries, and still resents contact with the world that has encroached upon its secrecy and encompassed its freedom.

The male has magnificent, glossy black plumage with pure white wings and tail feathers; while the female, a rather smaller bird, is dusky grey. The ostrich has a small and flattened head, with very large eyes, a telescopical neck, and long, stout, muscular legs, able to deliver a powerful defensive kick and to carry the bird at a very great space. Taking it all round, the beak of the ostrich, flat, broad and blunt, with nostrils in the middle, a covering of horn in separate plates, and a deep mouth reaching back under the eye, is the most primitive and muzzle-like beak carried by any modern bird.

The ostrich is known for its tremendous speed. The short wings of the bird are quite useless for flying, but they are employed as sails when the bird is running. When it is going at full speed, however, they are held close to the body, so as to offer less resistance to the air. The ostrich gains such momentum that at the top speed the bird takes strides of twenty-five feet. It can run sixty miles an hour, faster than the fastest Arabian horse or the Antelope. Races are often held between trained ostriches on ostrich farms and are said to be more exciting than horse.

At one time wild ostriches were very plentiful in many parts of Africa, but, owing to constant persecution for the sake of their plumes, their numbers were reduced to such an extent that had it not been for the fact that the birds thrive well in a domestic state the species would in all probability long since have been exterminated.

EXISTING SPECIES

African ostriches include three existing species, one in East Africa and another in South Africa, while the third and more familiar kind, the common Ostrich or 'Camel Bird' ranges north into Arabia, Syria and Masopotamia, and formerly existed in

SIXTEEN ANNAS

(Continued From Page 225)

He had taken all sorts of precaution. He did not now care for anything on earth. He took his seat on the big trunk and smoked a bidi and looked at the entrance—Harabilas and his wife should arrive now.

Rickshaws, taxis and coaches plied in. So many passengers entered with women of various ages. But there was no trace of Harabilas. Lalmohan became impatient. He had hardly moved a few steps when a young man of twenty-three ran to him. "You are here," he panted, "and I have been searching for you at every possible place." He was Haripada, cousin to Harabilas. Harabilas was putting up at his residence at Ultadanga.

"Where are your elder brother and sister-in-law?" asked Lalmohan.

"I came to tell you that," replied Haripada, "my brother won't go to-day. Sister-in-law has become unwell again. The doctor says she should not be allowed to undertake a journey within a few weeks. My brother asks you to manage yourself." Haripada went away.

Lalmohan sat still and pondered for sometime. Yes, he must take the train to-day at any cost. He had already paid a rupee and a half to the rickshaw-walla to bring his luggage to the station and he would have to pay the same to take them back. Moreover, how long could he afford to stay in a hotel in Calcutta? Where to get money from?

Harabilas would not go with his wife to-day—but there were other passengers with their wives. Lalmohan would approach one of them.

A smartly dressed young man with a beautiful wife was advancing towards the ladies' department of the customs office. Lalmohan addressed him straightway, "Excuse me, where do you live?"

The young man was surprised. "Faridpur," he said, "but what makes you ask this?"

"I am also from Faridpur," replied Lalmohan, "we come from the same district, you see. Will you please help me?"

"What can I do for you?"

Lalmohan pointed to his belongings and said very politely, "No, you need not take much trouble. Please ask sister-in-law to kindly get my luggage passed along with hers. She would have to admit that I am related to her."

The young man looked at him and then smiled, "My wife would not perhaps object to admit relation with an interesting person like you but we would not certainly run the risk. They have become so strict these days, you know.

Lalmohan approached a few more couples but all of them said the same thing. They were very strict—who would volunteer to run such a risk!

He said to his companion Nanda Das, "Who the hell can stop me from taking the train to-day? Sit here and watch the articles. I will go to the gents' department."

Lalmohan went to see the crowd near the gents' section. He looked around himself to see if he could find out a known couple.

On the right side refugees in distress sat in groups. They had established their household near the station. Some were eating, some sleeping. There were quarrels between men and women—romance was also going on. Lalmohan moved forward.

"Babu—hear me."

A woman's voice from behind made him turn his neck. The moment he saw her he stopped moving. A girl still within her teens. She had just a small worn-out sari on her. It was so dirty that its original colour was difficult to trace out. She was rather thin yet she had something lovely in her—joined eyebrows, pointed nose, beautiful eyes and long hairs.

"What do you want? he asked after a pause.

The girl hesitated but spoke out at last, "I am starving the whole day—my invalid mother also did not get anything to eat. She would have consumed me if she could. Will you kindly give me something?" She stretched her hand.

Lalmohan noticed a blue glass bangle round her wrist. It matched nicely. The shape of her hand was quite pretty. The fingers were slim and pointed.

He replied rudely, "I have no time to pity anybody—haven't money with me." He turned his face and made a move.

"Listen, give me something," the girl implored.

Lalmohan surveyed her again. Yes, she was not bad to look at. She could be introduced as a gentleman's wife.

"I can give you something if you do what I say," said he.

The girl fixed her eyes on his. What she would have to hear was not unknown to her. She had already heard this kind of word before. She had learnt that the moment they came to know she was hungry their eyes glowed with a different type of hunger.

She advanced a few steps to him and then said very softly with a smile, "Why not ? I will do what you say. Speak out."

"How can I say it here, come with me," said Lalmohan, "what's your name?"

"Champa."

"What a beautiful name," said Lalmohan sweetly, "come darling, come."

He went to the first class waiting room. He peeped into it and found there was none. "Come in," he said.

Champa followed him.

Lalmohan closed towards her. Champa moved a few steps back and said, "Tell me first how much you will pay."

But he did not touch her. He bent upon her and whispered, "If you help me in a matter I will pay you what you want." Then he said what sort of work she was to do. It was a peculiar proposal—she had never heard anything like this.

Champa asked after a pause, "But if they catch us?"

Lalmohan smiled, "Then everything will be over. We would be sent to jail hand in hand. The place is not so bad you know, you get your meals and also can stay there."

"O. K. I agree," said Champa, "but they would detect it at once. You have such a neat and clean dress whereas I am putting on a dirty torn out sari —how can we look as a couple?"

"Right you are," Lalmohan was pleased. "You are quite intelligent Champa,—you can easily become the wife of any judge or magistrate what to speak of me. Wait a bit I will bring the necessary things."

Within a couple of minutes he returned with a small suitcase. He pulled out a cream coloured sari

and gave it to Champa. "Have it," he said, "now you will look as my wife. It cost me seventeen rupees and fourteen annas. I will sell it to the Munshi at thirty chips if not more."

"Will you sell them all? Won't you give one to your wife?" asked Champa.

"Wife?" smiled Lalmohan, "Where is my wife? You are my wife, aren't you?"

Champa blushed. She darted a furtive glance at him. He was fair, slim and quite handsome. He was not more than twenty-five or twenty-six.

"Now just go out of the room," said Champa.

"Why?" asked Lalmohan.

Champa felt amused. Surely he was not married. He did not know anything about women. She raised her brows and said, "Wouldn't I change my dress?"

He pulled out a cream coloured Sari and gave it to Champa.

Lalmohan realised his mistake. "Sorry," he said, "but one thing more. Only costly sari won't do. You are going with your husband. You must put vermilion mark on the parting of your hairs and forehead. Put on the sari. I will bring vermilion in the meantime. I will have to buy a platform ticket also."

He returned after a while. He had brought not only vermilion but two pieces of betel leaves also. He gave one to Champa and said, "Have it. It will make your lips red. A married woman does not look nice if she does not chew betels."

"I can have it," replied Champa, "but how long I can bear this vermilion mark? Am I not a maid? People will start gossiping about me."

The station clock gave a gong. At once Lalmohan jumped up, "Gosh, it is half past ni Hurry up, otherwise I won't be able to catch t train."

After a few minutes Champa said, "Let us go am ready."

Lalmohan surveyed her. The cream colour the sari matched with her complexion wonderfu She had put it on quite smartly. Now she could easily taken for a lady!

Nanda Das felt restless at Lalmohan's delay. burst out when Lalmohan came to him, "Will you today or not ? What's the idea ?" But he was su prised to see Champa with him and asked, "Who she?"

"My wife," replied Lalmohan.

"Wife !" Nanda was taken aback.

"Oh, yes," said Lalmohan, "and you are wife's brother. You have come to see us off. Her your platform ticket. And let me have the tick you have already bought."

Nanda hesitated but Lalmohan shouted at h "Why do you hesitate? Do what I say if you wa to go home."

He called a coolie to carry his luggage and p ceeded with Champa and Nanda towards the lad department of the customs office.

There was a small queue. A nice looking you girl of twenty-two was at the check post. She h specs on her eyes and her face was quite soft.

Lalmohan pushed Champa forward and sa "Go ahead and show her what you are carrying."

Champa cast a glance at him and then mo towards the officer.

The lady customs officer looked at her and th surveyed the luggage. "You have only two ticke said she, "and so many things with you. How ma boxes? These four?"

"Yes," said Champa.

"Are you carrying anything illegally?"

"Open them and see yourself," smiled Champ

The officer was not to yield so easily. "Certai I will have to see myself. Open them. Where your keys?"

Pulses of both Champa and Lalmohan beat f Who would save them if the officer searched eve thing thoroughly!

Lalmohan brought out the key from his poc gave it to Champa and said, "Open it. I objected taking such a huge trunk. Didn't I say that would have to come again? But neither your mot nor you paid any heed to my words."

Then he turned to the lady officer, "She wo not leave a single thing behind, you see, and mother-in-law also seems to be devoid of comm sense. She has heaped all sorts of sheets, clot and what not—as if no other girl has to bear chi

Not only Champa but the officer also blush There were pearls of sweat on her forehead. wiped them with her handkerchief—or just tried hide her smile — who knows !

Lalmohan asked Champa to step aside. "" need not open it—let me do it," he said, "what the use of your coming in such a state—you co easily stay with your mother. Is it possible to unc take a journey at this stage? Look how pale she already become. And think of the strenuous jour she will have to make."

"You need not open that trunk," said the l officer, "let me see other things."

She just peeped into the suitcases and pre the bedding with her soft finger. "O.K. you may she said at last.

The rush of the passengers pushed them platform No. 6. The crewman did not care examine the tickets. He permitted them to get

SIXTEEN ANNAS

(Continued From Page 229)

Lalmohan said to Nanda, "Gosh, what a rush. All the compartments seem to be fully packed—how to get in! Go ahead with the coolie. You may find some space in the compartment next to the engine. I will soon join you."

A goods train stood on the other side. Lalmohan moved to that and said to Champa, "Hurry up. There's no time to waste. Go on to the other side and change the sari—and bring it to me. Well, how much should I pay you?"

He was in a hurry. The departure time for the train was fast approaching. "How much do you want? Speak out," he said impatiently.

Champa looked dumbfounded. After a while she said softly, "You promised to pay according to my demand."

"Surely, how much do you want?"

"What should I want?" said Champa, "pay me what you like."

Lalmohan pondered for a while and then took some coins out of his pocket and counted them on her palm. "Look, I pay you sixteen annas—nothing less. Now don't grumble. I wonder if I would be able to take the train."

Champa did not utter a word. She changed the sari and returned it to him. He gave the platform ticket to her. "Show it to the gate-keeper. He will allow you to go out. Have you counted the coins? Got sixteen annas correctly?"

Champa looked at his face and then said with a smile, "Yes, there are sixteen annas."

Lalmohan did not wait any longer. He ran towards the engine. Probably he would get a seat in the compartment next to it. To him Nanda was a silly goat and he could not rely on him.

But he found that Nanda had actually put all the luggage inside the compartment. There were seats for both of them.

"Hurry up," cried Nanda, "get in. I have kept a seat for you. The coolie took a rupee and a half."

He cast a glance at his belongings, then heaved a sigh of relief. He took two cigarettes from the packet and offered one to Nanda, "Take it. I did not think that I would be able to catch the train to-day."

The last bell was rung.

What a wonder! The young couple took seats opposite to theirs.

"So, you are also in this compartment," Lalmohan opened the conversation.

"You have come at last," smiled the young man, "but how did you manage?"

Lalmohan smiled mysteriously, "I am here, you see. You did not help me. You left me outside."

He felt embarrassed. "How could I help you," he said, "but tell me how could you come at the last moment with so many things? With whom did you come?"

"With whom else?" smiled Lalmohan, "with my wife."

"Wife!" he was bewildered.

"What do you think," replied Lalmohan jokingly, "are you the only married person in the whole world?"

The young bride now stared at Lalmohan for the first time. Probably, she felt curious. It was a beautiful face. And, there was that beautiful circular tip of vermilion in between her eyebrows.

Lalmohan got a shock. Champa had a similar mark on her forehead. She looked as charming as the lady before him.

The young man was rather perplexed. "I don't mean that", he said apologetically. "Then your wife—"

Lalmohan did not hear what he said. He did not want to—he stared out. The train had started to move. But he could easily get down if he like. He could run to her and ask for her hand.

But whose hand would he seek? Would Champa be traced out in such a crowd? Would she be recognised? Was she still bearing the vermilion mark? Had she not wiped it off then and there due to the insult and humiliation? Or who knows whether with that mark she was helping some other person to get his luggages passed!

Coal-dusts fell in the eyes of Lalmohan.

The train was running fast.

ONCE UPON A NIGHT

(Continued From Page 224)

you studying from my room. Well, you don't have to open the door everytime I come. Keep the windows open. I will come and just peep in from outside".

Uma was silent on the bed. There was an innocent, sleepy look on her face. But she was not sleeping, of course. Niladri knew that very well. He could even see the flicker of an amused smile on her lips and the quivering of her eyelids. But she had to remain silent. And Niladri could not go and sit near her and talk. Barada's ears were capable of picking up the sound of a falling pin and any moment he might appear at the window and ask, "Have you finished with the chapter on Cheating?"

Niladri quietly brought the Penal Code from downstairs. Then he dragged the table near the bed and started neighing almost into Uma's eardrum. Uma turned over to the other side. The trumpeting increased in vehemence and volume. Uma's fair and small hands covered her ears. Niladri felt all the more enthusiastic and increased the pitch.

At last Saudamini appeared at the window. "What do you think you are doing, Nilu," she shouted. "Won't you let anyone in this house sleep?"

Niladri looked up and mewed, "But father asked me to——"

"What nonsense! For God's sake, please stop this infernal noise. The way you are yelling it can even arouse a dead man."

Barada was already behind her. He felt irritated. "Don't you realise that his exam is near? All right, Niley, you may read silently now. How far with the chapter on Cheating?"

"Perfectly thorough," replied Niladri.

"By the way, why have you kept the window open," asked Saudamini. "The light is disturbing my sleep."

"Father says——," Niladri began gratefully.

Barada felt somewhat pleased now. He thought he could afford to look magnanimous.

"All right," he said. "You may close the windows. She has not been keeping well lately."

Windows were hastily closed to the satisfaction of everyone concerned.

As the last window closed with a bang, Barada could not conceal his glee. He laughed, gesticulated and said to his wife, "Did you see, my dear, how interested my son is in his studies. That's because he has failed once. Now he has taken his studies very seriously. By the way, did you know, it's long past twelve. And that fellow is not even aware of it. Actually I have wound the minute hand fifty minutes behind. Believe me, this boy will surely get through his law finals this time....."

[*English rendering from the original Bengali "Ekada Nishith Kale," by BARIN DASS.*]

STRICHES: 'CAMEL BIRDS' OF SOUTH AFRICA

AIR OF POWERFUL LEGS: The Ostrich in its ng posture. These legs help the flightless s run faster than any horse, it is said.

ntinued From Page 227)

tral Asia. A full grown ostrich stands seven to t feet high and weighs between 200 to 300 nds. Only the extinct Moa bird of New Zealand taller which was twelve feet high. It is unique ng the birds in having only two toes, one long, ng toe on which the whole weight rests, and the r much smaller and almost useless. The under s of these toes are provided with elastic pads, as camels. The South American Rhea, called the erican ostrich, is different from the true ostrich frica, as it has three toes.

Safety is promoted by the social habit, for iches generally live in parties of ten or twenty he wild state. They often move about in com- y with antelopes or zebras, and depending on very keen hearing and sight, which make it to detect approaching enemies.

The ostrich is usually cautious and wary, as well speedy. Its greatest weakness is a lack of good e. The ancient belief that an ostrich hides its in the sand when frightened is only a fable. habit proverbially attributed to the ostrich of ying its head in the sand when faced with er would be less absurd than it sounds, for the ch's skull is very weak, the most vulnerable part s body.

The long periscope of the neck and head is red and stretched along the surface of the , the strange hump-backed shape of the bird mes merely a hummock, a boulder, or an ant , breaking the flat surface of the sandy plains, e atmosphere and heat help to enhance the ge and hide the sitting ostrich completely. By laying of the head on the sand, the ostrich does act disappear from view in its native habitat. n brought to bay the ostrich defends itself with beak and legs, kicking forward with great force, tearing the flesh of an intruder. It is said that it can rip open an attacking dog, almost in two witn one kick, and the kick of the angry ostrich is so powerful that it can puncture a sheet of corrugated iron. There are stories that even the powerful baboon has been torn to death by the knife-like claws of this giant bird.

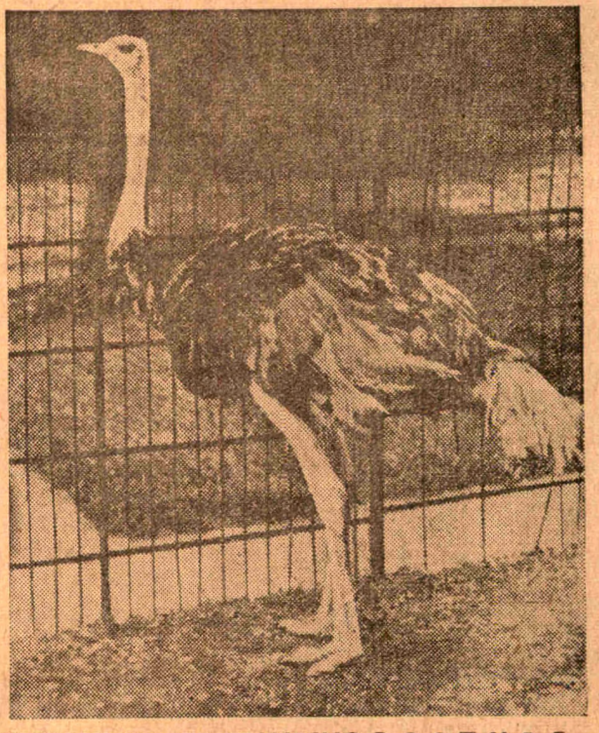
CURIOUS MENU

Wild ostriches feed on grass, leaves, seeds and fruits, as well as on birds and insects. They will, in fact, eat almost anything, 'the digestion of an ostrich' being proverbial. They need a certain amount of salt and a good deal to drink, though they can travel through the desert for long periods without water.

Ostriches in domestic state are fed mostly on alfalfa and grain. It swallows any sort of hard, gritty material it finds, and will devour stones, glass and bones.

A post-mortem examination held upon one of these birds that died at the London Zoological Gardens revealed the following curious diet: two handkerchiefs, three gloves, a Kodak film-spool, a pencil, a comb, a key, a number of nails, a rolled gold necklace, two collar studs, and five pence in coppers—a collection which has been mounted and may now be seen in the museum of the Royal College of Surgeons.

As the breeding season approaches, they break up into small parties of five or six, of which one is a cock and the rest hens. The nest is a shallow depression scooped out by the male in the sand. The females often share the communal nest where



OSTRICH IN ITS STANDING POSTURE: Although the Ostrich cannot fly, its wings are far from useless since, when alarmed, it spreads them and runs with the wind behind it, thus converting them into sails.

several hens combine and lay the dusty clutches of sometimes twenty or more large cream-coloured eggs.

The ostrich's wings, so impracticable for flight, are of great use when it comes to covering a score or so of eggs each equal in size to two dozen of the domestic fowl's. The cock bird subsides amongst his furbelows, like a seventeenth-century lady amongst her hooped skirts, and so sits each night for forty-two days. The hens take turn in sitting on the eggs and relieve one another during the day, though this is more to guard the eggs from beasts of prey than to incubate them. To change for the night duty the hens use secret call when the defending guardian is returned to the nest to take over and relieve the hatching hen.

In exceptionally hot weather the cock merely covers the eggs with sand, and, mounting guard over them, leaves the actual work of incubation to the sun like the method employed by most living reptiles, the last representatives of the fore-runners of the birds.

ACTIVE BUT DELICATE CHICKS

The newly hatched chicks are not blind and helpless like the young of many birds. They are active, open-eyed, and are able to walk within a few hours after leaving the eggs. The chicks look like balls of thatch and wool and have large appetites. For the first three months of their life the young are very delicate. In the wild state 75 per cent of them may succumb to cold wet weather or to the ravages of wild animals. They grow very rapidly,

NEWLY HATCHED OSTRICH CHICK & EGGS : The newly hatched chick looks like a ball of thatch and wool. It is active, open-eyed and is able to walk within a few hours after leaving the egg. One egg is equivalent to 25 hens' eggs.

CLOSE-UP VIEW OF THE OSTRICH HEAD It is not buried in sand when the bird scared, but outstretched along the grou

and increase in height at the rate of about a foo month from the time they emerge from the egg the time they are five or six months old. After they do not grow so quickly. The parents dis great solicitude for their young.

Both small and large birds love to dance du the courtship season, but the ritualistic prim dance of the mating ostrich courting the hen is amazing and very interesting sight to watch. Be commencing to display he expands his neck and g utterance to a loud booming noise. Livingstone calls how he once mistook the voice of a love- ostrich for the roar of a lion

The hen, grey, dusty, nondescript compared the superb black and white beauty of her m walks round and round him as he sits, majesti the sand. Shivering her drooping wings, emittir sound like the faint clatter of small castanets, circles around the cock with alluring moveme Then suddenly he rises with wings outspread, cur white plumes wave and the great bunch of feat which forms his tail stands erect. Slowly he pra up to the hen. Then, face to face, wing tip to tip, they start the ritual dance, slowly circling waltzing — their long necks curving and swa rhythmically.

Finally round and round they move until hen breaks the rhythm, suddenly squats on ground, wings outstretched, her long neck exter sweeping the ground; snakelike, from side to over the dusty surface, she weaves a pattern motion to further fascinate her mate, who, seemi bewitched, prances round her

The giant bird outstretches his fanlike w to display the curling white array of plumes, sionately stamps his dance of love amid a flurr beating wings and whirling dust. Having thus

THE HOLY MOTHER

By

TUSHAR KANTI GHOSH

(Baidyabati)

WOMAN is an unfinished man, said Aristotle, "left standing on a lower step in the scale of development." In one context, Meredith also said that woman would be the last thing civilised by man. History, however, has belied all these idle indictments; history has shown that women have often climbed up to the highest rung of the ladder of perfection, and there is reason to believe that man was the last thing civilised by woman.

This is the inevitable preface to any study of the lives of Indian women, and particularly in the context of the life and teachings of the Holy Mother. With the onrush of British culture and its ominous impact on the traditional beliefs of India, the ideal of our womanhood which glowed with white radiance in our chequered past seemed to be cast into oblivion. In the beginning of the 19th century we noticed the rapid pace of Westernisation in all aspects of our traditional life. There was the necessity of the emergence of spirited souls in different aspects of life, not to put the clock back, but to put it right. In the Gita, the Lord says: "Whenever 'dharma' is humiliated and 'adharma' takes its place, I create myself" (IV, 7). And, indeed, in the sphere of religion, God created Himself in Ramakrishna and the Holy Mother.

In those holy prophets of Bengal—the "Messiahs" of India—India not only had an effective counterpoise against the evil tempo of Westernisation wh so blurred the mirror of our cultural heritage as reflect nothing except its bad effects, but also clearest version of Truth and of the Life Divine. Ramakrishna we find an amazing synthesis of t ancient or Oriental with the modern or Western, well as the spiritual enlightenment imparted by t Vedantists and the loving 'bhakti' cult. In a n shell, Ramakrishna preached to India at the time her greatest need that the highest spiritual life c be attained by the common man if he learns to l all beings and to regard everything as the manif tation of God. One can, therefore, achieve G through images, provided one can transform t image into God. In essence, it is the Vedantic phi sophy made easy in an admirably simple way for t layman with a view to restoring Indian culture a belief and dynamising them. The 'bhakti' cult joi hands with Vedantic absolutism. That is why Rom Rolland aptly said that Ramakrishna "was the c summation of two thousand years of spiritual life three hundred million people."

MORE THAN SHADOW

While Ramakrishna was explaining his messa there was also another unexpressed voice of message being practised in a magnificent way

the life of one who was legally as well as in fact the co-sharer of the religious life of Ramakrishna—she was the Holy Mother, Saradamani Devi. As long as Ramakrishna was in this world, she never tried to make her presence felt, she was completely merged in Ramakrishna. Like an unseen shadow she always attended her noble husband. She was, however, more than a shadow; for she did not disappear into oblivion when Ramakrishna departed from the mortal millions. On the contrary, it was now the turn of Saradamani to become the Holy Mother. She was not, therefore, the shadow, but the supplement of Ramakrishna: she was the Example, if Ramakrishna was the Precept; and to vary the metaphor once more, if Ramakrishna was the hymn, she was the essential rhyme that adds to its sense of perfection.

This Saradamani Devi was not a seer like *Apala* or *Lopamudra* of the Vedas; she was far from being an intellectual like *Maitreyi* or *Gargi;* she was not a divine nightingale like *Mira Bai.* She was an illiterate, rustic maiden, as simple as Simplicity itself. But this little woman was to make the learned men astir—God, indeed, sends little things to confound the great!

Objectively viewed, the Holy Mother has not preached anything surpassing, in respect of value, the preaching of Ramakrishna, and to many it seems that in this regard she only continued and repeated the message of Ramakrishna. But looking in retrospect, we note that she had a significance of her own. Her life has been transcendent throughout the years to exemplify in a simple unornamented life the ways to achieve ideal womanhood, and, for the matter of that, highest religious realisation. Her life itself is her teaching and preaching.

A TRUE INDIAN

In our chequered past, we have a galaxy of great women; but so far as the attainment of ideal womanhood is concerned, none of them can surpass the Holy Mother. It is as if God created the Holy Mother by adding bit by bit the elements of perfection on her, just as God created *Tilottama.* The Holy Mother was out and out an Indian woman: and women in this part of the world have no religion apart from their husbands', provided that the husbands also are ideal ones. Saradamani had thus a two-fold function to perform : to contribute to the religious life of her husband as a devoted wife is expected to, and also to contribute to the religious life of the people of India and to serve as the finger-post to them who were, at the period, at the cross-roads.

In her capacity as a faithful 'Sahadharmini' or wife, the Holy Mother is the culmination of the two thousand years' flow of spiritual striving of Indian women, just as Ramakrishna was the consummation of two thousand years of the spiritual life of the three hundred million people. When Saradamani met her husband, she was a pretty little Bengali girl with ordinary hopes and modest wishes of a bride; but Ramakrishna uttered into her ears : "You cannot have what other women have, for I have to be a great man, father of humanity, and you must be the mother." One must be struck with wonder considering the ease and the perfect understanding with which the simple, uninitiated girl quickly adapted herself to this unexpected and extraordinary circumstances. Henceforth, she not only succeeded in her quick adjustment, she also contributed her mite to complete the process of Realisation which her venerable husband had begun. Faithfulness was added to devotion, affection to sincerity, and the supreme blessings of love to the realisation of God. Whatever Ramakrishna lacked, Saradamani carefully plucked from her own garden. The garland was thus made with the flowers plucked by both.

ACTIVE PARTNER

What was that something which Ramakrishna perhaps lacked but got from his wife ? The clue to the answer of this question can be found interwoven in the way of life of the Holy Mother. In the first place, Saradamani untiringly served her husband with his delicate food, with treatment in his ailments, and sometimes, also with advice. "Just think for a moment", said Ramakrishna, "how I would fare if I had no wife to look after this frail body. Who else would take so much care in preparing my meals and seeing particularly that the dishes agreed with my delicate stomach ?" Of course, the wider significance of this saying is that Ramakrishna must be spared for a good many number of years for the Salvation of Souls, and to that end, Saradamani made immense effort. In the second place, Saradamani not only made herself the testing ground of Ramakrishna's spiritualism, but also played the part of an active partner. The lives of great men often teach us that very often they owe to their wives a great deal for their greatness. For his wife's sake, many a man has been great, and many have been ruined, like Macbeth. The ideal wife of a great man not only relieves him of the petty niceties of family life, she also supplies new blood to him at the time of his disappointment and weakness. In the context of religious life, the influence of the wife becomes a still more deciding factor. There is reason to doubt if Ramakrishna could become the Ramakrishna but for his divine and lustless wife. Thus spoke Ramakrishna : "Had she been of a different nature and come upon me like an avalanche of passion, I don't know how far I would have drifted". (Quoted by Swami Nirvedananda in "Great Women of India", 1953, p. 482).

Thus the Holy Mother performed in her own life a duty to her husband with so much sincerity that we are led to compare it with the exemplary devotion of Sita to Rama. But the Holy Mother has not exhausted her contributions to our religious attitude only in her capacity of a wife. Her greatest contribution to our religious life has been in her capacity of the Mother.

As sister Nivedita has said, religious celibacy has long been accepted as "the towering ideal of the super-social life" by the Hindus. Next to it among women, ranks the sanctity of motherhood as the central ideal in the social life of this land. "For what thought", she asks, "is it that speaks supremely to India in the great word 'Mother' ? Is it not the vision of a love that never seeks to possess, that is content simply to be — a giving that could not wish return : a radiance that we do not even dream of grasping, but in which we are content to bask letting the eternal sunshine play around and through us ?" ('The Web of Indian Life') Saradamani attained consummation in her capacity of this Mother.

IMMACULATE CONCEPTION

It was Romain Rolland who said that India presented the example of more than one Immaculate Conception. The Holy Mother is a glaring example

(Continued From Page 237)

To her innumerable children, the Holy Mother has always shone with the affectionate radiance of a universal mother. The life of Sita does not tell us much about Sita the mother. In this sense, the depth of the ideal womanhood of the Holy Mother surpasses that of the Ramayana. Indian mothers have always been an example of self-sacrifice for their children. So long as her husband was alive, the Holy Mother sacrificed herself on the altar of her husband's penance. But after his departure, she did not seek consummation in a secluded life for self-attainments. Many a bereaved soul came to her and had gone away satisfied. Day in and day out, she would give 'diksha' or initiation to numerous men from different parts of India. Thus we see, "whereas the Master lived as the Mother's child, she lived as the Mother Herself. And the wonder was that though her mind dwelt in the highest realms of God-consciousness, she kept her body and instincts through sheer force of will on the worldly plane. Never before the world beheld such an accumulation of spiritual force veiled in a garb so lowly". (Subhadra Haksar, 'Vedanta Kesari', July, 1954, p. 96)

Throughout the later part of her life, we have experienced the divine motherliness of the Holy Mother. To cite only one or two examples, she always showed reluctance to deprive the depressed souls of the relief they would get by touching her feet or by getting initiation from her, in spite of the intolerable sufferings she felt through these touches. Sometimes, while narrating the agony she had to suffer from an impure touch, she would hastily add, "But don't tell this to Sarat. Then he will stop people from coming." One day, during her last illness, some one was saying that they would no longer allow the Mother to give initiation any more, as she was suffering so much by taking upon herself the sins of all sorts of people. At this, the bed-ridden Holy Mother said, "Why do you say so? Do you think that Shri Ramakrishna came only to take sweets?" In another context, the Holy Mother said, "All these children come to me with great longing and take initiation, but most of them.... do not do anything at all. But since I have taken their responsibility, should I not see to their welfare? Therefore, I do 'japa' for their sake, and pray to the Master constantly, saying, 'O Lord, awaken their consciousness. Give them liberation. There is a great deal of suffering in this world. May they not be born again!'"

A LIVING EXAMPLE

The exact words of the teachings of the Holy Mother cannot reach us since she had no Boswell like M. (Mahendra Nath Gupta) who has preserved the sayings of Ramakrishna. Recently several volumes have been published which give the sayings of the Holy Mother as written from memory by devotees. But we need not search for her teachings in her recorded sayings. A word spoken is a word lost; we must find out the source of the words. Her whole life lies before us as an exemplar — an incarnation of all her sayings and teachings. It is useless to write volumes on her, we must understand the significance. The dazzling words of Swami Vivekananda point to that: "You have not understood the wonderful significance of the Mother's life. But gradually you will know. Without Shakti, there is no regeneration for the world....Mother has been to revive that wonderful Shakti in India; and making her the nucleus, once more will *Gargis* and *Maitreyis* be born into the world."

Sister Nivedita raises the question whether the Holy Mother was the last of an old order or the beginning of a new. From our discussion, it has been clear that she may or may not be either; but a more correct view would be one taken by one devotee, that, "she is just the twentieth century link of a culture and civilisation which fades back to prehistoric fog, and which is now destined to survive into limitless future". (Bhikshu Anand Isabodh 'Vedanta Kesari', July, 1954, p. 80).

LOVE AND KINDNESS

To summarise, the Holy Mother's life and teachings have affected our religious life in four essential ways. First, she has disproved the myth that married life (and for that matter, family life) is incompatible with the realisation of God and the Life Divine. This, of course, is no new example to us for, from the early Vedic days we have been taught that a division of life between the 'Grihi' and the 'Sannyasi' does not mean that the former will have no entrance into the realm of God. Closely related with this, we have the further lesson from the Holy Mother that we must enjoy this world without attachment — i.e., the literal translation of the Upanishadic teaching — "Tena tyaktena bhunjithah" Ramakrishna would say: "Stay in this world like the fish (*pankal*) which lives insice mud, but mud cannot settle on its body". In the later part of the life of the Holy Mother, especially, we get an amazing example of this idea being worked out in practice Particularly, this is visible in the entanglement in which the Holy Mother allowed herself to be led in connection with Radhu (the unmanageable, indulgent daughter of the brother of Saradamani, whom the latter adopted). A mind which always lived in the transcendental plane soaring high above this earth could still afford to dote on Radhu. Thirdly, Indian women have learnt from her that marriage, sacrosanct in itself, must not have an upper hand over the true ends of life, that it must be subjected to life, not life to it. Finally, Indian religion once more received from her life the traditional teaching that there is no religion except love and kindness — "But I tell you one thing," said the Holy Mother to a devotee some days before she breathed her last "if you want peace of mind, do not find fault with others. Rather see your own faults. Learn to make the whole world your own. No one is a stranger, my child; this entire world is your own." This is the last message of the divine messenger whom Sister Nivedita rightly calls "Ramakrishna's final word as to the ideal of Indian womanhood" — an incarnation of unalloyed Purity, unparalleled Kindness and wonderful Simplicity — all in the lowly garb of an affectionate mother.

(From the Essay which won the second prize in the Post-Graduate group of the Essay Competition held by Belur Math during the Holy Mother Birth Centenary)

'CAMEL BIRDS' OF S. AFRICA

(Continued From Page 233)

posed to his lady-love it only remains for the beloved to accept the suitor's offer of marriage.

FARMS FOR FEATHERS

The great value of ostrich feathers, combined with the growing scarcity of the birds themselves has led to the establishment of ostrich farms in Cape Colony, Egypt, Algeria, Southern U.S. and elsewhere, where the birds are penned like sheep and shorn periodically of their plumage.

Plumes are taken from the birds for the first time when they are about eight months old. They are cut off, and not pulled off, three times during the course of two years. The feathers are cut about two inches from the quick of the wing flesh leaving the small stubby ends in the skin which are carefully removed three months later after they have dried up.

Plucking an ostrich is a delicate operation, for the birds are often vicious and their kicks can prove fatal. The selected bird is lassoed, and his head quickly covered with a small cloth hood which renders him comparatively docile. He is then hustled into a wooden structure resembling parallel bars in a gymnasium where, roped and held, his wings are outstretched over the bars and thus the ostrich submits to plucking. About two pounds of feathers are taken from each bird valued today at about £5.

Before the first world war ostrich feathers were used to a great extent for the decoration of women's hats, dresses and accessories, and in 1913, these plumes became a valuable article of commerce, and the value of feathers exported from South Africa reached nearly £3 millions. Then great numbers of ostriches were shipped out to supply ostrich farms in other places. Immediately after the war ostrich feathers suddenly went out of fashion, and the industry almost disappeared.

In recent years, however, a renewed demand for plumes has revived the industry. Creators of fashion have been using ostrich feathers again, though more sparingly and new commercial uses for them have been found. South African breeders are again increasing their stocks and striving to improve the quality of the bird.

It is interesting to note that the demand for ostrich feathers is by no means a modern one, for the Pharaohs of Egypt used them to a great extent for decorative purposes.

There is an oversea demand not only of ostrich feathers but quantities of skins are shipped to the United States for the manufacture of woman's handbags, shoes, lettercases and souvenirs.

The birds live to be thirty years old on the average and they sometimes live to be eighty, according to some reliable authorities. Their great length of life makes ostrich farming very profitable these days.

MOY-DANAB

(Continued From Page 217)

on him. He would pass through the whirling machineries set up in that resounding shed. He would no longer stay there. He was not wanted even by the workshop. He would go away.

The passage that lay through the labyrinth of machineries was narrow. It was so familiar to him. The eyes of the bewildered mechanic were dimmed with tears. He was suddenly pulled from behind. He smiled. It was that Dulu Singh! He would not allow him to go!—"No—No—No—leave me off—leave me off—leave me off." The experiment of running the machine with electric power satisfied the manager. He was all smile. "That's all right" said he.

On the site of the grinding machine, teeth to teeth, large grooved wheels were spinning round and round. All of a sudden, the shaft trembled after a jerk or two. But for the big body of the machine, it was not perceptible.

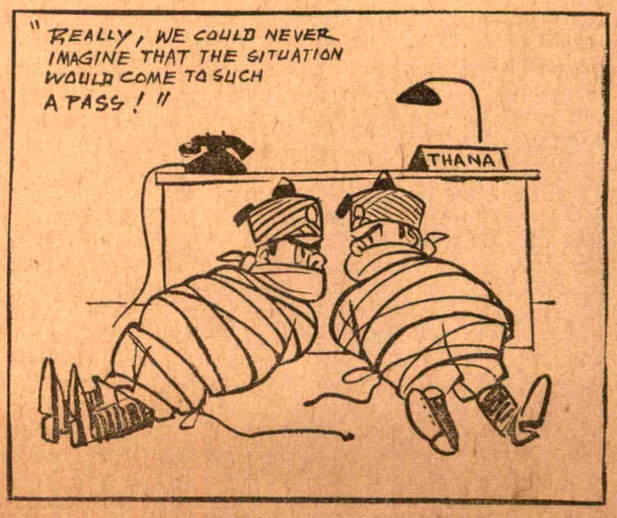
Phani was caught between the teeth of the wheel in his impatient, unwary mood. The workshop did not let him go. It swallowed him up. Blood was running down the two sides of the teethed machine and pieces of flesh were glued to it. On the nearby floor small bits of his bone lay scattered mixed and jumbled up in the dusty heap of the fire clay. It was as if by the removal of all traces that the demon of machine appropriated him.

The machine went on and on. Blood was dried up. Flesh-bits were carried forward from wheel to wheel and they disappeared. His fat only made the machine work smoothly and freely from one end to the other in that machine-shed. Freely it kept on going. With the ear turned to its sound, one could perhaps hear Phani mistri sing with his flat voice.

The manager observed the way of its untrammelled operation worked with electric power and called out—

"Switch off, please."

(Translated by Satyendra Mohan Mookerjee)



Chotanagpur Adibasis' Ornaments

By P. C. ROY CHOUDHURY, M.A., B.L.

THE Adibasis of Chotanagpur have a great attachment to personal decoration. Living in the lap of Nature the original Adibasis have had to raise a continuous warfare against Nature to get bare sustenance. They were afraid of the elements of Nature, the carnivora in the forests and other warring tribes. The innate fear-complex that they had was the origin of their personal decorations. The tiger causes depredations and the tiger has to be bearded in its den. The tiger is powerful. The cause of tiger's strength must be in its liver, claws and teeth. So when a tiger is killed the claws and the teeth are worn and the liver is eaten. The deer is a good sprinter and it is difficult to catch a deer or to kill it with bow and arrow. The swiftness of the deer must be due to its hoof and so the hoof of the deer has to be preserved and worn as a sort of medicine to produce swiftness of movement.

Then comes another stage when there has been a little progress and a somewhat static life for the Adibasis. Then comes the stage of their elemental craze for colour, for the green and red leaves and flowers for their personal decoration. They would go to the hats and bazars with flowers and leaves tucke into their deep black hair unmindful of the glanc of the non-Adibasis. Then at the next stage the turn to the cheap glass beads, *cowries*, various kinc of seeds for the girls and pieces of horn or tooth c bigger glass beads for the males. The earliest met that came in use for ornaments for the Adibasis i brass. Nickel and silver came much later. Gold fc ornaments has come into use only after the secon Great War when the Adibasi males made a lot c money as labour employed by the Military or as re cruits to the Sappers and Miners. The Adibas women also earned a lot in the airfields and othe military constructions and naturally some of then could turn to gold for their ornaments.

Colour appeals most to the Adibasis and fo this reason cheap glass beads of various colours pu in strings or chain are prized most by the Adibasis men and women. Necklace made of beads bough from the Hatias and markets are purchased by dozens by the younger elements of both sexes.

The Adibasis of Chotanagpur do not prize fea thers for personal decoration. Among the flowers

The Choice of all

(Continued from Page 241)

and leaves usually rich coloured ones are chosen. Hibiscus flowers (Jaba), Euphorbia leaves, attractive *Palas* flowers, marigold (Genda) flowers are very much in demand. Shells, stones, seeds and wooden cubes are also used.

PERSONAL ORNAMENTS

Coming to individual ornaments for an Adibasi woman for the head, combs are one of the main items. Unfortunately, the old rough combs of bamboos and wood are gone to be replaced by coloured plastic combs. Decorated combs with figures are not uncommon. Various kinds of ear-rings have now come into vogue. But about 20 years back the earlobes of the Adibasi women used to have a small piece of rolled up strawmat as a personal decoration and these pieces used to be usually of red colour. For the neck various types of necklaces of *cowries* or beads mentioned above are used. The cowri (Cyprae monenta) and beads are commonly used for the necklaces. Cowries are also supposed to keep off the evil eye. For the hand various types of bangles, usually heavy brass bangles, are used.

The brass bangles commonly used by the Adibasi girls are the same as what are still used in the interior of Orissa. At times the Adibasi girls overcrowd their arms with these heavy bangles. It is also a sort of protection if suddenly attacked. Iron bangles or any other kind of ornaments are rarely used. They are usually meant to keep off the evil eye or as a cure for some disease. Brass hair pins are not in use but the beautiful make-up of the hair is done with the help of some reeds occasionally. Silver ear-rings or necklaces have come into use quite recently. Ornate silver ear-rings imported from Cuttack (filigree work) are also in much demand now by the sophisticated Adibasi girls in touch with the urban areas. Common reeds of particular kinds are also used for twining round the arms and the n

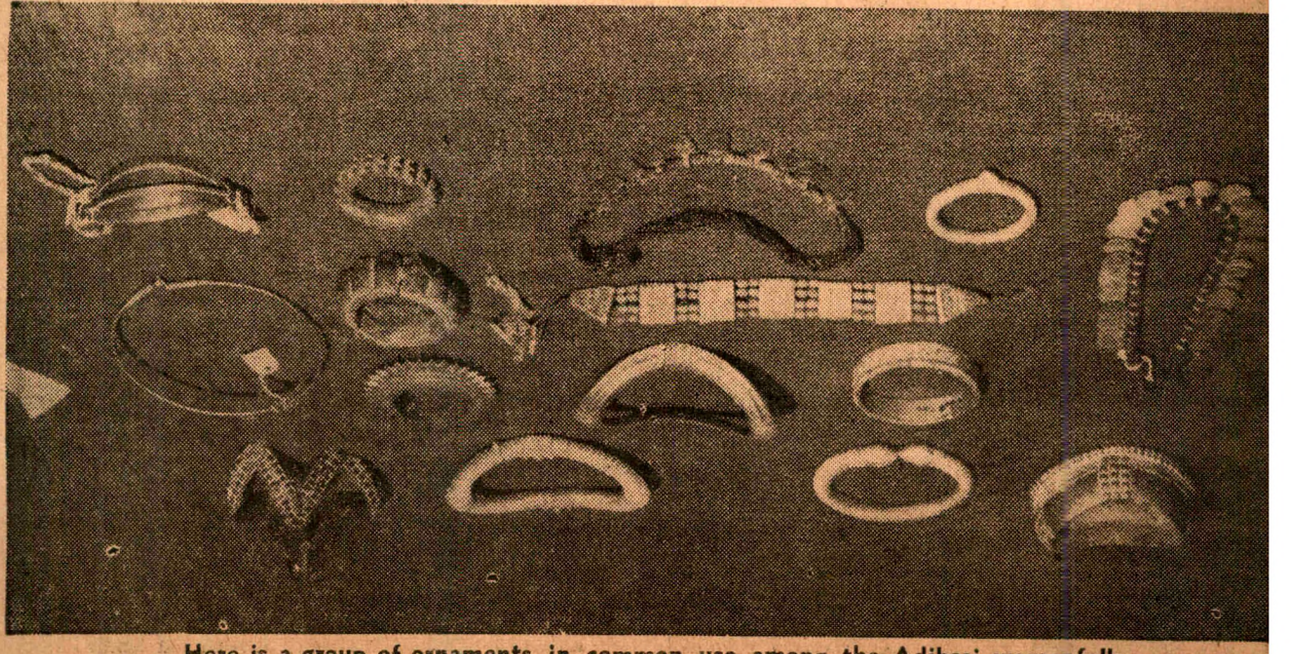
Adibasis of Chotanagpur use *cowri* mainly personal decorations in the shape of necklaces bracelets. They do not use *cowri*-decorated bags *cowri*-decorated combs like the Marias or Bas area. Headdress for men made of shells like w Marias wear are uncommon.

For the waist Adibasi women have now ta to the use of silver chain taking the cue from t Hindu neighbours. Feet ornaments are not comn and if used at all they are of brass.

The male Adibasi, as has been mentioned, very few ornaments and they are usually for neck or the arm.

The Kharias are one of the very few Adiba that are still uncontaminated by urban touch present-day civilisation. The ornaments of the Kha women are still usually made of brass. Their jew lery consist of glass beads, brass necklace, ear-rin finger-rings and toe-rings. The Kharia boys use br Bera or armlet on both the hands.

N.B. The photographs in this article illustrate some the ornaments that are commonly used by the Adib women for their neck and arms. The photos taken from the exhibits in Patna Museum throu the courtesy of the Curator and the kindness of Inspector General of Police, Bihar. The bead ne laces and the massive armlets do not require explanation. But there are a few pieces of g ornaments which were recovered from Adibasi hon just at the point of being sold in the market beca of their value in gold. One of them is the pair armlets in the shape of a fish. The other gro represents a few gold brassieres which were also p chased by the Museum authorities just when th were being sold. The use of gold and the type these two kinds of ornaments show that they are ve modern and most probably they were made in t course of the last Great War when Chotanagpur w full of the Military. They indicate a rather pathe evolution in the use of ornaments and show that t Adibasi women have travelled far from their days wood cubes, bright leaves, flowers, "cowries" than to the contact with the present day civilisatio



Here is a group of ornaments in common use among the Adibasi womenfolk.

FEARS PROVED FALSE

(Continued From Page 15)

under cereals during the year was higher than the target at the end of the Plan period by about 12 million acres.

The "highest ever" production of rice was obtained in 1953-54 when the total yield touched 27.6 million tons. Although, owing to floods in the northern and drought in the southern districts of Bihar and West Bengal, production during the current year has gone down by nearly 2.2 million tons, it is still much higher than in the base year of the First-Five-Year Plan.

Talking of foodgrains, i.e. cereals plus pulses, we can now compliment ourselves on our total production of 65.6 million tons which even exceed the target for the end of first Plan period.

NO FEAR OF SCARCITY

The increased production has not been achieved without occasional setbacks. The output of cereals in 1950-51 had suddenly dropped by nearly five million tons causing an alarming gap between our requirements and supply. Prices soared high. Procurement and rationing systems came almost to the brink of collapse. Depending on large imports from abroad and living, as it were, from ship to mouth for months together, the country just managed to avert a major tragedy almost by the skin of the teeth.

The year following, however, gave indications that the sustained efforts of the Government and the people to grow more food had started yielding dividends. The tempo of improvement was not only maintained but also accelerated in successive seasons. Marking a turning point, past the goal of self-sufficiency, progressive trends in India's agricultural economy at last gave room, on the food front, for optimism without complacency. In fact, set against the background of several lean years immediately after the partition, the picture that emerges today, is that we are freer from the fear of scarcity than ever before.

What does all this mean to the common man ?

Succinctly put, the bumper crops have offered relief to the common man in his cost of living, given the rupee greater purchasing power and toned up the country's economy by reducing dependence on foreign imports which during the period from 1947 to 1952 averaged more than three million tons per year.

Numerous controls, which had been the most irksome feature of distribution of foodgrains in India from the latter period of the second World War, have been virtually abolished to give the trade a greater measure of freedom. More noteworthy had been the complete withdrawal of statutory rationing which put an end to queues in front of grain shops, scrapped restrictions on consumption, and removed the ceilings on host's hospitality and housewife's larder. It appears almost incredible that only eight years ago, the Administration had to carry more than 150 million people on their rationing scroll.

With a total production of 55.3 million tons and estimated population of 378 millions, the per-capita availability of cereals in India in 1954-55 works out to 14.4 ounces which is 0.4 ounces higher than the balanced diet laid down by the Nutrition Advisory Committee. It also exceeds the target set for the end of the First Five-Year Plan, i.e. 13.71 ounces per head for 1955-56.

Armed with an enough-and-to-spare reserve of nearly 16 lakh tons, as has recently been revealed in the course of interpellations in the Parliament, the Food Administration can now face with confidence any emergency.

The movement of foodgrains has now been put on the reverse gear by the revival of export trade in rice to the countries which had, prior to war, developed a taste for Indian varieties. Already more than 70,000 tons have been despatched. Gifts of nearly 15,000 tons of rice have been made to relieve scarcity conditions in friendly countries like Nepal and Indo-China.

TIDE TURNS

Yes, the tide has turned. And what is more, times have changed and with them our agricultural practices too. Not so long ago, Indian farming was a simple routine and had a narrow boundary—a hit and miss affair largely. The farmer relied entirely on out-dated implements. He ploughed the land, sowed the seed and applied what manure was available to him. The rest was guess work, hope and prayer—the last mostly. It had existed for a long long time in a state of backwardness and misery behind the thin veneer of a complacent faith that the pencil of fate—Kismet—has no eraser.

But times, as I have said, changed tangibly. Farming in India is gradually ceasing to be a haphazard venture. Knowledge and experience, coming washed up on the stream of Government research spread over the years, but beyond the reach of the farmers of yester generation, is now available in good measure for their successors.

With the objective of a rapid and planned development, favourable conditions are being created all-round by the Central and State Governments for the Indian cultivators to enable them to exploit the bountiful resources from the good earth. During the past few years, major and minor irrigation projects have been undertaken in different parts of the country. Some of them have already been completed. Vast tracts of waste, fallow and jungle infested land have been reclaimed. Modern implements to turn the soil well, improved seeds to ensure the healthy seedlings and liberal supplies of phosphates and sulphates to make the yield larger are being brought within the agriculturists' reach. Organisation of credit facilities, warehousing, marketing and processing of agricultural products on co-operative basis is also well on its way. Measures to combat soil erosion and eradicate plant-pests are being pursued with patience and skill. The hierarchy of intermediaries between the actual tiller and the landlord and the insecure tenancy conditions are being progressively done away with by suitable legislation. A new spirit, a fresh outlook and a high hope have begun to enrich, slowly but steadily, the life of the Indian farmer.

This, I consider, is the most encouraging and outstanding achievement to the credit of the Government and the people of India during the eight years of Independence we have just completed. For, the fact of the matter is that about one out of every four in India derives employment from agriculture. And agriculture contributes nearly 50 per cent of India's national income.

Well may we take comfort in the thought that if hopes were dupes, fears have been liars.

STORY OF THE MAYA CIVILISATION

By SAKHA NATH BASU

THOUGH dead in the vast heaps of ruins, the ancient Maya civilisation of the New World is no longer in obscurity. The fallen lime-stones are now in limelight, and the discerning eyes of the scholars read in them the saga of an autochthonous civilisation of pagan pageant. Palmy, not pompous—proud, not loud with pampered pride, the Maya civilisation in flower covered a period of twelve centuries. Historians have clothed its bare bones with the flesh of historical events and have worked up a sketch of the culture pattern of the brilliant civilisation built up by the genius of the local people without outside aid and alien influence. Geographical isolation helped this civilisation to develop in its characteristic way like a sylvan flower blooming in the wilds of nature.

Maya civilisation flowered in the fourth century and faded in the sixteenth century of Christian era. The old Yucatan peninsula, which now covers Yucatan of Mexico, Peten of Guatemala and the whole of British Honduras, was its nursery as well as grave. It was built up by an aboriginal people speaking a language of the Mayoid group of the original Maya speaking linguistic stock. Gann is of opinion that this Maya speaking group owes its origin to a primitive people that inhabited the elevated plateau between Mexico and Peru. But modern study tells a different story. It is now believed that the Maya people are an off-shoot of the north-east Asiatic human race. Morley observes: "Three other physical characteristics of the Maya strongly suggest the original north-eastern Asiatic origin of the Maya race, as indeed that of all American Indians: (1) The epicanthic eyeball, (2) the Mongolian spot and (3) the line patterns in the palms of hands."

NOMADIC HUNTERS

In the dim past we find the Mayas a nomadic non-agricultural people living by fishing and hunting and upon the wild products of forests. In the third millennium B.C. we find them a settled, sedentary agricultural people. Since then down to the close of the third century A.D. nothing definitely is known about the Mayas. But the fourth century finds them with a civilisation in flower with the budding period, as is conjectured by some, passed over probably in the second or third century B.C.

The Maya civilisation has two distinct periods—the Old Empire period from the fourth century to the tenth century A.D.—and the New Empire period from the eleventh to the sixteenth century. The old empire period was the golden age of Maya civilisation marked by cultural and territorial gains. Creative genius of the people was in full play. The dynamic spirit of the Mayas knew no rest. City after city sprang up, temples were built and pyramids were raised. All round there were cultural intensification and aesthetic florescence. Maya waxed into prosperity and power. From the beginning of the tenth century disintegration had been at work behind the imposing facade of the Maya old empire. Finally, towards the close of the tenth century the old empire collapsed—not to any foreign inroad, but to internal exhaustion wrought by economic failure. The superstructure of the Maya stood on a very weak and inelastic economic foundation. The old primitive method of agriculture failed to cope with the pressing demand of the increasing population. Acute shortage of food forced the people to migrate. Cities and villages were deserted. Administration failed, disorder followed, and thus came the end of the old empire with a glorious history of six centuries. The sun went down and the full moon arose in the cultural firmament of the Maya.

RENAISSANCE AND FALL

The new empire sprang up in north Yucatan, a province of the old empire. The new empire era was an age of Maya cultural renaissance built up by Maya-Mexico co-operation. Art and architecture flourished anew. With the new leadership came new ideas, new customs and new life. Leadership was in the hands of groups of foreigners who came down from Mexico under Kukulcan, Cocom and Xiu. These new-comers founded the new city states of Mayapan and Uxmal and formed a confederacy known as the League of Mayapan, and controlled the destiny of the Maya people for about five centuries. But things did not run smoothly. Soon the city states began to vie with one another for political leadership. Long standing political and economic jealousies brewed inter-state feuds. They fell foul of one another, and the League of Mayapan was broken. Mayapan emerged out as a prominent city state. It stood head and shoulders above the rest and became the centre of activity of the new empire. Soon the Cocom rulers of Mayapan grew despots. Maya chieftains rose in revolt and sacked the city, and with the fall of Mayapan came the end of the ancient civilisation of the New World. Decimated by a devastating outbreak of pox and exhausted by internecine feuds that followed in the wake of the collapse of Mayapan, the new empire fell a victim to Spanish swords in the sixteenth century.

EMPIRE WITHOUT EMPEROR

Territorially the Maya empire was a poor contrast to the vast empires of the old world. Maya was an empire without any emperor. There was no central authority holding the reins of administration—no mighty ruler ruling like an autocrat over the empire. On the contrary, the whole empire was divided into a number of politically independent city-states—like those of ancient Greece—bound together by the tie of cultural homogeneity of common language and common religion. In the old empire these city states pulled together well, but in the new empire

their mutual rivalry and internecine feuds dissolved this homogeneity and paved the way for its final extinction.

Each city state had its supreme ruler with wide powers. The position was hereditary. Rulers ruled with the advice of chiefs and priests. They were the highest executive, ecclesiastical and judicial authorities in their respective city states. In the village or in the city the highest executive and judicial officer was the village or the town chief. He was assisted by a council of elders. The lowest officer was the village or the city constable.

In the Maya social ladder the priests and the nobility sat on the top, the common people occupied the middle and the lowest step was relegated to the slaves. The nobility were a comfort-cosy, leisure-laden happy lot living on the hard labour of the slaves and the common people. No less enviable was the position of the priests who were considered keymen of learning and religious guidance. With manifold duties—ritual, divination, astronomical observations and calculation and worship—they were an influential class worshipped with bouquets of honour. Priesthood was hereditary. Priests were carried in litters. Their knowledge of astronomy and medicine, ability to explain away celestial facts and to predict eclipses made them highly venerated. Common people who toiled from dawn to dusk were no better than "hewers of wood and drawers of water." They were an exploited class with a hard lot. They were the overworked weavers of the entire fabric of Maya cvilisation. They fed the nobility, clothed the aristocracy—themselves ill-fed, ill-clothed. They worked in the forests, in the fields and built up the massive pyramids, temples and palaces for kings and nobles. Like bees they procured honey for the honey comb and the nobility and the priests drank to their fill. They made houses for their lords at their own expense, sowed their fields, harvested for their food and lived on the outskirts of towns and villages to make room for their comfortable dwellings.

HUMAN SACRIFICE

Maya religion lacks spiritual depth. It is characterised by animism. In the beginning awe and wonder led them to placate the natural phenomena with humble offerings. As they settled down as an agricultural people, religion grew a bit ritualistic; for with the agricultural Mayas religion and food problem got mixed up. Sowing and harvesting depended on the vagaries of climate. For successful agriculture and to avert crisis they invoked the sun god and the rain god with offerings and prayers. With the passage of time religion became highly complicated as a result of a fusion of the primitive cult with an esoteric, sophisticated pseudo-philosophy of the priests. In the old and the new empires we find so many gods in the Maya pantheon. Big temples were built in the cities and villages. God Itzamna occupied the most glorious position. He was the Lord of the Heavens. In important festivals and ceremonies He was specially invoked. Next to Him were rain god Chac and the death god Ah Puch. There were cruel gods and benign gods. Mayas worshipped gods for prosperity and good harvest. Worship began with a process of purification through fasting, sexual continence, abstinence from meat-diet and ended with feasting and general drunkenness. Food, both cooked and uncooked, fruits, animals, birds and human blood were offered to gods. Human sacrifice at the altar of gods was an important feature of religion in the new empire. Slaves, orphans and kidnapped children were killed to propitiate the gods.

Except in the field of astronomy the Maya intellectual harvest was miserably poor. Achievement in astronomy as far back as third century B.C. was spectacular. Maya Year consisted of nineteen months of 365 days—the first eighteen months of twenty days and the last one of 5 days. They calculated with accuracy the length of a single lunation. They could predict solar and lunar eclipses and for the study of heavenly bodies built up high observatories. Another notable feature of their astronomy was the invention of Zero. Hindus of India are accredited with glory of inventing this epoch-making invention in the ancient intellectual field of abstract thought, but the Maya astronomers invented the conception of Zero quite independently uninfluenced by Hindu thought. In the field of literature, philosophy and other intellectual approaches to the problems of life Maya civilisation was barren.

"MILPA" AGRICULTURE

The economic structure of the Maya was buttressed by agriculture. Maya people observed "Milpa" agriculture—"a simple process of felling the forests, of burning the dried trees and bush, of planting, and of changing the location of the cornfields every few years." In the wooded, rocky, and shallow-soiled Yucatan peninsula "Milpa" agriculture was the only method of food growing. Maize and cotton were the principal products. Stone axe and planting stick were the only tools for agriculture. Sowing took place in May-June when the rains used to set in and harvesting was done in January and February. Weaving, matting, pottery and masonry were other economic occupation of the people. Trade with neighbouring countries was not unknown.

Maya people were great builders. They were expert in stone masonry. During the old and the new empire cities sprang up throughout the length and breadth of the Yucatan peninsula. In every city imposing temples were built, massive pyramids raised and beautiful palaces made. Inside walls were decorated with fresco painting and outer walls and facades were embellished with sculpture of figurines. Limestone, wood, stucco and clay were used for sculpture. Paintings on culinary pots, vases and plates, fine craftsmanship on gold necklace, bracelets, rings and on copper cups and plates bear ample testimony to the fact that the empire period of Maya civilisation was the hey-day of Maya art and architecture.

THE REAL SCOPE OF SPIRITUALISM

By K. C. CHATTERJEE

M.Sc., B.L., Rai Bahadur, Retired District Magistrate

BOTH in religion and in spiritualism, the common background is that death is not the end and that the soul is indestructible. When soul exists after death and when there can be revelations, is it possible for the departed one to have communication with the living? Spiritualists do say that communication is possible. In our country, spiritual practices are coming from very old times — we have examples of such practices in the Mahabharata. In the West, 1848 is taken as the date from which such practices are known.

Spiritual practices vary very widely — from simple rappings to spookish orgy and from witchcraft to saintly revelations. In general (although *not* always) there is a medium or a go-between (i.e. middleman) and he is the connecting link between the spirit world on one side and the living on the other. Some of the media have piled wonder on wonder, while a few were denounced as impostors and this latter fact was taken advantage of by the sceptics for attacking spiritualism as a whole, which is most unfair. Can we denounce the entire body of saints merely because a few so-called saints were found to be impostors ? Impostors are rather always tempted to come in where the cause is genuine or the movement is popular.

MODE OF COMMUNICATION

The second ground of attack is that spirit communications are often vague and do not rise much above the background of the media. But instances are not rare where the communications are not only clear and definite but are far-reaching and astounding. Further, in some mode of communication there is no medium at all. In any case, there is no denying the fact that things do happen in ways which are impossible for the worst critic to explain away: and what they do is like the "Science of Life" by H. G. Wells and the two Huxleys in which it has been sought to explain that the experiments were not done under the scientific rigidity. But they forget that there is a fundamental difference between a scientific experiment and a spiritual practice. In a scientific experiment, the scientist holds the control, while in spiritual practices, the spirit holds the control. A scientist, for example, heats water whenever he likes to the required temperature for boiling. In spiritual practices, the living being cannot go very far, it is the spirit that is responsible for the show. In general, it has been found that better result is obtained if the following conditions are fulfilled:—

(i) The 'sitting' is conducted in a spirit of goodwill, sympathy and trust. Conversely, spirits do resent idle curiosity, mistrust and scepticism. This is natural when we remember that scriptures are not disclosed to the heretics.

(ii) Cleanliness — physical, mental and spiritual. In this connection, I may just mention in passing that there is a difference between the higher (or noble) souls and the evil spirits (or ghosts or *pishaches*). Sometimes the presence of a very noble soul is manifested by sweet fragrance, while the presence of an evil spirit by bad smell. Noble souls may not like to come in unclean places, and bad or evil spirit may not come at clean religious place. Flowers, general religious atmosphere and burning of incense are liked by good souls.

(iii) The natural love and affection do not, in general, cease on death of one when the affinity is mutual. Hence the affinity and sympathy between the invoker and the invoked soul also counts. An unknown soul may not like to respond as the soul of a near and dear one.

(iv) The method of communication should be such as would preclude an evil spirit to come and misrepresent the required soul. (Planchette method is discouraged as an evil spirit may take control and falsely personify the required soul).

NECESSARY CONDITIONS

The next question is who can communicate. Can every soul communicate? The first necessary condition is that the soul is available. A soul may be in heaven or in hell or is sleeping till eternity or it may be elsewhere too busy to come. A Hindu believes in the transmigration of soul and so a soul, if reborn, cannot be available for spiritual communication. The next necessary condition is that it has power to come or it can be attracted. Further unless a soul be willing to come, we cannot force him to come. If we try to invoke the soul of Gandhi, we may not at all be successful as Gandhi may not be willing to come to waste his time for our idle curiosity. It may be noted that noble souls work for the uplift of the world even in heaven.

There are also general media and there are also media for a particular soul. An African Yogi came to India for spiritual experiments and he died leaving

his disciple (a Bengali gentleman) as his only medium. This Bengali disciple is commonly called "medium" or medium-Babu. The soul of the Yogi, whom we call GURUDEB, works wonders and is now so well-known that he always remains busy with the result and he does not find time to do the work of the majority of the people who come to him. He had sittings for Governors, Ministers, Supreme Court Judges, Rajas, Maharajahs etc. That African Yogi (Gurudeb) brings other souls for sitting — as all souls are not able to come without such help. In my 'sitting' with GURUDEB for my departed son, who was a commissioned officer of the Royal Indian Navy, I not only got the picture and handwriting of my son, but in the communication there was a prescription for a medicine for asthma with which I was then suffering for twenty years. I was not only cured of my asthma in fifteen days but I am now (with the permission of my son) giving the medicine to other asthma sufferers. I got an amulet dropped from the atmosphere when I was reading his communication that the amulet would cure a daughter of mine from gastric ulcer—the amulet permanently cured her of gastric ulcer. Whatever the narrow minded or bigoted people say, is any further scientific experiment required to show that souls do communicate from the other side ?

To me the spiritual practices are practical demonstration of our religious teachings. My dead son's soul communicated me a lot of informations. He said that when he was dying his grandfather's soul came to take him so that he might not feel any difficulty in the new evironment. He hovered over his dead body and could not leave the place so long as the dead body was not disposed of, in spite of his grandfather's request to go up with him. (Probably this is why we say that funeral rites should be quickly done). He felt mental pain at seeing his near ones lamenting and he says he did not like his body to be burnt on the pyre as he had still then an attraction to his body. After his body was disposed of, he could go with his grandfather. He says that when he was alive he used to joke with his grandmother about *sradh* and did not believe that *pindas* benefit the dead. But he says that after his death, he was benefited by the *sradh* performed by his brother. He described how the souls live in the other world (before taking rebirth), how they pass their days etc. Every morning they perform *pujas* and on my wife asking him if he uses flowers with his *pujas* he replied in the affirmative and said that whatever they desire in their mind they get the same and so it was easy for them to get flowers.

FRIENDLY SPIRIT

In the next sitting with GURUDEB, he not only gave his picture but on the four corners of the picture there were four beautiful deep red rose petals, which he said he attache[illegible] to show that it was easy to get flowers. In other mode of communication he used to have a friendly soul to guard him so that he may not tell a secret which souls are enjoined not to speak. Whenever inadvertently he would try to overstep the limit, the pencil would break (or the guiding spirit would break the pencil) and he would be warned. Nothing is allowed to be told if it creates a commotion in the world. No political forecast is allowed to be told. Whether a missing political leader is dead or alive is not allowed to be disclosed and so on. Further a good or noble soul won't disclose the name of criminals, because if they disclose the criminals would suffer for the disclosure for which they would be responsible. The meaning of religious sayings or *slokas* would be very readily told by the souls. They would help in all possible ways for religious uplift, for illness and diseases and in some cases for mundane affairs although in general they are reluctant to discuss mundane affairs. When a member of my family was very dangerously ill, the soul of my son told me that there was no fear of death and the patient would be all right after 45 days—and this exactly happened. In another case his soul told me that he and other great souls were doing their best to cure the patient and they would see that the patient come round.

I have a friend who was an I.C.S., District Magistrate and who resigned and became a *'sanyashi'*. When one of my grandsons had typhoid with diphtheria and the case was serious, I told him for spiritual help (my son's medium was not available then). To his prayer, a very well-known saint (an *avatar*), whom the entire world knows told him, "I have heard your prayer and have intervened. Tell his grandfather that the boy would be saved." This I.C.S. gentleman is a very well read man and he has read the religious books of probably all the religions. He says that all religions are good and noble. Whenever he could not understand a passage from Gita or some such book, he would invoke spiritual aid and a very great soul (sometimes an *avatar*) would appear and gave him an inspiration by which the meaning would be clear in a trice.

One day, I asked my son's soul as to how long he would remain in the other world. He quoted Gita, Chapter IX sloka 21, and said that so long his merit would last he would enjoy heaven. He however told me that instead of transmigration (by doing pious act one goes to heaven and then after the expiry of the time he is reborn) one should try to be with the Supreme Being as contemplated in Gita Chapter XV verse 6 and Chapter IV verse 9, and Chapter VIII verses 15, 16 and 21.

From the above it would be evident that spiritual practices are not for satisfying an idle curiosity. It has a very far-reaching significance. In any case, it is a practical demonstration of our religious teaching and if properly done, one will have no fear of death because to him, death is no longer a leap in the dark.

DANCES *Of* THE LUSHAIS

By

PROJESH BANERJI

A Lushai Devil Dancer. Note the hideous makeup.

THE Lushais inhabiting the borderlands between Assam and Burma and the north-east frontier tracts, have their "dance de divertissements," which they perform during their religious festivals, marriages and funerals. The devil dances are enacted mainly when there is a death in the tribe and especially when a chief or a member of the royal family passes away. They are also done to drive away epidemics or to please their gods during earthquakes, bad harvest and floods.

As regards ceremonies on death, a considerable difference exists in different tribes. Some burn their dead and others dispose of the dead by burial. The grave is dug to a depth of four or five feet, and at the bottom on one side, in such a way that the body lies at right-angles to the main grave, is dug a hole sufficiently long to hold a coffin. In this niche the corpse, fastened down in the coffin (a rough box made of planks and sometimes of bamboos tied together) is placed and the grave filled in with stones and earth. The head of the corpse faces west and the feet east. Over the grave poles are erected, and to them are fastened the heads of animals slaughtered for the funeral feast. All spirits whether they have committed good or bad actions in this world, are received in the "village of the dead", but this proviso is made : should a person during lifetime have injured anyone or committed murder, his or her victim will meet the spirit on the road, and stop the path; a fight will then ensue, by which the spirit is purified, and then permitted to pass. The person injured by the deceased may, of course, be still living, in which case a spirit is appointed by the gods as a substitute. It is owing to this that dead persons are buried with their weapons of war, to be ready for the fray.

There are certain ways by which a spirit can avoid having to fight persons he has injured in this life, one being by peace-offerings of pigs, goats, birds etc. For this reason it is customary to place the heads of animals over graves. On meeting the injured spirit, one of the goats or pigs, as the case may be, accompanying the deceased in a ghostly form, is offered, and if accepted, the fight does not take place.

PYTHON FOR DINNER

After the burial of the dead there is a feast of the village people. The food consists of drink, meat and rice. On these occasions large quantities of liquor are consumed. The common drink is distilled from rice, and when new, is very intoxicating, gradually becoming less and less powerful the longer it is kept. In colour it somewhat resembles dark brandy.

It is interesting to say a few words about their food here. As regards food, tigers and leopards are not eaten by any of the tribes, and dogs by the Betes (a sub-tribe of the Lushais) only. Monkeys are considered a great delicacy by all the aboriginal

Lushai tribes except two sub-tribes, the Tadois and the Rangkhols. With the exception of a Rangkhol any aboriginal Lushai will rejoice greatly at the capture of a python and a cheerful and animated appearance extends itself gradually over his face, as he measures off his captive and calculates the number of his friends he can comfortably entertain on the flesh.

The Rangkhol, owing to a certain fastidiousness, is again out of it when a fat bamboo rat is the object of search. Though either a Bete, Jansen, or Tadoi will show unwonted energy at the mere sight of the animal, and will scramble hurriedly down the steepest of steep places in order to effect a capture, he will gaze unmoved at the hunt, and even when the prey is brought up and ocular demonstration (by sundry punches in the rat's ribs) given that it is fat, will still remain unconcerned. Let, however, a porcupine, or ant-eater cross his path, and with one war-whoop he puts himself on the track, and the stoical reserve hitherto maintained is abandoned. Even the body of a deer or pig found in the jungles, alive with maggots, is not despised, maggots being considered rather a delicacy than otherwise by all the tribes.

As might be expected, where the Lushais have been brought into close relations with more civilised people, they have abandoned many of their former articles of food. Many a semi-plains Lushai will scorn a monkey.

DEVIL DANCE

After the feast in connection with a funeral ceremony is over the Lushais will indulge themselves in the devil dances. They wear hideous masks made of coloured bamboo pieces and leaves. The white colour is generally made of pounded rice. Now-a-days the mask is made of burnt clay as well, and sometimes of papier mache by the Anglicised Lushai. The German hues are applied these days. On the forehead of the main mask there are small skulls made. The sockets of the eyes of the main mask are generally left hollow but sometimes glass pieces are fixed. The ears and neck are covered with napkins, but now the dancers use thin papers for the ears and give them a fan like shape. They are also of variegated colours. The body is covered with pieces of colourful rags with bold white paints suggesting the arms and ribs of that of a skeleton.

The dancers dance with wild jumps and occasional yells. Music is supplied by a species of reed instrument, and time kept to the striking of bamboos on the ground. Generally males only take part in these dances.

There are other kinds of rituals on death when such dances are performed, and it is interesting to note a few of them. On the death of a man his spirit is believed to remain one full moon in the house he occupied when living, at the lapse of that time departing to a village termed "the village of the dead", where it stays until returned to earth (at the lapse of an uncertain number of years) in the body of a new-born child. Good and bad men go to the same village, but people carried off by tigers or killed by accident or in war, though still going there, live apart from the others. The gods do not inhabit the "village of the dead". All "mithun" (wild bulls), fowls, goats and birds, killed on the death of a man, accompany him on a future state.

On the death of a Lushai all the relatives and friends assemble. The day after the death a large pile of crossed pieces of wood is raised in the jungle outside the village, and on this the body is placed and more wood added. The nearest male bachelor relative of the deceased then stands on one side of the pyre, and lights it. As it burns he throws across small pieces of bamboo stems filled with water, calling out at the same time in the following terms—"Be as jungle; return to jungle." At the conclusion of the cremation, any bones left are collected, and, with the cooking utensils of the deceased, are placed in a miniature hut built on the spot. The friends and the relatives then return to the village, hold a feast and then dance. The morning following an offering is made to the gods.

A STRANGE CUSTOM

The Lushais dance the devil dance during the funeral ceremony of the chieftain, a strange custom which used to exist among a few sub-tribes, the Jansens and their co-tribe, and the Tadois. Immediately on their death becoming known, the whole community, and any relatives and friends living in other villages, are assembled, and wild bulls, goats, fowls, pigs and other birds are slaughtered for a feast. Each funeral guest, if not a relative, is expected to give one cloth for the use of the corpse; if a relative, two, three, or more.

In these cloths the dead body is carefully wrapped, and at the end of a few days, sometimes at the lapse of a day, it is carried out and placed on a raised platform at a distance of 30 or 40 yards from the house. Here it is decomposed. At the end of every three days the female relatives are obliged to visit the platform, or "machan", and so fasten up the cloths (as decomposition sets in and is progressing) that none of the putrid matter falls to the ground. During the whole of this period general feasting and dancing is kept up at the expense of the deceased chief, and only ceases when the supply of liquor runs short, or the corpse has thoroughly decomposed, and nothing is left but the skeleton. The bones and cloths are then carefully gathered, and buried in front of the house, but the skull is reserved for further ceremonies. It is first bleached in the sun, any loose teeth being reset and then, being thoroughly cleaned, it is placed in a woven cane basket. Another feast and dance is now held, at the conclusion of which this basket is carefully hidden away by the relatives.

During the earlier days when the decomposition has fairly set in, the stench in a village is fearful and unbearable; but this is blunted somewhat to the anything but sensitive nostrils of the inhabitants by large fires kept burning day and night. It was formerly customary on the death of a chieftain to kill a certain number of persons, slaves or prisoners of war, and place their heads on the platform with the body.

CROSSED BAMBOO DANCE

There are other types of dances prevalent among the Lushais which are not grotesque and hideous in nature. They are not mask dances and are generally performed by males during marriage ceremonies and religious festivals. They are amusing and entertaining.

In the crossed bamboo dance two men, holding the ends of bamboos in each hand, sit facing one another. Two others then place themselves, so that the bamboos which they hold in the same way cross at right-angles those held by the others. The two sets of men then alternately bring their bamboos sharply together, and as quickly back again to their original position on either side of their body. By this means a number of squares are formed and re-formed. A youth then advances, and is expected to spring in and out of the squares, without being struck by the bamboos, keeping time to the music, which gradually grows faster and faster. The bam-

boos are brought backwards and forwards to the same tune, and the dancer has to be very quick indeed to avoid being caught in one or other of the squares, to say nothing of the unpleasantness of being struck with the bamboos on the shin.

A few words about the Lushai marriage rites during which the crossed bamboo dance is performed will not be out of place. A suitor having presented himself, his courage and perseverance are tested in the following manner. A leg of pork is hung up inside a house, and all the female inhabitants of the village are assembled, each armed with a strip of cloth, to the end of which is fastened a bag of stones. These women, of all ages, from the girl of seven to the venerable old woman of eighty summers, then place themselves round about the house in such a way that anyone attempting to approach must pass by them.

A HARD WOOING!

The would-be wooer is now told to try and take away the piece of meat hanging inside. On a given signal he makes a rush, which the women endeavour to frustrate by striking him with the slings in their hands. Should he succeed in his object, he is again mercilessly treated on re-appearing from the house, and is chased through the village out into the jungle. If the piece of meat is dropped the beating ceases and the man is loudly laughed at, and told that he is not good enough for the girl, and had better return from where he came. Should he succeed in getting clear of the village, his companions, whom he has brought for the purpose, quietly take possession of the girl, and remove her unmolested.

The tiger dance, which is a popular one, is generally performed during religious festivals and 'pujas', when the entrances to all the Lushai villages are closed, and no outsider is allowed to enter. On ordinary festivals the village is open to all.

The Lushais believe in three principal gods—Lambra, Golarai and Dudukal. Lambra is the head god or creator, and without his consent, nothing can be done by the others. Golarai is the god of death. Dudukal causes sickness occasionally, but more often works for the good of mankind. When this latter god has to cause death, he carries out the decree through his wife Fapite.

Devil dance is performed to propitiate Golarai and Dudukal and Tiger dance for Lambra god. In this enactment a cloth done up to represent a pig or a goat is placed on the ground, and one of the youths of the village proceeds to imitate a tiger stalking it. The attitudes assumed are most amusing, and it is wonderful how some of the men, while on all fours, spring over the imaginary goat and alight on the other side.

"Come, Fill The Pitcher."

INDUSTRY IN THE SECOND PLAN

(Continued From Page 16)

Europe had to pass, but we have to telescope centuries into years if we have to face the world by providing a reasonable standard of life to our population and opportunities for employment to share in the production and consumption of wealth.

STEEL : THE FIRST PRIORITY

A casual look anywhere in the country will show that we have to look up to other countries for the most elementary tools needed in everyday life, even in agriculture. Steel is necessary for the point on a ploughshare and for making the sickle or dao or katari. In remote sections of the country even now people have to use sharpened points of wood because they cannot get iron or steel. Our production of iron and steel is far below our requirements even though the steel mill industry was started more than 30 years back. Every carpenter has to buy from foreign sources his chisel and other tools made of hard steel which we do not produce at all in our country. All the factories, big and small, in our country have to import their machines from abroad. In other words, we are dependent upon other countries for the tools of production — be it a simple hand tool or a complicated machine — which is after all a more complex tool driven by power. Though we have a hundred-million-rupee-worth textile industry in our country, it is entirely fitted up with machines imported from abroad. God forbid, if a catastrophe were to happen, as it happened during the last war in Japan, and our textile factories were destroyed, we cannot replace them quickly and cheaply, just because we do not manufacture those machines. (In recent years two or three establishments have started manufacturing certain textile machines, but it is yet not possible to fit out a complete textile manufacturing factory out of machines manufactured in the country). We have the largest resources in raw materials for iron and steel and yet we have to depend upon imports for our requirements. Therefore, the second Five Year Plan proposes to treble our steel production from 1.5 million tons of present production to 4.5 million tons by 1961. Steel has got to be converted into machines and tools which in turn will be used for the manufacture of both producer and consumer goods. Therefore, the largest chunk of our proposed investment of Rs. 1,400 crores, i.e. Rs. 425 crores or 30 per cent. of the total investment is ear-marked for iron and steel. Rest of the investment is proposed for manufacture of heavy machinery, heavy electrical equipment, cement, chemicals and drugs, fertilizers, aluminium, synthetic petrol, minerals and prospecting etc. and also includes an investment of 300 crores for production of consumer goods—100 crores in factory and 200 crores in small-scale and village industries.

We are starting where others began in the 17th century and we have to make a rapid progress if we have to catch up, and break even, with others in the world. The world has not remained static and we will not remain static also. It has passed through the age of steam, oil and electricity and is on the verge of the atomic age. We have to plan for the future, though we have to work for the present. Therefore, we cannot be content in copying the products of other countries and their manufacturing processes, but we have to invent our own.

COTTAGE INDUSTRIES

It is significant that a large bulk of consumer goods is proposed to be produced not in factories but in cottages by craftsmen and in small establishments. It is inevitable that with the pumping in of a large amount of money as investment in the economy of the country there will be an increase in the purchasing power of the population. Adding the fact that there is constant increase in the total population, the demand for consumer goods, particularly necessities, will increase. One of the reasons why the self-employed craftsman or the small producer did not find full employment was that there was not enough demand for the goods produced by him. That particular factor will be eliminated to a great extent, but the problem of production of adequate quantity of goods at comparable prices will be a challenge to our capacity for organization. It is taken for granted that the application of methods of mass production in factories, with its necessary complement of organization for securing raw materials and disposal in the end of products in bulk, results in economies which enable the consumer to get a particular product at a particular price which is much lower than that of goods produced by any other methods. But it has been demonstrated, that with intelligent organization and improvement in tools and technique of production, goods of equal or even better quality can be offered at a price comparable with goods produced by the method of mass production. This has been so in the case of manufacture of bicycle parts, sewing machine parts, etc. Whether the same results can be expected on a much wider scale and on all varieties of products has got to be proved, and I believe, it can be proved. In any case, we have no other choice. We have a huge and growing population endowed with intelligence and (developed) skill, but lack the resources in capital goods and capital in other forms. Therefore, we have to base our economy on methods which will be less capital intensive and yet provide us with necessary competitive strength. Therefore, the second Plan has deliberately concentrated upon the production of basic industries, for production of metals, fuels and chemicals etc. Once the base is firmly built, our capacity for invention may enable us to develop a method of production which will be different from that which is conventional now. But till that firm base is built, we have deliberately to reconcile ourselves to a period of voluntary deprivation of our impulses for unrestrained consumption of goods and services. We do it every moment of our life. We save for the future. We deprive ourselves of necessaries even so that we can give a better chance to our children. That is exactly what we have to do on a nation-wide scale.

Muslim Politics In The 19th Century

By REZAUL KARIM, M.A., B.L.

THE expression "Nationalist Muslim" is generally used for those Muslims who believe in the solidarity of the Indian nation and as such are attached, in one way or other, to the only national organisation, the Congress. They are a group of Muslims who always fight against all sorts of communalism and sectarian principles and in spite of allurement and preferment from the Government and other sources do not hesitate to undergo any kind of trial and tribulation for the cause of the nation and the country. They love freedom as they love Islam. In their eyes freedom and Islam are synonymous words. As they believe in the principle of nationalism, so are they staunch supporters of Hindu-Muslim unity. For the cause of that unity they are ready to go to any length, because they believe that to be in friendly terms with their neighbours is a fundamental teaching of Islam. Today, there are millions of Muslims throughout India who subscribe to the view just mentioned above. But several decades ago the number of the nationalist Muslims were few and far between, and those handful of Muslims who believed in nationalism were not earmarked as "Nationalist Muslims". In those days the conception of national ideal was vague and unshaped. So the very man who held national ideal in one thing held anti-national or even communal ideal in another thing. The Hindu leaders were no exception to this rule. But the sum total of their teachings bore salutary results. By and by, the principles of nationalism grew into a definite shape out of which emerged the Indian National Congress.

It is a commonplace saying that the Indian Muslims have become nationalists only recently. But that is a wrong idea. Even before the Partition of Bengal, there were many Muslims who held nationalistic views and thought of the country and the nation. In this article I shall mention the name of some of the Muslim leaders of the 19th century who held nationalistic views in many matters touching the vital interest of the country.

HINDUS WENT AHEAD & WHY?

Manifold were the reasons why the Hindus started the national movement. They had got several advantages over the Muslims. They received English education early, which threw open before them the treasure land of European culture and literature. Then arose among them some reformers and philanthropists who changed the outlook and mentality of the people. From a narrow and parochial way of life they led the people into a broader and wider sphere of life where nationalism was bound to flourish. Once the floodgates of Western ideas were thrown open, there appeared a galaxy of men who rid the people of the medieval prejudices and superstitions that obtained in the land. These new ideas gave birth to that political discontent which is the cause of nationalism in all subject countries. But the Muslims followed a different course. They rejected English education and all ap proaches to Western culture were closed by th fanatical Mollahs who held sway over the com munity. They remained aloof from almost a the political activities that were organised b the nationalist Hindus. Thus when the Hindu started a movement to compel the Goverr ment to grant political rights and liberties, th Muslims were silent spectators of the mighty up heavals that swept the land. Then came Lor Curzon's Partition of Bengal. It held out befor the Muslims the prospect of a separate provinc where they would be masters of their destiny. Th temptation was irresistible. So only a few Muslim could be found on the forefront of the nationa struggle. It is only those who had fore-knowledg and instinctively understood the motive behind th partition, had taken active part in the anti-partitio agitation.

But in the pre-partition days the Hindu-Muslir problem was not so acute and complicated as it i today. There were many Muslims of outstandin merit who are little known today. But the Muslir leaders of the pre-partition days deserve more tha a passing reference because they were among th earliest builders of Indian nationalism. Like man other earliest nation-builders they had many short comings too. But as obliging grandsons we shou forget the defects of our grandfathers and try t find out their merits only.

GREAT MUSLIM LEADERS

In the history of Indian nationalism, no one ca forget the services of Sir Syed Ahmed who put new life into the heart of the Indian Muslims. I is true that he discouraged the Muslims from joinin the Congress. But his opposition to the Congres was not on the ground that he hated the Hindus Nor did he ever think of fostering the Muslim caus at the cost of the Hindus, whom he regarded as or of the eyes of Mother India, the other eye being th Muslims. His idea was that because the Muslim were uneducated and were unwilling to receive Eng lish education, greater attention should be paid b them to education. He believed that without Eng lish education the Muslims would be nowhere. So instead of prohibiting Western education he wante the Muslims to absorb the best elements of Europea culture. He was the first Muslim to rouse the Mus lims to the importance of absorbing Western cultur and to organise them politically. Hence the lat Moulana Mohammed Ali had called him the "arch enemy of British Imperialism". It was with a view to spreading Western culture among the Muslim that he founded the famous Aligarh College in 1872 The part that the Aligarh College played in educatin the Muslims and thereby imparting political trainin to them is too wellknown to need any repetition. I is one of the earliest corner-stones of Indian nation alism. But Sir Syed Ahmed had not to cry in th

derness for long. Other notable men came in wake of the new movement started by him. Two minent disciples of Sir Syed Ahmed were the t Hali and the historian Moulana Shibli. Hali by poetry and Shibli by his essays and criticism athed a new spirit in the mind of the Muslims.

Mirza Gholam Ahmed Qadiani, though he was a direct disciple of Sir Syed Ahmed, was yet ebted to him in many respects. Specially in his icism of the Christian missionaries, he followed principle of Syed Ahmed. The Muslims of the hodox school may not regard him as a great gious leader, yet it is undeniable that he con-uted a great deal to the awakening of the Mus-s in their multifarious activities. Like Raja Ram han Roy, who saved Hinduism from the clutches the Christians, he has saved Islam from the pticism of the West.

LITICAL CONSCIOUSNESS

In the field of politics we cannot ignore the vices of Nawab Amir Ali Khan, a scion of Barch ily of Patna. By organising various associations roused political consciousness among the Muslims. near about 1885, he founded the National Maho-dan Association in Calcutta. His object in found-the Association was to unite all the classes of lims so that they might work together for the mon good. A few years later i.e. in 1886, wab Abdul Latif founded the Mohammedan Lite-y Society. Its object was to break down pre-ces and exclusiveness and to interest its mem-s in present-day politics and modern thought and ning. Five years later, he read a paper on Mus-education in Bengal. In this address he boldly pcated the spread of Western education among Muslims. Here are a few lines from his writing ch will give us an insight into his mind :

"Mohammedan Education can never cease to have a strongly marked feature of political interest, which will force itself on the notice of all who desire to make the enlightenment of Indian races the handmaid of loyalty and devotion to the British Power".

Few Muslims took part in such associations as Landholders Society, British Indian Society and British Indian Association. But the Muslim ers of those days were not apathetic to any ons of the Government that were prejudicial to interest of the country as a whole. We may tion one instance where "in a deputation of the sh Indian Association to Lord Lytton to protest nst the repeal of duties on imported cotton goods, names of Nawab Amir Ali Khan Bahadur, Nawab ed Ali and Nawab Mir Mohammed Ali also ared." ("History of Political Thought in Bengal" Dr. Biman Behari Mozumder; p. 396).

In this connection another Muslim luminary s large before our eyes. He is Mohammed Yusuf ihar. Perhaps he is the first Muslim to claim separate representation for the Muslims. But he did not support separate electorate, he only claimed for some reserved seats for the Muslims for the time being as a necessary evil. In his memorable speech delivered in the Bengal Legislative Council in 1883 in reply to an Indian Member's opposition to the Local Self-Government Bill, he supported the granting of local self-government. The introduction of Local Self-Government was opposed by men like Kristodas Pal, Jatindra Mohan Tagore and Digambar Mitra. But he supported it in the most emphatic language. At another time in the Indian Legislature he advocated the granting of franchise even to women, a phenomenon that was unthinkable in those days.

MUSLIMS & CONGRESS

When the Congress was started in 1885 many Muslims became its active members. The Congressite Muslims were not outcastes of the society, but were in the highest estimation of the country. Most of the present-day Muslim leaders were in some way or other connected with the Congress. It was only when the Congress threw away the begging bowl from their hands and took up a fighting programme that some of them broke away from the Congress and took shelter under the banner of communal organisation. The summer soldiers and the sunshine patriots cannot go to any other place. But still there are millions of Muslims with whom the Congress ideals are articles of faith.

The traces of political consciousness that we find in the early Muslim leaders are vague and indistinct. Compared with the thoughts of the present generation they are insignificant. But, it is curious to note that a class of Muslim leaders are still in the mediaeval age. While the early Muslim leaders made conscious attempt to drive away mediaevalism, the present-day Muslim leaders are bent upon introducing mediaeval spirit in every walk of our life. Instead of evolving, our politics has manifestly degenerated. Separate electorates and other special advantages were considered to be a necessary evil and they were never meant to be permanent. But in this age our leaders consider them as essential and an integral part of Islam and Muslim interests. This is the direct effect of slavery. While men like Rahmatullah Sayani, Badruddin Tayabjee and Nawab Syed Mahammed came to the forefront of the National movement, the present-day leaders are denouncing all principles of nationalism. A united and free India was their goal, and Pakistan is our present-day leaders' goal. Hindu-Muslim unity was their war-cry. India first and India always was their battle song. And our leaders like weary, war-worn and runaway soldiers are flocking to the rank of our enemies. It seems that political awakening among us has received a setback. We believe that this stagnation will not last. It will melt away into nothing at the first touch of the new movement that is coming in the near future.

Meaning Of Yoga In The Philosophy Of Bhagavad Gita

By Dr. (Miss) ANIMA SEN GUPTA

M.A., Ph.D., Head of the Department of Philosophy, Magadha Mahila College, Patna.

THE word Yoga in the Gita does not seem to stand for the "Astanga Yoga" of *Patanjali* where it has been used in the special sense of cessation of mental states. This technical sense of the word does not seem to have been adopted by the author of the Gita in the exposition of his own doctrine and ideal. The distinction in meaning of the word "Yoga" in the Gita and the Yoga Sutra is so clear and definite that not a single interpreter of the Bhagvad Gita has ever adhered to the technical sense of *Patanjali*.

In the Bhagvad Gita the word Yoga has been used in different senses in different contexts. When used with Samkhya and Bhakti, the word seems to mean association or union. Sankhya in the Gita means pursuit of true knowledge or wisdom. It has been stated that the Samkhyas (wisemen) attain liberation by following the path of unwavering and steady devotion. Both Sankara and Sridharasvami have taken the word "Samkhyanan" in the sense of wise people. These wise people are born, as it were, with a thorough and clear knowledge of *atman* and their earnest devotion to knowledge helps them to renounce worldly pleasures for the sake of the highest truth. Such is also the goal reached by the devoted persons or *"Bhakti-Jukta Purusas"*.

ASSOCIATION WITH KARMA

The word Yoga has also been used in association with Karma. For example, *Karma yogena Yoginam, Karmayogamasakta, Sannyasa Karma Yogasca. Karmayogena Capare etc.* Here the word does not seem to have been used in the former sense of union in any one of these contexts. In *"Karma-yogena Yoginam"*, the suggestion apparently is not that man can attain liberation by performing actions or by becoming *Karma-Yukta* : because in that case all persons should be able to achieve liberation and then there would have been no need of a special doctrine of Karma Yoga, as expounded by Srikrishna. *"Karmayogamasakta"* refers to one who is incapable of practising Karma-Yoga. In *" Sannyasa Karma-yogasca" Karma-Yoga* seems to refer to a special method of performing actions for attaining the highest goal. In *"Karmayogena Capare"* too, Yoga seems to have a similar reference. The meaning of Yoga used in all these contexts will become clearer to us if we take into consideration the meaning of the sentence *"Yogah Karmasu kausalam"* i.e. Yoga means some special skill for performing actions in worldly life : this speciality consisting in — renunciation of the fruits of action. This skill is needed for the attainment of the stability or balance of mind without which a man will not be able to fr himself from the shackles of Karma and bondag Ordinary people of the world are passionate, amb tious, easily affected by joys and sorrows, gains loss. They generally perform actions, driven b desire and attachment. The desires and attachme disturb the equality of mind and so desire-prompte actions strengthen the bond of man and preven him from attaining liberation.

GITA & KARMA YOGA

Every action in ordinary course springs fro desire and results in impressions which become th seeds of future activities and desires. In othe words, we can say that every action is followed b corresponding reaction and this law of action an reaction is called the law of Karma or the law cause and effect. So long as a man remains boun to this law of Karma he performs various activitie and thus goes on weaving his own cobweb of birt and death. So the question naturally arises : I there no way out of this whirlpool of birth, deat and new birth ? The followers of the path of re nunciation suggest that giving up of all actions i the only means for destroying the bonds of Karma Since one Karma leads to another and thereby sow the seeds of a new life, it is best to become com pletely inactive. But giving up of all actions on mass scale is not at all advisable and practicabl from the worldly point of view. Social life an social stability will be at stake if everybody refrain from doing action. Absolute inactivity means death For preserving body and mind, activity is needed Again for propagation of species activity is needed In fact, life sustains on activity So the author o the Gita refrains from speaking in favour of complete inactivity. On the other hand, he opens a new avenue brings new messages of hope and light for humar being by expounding his theory of Yoga in Karma It is not the external action as such that really binds a man to worldly life; it is the desire — the menta stage of human action — that pollutes his spiritua being and dislocates him from his real status. At-tachment, anger and greed are the three gates of hell that veil wisdom as smoke covers fire. Karma-Yoga, therefore, with its emphasis on the disinterest-ed performance of worldly duties provides humar beings with a new path of emancipation and freedom No human being can live without performing some kind of action and the Gita seeks to show how, by means of Karma Yoga, this constant output of

MEANING OF YOGA IN THE PHILOSOPHY OF BHAGAVAD GITA

rgy may be utilised by human beings to attain perfection and realise from transmigration. The cial art of performing one's duties is the art of ping oneself absolutely disinterested in and non-ached to worldly pleasures and pains. When the nd runs in madness after the objects of senses, intellectual background is disturbed and so the nd fails to proceed in its course, fixed for the ainment of knowledge and freedom. By controll- senses, however, one can secure the equability mind which is needed for achieving wisdom and fection. Attachment to worldly objects are form- by continued association with sense-objects and achment leads to desire. The person who indulges sense gratifications moves in the cycle of birth d death. Giving up of attachment and controlling e senses, therefore, constitute the indispensable e-condition for communion with God and the ful- nent of this pre-condition in action is Karma-Yoga. re physical inactivity without a corresponding ntrol of senses and cessation from nursing passions d desires in mind, is a bad and vicious path. The thor of the Gita has repeatedly remarked that the per way of doing actions is to dissociate one's nd from desires and attachment. The effects of y action can bind the doer only when in doing that ion he has a selfish motive to realise. But if he es not seek anything for himself and performs the ion disinterestedly, his work will not affect him any way. A man should, therefore, give up all desires for selfish motives and dedicate all his ions to God and still go on performing all the linary duties of life. This is Yoga in action as pounded in the philosophy of the Bhagavad Gita. be unselfish, non-attached and disinterested in rldly gains and losses is the supreme duty of hu- n beings. Disinterested performance of action l produce a change in the personality and out- k of man. *Detachment from self and attachment God is what the word Yoga actually refers to in e Bhagavad Gita.* Desire as such is not always l. It is the nature of the object that determines e moral quality of desire. If the object is self's n pleasure and enjoyment, the desire is to be carded; if God, then the man has the purest sire that will bring about his union with the preme Reality. Such a person perceives God in things and all things in God. Men and animals, and high, are the same in his eyes. Caste and ed lose all meaning and significance for him. He s then a broader and a higher vision of man and e universe. The universe for him is a vast sea Divinity and there is no distinction between man d man. Through his deeper vision, he perceives e Divine Spark in his own self as well as in all ner beings and things of the universe. Having lised oneness, he becomes united with God and s union with God is the real Yoga brought about the performance of the normal duties of life in purely disinterested and non-attached manner.

NCLUSION

In fine, it can be stated that by using the word oga" in a special sense, the Gita has sought to ng about a harmony between the ordinary life duties and responsibilities and the supra-ordinary e of divinity and freedom. To feel oneness with e life divine, to practise complete self-surrender God and consequently to dissociate oneself from o-centric desires, constitute the full connotation of the word *Yoga*. Dissociation from ego-centric desires is achieved by the performances of disinterested actions. When the shell of one's individuality is thus broken, he realises his identity with the Great Soul and this is the stage of God-Consciousness or Divine Love. This realisation of oneness of spirit is the highest ideal of life and the Gita seeks to show that this ideal or supra-ordinary stage can be achieved by a person even in his normal worldly life by the practice of Yoga (attachment to God and detachment from self.)

PLACE-NAMES OF UTTAR PRADESH

(Continued From Page 18)

or mud bank occurs in the name of Pilibhit. KOT is equivalent to GARH, and is found in such names as CHITRAKOT or SHERKOT. LAR is a suffix added to the name of trees, as in SISOLAR (row of Shisham trees). GHAT stands for a landing or watering place and is found in names like Rajghat, Lohaghat, and Doharighat. Certain terminations connote water or water-supply — natural or artificial e.g. SOT, i.e. water-channel (as in Amsot), KUND or KUNDI, i.e., pool (as in Surajkund or Markundi), POKHRI, i.e., pond (as in Ranipokhri), PHIL or JHIR, i.e., extensive sheet of water (as in Nohjhil or Lakhanjhir), TAL, i.e., lake (as in Nainital), KUAN, i.e., well (as in Lalkuan Markuan, etc.). Names compounded with suffixes like THAR i.e., dry-land (as in Asothar), THANA, i.e., station (as in Bharthana), KHET i.e., field (as in Ranikhet), BAGH i.e., orchard (as in Ranibagh), BARI, i.e., grove (as in Ambari), or SAR, i.e., enclosure (as in Jaunsar) are indicative of village land conditions. In short, the PASTORAL names are stamped with the character of Indian rural economy, and are therefore well worth a detailed study.

DENOMINATIONAL NAMES

The Denominational Group comprises names coupled with terminations indicating worship of some particular deity, or relating to some place of pilgrimage. The usual suffixes are BAN, PRAYAG, MATH, ESAR, DWAR, NATH, and DHAM. BAN suggests a sacred forest (as in Brindaban or Mahaban), PRAYAG stands for a junction of two sacred rivers, which is an auspicious place for worship and sacrifice (as in Karanprayag or Rudraprayag). MATH is a monastery (as in Joshimath). DWAR means a door or temple (as in Hardwar, Kotdwara etc.). ESAR means lord and is an epithet of God (as in Batesar, Garhmuktesar, etc.). NATH carries the same implication (as in Badrinath, Sarnath, etc.). DHAM means abode, but it is dropped in popular usage (as in Kashidham or Varanasidham, i.e., Banaras). It may be pointed out here that *puri* is similarly dropped in popular parlance in the case of Mathura which in reality is Mathurapuri.

ENGLISH INFLUENCE

English influence has also played some part in the growth of place-names in the Uttar Pradesh. It illustrates the catholicity of outlook and the sense of realism which led the people of a locality to adopt English names in modern times. The notable instances of this class are Shorepur, Kydganj, Robertsganj, Captainganj, Colonelganj, and so on.

Thus, the etymology of the various place-names, if properly studied, yields an amount of information which would surprise a student of History and Sociology.

Plastic Surgery—India's Original

By M. MUKHERJEE

Professor, Department of Plastic Surgery, S. S. Karnani Memorial Hospital, Calcutta.

PLASTIC Surgery has become a talk of the day. Plastic toys, utensils, table cloths and screens have become so commonplace that everyone tries to associate Plastic Surgery with the material called Plastic. A section of people is still under impression that in Plastic Surgery, lost parts of the body are made of plastic material and are implanted into the body. But plastic surgery has not much in common with the plastic material except the meaning of the word "PLASTIC'. The word plastic means any substance which can be moulded into different shapes and sizes. So the branch of surgery which deals with reconstruction of lost parts of the body and gives newer shapes to them is called plastic surgery.

Plastic Surgery was first practised in India by the Hindu Surgeons, 3,000 B.C. These Surgeons constructed noses from the skin of the forehead and so this particular method which is still the best and most practised is called Indian method of Rhinoplasty (Rhinoplasty-Construction of nose) all over the world. This art spread from India to Middle East and Egypt. The Italian Surgeons learnt the subject from Egypt. Then it spread through Europe to United Kingdom and America.

Even so late as 1744 A.D., the British Surgeons of East India Company learnt the art of Rhinoplasty from a Marathi Surgeon near Poona. But the whole art was neglected in India after the 18th Century and this is the period when the Western countries improved in all surgical fields including plastic surgery. But the modern concept of plastic surgery as a special branch in surgery was given birth to by Sir Harold Gillies. During the first world war he started this old art in a renewed fashion and placed the whole subject on a sound and scientific basis. The second world war has brought renaissance of plastic surgery.

REHABILITATION OF CRIPPLES

Now it has been recognised as a special branch of surgery and as such many separate units have been opened for the same. The West Bengal Government has appreciated the importance and the need of this speciality and has started a plastic unit in S. S. K. M Hospital (old P. G. Hospital). This is the pioneer unit in the Civil Hospitals of India. Next sore point in plastic surgery was, that for a long time this branch of surgery was associated with the idea of cosmetic surgery alone. Even now many people think that plastic surgery is meant only for a few fortunate people of wealth who have their beauty enhanced by shaping the nose or removing the old age creases of the face or shaping the pendulous breasts No doubt that cosmetic surgery is a part and parcel and the cosmetic surgery can deliver immense psychological improvement but the bigger problems in plastic surgery is rehabilitation work. In every country a number of victims of injury and burns become incapacitated for work due to loss of function of fingers or hands or legs They look aweful too but their loss of working capacity not only makes their life miserable but creates a national loss. In a poor country, like ours, these crippling ailments are more prevalent and their poverty prevents them from having proper treatment at the right moment. As such the number of cripples are much more and they are in dire need of plastic surgery for their rehabilitation. The injuries of hand

(Continued on Page 259)

Angioma of face operated & cured.

PLAN-FRAME FOR EMPLOYMENT

(Continued From Page 24)

retail traders in carrying out their daily business with different customers that these are considered to be the core of their success in their occupation. While the number of these traders is likely to rise to 8 million within 1961, the number of persons engaged in hotels and restaurants will be about 1.2 million and the number of these supported on professions and liberal arts will come up to 8.5 million. However single-handed the work of these people may be, they have to cultivate their sense of social responsibilities and to develop a communion of feelings with all they come in contact with. Otherwise, they cannot derive the much-coveted mental satisfaction which is the last word in all their toiling for wealth.

Along with our exertions to raise the level of our economic status, we have to foster a spirit of self-discipline and self-sacrifice. Without being inspired by the nobler object of our accepting an employment, we cannot make the employment yield us the best of dividends. What is the good of asking for fuller employment if the existing employment capacities even cannot be explored to the fullest extent ? We have to lay our hands on the nation-building projects, we are to participate in the planning for a better and brighter future of our country, and if we are really aware of the significance of these our assignments, it will be a sheer sin for us when we fall short of applying our best of attention and efforts to our task.

NATIONAL CAUSE

It is in the special genius and strange tradition of India that the rich and the poor here are fraternally united and are ever capable of moving hand in hand for a national cause even when there is a thundering clash between labour and capital on all sides. Be there any amount of external provocation to the contrary, we cannot forget that our capital is not entirely locked up in the iron-chest of our capitalists but it is lying bare in immeasurable quantity in our mines and ores and natural resources, which has to be found out by searches and researches and for which both manual labour and mental labour are extremely necessary. If we look to the countries making rapid strides in planning and progress, we shall see everywhere that the deficiency of capital finance is being fully covered up by the efficiency and sufficiency of human services. In days of vicissitudes and national crises, even the people of capitalist States like America stand united and keep up their national prestige in fields of commerce and industry. Poor people of a poor country as we are, we are all the more required to make a common pool of whatever little wealth or strength we have and invest the whole in the interests of planning. After an inhuman subordination of 200 years, the painful memory of whose shackles is still there, it is not very easy to attain the free spirit of a free man all at once, and it will be only by steady resolve and regular practice that one can drive away the habit of fear and evasiveness unfortunately developed in one's mental structure. This is where the question of educating the mind comes in. To appreciate and achieve the targets of national planning, a thorough recasting of the mental frame of the people is required before everything and we are sure the makers of the new Plan-frame will take up this issue in due course. In the meantime, let us strive and pray for a greater unity and co-operation between all employers and employees and pave the way to ever-increasing employment for greater progress and prosperity of our nation.

UNITY OF INDIAN LITERATURE

(Continued from Page 32)

introduction to the literature of Bengal. I hope this will not be the last and believe it will be the first of series of such literary pieces. If you could write biographical sketches, with personal touches of the leading writers of Bengal you would be rendering a service to the cause to which *Hans* is dedicated — homogeneity of all the Indian literatures. We look forward to the day when a Kerala or a Sindhi will be familiar with all the masterpieces of Bengali literature, the difference of language being no bar.

Yours faithfully,
PREMCHAND.

II

28-1-1936.

Dear Priya Ranjan Babu,

So glad to receive your letter of 21st inst. Please do write the sketch you are trying to write. Our Madho Babu used to say "try and you will succeed."

For February issue we have got translated the reminiscences of Jaladhar Sen, a most readable thing indeed. You must have read it in (the) original. Let me know what you think of the Hindi version.

Our Bengali friends have not taken kindly to our venture. The only consolation is that Bengali literature is no longer provincial. It has long ago passed that stage. But we are not quite conversant with its present-day developments. As Hindi literature grows, it gets a bit self-conscious and Hindi editions of Bengali books don't come so frequently. Bankim, Romesh, D. L. Roy, Sarat and Gurudeva are already all India figures, some of them world figures. But our interest in each other must not be allowed to slacken. Great writers are by no means the monopoly of my province or country. When we are a nation, we should be as proud of Bankim as of Sarshar or Eqbal or Joshi.

With best wishes

Yours,
PREMCHAND.

POST-INDEPENDENCE POSITION

Since the attainment of Independence the idea of the unity of Indian literature is coming more and more to the front, and the Viswa Bharati has published in Bengali accounts of the Assamese and Oriya literatures and it may be hoped that accounts of other literatures will follow. A sketch has also appeared in Bengali on Bharatiya Sahitya, giving in brief compass accounts of all the branches of Indian literature. The Hindi Sahitya Sammelan had been working on the same field, but its attempts belong more specifically to a previous period, before the attainment of Independence. When will the task be complete and a patriotic publisher bring out in Hindi, Bengali (in which some work, as pointed out before, has already been done) and English a series of historical outlines, grammars and readers of the different languages of India ?

I cannot conclude without referring to a beautiful observation made by Vinobaji. It was at Balarampur, where he met Bengali litterateurs that he said :

"It is for scholars to know the different languages and literatures. this was the path of knowledge — Jnana-Yoga; but for him and his like, it was also to know the different languages and literatures of India, for it was the path of love — Prema-yoga The love of India, our mother, should indeed prompt us to study the languages and literatures of India with a loving heart, the expression of idea which has taught our countrymen and the generations through previous centuries."

PLASTIC SURGERY—INDIA'S ORIGINAL

(Continued from Page 257)

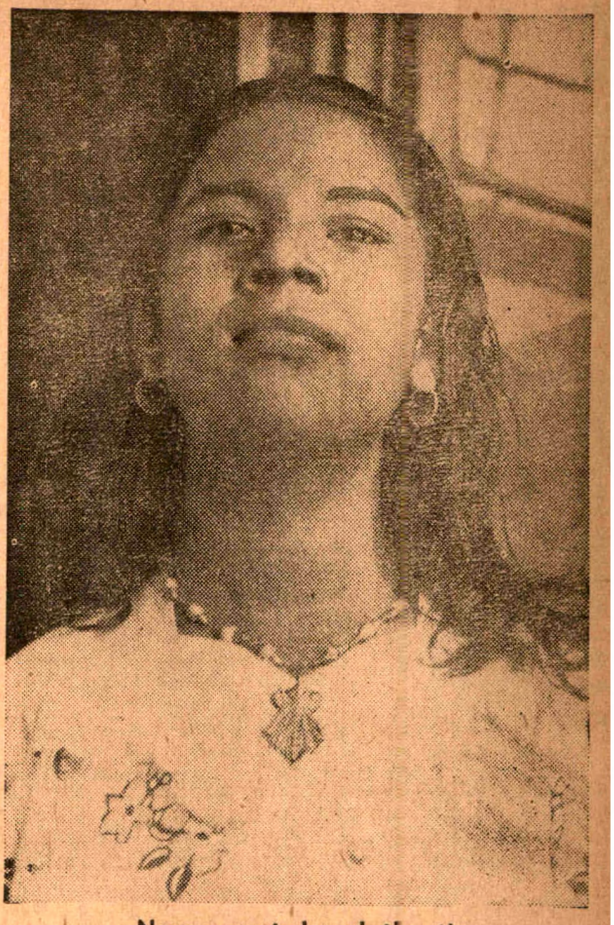
will increase as the nation is getting more and more industrialised. Proper treatment of such injuries cannot be possible without the aid of plastic surgery. In fact quite a number of such hand injuries are treated in the plastic units by the specialist.

Burns alone can claim 50 p.c. of the crippling disfigurements of hands, neck, face and legs in our country. Burns are a very severe damaging accident besides being fatal in quite many cases. Specialized treatment in separate units with advantages of different types of skin grafting can save quite a few and can prevent a lot of the deformities. The treatment of burns is almost entirely under the domain of plastic surgeons and in Western countries there are separate burns units for proper treatment of such victims.

CANCRUMORIS

A crippling disease in this country is cancrumoris. Kala-azar had its days. Then slouching of mouth, lips and jaws were fairly frequent. Even now quite a number of such infections of the mouth are seen in malnutrition patients having typhoid, measles or kala-azar. Their life is really miserable. Most of them cannot open their mouth. They are dripping saliva all the time. They cannot talk distinctly. They cannot eat their food with satisfaction. It is with the aid of plastic surgery that these miserable lives can

Congenital deformity of the nose with broadening of tip.



Nose operated and the tip of the nose shaped normal.

be made worth-living and at the same time the horrible appearances can be made agreeable. The following are a few examples of such cases :—

Elephantiasis of Legs: The victims of such a horrible disease can be relieved a lot. A huge leg is always a handicap for work. A number of these patients belonging to labour class take to begging. But plastic surgery can certainly relieve the weight and make them fit for work. The full cure depends on the systemic cure of filariasis but no such drug is as yet available.

Claw Hand: Burns, injuries or paralysis of nerves may give rise to different types of crippled hands. Leprosy alone causes claw hands unfit for work in a good number of patierts. These victims again can be made useful to the society by specialized operation.

CONGENITAL DEFORMITIES

Harelip And Cleft Palate: Everybody knows that babies may be born with defects from the mothers' womb. The lip may be split and the palate may have a gap or both the lip and palate may be widely separated giving rise to a horrible appearance to the child and severe disadvantage for feeding the same. Most of the babies suffer from proper nutrition as they cannot suck the breasts. They have to be fed with spoons. They may have to have feeding more often than normal babies. The feeding should be carefully done and a weight record kept. As soon as this baby

INDO-CHINA PAST & PRESENT

(Continued From Page 31)

fied by a treaty (forced as usual) signed at Hue (February 1886). Near this capital city the French built a fine Museum in Touranne where they housed valuable samples of Hindu-Buddhistic inscriptions, art and iconography coming from the ancient Hindu colony of *Champa* elaborately described by Dr. R. C. Majumdar and other scholars.

King Bao Dai who succeeded to the Annamite throne in 1926 fled from the Japanese but was allowed by the French to resume his 'protected' authority (in 1949) which again is seriously threatened.

The products of export are rice, sugar, cotton, silk tissues, tea, pepper, and cinnamon; among minerals we find coal, iron ores, copper, zinc and gold. The gold mine at Bong Mien was worked by a French company.

The Phang-rang river still conserves the deformed Hindu name *Panduranga*, a divinity worshipped even to-day in trans-Vindhyan India. From this river valley I entered Nhat-rang where the ruins of the Hindu temples fascinated me with their styles of Bengal architecture and with the images of Siva-Parvati, Ganesh, Kartikeya and other Brahmanical deities attended by dancing *devatas*.

Coming from the Centre to South Viet Nam or Cochin China, I visited the gay French city-port of Saigon with a huge population of nearly two millions. In area the State is 2,647,639 miles with a total population of about six millions. Over 4 lacs of Chinese are doing business and many rich Indian merchants from South India have built Hindu temples, guest-houses etc. The Annamite King was obliged to cede this area in 1862 to the French and it remained a French colony (with expensive French hotels, dancing halls etc.) till June 1946 when so-called autonomous republic (under France of course) was created as a part of Indo-Chinese Federation. In June 1949 it was attached to Viet-Nam (south) as a member State of the French Union. Principal products are rice, rubber, tobacco, betel-nuts, sugar-cane, beans, copra, dried and salted fish etc. In big towns, like Saigon and Cholon, we find several factories of rubber tyres, tobacco, food preserves etc., mostly managed by Europeans and Chinese. The native Annamites are small traders.

NORTH VIET - NAM

From the Centre and the South one could reach North Viet-Nam or Tonking (rich in coal and tin mines) by ship or by air. It has an area of 115,700 sq. miles with a population of about 10 millions. They were brought under French Protectorate in 1884 when the French Government began spending big sums to give publicity to the wonderful art treasures surveyed by French savants like Loti, Lojanqier and others. The French built up a splendid library of Chinese, Japanese, Korean, Tibetan, Sanskrit and Pali books etc., in their Research School at Hanoi, now (after French departure) taken over by the Government of Ho Chi Minh effectively supported by the People's Republic of China and also by the Soviet leaders in Moscow.

President Ho Chi Minh constantly complained of covert American interference in Viet-Nam which, like Korea, has been partitioned temporarily to stop bloodshed as urged successfully by peace-loving India. India was invited by U. N. to serve as the Chairman of the International Armistice Commission and also of the board to supervise the general election in 1956 with a view to reunite, if possible, the North and the South. This was endorsed in Geneva last year, by France, but the present Saigon Government led by Premier Ngo Dinh Diem (fighting a civil war) was not a party to the Armistice! So Premier Nehru naturally commented critically that the fate of Asian nations should no longer be settled by the Western Powers alone! Mr. Krishna Menon tried to smooth the difficulties and he was helped by Mr. MacDonald, the then Commissioner General of U. K. in South-East Asia. So U.. K., U. S. A., and France are now jointly pressing Premier Diem to stabilize things by opening talks with North Viet-Nam on the nation-wide election due in 1956. But much trouble was created by Ngo Dinh Diem and his party.

LAOS AND CAMBODIA

Adjoining Viet-Nam are two States of Laos and Cambodia where Hindu and Buddhistic cultures predominate. Between 1879 and 1895 a French explorer Auguste Paire traversed this 'land of the million elephants' and made a gift (as if his personal property) of Laos to France which began ruling since 1893. Its area is 91.405 sq. miles and population 1.5 millions only, mainly Buddhist by religion and culture. After the second World War North and South Laos were amalgamated under the Luang Prabang dynasty (August 1946), and in July 1949, Laos became theoretically a sovereign State within the French Union sending French advisers etc.

Their neighbours the Siamese annexed in 1941 the territories of Bassac, Paklay and Saya-Buri (like Lop-buri or Lava-puri of Siam); but these were restored to Laos in 1946 although Siam backed by U. S. A. may thus try to expand its power eastward. North Laos is reacting against American and French influences, by forming a semi-Communist party, Pathet Laos, and the party would now be strengthened by the Communist capital Hanoi which can fly aid by air to Vien-tien, the capital of Laos and headquarters of King Sisavang Vong, a pious Buddhist. Old Laotian literature relates not only to Buddhism but the Brahmanical Sanskrit Culture.

Last, though not the least, stands Cambodia under King Norodom (Narottama) Sihanouk who began his rule in 1946 and gave his people a Constitution in 1947. France in 1949 recognised Cambodian Independence within the French Union and French is still the official language of the realm.

PAST LINK WITH INDIA

Cambodia is 181,000 sq. miles in area with a population of about four millions, largely Hinayana Buddhists ruled by Buddhist Abbots who were modern enough to eat and travel with me as far as Japan! There is a Buddhist Pali Institute in Pnom Penn which opens the gate to the world-famous Hindu-Buddhistic temples of Angkor Vat and Baphuon (Vaishva), Bayon and Iswarapura (Saiva-Buddhist) which fascinated me by their colossal yet harmonious architecture, and also by their gem-like carvings and their superb statuaries of gods and goddesses. These art treasures remind us of the historic and cultural relations between India and Camboj-Champa for 1500 years (2nd B.C. to 13th Century A.D.). I had the privilege of reminding of these long cultural connections the Cambodian Prince visiting recently the Maha Bodhi Society. A Cambodian Abbot, Rev Veeravara, has built a Buddhist Centre near Kutab Minar in Delhi, with the help of the so-called *Kamboj* folks of Punjab! From Pnom Penh and Battembang one can enter Siam

"SAKTI - WORSHIP"

(Continued from Page 12)

Aided by Mahakali Lord Visnu killed the twin demons Madhu and Kaitabha while they were about to kill Brahma—the creator.

There was another disturbance of equilibrium in the nature of Mahalakshmi. The element of sattya having predominated, Mahasarasvati emanated from the person of Mahalakshmi. The exploits of this second incarnation are detailed in the third section of Saptasati, which deals with the story of the overthrow of the twin demon brothers, Sumbha and Nisumbha.

After the two successive emanations of Mahakali and Mahasarasvati, the two elements of tamas and sattya were eliminated from the nature of Mahalakshmi one after the other. Only the element of rajas remained as the essential constitutive factor of the nature of Mahalakshmi. Mahalakshmi in this limited aspect of rajas is to be clearly distinguished from the Great Mahalakshmi, the Universal Cause. This lower Mahalakshmi is the presiding deity of the second section of Saptasati which records an account of the destruction of the demon Mahisa by the Divine Mother.

It is said that Chandika though eternal in essence chooses to incarnate herself in various forms in order to fulfil different missions on different occasions.

DURGA PUJA IN BENGAL

In Bengal during the Durgapuja festival the worship of the earthen image of the goddess is usually celebrated. In this image the goddess is almost universally represented as killing the buffalo-demon (Mahisasura-mardini).

The earliest reference to the worship of the clay image is found in Saptasati itself. There is, however, no definite historical record of the origin of the worship of the clay image in Bengal. It may only be said that the practice is current for not less than a thousand years.

The goddess Durga as worshipped as an image in M.P., U.P., Bihar, Bengal, Orissa and Assam is a goddess with ten hands (Dasa Bhuja). In her retinue we find several figures of gods and goddesses —namely, Kartika, Ganesa, Saraswati and Lakshmi together with Mahisasura,—the demon born of the buffalo into whose body he entered for fear of being killed by the goddess. It appears that in worshipping the Mother of the Universe or in celebrating the day of Dusserah the aforesaid parts of India follow the tradition of the Ramayana while the others follow the tradition of the age of the Mahabharata.

Of the several figures in the group around her, Kartika, the commander of the godly force, represents the power which is the first requisite for the physical suppression of evil and also for the maintenance of the supremacy of the moral and spiritual order. Power for its perfection requires the cultivation of the arts and the sciences: the culture of the mind and the soul must be the invariable counterpart of the culture of the body. This explains the presence in that group of Saraswati, the goddess of learning, music and other arts.

All-round culture alone can find itself manifested in the birth of an all-round personality like Ganesa, the Lord of beings or Ganapati, the leader of the people. Ganapati, the elephant-headed who must be first appeased in all worship is pedestal of all idealism and divinity in mankind

It is when a people rises thus to the full height of manhood that brings Lakshmi, the godd of fortune and prosperity. She is the other daugh of Sakti, the Divine Power and brings abund fruition over the face of the smiling earth, in pe and plenty—the fruition of the elimination of by the exercise, by the Divine Mother, when p perly invoked, of her beneficent power.

MEANING OF TEN HANDS

The power of the Mother extends to the directions and is multiple and manifold in manifestations: this is represented by her ten han The evil force that she subdues exists not only the outer world but also, and chiefly, in our o natures—they are our own evil passions and p pensities, dark and menacing and often in disgu like the asura, which only the shining weapons the Divine Goddess, when appropriately invoked, subdue and conquer. We often forget that there tremendous power behind the goddess, that right backed by divine might when that might is invol by self-control, self-discipline and self-sacrif Divine power does not work for our private ben or for the satisfaction of our private desires, a the prosperity that gives hope for the indulge of our sensual impulses and passions.

It makes for ordered existence in the full sense, based on self-control and discipline. This the great lesson of the Puja, the worship of Mother of the Universe—the mastery of the bo by the soul, the triumph of spirit over matter.

On this day of Dusserah therefore, let us pray to the Divine Mother that at this auspici moment of our lives—on this blessed day—she m shower upon us her choicest blessings. May we be worthy to be the true children of the Moth May Her Power, the Divine Power, the Power the Right, the Good and the True, prevail over powers of darkness and evil and wrong everywh in the world.

INDO-CHINA PAST AND PRESE

through *Aranya Pradesha*. I took the sea-route, Saigon, direct to Bangkok. The Siam Navigat Company plies ships from the Cambodian harbo to Kep and Ream to the Siamese ports. Mid-Cambo boasts of the great lakes, drawing the overflow of Mekong river, running parallel to the Menam Thailand.

Cambodia exports rice, cotton, tobacco, pa sugar, resin, timber, hides, fish, oil etc. Preci stones and phosphate are their chief minerals, a great possibilities lie hidden in 25 million acres forest-lands of undetected resources. The soil damp and fertile; but Cambodia suffers fr lethargy and acute shortage of manpower and lab which she may have to import from India or Chir

Thus we see that the racial and economic p terns of Indo-China offer—as by its name—fields natural collaboration of the natives with India the one side and China on the other. Both neighbours (in spite of different ideologies) genuinely eager to help their friends of Indo-Ch exploited for nearly a century by Western colon or interlopers. India and China must soon incre their friendly support to the Indo-Chinese people

PLASTIC SURGERY—INDIA'S ORIGINAL

ontinued from Page 259)

growing well and attains a fairly big size the hare- should be operated. Best time for the operation of relip is between 3-6 months. Then the palate is erated before the child learns to speak i.e., within |2 to 2 years of its life. Failure to have these oper- ons done in right time causes almost insurmount- e difficulties in the production of a good speech. is almost accepted now that 100 p.c. good speech impossible if the operation is done when the child grown up and has already learnt all the speech.

Hypospadius: Some children do not develop the nary passage complete. They pass urine from e under surface of the penis and not the tip. e penis is also curved. These victims can be ed by plastic surgery and the best time for their eration is between 2 and 5 years of age.

Webbed Fingers: The fingers are joined together th skin flaps. These should be operated between 5 years i.e. before the age the child learns to use his fingers separately and purposefully.

Besides the above there are varieties of congenital ects which can be relieved or cured by plastic gery.

FECTS OF FACE

ll injuries and defects of the face including the ctures of the jaws come under the domain of plas- surgery. In short it can be said that 50 p.c. of ients undergoing plastic surgery has something to with face. And all such surgery on the face are cosmetic surgery. A big loss in the cheek or lip middle of the nose by accident or disease is not ed for beauty alone but to make him fit for the ety to earn his bread. On the other hand a girl ing a short, stout nose may require raising and owing of the same for cosmesis. Here again the blem of the marriage comes to the topmost. So a kind of work is not cosmetic alone but rehabi- ing too.

A person lost one eye but the socket got contract- and he could not fit an artificial eye. The socket be enlarged and made to fit an artificial eye.

A child got small-pox and ulceration of the nose causing closure of the nostrils. The child could not breathe through the nose for years. The nostrils can be reconstructed and the normal breathing can be established.

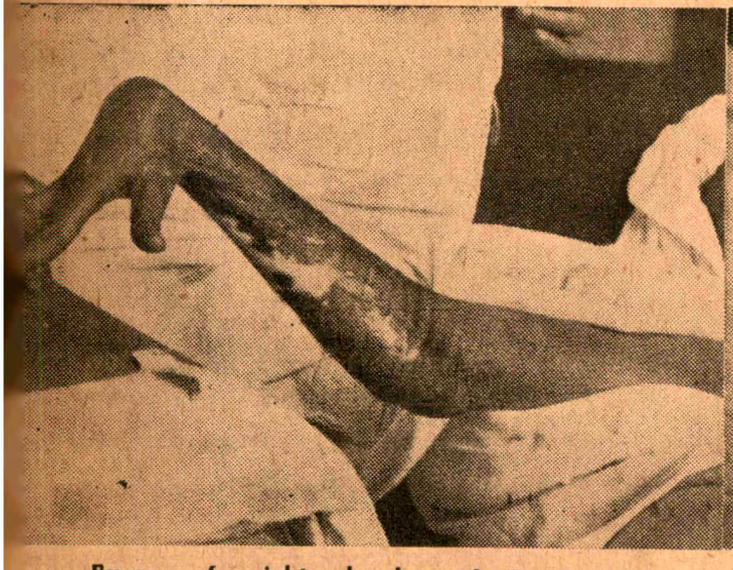
The black birth marks of the face can be excised and the appearance changed to normalcy.

PURELY COSMETIC

There are a few problems which may be called purely cosmetic. An elderly person wanting to remove his old age creases from the face or a grown up lady liking to have her breasts made smaller and raised like that of a young one is avoided by most plastic surgeons these days. This is more so in our country where need for the more important function of this specialized art is so acute.

Scars of the face can be excised and made to look better. The pittings of the small-pox can be improved although it is very difficult to cure them. It is undoubtedly a cosmetic surgery and this should be given the second place unless in case of marriage problems.

The most important point for the patients to know is that a number of ordinary deformities can be corrected with the aid of plastic surgery and they should try to ameliorate their condition with the help of different special branches of surgery at their proper age. But at the same time the specialist surgeons should appreciate their difficulties and try to help the victims in their order of importance particularly from the point of view of working capacity and usefulness in the society. People sometimes make propaganda that plastic surgeons can delete the scars. Here one would like to raise a strong objection. No man on this earth can delete a scar line. He may be able to make the scar narrower and less visible but a line scar will always be there. Every human art has its limitation and so also the plastic surgery. The science is new and is developing everyday and many more problems which seem impossible now may be solved later.



Burns of right hand and forearm with contracture of fingers and wrist. Patient could not use the hand at all.

The same patient was operated by skin grafting and bone fixation. The hand is useful as shown.

RAW MATERIALS FOR INDUSTRIAL DEVELOPMENT

(Continued From Page 26)

bauxite, but domestic production in 1953-54 was only 3800 tons. Imports in 1954-55 amounted to 12,380 tons valued at Rs. 3.60 crores. The Second Five Year Plan has fixed the target for aluminium at 40,000 tons per annum.

Copper which is perhaps the oldest metal known to man finds extensive use in the electrical industries, ship-building, in the manufacture of utensils and of alloys like brass, bronze, bell metal, etc. Our resources of copper ore are limited and the production of the metal falls far short of requirements estimated at 40,000 tons per annum. Output of copper in 1954 amounted to 7171 tons while imports during 1954-55 at 26,977 tons cost Rs. 8.75 crores of foreign exchange. Apart from the inadequacy of indigenous production, the superior grade of electrolytic copper is not manufactured because there is no refinery in India. In view of the shortage of copper and the high cost of electrolytic copper, it is worthwhile to substitute aluminium for copper in the manufacture of electric conductors. Steel reinforced aluminium conductors are now extensively used for transmission lines. These are now manufactured in India and production is rapidly increasing. The grades of steel and aluminium used for the purpose were hitherto imported. Last year a unit in South India set up an aluminium rod rolling mill for manufacturing the main raw material, namely, electrolytic aluminium rods, and proposes to use Indian metal in cable manufacture to the extent it is available.

It will also be advantageous to reduce the utilisation of copper and copper alloys in the form of domestic utensils. This point is of some importance as the increase in the standard of living of masses expected under the five year plan will create additional demand for metallic utensils which in total may amount to a substantial quantity of copper. It will be advisable to take steps to divert the demand to articles which can be made without use of scarce metals. Already, in some parts of the country, stainless steel vessels, made from imported metal are coming into favour. This trend may be encouraged along with provision of facilities for the manufacture of the special type of steel required for the purpose. The replacement of copper or brass bronze utensils will not only reduce consumption of copper but also of metals like tin and zinc for which India is entirely dependent on imports. The change in popular preferences that is envisaged will, however, affect the livelihood of thousands of skilled craftsmen engaged in traditional metal trades, who are already hard put to meet the competition of machine turned metalware. A constructive approach to the problem will reveal ways of utilising the traditional skill of the metal workers in the new metal trades and in light engineering industry. This is preferable to keeping them tied to uneconomic occupations, which are costly both from the individual and national point of view, in the name of support to handicrafts and cottage industries.

Zinc and Tin : As indicated above, for zinc and tin we are entirely dependent on imports. A small quantity of zinc ore is mined in India, but the output, about 300 tons per day, is insufficient for the establishment of a smelter. A committee set up by the Government of India which recently went into the question of establishing a zinc factory has recommended that a smelter could be established only when the daily output of ore reached 1000 tons. Meanwhile, annual imports of zinc are of the order of 40,000 tons. Zinc imports in 1954-55 amounted to 44,486 tons valued at over Rs. 5.28 crores. Imports of tin during the same period amounted to 3935 t of the value of 3.83 crores. Zinc is used for sn castings, copper alloys and in galvanising. finds important use in manufacture of tinplate containers, copper alloys and for tinning copper brass vessels.

The considerations of economy which sho govern the use of copper also apply to these met It should be worthwhile to examine the econom of progressive replacement of corrugated galvani sheets used for roofing and other purposes by asb tos cement sheets. The quantity of asbestos she now made in India is of the order of 75,000 to 80,(tons per annum. Imports of raw asbestos in 19 55 amounted to 9,016 tons of the value of Rs. 1 crores. Raw asbestos deposits are found in In but not on a significant scale.

Lead : Against annual requirements of 8,(tons, production of lead in India is of the order 1700 tons per year. Lead is used in printing, t manufacture of water and gas pipes, as armour electric conductors, for construction of sulphu acid chambers, for manufacture of the alloys, sold and pewter etc. The discovery of a one-mile long le belt 600 feet wide and 1200 ft. deep in Almora distr was recently announced by the Geological Survey India. Another deposit of lead ore has been found Bellary district.

Some other metals used in the steel electric industries e.g. nickel, molybdenum, tungsten, cob are almost entirely imported. Small deposits of the ores are known to exist in India. The possibilities exploitation of these deposits and prospecting shou be vigorously pursued.

TEXTILE FIBRES

Textile fibres include cotton, jute, wool and s silk. A few decades back, raw cotton and jute we the principal items of India's exports. At prese cotton and jute make the largest contribution to i dustrial production and their manufacture provid employment to the largest number of factory worke

Cotton figures in the country's foreign trade bo as an article of import and export After the Partitio India had to import large quantities of long stap cotton used by the textile industry. On the other ha part of the production of lower grade cotton is e ported. Recently the export quota has been increas to include staple lengths up to 25/32". The output cotton during 1954 is estimated at 3,935,000 bale Exports during the year 1954-55 amounted to 29,8 tons (170,783 bales) valued at Rs. 10.18 crores. In ports for the same period amounted to 120,853 to valued at Rs. 58.45 crores. In view of the heavy in ports of long staple cotton, the obvious line of develo ment is to step up the production of long staple cotto in the country. The main difficulty in this respect climatic . The bulk of India's output of cotton consis of short staple variety grown in the rain fed areas the cotton belt. The climatic conditions in thes regions do not make it possible to change over t long staple varieties which require regular and plenti ful supply of water and thrive best on irrigated lan Long staple cotton thus competes with foodgrain for land use and this fact sets a limit to the possi bility of expansion even taking into account the in crease in area of irrigated land under the variou irrigation projects which are nearing completion The most promising way of reducing imports of raw cotton appears to be through the development o manufacture of finer grades of textiles from ar silk or mixed fibres. A change in the sartorial habit and preferences of the public must come about be

ore this becomes possible on any considerable scale. ut I feel that, with skilful propaganda, it should be ossible for the public to get over the costly fasci- ation for superfine semi-transparent cotton tissues ade out of foreign cotton.

OLDEN FIBRE

Jute : After the Partition, the Golden Fibre has st its pre-eminent position in the national economy. xchange difficulties following the devaluation of the upee in 1950 brought about a crisis of supplies which rovided the incentive for the inauguration of a pro- ramme to step up the domestic production. The pro- ramme was, however, halted midway when it appear- d within reach of success. As against 4.7 and 4.6 illion bales in 1951 and 1952 output of jute in 1954 ad dropped to 3.15 million bales. The whole of it is onsumed by the Indian jute industry. In addition. ndia imported 1,218, 381 bales valued at Rs. 12.97 rores from Pakistan in 1954-55.

Art Silk : A passing reference to the need for ncreased production has been made in connection ith cotton. Present production of art silk yarn is far hort of the demand and of the installed capacity of he art silk weaving mills in the country. The require- ents of the 38,000 power looms and 78,000 hand- oms engaged in the art silk industry is estimated ; 50 to 55 million pounds of yarn per annum. De- and for art silk products, on account of their low rice and utility, is fast increasing. Production of art lk (viscose) yarn rose from 5.6 million lbs. in 1952 11 million lbs. in 1954. The production during the rst half of the current year was 6.1 million lbs. Pro- uction of acetate yarn was started last year and the tput during the current year is estimated at 2 mil- n lbs. The total production of the three existing nits is estimated at 14 million lbs. In addition, a tton mill in Bombay has begun erection of a large ant with an annual capacity of 28 million lbs. here remains vast scope for the expansion of the dustry and for the establishment of new units in e major consuming centres. India is every year porting increasing quantities of art silk yarn in- uding varieties not manufactured in India like lon and grillon. Imports during 1954-55 amounted nearly 41 million lbs. valued at Rs. 13 crores.

Wool : India makes only a minor contribution the world output of wool. As with cotton, the infe- r grades, used in making carpets, are exported d the finer grades required for woollen manufac- re are imported. With better grading it should be ssible to make increasing use of indigenous sup- es for manufacture. The coarse wools are used in king belting. In this respect India has enough raw terial and could be self-sufficient as regards belt- g for machinery. Imports of raw wool in 1954-55 amounted to 2.8 million lbs. valued at Rs. 1 crore, woollen tops to 11.5 million lbs., and Rs. 7.16 crores and yarn to 3.7 million lbs and Rs. 1.35 crores. Piece-goods costing Rs. 66 lakhs (13,22,038 lbs.) were also imported during the year. Exports of raw wool during the year amounted to 30.8 million lbs. valued at Rs. 8.61 crores. The quantity of woollen manufactures in India during 1954 was of the order of 18 million lbs.

CHEMICALS

Sulphuric acid, soda ash and caustic soda are the major chemicals of industry. Just as steel is the basic metal of heavy industry, sulphuric acid is the basic material of chemical industry. It is also used in various other industrial processes in the manufacture of steel, fertiliser, rayon etc. 1,48,817 tons of acid were produced in India in 1954. Imports are negligible and confined to special qualities. Consumption is expected to rise to 500,000 tons by 1960-61.

Sulphur: India is entirely dependent on imports to meet requirements of sulphur which is used in the manufacture of sulphuric acid. The shortage of sulphur underlines the importance of developing manufacture of nitrogenous fertilisers other than ammonium sulphate, like urea and ammonium nitrate. Manufacture of urea utilising coke oven gas has been recently started at Sindri. The new fertiliser plant to be set up at Bhakra will manufacture ammonium nitrate.

Soda Ash is used in glass, textile, paper and dyestuff industries. Nearly half the total supply is used by dhobies for washing purposes. Internal production last year was 48,293 tons and imports were of the order of 94,405 tons. It has been estimated that internal demand will rise to 300,000 tons by 1960-61.

Caustic Soda is one of the important materials used in the manufacture of art silk. Besides it is used in the soap, paper and cotton textile industries. Total production in 1954 amounted to 49,307 tons and imports to 49,257 tons valued at Rs. 3.04 crores. Annual demand is estimated at 150,000 tons by 1960-61. The basic material used in the manufacture of both soda ash and caustic soda is common salt. The expansion of these industries will call for an increase in salt production.

RUBBER

Rubber is an important raw material which is required for the manufacture of a large range of producer and consumer goods. Indian rubber plantations cover an area of 1,74,000 acres and annual yield of raw rubber is of the order of 20,000 tons. Imports in 1954-55 amounted to 4,689 tons of the value of Rs. 1,03,49,015. Demand for rubber is bound to grow with the growth of industries and road transport. There is scope for increasing the area under rubber in the forests of Travancore-Cochin which should be exploited to the fullest

extent. Development of rubber plantations in South India will also facilitate the rehabilitation of the Indian plantation workers who are being pushed out of Ceylon. Over the last year the price of natural rubber has nearly doubled. World demand for both natural and synthetic rubber is increasing at a very rapid rate. It may become necessary to supplement our resources of natural rubber by manufacture of the synthetic product.

Mica : Almost the whole of the mica produced in India is now being exported. During 1954-55 India exported 17,825 tons of mica valued at Rs. 6.59 crores. Similar is the case with lac. Exports during 1954-55 amounted to 26,800 tons of the value of Rs. 10.61 crores. With the growth of the electrical industries, it is possible to expect increasing use of these products within the country.

Oils and Oilseeds : Until very recently oilseeds figured prominently in India's export trade. It is a matter for gratification that exports of seed have now been replaced to a large extent by export of oil. Similar is the case with hides and skins; exports now are mostly of the tanned material.

FUEL

One of the most reliable indicators of the level of industrial development of a country is the energy output which is determined by the resources of fuel and hydro-electric power. Coal and petroleum products are the main fuels of industry. These are also used for household purposes. Shortage of the total supply would indicate the need for economising their use in the household.

Petroleum : India produces a small quantity of petroleum which possibly meets about five per cent of the total consumption. The bulk of the demand is met by imports which in 1954-55 totalled 936 million gallons of the value of Rs. 82.86 crores. In view of the heavy volume of imports, the proposal for setting up a synthetic oil plant included in the Second Five Year Plan at a capital cost of Rs. 80 crores is not so fantastic as alleged in some interested quarters. The shortage of indigenous oil production also shows up the need for augmenting the production and use of power alcohol, side by side with the expansion of the sugar industry. Production of power alcohol at present is of the order of 8 million gallons per year. Petroleum products are used in the form of fuel for industry and transport, illuminant and lubricants. The extension of electricity may be expected to reduce the consumption of kerosene. During the last war it was found possible to replace mineral lubricating oils by vegetable oils. The cost differential is the main obstacle standing in the way of use of vegetable oils for lubrication during normal times. But it will be worthwhile to carry on research in the field so that, if imports are cut off for any reason, industry and transport will not be brought to a standstill on account of shortage of lubricants. Before the advent of kerosene, various inedible vegetable oils were used locally in different parts of the country as illuminant. With the almost universal use of kerosene, the production of these oils has completely disappeared and the trees yielding the oil seeds have been cut down and bur as fuel. It will be useful, as a precautionary measu to resuscitate the production of these oils and to i vestigate the possibility of their use as lubricants a as fuel for oil engines.

COAL

Coal production in India is now of the order 35 million tons per annum. Industrial expansion, a especially the new steel plants, will call for large ad tional supplies. The target for coal in the Seco Five Year Plan has been fixed at 60 million tons be attained in 1960-61. This will mean about 20 p cent increase in total energy consumption. At t present rate of consumption our known coal reserv are expected to last a few centuries, though reserv of high grade metallurgical coal will be exhausted much shorter time. According to Dr. Bhabha, if In attained the same standard of consumption energy as the U.S.A., namely, output of nine tons coal per head per year, that will mean burning 3000 million tons of coal per year which will exha our resources in about a decade. This leads to t conclusion that the needs of a fully industriali India cannot be met except by utilisation of ato energy or other sources still untapped like so energy, the internal heat of the earth and the ene of winds and tides. Dr. Bhabha estimates that, even present, atomic energy might be competitive in c tain parts of India which are far away from coal producing regions. The position of reserves fissile material is also hopeful. The reserves of t rium and uranium according to Dr. Bhabha's e mate will be equivalent to 600,000 million tons of c or more than fifteen times the known coal reserv

In the same address Dr. Bhabha has also dra attention to a very significant feature of our curr energy output which is not as widely known as ought to be. "In 1951," said Dr. Bhabha, "some million tons (dry weight) of cowdung were used fuel. The total hydro-electric potential of India wh fully harnessed could deliver an amount of ene totalling about a seventh of that obtained from c dung." A proper appreciation of the significance this fact on the part of the Government and Planning Commission should lead to a really sci tific approach to the vexed question of cattle slau ter which is now, unfortunately, confused by the c troversy between religious obscurantists on the hand and dogmatic secularists on the other.

INDUSTRIAL EXPANSION

Even a brief survey of the raw material reso ces of our country will show the extent to which are dependent on imports for the indispensable ma rials of industry. Industrial development will agg vate the dependence unless special attention is voted in the plan to the discovery and developm

IN THE BLACK MAN'S COUNTRY

(Continued From Page 28)

ittle about them during my three days' stay there. was surprised to find these servants were not local old Coast people. The local people of Accra were argely different from Akans — their language was an — and the Akans were different linguistically, hough not culturally, from Gans. But the house ervants were from very far away Nigeria. A car as placed at my disposal and the driver of it was black African, a very pleasant-looking person, and Christian rejoicing in the name of Edmund Quist this is a well-known name in Gold Coast, being at of a famous politician and man of affairs). He as something of a silent chap. The head House-boy ave his name as Markson Sambo. He and the other oys' or servants were Igbos from Nigeria. The gbos like their cousins Yorubas of Nigeria, are a ery pushful people, clever, alert and eager to know, d adventurous. Some of the them have acquired nglish learning very deeply, like Yorubas, the Gans d the Akans. They number about five millions and e Yorubas also have a similar number. The Igbos e employed in Gold Coast in all sorts of capacities, d many of them have settled down in Gold Coast. e Akan people of Gold Coast are in a very flourish- g condition, with dollar crops like cocoa and palm l and ground-nut in abundance. The Akans can ford to pay for the services of other people in eir own country. All these house-boys were Chris- ns, but had retained a great deal of their old pre- ristian mentality. After these house-boys found, at though I was a foreigner and from India, and a est of the Government, I was nevertheless a like- le chap, and wanted to make friends with them, d they appreciated it very much, as the Black rican is essentially a democrat, they too were eased like myself to have occasional chats with me.

I have been referring to the people of West rica as "Black Africans". The word Negro is not ed by African peoples with sense of self-respect, this word sounds so very like the term of con- npt, Nigger. But all describe themselves with de as Africans, and they are equally proud to call emselves "Black Men and Black Africans.

MAND FOR "MAGIC RINGS"

The house-boys, individually and severally, ask- me to procure for them from India these things— ain Pills' and 'Magic Rings'. Even in far away st Africa the common European superstitution, ich is also found in America that the Indians are people with great magic powers which they have uired through Yoga and other mystic or esoteric ctices which are far beyond the ken of Western nce, has penetrated into West Africa also. They ieve that the Indians are adepts in palmistry, and y can use magical charms and formulas which are re potent than anything found anywhere else in world. They want these 'Brain Pills' in order to elop power to pass even the stiffest examina- ns (to pass an examination to qualify for a 'white lar' job is the ambition of most African youths, much as of youths in India). "Magic Rings" are very much in demand and they are to ensure success in life; and they even believe that a genuine ring coming direct from India can make the wearer invisible. Sambo wanted a Magic Ring against witchcraft. I argued with him that as he was a Christian, he need not have any fear from witches. But he laughed at the idea, and said that witches and magic did not discriminate between Christians, Muslims and Pagans. When I told him and his fellows that all they have heard about "Brain Pills" and "Magic Rings" was bunkum, and no sensible man anywhere should believe in such hocus-pocus, I felt a prick in my conscience that even after eight years of independence we too had many such simple people in India too who believed in various kinds of religious magic. I told them, however, that as citizens of African countries which were progressing and were looking forward to obtain their independence, they should get rid of these silly notions. They listened to me with respect, but I could see that they were distinctly disappointed. The same kind of child-like and childish faith I found in some highly intelligent Africans also — an M.P. or M.L.A. in Gold Coast and a Kumasi Police Officer. They also were keen on getting these Rings and Pills from India. Later I found out that some unscrupulous charlatans from India had started this business through newspaper advertisements, and generally they succeeded in cheating innocent Africans of their money. This should be put a stop to, in the interest of India's good name among Africans and other foreign peoples.

Raw Materials For Industrial Development

of indigenous sources as well as to the development of substitutes. We have only to visualise the situation that is likely to develop, if for some reason India is cut off from the sources of supply abroad which are under the control of the Anglo-American group, to recognise the precarious basis of industrial planning in our country. Even apart from any sudden stoppage of supplies, sharp fluctuations in the cost of the imported materials can throw plan estimates out of balance. Industrial expansion in Western Europe has led to shortages and firming up of prices of most metals. This tendency has been aggravated by strategic purchases of the U.S.A. in regard to non-ferrous metals—copper, aluminium, nickel etc.—for which India is largely dependent on imports. Copper prices for instance have risen by nearly 70 per cent during the last one year. Prices of other metals, lead, zinc, tin etc. have also risen though to a smaller extent.

If the planned industrial development of the country is to proceed without sharp interruptions caused by shortage of materials, there is need for setting up a body at policy making level, which will keep a close watch on requirements, availability and prices of raw materials and ensure a steady flow of supplies. It will be the responsibility of this body to anticipate the demand that is likely to arise in future, and take steps to maintain supplies at adequate level, by organising prospecting of new indigenous sources, indicating the need for substitutes and by building up stockpiles of strategic materials. In Russia there is a "Ministry of Material Reserves" which performs these functions. In India it will be necessary to set up a Raw Materials Commission to function as an adjunct of the Planning Commission. Or, the Ministry of Scientific Research and Natural Resources must perform these essential functions.

LORD CURZON—A RETROSPECT

(Continued from Page 14)

the whole passage on this subject, he would not probably come to the conclusion that it was the intention of Lord Curzon to say that the Indians were habitually liars or have no regard for truth—an interpretation which is usually made of his speech. In view of the great prominence given to this, I take the liberty of quoting a few passages, because most of the people who readily accept the accusation against Lord Curzon, probably have never actually read the text of his speech.

> *"I hope I am making no false or arrogant claim when I say that the highest ideal of truth is to a large extent a Western Conception, I do not thereby mean to claim that Europeans are universally or even generally truthful, still less do I mean that Asiatics deliberately or habitually deviate from the truth. The one proposition would be absurd, and the other insulting. But undoubtedly truth took a high place in the moral Codes of the West before it had been similarly honoured in the East, where craftiness and diplomatic will have always been held in much repute. We may prove it by the common innuendo that lurks in the words "oriental diplomacy" by which is meant something rather tortuous and hypersubtle. In your epics truth will often be extolled as a virtue; but quite as often it is attended with some qualification and very often praise is given to successful deception practised with honest aim. I remember reading in an Indian newspaper the following paragraph :—'There is not a question but that lying is looked upon with much more disfavour by Europeans than by Native Society. The English opinions on this subject are strong, distinct, and uncompromising in the abstract. Hindu and Muhammadan opinions are fluctuating, vague, and to a great extent dependent upon times, places and persons'."*

MORALITY IN EAST AND WEST

It seems to be that what Lord Curzon intended to say really coincides with the opinion which he quoted from an Indian newspaper. Whether this was an exact quotation from the *Indian Mirror* as is held by the apologists of Lord Curzon, I cannot say. But it may be conceded that it reflects a bare truth. Can anybody deny that English opinion on the subject of truthfulness is somewhat different from that in India? This is not tantamount to saying that the English are superior in point of morality to Indians. Each nation has a scale of values for different virtues and in some respects one is superior and the other is inferior. For example, a moral lapse in sexual matters would not be regarded with such repugnance in English society as in India. Again, in English society, common rules of hospitality such as are observed in the East are conspicuous by their absence. An Englishman, for example, would not think of asking a friend who visits him, say at a late hour in the evening, to spend the night in his house as his guest. This would be quite repulsive to the Indian feeling. In this way, instances may be multiplied about the differences in the value of moral principles and social practices of different nationalities, and I think we should admit that speaking falsehood is not regarded so seriously in India as in England, and probably that is what Lord Curzon really meant. He himself elaborated in the later part of his speech the particular forms of untruth against which his remarks were directed. The most important of these he calls exaggeration and he explains it as a most extravagant account of ordinary occurrence or most fanciful motive attribute a person. Undue praise of a man, which may called flattery, or undue slander and vilification rival or enemy are also indicated by him as the fo of untruth which he had in view. Here, again might pause and think whether he was not substantially correct both in his motive (he was addres the students) and in his statements.

PARTITION OF BENGAL

Now, we come to the Partition. It is a fact some two years after his departure from India, L Curzon wrote to the "Times" that it was a "wic falsehood to say that by the Partition he intended carve out a Mahommedan State, to drive a we between the Mahommedans and Hindus, or to arc racial feuds. It may be literally true, but we h now got positive evidence to indicate that s motives were not altogether absent, at least in minds of the high officials including the Vicer Secretaries. For example, Sir Herbert Risley w in a letter that the creation of the Eastern Provi would serve Mahommedan interests and that it intended to be a state where Mahommedan inter would be strongly represented, if not predomin Although, therefore, it is a fact that the idea Partition was already in the air before Lord Cur assumed his office, the ultimate form in which it adopted, and which was the creation of Lord Cur alone, was not altogether dissociated from the i of creating some sort of rift between the Hin and Muslims. But then it has to be remembe that the *Divide and Rule* was a time-honoured po of the British, and Lord Curzon alone could not held to blame for giving a very direct and vis expression to it. But a still more important point bear in mind in this connection is that in view what has happened in recent times, can we reg the division of Bengal under Lord Curzon's scheme altogether an artificial one? Does it not show t there were deep-seated differences between Muslim population of East Bengal and the Hindus Bengal, and it was obviously to take advantage these that Lord Curzon brought in his measure. is true that at first the Muslims, generally speaki were against the measure. But it is equally true t it was not long before the Muslim opinion soli ranged itself behind the Partition of Bengal, and t was true not only of the Muslims of Bengal but g of Muslims of India as a whole. The first Partit of Bengal was an arbitrary act of Lord Curzon, the second Partition in 1947, which was really result of a democratic procedure, followed, more less, exactly on the same lines as were adopted Lord Curzon. It may not be wrong, therefore, infer that Lord Curzon possessed an instinct wh enabled him to find out the real cleavage that dormant between the Hindus and the Muslims a he tried to bring it out to the advantage of British. Since this policy of *Divide and Rule*

n openly advocated by the British authorities from time of Lord Ellenborough down to that of fferin, Lord Curzon need not be hauled over the ls for an administrative measure which would ctively achieve the result desired by the British horities. The Partition of Bengal certainly was hly distasteful to the Hindus, but it cannot be ied that it became popular with the Muslims who med the bulk of population in Eastern Bengal, l in judging Lord Curzon, we must remember both s fact and the policy of *Divide and Rule* which s accepted by the British Government from almost very beginning of their rule in India.

EDIT THAT'S HIS DUE

While we have so far referred only to those acts which Lord Curzon stands justly accused before bar of public opinion, we must also mention ething to his credit which is not always remem- ed with gratitude that is due to him. First of all es the creation of the Department of Archaeo- y which has preserved ancient monuments of ia and has proved a great source of national piration and glory. The creation of this Depart- nt on a suitable basis, which was long overdue, l always redound to the credit of the great roy.

Next to this, we should remember the stern tude which he adopted towards the brutal acts of soldiers in respect of Indians.

An offence of a peculiarly revolting character been perpetrated by British soldiers against a ve woman in Burma. Not only was no punish- t meted out to the guilty, but both the civil and tary authorities tried to hush it up. A prosecu- was ordered, but it failed on a technical ground. l Curzon took strong disciplinary measures and this he was condemned in very strong language he entire Anglo-Indian press. Somewhat later, two pers belonging to the 9th Lancers had beaten a ve cook so severely that he had to be taken to a ital and died nine days later. Nothing was done iscover or punish the culprit. But as soon as the s reached the Viceroy, he ordered an immediate iry and as the wrong-doers could not be ed on account of the refusal of the soldiers to evidence against the culprits he punished the e regiment. Here again, the English newspapers loud in their denunciation of Lord Curzon, but ething more important than this followed. During time of the Delhi Durbar, in 1903, when this ment was passing in parade before the Viceroy the assembled guests, it received a hearty ova- from all the European spectators. It was impos- to mistake the significance of this and, as Lord on's biographer tells us, the Viceroy naturally deeply hurt at this demonstration of his trymen. It may be added that this spontaneous approval of the crime of the regiment by the Europeans was followed by counter-demonstration on the part of Indians showing a deep appreciation of Lord Curzon's actions.

Lord Curzon poured out his heart, in wrath, to the Secretary of State, and strongly denounced this mentality of his own countrymen. For he held that Imperialism in India should be based upon justice and welfare of the masses. This supplies the key to Lord Curzon's policy and career. He was an Imperialist of the true type, and subject to the perpetual domination of the British over India, he sincerely tried his best to do good to India in the light of his own judgment. He was strong and straightforward and an imperialist to the core, with all its virtues and vices. But even this cannot be said to be true of a large number of Viceroys in India.

Development Of Village Industries

(Continued From Page 20)

industries scattered over a large area and they themselves mainly do the work of finally assembling the parts. This has been feasible in Japan because of the political and social conditions prevailing there. The mill owners there have both social and political influence over the villagers and there is no such thing as labour movement. Here in India conditions are so different that no big industry dare depend upon regular supply of manufactured parts from the villages in time and according to specification. It is idle to expect smooth working of the Japanese method in India for the very nature of social and political conditions. In Japan industrialisation has descended from the top downwards to the village, as for example, without iron ore, Japan has huge steel plants. That is the main reason why Japan has failed in the long run. In India industry should grow from the village upwards. That is what is envisaged in the scheme above.

In order that India may develop industrial economy through village industries, which is admittedly the only practical way, two points have to be borne in mind. One is that the production and the consumption of goods should be in the same area or zone as far as possible. No marketing organization will be able to organize village production in one place and consumption at a distant place. The second is that the production should be linked up with agriculture at the village level; implements and tools should be manufactured regionwise, while the basic industries should produce the manufacturing plants. In this way alone can agricultural economy be converted into industrial economy and the new India of our dreams will emerge.

AN EARLY
French Theatre At Chandernagore

By AMAL MITRA

THE first English theatre to be established in Calcutta was started in the middle of the eighteenth century. A number of other English theatres made their appearance in the city towards the end of the eighteenth and the beginning of the nineteenth centuries. Play-houses also spread to the environs of Calcutta such as Dum Dum and Barrackpore early in the nineteenth century. These were unassuming but neat and well-designed buildings.

The theatre established at Dum Dum to provide entertainment for the troops stationed there set up a proud record and bears a place of honour in the annals of the English stage in India in the nineteenth century. This was largely due to the outstanding histrionic abilities of a simple bombardier named Charles Frankling who was universally admitted to be one of the best English actors ever to perform on the stage in India. Moreover, the Dum Dum Theatre possesses another claim to distinction that will ensure that its memory will never fade. Mrs. Leach, the pre-eminent actress of the English stage in nineteenth century India, made her first appearance on its stage. The Barrackpore Theatre too acquired an enviable reputation. Many excellent plays were ably presented there, reports of which were constantly to be found in the newspapers of that period. The Governor-General would occasionally visit this theatre.

The suburban theatre I propose to deal with in this article, however, is the one that was set up at Chandernagore. A newspaper of that period relates that it was the Barrackpore Theatre that set the fashion for playhouses in the environs of Calcutta. It says: "The amusements of the Theatre, which commenced at Barrackpore have been rapidly diffused over many stations." W. H. Carey, the author of 'The Good Old Days Of Honorable John Company' says of the Chandernagore Theatre "Chandernagore also boasted of a theatre where many of the Calcutta residents used to resort. We have not been able to ascertain when it was built." To-day, however, we are no longer in any doubt as to when this theatre was established. The papers of the time specifically state that it was opened on the 15th of March, 1808. This theatre was set up by French prisoners of war to relieve the tedium of their detention and to entertain friends. There was a unique feature in regard to this theatre in that no admission prices were charged of the audiences attending performances there.

"EXCELLENT ENTERTAINMENT"

The two plays with which the theatre opened on the 15th of March were 'Menechmes' and the celebrated French dramatist Moliere's 'The Cheats of Scapin'. For the benefit of those interested in the stage the 'Calcutta Gazette' of the 24th March carried a lengthy account of the founding of this theatre along with a review of the performances on the opening night. They added: ".....We are happy in embracing this opportunity of intimating to the lovers of the Drama, this new extension of the histrionic field." In regard to the performances they highly praised the standard of acting which, they stated, was of as high a quality as were the stage sets, backdrops etc. They make special mention of an outstanding dance performance by a boy of twelve. They also mention that among the 300 people who attended the opening performance were "....the Superintendent, and some Gentlemen of rank and fashion from Calcutta."

Thereafter, week after week at this short-lived Chandernagore Theatre were played tragedies and comedies of famous French dramatists. For example, the 'Calcutta Gazette' of the 7th April reported that the plays 'Le Barbier de Seville' and 'L' Avocat Pateline' had been staged at this theatre on the 4th of April. The report starts with the information that these performances were played "....to a numerous and overflowing audience." In regard to the plays presented the paper says: "....It would be difficult perhaps, beyond the precincts of Paris, to witness a familiar exhibition better conducted in all its parts: and the actors received and merited, during the whole evening, the most lively testimonies of universal applause." It becomes abundantly clear from this paper report how skil-

fully the talented French actors must have brought the characters alive and how fortunate the large audience attending the show must have considered itself in being provided with such excellent entertainment so far from home. The paper stated with considerable emphasis "....the abilities of many of the actors are said to be little inferior to that of the best performers in Europe."

NO ADMISSION FEES

There was another important announcement regarding the Chandernagore Theatre which appeared in that issue of the 'Calcutta Gazette.' Apparently the 'India Gazette,' another paper of that period, had reported in its issue of the 4th April that in future tickets for admission to the Chandernagore Theatre would be priced at one Gold Mohur each. This report was completely erroneous and unfounded. Accordingly the 'Calcutta Gazette' wrote in this connection as follows: "A paragraph appeared in the 'India Gazette' of the 4th instant, stating, (upon what authority we cannot tell) that tickets of admission to the theatre of Chandernagur were to be purchased at the rate of a Gold Mohur for each ticket.

"The theatre of Chandernagore has been fitted up at the expense of a few individuals, for the liberal purpose of opening, for themselves and their friends, a new and certainly an attractive source of rational entertainment. No ticket of admission was ever sold for that theatre, nor did it enter into the conception of the parties concerned, that their laudable endeavours to promote the enjoyments of all around them would be converted into a scheme for levying pecuniary contributions on the public. It is therefore with much pleasure that we insert in another part of this paper, a letter received from two of the Gentlemen, prisoners of war, who have come forward on this occasion to rescue their own characters, and that of their brother officers, from the degrading imputation to which (inadvertently no doubt) they have been exposed."

A LETTER TO THE EDITOR

Just under this they published a letter from Gravier and Lambert writing on behalf of the theatre to contradict the false and unjust statement made by the 'India Gazette'. The letter reads as follows:—

To

The Editor of the Calcutta Gazette.

Sir,

The French prisoners of war at Chandernagore, with the approbation and encouragement of the Superintendent of the place, have erected a small theatre for their amusement and that of their friends. Any attempt at ridicule against them they leave to its own merits. But what affects their character ought not to pass unnoticed. The best refutation of calumny is a simple denial of its assertions. In answer then to an article which appeared in the India Gazette of the 4th instant, stating that the Price of Tickets for admission at the Chandernagore Theatre is One Gold Mohur, we on the part of our brother officers declare the alleged fact to be directly contrary to truth, no price for admission having ever been required or accepted. Trusting to your liberality for an early insertion of our declaration.

We are sir,

Your most obedient humble servants,

5th April '08. GRAVIER,

LAMBERT.

This irresponsible report of the 'India Gazette' must have greatly distressed a good many playgoers of that time. Gravier and Lambert's letter is an important document relating to the history of the stage in India. It clearly establishes that a theatre can be set up, not for business purpose, but simply to provide free entertainment for friends and that such a theatre was, in fact, set up in Bengal by the generous French prisoners of war.

The 'Calcutta Gazette' of the 7th April is in fact full of news relating to the Chandernagore Theatre. Not merely does it carry the above letter and announcement as also a review of the performances on the 4th of April, but it also relates a most striking and amusing incident that took place behind the curtains after the show was over. I have mentioned earlier that 'L'Avocat Pateline' was one of the plays presented on the 4th. The story of this play is about the legal trial of a dishonest French shepherd, who had stolen and killed a number of his master's valuable sheep, from whose wool 'superfine English cloth' used to be prepared. The audience had returned home delighted with excellent performances of the actors playing the roles of the judge, the accused etc. The recently crowded auditorium was empty. The players were still in their stage costumes when news got round that some valuable piece of theatre property was missing. The manager noticed one of the theatre's servants moving about behind the scenes in a manner that roused suspicion. He immediately hauled him up before the actor who had played the role of the judge, and was still attired in his judicial robes. With an air of great solemnity the actor mounted the judge's bench which had not yet been removed from the stage. The accused was summoned to appear before him. Those who had played the parts of bailiffs and were still attired in bailiffs' uniform mounted guard over the accused. With an air of the utmost seriousness the trial began, and the accused was gravely questioned in

regard to the theft, the actors maintaining a solemn mien and forcing back the smiles that such a situation would naturally provoke. So realistic an air did they impart to the trial that the accused took it all in earnest and, falling at the feet of the supposed judge, pleaded guilty and revealed where he had hidden the valuable missing article. It was found at the spot he indicated. After a stern warning to be on good behaviour in future, the pseudo-judge discharged the prisoner. It was thus that behind the lowered curtain another farce was played. The 'Calcutta Gazette' described all this in detail and concluded by saying: "After a severe reprimand, he was released on his solemn promise to be honest in future, a promise which from his fears, he is likely to keep at least within the precincts of the theatre."

The plays of Moliere were the most popular in those days, and have remained firm favourites to the present day. It is not surprising, therefore, that his plays 'L'Avocat Pateline,' 'Le Depit Amoureux', 'Le Medecin Malgre Lui', and others should have been presented at the Chandernagore Theatre. Other French dramatists were by no means neglected, however, and there are reports of presentation of plays by Regnard, Corneille, Boursant, Bollly and others such as 'Le Francais a Londres', 'Le Mercure Galant', 'Menechmes', 'Le Destrait' etc.

HIGH QUALITY OF ACTING

Every single performance was well-attended. It was not merely the Frenchmen living in the locality who would attend, but a good many residents of Calcutta too would make their way there 'inspite of the intense heat of the weather' in April and May. Perhaps one of the reasons contributing to this was the fact that the one and only theatre functioning in Calcutta at that time was in a parlous state. It seemed on the verge of closing down completely and did, in fact, shut up shop in that year, 1808. It shared the same fate as Calcutta's first theatre in being converted into an auction hall. Be that as it may, it would be doing the Chandernagore Theatre a grave injustice to suggest that this was the sole reason for its popularity, for outstanding plays of eminent dramatists were most ably presented on its boards. Never otherwise would weary citizens of Calcutta undertake the arduous journey to Chandernagore and back simply for a few hour's light entertainment. That was before the days of railways, it should be remembered. The high quality of the acting at the theatre is attested to moreover by numerous reports in the highly respected paper of that period, the 'Calcutta Gazette'. Many a time did their dramatic critic, entranced by the excellence of their standards, bestow lavish praise on some artiste or another for an outstanding piece of acting or a particularly effective dance. In the limited space at my disposal I can only mention one or two of these reviews.

On the 7th of May Moliere's play 'Le Festin de Pierre' and another play 'Le Cocu Imaginaire' were presented. Moliere had originally written his play in prose, but this had been converted to verse by Corneille. In one of the roles a girl only eleven years old held the audience spellbound with her amazing dramatic ability. Of the performance of this prodigy the 'Calcutta Gazette' of the 12th May wrote: "....a young lady of Chandernagore, not yet eleven years of age, who acted in the play a part of no inconsiderable extent with much ease and vivacity." The young artiste repeated her triumph a few days later in the role of Isabelle in Regnard's play 'Le Destrait'. Once again delighted by her superb performance the dramatic critic of the same paper wrote: "The young lady, whom we have mentioned on a former occasion, performed with much ability, the part of Isabelle, one of the principal characters of the play." Many other such reviews are to be found in the journals of that period.

I have mentioned before that this theatre functioned only for a very short while. The 'Calcutta Gazette', while announcing that Moliere's play 'Le Avare' and 'Le Mercure Galant' by Boursant were presented on the 4th of June, carried also a distressing news in regard to the theatre, which the public had not anticipated so soon. It stated that the prisoners of war would be returning home and that there would therefore be no further performance at this theatre which had become so popular with the French colonists.

It is quite easy to imagine how distressing this news must have been to the residents bot' of Chandernagore and Calcutta.

WEST BENGAL'S SECOND FIVE-YEAR PLAN

(Continued From Page 30)

not be attended to in the First Plan. With an increased allotment by the Planning Commission than that we estimated, it would now be possible to extend universal basic education for children in the age group of 6-14. Work will commence in an extensive area of 100 to 120 villages in each district where a Basic Training College will be a Central institution around which most of the primary and junior high schools will be gradually converted into Basic Schools. In the Second Plan Period, significant changes are contemplated in the secondary stage of education. About 250 Secondary Schools will be converted into multipurpose school. Some of these schools would also be upgraded to Higher Grade Schools with provision for the 11th class.

Adequate provision has also been made for the promotion and improvement of University education, technical and commercial education and Social Education. Number of Social Education Centres would be suitably increased and there will be a District Library in each district, not yet covered, Branch libraries in Sub-Divisions and village libraries in selected areas.

MEDICAL AND PUBLIC HEALTH

The schemes for improvement of medical and public health services in the State during the Second Plan period aim at, among other things, extending medical facilities in urban and rural areas. The work of improvement of hospitals would be carried further and training programme for doctors, compounders, nurses and midwives has been provided for.

350 more Health Centres are proposed to be established in the State during the Second Plan period. The bed strength of the Infectious Diseases Hospital would be raised, the T. B. Hospitals at Kanchrapara and Digri will be extended and considerable improvement will be effected in the Nilratan Sircar and Calcutta Dental Hospitals.

Other schemes include, improvement of Pharmacy training, expansion of Nursing Service, establishment of a Department of Preventive and Social Medicine in the Medical College etc. It is also proposed to establish a 200-bed Mental Hospital in the State during the Second Plan period.

The Public Health Schemes included in the Second Five-Year Plan comprise in the promotion of maternity and child welfare, improvement of School Hygiene, to raise the standard of nutrition, campaigns against Malaria, Filaria, T.B., Leprosy etc. During the Second Plan period, it is proposed to establish 14 more chest clinics, establishment of a 600-bed Leprosy colony and 30 Leprosy clinics and a number of Anti-Leprosy Treatment cum Study Centres.

IMPROVING HOUSING CONDITION

Adequate provision has also been made in the Second Plan for improving the housing condition in the State Work taken up in the First Plan will be pursued and a number of new schemes will be taken up to solve the problem of housing in the State.

Besides, West Bengal's Second Five-Year Plan provides for further improvement of the condition of working classes and tribal people.

For the successful working of the State's First Five-Year Plan and having a distinctive Plan for it for the next five years for which he has made tremendous efforts, West Bengal's indebtedness to her Chief Minister, Dr. B. C. Roy, knows no limit. He is leaving no stone unturned to bring happiness to the people of this truncated State and has earned admiration of all for the herculean nature of the job he has already done and for the remarkable progress of the various development plans. The installation of the third steel plant in this State on which decision has been final is one of his other great achievements. May West Bengal play her part well in the coming five years towards the execution of the Second Plan.

MANIFESTATIONS OF CHANDIKA

By DR. MAHANAMBRATA BRAHMACHARI

CHANDIKA, the Divine Mother, embodies in Herself the multifarious modes of life. All contradictions merge in Her dynamic personality. She is tranquil and turbulent, serene and fierce, *soumya* and *roudra* at the same time. She is serene like the azure sky but boisterous like the thunderbolt.

Etymologically, Chandika means vehement. She is an affectionate Mother but a frantic Killer. Her all-embracing motherlines makes her intolerant of those who are inimically disposed towards Her human and divine children. With all Her might does She destroy the demon of darkness that hinders the evolution of Her creation and the revelation of the Divine Light.

The *Tantras* maintain that Chandika is the queen-consort (*Patta Mahishi*) of the Absolute Brahman, meaning thereby that She is the Supreme Energy and Absolute Being — the Agent. For the purpose of creation the Absolute Being divides Itself into two — *Siva* and *Sakti*. They are essentially identical but functionally different. For the object of creation, preservation and destruction She assumes triune forms: Maha-Kalika, Maha-Lakshmi and Maha-Saraswati.

The digest of Tantric literatures is to be found in the celebrated book called *Chandi* or *Saptasati* (a book of seven hundred stanzas). The three aspects of the Mother are the presiding deities of the three sections called *Charitras* of the *Saptasati*.

HOW SHE REVEALS HERSELF

To begin with, the story of the revelation of Chandika is told to Suratha Raja and Samadhi Vaisya by the Guru, the Seer Medhas. Both the

Chandi and the *Bhagbat Geeta* start with wars. The war of the *Geeta* lies in the actual battlefield of Kurukshetra whereas that of the *Chandi* is the internal war of the psychical and super-psychological plane. It is pre-eminently *Sadhan-Samar*, as has been aptly named by a seer of modern days.

After the introductory setting the actual discourse of the *Saptasati* begins with a time that goes beyond the beginning of creation. Creation in Hindu scriptures is always a cyclic process. The scene, therefore, depicted before the dawn of creation is invariably one of all-swallowing inundation, the Ocean being symbolic to primordial causal state.

SHE IS YOGA-NIDRA

The Vedas begin with one Great Purusha with a desire to be many. The Tantra goes deeper. With Purusha it starts, to be sure, but having no desire or action. The Purusha, in the *Saptasati*, rests in deep slumber. He is existent and non-existent at the same time, so to say. Who does then exist in that nocturnal abyss of complete silence ? She is the *Yoga-nidra*, the great motherly energy that upholds the Cosmic Sleep, the Maha-Kalika, who embosoms even the Supreme Purusha Vishnu and reigns over all that is or was or will ever be.

SHE IS MAHA-KALIKA

On the navel lotus, the centre of creative vibration of Vishnu, is seated the Creative Energy, embodied in Brahma, the Logos, *Sabda Brahma*, lost in the contemplation of the new creation to dawn. Madhu and Kaitabha, the two principles — *Rajas* and *Tamas* — Passion and Ignorance, that bring friction to Cosmic motion, came out of Vishnu and aimed at destroying the creative meditation, personified in the Logos Brahma. He was to awaken Vishnu and with that end in view sang a panegyrical hymn to eulogise Maha-Kalika and implored Her earnestly and reverently to give up Her hold on Supreme Purusha Vishnu. She did accordingly relinquish Him and appeared before Brahma who witnessed Her all-veiling existence. This is Maha-Kalika.

APPEARS AS MAHA-LAKSHMI

In the Madhya Charita of the holy *Saptasati* the manifestation of the Maha-Lakshmi is symbolically depicted. In the course of the eternal warfare of the Devas and the Asuras, the former being defeated, the latter reigned supreme in the heavenly domain. Brahma led a commission of the Gods to Vishnu and Shiva and craved for redemption.

Vishnu resented and trembled wrathfully. For the vindication of the divine rights brilliant flames of fury oozed out of His forehead and dazzled objectively. Affected by similar feelings glares of effulgent light came out of the bodies of Shiva, Brahma and rest of the Deities. All the rays of light were united, integrated and transformed into a glorious Motherly Figure of Pure Excellence. This is Maha-Lakshmi, the transcending reality becoming emanant.

To visualise Her is to view the Universe at a glance. In Maha-Kalika all the objects are latent, in Maha-Lakshmi all the details are patent. In Her the Universe is manifested in its entirety. From the epistemological viewpoint the vision of Viswarupa of the *Bhagbat Geeta* and that of Maha-Lakshmi of the *Chandi* seem to be identical — comprehension of unity in diversity.

AS MAHA-SARASWATI

The third manifestation of the Divine Mother, Maha-Saraswati, is pictured in the *Uttar Charit*, as its presiding Deity. The Mahasakti was for the third time invoked by the Devas, who were oppressed by the twin demons, Sumbha and Nisumbha. Maha-Saraswati emanated from the person of Maha-Lakshmi as the element of pure *Sattwa* predominated.

In the tenth chapter, the demon king Sumbha entered the battle field, shorn of all his co-fighters. He beheld Chandika, surrounded by many matronly figures, the Deities, siding Her to help fighting. That She should fight alone was the condition precedent and its violation provoked the opponent.

"Stop boasting of your false arrogance. Why neglect the essential condition and hire these demigods ?" exclaimed the demon grudgingly. "Alone do I stand and none seconds Me under the Sun", came the reply serene and sound, from the Mahasakti. And no sooner did She finish and the demon gazed agape than the truth was translated into a sublime demonstration under his very nose.

The myriads of goddesses moved to touch Her Person and instantaneously merged in Her all-absorbing Existence even as the rivers lose themselves in the sea. All disappeared by merging in Her and alone She stood, all by Herself, the Great Mother Ambika, as the Supreme embodiment of the underlying substratum of the Universe — Maha-Saraswati, the culmination of the Cosmic process.

THE THREE IN ONE

Mahakali may be conceived of as the snow-clapped mountains where the rivers exist potentially. Maha-Lakshmi is the plains where the rivers dance to flow in innumerable channels. Maha-Saraswati is the ocean where they all reach and merge and complete their journey for good.

Maha-Kalika is infra-red, light unmanifested, appearing dark to onlookers. Maha-Lakshmi is the entirety of variegated colour spectrum, having manifold vibratory expressions. Maha-Saraswati is the Ultra-violet, most dazzling of all rays, visible only to expert eyes, aided by the instrumentality of human *Sadhana* and Divine *Karuna*.

Today, a diabolic mentality stands out predominant in our individual, social, national and international life. This mentality thrives on the lack of a unifying vision. May our Matri-Puja become fruitful in endowing us with the realisation of Unity-in-multiplicity and may the demoniac spirit in us die out like darkness before the Solar Deity.

DURGA PUJA IN ASSAM

By HEM BARUA

THE worship of Durga in her ten-armed (*Dasa-Bhuja*) image, which is an accepted ritual in M.P., U.P., Bihar and Orissa, is a later-day introduction into the religious history of Mongoloid Assam.

It is seen that the *Saptasati Chandi* gives a fine account of Goddess Durga's physical composition in terms of the different aspects of the All-Powerful. Her feet, for instance, represent the dynamic power of the creative principle of life as embodied by Brahma,—their posture, it is seen, are not static. They are on the move, suddenly halted. Her hands in a similar way stand for preservation. This principle of preservation as suggested by the *dasa bhujas* of the Goddess is the very essence of Vishnu's power. Besides, they signify a deeper power also; that is that of the wheel of ever-lasting motion in the process of Time and Space. In a similar way the description of the rest of her body, as given in the above treatise, is imbued with a deep spiritual significance.

Besides, in the *Saptasati Chandi*, there are references to the worship of Goddess Durga in the *Markandeya Purana* also; the one in the former is the earliest of its kind. The latter records the story of king Suratha who worshipped an earthen image of Durga for three years; on this occasion, it is said, he chanted the *Rig Vedic* hymns *i.e.* the *Vaksukta* or the *Devisukta*. The subsequent worship of the Goddess in the present form is a derivation from these sources on the ritualistic aspects of it. The Aryans consolidated the local Sakti-cults, as in Assam, into the Durga-cult as incorporated in the Vedas. The worship of Durga or the Primordial Energy is mentioned in different books of the *Mahabharata* Epic as well. And this aspect of Sakti is described as *Prakriti* in most of the *Tantric* literature, and ancient Assam is rich in this. Dr. S. K. Chatterji says about it thus :

> ".. .. .. the Kamakhya shrine in Kamarupa had become already established as an important centre of Tantric worship (both Buddhist and Hinduistic), according to "Hevajra Tantra" (8th century A.D.) and the 'Kalika Purana' and "Yogini Tantra" (which was probably composed in Assam, as a later day work, certainly composed or compiled after 1000 A.D., and probably later still) already exto) Assam as a land where Sakta Tantricism was fully established."

WHEN & HOW IT CAME?

When is it and how is it that the Durga Puja came to Assam? It is true that ancient Assam was the spring-board of the Sakti-cult, and the wide-spread popularity of Kamakhya holds testimony to this fact. It was only in later times, as pointed out in the *Kalika Purana* and the *Yogini Tantra*, that this Goddess underwent certain transformations and came to be identified with different aspects of Durga *i.e.* Parvati, Tara and Tripura Sundari in the main. For one thousand years after Narakasura who is credited with helping the growth of a sort of Indo-Mongoloid cultural synthesis in ancient Kamarupa, Kamakhya is said to have remained in the eclipse. The age of Bhaskar Varma, during whose rule the Chinese pilgrim Hiuen Tsang visited this country (7th century A.D.) was one of Saivism; the Sakti-cult, as a matter of fact, suffered temporary fade-out during this rule of the Varman dynasty. This being so, when is it that the Durga-cult came to forefront in Assam? The earliest historical record of how Kamakhya was accepted as Durga is evident in the inscription of king Naranarayan of the Koches who built here a temple in 1565 A.D. after the original one suffered destruction in the hands of Muslim invaders. A part of the inscription reads as follows :

> ".. .. .. he (Naranarayan) is as bright as Kandarpa, he is a worshipper of Kamakhya. His brother Sukladev built this temple of bright stones on the Nila hillock, for the worship of the Goddess Durga, in 1487 'Sak' (1565 A.D.)".

ASSAM-BENGAL TIES

For the last one thousand years or so, Durga worship, as it is, has held its sway in Bengal; it is difficult to say when is it or how is it that Durga worship in the clay image of the present came into vogue there. In the case of Assam, it is different. It is definitely a product of Assam's cultural relation with her neighbour Bengal; the initial contact in this respect was during the latter part of the Ahom rule in this country. That was under the Ahom king Rudra Singha, aptly described by Dr. S. K. Chatterji as the "Sivaji of Eastern India"; he ruled the country from 1691 to 1714. The next historical contact

that was naturally of a wider scope was during the British rule. The first wave of cultural contact during the rule of the Ahoms was under the auspices of the Brahmin priests that were from time to time imported into the religious life of this country. The second wave manifested itself under the auspices of those people from Bengal who came with British rulers to this country as a part of their administrative machinery. The colourful ceremony of the Durga Puja initiated by them here created a climate of active interest for the people in this country. The easy and constant intercourse with Cooch Behar and other North-Bengal districts which constituted the ancient kingdom of Kamarupa, made cultural exchanges quicker and more comprehensive in spirit.

From ancient times, Kamarupa is considered as one of the three principal *Sakti-pithas* in India. When the worship of Durga was in slow degrees introduced into it, the assimilation of the two identical Sakti forces into a consolidated pattern was easier of accomplishment. The fact that "a Hinduised Indo-Mongoloid empire", as pointed out by Dr. S. K. Chatterji, "was thus achieved during the middle of the 7th century A.D." proves that the Hindu path already paved itself to a large extent for the ultimate attainment of the goal; the later-day introduction of the Durga Puja is a milestone in this cultural development in the way of a process of synthesis.

VAISHNAVISM VS. SAKTAISM

Saktaism suffered a temporary set-back here in Assam due to the widespread popularity of Vaishnavism (15th-16th century) under the auspices of Sri Sankardev. It was in the true sense of the term a religion of the people that lived and sustained itself on the sap that it drew from the people. The royal patronage of the time extended to Vaishnavism was haphazard and slip-shod while that extended to Saktaism was whole-hearted and fired with a deep passion. History has it that the Ahom king Sukhampha (1552-1603) despatched his Buragohain (Minister) to sue for peace with Chilarai of great military fame in Cooch Behar. The Minister visited the capital city of the Koch kingdom, and it is said: "a number of Koch artisans accompanied the Ahom hostages on their return to their country. Amongst them were potters skilled in the art of making images of Durga and other Hindu deities." (Sir E. A. Gait).

The policy of persecution resorted to by King Gadadhara Singha (1681-1696) on the Vaishnavas and their *gossains* (spiritual heads) had its natural effect The reasons for this persecution were two: (1) the king sincerely believed that Vaishnavism produced a dissipating effect on the people. This is because, as he thought, it abjured meat and wine and thus helped to de-vitalise the people, (2) the king had some personal reasons also for inflicting this persecution on the *gossains*. The Vaishnava priests, except the one of the Jakhalabandha Satra (monastery), refused him shelter when he was in exile for some time, before ascending the throne. This being so, the Brahmin priests who did not accept Vaishnavism as it was a religion initiated by a Sudra *i.e.* Sri Sankardev, left no stones unturned to impress upon the king the necessity of extending royal patronage to Saktaism as manifested in the worship of Goddesses Durga and Kali in the main. They said this stood for robustness and vigour, and this is how the ground was skilfully prepared by these Brahmin priests for the ready acceptance of Durga worship in this country.

PRIEST FROM SANTIPUR

On the death of Gadadhar Singha, Rudra Singha (1696-1714) became the next Ahom king. This king was of liberal views and of advanced mind. He encouraged cultural contact with the rest of India, and sent envoys to places of cultural and religious interests. He invited artificers from Bengal; of them, Ghanasyam who built the Siva temple at Sibsagar, is the most noteworthy. He invited Krishnaram Bhattacharyya, a well-known Sakta priest from Santipur (Bengal). It is to this priest naturally goes the honour of popularising the present form of Durga worship here in Assam. Rudra Singha who was already ordained in the Vaishnava faith refused to be re-ordained in the Sakta faith ordained by this priest from Bengal. The priest was duly rewarded with gifts of gold and silver, and he started back homewards *i.e.* to Bengal. As he went, miraculously enough, a heavy earthquake shook the country from the one end to the other. The Sakta priests, at this, left no time to impress upon the king that this natural catastrophe was due to this unwarranted dishonour shown to the Sakta priest from Bengal. The priest was immediately called back. When he came, it is true that king Rudra Singha refused to be formally initiated into his creed of Saktaism; he, of course, compensated this refusal with social status and money gifts made to the priest and his followers. Prince Siva Singha who ultimately succeeded his father to the throne was ordained into the Sakta creed of Krishnaram Bhattacharyya. Other princes like Pramatha Singha and Rajeswar Singha also got initiated into this new faith. This is how Durga worship came to this country on the one hand, and, on the other hand, led to a continued conflict between religious faiths, Saktaism and Vaishnavism, and disturbed the prospect of consolidated peace for the rest of the Ahom rule.

QUEEN POPULARIZES PUJA

Siva Singha's Queen Phuleswari was originally a dancing girl of matchless beauty attached to a temple; she was a *devadasi*. It was in spite of staunch opposition from court nobles that Siva Singha took her as his consort. Ultimately, because of her beauty and talents, this dancing girl came to be the main power behind the throne, and Siva Singha was willy-nilly reduced to the position of a titular figure-head. The Queen virtually became the *Bar Raja* (Ruler-in-Chief). The royal power was formally handed over to her by her husband in 1772 and coins were printed in her name. This was because of an omen which was interpreted by the Brahmin priests as meaning absolute ruination of the empire if the king held power any more; the Sakta priests wanted Queen Phuleswari on their side to fulfil their aspirations. As she got absolute power, in consultation with these priests she organised a

BUDDHISM IN CHINA

By Dr. SUNITI KUMAR CHATTERJEE

Chairman, West Bengal Legislative Council

IN spite of numerous points of contrast which we see in the life of China vis-a-vis that of India, these two countries nevertheless present some fundamental points of agreement as well. The contrasts relating to the life and ways of India and China are due basically to the racial background and composition of the two peoples. China is more homogeneous racially than India. The basic element in the Chinese people is Mongoloid, and racially the Chinese are the immediate brothers and cousins of the Siamese, the Burmese, the Tibetans and allied peoples and tribes. In China, however, particularly in the Yang-tsze-Kiang valley and the regions to the south of it, there was a people who occupied the country before the Chinese proper from Hong-Ho valley pushed south and gradually absorbed them. In this way, there was a substratum of pre-Chinese people in the centre and south of China. These pre-Chinese people are believed to have belonged to the great Austric race which at one time spread over the whole of Eastern, Southern and South-Eastern Asia, from north-west India through the Ganges valley into Burma and Indo-China and central and southern China. But owing to this racial substratum there are some noteworthy contrasts in character and temperament between the present-day Chinese of the north and the Chinese of the centre and the south. On the whole, China presents a remarkable homogeneity of culture and mentality, the result of nearly 3,000 years of co-operation among all sections of the Chinese in evolving the same type of culture. India, on the other hand, is a land of many races and languages. But in India also there has been a racial fusion scarcely paralleled anywhere else in the world. Atleast four main groups of people with their diverse racial types, languages and cultures have been fused to form the Indian people of history. These four were the dark Austrics, the brown Dravidians, the yellow Sino-Tibetans (a branch of the same race which we find in China), and finally the white Aryans, a section of the great Indo-European speaking people who are the dominant people of the West. The *Indian Man* evolved by about 1,000 B. C. through racial intermingling of these peoples. There has been a common element through the Austrics and the Tibeto-Chinese whom we find both in India and China. The points of cultural agreement and mental attitude may be due to certain common racial elements, which are dominant in one country and subdued in the other.

Some fundamental concepts were thus to be noted among peoples of these two countries. There was, for example, a belief in the conception of a Cosmic Law or Order which is both immanent and transcendent, - what may be called a Divine Stuff or Essence which suffuses every facet of existence : this is called *Tao* in China and *Rita* or *Dharma* or *Brahman* or *Paramatman* in India, and this is also known as *Mana* among the Polyesians who are t easternmost offshoot of the Austrics. The notion this *Tao* or *Rita* was helpful in establishing in Chi some of the fundamental concepts of Mahaya Buddhism which were quite akin to the basic ide of the Brahmanical Vedanta. Then, again, there w a conception of a dual force working in the Univers In India this is known as *Purusha* a *Prakriti*, and in China as *Yang* and *Yin*, and conceives Life and Universe as being due to t interaction of these two forces, positive a negative, forces of light and darkness, of sun a shade, forces of activity and passivity. So, in th way we may say that there was a prehistoric con mon base which embraced in the domain spiritual ideas both India and China.

EMERGENCE OF BUDDHISM

When Buddhism came to China, the Chine mind found in it something which was not contra to its own most profound conceptions. Of cours there was something quite novel also whic Buddhism brought to China. And among these ne things were Universal Love and Charity for a living beings, and Self-discipline through a rigid moral life. The other matters less fundamenta referred to organisation and discipline of the com munity as a whole. Buddhism as it developed i India within the Indian *milieu* came to China at time when in that country the deeper spiritual lif had receded into the background. The philosoph of Confucius which had as its basis the philosophi notions relating to *Tao* and *Teh*, i.e., the Way (o Law) and Virtue, had developed itself along th lines of a practical and a more or less mundan philosophy, which had as its ideal the creation o good, virtuous and law-abiding citizens. It was no interested in the basic and deeper things of exis tence. Confucianism was on the surface, and no profound enough. The lofty philosophy and mysti cism of Taoism was at that time thrown into th background, and the Taoistic philosophic system had degenerated into practice of magic, exorcism and search for the elixir of life. Buddhism came at the psychological moment, and with its sense of sorrow and suffering in life which it took up as its duty to remove, its love and active goodwill for all creatures and its system of thought which went to the funda mentals, had an immediate appeal for both the masses and the elite. With Buddhism also came

art and imaginativeness, and gorgeous pageantry of ritual and imposing ceremonials, which attracted the love for the spectacular in ordinary people.

When exactly Buddhism entered China is a matter of speculation, The usual story is that the Chinese Emperor Ming Ti of the eastern Han dynasty who flourished circa 50-75 A.D. had a dream of a human personality of golden hue, who appeared in the western sky. After investigation in the matter, it was thought that the Emperor had a vision of Buddha. Central Asia was already largely Buddhist, and through the interest of the Emperor two Indian monks came to China and they were received by the Emperor at his capital Lo-yang. These monks were Kasyapa Matanga and Gobharana (or Dharmaraksha) and they are now known in modern China as Chia-yeh Motang and Chu Fa-lan. They brought a number of Sanskrit books and images which were carried by a white horse. To commemorate this event, a monastery was built at Lo-yang, which was named Pai-ma-ssie or "the white horse temple," which still exists. These two scholars started to translate Indian Buddhist texts into Chinese, and in this way they began a tradition of rendering Buddhist texts into Chinese which continued for some 1400 years.

FIRST INDO-CHINA CONTACT

Some scholars however, have thought that contact between India and China began even before Christian times. It was probably as old as the fourth century B. C., and certain Indian notions and ideas influenced China already in the centuries just before Christ. The appeal of the new religion, particularly after books on Buddha and Buddhism became available in their own languages, to the Chinese became immediate and irresistible.

It was, however, not smooth sailing always. The followers of the national religion in its two forms, Confucianism and Taoism, naturally did not like a foreign creed to capture the minds and hearts of the Chinese people. The resistance to this foreign Buddhist doctrines and practices started soon, and the scholars trained in the Confucian ideal were sometimes exceedingly hostile. There were ups and downs in the progress of Buddhism. Taoism, while fighting Buddhism, took over many of the ideas and practices from the foreign faith. However, the Chinese mind like the Indian is exceedingly tolerant in religious matters, and there started very early in China a movement, widely supported by the people, to harmonise the native or national religions with Buddhism, and later on with Christianity and Islam when these reached China. What has happened in the course of the centuries was that Buddhism entered into the very marrow bone of Chinese civilisation and Chinese life. People in China may be professing Buddhism formally, and ardent Buddhists may be taking pride in the Buddhist name. But the ordinary Chinese is a Buddhist, at least in some aspects of his life, without openly professing or exclusively practising it.

A man is a Confucian, Taoist and a Buddhist all at the sametime. People who are looked upon as scholars in the Confucian tradition may express apathy or even contempt for Buddhism, because in its popular side it has some ideas and practice which are foolish, as we find in any religion in the world. But even such a sceptically minded person takes help from Taoist priests when illness or some calamity befalls the family, to placate the benefi-cent gods and to drive away the spirits and forces of evil. When a Chinese person dies, unless he is a Christian or a Muslim, Buddhist monks who act as priests are invariably called, and they perform the funeral rituals with full Buddhist ceremonials, in which reading from Buddhist Sutras takes an important place.

RELIGION IN RED CHINA

At the present day in Communist China the attitude to religion is changing, and people are becoming apathetic or careless with regard to religion in any form. But Chinese people, men and women, would enter monasteries as monks and nuns, and sometime little children were dedicated to monasteries by their parents ultimately to become monks and nuns. The position of Buddhism is fairly strong in China even today. The Government of the People's Republic of China is not putting any difficulties on the score of religion before its people. Chinese Buddhists can perform their religious rites without any opposition from anywhere. Only the ordination into monkhood of minor children is not allowed. The Government is now repairing and maintaining existing Buddhist temples and buildings as works of national archaeological importance. Publications on Buddhist art are fully encouraged.

In China, the basic form of Buddhism, of course, is Mahayana. The ideas of the Mahayana Buddhism is very different from that of the Hinayana or Pali or southern Buddhism. Mahayana Buddhism has become a system of thought which has many points in agreement with Brahmanical theistic religion. Both Jnana or Knowledge and Bhakti or Devotion as well as Ascetic Practices (Yoga) feature in Mahayana. There is a belief in the concept of an Adi-Buddha, comparable with the Hindu concept of the Brahman or Paramaatman. The Buddhas are innumerable in number, and the historical Buddha, Gautama Siddharta Buddha, is specially honoured, and the Chinese refer to him as Sakyamuni Buddha (Sa-chia Mu-ni Fo). The most popular Boddhisattava is also the most popular divinity for the whole of China. Avalokitesvara or Avalokita-Svara (i.e., he who sees or listens to the voice) was taken to China with other members of the Buddhist pantheon. Avalokitesvara refused to obtain Bodhi or Supreme Wisdom and thus to pass into *Nirvana* or Release because he was affected by the voice of sorrowful wailing (svara) of all creatures which he listened to and observed (*Avalokita*), when they appealed to him to take pity on their plight and stay on and help them to obtain salvation. Out of mercy for suffering living beings, Avalokitesvara decided to defer entering *Nirvana* until everybody was saved. For this great act of pity, he was looked upon as a visible incarnation or epitome of mercy. In China there was a great Mother Goddess, known as

(Continued On Page 16)

WEAPON OF SATYAGRAHA AS ENVISAGED BY GANDHIJI: DANGERS OF ITS ABUSE

By B. G. KHER

INDIA has recently attained independence, and we have given ourselves a Constitution which guarantees to all citizens justice, —social, economic and political; and also liberty of thought and expression of belief, faith and worship, equality of status and of opportunity, assuring the dignity of the individual and the unity of the nation. The fundamental rights are assured to us and defined. It is, therefore, right and proper that corresponding to the rights of the citizen he should have duties and obligations. Obedience to Law is the first of such duties and allegiance to the State, payment of taxes, the proper exercise of franchise are others.

RULE VS. OBEDIENCE

Democracy is said to be the Government of the people, by the people and for the people. The term "Government" implies in the essence that some individual or individuals, however chosen, should rule and the rest of the community, for however long or however willingly, should obey. When the whole community ceases to obey, Government ends. The only result is that a fresh Government has to be set up. When one is formed, people must consent to obey. But rule on the one hand and obedience on the other there must be. What then is the meaning of the phrase "Government of the people, by the people and for the people ?"

Modern communities express 'the general will' of society through the exercise of the legislative power by its duly-constituted organs of authority. Therefore, regulation of the land in which we live should have a final and ultimate sanction. This would be so particularly in democracies wherein the exercise of such legislative authority is definitely related to the wishes of the majority of the people comprising the community. Even if one should happen to belong to the minority which does not accept the majority views, normally it is only right and proper that one should defer to the majority opinion as the necessary price that one must pay for belonging to the community. In this context, however, the significant questions arise not with reference to the vast majority of occasions for the vast majority of people but with reference to the exceptional occasion and in the context of the very small number of rare persons who may find themselves under necessity of having to disobey the injunctions of the laws.

WHEN TO DISOBEY

No one has written and spoken more about the ethics, method, justification and limitations of the duty or right to disobey the law of a State, in modern times than Mahatma Gandhi. Such disobedience can either be individual or by the mass. In either case, the first condition that Mahatma insisted upon was the purity of both end and means. Now we all know that Gandhiji described truth as his God and non-violence as inseparable from it. In a manifesto issued on the 10th March, 1920, he described non-violent non-co-operation which is a prior state to actual civil disobedience :

> *"Now a word as to what may be done if the demands are not granted. The barbarous method is warfare, open or secret. This must be ruled out, if only because it is impracticable. If I could but persuade every one that it is always bad, we should gain all lawful ends much quicker. The power that an individual or a nation for swearing violence can generate is a power that is irresistible. But my argument today against violence in based upon pure expedience, its utter futility. Non-co-operation is, therefore, the only remedy left open to us. It is the clearest remedy, as it is the most effective, when it is absolutely free from all violence. It becomes a duty when co-operation means degradation or humiliation, or an injury to one's cherished religious sentiment."*

METHODS TO DISOBEY

Referring to his methods of opposing the will of Government, he said in April 1920 ;

> *"I believe that it is possible to introduce uncompromising truth and honesty in the political life of the country. I would strain every nerve to make truth and non-violence accepted in all our national activities Then we shall cease to fear or distrust Government and their measures.'*

He coined the word "Satyagraha" for his method. On 10th September, 1935 he wrote, *"The statement that I had derived my idea of Civil Disobedience from the writings of Thoreau is wrong. The resistance to authority in South Africa was well advanced before I got the essay of Thoreau on Civil Disobedience. But the movement was then known as passive resistance. As it was incomplete I had coined the word "Satyagraha" for the Gujarati readers. But I found that even 'Civil Disobedience' failed to convey the full meaning of the struggle. I therefore adopted the phrase "Civil Resistance." So we see that in highly morally evolved persons their number is, alas !, very small—who have got rid of their own selfishness and maliciousness (both common and even inherent in humanity) by imposing rules of conduct upon themselves a feeling of obligation or duty is created to choose between several possible acts. It is this moral sense which made Socrates choose the duty to drink the hemlock."*

SENSE OF MORAL LAW

It is this sense of duty which was at the bottom of the doctrine of "Civil Disobedience" that Mahatma Gandhi preached and practised with such phenomenal results—even during the short span of his own personal life. There resides in every indivi-

dual a sense of right and wrong, a sense of good and evil, a sense of the moral law, which from the point of view of the individual, is called his conscience. There may arise occasions when an individual may want to and may be right in setting at naught all man-made laws under the compelling injunctions of his own conscience, that is to say, his sense of loyalty to the moral law. It was this right of disobedience that Gandhiji invoked with reference to the foreign power which ruled over us and made laws. Those laws were designed for the purpose of perpetuating their rule.

WHERE ONE MAY NOT DISOBEY

It is not necessary for me to expatiate how foreign rule is detrimental to the best interests of the individuals in the society subject to such rule. A good part of the laws and regulations of the foreign ruling authority are designed for safeguarding and perpetuating itself, and not in the best interests of the society concerned, and naturally occasions for disobeying them are likely to be more numerous. This state of affairs must, however, be distinguished from that which obtains in a genuine self-governing democratic community where democratic processes are not vitiated by force, fraud or tyranny as happened during Nazi and Fascist regimes in Europe. The normal presumption would be that the laws operative in democratically governed societies are made for the well-being of its constituents : where sectional interests happen to conflict, the laws would have been framed to subserve the general weal. In such circumstances, the occasion for disobedience of the laws would be much fewer.

WHEN ONE MAY DISOBEY

Also it is imperative that anybody who considers himself under compulsion of his conscience to disobey the laws in such a society must have, by rigorous discipline, made himself pure and wholly unselfish. Human judgments are apt to be clouded and warped by all manner of mists and fogs, and 'refractions' of the vision originating from unconscious and subconscious levels. We all know how sub-conscious states of mind are apt to colour the opinions and judgments of an individual in spite of every effort on his part to reach honest conclusions. Having regard to all this in reasonably well-ordered democratic communities, it would only be in the most, exceptional circumstances that the truthful and non-violent man with unerring perspicacity and vision, who, for the highest reasons of public good would consider himself compelled to disobey the law. And then he will do so when all other remedies have failed and after due warning with a view to convert the adversary by inviting self-suffering—his emphasis is not on defiance but on conversion by suffering.

DANGERS TO FREE INDIA

I wonder what the Father of the Nation and the inventor of Satyagraha will think when he knows how it is now a weapon freely used by dismissed employees, failed candidates, all and sundry, for redressing their grievances and obeying their conscience. The dangers of the abuse of this weapon are familiar to all by now. They are particularly grave in this country with its political freedom only 8 years old, its religious, communal, linguistic and other divisions threatening the life of the nation itself. They can only delight the heart of the enemies of India. I have stated very briefly the circumstances in which disobedience of the laws and a breach of the normal canons of patriotic duty might, or ought not, to be resorted to.

Patriotism, which is a very complex feeling built out of primitive instincts and intellectual convictions with a religious element mixed up in them, can never take the place of the supreme moral law or of religion. It lacks universality. The good at which it aims at is a good for one's own nation only, not for all mankind. So it is said "a world full of patriots may be a world full of strifes." Do we not find this to be now ?

BUDDHISM IN CHINA

(Continued From Page 14)

Hsi-Wang Mu, who was also the loving Mother of Mankind. In China, this ancient goddess and the new Boddhisattva from India coalesced, and as a result we have a composite deity who has been named Kuan-Yin (which means Listen-Voice, and is a Chinese translation of Avalokita-svara); and Kuan-yin is universally worshipped as a Bodhissatva of mercy who is at the same time the loving mother of all. The God has been transformed into a goddess. She is thus the Chinese counter-part of the Roman Catholic Virgin Mary and the Hindu Uma or Durga, the Mother of the Universe. There are numerous other gods and goddesses who are found in the Chinese Buddhist pantheon for the masses, and we see the worship of them everywhere.

Buddhist temples and pagodas abound everywhere in China, and some of them are rich treasuries of art. Chinese Buddhists have a number of most eminent scholars among them who know deeply the history and the philosophy of their religion. Buddhism Ju-lai is still a living force, and the average Chinese person is a devoted disciple of the great Ju-lai or Tathagata. They connect India with all that is great and good and noble in the spiritual world. A pilgrimage to India was looked upon as something worth many years of one's life in the olden days. For over 1000 years we have had a most remarkable instance of international cooperation in the intellectual and spiritual sphere through the work of Indian Buddhist writers and scholars going to China and Chinese scholars like Fa-Hien, Song-Yun, Hiuen-Tsang, and I-Tsing coming to India. China took a lot from India — philosophy and religion, art and literature, and some of the sciences too, like grammar and phonetics. But this Sino-Indian contact through Buddhism was not a one-way traffic. India also in her turn took a lot from China, and this is a matter in which investigations have scarcely started. In China there is plenty of materials for research. This is almost a virgin field, and it will be seen how the Indian mind was enriched by contact with China.

THE DIVINE MOTHER

UP AND DOWN THE LADDER OF TIME WITH DADABHAI NAOROJI

By St. NIHAL SINGH

TRANQUILLITY had seemingly triumphed. With his squall-making bellows Vayu, the storm-brewer, had turned tail and fled. The long, curving, vivid green palm fronds had ceased to thrash about. All heave had gone out of the Bay of Bombay's breast, alongside which India's Grand Old Man — Dadabhai Naoroji — was anchored. With the departure of the tide the agitation caused by the Wind-god's passionate wooing was leaving. Every split second the shadows cast by vegetation that, by some miracle of Nature, luxuriently uprose from quintillions of sand particles, were losing their wavy effect. Any moment they would be preening their perfectly mirrored images in the still, silver sea-surface.

Ardour had all but gone out of the bronze disc that, on that day of September, 1910, was hanging above this setting of exquisite charm. Every tick of Time's clock it was becoming larger and larger. Apparently heavier and heavier, too. For it seemed to be dropping, of sheer weight, like a balloon from which all the gas had escaped.

As from my room in "the Sands" — the house in which "Dad" was dwelling in Versova, some 20 miles north of Bombay City — I was going beachwards, Suryadeva was snuggling into the West—vanishing for the nonce.

AGED BATTLER'S 87TH BIRTHDAY

Still, still, lay the short, spare figure of the aged battler for Indian Swaraj, as he, at the 1906 Calcutta Congress, had defined our politico-economic goal. How shrivelled it appeared upon the long, long deck chair upon which it was gracefully curled ! Made of deftly woven, split rattan strands, that chair might easily have been blown from the hurricane deck of some luxurious ocean liner and come to rest alongside the half-moon-like curve of the Bay.

But then I remembered that, even on the Christmas day of 1893, when I had first beheld that beloved figure, it had looked fragile to my boy-eyes. Yet how briskly it had moved in the huge crowd packed round the Ghanta Ghat (bell tower) that, in their vanity, the foreigners had caused to be raised dwarfing the olden, shapely *shikhar* (dome-like top) of Sri Har Mandir Sahib — the "Golden Temple"

* * * *

And in the autumn of A.D. 1910 — seventeen years later — Dadabhai Naoroji's 86th (or according to Indian reckoning, 87th) birthday had been celebrated. Hero in the eyes of worshippers of Mother India, offerings of sweet-scented jasmine and marigold, of coconuts in the husk, candied sugar and cowrie shells, had been placed at his feet. Sprinkling sanctified water in a circle round the chair on which he was seated, gorgeously dressed women from fashionable Malabar Hill in Bombay had touched their foreheads to the geometrically correct square drawn with flowers, on the path where his feet had rested.

That afternoon, turning into evening, he lay on the outsize deck chair which so vividly contrasted with his shrunken figure. He was all alone. Not a soul was stirring, even in the offing. The fish-wives, their labours with the nets that their men-folks used to bring in the harvest of the sea over for the day, with their yellow-bordered, blue saris tightly wound round their steel-muscled, lithe figures, had wended their way to the village of Versova, where they were doubtless now lighting fires with dried cow-dung cakes and faggots gathered from here and there, in their low, crudely fabricated but ever so efficient hearths.

OLD HERO'S BIRTHDAY TALKS

TRANQUIL — ever so tranquil — looked the old, old man. Died down was the fire within him kindled by his devotion to the mother of his mothers — India — that long ago had given shelter and sustenance to his ancient ancestor fleeing for conscience sake from Iran and unflinchingly remaining true to the teachings of the sage Zarathrustra. The hero who, for three-quarters of his long life had found amusement by pulling out hairs from the British Lion's whiskers while insisting upon dwelling in that lion's den, judging by the indications that lay upon the surface of life on that September afternoon when I tiptoed upon him, was done with problems and polemics, content to rest upon his oars (a phrase he had picked up from an Englishman who had taught him in the eighteen-forties in the Elphinstone Institution — later College).

But what newspaper man worth his salt goes by surface indications ? I could not, for the colloquy that had taken place a few days prior to our receiving invitations to be his house guest. We had called upon him to express our gratitude to the gods that he, now across the threshold of his 87th year, was with us to guide us. He had then said :

"Your wife is American—"

"No ! An Indian", she had interjected.

"By marriage," he quick-wittedly rejoined.

"Yes", she assented, "and by conviction, by choice : also by Karma (in which she firmly believed). I feel that India is my spiritual home."

"All this is pleasant to hear," quoth the G. O. M., his face beaming with joy. "But as I was going to say, you are by birth an American. And

your husband has just returned to his Motherland after many years' world wanderings."

With that introduction he began asking questions about current affairs—current world affairs—complex affairs. From these only one conclusion could be drawn — that he kept his finger on the pulse of Time. Later, when his son-in-law took me to "Dad's den" I saw the mechanics and hydraulics of this process. In neat piles lay newspapers, magazines, reviews and books, on shelves kept in place by glass paper-weights—and on the desk a mass of letters. The catholicity of his taste, even at that advanced age, impressed me as well as the orderliness and organization displayed wherever I glanced.

So I would have been obtuse indeed if I were to conclude that the apparently listless figure gazing into space with what seemed to be a vacant stare was a sign of smug satiety. No. He was like that sea, I inwardly commented, that now is like a mill pond — he was like those palm fronds that were hardly stirring — he was like the wind-still (if I may make a present of that substantive from my verbal mint) that is so palpable. Movement was within them all. In none more so than in Dad.

"I am not disturbing you, sir ?" I apologetically asked.

"No", he replied. "I was expecting you. I had, in fact, told you that whenever you like you could look me up here in the evening."

Had I the power to penetrate to the heart of things, as I had recently learnt Roentgen (now X) Rays did, I should have apprehended that "Dad" was busy making, for my express benefit, a ladder down which I might descend to the beginnings of modern India. After becoming *au fait* with the rise and development of nationalism in its manifold aspects—,I would ascend it, rung by rung, to the present. Howmuchsoever far he would elect to take me, whether to Calcutta, Lahore, Baroda, London or Liverpool, back I would be brought to "the Sands." I would be physically unexhausted and mentally enriched, spiritually uplifted—exhilarated.

The first inkling of this came to me in this wise : As I took a seat near his long, long deck chair he reminded me that old men seem to strangers to be full of fancies. This because generally their mind is turned inwards. They are nearly always remembering happenings of long, long ago and are not merely imagining — inventing — incidents. Or they are relating conversations that took place years, maybe decades, earlier. A chance acquaintance, lacking intimate knowledge of their antecedents, is likely to think that they are rambling in their minds.

DAD RECALLS HIS OLD DAYS

After a slight pause, more for effect than to catch his breath, "Dad" continued : He was differently constituted. He could remember things that happened yesterday and the day before, or ten, twenty, thirty, forty years before — occurrences in his boyhood — in his childhood. He could go back, in fact, to the reign of King William IV, in which he was born, through Queen Victoria's Sovereignty, long, long as it was, through King Edward's brief decade or so of rule to George V's time. His memory was clear and definite all the way through. The more I, with my feet planted upon that ladder, went voyaging through space to the days of long ago, the more I realized how very true those pregnant words of Dadabhai had been. We did make an excursion to the scenes of his infancy, childhood, boyhood and young manhood. Neither did he show the least disposition to dally there nor would he let me wander about. The jaunts to the sites of what may be termed his professional activities were also strictly limited and breathtakingly brief. On the contrary the others . . . . (of these presently). How unoldmanlike indeed was "Dad's" memory.

Of this I was reminded only a while back when, after decades, I was revisiting Naosari (Navsari) of which that Prince among mortals Maharaja Sayaji Rao Gaekwar used to talk to me in my thirties. The High Priest of the Parsis in India — a kindly, cultured, learned, pious man and his noble spouse intensely interested in our ancient faith — were entertaining my good lady and me in their house in the oldest portion of the city. "Well", they asked, "have you seen the house ?" The reference was to the one that had been shown us as Dadabhai Naoroji's birthplace.

"But", I blurted out, "how can that be correct ? He was born in Bombay."

"Now you have lived with him in the bosom of his daughter's and her husband's family in Versova. In the hundreds of talks you must have had with him, did he ever tell you that Bombay was his birthplace ?"

That question, so directly — so sincerely — asked made me reflect. "No", I answered, "I can recollect him speaking only of the tiny village in an humble quarter of Bombay off the sea in which he, as infant and child, dwelt with his widowed mother, supported by her brother, a poor Parsi priest as her husband had been. Near there he had had his first lessons. The *Mehtaji*, with a large tuft of hair in the centre of a shaved pate and a scant dhoti wound about his body, sat with a thin stick in hand. To his 19-1|4 x 17-3|4 = so much, chorussed the boys standing in long rows, dappled by the sun glancing through the jade web high above. Attracted by (to them) this strange sight, the visitors from abroad, fresh within the Indian gate, stood open-mouthed. The tiny, fair-faced child, looking for all the world like a Dresden China doll, attracted them more than any of his fellows. Evidently, he was proud of the impression he then made, for I first had this incident described to me by one of my London editors — "Tay Pay" O'Connor, who hailed from Athlone in the heart of Ireland, and who from journalism (that he never abandoned) rose to be the Father of the House of Commons of his day—and a long day it proved to be.

Fain would I dwell upon the sites associated with Dadabhai of early years, to which he himself took me by means of the magic ladder, and recount the echoes that, at our appearance, rang from the spots. In the stint of space provided me I can only say that he was among the first batch of Indians of that region to turn from the out-of-doors Indian academy to a modern class educational institution. He was the first Bombayite to become a professor in the only college that was just founded. He, as "Dadabhai Professor", started, in the eighteen-forties, what we would call extra-Mural lectures. These lectures were on science, couched in language that would be readily understood by the people. Not that he eschewed other subjects — he, on the contrary, descanted on social and religious reform. With some of his cronies he found the *Rast Guftar* (the Truth Teller). What storms this slip of a young man with mutton-chops on his cheeks roused !

DAD'S PLUNGE INTO POLITICS

The descent into the past that profoundly interested me was one in which figured the founder-editor of the *Amrita Bazar Patrika*, "brother Sisir", as I began calling him in the beginning of this cen-

IN THE EYES OF AN OPTIMIST

By N. KANUNGO

Union Minister for Consumer Industries

IT is not an unusual sight to come across dry rivers in summer with beds of sand. We are told that soil is washed away by rain and in the process of being washed down the streams, it is washed into particles of sand. If adequate physical properties are added to the sand, it becomes fertile soil again. That is what happens when silt is added to sand or some physical process happens in other ways by which sand becomes soil and fertile soil as well. But this process takes decades, assuming that conditions are favourable or may even take many decades.

It does not require any statistical gymnastic to prove that the people of India are poor. One can see it. It is like the fertile element of soil having been washed out leaving bare sand. Is it possible that the desert can be turned into fertile land ? In other words, is it possible to convert barren sand of poverty into fertile soil of prosperity ?

MUSCLES HIS ONLY ASSET

It is claimed that it is possible, and the intensity of human ingenuity and effort can shorten the period of reclamation. The process has started and can be observed in a manner as it is like watching for the seedling when it grows into a plant, maybe a crop or a forest, when no effort at observation would be necessary. Take for instance, the conditions of the poorest type of population. There were and still are persons who have to hire out their labour to earn a living in the villages. Workers have been too many for the limited amount of work available. People have to migrate seasonally or even permanently to find work and naturally the supply being larger than the demand, wages have been extremely low. Before 1940 in many parts of the country the usual wages for a full day's work for an adult woman were 2-1|2 annas and for an adult man 4 or 5 annas. In between the person whose only asset was his muscles and a prosperous farmer, whose prosperity was merely his ability to feed his family all the year round and nothing more, there are always various grades of poverty. Even the socalled prosperous person had to go in for debts when he had to face an emergency like, failure of crops, sickness etc. Usually he could not pay back his debts but as he had no margin to pay it gradually slipped down to a condition where all his assets, possibly even his shelter, were lost and he was left with his muscles alone.

CASE OF INDEBTEDNESS

The muscles too did not last long for lack of sustenance and he was dead long before his physical disintegration. It cannot be said that this cycle has changed as far as many millions are concerned, but careful observation will show that this slide has stopped at any rate in scores of lives — maybe hundreds. Take for example the case of indebtedness; compare the number of persons in villages who had to go in for grain loans to keep themselves fed round the year, say 15 years back, and compare the number today. It will be definitely less, maybe much less. Compare the huts of two decades back in any village with those today. Changes are not certainly striking, but change can be observed. Many huts did not have any doors. It was usually a bit of frame made out of reeds or a bamboo leaned against the opening to serve as a door without hinges and latches. One could travel hundreds of miles along the coastal area, particularly in the East and not come across a piece of stone or brick. Perhaps the only stones that could be seen were the *Shivlinga* or images of deities. Metal pots and pans were a rare sight The only receptacles for water were earthen pots and pitchers and in many cases dried out rinds of "Gourds". Pots for cooking were of burnt mud and the usual receptacle for food was any broad leaf. Banana leaf was a luxury. There were many households which did not possess a single metal receptacle. Metal pots and pans are no longer such a rarity. Plough points made of hard wood could be seen though rarely, but it is gone for good.

Going round any 'HAT' one could see beads of seeds and shells, combs of wood, shells of insects of bright colour, ingenuously braided strings of hair of fibre exposed for sale. These were the objects of adornment. Bangles and clasps of brass or other cheaper metal alloys were the jewellery. Ornaments made of silver were the privilege of the very prosperous. Gold was a rarity. Gold ornaments for ears, nose or neck were the high privilege of royalty and the caste from which the royalty were drawn. There was taboo against silver for many castes even. Today ornaments made of baser metals are almost non-existent and it is rare for the poorest person to fail in providing a small bit of silver on the occasion of a daughter being married or a bride coming home according to the custom prevailing

DRESS OF WORKING MEN

It was not unusual for an adult male labourer to go to work in a piece of cloth 1-1|2 yard long and 9 inches wide hung on a string round the waist — a sort of *kopin*. Of course, women labourers had to have longer and wider pieces of cloth to cover themselves. It is not very uncommon to find this apparel on working men in many places of our country, though it can be said that the number is much less than it used to be. The best dress for a working man was a piece of cloth 36" wide and 4 yards long and a piece of rough towel, *Gamcha*, which serves for rubbing and drying the body at bath and as the only change. Of course, wider 'dhoties' and the 'chadar' were for prosperous people who could effect elegance. Even they could not afford any stitched apparel, like a 'kurta'. Going to a cloth shop today it will be rare to find a full length 'dhoti' 36" wide and even a village weaver will tell you that this size is not in demand any more. One need not look into the figures of textile

DADABHAI NAOROJI

(*Continued From Page 18*)

tury. Patches of yellow on the map of India were, in that benighted era, under more or less dual administration. Ostensibly, the "Native Chief" ruled. The Resident stationed in his capital — no "No" was taken in this matter—pulled wires from behind the purdah. The poor wretch on the *gadi* grimaced, gesticulated and gyrated as he felt the pressure of the strings.

On the death of Khande Rao Gulcowar (as my *guru* William T. Stead, Editor of the Review of Reviews, used to spell the name), his younger brother Malhar Rao succeeded as ruler. Before the inebriation superinduced partly by good fortune and partly by spirituous liquor was hardlly over he realized that he had to reckon with the grizzly bear in the Residency. Some confidant whispered into this newly made Maharaja's ears that if he was not to be mortally wounded by the bear he must call to his aid his shrewdest subject. This shrewd Gaekwad subject bore the name of Dadabhai Naoroji, whose ancestors had settled centuries back in Naosari.

At the moment when the call came to him from Baroda "Dad" was supposed to be pursuing Lakshmi. She had never captured his head nor even his fancy. Politics had. As W. T. Stead told me, "That little old Parsi used to breakfast on blue books and make his lunch, tea and dinner on old issues of *Hansard*." He had knocked a hole into the wall built round the entrance leading to the higher services in India : the Bull Dog had stood on guard night and day when "Dadabhai Professor" arrived in England to open the first Indian import and export house in the heart of the Empire. Through that hole had crawled Satyendra Nath Tagore, with whom lived the boy Rabindra, then a shrinking violet and the famous trio — Romesh Chandra Datt, Behari Lal Gupta and Surendra Nath Bannerjea. There was trouble over Surendra's date of birth and "Dad", with his cool head, helped the irascible young man, threatened with the loss of opportunity, to what he expected was to be his life's career. The merchant-politician had established the East India Association which was stolen from him by the cliquy retired Anglo-Indians mortally in dread of the Bombayite's activities. He had been made a governor of the newly established London University and in that institution held the position of Professor of Gujerati to Indian Civil Service aspirants. He left all these interests to become Malhar Rao's Dewan; instituted with the help of hand-picked men reforms in all the realms of administration, drafted, for Rs. 100,000 (it was said) the *Kharita* (royal letter) that took Baroda out of the clutches of the Bombay Government and placed the State in political relationship with the Government of India. The Grizzly got the better of him, however, by accusing the Maharaja of attempting to poison him by mixing diamond dust in a glass of sherbet.

SWING BETWEEN BRITAIN & INDIA

All the time the ladder of Time was swinging back and forth between Britain and India. In the eighteen-eighties he was in Bombay. He helped to organize the Indian National Congress. The honour of presiding over the first session was given to that silver-tongued accomplished lawyer Woomesh Chander Bonnerjee. At the next session, held in Calcutta, "Dad" was asked to take the chair and his administration of that high office earned him the plaudits of all our early politicians.

Back in London he resumed the old, old game of badgering the autocrats in undisturbed authority over India. He wrote out questions ventilating Indian grievances in the House of Commons. The friendly M. P.'s who thus helped him bore the Liberal label — all well to the Left, as we now would call them. Some noise was made. Those diehards who constituted the Secretary of State's Council fumed and fretted. So did the hierarchs in India. To be effective he came to the conclusion that he must himself get into the House of Commons. This he did. Soon afterwards he voyaged to India to preside over the 1893 session of the Congress in Lahore. It was there, as related earlier, that I first met him — 63 years ago.

HIS PARLIAMENTARY WORK

A volume is needed to deal with Dadabhai's Parliamentary work for India. It is possible only to refer sententiously to two of his exploits. The first was the Resolution that he succeeded in carrying through the House, recommending the holding of the I. C. S. examination simultaneously in India and London. The other was his merciless *expose* of the sucking of Indian blood by Britain.

There is, I am afraid, a disposition upon the part of the present generation to tag the G. O. M. as a "Moderate" — or even a "Moderate of Moderates." Some of those who saw and heard him at the 1906 session of the Congress at Calcutta, where he dismissed "good government", of which the "sun-dried bureaucrats" boasted, as being, in the words of Henry Campbell Bannerman, no substitute for self-government or swaraj, as our Grand Old Man translated it in terms of his mother-tongue — Gujrati, an accomplished daughter of Sanskrit, — would testify to his being a Liberal of Liberals. But listen to him as getting down from the dais where he had been sitting with his colleagues of the Commission appointed through his hectoring the Government, and occupying the witness's chair, he made his demand. He did not mind, he said, a handful of Britons continuing at the top. But these must be only the Viceroy the Governors over the provinces, a few controllers of the Civil power and the Commander-in-Chief to manage the Military. He insisted that Indians be given the justification to claim that they were being ruled by themselves.

Did not Dadabhai know, asked the Chairman, a sound enough Liberal, that through the ages Indians had been "continuously slaughtering each other ?"

"What else had the Europeans been doing in Europe ?" rejoined the Parsi Knight-Errant.

Had not Dadabhai heard what the great Prime Minister of Baroda and other Indian States — Sir T. Madhava Raw — had said ?

"What ?" asked the witness.

The Chairman quoted the great Dewan as prophesying that the withdrawal of British administrators would be like loosing the bars of the cages in the Zoo upon the defenceless millions.

Without a split second's hesitation Dadabhai replied : "Is that all that the Chairman could say for the 150-year rule of India by Britain ?"

No soldier ever fought for any land so long, so steadfastly, so lionheartedly, as did Dadabhai Naoroji. No general of any nation was a shrewder master of strategy or a greater tactician. None managed withal to retain the gentleness of the dove. None wiped away the tears of widows and orphans with greater assiduity or with deeper concern for their welfare. Would they and the coming generations combined be ever able to pay him the gratitude that is his due for laying the foundations of our self-rule, while under withering fire, so truly — so soundly ?

HINDU LAW REFORM

By C. C. BISWAS,
Law Minister, Indian Union

PARLIAMENT has now put on the Statute Book three epoch-making laws which have revolutionised Hindu law. A fourth measure is on the anvil and it deals with Adoptions and Maintenance. Some time has elapsed since the passing of the above three enactments, and it is possible now to view the matter objectively from the point of view of the country as a whole.

Time was when I with some of my then colleagues in the Calcutta High Court was inclined to the view that uniformity in Hindu law is not such a desideratum as to be purchased at any price. We felt that diversities of usage are inevitable among the very large number of Hindus who inhabited this vast sub-continent, and it was not for nothing that the Hindu law-givers recognized the paramount authority of local usages and customs. We went further and posed to ourselves the questions: why then should Hindus of any particular locality be necessarily called upon to forswear their own distinctive traits and traditions in the interests of a theoretical symmetry? And why, further, for the sake of attaining an ideal uniformity must the law be cut off from its ancient moorings? Hindu law divorced from the Smritis and Nibandhas would be a contradiction in terms.

CHALLENGE OF TIMES

At the same time we were conscious that like every other system of law, Hindu law must be prepared to meet the challenge of the times. In fact, it is the adaptability of the Hindu law to changing conditions and circumstances that has helped to maintain it as a living force and it is significant that the Smritis which are the ultimate repository of the law themselves recognize the principles of such growth and development.

These observations perhaps erred somewhat on the conservative side. Maybe, we had not sized the position in the country correctly. It should, however, be admitted that the observations we then made were not without reason. In every measure of social reform the country requires to be educated and the reform must go side by side with the progress of the country. It is common knowledge that the Rau Committee was met in many places with black flags, and the Provisional Parliament in 1948 was not prepared to give any consideratio the product of that Committe's labours, in spit the fact that the Hindu Code Bill prepared by Rau Committee was being piloted by so abl persor as Dr. Ambedkar.

QUESTION OF CODIFICATION

The question of codification of Hindu law assumed prominence in 1939, and, although l on the subject of Hindu law could be placed on Statute Book only in 1955, the intervening y had not been spent in vain. Political and econo changes have been moving fast not only in country, but all over the world. In our coun these changes have been very marked and ra after independence. Political freedom can h little meaning without economic and social adjustments for ensuring the contentment prosperity of Indian society as a whole. We h given to ourselves a Constitution which secures all citizens justice—social, economic and politi and equality of status and opportunity. The Cons tution abhors discrimination between citizens ba on grounds only of sex, and one of the duties of t State is to promote with special care the educatio and economic interests of the weaker sections the people. The women of India have become fu conscious of their rights and the enactment of the Hindu law measures is only a recognition, thou belated, of their rights.

DIVINE ORIGIN

There are, no doubt, people who believe in t divine origin of Hindu law: one need not quar with them on that issue, but it may be pointed o that Manu himself, the sage and seer, wanted dispense justice according to local usages a written codes. In those days the functions of t sovereign and the judge were combined in the Kin In the ancient days we had commentators who fro time to time put their own laws upon the ancie texts and in many cases discarded rules whic though they may have been contained in the sacre books, had become abhorrent to the country. Durin the long period of Muslim ule it was th Mohammaden law which became the law of th land, though in the matter of succession an inheritance the Hindus were probably left alon Hindus must have been governed in different place by what would have been called customary law When the East India Company took over, it wa decided that Hindus and Mohammadens should b left to be governed by their own laws in suit regarding inheritance, marriage, caste and othe

religious institutions. This was very unsatisfactory, because the moment a Judge is left without any lawful rations in the shape of express enactment, he is constrained to go out foraging for supplies, and the more learned and diligent, he is, the further he is likely to go.

HINDU LAW & BRITISH RULE

The history of British rule has seen the establishment or modification of the Hindu law by judicial decisions. And very often these judicial decisions took the form of deciding, not what the law ought to be, but what it is according to the interpretation of primitive text books or forgotten phases of society unmodified by contemporaneous opinion. Now that we have a Parliament representing the wishes of the people, it is but proper that the task of codifying the Hindu law with modifications wherever necessary should devolve upon it, so that Judges no longer have to go foraging for supplies in the confused welter of commentaries and text books. No one can contend that a deliberate, well-weighed and well-informed enactment passed by Parliament grounded solely on considerations of public welfare and guided by the wishes and opinions of the chosen representatives of the people, is not preferable to judicial legislation by judges.

SUPPORT FOR REFORMS

The time that elapsed between the first attempt to codify the Hindu law of succession and the decision of the Government to split up the Hindu Code into various parts has served firstly to make the provisions of these laws more familiar to the people, and secondly, to gradually diminish and ultimately remove all opposition to the reform of Hindu law. I have read with con ·ble interest and satisfaction certain articles which have appeared in legal journals praising Parliament in this behalf In fact a sort of gallup poll taken in one part of the country by means of a questionnaire addressed to certain associations has elicited the information that a very large majority of men and women are in favour of monogamy being made the rule of law for Hindus, of provision being made for divorce for them and of daughters being treated as equal with sons. If any proof that the country is now solidly behind these Acts is required, it is furnished by the fact that Parliament, after the first few teething difficulties, was able to dispose of all these measures in fairly quick time notwithstanding the heavy pressure of work which it had to face and by the fact that no protests worthy of mention have been raised from any quarter with regard to any of these Acts. After all, sons are as dear to us as our daughters, and it is only because of certain conditions existing in society and for certain extraneous reasons not based upon love and affection that the daughter, who was once treated on the same footing as the son, had to be treated differently. Things have now changed and are changing.

WOMEN'S POSITION TODAY

I do not propose to deal in detail with the provisions contained in the Hindu Marriage Act, the Hindu Succession Act and the Hindu Minority and Guardianship Act Suffice it to say that each of these Acts makes a radical and fundamental change in Hindu law, which perhaps could not have been thought of a quarter of a century ago. Equality of sexes is fully assured by these provisions. It may be that here and there a few difficulties in construction and such like things may be met with, but these are matters for simple amendments to the law after the judiciary has made pronouncements upon them. But, broadly speaking, the provision for monogamy, the provision for divorce, the right of women to succeed to the property of their parents, including ancestral property, and the absolute right vested in them will, within the course of the next few years, ensure women occupying an equal position with men in the life of the society. Our ancient texts have always regarded women with great veneration and they were given the most important place in the household. The fact that property rights were either denied to them or were given to them in a limited form did not at all detract from the reference with which they were held. But the time has now come when all distinctions should disappear and men and women should march together with equal confidence and equal ability in the road towards India's progress.

IN THE EYES OF AN OPTIMIST

(Continued From Page 19)

consumption of so much per head or the phenomenal shift in the quality in the sense that more and more fine yarn is being consumed.

FOOD SITUATION IMPROVES

It may sound incredulous that two decades back hundreds of thousands of people never had rice or wheat in their food from year end to year end. The staple food consisted of 'Razi' and other minor millets and starchy root tubers. Boiled rice was a luxury for festive occasions like weddings etc. Sugar in the form of *gur* was considered a rare luxury and salt was sparingly used It was not unusual for salt being the medium for barter of small articles of use, like firewood, oil etc. Such conditions in the countryside are rare today Though 'Razi' and minor millets are still the staple diet of the poorest, yet it is hardly possible to find a person who has not got rice or wheat for his food at least for some days in the year The phenomenal increase in the consumption of sugar provides its own inference. Four decades back *cowrie* or shell was still a currency for transactions, of course, in remote parts 1|12th of an anna was a current coin and perhaps still is, but there is hardly any transaction today of less than half anna.

THE CRIMINAL TRIBE

Assuming that the above observations and comparisons are agreed to it is not to be inferred that the tide has turned and poverty has been reduced to an appreciable extent, but it does give a ray of hope that the barren sand is being turned into soil, at any rate, the process has started. It is not long ago — to be exact 38 years back – that a brilliant and sensitive young Indian who had entered the Indian Civil Service, was assigned the duty of reporting on the condition of a group of people in a remote district, who were being considered to be classed as a Criminal Tribe by the administration of the day. The usual crime they committed was the lifting of a handful of grains or fruit or something paltry in value but necessary for keeping the body and soul together. The young man before finishing his assignment and submitting a report, which was expected to give the reasons to declare the group as a Criminal Tribe, committed suicide and in a letter to his family mentioned that he was shocked to see the human beings living in conditions worse than animals and he could not see any way how he could discharge his obligation as a man to his fellowmen, whose condition he had seen Perhaps suggested observations as above will help in preventing sensitive men and women from being desperately depressed and restore their faith and hope in the future of our people.

GOVERNMENT OF THE PEOPLE

By TARUN KANTI GHOSH

Deputy Minister, West Bengal

IN one of my numerous tours in the interior sectors of West Bengal I was addressing an open-air rural gathering of a rather heterogeneous texture. It was not a formal meeting but just the sort of an unpretentious seminar where one could unreservedly open out one's mind, unfettered by any rigid rules of business imposing a restraint on the freedom of expression of views and comments. It was not a gathering for one speaker alone to talk long and loud and for all others silently to listen. Indeed, it was an unassuming but a very active forum where no words could expect acceptance until and unless they could stand the rigid test of practical village wisdom.

As I was developing the story of our present-day problems and venturing to suggest how best we could try to approach them effectively, I was interrupted by one from the gathering who asked for leave to put me a question. The leave was readily given. I could guess from his determined looks and stout but modest voice that he was out to throw me a challenge. Indeed, I was not mistaken, as I very soon discovered. "This Government have had been in charge of our affairs for nearly eight years now," was his question, "but could you please tell us what the people have really got from them ?" It was a straight question straightforwardly put. There was no malice in it, no motive of running one down. It was the vocal expression of a simple mind which, perhaps, believed that since we had had the independence, the Government of the country must be able to erase forthwith all the wrinkles that had been wrought on its face. But, I am afraid, the questioning villager was not the only person to hold such a view. there are millions in the country who share his hopes and, I am tempted to say, his demands.

A DIFFICULT BEGINNING

I have purposely said *demands*. Because there is a tendency in many quarters, some of them learned and sophisticated, to praise or condemn the country's Government only measuring their activities with the yardstick of what has been 'given' by them. This is an unfair approach, unfair both to the Government as well as to the people themselves. Equally unfair is the evaluation of any achievement without due regard being paid to the intentions behind it and to the odds and handicaps that might have formed an initial hedge around it. Success, after all, is a relative quantum, conditioned by the circumstances in which we are given to make the efforts. I explained to the villager, who asked me the question, how the Government began, what were the formidable obstacles in the way and what was possible of attainment in spite of the difficulties that threatened them every now and then.

As I look back, I sometimes shudder to think of the anxious years passed through. It was difficult to contemplate, at the beginning that it should at all be possible to reach the mile-stone where we now are. It is no exaggeration if I say that the desperate situation might have spelt disaster to any Government unless it had the courage and stamina to refuse to bend an inch before overwhelming avalanches. What were the legacies in 1947 ? Nothing more than too little space to contain too many people, an emaciated exchequer, a surging mass of uprooted humanity, and an economy thrown completely off the gear ! All these years the Government have been striving, consistently with the slender resources, to restore the equilibrium which had been violently disturbed and I am sure that none would grudge the charity of conceding that the Government had had to wade their way through difficulties of stupendous dimensions.

FOOD, CLOTHING & SHELTER

The three fundamental requirements of human life are : food, clothing and shelter. All economic activities, everywhere in the world, are directed towards the solution of these three problems. Though any one of these problems is as important as the others, food deserves the priority of attention. In West Bengal, the Government have not for a moment lost sight of the prime necessity of marshalling the resources on the food front. At the beginning the total production of cereals in the State was nearly 36 lakh tons of which rice accounted for about 35 lakh tons. But the Government have been able to raise the output to nearly 53.5 lakh tons, of which rice amounts to slightly more than 52 lakh tons. It is not only in regard to cereals that more has been produced, but in respect of other food crops also the Government have been able to move ahead. How this has been possible is a story of unremitting efforts towards bringing in more acreage of land under cultivation and, at the same time, increasing the productivity of the land per acre. On a modest estimate, nearly 25 lakh acres of land have been put to use as a result of the Grow More Food Campaign and more than 50,000 acres of waste land reclaimed. But the productivity of land can be increased by various agencies, the most important of which are fertilisers and irrigation. Distribution of manures and chemical fertilisers is today an extremely popular programme and the initial prejudice amongst the cultivators against the use of chemical fertilisers has been so completely overcome that the demand for such fertilisers is more than can be met. Minor irrigational facilities have increased the irrigated areas from 18.1% of the net cropped area to nearly 24 per cent. There has been an increased output of jute, for which West Bengal depended so dangerously on Pakistan, from 6.5 lakh bales a year to more than 19.5 lakh bales. The total cropped area in

West Bengal has registered an increase of nearly 16 lakh acres since 1947, standing at present at about 143 lakh acres.

The cattle wealth is a proud possession of any country. Even today in many parts of the world, not yet sophisticated and geared mainly to an agricultural economy, the index of prosperity is the number of heads of cattle. The cattle wealth was seriously depleted by the partition. This was the reason why comprehensive measures were undertaken and are still being followed not only to improve the cattle economy but also to sustain the results already achieved.

The total outlay on Agriculture in the First Five-Year Plan was Rs. 8.52 crores but the actual expenditure was Rs. 8.87 crores. In the Second Plan, the provision under Agriculture is Rs. 33 crores, which is 22 per cent of the total allotment of Rs. 153 crores for the entire State of West Bengal.

MORE WATER FOR THIRSTY LAND

The importance of irrigation to any plan for growing more food cannot be over-stressed. In fact, a considerable stretch of land in West Bengal thirsted for water — land which could otherwise yield a rich harvest. Since Independence, the Government have been vigorously following a policy of more-and-more water for our lands. At the beginning of the First Plan, the position of West Bengal in regard to area irrigated was fifth among the 17 Part A and B States of India. At the end of the Plan period, West Bengal retained its position, but in the proportion of irrigated area to the total cultivated area, her position was fourth as compared to the tenth place in the beginning of the First Plan. There would also be an increase in the area to be benefited by irrigation or drainage by about 107 per cent since 1949-50. The provision for Irrigation in the First Plan was Rs. 14.85 crores and the expenditure was Rs. 14.24 crores. The area to be benefited by the First Plan schemes, exclusive of the inter-State Damodar Valley Project, would be 10.43 lakh acres yielding an additional 111 lakh maunds of crop. In the Second Plan there is a larger provision for Irrigation amounting to Rs. 18 crores.

SMALL INDUSTRIES FOR SMALL MEN

Industries, particularly small and cottage industries, form an integral sector of our rural and general economy. Though the small industries are having a somewhat lean time, yet no less than a million men and women are engaged in them and an equally large number are indirectly associated with them. Handloom, silk, sericulture, pottery, smithy — these are some of our proud possessions. In spite of competitive economy, these small industries have possibilities for rehabilitation and development if due encouragement is addressed to them. With this end in view, elaborate schemes have been taken in hand not only to improve their lot quantitatively but also qualitatively. Undoubtedly, it is a difficult job but, in view of its tremendous importance, is worth putting in every ounce of our energy. In the First Plan there was a provision of Rs. 1.15 crores for Industries; in the Second Plan a much larger provision of Rs. 16 crores has been made, representing about 10 per cent of the total State outlay.

While food and clothing are important, equally important is education. The Government can pertinently claim to have given the matter the attention it deserves. Expenditure on education now represents an increase of 300 per cent over the expenditure in 1948-49. The programme consists of improvement of existing Primary schools, starting of new schools, gradual conversion of primary schools into basic schools, expansion of free Primary education in rural areas, increasing training facilities for Primary school teachers and improvement in the conditions of service of teachers. In addition, Secondary and College education have had due dose of consideration. To cater for the masses, there have been started about 1,000 Adult Education Centres, about 500 Night Schools and no less than 250 Centres run by Voluntary Organisations in which over 75,000 people are receiving instructions. The total expenditure on Education in the First Plan has been 11.43 crores and in the Second Plan the allocation is Rs. 21.30 crores.

Medical relief is one of the most important aspects of social service and, happily, West Bengal occupies the first place among the States in India in respect of measures for prevention of diseases and for the relief of the sick. Her *per capita* medical expenditure is the highest in India and nearly 15.4 per cent of the total revenue of the State is spent on public health and medical relief. In the First Plan, the total expenditure on Medical and Public Health was Rs. 23.35 crores.

HOUSING — A DISTURBING PROBLEM

Housing is a disturbing problem in all sectors of life. As regards industrial labour, not more than 20 per cent are now provided with houses by their employers. Efforts are being made to take advantage of the Industrial Housing Scheme of the Government of India to extend the housing facilities to as many labourers as possible. The Middle Class Housing Scheme has been of very great advantage to the people in the small income group. In the First Plan there was a provision of nearly Rs. 4 crores for Housing and it has been increased to Rs. 8.59 crores in the Second Plan.

A BOLD EXPERIMENT

Since 1952 a bold experiment has been at work, applying itself to all aspects of life. It is the experiment known all over the country as the Community Development Project. It aims at bringing about a radical change in the outlook of the people through the medium of the principle that self-help can alone show the way. From only 3 Community Development Blocks in 1952, the number of these and National Extension Service Blocks have steadily increased and the expansion will be continued until the entire State is covered by a network of 321 National Extension Blocks by the end of the Second Plan. The provision in the First Plan was to the order of Rs. 3.96 crores and in the Second Plan the estimated outlay will be Rs. 14.25 crores.

Particular mention of the plans in the foregoing paragraphs should not be taken to exhaust the list of activities of the Government. Indeed, there are many more and space would not permit referring to them all. One undeniable conclusion that emerges out of these parade of facts and figures is that, whatever may have been the actual results achieved, no efforts have been spared to initiate and implement measures and schemes to bring about an overall improvement in our economy. There should be no end of activities to that end in a welfare state. But, at the same time, the realities of the situation should not be ignored. In that case, we shall have built castles in the air and a feeling of disappoint-

(Continued On Page 28)

WELFARE STATE IN OUR TIME

By SURESH CH. ROY, M.A., LL.B, J.P.

OR the last decade the concept of the Welfare State has been held up before the country as the goal of national endeavour. The growth of the idea has coincided with steady expansion of the functions of Government all over the world leading to the assumption of direct responsibility by the State for the economic welfare of the citizens. In actual practice these include an economic policy designed to ensure full employment and a comprehensive system of social security. A Welfare State seeks to attain these aims without surrendering the basic democratic values. That marks it off from totalitarian systems. Most of the Western nations have found it possible, in post-war years, to provide remunerative employment to all those who are prepared to work and the means of subsistence to those who are disabled by age or illness from active employment. In India, too these are the declared aims of Government policy. The First Five-Year Plan defined the objective in the following terms:

> "The central objective of planning in India is to raise the standard of living of the people and to open out to them opportunities for a richer and more varied life. It must, therefore, aim both at utilising more effectively the available resources, human and material, so as to obtain from them a larger output of goods and services, and also at reducing inequalities of income, wealth and opportunity.
>
> "While in the initial stages the accent of endeavour must be on increased production, planning, even in the initial stages should not be confined to stimulating economic activity within the existing social and economic framework. That framework itself has to be remoulded so as to secure progressively for all members of the community **full employment, education, security against sickness and other disabilities, and adequate income.**"

The Second Five-Year Plan has accepted the achievement of a socialist pattern of society as the obejctive of economic policy.

> "This means that the basic criterion for determining the lines of advance is not private profit but social gain. Major decisions regarding production, distribution, consumption and investment and in fact the entire pattern of socio-economic relationships must be made by agencies informed by social purpose. The benefits of economic development must accrue more and more to the relatively less privileged classes of society, and there should be a progressive reduction of the concentration of incomes, wealth and economic power. The problem is to create a **milieu** in which the small man who has so far had little opportunity of perceiving and participating in the immense possibilities of growth through organised effort is enabled to put in his best in the interests of a higher standard of life for himself and increased prosperity for the country. For creating these conditions, the State has to take on heavy responsibilities as the principal agency speaking for and acting on behalf of the community as a whole. The public sector has to expand rapidly and the private sector has to play its part within the framework of the comprehensive plan accepted by the community."

The objectives of the Plan have elicited a surprisingly wide measure of support. During the recent discussion on the Plan in the Lok Sabha, the Deputy Leader of the Communist Party declared: "I say the Plan has been welcomed by almost all sections of the people and its professed objectives are such that nobody can really object to. I should think that the Government ought to be gratified with the response which has been given to the Plan." On the other hand, even the classes that stand to lose their privileges with the realisation of these objectives have not put up any significant opposition.

PEOPLE YET TO GET BENEFIT

But the objectives, however, unexceptionable, mean little to the common man trying hard to make both ends meet in a world in which in spite of five years of planned endeavour, employment opportunities, instead of broadening, are getting more and more restricted. What is of immediate significance is not the objective but the rate at which the country is advancing towards it. Though the progress reports make impressive reading, any objective observer will be hard put to find evidence of improvement in the actual living conditions of the people. Planning so far has not been able to make any perceptible difference to the massive poverty of the country.

A recent survey of living conditions in Calcutta undertaken by the Calcutta University for the Research Programmes Committee of the Planning Commission, reveals a dismal picture. The data collected during the first year's survey shows that about 63 per cent of the persons in the age group 15 to 24 who are seeking jobs are unemployed, followed by 11.5 per cent in the next age group. The report also reveals that 36 per cent of the population belonging to the lower income groups are living below the poverty line on a per capita income of less than Rs. 30 per month. In spite of the progress registered in the industrial sphere and increase in the number of establishments, the actual number of workers in employment shows a decline. The Minister of Labour stated in answer to questions in the West Bengal Legislative Assembly that, while the number of industrial establishments in the State increased from 2,613 to 2,820 from 1951 to 1954, the number of workers employed declined from 654,901 to 592,241 during the same period. While there are no authoritative figures of the total volume of unemployment in the country as a whole, it is estimated, that there are at least 16 lakhs unemployed young men in West

Bengal, the number unemployed in Calcutta alone being about five lakhs.

Though Calcutta and West Bengal have special problems of their own, it will be a mistake to regard the conditions in Calcutta as exceptional. For the fact remains that, in spite of restricted employment opoportunities, Calcutta continues to draw migrants from all parts of the country who come in search of means of livelihood. While some succeed, the less fortunate sink into unrelieved destitution. Calcutta may therefore be rightly regarded as the epitome of India. The conditions in this city bring the national economic problem into sharper focus.

MODEST BEGINNING

While economic policy has failed to grapple effectively with unemployment, progress in respect of social security schemes is even more inadequate. A modest beginning has been made with the Employees' State Insurance Act passed in 1948. Ten years after enactment of legislation, implementation is only partial. Even when it is fully in operation, it will offer a very limited measure of security to the workers of organised factory industries. These constitute less than one per cent of the total population. And it may be mentioned that there is no provision in the existing scheme for unemployment benefits or old age pensions, two essential elements of any worthwhile scheme of social security. At this rate of progress it will be a century before the entire population is covered by State Insurance, and by that time the scheme itself might have become an obsolete anachronism in a rapidly changing world. It should not be surprising if such a depressing prospect impels the people who are asked to contribute for State Insurance to harbour sentiments similar to those of an African leader regarding the slow advance to self-government. He is reported to have said that Africans were not prepared to wait for hundred years for having one Minister in the Cabinet. If people are to be cured of their cynical indifference to State Insurance, immediate action should be taken to devise and implement a scheme to make at least Health Insurance available to the entire population. It is wrong to think that the country is short of doctors. The problem, on the other hand, is one of proper utilisation of their services. The Bhore Committee's Report published in 1946 estimated the ratio of qualified doctors to the population at 1: 6,000. During the last ten years there has been a large expansion in the facilities of medical training and a corresponding increase in the output of qualified medical practitioners. In Bengal, at any rate, the present ratio of doctors to the population is likely to be nearer 1: 2,000. Statistics of unemployment among doctors also give an indirect indication of their total numbers. This unemployment is the result, not of an actual surplus, but of bad planning in utilising the services of medical men who, in the absence of inducement to settle in villages, tend to concentrate in urban areas. In the beginning of the year one hundred doctors seeking employment had registered their names with the Calcutta Employment Exchange. The comparative figure of other States was about ten.

Provision of Health Insurance will make for the rational utilisation of the services of medical men. Medical service may be nationalised, that is to say, every doctor should be asked to devote two hours in the morning and evening for attending patients on the same basis as panel doctors under the State Insurance Scheme. The rest of their time may be devoted to private practice. Provision should also be made for free dispensing of common medicines. The cost of the extension of health insurance to the whole population can be met by a small deduction from the salaries of all employees, supplemented by a slight addition to the fees charged for trade licences. If the problem is tackled in this way it should be possible to make universal health insurance effective within the next two years.

LACK OF ENTHUSIASM

The very slow rate of progress already achieved, or promised, is the most serious difficulty in enlisting popular enthusiasm for the practical tasks of planning. As the Minister for Planning stated in the Lok Sabha during the debate on the Plan there is no doubt that "the public will respond if they are approached in the right way." But it will be naive to believe that this can be achieved by publicity for the actions of the Government or the Plan targets for steel or cement. Deferred benefits have little attraction for people living on the margin of subsistence. People with experience of life insurance know how difficult it is to convince even educated people of the value of insurance, because the benefits in this case, though real and substantial, accrue years later. A gigantic programme of investment, with prospects of plenty in the future, is cold comfort to the unemployed youth wasting the most fruitful years of their lives in frustration. If planning is to be really effective, it should be designed to make an immediate and substantial reduction in the total numbers of unemployed.

There is no dearth of tasks waiting to be accomplished. What is required is the will to mobilise the entire working force of the country for a total attack on poverty and squalor. Unless this can be done, and in the near future, the outlook for ordered progress is not very encouraging.

People living below the margin of subsistence cannot afford to evaluate the merits of rival political ideologies. They can be easily persuaded that political liberty and free elections are luxuries which may be profitably exchanged for ensured means of livelihood. Otherwise how is one to explain the popularity of parties and politicians, whose only stock-in-trade appears to be the slogan *"hobe na"* or *"cholbe na"*. These are slogans which one cannot miss whenever there is a demonstration in the streets of Calcutta.

For a start, the Government cannot do better than undertake a co-ordinated programme of slum clearance and housing, so drawn up as to provide employment to all the unemployed who are willing to work at minimum wages. The cleaning up of the big cities alone will mean an increase in standard of living which cannot be adequately measured in material terms. For it will mark the difference between civilised living and bestial condition of existence which now is the lot of the slum dwellers in our great cities.

PROBLEM OF BEGGARS

If the programme is to be really effective and lead to lasting improvement, side by side with slum clearance, adequate provision will have to be made to take care of the destitutes, the old and infirm who clutter the pavements and live in gutters. Estimates of the number of beggars in the country vary. According to the 1951 Census, the total number of beggars was about five lakhs. This figure however relates to self-supporting beggars and is clearly an underestimate as far as total number of destitutes is concerned. Other estimates place the total figure at nearer two million. Even taking the higher estimate, for a country of India's size and population, the pro-

HARDAYAL'S WORK FOR INDIA

By GOBIND BEHARI LAL

IT seems that there is a reawakening of the nationalist spirit in many parts of India, apart from the routine Government and Congress Party rituals, which are necessary to keep the country going on in an orderly fashion. Honour is again being paid to the memories of Lokmanya Tilak, Sri Aurobindo Ghosh, Netaji Subhas Chandra Bose, who were all fighting patriots.

In remembering such men, most of whom prepared the way for Mahatma Gandhi's great movement which eventually led our people out of servitude into full national independence, the present generation of Indians honour and strengthen themselves. So necessary is PATRIOTISM for all Indians now — a fact which I can discern, from a great distance better than many of my compatriots seem to do in India — that no pettiness, no jealousy, no shortsightedness should be allowed to stultify it.

VARIETIES OF NATIONALISM

The more we think of the varieties of Indian Nationalism, and of the extraordinary geniuses and patriots, saints or soldiers who shaped these varieties, the richer and stronger will be our today's Unity. However, important and expedient "discipline" in a particular party may be, it should not be mistaken for sectarianism and dogmatism that will divide us in the long run.

In this spirit of a great historic Indian national consciousness I wish to remind my compatriots of Lala Har Dayal who made, in his way, a unique contribution to the development of the Indian independence movement.

Har Dayalji was the most brilliant of the militant nationalists of the Delhi School of Patriots — or even of the Delhi-Lahore School of Patriots, which may be shortly described as the (undivided) Punjab School of Nationalism He was younger than Lala Lajpat Rai, and the two loved each other greatly Lajpat Raiji's great work for the nation had begun long before Har Dayalji entered the arena of Indian national politics in 1907 or so.

DEFIANCE OF BRITISH GOVT.

What made Har Dayalji an important man overnight was his spectacular defiance of the British Government by an unprecedented act of NON-COOPERATION. which stirred up the whole British Empire He had been awarded one of the two State Scholarships which, in those days, were given by the British Government of India to two of the most brilliant graduates of the year from all the universities.

In 1905 or so he went to England on such a scholarship, and started studies at St John's College, Oxford, where he won a Bodlian scholarship for Sanskrit studies, as well He was expected to take the Indian Civil Service (I. C. S.) competetive examination, and he would have passed it brilliantly.

But one day in London he wrote to the Secretary of State for India that he was an Indian patriot, and could not conscientiously accept any money from the British rulers of his country, where they had no business to be. Newspapers published his letter of resignation, and the British were visibly upset, while the Indian nationalists were surprised and happy

PLANS FOR REVOLUTIONARY WORK

In 1908 he returned to Delhi, then stayed a few weeks as a house guest of Raj Prithwinath Chak in Kanpur (Cawnpur), where he made plans for his future revolutionary work.

His prestige was naturally very high now; men in Lahore and Delhi started calling him "Rishi Har Dayal", for he was as simple as he was brilliant and learned. Sri Aurobindo Ghosh wanted to meet him. Lokmanya Tilak and also G. K Gokhale, head of the Servants of India Society, invited him to stay and work with them. And the Lahore patriots urged him to remain in North India, where patriotism was still exceedingly backward.

In Delhi itself, then a lazy, unpatriotic city, Har Dayalji's friend, admirer and former teacher, Master Amir Chandji, promised to give him every support possible. A few more daring and nationalistic young college graduates came to be his disciples, willing to follow his example and give up any careers related to the British system.

NON-COOPERATION IN 1908

Har Dayalji, partly urged by Lajpat Raiji, started writing and publishing in English, Urdu and Hindi a series of articles in which he passionately exhorted educated Indians to give up all connection with the British. He had launched an all-out Non-cooperation movement in 1908. The British governors, especially of the Punjab and of the United Provinces, were extremely angry with him, and yet hesitated to make a martyr of him.

Then the history-making bomb burst in Calcutta, and all Indian public, political and economic, activities were revolutionized. Har Dayalji, even before Sri Aurobindo, had to leave India, or waste away in a British prison. He went to France and rejoined the unique brotherhood of "India's Political Exiles" — Shyamji Krishnavarma, Madame Cama, Rana of Paris, Birendranath Chattopadhya (Sarojini Naidu's brother) and others. Because of his personal sacrifice for a patriotic principle, his prestige was exceptionally high among all these compatriots, each of whom was unique and ardently patriotic.

REVOLUTIONARY WORK ABROAD

This "Exiles Group" laid the foundation of what we now call "India's Foreign Policy" — not in the technical sense in which it is a function per-

rmed by Shri Jawaharlal Nehru with a rare nius, but in the spiritual sense.

The point, and a very important point, is that e Exiles made other great countries conscious of e movement for the independence of India, and n the sympathy of these countries for the Indian use in various degrees and fashions. London, ris, Geneva, Rome, Berlin and San Francisco and w York and Tokyo — all these world capitals — re activated for the Indian cause, and this was ne by human beings — these Exiles of India.

To get back to Har Dayalji, he was ill with eumonia in Paris, and wandered on to Honolulu, om where he came to San Francisco in or around 10. It was here I was to meet him again, for had been intimate friends in Delhi. Without ing into any details, I shall give here a few high ints of what Har Dayalji did for India in lifornia :

The fact that he was an Oxford scholar, who d resigned his scholarship, turned his back upon brilliant and enriching official career, as an I.C.S. aheb", was already known to the authorities of e Universities of California and Stanford and to me of the great American newspapers of San ancisco and Oakland. Mr. John D. Barry, of the *n Francisco Bulletin,* a great newspaper edited by r. Fremont Older, wrote a series of biographical ticles about the Hindu genius, Har Dayal.

EW MOVEMENT LAUNCHED

One winter evening a meeting was held by the dian students of the University of California at e Stiles Hall, off the campus, and a large number professors and reporters were present. Lala ar Dayal was the chief speaker and he declared : British rule in India is an infamy, and we will ase it. We will fight for our independence." The t was in the fire. He had launched a new ovement.

Young Sikh students, particularly Kartar Singh, read Har Dayalji's gospel of patriotism among kh and other Indian farmers and workers roughout California. A movement of the "people", t only or even largely of the "educated Babu heb", was begun. Like Mahatma Gandhi, Har yalji had tremendous faith in the "common dian people", the vital yet illiterate workers and rmers. This was his magic — his passion for his people, not for the few of his own privileged ss.

The response was rapid and surprising. What s to be done ? Har Dayalji said : "We must ve a publication to advocate our cause, to promote e spirit of patriotism among our own people wher- er they may be in India, outside." The name of e weekly publication was to be most challenging : ADAR. Every Punjabi and United Provinces man ew what it meant — GADAR was the name by ich the Great Rebellion of 1857 was known to du and Hindi speaking peoples. The British ew.

Well, the Cause of India, now given a shape, s taken up by Irishmen, fighting for their in- pendence, by the Germans and so forth : it ame an international issue for the first time in period of the First World War. All the Exiles cked for it; Har Dayalji was a representative of m, and a highly individual thinker in his own ht.

GOVERNMENT OF THE PEOPLE

(Continued From Page 24)

ment and a sense of frustration are bound to follow. The Government can proceed only as far as our resources should permit. But, there is another factor — perhaps the most important factor — that conditions the movement and progress of all plans and programmes. I refer to the human factor. Resources of a country lie in its men and materials. It is the balance between the two that is calculated to yield the maximum results.

GOVERNMENT — PEOPLE'S CREATION

I would conclude by referring once again to the query made of me by the villager in the open-air rural gathering. His question still rings in my ears: "This Government have had been in charge of our affairs for nearly eight years now, but could you please tell us what the people have really got from them?" If the question is the outward manifestation of an anxious mind, it is, at the same time, indicative of an one-sided conception of rights. The impression that, unfortunately, lies in many minds is that the only function of the Government is to *give* and *give* and to the extent that they fail to give, they should stand condemned. Those who make demands of the Government often forget that they have a corresponding measure of responsibilities also to discharge. After all, what is Government ? It is the people's creation, it is the signature of the greatest measure of common consent. And to sustain their own creation, people must work. Is not the Government a people's movement in the ultimate analysis ? If so, it is for the people to come forward and supplement the efforts of the Government by their willing endeavours and ungrudging cooperation. Let us look for a moment to the Community Development Programme. It has created a stir in the villages not only in West Bengal but all over India. But its success has not been uniform everywhere. Its achievements have been in direct proportion to doses in which the support and active cooperation of the people have been forthcoming. It has attained striking results where the people have adopted it as their own programme. The Government has given the go, but the momentum has been accelerated by the energy and enthusiasm of the people.

During the last few years, I have had many opportunities of coming in contact with the people, particularly those in the rural sectors. I have no hesitation in saying that they are an excellent material, simple, unassuming and straightforward. With them anything can be done, once they are roused and enthused. I, for one, do not believe that anyone will ever refuse to lend his hand to a worthy cause. And what cause could be more worthy than the plan for improving the lot of the common man ? What the Government have been able to do are known to everyone. All their cards are on the table. Judge them impartially and dispassionately and one will not perhaps grudge the verdict that serious and honest endeavours have been made in circumstances none too placid and easy. The Government is grateful to the people for all that they have done to help the plans initiated so far. In the coming years, let them associate still more actively and intimately with the endeavours of the Government and there is no reason why we should not view our future with hope, faith and optimism.

CRYPTOGRAPHY AS A FACTOR IN WORLD HISTORY

By Dr. NANDALAL CHATTERJEE, M.A., Ph.D., D.Litt.

CRYPTOGRAPHY or secret writing through codes and ciphers has been one of the most vital factors in world history, and is still a potent force in the domain of international relations. It is a pity that this art has not received in India the attention it richly deserves. Cryptography may be briefly described as the art of writing messages which cannot be understood by anyone ignorant of the system employed. It is one of the most ancient of arts, and it would be hardly an exaggeration to say that throughout the world's history, battles, crowns and kingdoms have been won or lost, more through the knowledge of cryptography than from any other cause.

The story of codes and ciphers is truly fascinating. But, before we proceed to examine the history of codes and ciphers, let us first briefly indicate what a code or a cipher actually is. When a word is made to stand for a phrase, or a sentence, or a whole message, it is called a code-word. The use of codes, therefore, requires the keeping of a code-book or code-dictionary by the party sending the secret message and by the party receiving it. In a cipher, each single letter of the message is represented by some other letter, figure, or symbol. If the key thereof is known or remembered a cipher message can be easily deciphered. The use of cipher, therefore, does not necessitate the carrying of code-books or any other mechanical equipment. Codes are generally used in the navies, whereas the armies generally use ciphers. In diplomatic or secret service work and in espionage, codes are generally preferred, because code messages can express more ideas in the shortest amount of space.

AS OLD AS WRITING ART

The history of codes and ciphers is so old that it is difficult to state when exactly they first originated. It may even be supposed that they are almost as old as the art of writing itself. Historians hold that the alphabet began originally as a series of pictures representing ideas and actions. This sort of pictorial writing which flourished in the ancient world is known as hieroglyphics. In this sort of writing, every symbol possessed a distinct meaning. But, in course of time, the alphabet replaced the old picture symbols, and in consequence lost the meaning which the former symbols had possessed. The introduction of the alphabet thus marks the beginning of cipher. Cipher, therefore, came into existence when and wherever people learnt the art of reading and writing.

In ancient Greece and Rome, secret writing was practised through cipher. Historians tell us that Julius Caesar used to send his secret messages through cipher alone. It is also believed that Charlemagne too employed ciphers to communicate with his distant agents. An example of a successful use of cipher message in the ancient times may be given from the history of Sparta. Lysander of Sparta was a great general. He crushed the power of Athens, and was in his own day the most powerful man in Greece. Once, while he was encamped at Sestos, he accidentally received a secret message in cipher from a slave that his friend and colleague had been murdered, the Governor of Persia had proved a traitor, and that there was danger of an immediate rising in Sparta. The same night Lysander sailed for home, reached there in time, and saved the situation before it could be too late. It was thus a cipher which saved a general and an empire.

DURING MEDIAEVAL PERIOD

In the mediaeval times, however, codes too were sometimes used along with the cipher. The oldest reference is to be found in the secret communications of the Venetian ambassador at the Court of Austria. The Venetian ambassador used to refer to the King of Hungary as "P", and the Pope as "Q". It is interesting to note that the ambassador usually referred to Austria as the "Sun". Generally, however, Italy, Spain and France used ciphers. The codes and ciphers in mediaeval times originated from two different sources - priestly authors who sought to avoid the strict censorship of the Church authorities, and thieves and robbers who communicated with each other through code words or secret signs. The art gradually came to be adopted as the principal means of diplomatic and state correspondence. It may be incidentally mentioned here that the French ambassador to Rome, in the time of Louis XIII, used to describe the Pope as "the rose", Rome as "the garden", Germany as "the stable", and Spain as "the manger". The French ambassador to Russia referred to the English ambassador as "the fox", the Austrian ambassador "the wolf", and so on.

With the advent of modern times, secret writing gradually acquired a much greater importance than it had ever possessed before. An illustration may be given from the history of England of Queen Elizabeth's time. During her captivity in England, Mary, Queen of Scots, started a secret intrigue against Queen Elizabeth with a view to securing the throne of England for herself. She used to write to her supporters in cipher. Two of these, John Ballard and Anthony Babington, made an attempt to procure Spanish help for Mary, and also plotted the assassination of Queen Elizabeth, Cecil and Walsingham. They also planned to rescue Mary from the place where she was kept confined. Mary was fully aware of these plans, and she was believed to have approved of the plot to murder her rival, Elizabeth.

But, before the plans could materialise, the cipher messages of the plotters including those of Mary were accidentally intercepted and deciphered by Walsingham. Most of the conspirators were in consequence arrested, and Mary herself was eventually beheaded. Thus it was cryptography which saved Elizabeth not only her throne but her life as well.

FRANCIS BACON & HIS SYSTEM

Francis Bacon, Lord Verulam, is reputed to have introduced a special mode of secret writing with only two alphabets, "a" and "b". An examination of his system has. it is curious to note, led many modern cryptographers to suppose that it was Bacon himself, and not Shakespeare, who had written the Shakespearean plays. This has indeed been one of the most intriguing problems in the history of secret writing.

The suggestion that Bacon wrote the dramas ascribed to Shakespeare first came from Horace Walpole. Subsequently, Joseph Hart published a treatise in support of Bacon's claims. He was followed by many others. Among them were the American authoress, Delia Bacon, the American politician, T. T. Donnelly, the American professor, Dr. Owen, the latter's secretary, Mrs. Elizabeth Wells Gallup, and other writers such as William Stone Booth and Col. George Fabyan. These writers used their knowledge of cryptography to detect such secret references in Shakespeare's plays as might conclusively establish the authorship of Bacon. Mrs. Gallup, for example, made startling decipherments to show that in her youth Queen Elizabeth had secretly married the Earl of Leicester and had even a child. The child of this secret marriage was no other than Francis Bacon, and it is Bacon who wrote all the plays and works attributed not only to Shakespeare but also to Burton, Ben Jonson, Peele, Greene, Marlowe and Spenser. It is needless to say that this whole theory is fantastic, and is historically improbable. The controversy only indicates the extent to which ingenuity in the art of reading secret writing could reach.

INTERESTING ILLUSTRATION

An example of the method employed by the upholders of the Baconian theory may not be out of place here. William Stone Booth, it is interesting to note, found in Scene III, Act IV of *Love's Labour's Lost*, the following lines :—

> But with the motion of all elements,
> Courses as swift as thought in every power,
> And gives to every power a double power.

In the first line, there is "B", in the second "Co", and in the third "An". This was taken to mean a secret indication left by Bacon himself that he was the author of this play!

After the Elizabethan period, secret writing began to influence the course of historical events to a much greater extent than before. After the death of Henry IV of France, there was a strong Huguenot movement in the country. The Huguenots were up in armed revolt, and were besieged in Realmont. During the siege, the Prince of Conde chanced to get hold of a man who was trying to escape through the lines. On search being made, a poem was found in his possession. It was a secret message from the fort asking urgently for a supply of arms and munitions from the Huguenots of Montauban. The interception of this secret message enabled Conde to secure the surrender of Realmont the very next morning.

AN ADVANCED SCIENCE

In Louis XIV's time, cipher was considerably used, and after the French Revolution cryptography became an advanced science in Europe. In England, secret writing had already acquired a permanent importance, especially during and after the Civil War. An instance may be cited here. After the death of Charles II, his bastard son, the Duke of Monmouth, plotted to obtain the throne of England. The Duke of Argyle joined in the plot, and sent messages to his friends in Scotland. One cipher message was accidentally intercepted. The message was to the effect that Argyle was to land on the west coast, of Scotland in early May, and Monmouth would simultaneously land on the west coast of England. James II was thus forewarned, and all suspected persons where Argyle might land were thrown into prison. Subsequently, Argyle and Monmouth themselves were caught and hanged. Thus, James escaped overthrow because of successful cryptography. Had James been a wise ruler, he could have sat till his last day on the throne which his cryptographers had preserved for him. That was, however, not to be!

During the wars of the French Revolution, the failure to find a good cipher cost many people their heads, and it brought death to a really great leader—Charles Pichegru, general of the French army on the Rhine. One of his letters in cipher revealed that he intended to overthrow the French republic in favour of the king. For this Pichegru had to die in prison. Napoleon used cipher in his secret communications, but sometimes he suffered badly from intercepted messages as, for example, in the Battle of Leipzig.

UTILITY IN WARFARE

After the French Revolution, the invention of the electric telegraph carried cryptography a stage further. Henceforth, ciphers were almost obligatory in all important political and military communications. In France, there was an attempt made to bring the Bourbons back to the throne after the fall of Napoleon, but the attempt failed simply because the secret messages of the chief plotters like Duchesse de Berry were intercepted. Again, shortly afterwards the police got hold of details regarding the conspiracy in favour of Prince Louis Napoleon, In the American Civil War secret writing was practised by the rebel leaders, and the success of the Unionists was largely due to the fact that they could successfully decipher the secret communications of the Confederates. In the Franco-Prussian War, the Germans could easily defeat the French, because they managed to intercept and read some of the most important secret messages of the French Army. In the Russo-Turkish War also, Russian success was to a large extent due to Turkish inability to read their own secret code messages. In the Boer War, the British used cryptography with marked profit.

In the pre-War Europe, diplomats and spies considered it to be their most important duty to steal the codes and ciphers of rival powers. This enabled many clever impostors to sell bogus code books at fancy prices For example, the Austrian Government was once cheated by a Serbian adventurer who sold a bogus code book of his country for 10,000 Kroner.

The World War of 1914 found cryptography at its height. From the day when the German radio

(*Continued On Page 242*)

VINOBA'S NEW SOCIETY PLAN

By JOHN E. FRAZER

ON a day between today and 31 December, 1957, a thin, bespectacled man, clad in khadi, will announce to India that land, all land, belongs to the people, not to the present owners.

This is the promise of Vinoba Bhave, made in an exclusive interview in a landowner's swept and garnished house in Coimbatore District of Tamilnad. An American, I had gone south to walk and talk with the disciple of Gandhiji and to ask, as I had known others to ask, what Vinoba would do if the goal of 5 crores donated land is not reached. Only one-tenth of that acreage has been subscribed thus far.

JUST A FIRST STEP

"I don't know what I myself will do", said Vinoba. "But there is no misgiving in my mind. It (the 50 million acres) is not a goal—it is simply a first step. The whole land can be distributed in a single day—provided we create the proper atmosphere. I think the atmosphere is being created.

> *"Just as you celebrate Christmas all over the world on a single day, so also land will be distributed. A date will be fixed, and in all the villages (of India) people will declare that land belongs to God."*

I checked this statement later with Bhoodan party workers. There can be no doubt of the walking saint's resolve. On a certain day, yet to be determined, he will put forth a principle, and then watch, wait, and walk while, like the Quit India movement, the idea takes root.

THE SAINT'S WAY

Vinoba is impressive. All his manner is resolute and decisive. He comes to the heart of a matter, disposes of people and papers quickly, goes on to the next subject. Schedules run on time. If he is to speak at 5-30, he speaks at 5-30. Departing from one village to go to the next, he leaves the house almost hurriedly, flinging his cloth about him, walking impatiently.

His steps are firm, his shoes, of brown cloth, planted firmly but lightly on the ground. He stops halfway in the march for a cup of curds; on arrival, he sits immediately, and perspiration is patted from his legs. His voice is thin, not strong, but his gestures are strong. He taps his knees flatly when he speaks to an audience, covers and uncovers his watch on the platform beside him, prays silently, lips moving gently, with intensity; smiles warmly. "Same like the Gandhiji", said a Madras bearer to the writer. "Very soft man".

Like westerners, I knotted my legs trying to sit cross-legged. Vinoba motioned me closer. "I am a little hard of hearing". In the desire to catch and write down each word, I appeared inattentive, not watching his face closely as he spoke: he stopped, placed a hand on my shoulder, and said with a flashing twinkle, "Are you hard of hearing too?"

WHAT'S SHAME?

I asked for comment on a criticism I had heard, that Bhoodan promotes a national guilt-feeling. He did not understand this. I explained that a landowner might donate out of compulsion, or shame, not out of compassion. This shame might reach national proportions.

"There is always a complexity of motives in the human mind", Vinoba then said. "Shame is there. Shame is also a kind of knowledge. A child is not ashamed to be naked, but a grown-up boy is. He has knowledge. Shame presupposes knowledge.

"Those giving out of shame give out of knowledge. They feel it is their duty to give. If they feel that compunction, there is nothing wrong. If I can sense the atmosphere, most people are giving out of the goodness of their hearts—but others out of shame".

PLANS NEW SOCIETY

Emphasis in Vinoba's movement, to some observers, is altering. From simple appeals for a gift of land, out of compassion and love, Vinoba now pleads for a new society. He wishes to change the structure of India, then of the world. Jayaprakash Narayan, speaking in Madras, declared that "just as the goal of Gandhiji was to inculcate fearlessness, to teach every Indian to work for freedom, so the goal of Vinobaji is through force of love and reason to bring about a human revolution, to give up all, and build a new civilization based on social ownership of property".

This is a large dose to swallow. I asked Vinoba if, as greater ambition dominates the movement, the land-gift idea might not suffer.

"Flowers are dropped", he said, "and fruits appear. Suppose emphasis on land disappears and higher things come. There is nothing to be grieved about. You sow a seed, and you find that it disappears. But out of that seed, flowers and fruits come. The unity of the seed is not destroyed—it manifests itself in different forms. The seed is not lost. And so long as I do not go by airplane you can be sure that the land movement is going on!"

PRIVATE PROPERTY

What about private property? In the gramdan villages of Bihar, land is now wholly owned by the village; there is no private ownership. Even village stores are village-owned, according to Vinoba's formula of "one village one family". I ask whether he aimed, in fact, at the abolition of all private property.

"What I mean", he answered, "is not the end of private property. I want to get rid of the sense of

private property. I should feel (for example) that my body is my responsibility, my private property. I have a responsibility to keep it fit. But I should not have the view that my body is meant for me alone—it is my duty to keep it fit for society.

NO "ME" & "MINE"

'I want to do away with 'me' and 'mine', and let us use the words 'we' and 'ours'. In the Bible are the words, 'Blessed are the poor in spirit'. There is a difference between poor, and poor in spirit. (He implies here that man should be humble). You can have your own automobile (as an example), as you have your own food, provided you use it for society. Your own development is a public concern, and you are in charge of it".

If Sarvodaya is a world society, how can it contribute to world peace? And how, particularly, would Vinoba apply Sarvodayan principles to specific questions like Suez?

SUEZ & NASSER

"Egypt is a small nation", Vinoba said, "and against it are strong nations like England, France, and America. What should they do? "Agree with thine adversary quickly"—and finish the matter. Suez is no real question, but a fiction. Big nations should be strong enough to agree with their adversary, and the problem would be solved. When Nasser says he will keep the canal open for all, why not test Egypt"s sincerity? If I were a representative of America and Britain, out of strength of my position I would fully trust Nasser, and I would have patience because I am strong enough".

WORLD PEACE

About world peace:

"I have often said that a land gift deed is a vote for world peace. I claim this movement is doing for world peace what is not being done anywhere in the world. Here we are trying to change the basis of human society. Sarvodaya will first have to transform Indian government and Indian society, and through them the world. We can't expect to change the world without changing India. To outward appearances this is a national movement: but actually it is an international movement, broad and inclusive".

Perhaps it is rash for an outsider, and presumptuous, to judge Sarvodaya on short acquaintance. But impressions remain, as one reads, talks, and then watches Vinoba among the villagers, or walking a dark morning road in silence, a lantern bearer in front, and quiet, devoted followers pressing forward steadily with him.

WORKERS' CONFIDENCE

A first impression is one of continuing confidence. There is no slackening of enthusiasm among the workers I talked to—"they are hopeful and confident", said Vinoba. Gifts of land may decline, but devotion continues. Every party worker to whom I spoke declared firmly that interest in Vinoba's walks was increasing; more workers are joining, and the sense of mission is stronger than before.

And still the desperate need continues, as only the blind in heart could fail to see. I watched the searching, hungered stares, particularly of women in villages, as Vinoba spoke: some hope for a change must surely stir within these people. Gandhi's question, 'Pray tell me, what am I to do with a fifth of the human race on the verge of starvation?", still bitterly cries for an answer.

VINOBA'S TOMORROW

One asks, however, as others are asking, whether the simplicity of land sharing, which all can understand and perhaps agree with, is not lost in a complexity of dreams for a new society.

Vinoba's tomorrow is a world dominated by love, not a new idea, but the world's strongest idea; but he allies theology with a specific economic system—a unanimous society, where all goods, all property will be socially owned.

In more practical aspects, also, questions arise. A Bhoodan leader told the writer in Coimbatore that 80 per cent of all land collected by Vinoba is still undistributed. The Herculean task has not yet been tackled. But administration is part of revolution too.

CALL OF LOVE

The deepest instincts of the human heart respond to the call of love and generosity, and it is to these that Vinoba first appealed. Now he goes further, to the new ideal society. Is this where India wants to go?

On a day between now and 31st December, 1957, a thin, frail man, walking a dusty road, will give India a chance to decide.

DURGA PUJA IN ASSAM

(Continued From Page 12)

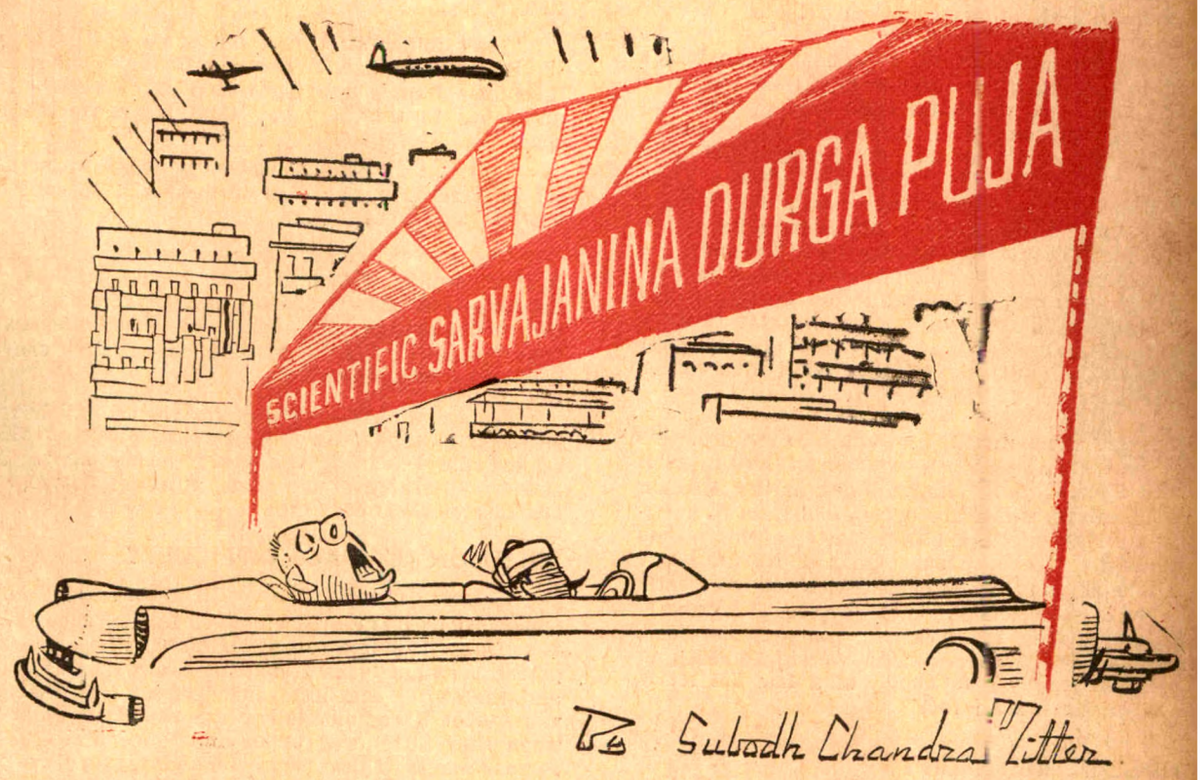
Durga Puja on an astounding scale. Animals, goats and buffaloes, were sacrificed in hundreds, and *bhawanas* (village operas) and folk-plays were organised on a lavish scale. It was open for public co-operation, and those who refused or failed to do obeisance to the Goddess, as desired by the Queen, were forced under threat of death to do obeisance to the Goddess. The Vaishnava preachers, including Chaturbhuj, a powerful spiritual head of the volatile Moamaria sect, were invited by the Queen to the celebrations. As is natural, Chaturbhuj and his followers politely refused to do obeisance to the Goddess. At this, the Queen had them brought to the place of worship under threat of arms, and were forced to do obeisance to Goddess Durga at her behest; their foreheads were forcibly besmeared with the blood of the animals that were sacrificed in the ritual.

CRUEL BLOOD BATH

The efforts made to introduce Durga Puja into the religious life of Assam constitute a history of political discord and cruel blood-bath. This is the first chapter of the history of the introduction of Durga worship here; the second chapter of it came to be written with the Bengalis who came to this country along with British administrators. The spirit in which the Britishers introduced Christmas celebrations into this country *i.e.* to keep up home traditions in a foreign country, was the spirit behind the enthusiasm of the Bengalis who came with them in their efforts to make Durga Puja an item of religion here. It was natural to a people separated from their homeland and their local cultural environments.

By now, it has, naturally enough, gone deep into the mind and heart of the people here, and it is with great eagerness that they await the autumn to come, and with it the Durga Puja,—the autumn bebause it brings a refreshing time and the Durga Puja because it brings them the joy of celebrations and a few care-free days from the chronic tedium of life. It is an undeniable fact that the deep religious appeal of it and its mysterious and highly esoteric aspects are over-shadowed by the spirit of gay abandon and *joie de vivre* inherent in its very life-spirit. Whatever religious appeal of the Puja exists, it is only in its pale cast.

SREEKRISHNA—THE SUPREME LORD



KALURAM VIDYADVIGAJA came back home after having finished his long tour round the globe extending over a period of well-nigh four decades and a half, rich with scientific lore both ancient and modern. Nothing surprised him so much, neither the present Howrah Bridge, nor the spacious roads like Vivekananda Spur and Chittaranjan Avenue, nor even the tall mansions that skirt them, as the red pieces of cloth with the words Sarvajanina Durga Puja inscribed on them with bold silver letters, suspended high across these thoroughfares almost regularly a furlong apart, from a verandah to a verandah across the streets. Soon he found himself asking, 'What do these things really portend ? Are they commercial advertisements ? In our time they used to write *Pujar Vipula Ayojana*. Are they something akin to that or are they merely kite-flying by party politicians ?'

Ere he could come to any definite conclusion, his car swirled into an alley, kissed a ground-floor balcony and stopped at the entrance of his ancestral house. Some youngsters assembled on the balcony with bunches of paper in hand resembling booklets of lottery (Raffle) tickets greeted him with folded arms. He returned their greetings, exchanged smiles with them and said : 'Do I know you at all my young friends ? No, you were none of you perhaps born when I left home last !

'No sir', replied the boys, 'We are satellites of great men. We move in high circles. Your name and eminence have reached our ears. So, we n gather round you.'

'So nice of you, replied Kaluram, 'but this is r perhaps the proper time, either for you or for n to pick up new acquaintance.'

'No sir, subscription sir, we leave you quick cried out a pert youngster of the party.

Kaluram smiled at him and asked, 'What am to subscribe for? 'For the Sarvajanina Durga Pu sir,' came the reply.

'Glorious!' ejaculated Kaluram, 'You have cor just in time! I was simply getting mad to know wh it actually meant. Come in, come to my roc please.'

Kaluram led the way, the boys followed hi looking askance at each other. Soon they all ente ed Kaluram's office room.

WHAT THIS PUJA?

When they had all taken their seats Kalura began, 'Yes, my friends, what is Sarvajanina Durg Puja ? Nothing of it was even in air when I le home. Is it really a form of congregational worship

'No, no, sir, nothing of the kind,' replied th leader of the juvenile party, 'Only one and or minister officiates at the function. The rest are a spectators.'

'No, sir, another person plays the role of prompter.' Thus corrected second boy.

'Yes, I know that', replied Kaluram, 'He is know as Tantradharaka'. 'Yes sir, yes sir, you sti remember it', cried out the boys. 'How then can

Sarvajanina ?' enquired Kaluram and added, en I was a small boy, like many of you present , I read a poem named Universal Prayer—Father ll etc. That poem was translated as Sarvajanina ra *Sakaler pita tumi tumi sarvamaya.* So, I rally thought it to be a universal worship of ga where Hindus, Sikhs, Buddhists, Jains, Parsees istians and all others could participate.

"Surely sir, we have no objection to anybody's ng part in it, if he chooses to do so", observed of the boys to which Kaluram replied, 'Yes that be so, but some such element must be introed in the worship so that none might feel any ple in joining in it. Rabindranath was a great . Others before him might or might not have ered him in poetic genius, but there is no denythe fact that today Rabindranath's name is e universally known than any of his predeces-. Go to any part of the world and ask the people re, they will say, yes we know him through nslations of his poems. Have you ever stopped hink of the real cause of this world-wide fame? The boys cried, 'No, no.'

Kaluram went on: 'Rabindranath never drew his tic inspiration from any wonder of Nature such Aurora Borealis, or Niagra Falls, or the Amazon the Himalays, which are but special gifts to partir countries, but the subject matter of his poems confined to the commonest gifts of Nature, such the blue sky, purling streams, green foliage, gentle eze etc., which one comes across everywhere. nce his universal appreciation. You are, therefore, introduce in the Sarvajanina worship something ch is not merely a monopoly of a few but really mon to the human race.'

ONDERFUL RESEARCH !

'Yes, please find out what that element is and we ll spare no pains to introduce it in our mode of ship. As a matter of fact a competition has wn up almost unwittingly among the different ties about the introduction of novelty. So, yearly novelties crop up in different sectors.' Thus gested one amongst the boys present there.

Kaluram answered: 'In my humble view man is orn self-seeker. Self-seeking is congenital to human race. I am supported by Darwin in view, although he uses a different expression. It n this struggle of self-seeking that the fittest ne survives. So the present generation of men women is only the cream of self-seekers' comnity. Parents' love towards their children, which s so speciously selfless, is not altogether free n expectation of help in times of need. So my s, try and introduce this self-seeking element in r mode of worship and you will find that not y all men but all birds and beasts will join you in time!

Laughter marked the scene and the boys reked: Thank you sir, for your wonderful research, that element is not altogether absent in the pret day Sarvajanina Puja.

ACE SHORTAGE

'Very well', said Kaluram, 'tell me all about your lculties and I shall remove them scientifically as as it lies in my power to do so'.

'Our first difficulty is about space,' remarked one the boys and added, 'Influx of displaced persons in city has encroached upon so much of its space t hardly a square foot of vacant land is now available for the erection of the pandal. The other factor is also of no mean order. Sarvajanina Puja is increasing by leaps and bounds every year due to party faction.'

'Paucity of space is no real difficulty to scientists nowadays', replied Kaluram and added 'Modern scientists can create space almost *ad lib,* out of time.'

'Can't follow sir,' burst out some of the boys.

Kaluram replied, 'Why not? Haven't you noticed in cinema houses light converted into speech? It is analogous to that, here time is converted into space.'

'How can we possibly believe it unless we actually see it done as in the case of light and speech?' remarked those boys.

'Yes, you will follow me after you have heard me in full', replied Kaluram and went on: 'Yes, by applying the theory of *commintern* scientists can now convert time into space so that one having time eternal at one's command can easily convert it into infinite space.'

'Yes sir, we have heard of the theory, but haven't yet seen it applied to any practical purpose.' Thus replied the leader of the young men's party, and added: 'Please give us some practical advice, we are sick of theories.'

SOLUTION OF SPACE DIFFICULTY

Kaluram now went on with a grave and philosophical look: 'The oft-committed fallacy about space is to think it limited to the earth's surface alone, forgetful of its existence in abundance between the earth and the sky. The first businessmen to take advantage of it commercially were the Railway people when they introduced upper and lower berth in the compartments of carriages for conveyance of passengers. But the greatest exploitation of this space that has uptill now been made is by the American architects who have introduced sky-scrapers in their country (Laughter).

'But sir', said the leader, 'we have been allotted a delta shaped pavement at the crossing of two main thoroughfares. Its measurement hardly touches 10 sq. ft., and we have to keep clear space for a two-way traffic. How can that be feasible?'

'Why not?' replied Kaluram, 'Erect scaffoldings with layers of shelves. The different images can be arranged in a vertical column each being accommodated in each of these layers of shelf.'

'How can that be, sir?' asked a boy, 'Lakshmi and Saraswati are to remain by the side of Mother Durga.'

'Not necessarily', retorted Kaluram, 'Some people place Saraswati on the right side of Durga while others place her on the left side. So you see there is no hard and fast rule to follow about the location of these images. Besides, these two goddesses are neither A.D.C.s to Durga, nor did they ever participate in the fight against the demon Mahisha. They are silent figures, mere side shows and function like apothecary's show bottles.' (Laughter) 'No, this objection must be overruled. What next please?'

'How do you propose to arrange them'? enquired the leader.

'Yes, that's a point to be settled,' answered Kaluram and said, 'Ganesha must be placed at the bottom and Shiva at the top'.

'Why?' asked the boys. 'Ganesha is to be worshipped first and Shiva last,' replied Kaluram.

'All right sir, we appreciate,' replied the boys. Kartick must be placed just above Ganesha ready

KALURAM IS A MAN OF WONDERFUL IDEAS AND BOLD INNOVATIONS

with bow and arrow, lest Shani might once more do him any harm. Of course ordinary arrows won't do, they must be tipped with some explosives.' Thus proposed Kaluram and the boys agreed.

Then came the question of the two wives of Vishnu. Who was to get the precedence? Vishnu himself has not assigned precedence to any and has always allowed them equal status. So, how to decide this troublesome question of precedence of the two co-wives? Kaluram cut this Gordian knot by judging the ratio of their devotees. Undoutedly Lakshmi claims the larger number. As times are getting harder her devotees are increasing by leaps and bounds. The school teachers, who had ere long been exclusive devotees of Sarasvati, being pinched with poverty are now turning their heels to her and casting a look of supplication at Lakshmi. So, it is settled that Lakshmi should have precedence over Sarasvati and should be placed above the shelf occupied by Sarasvati. Accordingly, Sarasvati's place is allotted to the shelf above that of Kartick and Lakshmi's to the next above it. The fifth shelf from the bottom is to be occupied by Mahisha and the one above it, which is to be pretty high, is assigned for Durga on Her lion. The one above Durga's being the topmost is reserved for Shiva. Nobody having raised any objection this arrangement stood confirmed.

ANOTHER DIFFICULTY

A point, however, was raised as to how the offerings were to reach the deities on the upper shelves. Kaluram at once answered: 'By means of a toy rocket flowers and other offerings are to reach them.' So, this point also was settled.

At this suggestion the boys cried out: 'Sir, you are a man of wonderful ideas and bold innovations, we leave the entire management at your hands, we will utilize our energies in collecting subscriptions. So, please say how much you propose to subscribe to our funds.'

Kaluram said, 'I shall bear the whole expense of your Sarvajanina Puja, if you only follow my advice.'

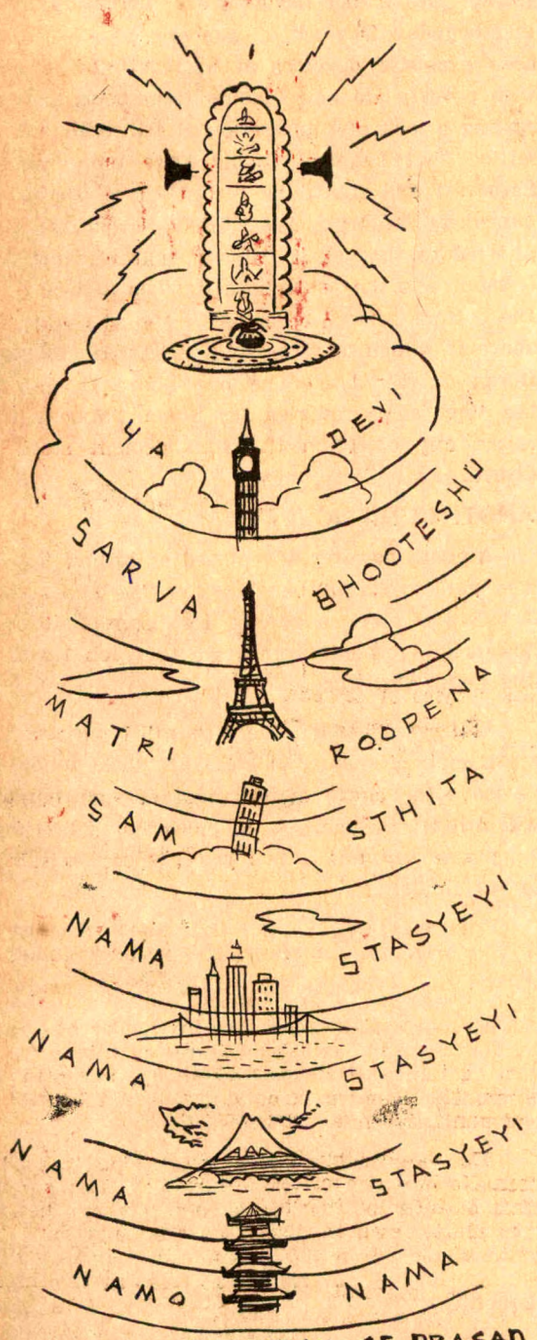
The boys raised their eyes in wonder at him and he continued: 'You see we are scientists, we can turn coal into diamond. So, we are never in want of money. Diamond is only jewellers' favourite, but gold and silver are favourites of all'.

'Can you make gold out of nothing?' asked one of the boys and Kaluram replied: 'That's not at all a difficult job, but we should stay our hands in the matter. All civilized governments are now converting paper into gold and silver and we should not tread on government's toes in this matter.' (Laughter)

GRAND PREPARATIONS!

The next day Kaluram inspected the delta-shaped spot, had high scaffoldings erected with shelves and placed the images in the order proposed the day before. In course of a few days he brought several helicopters, fixed telescope on the parapets of high buildings of the town as well as on the high railings of the bridges over the river Hooghly, planted broadcasting instruments in a park in North Calcutta and converted that park simultaneously into an airport and a landing station of numerous hang-

ing bridges and hanging roads constructed temporarily to divert the crowd of spectators, flash lights were fixed on tree-tops to illumine the sky so that plane-crash and other such accidents could be avoided. A network of rope-ways were constructed to send Puja offerings to the deities from devotees



AFTER THE DISTRIBUTION OF PRASAD BY AIR, THE RECITAL OF CHANDI WAS BROADCAST TO REMOTE PARTS OF THE WORLD

of far off lands. A publicity board was set up to proclaim this festivity to the far easterners and far westerners through their representatives in Calcutta. An unprecedented enthusiasm prevailed in the town and its suburbs. Devotees' excitement knew no bounds. Visitors from foreign countries began to pour in. Some were accommodated in the Tereti Bazar colony of the town and entertained in subterranean gambling dens after being served with black tea, prawn cutlets, roasted bacon etc., others were housed in sky-scrapers as could be found in Calcutta-1, and were entertained in a cinema house at Chowringhee after being served with cocoa, ice-creams etc.; still others were lodged in the secret cells of a defunct fort in the Calcutta Maidan with iron guards to protect their secrecy. They were entertained with secret games of an astute nature after being served with secret dishes, everything being secret with them.

PRASAD : SCIENTIFIC DISTRIBUTION

On the Mahasaptami day a special police force was seen hovering in chartered Dakota planes round the monumental pandal and shouting through mikes *'Apahatasi Asurani Vedisata'* (Evil spirits round the pandal go to the ruin) Some helicopters fitted with ambulance requisites and bearing red cross marks were seen lifting with the help of parachutes the injured people from amidst the mass of pedestrians struggling on hanging roads and hanging bridges, the main thoroughfares being reserved for vehicular traffic.

When the Puja was over *prasads* or the sacraments of the deities were dropped from flying planes packed in plastic bags with marks of Swastika on them specially made for the occasion, in the same way as is done in times of war to the besieged garrison. *Charanamrita* or the sacred washings of the deities' feet were also dropped in like manner sealed in plastic ampullae. When these things threatened to get exhausted the Governor of the management ordered the *prasadas* still remaining to be pulverized into fine attenuation and sprinkled through sprays to the devotees assembled in the pandal zone. *Charcnamrita* too was ordered to be reduced to mist and cast over them in nebular form. Nobody, of course, ostensibly grudged at this arrangement which ensured even distribution to all, but many felt sorry at heart for not having stomach loads of *prasadas*. After this *pradsada* distribution ceremony the recital of Chandi was broadcast to remote parts of the world such as North Cape, Godhab, Honoluloo etc, where it was still an unheard of things. In this way passed the three-day worship of Mother Durga amid thumping excitement and cheers.

IMMERSION: IMAGES IN BALLOONS

When the fourth day came difficulty arose as to the immersion of the images. How to take them out through these heavy throngs of people ? Kaluram solved the problem by taking them in transparent balloons so that every one who once turned his eyes at the sky could easily have a full view of the images flying. They are landed in a sea-moth moored in the river Hooghly. That vessel moved listlessly on the river exhibiting the images to the long lines of spectators who had assembled on both banks of the stream. People from different bridges fitted with telescopes also saw them through those instruments. So did also the people gathered on the high terraces of the telescope-fitted houses near the strand. Durga Devi being a fighting Goddess, immersion cere-

FROGS and THE MAN

By Ananda

"Yes, take it all around, there is quite a good deal of information in this book. I regret this very much; but really it could not be helped. Information appears to stew out of me naturally, like the precious ottar of roses out of the otter.....I can only claim indulgence at the hands of the reader, not Justification."

— Mark Twain in his preface to "Roughing it and the Innocents at Home"

WITH me, it is not otters but frogs. Two hundred frogs. No, two thousand frogs. Stewing out.

No, don't tell it. I know it myself. I know very well that at my time of life, "frogs" should hardly be a suitable subject to spill on people,—specially in a "Puja" number. A week ago, I had no such designs.

In point of fact, I was just on the brink of a ripe brain-wave,—"humorous" as they call it,—and then three days ago, this friend of my youth came and filled me up with frogs. He told me all that could conceivably be told about frogs in the course of one morning.

You remember what happened to me when another friend dropped in and talked "cement" for three hours? You should, for I told you all about it in one of my Sunday talks His sole excuse was that he was not getting cement for his house from "Control." So he sought relief by talking cement to me. He got it after he had finished. All I got was a head full of cement. For three days, I could only speak on the subject of cement.

On the fourth day, a loud speaker down my street crashed into song and broke the spell. The shell, I mean.

The surprising part of this man's breaking into the "frog" theme was that I had never suspected him of having any truck with these animals. I thought that I could say of him what Wordsworth the poet had said of another man in the context of "primroses":

"A bull-frog by a river's brim
Was just a bull-frog to him
And was nothing more."

It couldn't be anything more with other bees buzzing in his bonnet for years No, not quite bees. Birds. This man has birds on the brain. He is what is commonly called a "bird-watcher."

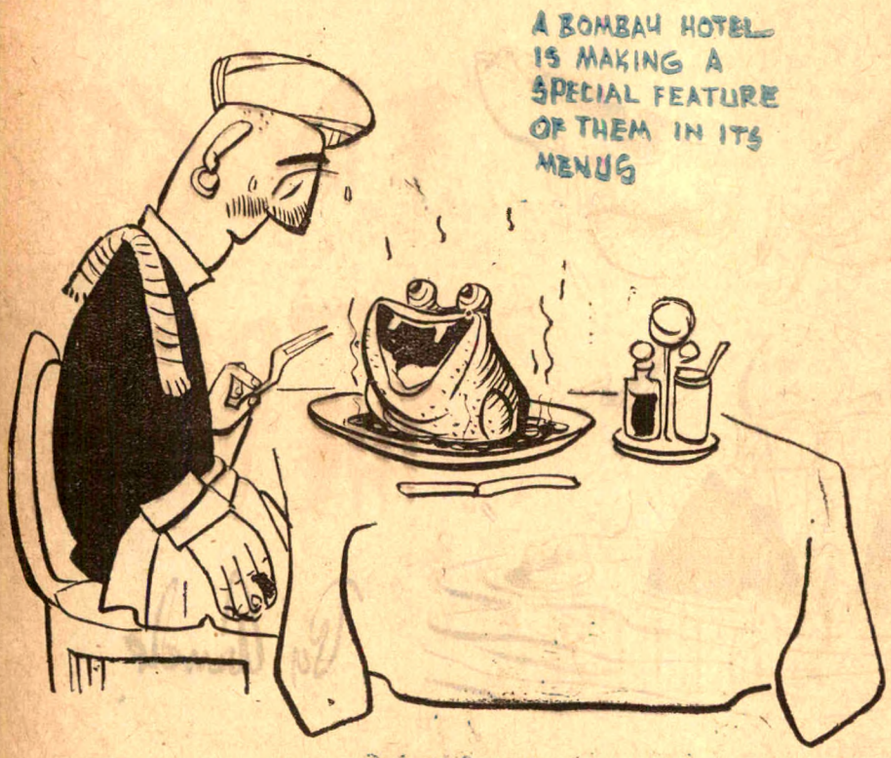
He watches birds Heaven knows why, but he does. No bird can escape his watching. Miss Mallika Mala bathing in the Dhakuria Lake might escape the eyes of our research students but nothing in feathers could elude the watchful eye of this bird-watcher.

One moment, he would be talking intently about Tagore and his contributions to humanity. Next moment, his eyes would light on a crow or a rook or a sparrow or something out of the window, —and he would quietly pass out as if you had shot a horse's dose of morphine into his veins. After that, No Tagore, no humanity, nothing.

And then he would walk out of the room, sort of "sleep-walking," and shadow that bird for miles.

It is on record that once when he was lunch-

ing with a friend on the latter's back verandah, he saw a bird pottering in an adjoining field. Nobody else did. He left that table without a word and returned to it in the evening when the family was sitting down to dinner. He explained that it was a rare variety of the "Shrike," and naturally, he wanted to get a first-hand knowledge of its habits.



It is also on record that once he held up traffic on the Chowringhee junction for full three minutes, — standing on the middle of the road and staring at something. When the sergeant came up, he pointed to a bird on a tree-top. The sergeant had a lot to say but didn't say them. Just the day before, the Commissioner had given a talk to the "Force" on the importance of Courtesy in crises.

When he started bringing the frog *motif* into the conversation, I asked him why he was doing it. "Why "frogs"? He was surprised at the question. He said that he understood I was interested in frogs. He had read my article "Bang!" in the *Amrita Bazar Patrika*. Did I know that the price of frogs in Travancore-Cochin had gone up last week from one anna to double that amount ? I didn't. He said that whether I believed it or not, it remained a fact.

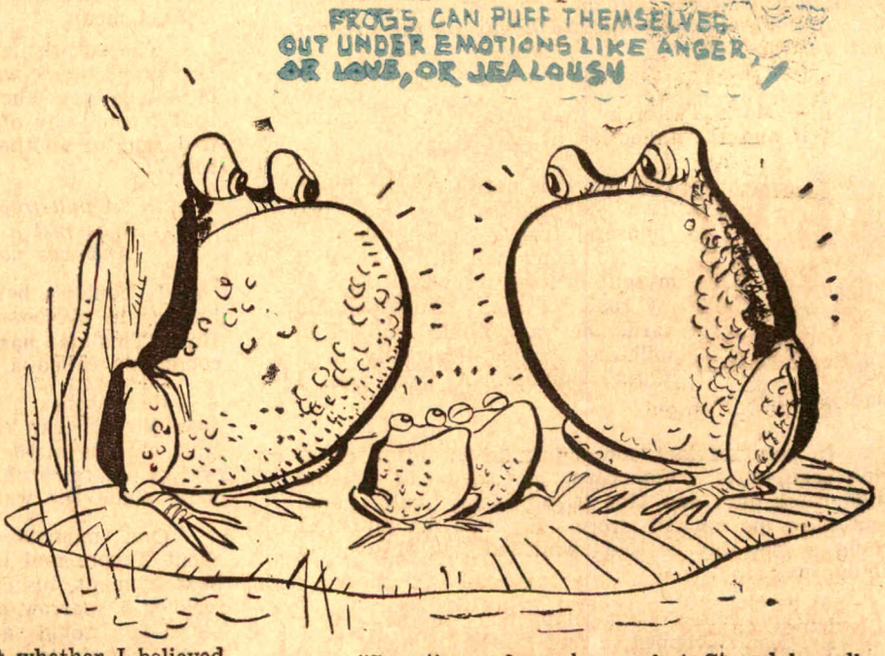
It was all because of these frogs belonging to the saline species "Rana Limnocharis," edible and very popular in the U.S.A. Frogs were being exported to America by hundreds, like monkeys. A Bombay hotel is making a special feature of them in its menus. So the price is shooting up. The question of a price control on frogs is being hotly debated in the knowledgeable circles of Kottayam.

If he had stopped there, perhaps it would not have been so bad. But he didn't stop. He confessed that my "Bang" had tickled him to such effect that he had been giving a miss-in-baulk to the birds for the last two months and watching forgs only. He had also read up all available on the subject.

He said that the Travancore-Cochin forgs were 2½ inches in size and the males had black patches on their throats. They are remarkable among amphibians for their readiness to take to brakish or even salt water. They occur in the Himalayas up to 7000 ft.

I asked him, how did he know all this ? He said that he had read it all in Sterndale's "Mammals of India." I asked him again, what made him read Sterndale's whatever-it-was and who was Sterndale, anyway ? He confessed that it was all brought on by my "Bang!" After that, I sank back in my bed. He went on with his job.

"The common Indian toad (Safo melanostictus)", he drooled, "is a crawler rather than a hopper in its gait. It readily comes indoors. The bull-frog (Rana tigrina) is the largest amongst Indian frogs. It spends much of its time in water. The Tree frog is 3 inches high.....



"Sometimes, frogs have what Sterndale calls a 'dry time.' Then they get thin. They absorb plenty of water and become plump again and fit for the table.

"Frogs can puff themselves out under emotions

Social Satires of Old Calcutta

By Mukul Gupta

SATIRE is the medium, in poem or prose, for holding up to delightful ridicule the failings and follies and the lapses and defaults of the people in the contemporary society. It does not respect any persons or personalities. Indeed, more often than not, the higher strata of the society are the easy and handy victims of satirical assaults. The assault may or may not be born of malice. Its objective may be reformative. But there is no denying that it wobbles on the borderline of the corrective zeal and benevolent wickedness. Whether it does or does not leave a sting, a satire is an index of the vigilant eyes of the social or political watchdogs who would let no slip go 'unbarked'.

The satirists lend joy and jest to the social life which sometimes suffers from dull monotony. Eighteenth century Calcutta was a blend of many conflicting vices and virtues, of simple undertones and outrageous excesses. In the twilight of those early days, the English settlers led a life which could not be claimed, in general, to be a story of untainted virtues. Lapses and false steps were there, and often in plenty. Merriments, in many instances, degenerated into unseemly indulgences. Easy wealth and easy conscience made an unholy alliance in which the old and the youngsters were active partners. But there was a cross-section of the people who honestly endeavoured to restore the erring brethren

most common instrument, not always unsuccessfu wielded, was social satires mostly ventilated throu the hospitable columns of the journals a periodicals.

JAMES AUGUSTUS HICKY

James Augustus Hicky, the wild Irishman w gave India her first English newspaper, was one the earliest satirists of Calcutta. Himself a man easy conscience and suffering from no over-burde of scruples, Hicky would not pardon the follies a failings in his contemporaries. Sometime in 178 his famous Gazette gave a rude but enjoyable sho to its readers by a pungent satire in the form Questions-and-Answers.

Q. What is Commerce ?
A. Gambling.
Q. What is the most cardinal virtue ?
A. Riches.
Q. What is fraud ?
A. Detection.
Q. What is beauty ?
A. Paint.
Q. What is punctuality ?
A. An observation of the appointments c duelling and intriguing.
Q. What is gentility ?
A. Extravagance.
Q. Who are the people ?
A. Nobody.

lished in the form of an advertisement sometime 781. It read :

"WANTED - A resolution not to bribe, or a determination not to be bribed.

LOST - The dignity of high life in attention to trifles.

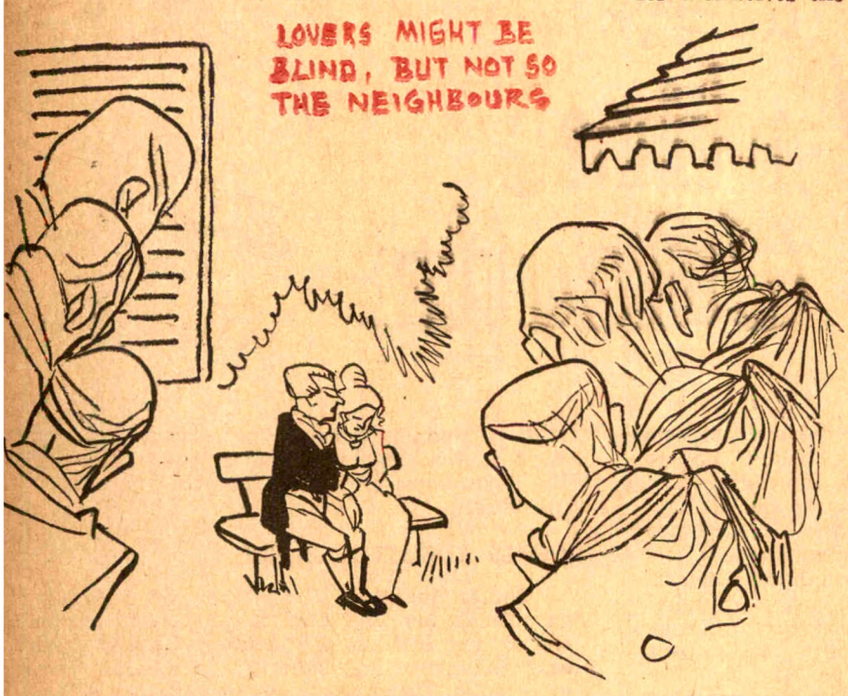
STOLEN - Into the country, the inhabitants of Esplanade.

ON SALE - For ready money whatever ought to be purchased by merit only."

The veiled references are to the undesirable al habits to which the contemporary English abitants of Calcutta had become all too suscepti-

OROUS EXCHANGES

Love-making is as old as the Man and Woman. re is nothing wrong with it as long as it is within ts and does not overtoe the bounds of graceful raint. But in those days it sometimes went into ths which the accepted codes of decorum and ncy could not sanction. Amorous exchanges of



rts and side-long glances came in for a good deal panter. Once a member of the Government took cy for a Miss Wranghams - a charming lady of t beauty. Lovers might be blind, but not so the hbours. And it was not long before their affairs, ch. they thought, they had succeeded in keeping the public gaze, came to be widely known and ned the subject of saucy social gossips. Imagine discomfiture of the unsuspecting gentleman n one fine morning he opened his paper to find :

"Counsellor Feeble now constantly drinks a sort of cordial dram which he calls W-g-h eye-water and of which he drinks so freely that he d'ye see, retires tipsy - he, he !"

In 1781, there appeared another satirical sketch against whom it was directed is not known. It :

"LOST on the Racecourse, last Monday evening, Buxley Clumsey's heart whilst he stood simpering at the footstep of Hooka Turban's carriage."

LADIES NOT ALWAYS FIRST

In 1797, something happened which caused considerable anguish and annoyance to the ladies in the higher rungs of the official and social aristocracy. A new church was to be consecrated in Calcutta in that year. Formerly, the ladies used to sit in a pew in a line with the Governor-General. But the order was changed and in the new church they could not occupy the seats more advanced than those of the Judges of the Supreme Court. The vanity of the ladies was pricked by this judicial infiltration but they were helpless. The anguish of the displaced ladies peeped through their knitted eyebrows and there were not a few who wickedly relished their delicate discomfiture. The discontent of the ladies produced a delightful satire :

"The ladies on the LORD relied
To dignify their forms divine,
But now, forsaken by their pride,
To COURT the praying maidens join."

LAWYERS HAD THEIR SHARE

Somehow or other, lawyers and attorneys earned for themselves the dislike of the people and no opportunity was spared to have a dig at them. A man of wit and humour must have been responsible for offering, free of all cost, the following epitaph for the lawyers and attorneys which they might use for themselves or for their brethren in the trade, without any infringement of the rights of the author:

"God works wonders now and then,
Here lies a lawyer and on honest man".
"This a mere law quibble not a wonder,
Here lies a lawyer and his client under."

But there was, indeed, a cruel but amusing hit in what came out as an epigram:

"The attorneys of Calcutta may be said to be lawyers what apothecaries are to physicians, only that they do not deal in scruples".

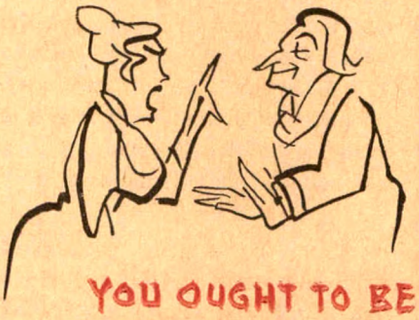
But the satirical poem that excited a real sensation in the social circles of the then Calcutta fringed on Philip Francis, sworn enemy of Warren Hastings and also his Counsellor in the Supreme Council. George Francis Grand, a man in the East India Company's civil service, married a Mademoiselle Werlee whose "fine, blue eyes with black eyelashes and brows gave her countenance of a most piquant singularity." Francis attached himself to this French girl and laid himself, by his conduct, open to be attacked by law. In the suit filed by Grand, the Judges differed in their findings. Justice Hyde said that "though the evidence was slight, it satisfied his mind of the guilt of the defendant and justified a judgment for the plaintiff." But, Sir Robert Chambers, another Judge, declared that he thought that the "plaintiff had totally failed to make out his case, and must be non-suited, in support of which

A CONTEMPORARY SATIRIST WHO GAVE A PICTURE OF THIS MENTAL ATTITUDE PREVAILS EVEN TODAY AMONGST CIVIL SERVANTS —

I AM A COLLECTOR

HE WAS A COLLECTOR

WE SHALL BE COLLECTORS



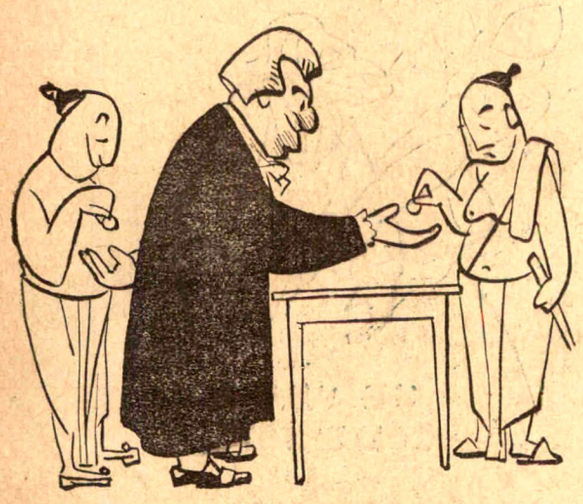
YOU OUGHT TO BE A COLLECTOR

THEY WOULD HAVE BEEN COLLECTORS

(A CONJUGATION OF THE VERB 'TO COLLECT')

AN EPIGRAM :—

" THE ATTORNEYS OF CALCUTTA MAY BE SAID TO BE LAWYERS WHAT APOTHECARIES ARE TO PHYSICIANS, ONLY THAT THEY DO NOT DEAL IN SCRUPLES "



opinion he cited many late cases wnerein the law had clearly been laid by the ablest civilians of the present-day, men who were equally an honour and ornament of the British Bench." Sir Elijah Impey, the Chief Justice, concurred with Justice Hyde in the opinion that "the evidence entitled the plaintiff to a judgement and that such judgment should be fifty thousand siccas."

Within a week after the trial a petition of Appeal to His Majesty in Council against the judgment was preferred. As the petition was being moved, Grand's Attorney Mr. Tilgham, received a three-line note from Francis. Soon after he had glanced over the note, he requested the leave of the Court to "withdraw the motion he had just made." All present in the Court were taken by surprise at this sudden move from Grand's side. The leave was granted. Gossips and conjectures were spun in plenty to explain the reasons for the withdrawal. But the prevailing opinion was that Grand, who felt embarrassed, had proposed a composition and consented to take a part of the damages to put an end to the none-too-pleasant affairs. Francis, on his part, was only too anxious to draw the curtain over the matter and bury it once for all, since, as a married man, the incident, if carried to England where his wife used to live, would bring upon him dishonour and indignities.

In all these affairs Francis had a useful accomplice in one Mr. Shee who, later, was Sir George Shee. The Chief Justice made most caustic remarks about Shee and observed that "his behaviour was as reprehensible as it was derogatory to the character of a gentleman." The censure of the Chief Justice on the conduct of Shee, the amorous adventures of Philip Francis, the sudden composition of the suit by Grand—all these inspired many lampoons of which the most relished one was by one Colonel Ironside. It was :

"Psha ! what a Fuss, 'twixt SHEE, and 'twixt her !
What abuse of a dear little creature,
A GRAND and a mighty affair to be sure,
Just to give a light PHILIP (fillip) to nature,
How can you, ye prudes, blame a luscious young wench,
Who so fond is of Loves and Romances,
Whose customs and manners are tout a fait French,
For admiring whatever from FRANCE-IS !"

HUNT FOR BRIDEGROOMS

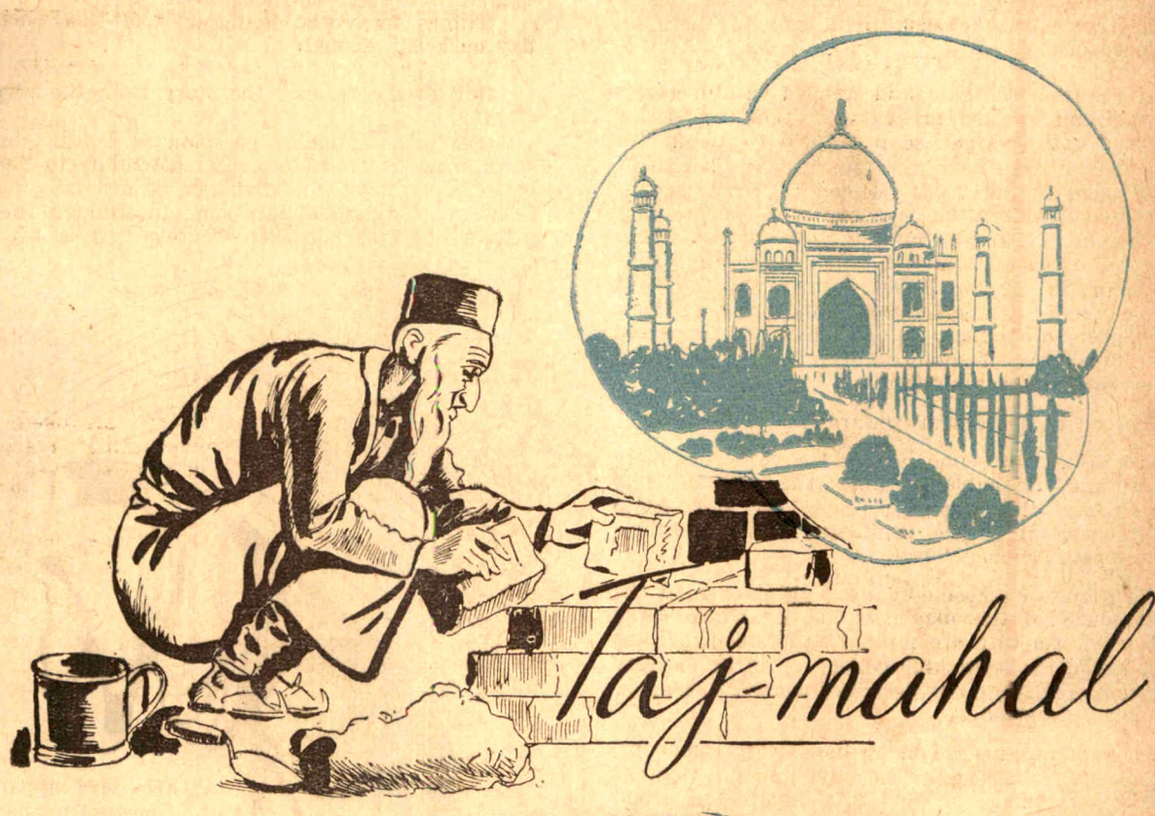
Another theme, which provoked frequent satires, was the 'husband-hunting' craze of the damsels of the day. Their eyes roved about for civil servants who, by common consent, were considered to be the most eligible as grooms. They were called "Three - hundred-a-year-dead-or-alive-men" from the fact that their pay, when they joined, was £300 a year. If they had put in sufficiently long service before death, their widows drew a pension of £300 a year. To capture such young men, it was not unpardonable for ladies to make all endeavours to clothe them in unfailing charms by undergoing an elaborate prescription of beauty treatment and top-dressing. A contemporary poem satirised the frantic efforts of unsuccessful husband-hunters to retain their English bloom and freshness :

"Pale faded stuffs, by time grown faint
Will brighten up through art;
A Britain gives their faces paint,
For sale at India's mart."

GIBES AT CIVIL SERVANTS

Civil servants of those early days used to put on airs around themselves and spared no opportunity to lend an impression of a superior social status. Such an attitude created obvious displeasure in the minds of those less fortunately placed. The snobbish exclusiveness of the civil servants provoked saucy satires not unoften. Whenever these civil servants met, they used to talk shop. Their vocabulary was restricted to the limits of official language and they found no delight or interest in talking about matters which were not official. Most of them were Collectors—the heads of the district administration—and whenever they met, whether in clubs or in private get-togethers, the only subjects they relished to discuss were transfers, promotions or prospects for better employment. A contemporary satirist gave a vivid picture of this mental attitude which, perhaps, prevails even today amongst the civil servants :

"Whatever subject may be started they contrive to twist it, drag it, clip it and pinch it, till they bring it round to that and if left to themselves they sit and conjugate the verb 'to collect' : I am a Collector—He was a Collector — We shall be Collectors — You ought to be a Collector — They would have been Collectors."



Taj-mahal

By BANAPHUL

Emperor Shah Jehan's death-defying love for his wife is enshrined in the world-famous Taj-mahal. But there is no monument to speak of the equally great love of a Faquir bearing the name of the Emperor, who has remained obscure. The writer discovers the man and tells us all about him in a remarkable way.

OF COURSE the first time I visited Agra, I went to see the Taj.... The feeling I had at sight of this world-famous specimen of superb architecture, I remember vividly to this day.

I had been travelling by train, and was yet some distance away from the station....Sudenly a fellow-passenger bawled out excitedly....."Ah, there's the Taj!" he was beaming shining delight, and proudly pointing to it.

Quickly I thrust my head out of the window.

So, there was the Taj, really!

But this wonder of wonders, if I must be frank and truthful, from this distant compartment of a fast-running train in revealing daylight, rather disappointed me ... It was so much like an ordinary masjid, was this Taj ... One of many, and indistinguishable from the rest.

Still, I gazed at it with unwinking eyes....For, whatever it might look like, it was, after all, the Taj, the fondest dream in spotless marble of the love-lorn emperor to immortalise his dearest sweetheart.

During the wearying days of captivity and humiliation the helpless lover would sit on a languid afternoon, on the balcony of the historic fort, his dimming, wistful eyes rivetted upon this noble mausoleum, hallowed by the sacred memory of his beloved Mumtaz.

However he might have been depicted otherwise, and disreputed for unfeeling inhumanity, Alamgir, all his atrocities notwithstanding, was not, really, altogether heartless... He respected the last wishes of his aged, infirm father.

As I looked on and on at this far-famed tomb there arose before my mind's eye the vision of a long and solemn procession slowly meandering along the winding streets of the city with a bier with the once mighty monarch laid in it in eternal rest.

At last Shah Jehan, with all the pomp and splendour due to the late sovereign ruler of Hindusthan, is on his last journey to re-unite with the darling of his heart in everlasting union.

The long and painful separation is at an end ... The gruelling torment of body and soul is, at last, happily over.

The coffin with his mortal remains, is gently and tenderly lowered into the bowels of the earth ...

Mumtaz and Shah Jehan ... Side by side they lie in calm, interminable repose in this lover's paradise, the Taj.

If memory does not play me false, there was—or rather, probably there still is—a third grave adjoining this Taj-mahal.....It interred the severed remains of the beheaded crown prince Dara Shiko.

As the train sped swiftly on the plain mosque-like Taj, as it then appeared to me, fast disappeared from view.

On the day following the full-moon I went to see the Taj for the second time, after sun-down.... The tingling of ecstatic thrill I felt on this occasion, is still fresh in my memory ....

It was early in the evening. The stately moon

had not, as yet, made her appearance of grace and grandeur in the sky ... Only a mellow effulgence lit up the fringes of the eastern horizon and heralded her approach ...

As I crossed the gate and stepped within, a very faint murmur greeted my ears ... The whispering music did not, at least, so it seemed to me at the moment, emanate from the soaring firs bordering the adjacent avenue....It seemed to come floating to me from the forgotten depths of some remote past, long gone by .... It was more like the stirring, strangled sobs of some anguished soul than the silky rustling of the sighing leaves, fanned by the soft evening breeze ... And, in that transparent darkness the exquisite monument, as yet unsighted, appeared like a huge heap of sombre gloom, only denser and blacker than its surroundings.

Slowly I bent my steps towards it.

As I drew nearer and nearer, the more and more defined and definable became the Minars and Minarets and the cupolas....Even the snow-white principal central edifice itself was now discernible in its sable envelope

Then quite unexpectedly, as if all at once, at the merest touch of the magic wand, the whole thing was flooded over with dreamy light and stood revealed before me in its bewitching beauty....in its entirety it became a reality to my electrified consciousness....

I was galvanized ...

The radiant fairy moon, in her silvery splendour, was now there smiling in the sky: and me thought that the very image of Mumtaz's dream, the proud empress of a mighty monarch, warmly welcomed and received me in the open arms of cordial hospitality ... I was completely overcome ...

In speechless awe I stared at it, charmed and subdued...

A long time has rolled by since I had this glimpse of the ethereal fantasy woven intimately into the texture of this magnificent and marvellous memorial.

Apart from the delicately poetic and divinely artistic aspects of this glorious piece of splendid and unique architectural achievement, I have, in the meantime, been posted fairly accurately, in matters grossly mundane as well.. I have been informed what a wide margin between the amount earmarked for and the amount actually spent in its maintenance, is left over to the credit of the lucky contractors entrusted with this job, how from the ceaseless stream of visitors the keepers of near-by hotels have leapt from indigence to opulence and turned into veritable nabobs, what an enormous profit the pedlars raise from the sale of miniature replicas of the Taj, and of peculiarly-shaped cigarette-holders, made of cheap and useless stone what criminally exorbitant rates the ignorant sight-seers are charged by the unscrupulous tongawallahs (drivers of a particular variety of light two-wheeled vehicles) to take them to and from the Taj, and so on and so forth.

I have subsequently seen this matchless beauty at all conceivable earthly and unearthly hours of the day, at dawn, at dusk and at dead of night; I have seen it in all seasons, in summer, and winter, and in autumn, sometimes aglow with the glittering rays of the glaring sun, and at others, veiled in the sable shroud of gloom-indeed, I have seen it so often and anon, that it has ceased to be a thrill to me any longer ... The charm has worn off from my eyes.

For some time now I have been appointed the medical officer of a charitable dispensary near the city, and when I pass and re-pass the Taj I hardly ever turn my head to look at it.

Things had been going on like this when one day curiously enough ....

* * * *

But let me recount the story from the very beginning.

On this particular occasion as I was stepping down from the verandah after attending to the out-patients, as usual, in pursuance of my daily routine, I saw an old Mussalman come in through the gate with a big wicker basket securely tied to his back.

I saw an old Mussalman come in with a big basket securely tied up to his back.....

He was apparently unequal to the task, and had nearly doubled up under the strain of its enormous weight.

At first I thought that he was probably some itinerant vendor of fruits. But as he deposited his load on the ground I found to my surprise no fruits in it, but a lady in a borkha (a long over-all garment, usually donned by Muslim women, covering the wearer from the head to the ankles) instead....The old man in his flowing robe and for his snow-white beard, looked like an austere dervish.

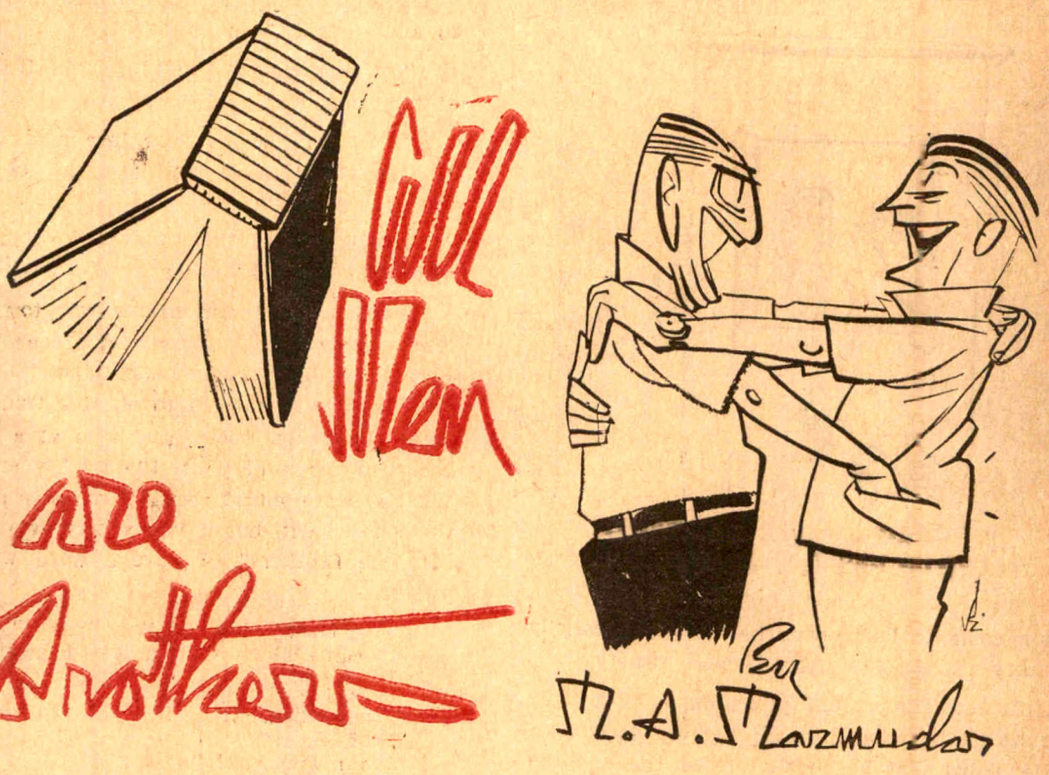
He came up to me, and made a low salaam.

Then in his faultless Urdu he politely informed me that as he was an extremely poor man he could not afford to call me in to his wife....Accordingly he had borne his Begum on his back all this way to the hospital.

Now, if only I should be so graciously disposed as to ... How the man wore his ailing wife in his heart!

This singular instance of unflinching and are

(Continued on Page 47)

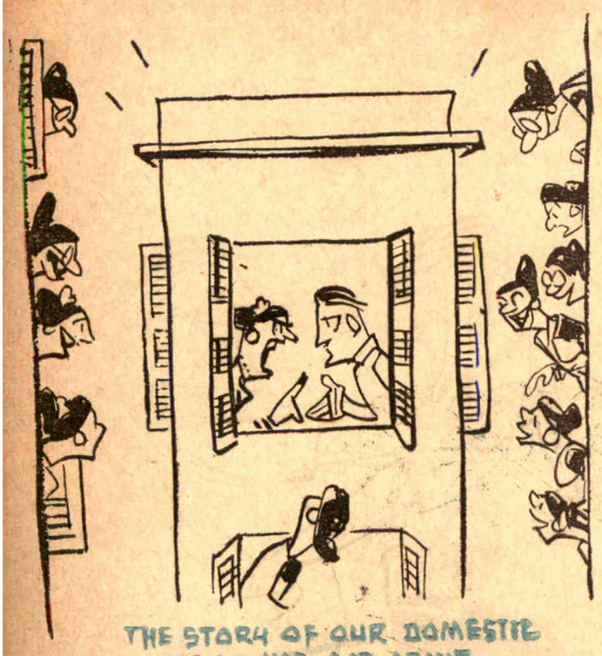


SUNDAY: I go happily through a long and substantial morning meal. At its conclusion I experience the heavenly joy born of a most satisfying fullness. Then I bend my foot-steps in the direction of my bed-room for a quiet snooze or nap. On my way I stop at the revolving book-case to take out my newly-bought best-seller entitled "All Men are Brothers" by the celebrated American philosopher Dr. Ulysses F. Schnellenhamer. I always love to read myself to sleep. Alas, I cannot find the volume. I am plunged into deep and dark disappointment. Where's the book gone? I yell out wildly for my wife. She blows in like a storm. She looks like a study in female fury. I demand from her the whereabouts of my "All Men are Brothers". She says Prof. X dropped in here this morning during my absence, fell in love with the book at first sight, and insisted on 'borrowing' it. But he promised to return it in a couple of days. This drives me to the verge of madness. I tell the woman that she's a pretty wife to allow a man no better than a sneak-thief to make away with my property. She says she didn't know I associated with sneak-thieves, and anyway there was nothing she could do to prevent the hunter from pouncing upon the quarry and going away with it. A brisk and blazing exchange of words here ensues. A real display of fireworks. I am fearfully put out. Tell wife she's no wife of mine, and stamp out to the bed-room in a huge huff.

Evening: The story of our domestic flare-up has got about. Not more than an hour back, a gang of neighbouring fatheads called on me 'to restore peace between us', as they put it. I got furious at this most uncalled for invasion. I hounded the whole lot of them out of my house. I have now broken off all neighbourly connections. The disappearance of my cherished "All Men are Brothers" still rankles in my heart. I feel like treading on Prof. X's prostrate body with spiked boots. The snake!

Monday: I sack the maidservant. Serve her right! It was she who trotted round, blabbing to all and sundry about our quarrel. The cat! There is now a well-marked estrangement between me and my wife. I am not on speaking terms with her. Cannot forget that a great deal of the responsibility for the exit of my "All Men are Brothers" rests squarely on her shoulders. I am a great believer in universal brotherhood. I am anxious to see mankind united and living on this planet in peace and goodwill. And, therefore, I have taken this loss of the book (albeit temporary) greatly to heart. Prof. X. had absolutely no right to grab it and march off with it. I wish, I ardently wish, he and his kind were rubbed off the face of God's green earth. The vermin!

Wednesday: I have waited for the promised return of my "All Men are Brothers". In vain. The book has not been forthcoming. I send a stinging note to Prof. X. I call him every name I can think of or even invent. I demand prompt return of the book per bearer. I add by way of postscript that he should never darken my door in the future. I



THE STORY OF OUR DOMESTIC FLARE-UP HAS GOT ABOUT

have now come to look upon the man as a wholly unnecessary excrescence upon human society.

Afternoon: The servant just brought in a reply to my note to that clod Prof. X. Not the book, alas. Prof X explains that he couldn't resist the temptation of "All Men are Brothers". Dr. Ulysses F. Schnellenhamer is his favourite author, and he (X) is keenly interested in human cohesion and welfare. But, says X, on his way home from my house, he happened to drop in at Dindoomal's General Stores (which keeps closed on Wednesday), and forgot the book at that establishment. As he, X, is particularly busy just now preparing a paper for an important conference, would I please make it convenient to look for "All Men are Brothers" at Dindoomal's. The old thug puts in a post-script drawing my attention to a certain best-selling book on manners. He also wedges in a bad-tempered comment on my culture, or rather the lack of it, and most cordially desires me to take a trip to hell. I wish I could ram "All Men are Brothers" by Ulysses F. Schnellenhamer down his throat with a crow-bar.

Thursday: I go to Dindoomal's the first thing in the morning.

"Ah Dindoomal", I speak to the barrel-shaped proprietor.

"Yes, sir. What can I do for you, sir?" he asks.

"My book, if you please".

"Book, sir? What book, sir?"

"Dr. Ulysses F. Schnellenhamer's "All Men are Brothers", Dindoomal. That idiot Prof. X pinched it from my house and forgot it here".

"Ah. But, sir, I saw your name on it, sir, and was just on the point of sending it on to you when Prof. Y turned up, picked it up, said he'd return it to you after having a dip into it, and walked away with it. Didn't you get it back sir?"

"No, Dindoomal, I didn't. And let me tell you, you're a fatheaded chump to have allowed Prof. Y to make off with my book".

"I should advise you to refrain from that kind of language, sir".

"I shall never see your face again, Dindoomal".

"That will spare me the sight of yours, sir. Thank you, sir".

I walk out of the shop. I see Prof. X on the way. We cut each other.

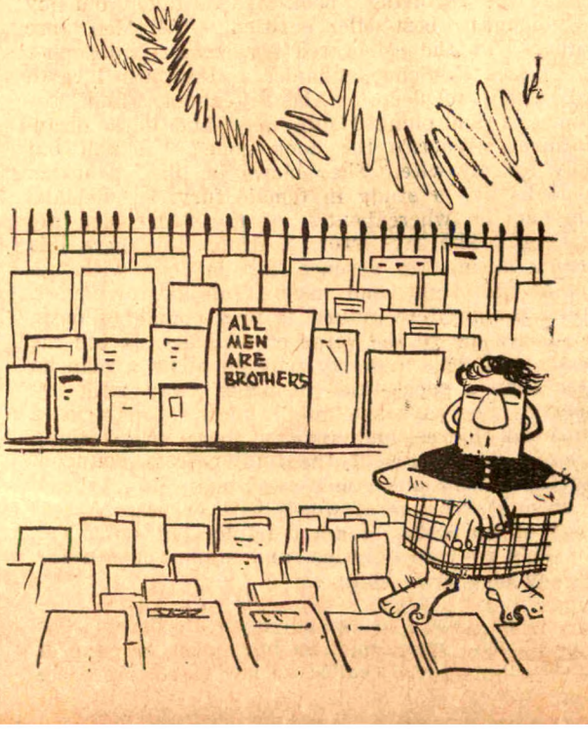
Afternoon: I am on my way to the world's leading pest Prof. Y for my "All Men are Brothers". Hate is seething in my heart against the two gumboils who have put me to all this trouble. I am a great lover of books, and stop at a second-hand bookshop for a peep at 'the mighty minds of old'. What's the very first book I happen to pick up? You won't believe it, but it is my very own copy of "All Men are Brothers". I have a word with the proprietor.

"This book. How did it get here?" I ask.

"It came along with a lot I bought recently, sir", he replies.

"From whom?"
"Prof. Y, sir".
"It's my property".
"I bought it from Prof. Y, sir".
"What did you pay him?"
"Can't tell you, sir Business secret, sir".
"Well, I paid fourteen rupees for it".
"You can have it for seven, sir".

I have it for seven. The experience of rebuying your own book is certainly not pleasant. "All Men are Brothers" in my hand, I walk homeward, heartily cursing humanity in general and the professorial part of it in particular.



TAJ-MAHAL

(Continued from Page 44)

devotedness moved me to genuine pity, and I directed her to be taken into the hospital.

As I approached the patient in the examination room an intensely foetid, sickening odour assailed my nostrils, and I could not, for the life of me, place it correctly at the moment.

But when at last, in spite of vehement protests, she could be persuaded to emerge out of her hiding, the whole shocking truth was instantly revealed, and lay bare before my eyes in its naked hideousness .... She was the pitiable victim of a dreadfully fell disease ....

She had been suffering from Cancrum Oris.

Half of her face had already been decomposed and fallen off .... The right cheek having completely disappeared all the teeth on that side had been revoltingly exposed to view in all their lengths.

It was altogether a horrible and scaring sight .... And the foul smell of putrid would not besides, allow anybody to stand near her.

If she was to be treated at all she could not thus be daily carried from her home to the hospital on the back of her husband .. And, no bed was just then available either so that I could admit her as an indoor patient .. So, left with no other alternative I asked her to put up for the time being at the corridor in front of the ward.

He had two ends of a spread-out coverlet firmly gripped in his fists.

Unfortunately for her even the comfort of this unenviable shelter, she was denied to the last .. And it was the infernal stench that did all the mischief.

The other patients in the hospital resented this, and objected in a body to her presence in their vicinity .. The compounder, the dresser and even the menial staff flatly refused outright to go near her.

But the strangest aspect of the whole affair was that this offensive and odious smell did not perturb the old man, her husband, in the least. For twenty-four hours in a day and for seven days in a week he ministered like an automaton to the needs of his wife real or imaginary .... It was more than flesh and blood could do.

Unanimous and persistent demands for their removal were strong and compelling, and ultimately I asked them to move away from their present abode to establish themselves beneath a huge spreading tree standing in the hospital-compound.

They were most obliging, and this they did readily.

Every morning the old man would attend the outdoor for her day's supply of medicine ... If she required any injection, besides, I would go to her and administer it.

Things thus went on pretty smoothly.

One day as I was returning from my round of professional calls, an unprecedented spectacle arrested my eyes.

It was raining cats and dogs, and the old man was standing there under the sky, exposed to the fury of the pelting rains. He had two ends of a spread-out coverlet firmly gripped in his fists, the other two ends being securely tied to a branch of the tree.

Quickly and quietly I motored up to him. The crudely improvised apology for a canopy was but an extremely ineffective contrivance, and afforded no protection against the steady, heavy downpour from the sky ... The poor Begum had been pitiably drenched to the very bones from head to foot, and shivering terribly ... Her teeth were chattering ... Yet, paradoxically enough, a happy, hideous smile lit up all that was left of her face....

She was, my practised eyes told me at once, running a very high temperature as well.

I was greatly distressed at this sad plight of the wretched couple .. And, under the circumstances, I could not but ask them to go back, if only temporarily to where they had come from.

Suddenly a sweeping sense of frustration, a sense of the pettiness of all human endeavours against in-

(Continued on Page 112)

SCIENTIFIC SARVAJANINA DURGA PUJA

(Continued from Page 36)

mony was conducted in a military style by torpedoing the plane from under the water. A huge column of water spout sprang up forthwith lifting the images high and placing them full before the view of the spectators who cried : *'Durga Mai Ki Jai'* (Glory to Mother Durga).

BIJOYA HILARITY

After the immersion party had returned to the Vijaya Sammelana Pandal the people were caught in a frenzy of laughter and mirth, the zone being charged from beforehand with colourless, odourless

THE MORAL EFFECT OF BIJOYA HILARITY SCENE (WHICH WAS BEING WATCHED THRO. TELEVISION FROM DIFFERENT PARTS OF THE WORLD) WAS THAT THE OPIUM EATERS OF THE EAST PASSED A RESOLUTION TO GIVE UP OPIUM EATING AND TO TAKE TO BHANG.

and impalpable fumes of highly concentrated Acqua Canabas Indica. From titter to giggle the laughter gradually rose and ultimately ended in a roar. Men, women, and children began to roll on each other almost promiscuously. Soon decency seemed to recoil from the scene. Some attempted to fly without wings, others to walk on head with toes turned to the sky, others clasped round their neighbour for fear of falling down on the ground, menfolk began to exchange Vijaya embraces with stanger women folk, old people doing prostrate obeisance to children. None looked sad, hilarity seemed to saturate every particle of air. When reminded of the presence of the ladies an old man cried : 'Verily, verily, there is no distinction between man and woman, young and old, rich and poor, fair face and dark complextioned people in the eye of Mother Durga. Soon started Vijaya carol in 'sing as you please' style. Some sang : 'Raghupati Raghava Raja Ram', others sang 'Hari Tomaya Bhalavasi Kai, others 'Ma Amaya Ghurabi Kata', others 'Vande Mataram', others 'Aman Deshti Kothao Khuje Pave Nako Toomi', still others 'God save the queen'. One harlot woman sang 'Praner Pakhi Ure Gelo Ar Elo Na'. None, however, sang a syllable in praise of Durgadevi. Vijaya dance too was equally multi-coloured. Some danced 'Nataraja', others 'Rasleela', others still 'folk dance', still others 'Koal dance'. A few also indulged in 'Manipuri dance'. A band of little folk too attempted 'Bratachari dance'. To crown all some non-Asiatic domiciles took to 'Waltz' etc. In fact the scene gradually presented such a curious medley of music, dance, pranks and frolics that it lost no time to gain the admiration of those who had been watching it from their own places through television apparatus. The moral effect was that the opium eaters of the east passed a resolution to give up opium eating and to take to *Bhang*. It also set athinking Nihilist Governments who have declared god worshipping a crime, whether they should not introduce this festivity in their countries to secure greater fraternity in their States. The far westerners too whose watchword is 'work is worship', began seriously to contemplate if they should not punctuate their yearlong, tiresome and strenuous working life with indulgence in similar festivities.

FROGS & THE MAN

(Continued from Page 38)

like anger, or love, or jealousy. As their colour is likewise changeable at short notice like lizards, considerable allowances must be made in identification of amphibians for temporary alterations in figure and complexion." He added,—though I hadn't said a word,—that Sterndale said so.

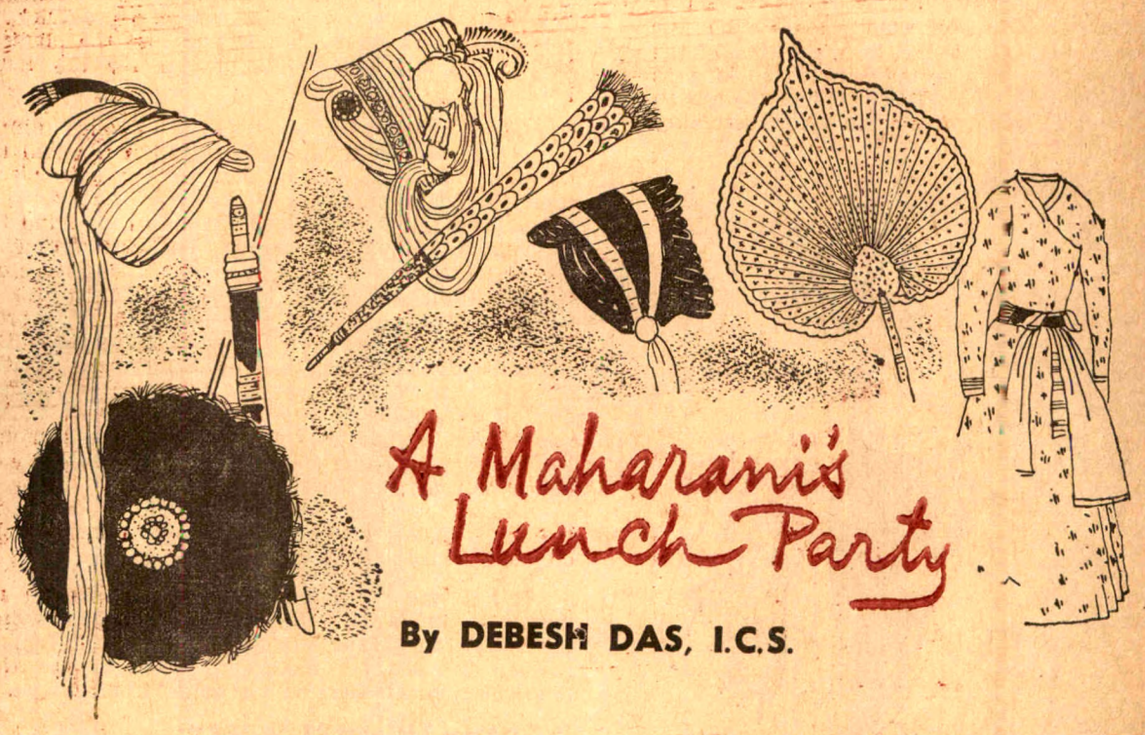
"Frogs spit," he went on. "Some can spit further than men. I discovered that for myself. Remembering Mark Twain's story of the Jumping Frog, I wanted to see if a frog could really be filled up with shots. I caught one which appeared to be quite harmless, opened its maw, and started pouring a handful of buck-shots into the opening.

"The frog said nothing. I went on filling it with the shots till it could hold no more. Still, the frog said nothing. And then, what do you think happened ?" Following the frog's example, I said nothing.

"That goddam frog opened its mouth and spurted the whole lot of shots in a stream. It was quite clear that the rascal had aimed at my face,—for one of the shots hit me over the left eyebrow." I still said nothing.

And then he left. It was quite apparent that he had obtained considerable relief,—like the "cement" man. So have I,—now. But, honestly, I didn't believe that last thing of his.

By the way, if you wish to know more about frogs, will you ring up 46-3377? You will get it all there.



A Maharani's Lunch Party

By DEBESH DAS, I.C.S.

A colourful and intimate picture of the private affairs of the Princes, the sighs and significance of life in the harem.

YOU would hardly realise what a terrific thing it meant for me. It was not for the afternoon tea nor evening coffee, nor even for the omnibus reception of a princely durbar. This was an invitation to a private lunch party specially for me.

If you are poor you may still attain God provided you are devoted enough. You may be of an humble origin, but with your brain and abilities you might become a Rockefeller or even a Hitler. But the private lunch party of a Maharani is something unheard of. It is true that such incredible things happen occasionally in the Rashtrapati Bhavan. But the codes of Maharanis do not admit such strange changes even now.

Moreover, she was not just a Maharani. She was the Maharani of the famous fighting clan of the Rathors of Jodhpur and not a mere Maharani either. The princely order has been deprived of ruling authority. Otherwise it would have been she who would have controlled the fate of her millions of subjects. You may almost say that the Twentieth century is all the poorer for this change. But for it we might have had a new edition of some Maria Theresa in the Maharani.

REGARD FOR THE BENGALI PEN

It was this Maharani from whom I got the invitation this morning. Only a few family members and a few Maharani's guests from other states, would be present. The other invited guests were the Raja Sahib and his younger brother, the Thakur Sahib. The barony of the Raja Sahib forms the frontier of Marwar State. Time and again, century after century the Moghuls and the Pathans and the Marathas have had to enter the state only after having their first bloodbath in the county of Kuchamon. The Rathors' first Maginot Line lay in the Kuchamon. In the forbidding fortress there are arranged in impressive array the history of the Kuchamon Clan. It was written in blood and painted with glory. Various types of turbans, dresses and banners hang on the wall. So do mediaeval armaments.

In contrast my only armament in Rajasthan is the pen of mine. It is my only introduction in this land of princes. But I know that the Rajput has great regard for the Bengali pen. The Maharani herself has mentioned this in her invitation. I held my head high in the air and remembered that the Rajput expresses his satisfaction after a heroic exploit by twitching his moustache. I admitted to myself that for the first time I was keenly feeling the absence of my own moustache.

But I bowed my head with reverence at the honour shown to literature.

ROSES IN MIDST OF A DESERT

Just at this time the gardener brought in a bunch of roses. Yes, roses in the midst of a desert.

I leaned forward and took a long breath over the roses. Their fragrance lent wings to my imagination. I remembered a story of another desert. Caliph Al Mutawakkal had said, "I am the prince among princes and the rose is the queer of flowers. So we are the best companions for each other."

But how am I less than that Caliph of Arabia just now? I remembered a fine Turkish poem com-

sed by Emperor Babar, "My heart is like a rose
id, spotted with blood."

Of course I am prepared to yield the honour to weaver of the same Arabia. He gave up all his rk, his only means of livelihood, in the rose ason. From morning he would start with the ellow wine of Shiraz and sing, "Oh, the time of the es has come now. You go on drinking so long as rose has her buds and flowers." When the season ne to an end he would sing again before resuming

Oh, if Allah keeps me alive until the season of roses is on again, I shall start again with the wine.

s work, "Oh, if Allah keeps me alive until the ason of the roses is on again, I shall start again th the wine. But lest I should die even before that oment comes I leave here two drops of tear for my ses and my wine."

But the Caliph was no less a connoisseur of the od things of life. Dare a mere weaver compete with in this rosy enjoyment ? Alright, I also know how honour a connoisseur. Here is an annual pension ten thousand dirhams so that he can enjoy him-f in careless abandon in the rose season.

Let me come back to my story. I held in my nds the letter written by a Maharani herself. A y other Maharanis were also in view. So were the ely red roses on my table. The whole of Arabia was esent fragrantly in my mind. I felt that I could t do adequate justice to these feelings with my n pen. So I remembered the poet Amir Khusro.

Tipsy Khusro has poured wine that Shiraz people e.

In the cup of the Muse who descends from above.

HAT ABOUT THE PLUMES?

I have seen many a connoisseur start his mor-ng with beer. But unfortunately I am not initiated o the pleasures of that fine beverage. Instead I t my perched throat and mind with the pleasures poetry. Not that I would rate my-self as superior my friends who enjoy beer.

So I went on reciting to myself the fine poems Persian poets one after another. I was happy beyond measure and my happiness flowed smoothly like a yacht on the Norfolk Broads. But suddenly my yacht ran aground.

At this stage I was remembering a line of Tagore "My heart dances on and on like the peacock." It was dancing no doubt, but what about the plumes ? Have I got any plumes to put on for the lunch party ?

Of course I still possess the English dinner jacket tailored years ago in London but it would not do for a lunch party. Nor have I yet surrendered myself to the temptations of the new formal dress so proudly worn in New Delhi. I figured in my mind the Raja Sahib and his brother the Thakur Sahib. They will certainly put on the Prince coat and bow before the Maharani with grace abounding. Coloured turbans will make their bow still more colourful. This ordinary writer also has got a Prince coat like that. But Bengalis do not put on any head dress. Critics attribute this to the fact that our heads are strong enough even without any gear. I pictured in my mind these Rajput princes in Prince coats and myself also in the same attire. For me the Prince coat was summarily dismissed. What then ?

I read the letter again carefully. There was no indication in it regarding dress. Should I then depend on the commonplace lounge suit ?

But it was the letter itself which showed me light. The invitation referred to the Bengali writer. Surely the Maharani would expect me in Bengali costume. I was not a mere quill driver of the New Delhi Secretariat. Here was a writer from Bengal.

PURDAH—THE NEXT WORRY

The next worry was regarding the purdah. Does the Maharani observe purdah ? Will she appear in person before me ? Shall I have the privilege of talking to her normally as one person to another ? Will she herself serve on my plate a few delicious puris (oven-fresh fried loaves)?. If she does, I shall certainly lose my balance in joy and arrange my ten fingers in such a way as to produce a figure of classical Indian dance. Surely the other guests will be filled with joy by discovering in this an artistic pose expected from a litterateur.

The purdah has different shades. Take the case of the Maharani of Udaipur. No male can approach her. Even her own brother can see her only because her husband has given him special permission. I could not therefore meet her but my wife who was admitted to her presence came back highly impressed with the intelligence and the personality of the lady behind the purdah. Probably she had ability enough to look after the administration herself. She knew about all that was happening in the state and the causes and effects of things important. The gleam that played in her eyes was not one of diamonds and jewellery but of acute intelligence. Even then she is purdah.

We were also told that she was an expert hunter and had shot dead a tiger with only one bullet. How could a mere purdah veil her eyes ?

THE SYSTEM OF HALF PURDAH

There is also the system of half purdah. Here is the story of the queen mother of another state. During her grand daughter's birthday anniversary there were elaborate festivals and she was present throughout thanks to the half purdah. It will be difficult to describe it but here is a small sample of this system. There was a musical soiree in a palace and the musicians were at their best. The queen mother wanted to enjoy the music as closely as

possible. A curtain was arranged and she covered herself in a shawl to take her seat behind it. But the music was very fine indeed and she must come nearer. She peeped out and noticed another flimsy screen just in front of the musicians. So two chairs

She suddenly leapt forward before the very eyes of the people.

were placed in the intervening space and she suddenly leapt forward before the very eyes of the people in the party. All these exertions made her very hungry and she called for a plateful of sweets. We could not, of course, notice the film of satisfaction that must have enveloped her face behind the apology of her veil.

No wonder that the interest is sweeter than the principal amount and half purdah than purdah itself. The whole thing is covered in mystic half light and half darkness. You hear everything and still leave something unheard. You see everything but do not touch them. Nothing is hidden but everything is beyond your reach. This indeed is the climax of romance in life.

SCENES IN SHAHJAHAN'S DELHI

If you do not believe me, come with me to the Delhi of Shahjahan. His daughter, Princess Jahanara, has started from her palace for the durbar. There is no end to pageantry. The mounted bodyguards, the infantry and the eunuchs are moving in state. It is the eunuchs who have the good-luck of being nearest to the princess. They are shouting and jostling and pushing people right and left. Even respectable people get no better treatment. Gorgeous litters follow carrying the lesser princesses. Rose water is being sprinkled in front so that the dust does not reach the litter of Jahanara. It is covered with fine golden threads and is ornamented with gold inlaid with jewellery. The fan is made of the plumes of the peacock and is put in a gold frame. The elephant is proceeding in slow majestic movement but the movement of the fan in the hands of the Turkish bodyguard is more majestic and slower still. The daughter of the "emperor of the world" wants to have just half a look at the moon through a veil of fleecy clouds.

Immediately the Moghul knight of the middle ages would alight from his horse. From hundred yards away he places his hands on the chest so long as the princess does not pass by. Then he bows in deep respect with his turban almost touching the ground.

Has the princess not noticed anything? Of course she has, and she has also made herself fully noticed in the process. If it would please Her Highness she sends down her casket of golden brocade embroidered with jewellery containing betel and betel leaves, the ceremonial proof of her royal pleasure.

Roshanara, the younger sister, was no less fond of pageantry. In fact she went one step further. Her litter was carried by a huge elephant and the seat was inlaid with gold and the canopy was like one adorning the royal throne. One hundred and fifty smart colourful Turkish girls formed her retinue. Countless palanquins followed the procession. But the veil in each case consisted of diaphanous yarns of gold. Flutter they would and so would the bosom of the fair cargo in the litter.

Which fool on this earth wants to take an account of what he has got and what not from the fair one behind this veil? You bet I am not yet so devoid of aesthetics as to do that. Truly has the poet sung —

If my eyes rest on her glance and my heart on hers,
Can a mere dam of sands resist
The endless waves of the ocean?

VISION OF THE QUEENS' COUNTY

I was mentally handling the delicate barrier, the flimsy difference between purdah and half purdah when came to my mind the vision of the Queens' County seen from the top of the mighty hill fortress of Jodhpur. The name of the locality came to my mind with a shock. I have heard of different localities like the Brahamans' area, the washermen's area etc. in our orthodox villages. But the Queens' County was quite a different proposition.

Yes, it was so. A Maharaja might sever his tender connections with this world leaving behind some 27 queens, 57 half queens and 387 recipients of private favours. But why should his successor consider himself obliged to meet their expenses or annuities? Why must he accommodate them in the palace or even its outskirts? The claims of the new queens, half queens and quarter concubines should certainly come first. Naturally the locality that comes to the rescue of the fallen stars after the moon has set is called the Queens' County.

I found nobody to explain to me the exact degree of marriage that had taken place between the dead prince of a state and chief recipient of his matrimonial honours. I asked some of the courtiers aside and in oblique glances and hushed whispers they just mentioned that there are degrees of difference in the marriage of many rulers just like the difference in the dilution of homeopathic medicine. A little while later the private secretary of that late ruler got hold of me privately and made the situation a little clearer. It was not the queens alone. The

mistresses also had graded classes among them like the gold Queen, the silver Queen, the diamond Queen and so on.

A KEAL RAJPUT HEROINE

In this atmosphere of punctilious social classifications and inequities Didaji Bai was the unquestioned queen of her husband, the sole luminary in his spacious sky. There were no stars to share the space with, nor any sudden or even accidental eclipse. She shared all the joys and sorrows, pleasures and worries of Maharaja Umed Singh. She answered the true description of the definition of a wife in the Sanskrit classics, a housewife, minister, a friend and a sharer of secrets as well.

One monsoon the mountain rivers of the state were in spate and the picturesque town of Jodhpur built up with great care and solicitude was on the point of being washed away. The Maharaja himself came out of his palace at the dead of night to look after the erection of a dam. By him stood Didaji Bai herself to encourage the labourers. She was a real queen that moment, unfettered by any veil or any thought for the rigid purdah of Rajasthan. She was a real Rajput heroine, wasn't she ?

Finding me taking interest in her story of the Maharani-ship of bygone days tears rolled out in her eyes. She went on telling me the stories of her past life of greatness and effectiveness one after another, the story of a husband who was no more, of a kingdom that had gone. But there was neither pain nor criticism in this rumination of the past. I calculated in my mind how much has been lost by those who had so much and silently bowed my head before this heroic lady.

MELON AND THE KNIFE LEGEND

The butler was standing like a statue in my front in his immaculate Rajput outfit. In his hands was a tray containing the fresh juice of watermelon grown in the desert. The Maharajkumar i.e., the younger brother of the young Maharaja who had died in an air crash only about 18 months back while piloting his own plane, was pressing me to taste this cool and delicious fruit of the desert. He was dressed in Rajput breeches and in his waist band was tied a huge Rajput dagger and a pistol to match. Both were, as rumours had it, manufactured in the secret armament factory of Jodhpur. But it was not for that reason that I was looking at this instrument of aggression. Here was the melon and here the Rajput dagger on one side. On the other was sitting the Rathor queen. The curtains of centuries began to lift themselves.

The Maharajkumar was pressing me to taste the cool and delicious fruit of the desert.

It was towards the end of Shahjahan's reign. His four sons were engaged in a bitter war of succession against one another. Maharaja Jaswant Singh of Jodhpur fought for one of them and fell back on Jodhpur after a crushing defeat. The Maharani closed the gate of the huge fortress against her husband. The husband was, in her eyes as good as dead. The husband of a true Rajput woman must come back home carrying the shield in his hand. In the alternative the shield must carry his corpse. What should the queen do in such a situation ?

The Maharani asked for the funeral pyre to be lit up with royal pageantry on the plea that the husband was already dead. Jaswant Singh somehow tackled her for the time being and promised to go to battle again and fight like a hero. But alas broken glass and broken heart cannot be mended, once broken.

One day the Maharaja sat down for his meal. The Maharani took her seat by his side and herself began fanning him. The maid servant brought in a piece of melon and a knife for cutting it. But suddenly the Maharani cut a joke more cutting than the knife itself. Take away, take away this knife quick; my Maharaja might faint at its very sight.

DISHES—NO SURRENDER CALL

We came to the dining room and took our appointed seats. This was not a big and gorgeous room like the banquet hall on the ground floor. Here there was no risk of losing my way or being at my wits' end in the wake of pageantry and royal formalities. But who knew whether I, an average middle class Bengali, would be able to digest the food taken in a room so richly and royally appointed. The Maharani sat at the head of the table and seated me on her right. She was talking to me very informally with a ring of sincerity. Imperceptibly I became one of them.

She requested me time and again to take the dishes prepared in their own Rajput way. For the last few days I had taken Rajput food every day without a break. The nobles of Kuchamon had put me up in great comfort and treated me with greater attention in their palace of yellow stone. My suite was next to their lounge. Just across it started the private apartments where my casual entrance in a careless moment might bring me face to face with the ladies of the family. But if even Sun, my maternal uncle, gets no opportunity to have a look at their faces, why I, the humble guest, should try for better luck ?

As I used to come down to the modern dining hall treading my careful steps on the spiral staircases of mediaeval type I always had the feeling that the modern mahogany table and the upholstered chairs did not befit the surroundings. The only thing that fitted in was the Rajput food served by the khan-

sama with his majestic turban tied in the Rathor style. Daily would I swim across the saffron coloured ocean of ghee (cooked Indian butter), spices and meat risking my life on the mission. My modest appetite, trained in the English way, used to cry halt in mortal anguish. But my chest blew up and announced the call of no surrender. Defeat I shall never acknowledge, oh, never, never. Every day would I wade my way through this heavy and hot Rajput meal, every day. Never mind the risk of indigestion and serious upset of the system. In this country of heroes the least I could do was to eat like a hero.

AHMED ALI'S TOUCHING STORY

I could not help it. I could not forget my friend Ahmed Ali who has gone over to Pakistan now. He is gracing a big post in the Central Government of Pakistan. He had confided to me with great regrets a personal incident of his. How could I forget that touching story ?

In his young days he went to the North-Western Frontier as a guest of a class mate of his, a dour tribesman. But the day Ali arrived there his friend had to go away to a far off village in connection with pressing personal affairs. He left instructions with his wife behind the purdah to look after the guest well. From behind the purdah the lady began to despatch mountain loads of food, to which not one but seven Ahmed Alis could not possibly do any justice. Earnest requests and entreaties and at last regrets came floating from the other side of the purdah that the Duke of Lucknow was not relishing the food sent by the Begum Sahiba. Otherwise the guest who was superior to any god according to the tribal scripture and was a friend of the husband in addition could not have resisted her entreaties. The lady was beyond herself in grief behind the purdah.

Ultimately she could not control her emotions and came out of the purdah. She insisted on the guest taking all the food brought out. Ahmed Ali was in mortal fear of his own life and tried to obey Her Majesty's orders while secretly taking digestive pil's of local manufacture.

In the meantime the friend came back from the village and was furious. He was shocked beyond description. His wife had cast away all sense of decency within these two days and discarded her purdah. The scriptures of the Pathan and the codes of his society as well had received short shrift.

From across the curtain angry arguments of the husband and the wife came wafted to Ahmed Ali's ears. He did not know how to get over his own regrets and embarrassment. But he did not know even at that stage to what further length his mortification would go.

The friend's wife started loudly shouting and shocking the whole area. This little birdie, this friend of yours from Hindustan, from what time did he become a male ? He cannot cope with even a nightingale's share. How could a woman be considered lacking in decency if she came out to face him ?

Poor Ahmed Ali had no moustache. He quietly passed his fingers round the slender waist and consoled himself, "Allah be praised. Occasionally I am a little hard of hearing."

I used to sit down to meals with Kuchamon and his friends and remember Ahmed every day. My whole life was hankering for some other lighter food. I wish I could at least have an English meal one night consisting of a little soup and the three course dinner which has been a fashion since the last war. That alone could give my stomach a little rest. One day the Master Sahib appeared on the scene. He was the Headmaster of the local Rajput school. His bones were old but mind young. In his school the arts of fighting formed as important a subject as ordinary university education. Indeed he was producing scholars who were the future military officers of Rajasthan.

RASOMALAI FOR CALCUTTA MAN

The Master Sahib was surprised to see me engaged in a tussle with a huge piece of meat and a rich portion of pillao. He was almost on the point of beating up the butler. Yes, he could not have let all his instructions in the Military School go in vain for nothing. The wretch of a butler was such an expert shirker that he was entertaining the guest of the Raja Sahib with only Indian dishes. Why ? Could he not produce for a day at least Poulet Polonaise, that tasteful Polish delicacy ? Surely the Raja Sahib would have been pleased and his guest would also have had a change of menu.

I pricked my ears to catch the reply of the butler who not only knows how to cook a chicken but also the formal French name of the dish. It appeared to me that Tensing the great climber brought down the whole Himalaya of his turban with a flourishing bow and whispered the reply. The Rani Sahiba herself was cooking the meal every day for the distinguished guest, each meal every day. It would be an insult to the guest if the butler were allowed to suggest the menu or prepare it for him.

I remembered all that. On all sides of the table the army of butlers was moving about in silent footsteps with Indian plates and English dishes. Some were carrying the Indian menu and some the English ones. But all English food was finding its way to the other side of the table where Kuchamon and his friends were in occupation.

Even the Maharani who was sitting just on my right with her radiant beauty and lighting up the whole room started with delicious hors d'ouvre. But Didaji Bai herself was immersed in her native Marwari meal and herself serving it in huge quantities on my plate.

I was contemplating how to loosen the waist band of my trousers without being noticed. While struggling with the huge bread of maize soaked in butter I noticed the sweet called Rasomalai. Its size was

not what we are accustomed to in Calcutta. This delicacy was of a proportion which could be of great help in times of civil commotion on the streets.

Beaming with smiles the Maharani requested me to take at least one whole piece. She added that

Beaming with smile Maharani requested me to take at least one whole piece of Rosomalai.

though it was first invented in Calcutta it is Marwar, her capital, which has developed it. She had asked for it specially today as she thought I would like a sweet which had its origin in my town. How kind and thoughtful of her.

THAT YOUTH THEN IN LONDON

Pleasant conversation and the gleam of jewels and dresses filled up the whole room. I was at a loss to understand as I did not know whether to concentrate my attention on the jewels round me or the beauty. In a moment of absent-mindedness I looked up at the magnificent chandelier of Belgian cut glass above. Its chiselled form carried the reflection not of my face as I am but as I was in my younger days.

That youth was then in London. He was studying in the university with the help of a small scholarship. An ordinary boarding house in the north of London was his shelter and two other Indians shared the place with him. On his return from the college one evening he found another Indian sitting in his room with a handsome Anglo-Indian girl. The object was financial assistance. With his Indian drawl he mixed English and Bengali and described how he had come to the United Kingdom as a seaman, got married to an English girl and settled down for good. Though he could not maintain himself adequately he maintained the Indian custom of producing a big family all right. Therefore .... We felt great sympathy for this little girl who could, by no means, be blamed for this pitiable condition. But her famished face carried the imprint of Indian incompetence. We became fired with patriotism and helped the man with cash as much as possible. Many big Indians were then in London on account of the Round Table Conference talks with Great Britain. The friends wrote out forceful appeals to them asking for financial assistance for this poor countryman of theirs.

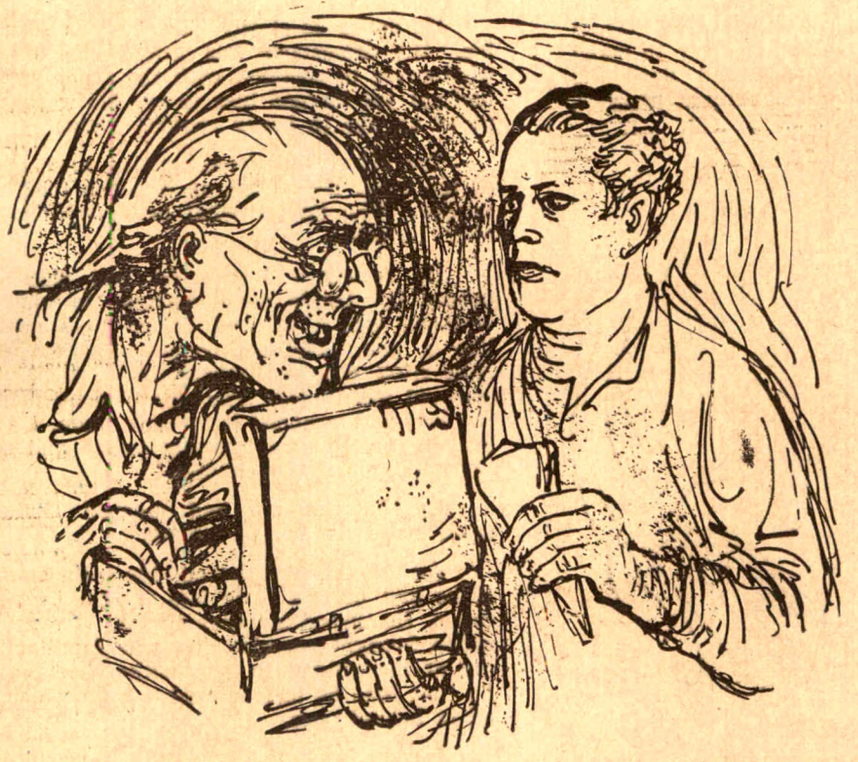
DAYS OF SARDINES ON TOAST

Next week the fellow turned up again with his little daughter. He was not getting help from any quarters. The week after he made his appearance again, and he repeated the performance week after week. Ultimately the friends decided that tmporary help would be no remedy. The fellow must be made to stand on his feet. After many enquiries they came to the conclusion that the only possible way of putting him in independent business on a small capital was to buy him a wheel barrow of fruits. But where was the capital to come from ? Ultimately they pooled the whole of their monthly remittances from home and gave the amount to the man. They themselves would be starving but at least one countryman of theirs would be put on his own feet. Three small hungry mouths would get their bread in this way.

Thereafter the three friends started starving or doing with as little food as possible. No money was due from home until the beginning of the next month and till then they must carry on somehow. Great Britain does not believe in giving credit to unknown people and if they were to beg or borrow from others surely the sacrifice made for the sake of an ideal would lose its edge. The ideal supplied the sauce to the cheap sardines on toast which became their mainstay for lunch and dinner. But alas, at that age appetite also is sharp and uncompromising. Still the flag was held high.

One evening they were coming back from the college. They were making a short cut to save the bus fare. Somebody tottering on his feet was coming out of a pub and swearing violently. Oh, where was the wheel barrow at Covent Garden and where was the principle of self help ? All the money produced by the self imposed starvation of the three friends had disappeared in the pub. Living on sardines on toast day after day failed to give them further sustenance, imaginary or idealistic.

Sitting in front of the Maharani and the plate of Rasomalai all that I could do was to send up a silent entreaty to the reflection of those young days, "Forget not, forget not, those days of sardines on toast."



HEIR

By BIMAL MITRA

A tragic account of mighty Purandar Khan's heir, Roy, now passing his days as a vendor selling "G. C. Roy's Jolpan" at railway stations.

IF you ever travel by the Machada Local you ought to be forewarned.

The train leaves from Platform No. 6, Howrah Station, at 7-25 a.m. You will have to get up a little earlier than usual the day you take it. You live in Tollygunge. From there to Howrah is a long way. It will take a full hour either by tram or by bus to get there. There may not be much time left after you get up, dress and shave.

Perhaps you think you will breakfast at the Station but when the tram finally arrives a glance at the clock overhead dispels your hunger. You have to run to catch the train. And you even find a place for yourself in the corner of a Third Class carriage. Then ? The rocking of the train and the heat of the crowd will make you thirsty for a cup of tea. You will get tea. You can purchase pure tea in an earthen cup for an anna. You can purchase lozenges also. At Uluberia and Kolaghat cool green coconuts are available. At Andul you can get *pantuas*, hot *singharas* at Sankrel, fried food at Mourigram. You can buy any or all of these but one thing you must not buy. I bought it a I know. Let me tell you abou it. I have travell by the Machada Local twice.

The first time nothing in particular happened The train was very crowded. I bought a new paper and began to read it. There were so mar people in the compartment, I couldn't even put n feet on the bench in front of me and be cor fortable.

After the train left Santragachi the vendo began to deliver their speeches one after another

What a strange collection of commodities They advertised and tried to sell everything th could or could not be of any use in a household starting with twelve-anna pairs of half-pants. The sold their wares cheaply as an advertising stun Medicine for asthma, from a holy man's prescri tion, was being distributed free for the benefit suffering humanity but the copper amulet cas cost five annas one pice. The Kalimata Tailorin Co. sent a vendor to sell half-pants that could nc be bought for less than Rs. 1|12|- in the market t the passengers on the Machada Local fo twelv annas in order to solve the clothing problem in th country. And there was ringworm medicine put ou by Das Co. The name indicates its efficacy i ringworm but it is an unfailing remedy in a

kin diseases. A single application is enough. does not stain clothes. The salve contains no ercury. Those who have tried it once can buy nother jar for the benefit of relations and neighurs. There is also that fund of humour, the funny ories of Gopal Bhanr, sole pilot of a way to make ou forget grief sorrow and tears and flood the d heart with happy laughter. Father, mother,

Neem tooth powder!
Priced at only two pice!

ughter, son—a book that can be read by all toether. Only three annas. Small to look at but more ntertaining than the Arabian Nights, Gopal Bhanr's *unny Stories!* A blind beggar tapped out the ythm of his pathetic song on an earthen pot, rother, I am blind! I suffer because I cannot e!' Tillotoma Chemicals sell Banga Lakshmi ndur. That day was the first day of a Grand eduction Sale. The price was liable to rise the ry next day. Better buy a stock! It is indispenble in a Hindu home! If you purchase five packets gether you get a commission of three annas. on't miss such an opportunity! Neem tooth wder! Priced at only two pice! But people ffering from diseases of the teeth, people who ve spent thousands on dentists without obtaining y relief, should try it. Believe and buy. Two pice e spent in so many ways! Thrown away! And en there is.....

But is it possible to remember all the things at are there?

Push carts on the platform peddle *balusai* and *hidana*. Pure tea with sugar is sold in earthen ps and glasses. Young coconuts, fried food, sweet tel, cigarettes, biri — in a word, what wasn't ere?

The Machada Local went slowly on its way. nall stations sat on its left and right. Mourigram, ndul, Sankrel, Abada, Nalpur, Bauriya. When the ain stopped the vendors left one compartment and oved on to the next.

At Fuleswar a very old man came in. He was rtly bald. His grey hair was scanty. He was earing a khaki shirt without any buttons. The lens of his spectacles were thick. He was carrying a torn suitcase.

"G. G. Roy's amazing Jolpan! Will you buy one? G. G. Roy's amazing Jolpan!"

He spoke so slowly that he was scarcely audible. His demeanour was grave. He had nothing whatsoever in common with the other salesmen. He had not yet learned how to cry his wares. Nor was he of an age to board running trains.

The elderly gentleman sitting next to me raised his head. He looked up into the face of the old vendor. Who knows what he thought. "Give me one," he said.

He bought a Jolpan for two pice. Then he opened it. Inside the newspaper in which it was wrapped was a sal leaf folded in a neat triangle like a *pan*. The leaf contained a few peanuts, a little fried dal, and several little sticks, fried and smeared with spices. The elderly gentleman refolded the leaf and wrapped it up once more. I was watching. He turned apologetically to me and murmured, "Something for the children."

By that time we had reached Uluberia. The train stops for half a minute.

As the old man got out the train started again. If he had been a little less careful he would have fallen. He turned his back to me. A sense of recognition brought surprise. He was familiar! I hung out of the window to get another look at him. But by that time he had entered a train which had pulled in behind ours.

I came back to my seat. It wasn't Roy, was it? Doubt seized me.

But another diversion was being created in our compartment. Birbal's wonderful ointment! Birbal's wonderful ointment! Infallible for cuts, burns, sinuses, scabies, ringworm, itch, inflammations,

Gopal Bhanr's funny stories, priced only three annas.....

cold and cough, persistent cough, asthma, headache, wind, dysentery, indigestion, and all other diseases !

* * * *

Some five years later I travelled by the Machada Local again.

This time something happened.

I managed somehow to evade Gopal Bhanr's *Funny Stories*, pure sugar tea, half-pants and the rest and get down from the train. I had planned to finish my work and return by the evening train. But the down train rolled out past the distant signal when the station was still a mile away. It was late in the evening. Darkness was thickening all around. I paced up and down the station platform alone. Apparently no train was expected soon. The platform was deserted. Several red dots stood alertly at the head of the distant signal posts like watchmen. Before them and behind them lay the endless mystery of the night, wrapt in the smoke of a faint mist. When I stood still the silence itself seemed a strange and marvellous sound.

Suddenly I heard, "G. G. Roy's Jolpan ! Will anybody take one ? The amazing Jolpan !"

At first it seemed to me that the words were a murmur in my memory. Then I looked sharply around, trying to see through the gloom. The opposite platform was empty. Who would try to sell anything there ! Who would buy ! I watched him. The shadow crossed the overbridge and came back to this side. He kept on babbling, 'G. G. Roy's Jolpan ! Will anyone buy ? The wonderful Jolpan ! Will anybody buy ? Jolpan !"

He advanced, repeating his formula like a prayer. Descending the steps he began to walk across the empty platform towards me. I stood still and waited. He was like the ghost of a vendor seeking customers for his extraordinary commodities. I experienced a sensation of fear.

Stopping under a lamp post he looked around and saw me. Turning his face away he walked quietly off in another direction.

In the light I got a good look at him. He was the same person I had seen the last time. Old. Thick spectacles. Grey-haired. Slightly bald. He seemed to be muttering inaudibly to himself. Now I recognised him distinctly. Roy. The same Roy. The heir of Purandar Khan. There was no mistake.

But he did not recognise me.

"Have you any Jolpan ?" I asked, going up to him.

An instant only. But in that instant I felt as though I had circumnavigated the globe.

I remember how strange the world seemed on the day I took my first job. Sudhir Babu handed me a bag of edibles and said, "Hold it ! Here, take it !"

"What's the food for ?" I asked.

"Purandar Khan's heir has passed the Matriculation examination."

I still did not understand. Harish Babu was next to me. He said, "You are new. You will see a lot of things here, any number of famous people. Look over there. See that fellow in a torn shirt, drinking tea out of a glass ? He is a well-known doctor. If you give him a call at your house he'll charge you four rupees. And over there, the fellow dressed in a second-hand suit, his brother has foreign education and if you come to the Record Room I'll show you Purandar Khan's heir."

I saw Roy for the first time that day.

I went to the Record Room to look up a letter. He was wearing thick lensed glasses and his dhoti was pulled up over his knees. All the buttons of his tunic were undone. The iron grey hair on his chest was showing. He raised his head when I stopped beside him. "I haven't seen you before !" he said, "Are you new ? Whose man are you ? Das's ?"

"No," I answered.

"Then Benoy Babu's ?"

"No," I said again.

"Then McClean Saheb's ?"

I had heard that no one could get into this office without belonging to one group or another. When he was told that I belonged to none he said, "It will be difficult for you to get on, Brother ! You'll have to rot away in the Journal Section. Look at me !"

He checked himself and asked, "What is your name ?"

"Mitter ?" he commented, "Are you related to the Nayanjora Mitters ?"

"No," I said.

He didn't give up. "Then Raja Kailash Mitter's family ?"

"You've never heard of Raja Kailash Mitter ?" my answer made him patronising. "How is that ? Don't you read the papers ? He spent twelve lakhs on his mother's funeral and thrilled the whole of Calcutta. He used to smoke a silver water pipe with a golden nozzle. You've never even heard his name? My aunt's brother-in-law married one of his granddaughters."

Bhudhar Babu was passing. 'Don't you know who you are talking to? Have you heard of Purandar Khan ?", he said, giving me a little push.

"Of course I have," I answered.

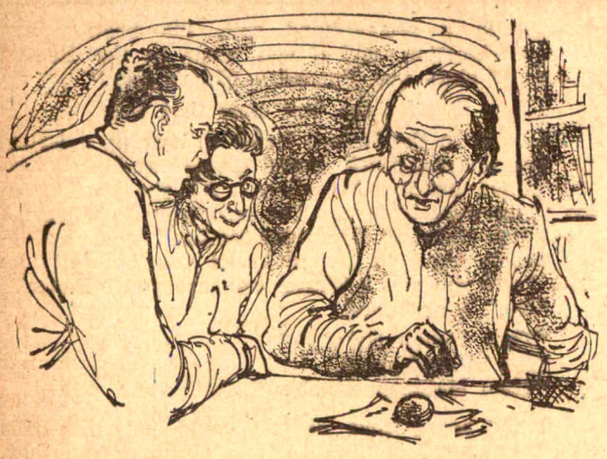
Roy stopped me. "Don't pay any attention to them, Brother. Would I be rotting in this sixty-three-rupee twelve-anna job if I were the heir of Purandar Khan ?"

Later I realised that it was his modesty which described his job as a sixty-three-rupee twelve-anna one. And I also realised that everybody knew the story of Purandar Khan's heir. Sixty-three rupees twelve annas, or however much it was that he got, he accepted only because he couldn't help it. Ganga Govind Roy, the owner of property worth six and a fourth lakhs, had come, through the sordid conspiracy of his co-sharers, to work in the office of a railway. And all this—the short dhoti, the torn tunic, the four or five days' old beard, his walking to office from his home in Bhawanipore and back and drinking half a glass of tea for lunch — was done with a purpose.

A relative of Panchanon Babu, Sub-head of the Journal Section, sent his son-in-law a present of mangoes. He brought four to the office. They were divided among thirty people.

During the lunch interval I went into the Record Room. "Why don't you taste the mangoes, Roy Mahasay ?" I asked. "The others were passing comments."

Roy put a stone on the letters under his hand as a weight and said confidentially in a low voice,



Then listen.....There was a time when I ate at least forty mangoes all by myself

"There's no harm in telling you, Brother, but don't say anything to anybody else."

I did not understand why he should be so secretive about such a small thing. "No, I won't say anything."

"Then listen. We are not accustomed to eat mangoes cut up in small pieces like that. I'm telling you the truth. There was a time when I ate at least forty mangoes all by myself. And those mangoes ! What are these compared to them ? Each was ripened on the tree and plucked in a net on a long pole. If you ever go to my part of the country I'll show you. And the trees ? One hundred and three fell to my share, of the best variety. Seven lichi trees, eighty-five breadfruit trees ! What breadfruits ! Holes are dug under the trees when the fruits ripen to keep them from touching the ground. Never in my life have I eaten mangoes by the slice !"

"Who are eating those mangoes now ?" I asked.

Roy applied himself to his work once more. "Its a long story," he said, "If I were to relate the whole eighteen chapters would be required, like the Mahabharata. Nobody believes it and I myself do not go around boasting. I am Purandar Khan's heir. Who would think so looking at me ? It is better not to say annything about it. People who have no feelings go around talking about such things. But I don't. Those who know the history of our family, who keep in touch with our fortunes, still respect me. Don't say anything about it to anybody. I am not in the habit of doing that. My father's palanquin is still lying beside the pavilion in front of the temple. Eight bearers were required to carry it. My co-sharers tore out a panel and made a cradle from it. The Raja Bahadur's brass cannon is still lying on its side beside the tube well. If you go there you'll find the village women using it as a wash board."

"Let me tell you something else," he called me back as I turned to leave.

"What ?" I asked, returning.

"Do you know a good lawyer ?"

When he heard that my elder brother is a vakil at Alipore he asked, "In which court, the civil or the criminal ?"

"Civil," I answered.

Roy suddenly became animated. He pushed away the work in his hands, "You must help me, Brother, my....."

He caught hold of my hands before he went on. "I only want to show him my papers. I showed them to K. Bose, the barrister, once. He went through everything, the rent receipts, the *sanad* from the time of Lord Clive, the lease and its counterpart, I've had copies made of all of them, you know. He said that the papers were clear. There is no snag anywhere. I am sure to get a decree if only I can place them before a court. But....."

"But what ?" I asked.

"The expenses. Who will pay them ? It is not a criminal case. It will take several years. The expenses of a lawyer and of the court must be paid for all that time. The property involved is worth more than six lakhs; it is not just a tap of a finger. The trap must be as big as the tiger to be caught. A court, the place which is called a court of justice, is the tiger's father. Where can I find so much money ? I manage to save three or four rupees a month and put it aside but if I can find a good lawyer....."

When I came back to my place and sat down Sudhir Babu said, "Has he asked you to go to his house ? Be careful ! Don't go !"

"Why ?" I asked.

"He'll pester you to death. He'll show you a whole trunk full of papers, give you something to eat, and then read them out to you regardless of how late it may be before he is finished. You'll have to decipher the handwriting on the deed, look at the map, read the names of his ancestors. He

'Has he asked you to go to his house ? Be careful ! Don't go !' said Sudhir Babu

won't let you go until you do. He gave me hot luchis and fried potatoes."

"Did he show the papers to you ?"

"Only to me ? Ask also others. No one in the office has been overlooked. Jivan Babu, Harish Babu, Sanatan Babu—even Dwijapada the chaprasi, has been invited to his house. Dwijapada doesn't know how to read so he had to listen."

After office we were all waiting for the bus when Roy set out on foot. He went straight home, swinging his cane, without paying any attention to anything on the way. He lived in Bhawanipore, walking the entire distance.

Sudhir Babu asked, "Do you know why the old man puts himself to so much trouble ? It is all for his brother. He starves himself and dresses poorly in order to educate his brother. That brother is developing into a brute. After failing twice he managed to pass the Matriculation in the Third Division. I wonder how long it will take him to pass the I.A. Roy has promised to feast us on meat when he does."

Roy used to say, "Don't tell anybody, I'm saying this to you confidentially, I want him to pass his B.A. and then study law. Don't you see ? A lawyer in the family ? He'll be able to look after the family affairs himself and conduct our case. The property is worth six and a fourth lakhs. Let it take two years, three years, as long as necessary! Let the case go on ! I have a job. Once we get a decree I'll be off ! Basanta won't have to practise at the bar for a living. We can live for seven generations on what we have. I'll be able to throw my cane at this sixty-two-rupee twelve-anna job !"

Roy never spoke much. But once one became friendly all the barriers were down.

"Don't tell anybody," he said to me one day, "Have you noticed this cane I carry ? It belonged to Raja Rudra Ram. He made it himself. He was most fastidious, you know. The head used to be goldplated. Four generations have used it. How many are the memories it evokes ! Once the fate of Burdwan rose and fell with it ! Why should it look well in the hand of a railway clerk ? That's why I had the gold, ten tolas, taken off. I've kept it to meet the expenses of Basanta's wedding. When I get the money I will have a crown made. A bride in a noble house cannot be blessed with a few guineas, can she ?"

A day came when Roy really did feast all his fellow employees on meat. The thirty people who worked with him were all invited. Basanta Ballav Roy had passed the I.A. examination at the first attempt.

"I can write the title of Kumar in front of my name," Roy said, "There is no legal bar. But I haven't done it. A clerk on sixty-two rupees twelve annas a month and he.....if ever my fortunes change....."

Basanta passed the Matriculation. Basanta passed the Intermediate. He took admission for the B.A. Roy told me when Basanta was indisposed, what he liked to eat, when he got up in the morning, what he looked like.

"Don't say anything to anybody," he whispered one day, "Basanta lost his temper today."

"Why ?"

"Just ! You can call temper a distinguishing characteristic of the Roy family. Raja Rudra had a lake filled up—he was so angry when croaking of frogs kept him awake one night. Digambar Prasad lost his temper once and set to forty villages and Raja Nilambar Prasad...

"Last night Basanta couldn't sleep. You k Brother....."

"Why not ?"

"He was playing cards with his friends."

"How can that be ?" I was surprised, exams are so close ! Wasting time ! Didn't you anything !"

"I thought I would at first," he said, "b kept quiet. Our family is a whimsical one ! I be a sixty-two-rupee twelve-anna clerk but does not cancel the blood of kings ! I know mys Raja Sarbeswar turned monk just for a w You'll find it in the history books. And my gr father Raja Kailash Chandra took a fancy to his only daughter, that is to say, my aunt, ma to the son of a cow-dung picker ! That f got a princess and half a kingdom as well !"

"How can that be ? Family pride ! Honou

"What else is a whim ? This lawsuit is ag them. My father died when we two brothers both minors and my uncle became my guar He transferred the property anonymously. haven't come to my house. I'll show you a s with the Emperor Aurangzeb's seal affixed to i keep it carefully in a trunk. Once Basanta p his Law exams.....but please don't say anyt about this to anybody."

"Roy is very friendly with you," Bhudhar said one day, "Has he told you the story a what Raja Rudra Ram did when he was angry

"I've heard it."

"Have you heard the story of the gold-he cane ?"

"Yes."

"The story of the *sanad* with Aurang seal ?"

"That too."

"How the crocodile was killed while cro the Ichchamati on an elephant ? How Raja N bar Prasad fished with a golden rod ?"

"No I haven't heard those."

"You will. Wait a little while. Everybody heard them. Why shouldn't you ? Is that poss Yet he warns everybody not to tell anybody el

It was true, what Bhuchar Babu said. I those stories also when I visited Roy in his He had been asking me to go for a long time. at last I went.

But I regretted going.

It was Bhawanipore only in name. There nothing of that fashionable quarter about houses.

Roy was wearing only a *gamchha*. He w think, cleaning a drain. He drew me into the

"I'll dress and be back in a minute," he "Please sit down, Brother.'

I was silently contemplating the floor. A platter of rice and curry lay scattered all ov Apparently some one had sat down to a meal a minutes before and, for some reason or overturned the platter and got up.

I was most embarrassed. Roy's humili revealed to me in this surprising way, seeme most to put me also to shame.

"I am so happy to see you," Roy said, returning dressed, "You have come. But....."

Noticing my embarrassment and following the direction of my gaze he said, "Oh, don't mind that! That is the little Bahadur's way. Make yourself comfortable in the bed and tuck up your legs, will you please ?"

"Who is the little Bahadur ?" I asked.

"Basanta, my younger brother. He was kept waiting for his lunch, you see. It was time for his train. He has gone fishing with some friends. This is nothing unusual. It happens all the time. What would you like to see first ? The *sanad* or the other papers ?"

The naked poverty of the room and the house upset me. I could not respond to Roy.

"Tell me what you are thinking ?" he asked, suddenly curious.

"Oh, nothing," I said, thoroughly put out, "You....."

Roy's hesitation was not dispelled. "No, you are thinking something. Does the dirtiness of my clothes disgust you ?"

"No, no. I am not thinking anything. You can talk....."

"Why should I accept your no, Brother ? Certainly you mind what you see. Woodburn Saheb himself was astonished to see me as I am, and you....."

"Which Woodburn Saheb ?"

"Woodburn was a judge on the civil side at Alipore Court. You know what courts are, don't you? Nobody cares who anybody is, whether he is a Raja or a Wazir. My petition was placed before Woodburn, you know. I walked my heels off. And I gave money away. Eighty-five rupees I had to pay a muktear to make a copy of the *sanad*. Woodburn looked at me in amazement. 'Are you Rudra Ram's grandson ? The Rudra Ram at whose death the cannon was fired at Fort William ?' "

" 'Yes, Sir,' " I answered him.

" 'But why are you in this condition ?' " the Saheb asked, " 'What do you do ?' "

I remembered the Roy of long ago, a sixty-two-rupee twelve-anna clerk in the Record Section of the office of the B.N.R., the heir of Purandar Khan, Ganga Govind Roy! He spent one rupee three annas cash on refreshment for me that day. I added up the price of everything he gave me, *rashagolla, pantua, darvesh*, cheese *goja*, it was not less than one rupee three annas. Perhaps it was the market allowance for two days of a man who walked to office and back to save money for his civil law suit and to educate the little Bahadur to be a lawyer. I could scarcely swallow. It seemed I was being unfair, taking what I should not.

Opening an iron safe in the corner of the room he showed me a great many papers, very old manuscripts. There was no end to the genealogies and marriage records. He was late for lunch that day, I remember, and so was I. It was 3 o'clock before I was able to get up.

And then Aurangzeb's *sanad* came out.

"I must go today, Roy Mahasay," I said once more.

"No, no, a little longer, a little longer, you haven't seen everything yet."

The care with which he kept each of the documents in the iron safe was pathetic. He handled them so gently! As if they were so valuable!

The next Sunday I brought Roy to my elder brother. I was not present during their conversation. He brought nearly fifty pounds of papers with him. They were wrapped carefully in oil cloth. The weight made Roy stoop. He recovered somewhat after resting a little. "They look like just a mess of frayed paper," he said with a dry laugh, "but they're worth six lakhs!"

The next day he called me aside as soon as we met at the office. He said, "Don't tell anybody. Everything is settled."

I was surprised. So easily ? At least it was settled, at last !

(Continued on Page 64)

Opening an iron safe in the corner of the room he showed me a great many papers very old manuscripts.

A Vision of Truth

The story gives a fascinating picture of the ways of a particular type of labour leadership.

By GOURI SHANKAR BHATTACHARYYA

MEN were on strike. Compared to the millions of Calcutta it was not much. Still as strikes go, it was unique. "Accept our conditions, accede to our demands or down with tools", said 80,000 workers, "The pay is not enough for two square meals a day".

The discussion went on in Comrade Noren's private office.

"Yes, it's time it was settled", agreed Mr. Choudhury who held 50% shares in an insurance company and was connected with two important banks. What the industrialists handed over to the Govt. as Excess Profit Tax, he suggested might as well be spent on the workers.

Noren agreed. "Yes, but you see Mr. Choudhury, it is best not to let the beggar know where the store is. If we bow down too easily the next crop of demands will be here in no time. Of course I know you cannot continue indefinitely with empty promises". He rang the bell, ordered coffee and offered cigarettes

An important meeting of the party was scheduled at 4-30. The members had started to drop in. Comrade Ram Talukdar with his unkempt appearance threw himself in a chair. "Intolerable", he grumbled, toying with a ringlet on his forehead, "intolerable is this oppression by the rich".

"Excuse me", apologised Noren, "you are 45 minutes too early, Ram babu. Save your breath now. The meeting starts at 4-30".

"Of course, it doesn't concern you. You are well off. Forgive me I am off my head today".

"It's not exactly the place to come when one is off one's head", reminded Norendra.

Mr. Choudhury smiled, "Right you are. Come, come Care for some coffee?"

Ram nodded his head. "Sure. Coffee by all means".

The telephone rang. Noren picked the receiver up. "Hello. Yes, it's me. Yes. Did she have chicken broth at 3? Oh I see, I'll collect the blood report on the way back. Are you sure she is improving? What! You haven't yet! Really you wou dn't let me work quietly for a minute even! All right. No no. Don't bother. I'll manage it," and he snapped the receiver down.

"How's she?" enquired Choudhury with evident interest.

Flicking the ash off the cigarette Noren answered, "It's an acute case. I told them to get Col. Lahiri. I learn he hasn't been asked yet. A precious life is at stake and nobody seems to bother. Well, I'm afraid I have to leave".

Ram looked longingly at Noren's expensive cigarette and said, "Pity, Noren babu can't stay. But can't be helped. Wife's illness is more important than a party meeting".

Noren interrupted, "My wife is not ill".

"I didn't know you had a daughter" apologised Ram.

"When you think only in terms of wives, daughters and parents," impatiently retorted Noren, "how can you think of humanity in general?"

Ram was taken aback. "Of course the whole country is brothers and sisters, but how few can grasp the idea ? It's too big for most. Anyway whoever she is, I wish her the speediest recovery.

4-25. The room reeked with cigarette smoke unbrushed hair, perspiration and dirty clothes. A dozen voices talked loudly together. There had been a police lathi-charge The clerks had to be taken to the hospital. A strong resolution must be drafted to condemn it. Large sums had to be collected for the trolleymen on strike. Choudhury suavely piped in, "Don't worry on that score. I may manage that if I get a definite guarantee that at least a 100 men will insure with our firm. They of course don't lose anything by it. The rates of our company...."

Ram Talukdar said, "Certainly Why merely a 100? Everybody will insure there After all you are

ıg them over a difficulty. That shouldn't be ɔtten".

"Right", said Choudhury with a broad smile, "I a straightforward person and I like straight ".

The hall-porter came to say that a person was ing outside. He would neither give his name nor way.

'I'll go and see", said Ram, "Probably the son bitch is a spy.

Some boys poured in. "Where's the president?" nquired of them.

'Couldn't find him", they said.

'Comrade Protap Singh is like that. Probably up with something or other. He isn't fond of s either. Only, the flowers and garland are ed. Anyway, sit down. I'll be back in a minute".

An elderly man stood across the road smoking holding a bag. His shoes were worn. He came ard on seeing Ram Talukdar and asked, "There to have been a meeting here. Not exactly a ing."

Ram greeted him effusively, "Hallo!. Welcome rade Protap Singh. It is a pleasure. He chaperon-

Hallo, welcome, comrade Pratap Singh !

im inside and then started scolding the boys. s is unpardonable".

'We looked everywhere" they insisted.

Protap Singh intervened. "I came straight from station. You needn't have sent them. This is a job, not a celebration. Let us start. No need ormalities; that is a waste of time and energy".

After the meeting president Protap Singh was n to comrade Noren's residence in his car. Ram kdar had arranged everything. He now told Protap Singh, "Noren is a genuine worker. You must meet him. He couldn't be present today due to an unfortunate illness at home".

"Illness at home!" interposed Protap Singh, "Then to go now would be to disturb him. We could meet some other day".

Ram insisted, "But he would be disappointed".

"Well, in that case let's go", said Protap. "It's a pleasure to meet such people. We can do very little, Rambabu. Work is the only thing we can offer, but their sacrifice is for the sake of an ideal — they are the true workers. Born with silver spoons in their mouths, they have yet dared to face their obligation to the country — it's a great thing."

Ram agreed. "Exactly. And talking of workers, you are unique too. We in Bengal have never seen another like you. Most of us are glad tc get the work done somehow but nothing holds you back. Nothing tempts you — neither fame nor money."

"Oh, you exaggerate. You are great men. You guide the destinies of thousands of workers. We can do so little in the villages — we only fret".

Everything had been arranged by Ram Talukdar. Protap Singh was Noren's guest but in the midst of the expensive furniture and fashionable pictures he sat incongruous as an ugly stain.

To wait thus was exasperating. Protap could easily have returned to the village. There was such a lot of work left. This was the harvest time — the crucial time of the year. From subscription to sharecropping — the villagers needed him in everything. Of course the urban problems were vaster and of course it was nice to have a chance to meet the elite and the intellectuals. Still Protap found it a bit unnerving. You have to think twice before opening your mouth. He wondered when Ram would return or whether he would return at all.

Evening came. Protap sat in the gloom till a servant came to switch on the light and bring tea.

Protap enquired, "Is Noren Babu at home?"

"Yes but he is very busy. You see the very biggest doctors are coming".

"I see. I shouldn't have come at a time when he is so worried".

The servant paid no attention to the words. He only wanted to know whether Protap liked bread or rice for dinner.

Anything will do.

At 9 o'clock came both bread and rice with a paraphernalia of rich delicacies. The lavish meal made him uneasy. He decided to return home by the first train next morning.

At 9-30 he heard some footsteps recede and in their wake entered a person, to say, "So you are Protap Singh".

Protap was delighted. "Yes. You are Noren Roy I presume."

Noren didn't look very happy about the guest. Still he said, "Glad to meet you. I have heard a lot about you. It's a pity we meet at a moment when it is impossible to discuss much. I want to apologise for what must have seemed to you the height of rudeness".

"No. No. Please don't mention it. It makes me feel embarrassed. After all it is an emergency. Tell me how is the patient?"

A note of despair comes into Noren's voice. "It's a tragedy, sir. It's the result of relying on others. Who ever thought it would get so serious within three days. Men like us cannot afford the luxury of

a little rest, it seems. It has come to such a stage now that she can't even recognise me!"

Protap hurriedly enquired, "Is it your wife?"

"Oh no. That wouldn't have mattered. After all she can speak. It is her silent vacant look that upsets me so much. The attendant is a big fool. Col. Lahiri should have been consulted in the first place. Instead he called a vet who simply pocketed the fees and did nothing. Afterwards I tried all the specialists of course and consultants still the dog gives a vacant look — cannot recognise her master even. This evening she passed through a crisis. She seemed to be sinking. Excuse me, I must see if the terramycin has come".

"Terramycin! But that's awfully costly", almost unconsciously comments Protap.

"Can't be helped. Life's worth more than money. Anyway, goodnight. See you in the morning".

Protap was still in a reverie when that servant turned up to say, "Won't you come up? The bed is made."

It came as no surprise to Protap. In a house where animals get costly antibiotics, it was quite expected that a suite of rooms be offered to a working comrade.

In his bed Protap recalled the past. He remembered his wife. Their struggle through poverty, starvation, the social quabbles and police tyranny — Sumitra had put up with it all in silence. When she was dying they had taken her to the hospital. The doctor had ordered those costly medicines.

Where could poor Protap find that much money? He had hopelessly stood there thrusting his hands in the empty pockets. For a moment he had thought of the cheque book. But it was the party fund. A doubt had come to his mind, can money be more precious than life and he had the answer too. It was the lifeblood of many. The country of many. The country was a greater stake than a single life.

In the silence of the night, he heard the moaning of dog Suddenly his head and body seemed to be on fire. This dog and its vacant look! If he had a revolver he would shoot that dog. No, rather shoot Noren. He paced the room and then slowly opening the door at one time came out. The dog was still moaning.

The next morning the house was in a turmoil. Noren ran about like a mad man and telephoned everywhere. The servant had been given notices and police had been summoned. Noren swore to send everybody to jail unless they confessed. It was useless. Then it transpired that the guest of last night was missing too.

The police officers interrogated everybody and examined everything. "Noren babu", they said at length with regret, "an astute man like you should have got in touch with us last night. This is a hardened criminal type. And after all, how could you let a staunch Communist enter your house?"

Noren apologised as he offered an expensive cigarette to the officer, "Seen lots of communists, but never one of this brand"

"The trouble with those fellows is that they seek to put the ideal on a basis of reason. They are the intellectual type whose life is spent doubting both the dream and the reality But a true communist is nothing if he is not a realist. Your dog has a good market value."

Noren smiled sadly. "You are right. Even the dog soap, chicken broth and shampoo are gone. I'll catch him yet — a regular burglar. His voice choked with emotion.

Protap had proudly walked out with the dog. The night was nearly over. Walking along Hazra Road he came to the bank of the Ganges. It was completely deserted. He glanced at the light of the sickle moon shimmering on the strip of water, then patted the dog.. "Lucky chap", he said, "I have

Freedom. You are free now !

denied you the solace of costly medicines, but I offer you something greater, much greater". He loosened the collar and shouted, "Freedom. You are free now".

The dog perhaps couldn't appreciate it. He stood and wagged his tail and became vociferous.

"No, nothing else", Protap commanded, "I give you nothing less than absolute freedom. The rest goes to deserving candidates". He walked down to the water for a bath. "At least one soul is saved from slavery", he thought.

The dog was still standing when he came out of the water. He wondered if the look was 'vacant' but couldn't decide. He started doubting whether the brute fully appreciated the newly got freedom. The dog came near him and started moaning.

He felt pity for the animal. It will at best lead a dog's life. But he couldn't tolerate the luxuries. It was too much for a bitch.

"This world is large enough", he said in a tone of viceregal majesty. "Isn't it enough that we have given you freedom unasked?"

The dog stood with an unappreciative stare.

"It only shows what an ungrateful dog you are", thought he. The poor soul can't appreciate liberty. He remembered his wife. She had been ill too but there was no costly medicines for her. "That damned dog" he swore and started to walk rapidly

HEIR

(Continued from Page 60)

"Why didn't you tell me you are the Nayanjora Mitters?"

"How do I know! Where is Nayanjora? I never heard of it!"

"Such a distinguished family! Why have you taken a job in the railway office, Brother? I said as much to your elder brother. He is a highly educated man! He's drunk the law down like water. Why else should he charge a fee of five hundred and one rupees? A real lawyer! He said the same thing barrister K. Bose said."

"What did you decide?"

"He said that the papers were perfectly clear. There is not the slightest discrepancy anywhere. The case is in my favour. Raja Rudra Ram's own signature is on one of the documents: 'As long as my grandsons, Sriman Ganga Govind Roy and Sriman Basanta Ballav Roy are minors Sri....will act as their guardian and look after the affairs of the estate' ....It was decided that we shall divide our share as soon as the judgement in the case is delivered. Half and half. Your brother will take half and my half, that is to say, the half remaining to us two brothers, will amount to something like three lakhs twenty-five thousand but there is one thing....."

"What?"

"He promised to win the case. He said he would get a decree from the High Court. But the case will last for three or four years. He said I won't be able to manage it unless I give up this job. It is not a criminal case but a civil one, not a tiger, a tiger's father!"

"What have you decided to do?" I asked, "Are you going to give up your job?"

"Immediately! If I could hit the job over the head with a stick and get out I'd be saved. Let me finish my work today. I'll submit a petition tomorrow. I have about four thousand rupees in the Provident Fund. The family can manage on that for three or four years. After that—but don't say anything about it to anybody yet, Brother....."

"How I do not know, everybody in his Section came to know about it that very day.

"Is it true, Roy Mahasaya?" Sudhir Babu asked.

"Then you are really going to quit your job, Roy Mahasaya?" Bhudhar Babu asked.

Sanatan Babu, Abinash Babu, the brother of the man with a foreign education, the doctor—they were all interested. When their questions were answerd in the affirmative, if not by Roy, by me, they seemed depressed. If some one you know should suddenly win three lakhs twenty-five thousand in a lottery you would feel the way they did about it. Roy Mahasaya had suddenly risen far above everybody else. He was envied and at the same time regarded with respect.

The petition was not submitted the next day.

"You've sent the petition?" I asked him.

"No, I couldn't manage it today! I can't do it without consulting the little Bahadur! His consent is essential. He is also the heir to half the property, isn't he?"

Not long after I was transferred to Bilaspur.

"I cannot tell you how grateful I am," Roy Mahasaya said, "You made it possible. I dared not even dream of recovering my fortune. I shall keep you informed. Your brother will tell you everything. I also shall write to you. Don't imagine I shall forget my friends in the office just because I am rich. Whether I am a Raja or anything else. We've passed so many years together....."

* * * *

Several years later I came to the Head Office on official business. I found Roy still working in the Record Room, sitting in the same chair, in the same position.

"What's the matter?" I asked, "Haven't you given up your job yet?"

"Practically. You can call it that. Basanta has agreed. I've drawn up the petition and had it typed. Only placing it now remains to be done. And my wife said....."

"What did she say?"

"She has her wits about her. Her advice is good. I have also thought it over. Basanta should pass his law examinations while I still have my job. What do you think? Isn't it better so? I've shown the papers to an advocate also. He said the same thing. The papers are clear. No difficulty...."

I did not come again for several years. But Roy was still there, in the same position, in the same chair, in the Record Section. He was older. Bhudhar Babu had been promoted. Abinash Babu had been transferred. Sudhir Babu had retired. Many changes had taken place in the Head Office. But Roy....

"What has happened? Haven't you quit yet?"

"There now. Everything is ready. Basanta is married. The girl is auspicious. Have you heard of the Duttas of Mulajor. A famous family! I've brought a girl from that family into ours. Basanta passed the law exams at his first attempt. I have the petition with me today. This afternoon I shall hand it to Das Saheb myself. The day is a lucky one I looked it up in the almanac. Now is the time to hit this job over the head with a cane and....."

Bhudhar Babu commented, "And you! Do you think a person can ever get out of this cage once he is in? It doesn't matter whether he is a Raja or a pauper."

Three years later I heard that Roy had retired not a day earlier nor a day later than his fifty-fifth birthday. He applied for a year's extension but it was not granted. That had been about seven months' before. I found a young man sitting in his place, in his chair. Bhudhar Babu was the only one left of those whom I had known. "Have you heard about Raja Ganga Govind Roy?" he asked.

"No. What is the news?"

"Have you heard that he has retired? He asked for an extension but he didn't get it. Have you heard?"

"I have heard. I was told when I arrived."

"Have you been told anything else?"

"No."

"Then you haven't heard anything. Have you heard that the little Bahadur with his wife from the famous Dutta family of Mulajor has set up a separate household?"

"How is that?"

"Yes, sir, he rented a house in Bhawanipore and practises as a lawyer in Alipore. He took the six and a half thousand that Roy had in his Provident Fund away from him and turned Roy and his family out. Sudhir Babu met him on the street one day. He said Roy is in a bad way! He is living in a village in Howrah. They are destitutes, almost starving! They haven't a pice. He has two unmarried daughters and his sons are still minors."

It was a long time after all these events that I suddenly came face to face with Roy on the empty

The ADVENTURE Of THE FRIGHTENED BARONET

A deductive detective story in the great tradition of Poe and Conan Doyle

By AUGUST DERLETH

FROM the chess problem in which he had been absorbed, Solar Pons slowly raised his head, cocked a little, and smiled. His fingers relinquished their hold upon the knight; he leaned back.

"Yes, yes, as I thought", he murmured, "we are about to have company".

London was lost in fog, a heavy autumnal curtain shutting the city away from our lodgings in Praed Street, and at first there was only the distant hum of diminished traffic that was the pulse of the city, and the several small noises of water dropping; then I heard the curiously muffled sound of hoofbeats, travelling a short distance, stopping, then coming forward again.

"Surely he is looking for Number 7," observed Pons with satisfaction, for time had been pressing heavily on his hands since the bizarre adventure of the Octagon House. "To whom else would he address himself at this hour of the night? Nor is it amiss to surmise that he has come up from the country not far from London; horsedrawn carriages are uncommon indeed within the city. "Clearly now," he went on, listening intently, "he has got down just a few doors away; he has gone up to the door, flashed his light on the number. No, that is not number seven; yet number seven cannot be far away. Hear him! He returns to his carriage—but he does not get in; no, he is too close to the desired address for that—he leads his horse down the street a few doors, and here he is."

I looked toward the night bell, back to Pons' expectant features, marking his keen eyes, his acquiline nose, his firm, thin-lipped mouth, touched still by his smile, and once more at the bell. On the instant it jangled. Pons stepped to the speaking tube and invited our visitor to come up, and in a few moments there was a tap on the door giving to our lodgings. I strode across the room and opened it.

Across the threshold stepped a short, stout, sturdily built gentleman of approximately sixty years of age, swarthy of skin, heavily bearded, and still darkhaired; he fixed his small glittering eyes on Pons, bowed curtly, and handed him an envelope. It was unsealed.

I crowded up to Pons and looked over his shoulder at the card he took from the envelope. Alexander Taber Rowan, K. C. B. Chiltern Manor. Pons turned the card over. In a shaky script someone had scrawled thereon! "For God's sake, come! I can't stand it much longer." I flashed a glance of inquiry at Pons, and saw that his eyes had lit up with the excitement of the chase.

"Late of His Majesty's Service, attached to the staff of the Viceroy of India," said Pons, returning the card to the envelope and dropping both to the table. He looked across the lamplight to where Sir Alexander's man stood, fingering his cap.

"I am Kennerly, sir."

"What is it?" asked Pons.

"It's the curse of the stone, Mr. Pons."

His voice was gruff but not discourteous. What he said apparently conveyed something to Pons, though it meant nothing to me, and I saw that at the moment at least Pons had no intention of enlightening me. He nodded.

"You were sent to bring us?"

"If possible."

"Good. We'll be with you in a few moments."

While Pons got into his rainproof, I saw him scrutinizing Kennerly with marked interest.

"A veteran of India yourself, I see," he said presently.

"Yes, sir."

"Of great personal service to the Maharajah of Indore."

"I saved his life, sir."

"Very likely in the encounter in which you lost your foot."

By this time Pons was ready; he turned to me, his eyes twinkling at the sight of my obvious efforts to observe the bases for his deductions and seeing only the telltale smoothness of the shoe which betrayed the lack of a foot. "Coming, Parker ?"

We descended the stairs after leaving a message for Mrs. Johnson, our landlady, and passed into the thick fog which lent to Pons and Kennerly a shadowy, almost intangible being. The carriage loomed abruptly out of the night. We entered it. Kennerly mounted before us; and soon we were travelling westward through London in the direction of the Chiltern Hills. Our pace was necessarily slow, but the horse seemed to proceed with an uncanny instinct and, as far as I could determine, no errors in direction were made.

Pons sat deep in thought, his visored cap low over his face, and I hesitated to disturb him : yet I rankled within at my own inability to follow his deductions, and finally I could contain myself no longer.

"Doubtless it is a most elementary matter, but how in the devil did you know this fellow is a veteran of India ?"

"Come, come Parker—it should be obvious. For one thing, his military bearing; for another, he is the trusted servant of the baronet. What more likely than that he was his orderly in service ? But, primarily, he wears a ring he could have got only in India."

"I can follow the observation about the lost foot easily enough, but what about his service to the Maharajah of Indore ?"

"The ring he wears bears the crest of the Maharajah. Such rings are not for sale. It follows therefore that he must have been given it by the Maharajah himself. Since such a ring is not given simply as a gift, for it is too personal, but rather as a mark of esteem, it is not at all a shot in the dark to assume that our visitor did the Maharajah a personal service of such vital importance that nothing short of the crested ring would satisfy the Maharajah's sense of gratitude."

"And the card ? I asked, determined that nothing should escape me. "What did you make of that ?"

"Only that our client is badly frightened, that his sending for me is done with the knowledge of no one else in the household save this man, that the matter is one in which he hesitates to seek police protection, very probably because of the attendant publicity, and that he has been drinking to keep up his nerve. From what his man has said, I take it that something has come up to remind him that the Eye of Siva which he acquired some thirty years ago during a campaign in the hill country of India was, after all, cursed, and that the fruits of this curse are now being visited upon him."

I took a deep breath and considered. "The script and what he writes betray some fright," I ventured.

"Capital ! Though obvious."

"But the other matters—?"

"He comes to us in preference to the police, and he comes at an hour which indicates secrecy; since he himself has nothing to fear from us, clearly he believes his family will disapprove of his sending for us. He therefore summons us at a time when he can present us to his household in fact, as a fait accompli. It is, further, not illadvised to assume that there are troubled waters there. Finally, there was the distinct odour of rum about his card."

It was in the early hours of the morning that we arrived at Chiltern Manor in the low rolling country immediately adjacent to the hills which gave the house its name. We had ridden out of the fog not far from the environs of London, and

The entrance gave way almost at once to a curious staircase. Kennerly's light illumined the way.

waning moon shone down, shedding its pale light upon the wooded country and fields through which we now rode. The estate lay behind a high old stone wall, almost totally concealed by a heavy growth of vines, and surrounded by many trees and bushes. Rowan's man drove through a gate in the side-wall and directly around to the carriage sheds, where he left horse and carriage standing to lead us into the house, which rose up from among trees, an old stone building not without Victorian magnificence, at this early morning hour dark and sombre save for a faint glimmer of yellow light from window on the second floor.

I could not help observing that we entered the house by a side entrance, and that Kennerly's movements were marked by a singular care, thus confirming Pons' surmise that Rowan had sent for us in secret; moreover, the entrance gave almost at once upon a narrow staircase, which clearly led up between the wall and a room below, almost as part of the wall as it were, for we were forced to proceed in single file by the small light of a pocket flash which Kennerly used to illumine the stairs.

CHAPTER—II

PONS' client waited in his own rooms. The pale light shed by the single lamp burning there presently disclosed him, an elderly man, deep in an upholstered chair, and wrapped in a steamer rug, as if for warmth. His chin rested upon his chest, and his sunken eyes looked at us from over his pince nez. A thin moustache and beard, both white, in singular contrast to Kennerly's black growth, and a fringe of white hair seen from under the black skullcap he wore, ornamented his thin, ascetic face, white within the darkness of his immediate environment.

"Ah, Mr. Pons!" he said in a cultured, well-modulated voice. "I had hoped Kennerly could bring you." He glanced interrogatively at me, and Pons introduced me as his assistant. "I am afraid my message may have seemed somewhat incoherent to you."

"Not at all," responded Pons. "In fact, it is perfectly clear that something has happened to make you believe there may after all be something more than legend to the curse on the Eye of Siva."

A wan smile touched the baronet's lips. "I am reassured. I made no mistake in sending for you."

"……It was moving steadily before me. Not a light, but a kind of spectral image — Siva! the destroyer."

"Let us hope that we may be able to justify your confidence," said Pons quietly. "However, if I remember rightly, the stone is now in the British Museum."

"It has been there for twenty-five years." He shrugged. "But apparently this has made no difference. I will not attempt to deny that I am badly frightened, Mr. Pons. Approximately two months ago, the first of these mysterious events took place. I thought initially that I was the subject of a practical joke in the worst possible taste. The occasion was the Naval Conference; since Chiltern Manor is not too far from London, friends of mine in the diplomatic service in Britain for the Conference called on me. At the end of one of those days, I found a card in the tray. It read, Puranas Mahadeva. I regret that at the moment the significance of this did not occur to me; I assumed that it had been left by some minor official whom I had met at Delhi and forgotten.

"That night, Mr. Pons," he went on after a short pause, his eyes glittering strangely now, and his breath coming a little faster, testifying to his excitement at the memory of the incident he was about to relate, "that night, as I was preparing to retire, I was summoned from my work by a tap on my door and I stepped into the hall. No one was there.

"Now, sir, since I am as familiar with this house by night as by day, I did not turn up the light. I stepped out into the hallway, and had begun to walk down towards the stairs when my attention was attracted to what appeared to be a spot of illumination low on the floor along the wall

at second glance, I saw that it was moving steadily before me. And then, sir, I observed that it was not a light at all—but a kind of spectral image."

Sir Alexander drew a long breath and continued:

"Mr. Pons, it was the image of Siva, the Destroyer ! Perfect in every detail, a miniature spectre! I was startled. I was not immediately disturbed; I felt I had experienced an illusion of some kind, and quickly turned on the lights. There was nothing in sight, nothing whatever.

"I examined the wall, the floor—nothing. I returned to my rooms somewhat shaken, thinking naturally of that old curse; an article not long before in the feature section of an American newspaper had brought all those old painful memories back; and it was then that it struck me with the force of a thunderclap what those words on the calling card stood for : Puranas is the title of Hindu scriptures; and Mahadeva is a less-widely known name for Siva ! I took out the card at once—or perhaps I had better say, sir, that I took out the one I thought was the card I wanted. Mr. Pons—there was nothing whatever on it; it was perfectly blank; there was nothing to show that a single letter of printing had ever been on it !"

"Ah," murmured Pons delightedly.

"That was the beginning of a series of events which I am unable to explain save as the malign evidence of the workings of that ancient curse ! The pattern has been repeated endlessly : the tap on the door, the strange apparition—nor has this been all; I have seen the spectre with increasing frequency on the top of the estate wall on the north and in other places where I would not have expected to come upon it."

The baronet sighed, "Moreover," he went on, "within the past few nights, events have taken a more serious turn; I have awakened to the sound of voices warning me to prepare for death; I have also heard the strange whistles the Sepoys used to give; I am ashamed to confess that I have had recourse to rum to steady my nerves. It is the firm conviction of the family that I am losing my mind, for no one else has seen any of these apparitions, and they have held out against me in summoning help from outside. no doubt for fear of any publicity which might attend having you here.

"But last night the mastiff which guards the north gate vanished without a sound; I have no speculation as to what may have happened to him. And now I am convinced that at last the curse on the stone has become active again."

"Why ?"

"You know the story of the stone, Mr. Pons. How the priests in that temple opposed the Maharajah—indeed, they made their temple a base of operations. We destroyed the temple, and the Eye of Siva was a prize of war; it is true that in the melee attendant upon the destruction of the temple, one of the guardian priests was slain. The newspapers will have it that it was this man who put a curse upon the stone, but the fact is that the only curse connected with it was a general and ancient curse upon anyone who desecrated the temple; it is really not attached to the stone at all

"However, as you know, the Maharajah died shortly thereafter, three of the soldiers accompanying me into the temple died within a year, and four months ago—the raison d'etre for that American newspaper article—Sir James McLeen, who commanded my right wing in that engagement, fell to his death under mysterious circumstances. These events, looked upon in the light of that ancient curse. naturally point to but one conclusion—to which I did not come until after I had begun to witness these manifestations; only then did the other events fall into their place in the pattern."

"You suggest that the design is to retrieve the Eye of Siva ?"

"Not alone that, but to punish those responsible for the destruction of that temple." Sir Alexander touched his lips with his tongue, nervously. "But I feel that you do not put much credence in the curse, Mr. Pons."

Pons smiled drily. "Let us say rather that I am at the moment concerned only with the problem of which aspect of the matter is cause, and which is effect. I take it you own more than one dog."

"Yes, of course."

"You have said you have witnessed the apparition of Siva on the estate wall. Was its appearance accompanied by any demonstration from the dogs ?"

"None."

"Does this suggest nothing to you ?"

"Only that whatever is out there is meant for me alone. The Hindus have many very strange beliefs, Mr. Pons, and stranger things than this have happened in India, without any explanation."

"I have some acquaintance with the lore and legends of India," replied Pons absently. "Have you ever seen the spectre of Siva in someone else's company ?"

"Yes, on one occasion my brother Ransom was with me. On another, my daughter's fiance, Geoffrey Saring. Neither of them was able to see anything. Yet the thing was as plain to me as you are, sitting there."

"Your man Kennerly has never seen it ?"

"No."

Pons sat for a few moments with his eyes closed, touching the lobe of his left ear thoughtfully with his thumb and forefinger. Presently he gazed at the apprehensive baronet once more. "I wish you would instruct Kennerly to answer any question I put to him."

"It shall be done."

"Further, I would like to have you show me approximately the space in the hallway covered by the apparition at such times as you have seen it."

Without a word the old man got up. Pulling his steamer rug around him, he walked a little unsteadily over to the door, threw it open, and stepped hesitantly into the hall. He turned up a light and pointed to the base board along the farther wall.

"Beginning there, Mr. Pons—and going for a distance of twenty to thirty feet—I cannot be sure which, but in any case it varies."

"At which end ?"

"It is usually at this end."

"Who occupies this floor besides yourself ?"

"My daughter's rooms are across the hall. Down the hall—Geoffrey Saring, next to him my brother Ransom, then my sister Megan's room; and then across, a guest room of some dimensions; Kennerly has got it ready for you and Dr. Parker."

Pons stood in the hall, hands clasped behind him, his cap back on his head, gazing thoughtfully

along the wall where it joined the floor, which, for a distance of approximately a foot from the wall, was not covered by carpet. He stood thus for perhaps three or four minutes; then he turned abruptly, as if dismissing the hall, and said that except for one thing, there was nothing further he could do tonight. And that one ? inquired the baronet.

"I want to have a talk with Kennerly, if you will send him to our room."

"Certainly." The baronet hesitated briefly; then a look of great anxiety crept into his eyes; he put one trembling hand on Pons' shoulder, and said, "I hope you will be able to explain this strange mystery, sir. I am close to the edge."

"We shall see," said Pons imperturbably.

CHAPTER—III

WE entered our room and found everything laid out for us with the skill and comprehension possessed only by someone who had served in the capacity of an orderly for many years. Pons threw himself into a chair without pausing to remove anything but his rainproof and his cap; he looked quizzically over at me, but his mouth was grim.

"This is devil's work, Parker."

"You attach no importance to the curse, then ?"

"I attach every importance to it, on the contrary; it is the most important single factor in the matter."

"Indeed ! You did not let Sir Alexander think so."

"There is time for that, Parker."

I was about to say more when Pons cautioned me to be silent, rising from his chair and moving with cat-like quiet towards the door.

"Kennerly," I whispered.

"Kennerly's slight limp is distinctive in his walk," replied Pons in an equally low voice. "It is not Kennerly."

There was a quick, rustling tap on our door. Pons threw it open.

A young woman stood there, her ash-blonde hair wild, one hand almost protectively ir the pocket of her dressing gown, the other holding it close about her neck. Her dark eyes darted from one to the other of us before she stepped into tre room, closed the door, and stood with her back against it, her mouth working a little, a frown heavy on her brow.

"It is Mr. Solar Pons, isn't it ?" she said, looking at Pons.

'At your service," replied Pons.

"I have seen your picture in the papers often enough," she said bitterly. "Or, Mr. Pons—surely you are not going to make my poor father's madness the subject of scandal ? I beg you to go away, to say nothing....."

"I am not in the habit of announcing myself to the press, Miss Rowan."

"I'm sorry. But it is a painful thing to witness the decay of a man like my father—quite apart from his being, after all, my father."

"You are convinced his mind is going ?"

"I wish I were not. But there is no other explanation. He has seen things neither Uncle Ransom nor Geoffrey saw when he was with them; it isn't the mere hallucinations alone, but the added fact that they prey upon his mind and fill him with fear. He has for some years suffered from a heart weakened by coronary trouble, and now that his mind has given way, the end is only a matter of time."

"Perhaps I may be able to relieve him," said Pons.

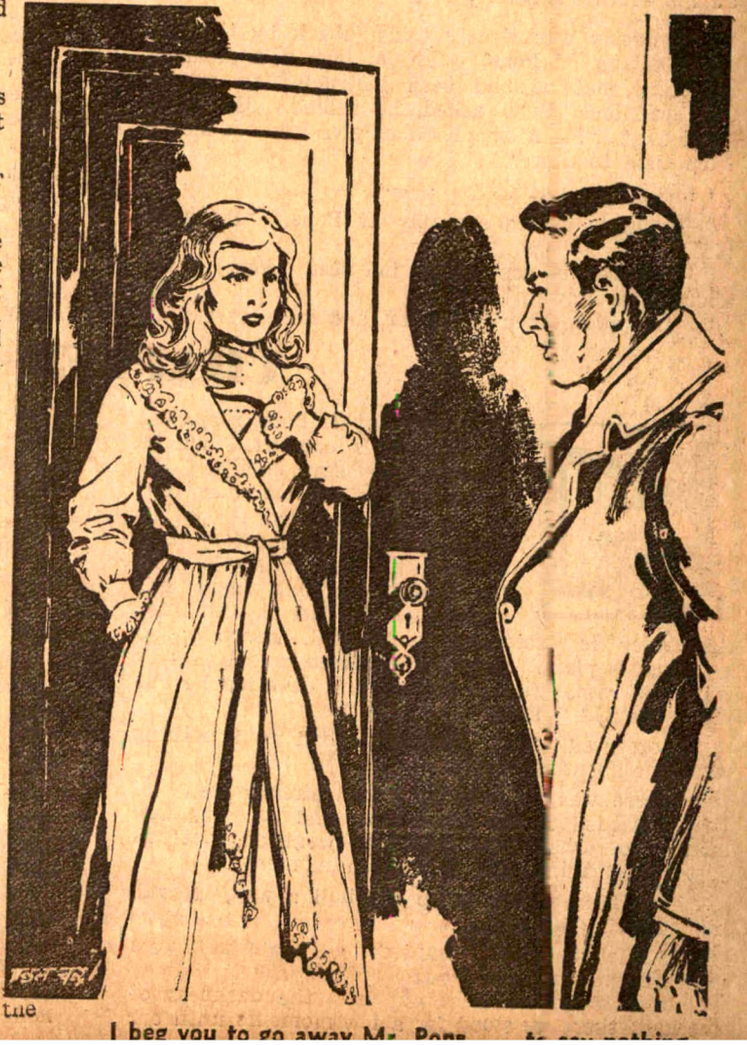
"If only you could !" she said earnestly. "But I'm afraid it is too late. I feel only that your being here will give him a false hope, which, when it is destroyed, will affect him all the more adversely."

"I understand that he suggested calling in outside help and that the members of his household opposed this."

"Yes, I did. So did my brother, who was visiting us at that time. So did my aunt. Only Geoffrey and Uncle Ransom seemed to think it a good idea, and I could see that my uncle was none too keen, for all that."

"Well, then, I promise you I shall not be here long."

Thus assured, Miss Rowan left us. Pons glanced at me curiously.



I beg you to go away Mr. Pons ... to say nothing

"Would you say she was sincere, Parker ?"

"Undoubtedly."

"So I thought."

"Perhaps, after all.....", I began.

Pons smiled. "Did Sir Alexander strike you as a man who was mentally deranged?"

"Oh, you cannot make such generalizations, Pons. He is certainly under great mental stress. But many mad men are perfectly normal to all but the experienced eye; my eye is hardly experienced to such a degree."

"Let us just ask Kennerly what he thinks," suggested Pons.

The sound of Kennerly's footsteps paused, he knocked on the door, and, in response to Pons' invitation, came in. Like Miss Rowan, he stood with his back against the door until bidden to come forward and sit down.

"I was told to answer some questions, sir," he said in a voice that was courteous without being servile, and toneless without being colourless.

"Why, Dr. Parker has a question to put to you first of all, Kennerly."

Pons turned to me, and thus prodded, I put the question : Did Kennerly think that Sir Alexander was losing his mind ?

Kennerly favoured me with a hostile, stony stare. "I do not think so," he said coldly.

Pons said nothing to this. "Now, then; Kennerly—to what extent does Ransom Rowan live on his brother's bounty ?"

Kennerly was clearly taken aback by the personal nature of Pons' question, but in a moment, reflecting that he had been instructed to answer any questions Pons asked, he rallied. He spoke cautiously. "Sir Alexander does give Ransom money from time to time."

"How does he spend it ?"

Kennerly looked squarely at Pons. "He gambles."

"Ransom is constantly in need, then. What about Miss Rowan ?"

"She adores her father sir, and he is very fond of her. But not so fond as to be blinded by her."

"Intimating that he stands in her way occasionally. How ?"

"He has not yet given his consent to her marriage."

"She hardly needs his consent, does she ?"

"Not necessarily. But Miss Winifred is that kind of girl, she will not do anything against her father's wish."

"He does not trust Mr. Saring ?"

"Sir Alexander is a hard man to please."

"And his son ?"

"Philip is wilful and determined to have his own way. Sir Alexander is difficult to get along with in many ways, though I have always managed to do my best for him, and have no reason whatever to complain."

"Philip wishes his own way about what ?"

"His inheritance, sir. He has devised some way of obtaining it before his father's death so that he will not have to pay so much tax to the Crown."

"And Sir Alexander's sister ?"

"Miss Megan is a very strong-willed woman."

"They do not get along ?"

"I think they get along as well as any sister and brother do, sir."

"You have seen none of these phenomena reported by Sir Alexander ?" inquired Pons then.

"Nothing whatever. But the dog is missing."

"Yes, the dog is missing. Sir Alexander says he did not make a sound."

Aye. So he thinks. But he did call once—it wasn't pretty, sir."

"Yes, it is plain that he was lured off by someone whom he had no reason to fear, and killed. He cried out when he was slain. That is what you want to say, is it not, Kennerly ?"

"It might be," he replied reluctantly.

"Come, come, Kennerly. We are both working towards the same end. But enough—you may go."

I could not help observing after he had gone, that Kennerly was not only reluctant to speak but singularly uncommunicative.

CHAPTER—IV

HE is very loyal, Pons remarked on Kennerly's conduct, "but he managed to say enough. Sir Alexander is no martinet, but he is difficult. On the other hand, his brother Ransom is a wastrel, his son Philip is none too honourable, his sister has aspects of the termagant. Sir Alexander is crotchety, distrustful, neurotic; so so much is plain. Only for Winifred does Kennerly have the same kind of respect and devotion he has for the old man."

I observed that Kennerly had said nothing whatever about Kennerly.

"There was no need to. I had already seen all that I needed to see about him; and he was well aware of that. Now then," he went on, "let us just step out into the hall for a moment."

"The light switch is up the hall a way," I said, remembering its place.

'If it were light I wanted, we could well wait until after dawn," said Pons cryptically.

Accordingly, we went out into the darkness of the hall; there we stood for a few moments until our eyes grew accustomed to the darkness. Then Pons walked up towards Sir Alexander's rooms, got down on his knees, and began to scrutinize the baseboard of the wall with great preoccupation.

"What in the world can you hope to see without a light?" I demanded in a whisper.

"I can see very well," replied Pons imperturbably.

I came down on my knees beside him. "What is it ?"

Here and there the wall-board and the floor showed obvious colour changes which, observed at this proximity, were curious and startling, for the effect of these strange streaks and marks was as if a faint illumination were given off into the darkness.

"Elementary, my dear Parker," said Pons, rising and walking slowly down the hall, only to sink to his knees again to crawl from one of the doors to another opening off the hall there.

I was nettled, but it was not until we had returned to our room that I asked Pons what he made of it.

"You know my methods, Parker. The whole problem is as plain as a pikestaff, and it only remains for us to obtain sufficient evidence to convince

Sir Alexander. I fancy that our presence will bring matters to a climax rapidly enough."

"You have seen something that has escaped me!" I cried.

Pons chuckled. "Perhaps you have not pursued the facts to their obvious conclusion. Or, even more likely, you have started out on a wrong premise. We shall see in good time. Now let us get a little sleep, for I dare say we have a busy day ahead of us."

Our day began before breakfast, when Pons woke me and suggested that we might walk out upon the gorse and bracken-grown rolling country surrounding the estate of Sir Alexander. Clouds lowered in the heavens but the way was pleasant enough despite the absence of the sun. It was soon clear,

"What are you doing here?" he demanded gruffly.

however, that Pons was not idling away time. We slipped out of the house and left the estate behind us by way of the north gate, from which point Pons began what initially appeared to be an aimless angling away, but proved ultimately to be only one of a series of concentric circles which he described with the utmost casualness, while he sought diligently for broken ground, so that it soon became obvious to me that he was on the track of the missing dog.

The country away from the north gate was fairly open, apart from the gorse and bracken which covered it, and a kind of heather with which I was unfamiliar in these latitudes, and it was not long before our peregrinations ended at the edge of an abandoned quarry in the foothills.

Gazing down into the dark water which filled a large part of the quarry, Pons said, "I have no doubt that the mastiff lies down there. In the absence of any place which might serve as a burial ground for the dog, and presuming the need to be rid of him as quickly as possible, this is the likeliest place; we may therefore assume with ample justification that this is the spot to which the dog was lured and slain. In all likelihood, too, the body was weighted, so that it will not rise."

We had hardly taken our leave from this spot when we were suddenly confronted by a burly individual dressed in hunting clothes and carrying a gun; he stepped out from behind a small gnarled tree down the slope (having also partly been hidden by a projecting wall of rock), and appeared before us with a decidedly menacing air, his eyes narrowed, his mouth turned down so that his face had a surly expression. Nevertheless, his resemblance to Sir Alexander was so marked, that his identity was no mystery.

"What are you doing here ?" he demanded gruffly.

"That is a question I should be more inclined to put to you than to answer, Mr. Ransom Rowan."

Rowan looked closely at Pons. Mr. Solar Pons, is it ! So Alec sent for you after all !"

"Against your advice ?'

Rowan shrugged and stood off to one side. "No difference to me what he does," he said curtly.

He eyed us sullenly and with unmistakable apprehension, but said nothing further to us as we walked past him.

"So that is the gambler," I said when we had passed out of earshot. "He looks like a man caught in the middle of his game and uncertain of the way the numbers are coming up."

"Yes, doesn't he ?" agreed Pons noncommittally.

At the north gate we had yet another encounter. This time we came up a young man on his knees beside the gate, who got up, abashed, and stood grinning before us — a husky young fellow of close upon thirty years of age, whose blue eyes regarded us with some chagrin. He introduced himself as Geoffrey Saring.

"Looking for footprints and such," he explained nonchalantly. "Don't believe myself the dog would simply have walked off."

"Surely it is a little too long after the event," observed Pons.

"Well, perhaps. I didn't think of it until now, after Winifred told me you were here."

"If you discovered anything, you might just let me know," said Pons drily. "I understand that you were with Sir Alexander on the occasion of one of his—shall we say, 'visions?'—and saw nothing."

"Yes. Mr Pons. A rather painful few moments, I must admit. I hope they will not be repeated. It was one evening about a month ago. I had just come downstairs to rejoin Winifred when I [illegible]

shout; I ran back up immediately. He stood there in the hall pointing to the floor along the wall and demanded of me whether I saw 'it.' There was nothing whatever there. Apparently, whatever it was vanished, for he said, "There—the infernal thing's gone'. Then he turned to me and asked whether I had seen anyone, or anything in the hall or on the stairs; I had not, and said so. He said someone had rapped on his door only a few moments before. That was all there was to it. He seemed gravely upset when I could not see whatever it was he saw."

"Do you remember where Sir Alexander's brother was at that time?"

"I believe he was in his room, but I do not know. He had a similar experience—except that he was in Sir Alexander's room at the time, and Sir Alexander thought he saw something moving along the estate wall. Ransom didn't see anything, either."

Pons' next question was disconcerting. "Have you been long away from the stage, Mr. Saring?"

Saring laughed pleasantly. "Surely it's not that obvious, Mr. Pons?"

"Your clothes are by Du Beune, who caters to the profession. Your hands give no evidence of manual or clerical work. It might be either the stage or the cinema."

"Bit parts, Mr. Pons, I've been off the stage for about a year. I met Winifred as a result of my stage work, and since it was, I believed, the basis for her father s disapproval of me, I abandoned it".

Pons smiled, wished him good hunting in his search for clues about the dog's disappearance, and went on into the house, only to be met just beyond the entrance by Miss Winifred Rowan, who gave us a glance of mute appeal. Behind her, Miss Megan Rowan, Sir Alexander's testy sister, looked upon us with poorly-concealed disdain and made it clear and emphatic in her entire manner that she thought us intruders who had taken advantage of a man who was mentally sick. Moreover, her replies to Pons' cursory questions left us in no doubt; she shared her niece's conviction that Sir Alexander was losing his mind.

CHAPTER–V

SIR Alexander himself, seen in the light of mid-morning, was not a heartening spectacle. His face was lined and haggard, not alone with age and sleeplessness, but with manifest fear. His hands trembled a little, but this morning the slight odour of rum which had permeated his rooms on the previous night was absent; this fortification, however, would not have been amiss. I paid him the closest attention during the conversation Pons and he carried on, and was struck by the curious way in which he looked over his shoulder every little while, as if he feared an attack from behind, and by the troubled manner in which his eyes wandered; so that I did not find it difficult to understand how his sister and his daughter could believe in his derangement.

After luncheon the sun came out, and Pons again expressed a desire to walk about the countryside. After all, he pointed out, we were too seldom away from London, and we ought to take the fullest possible advantage of a day in the country.

"A day," I cried. "There is no evidence that we won't be here a week."

"My dear Parker, how you belittle my poor talents! I fancy another twenty-four hours or so will see an end of this business".

"You have clearly seen more than I have," I said.

"On the contrary, everything presented to me has been presented to you also. But while you, and Sir Alexander as well, have proceeded along the obvious lines, I have chosen to follow a different course. Either Sir Alexander is the victim of a mental breakdown, or he is not. You have sought every evidence to prove that his is a mental case; I had on the contrary only to look about me discover every evidence that it is quite the contrary — he is a victim not of his own mind, but of someone else's".

"You speak as if you knew him."

"The identity of the culprit is so elementary that it is needless to discuss it. The modus operandi is the moot point. I fancy we shall soon witness a change of method. We are dealing with a clever, unscrupulous rogue, who does not lack for a tremendous egotism."

"You speak with such confidence that I am almost reluctant to point out that Sir Alexander does betray very definite signs of mental derangement."

"Undoubtedly."

"Are you changing your mind, then?"

"Certainly not, Sir Alexander was meant to betray such signs."

"Do you doubt the sincerity of Miss Winifred?"

"Not in the slightest. She is honestly concerned, and honestly convinced that her father's mind is failing. It was meant that she should be. It was meant that all of them in that house should be."

"What then is the motive for these events?"

"Why, surely it can be but one of two: either it is hoped that Sir Alexander's heart will give out as a result of fright, or that he will be adjudged mentally incompetent and the management of his affairs pass to someone else."

"His son!"

"I have not had the honour of reading Sir Alexander's will. You have a disappointingly professional mind, Parker. I would caution you to observe that there are other ends which may be as immediate as money."

"But in that case — what does the removal of the mastiff signify?"

"Come, come, Parker — surely it is evident that the mastiff had to be removed for two reasons: primarily because it was quite possible that, even though the dog knew the miscreant who was bringing about the 'vision' Sir Alexander saw on the north wall—recall that he emphasized last night that he saw the thing especially on the north wall — he might disturb the family sufficiently to attract attention to him; secondarily, because the strange absence of the dog could contribute still more to Sir Alexander's fright. It is all of a piece, and you, who know my methods, ought properly to have applied them."

"I have mistaken the point of beginning". I said soberly.

"Yes, the newspaper article was the point of

beginning — or perhaps even the coincidental death of Sir James McLeen four months ago. The curious events which have frightened Sir Alexander are not the effects of the curse by any means, nor is the curse their reason for being; no, the curse is simply being used, no more. Sir James McLeen's death, followed by the lurid newspaper article, gave rise to the diabolical plot of which Sir Alexander was picked to be victim. With any luck, we may be able to forestall the projected ending of this little melodrama."

Pons would say no more, but directly upon our return to the house, now shadowed by the late afternoon sun, he went up to Sir Alexander's room. The baronet looked up anxiously at our entrance; he had been playing chess with Kennerly, who got to his feet and would have left the room, had Pons not signalled to him to remain.

"I have only two more questions to ask Sir Alexander", said Pons.

"Yes?" asked the old man.

"On the occasions of your seeing this spectral miniature of Siva, was it ever still?"

"No, not that I recall. It always seemed to move, to float away from me."

Pons nodded with satisfaction. "Now then, try to think back, Sir Alexander. Can you remember ever hearing anything whatever on the occasion of your sight of this spectral image?"

The baronet slowly shook his head, his eyes puzzled.

"Nothing? Think, man; it is of the utmost importance."

Here Kennerly interjected himself. "Begging your pardon. Sir, but you did say that one night — you said —".

"Yes, that's right, Kennerly", said the baronet with more animation than he had shown at any time previously. "I did once or twice hear a sound I thought was like — well, like a clock being wound, only steadily, a kind of whirring sound."

"Capital!" exclaimed Pons. "Well, sir, I think we may say that we shall soon have this ghost laid to rest for you."

"I am not going mad then? I have actually seen things?"

"You have seen things you were meant to see, Sir Alexander. You will hear from me again before you retire tonight."

I was awakened from a doze into which I had fallen in the room's only easy chair by Pons' hand on my shoulder, and he whispered, "Come, Parker. The game is afoot". I started awake. Save for a small lamp beside our bed, the room was in darkness.

"What time is it?"

"Close to midnight. The house has settled down. Come."

He led the way silently into the hall, and in darkness we went down to the door of Sir Alexander's room, upon which Pons rapped quietly and called out in a low voice to identify himself. In a few moments the bolt was drawn, the door opened cautiously, then swung wide as Sir Alexander recognized us. Pons and I slipped into the room.

"What is it?" asked the old man uncertainly.

"We are effecting a change of rooms, Sir Alexander," said Pons composedly. "If I may, I want to borrow your dressing robe, your steamer rug, your skullcap. And that leaded cane I see over there; I dare say I may have a use for it. Thank you."

Pons offered no explanation; Sir Alexander asked for none. He took Pons' decision like a military man responding to orders, and with a few moments we had completed the exchange; Sir Alexander was ensconced in our old room, and we were in his.

"Do you now conceal yourself, Parker, behind that chest of drawers near the door," said Pons, while he took up Sir Alexander's position in the old man's chair; in the half-light, there was a remarkable resemblance between them, and a casual glimpse would not have detected the difference.

"What in the devil are we doing here?" I asked.

Waiting for the ghost of Siva. Unless I am badly mistaken, I think a major attempt will be made tonight to bring matters to a head. My talents may be modest, but there is no need of daring them too much — is that not the way a criminal might reason? Or a scoundrel at least, eh? Now, then, let us be still."

In a few moments the bolt was drawn, the door opened cautiously.....

CHAPTER–VI

THE midnight hour struck, and the minute hand crept slowly around towards one. The old house was quiet, and the only sounds to invade the room were the soft keening voices of a pair of owls, and the harsh booming of night-jars coasting down the sky. It was not yet one o'clock when I felt rather than heard Pons stir, and at once I became more alert, anxious to miss nothing. Was it a rustle I heard? Was it someone in the hall? In my eagerness I almost gave the show away by calling to ascertain if Pons had heard, but I caught myself in time.

A furtive tapping sounded on the door. I looked over at Pons, who shook his head silently. Once again the tap sounded, a little more peremptorily this time.

In a hoarse, quavering voice, Pons called out, "Who is it?"

Then he got up and shuffled over to the door, not, however, forgetting to carry with him, concealed in the folds of his dressing robe, the leaded cane which he had elected to use as a weapon.

The place where I stood offered me a view of the threshold; and I turned to face the doorway as Pons threw open the door. I do not know what Pons anticipated, but the reality was most unnerving and almost demoralizing; what would have happened to Sir Alexander if he had been confronted in this fashion by the spectacle that met our eyes, is difficult to guess. For what stood on the threshold and seemed to lean into the room, whistling eerily, was nothing less than a great glowing image of Siva, a terrifying vision filling the doorway. Only for a moment did it stand there; then it seemed to rise up and tower above Pons, who cringed before it as no doubt Sir Alexander might have cringed. A solitary threatening movement caused Pons to fall back; then the thing would have retreated, but Pons' backward movement was a falling away designed only to permit him to grasp and swing the leaded cane he carried.

Before the creature in the doorway could dodge, the cane swung around and crashed down against the side of its head with a horrible tearing sound, which I realized almost at once was the crushing and ripping of papier-mache. The creature lunged for Pons, but at the same time that I leapt forward in response to Pons' call, the cane landed once more, and this time reached its objective, for the thing slumped grotesquely and collapsed on the floor.

"Lights, Parker," said Pons, breathing fast as he stepped back.

I turned up the lights and saw that from beneath the cleverly-wrought likeness of Siva projected a pair of very human legs. Under the light, the glow had disappeared, and the papier-mache of the costume seemed almost drab. But on the instant I understood the secret of that horrifying glow.

"Phosphorus!" I exclaimed, looking over at Pons who was matter-of-factly removing Sir Alexander's dressing-robe and skullcap; the steamer rug had fallen from his shoulders when he had delivered the first blow.

"Yes, yes, of course," replied Pons impatiently. "Surely that was patent? You saw it yourself in the hall last night, though I have no way of knowing how you interpreted it. Now then, come along, before the others get here."

Already there were sounds of movement in the rooms adjoining the hall.

"Aren't you stopping to see.....?" I said to Pons retreating back.

"What need? My dear fellow, it is only too obvious that it is young Saring, Come along. We have yet to verify one aspect of the matter."

He darted from the room, down and across the hall, and into Saring's room, the door of which stood partly open. Here he stood for a moment in soundless concentration; then he went to the closet and began to examine Saring's luggage, where he quickly found what he sought — the tiny, phosphorescent image of Siva, the thin thread which had drawn it along the hall and the garden wall, and the electric contrivance and reel which served to draw the spectral miniature along the hall floor and into the room through the slightly open door, giving the illusion of having disappeared.

When we emerged from the room, Sir Alexander

Pons' backward movemen was a feint, permitting him to grasp and swing his heavily loaded cane.

was coming down the hall, Miss Winifred stood on her threshold, looking with horror across to her father's room, and Miss Megan had appeared.

"We have caught the scoundrel, Sir Alexander," said Pons gravely, and, taking the baronet's arm, he drew him into his rooms and closed the door behind him, admonishing me to give my attention to Miss Winifred, who had plainly recognized the clothing and legs projecting from beneath the elaborate costume worn by Geoffrey Saring in the furtherance of his diabolical scheme.

What took place behind the closed door of Sir Alexander's rooms, I did not know; but shortly after Pons emerged from the room, Kennerly appeared to drive us back to our lodgings in London. Pons said no word until we were on our way into the city, driving under that same moon, smaller still, which had spilled its wan light upon the earth only the previous night.

"You are silent, Parker; did Saring's unmasking surprise you?"

I admitted that it had astonished me.

"You had fixed upon Ransom, of course. Ransom was not without guilt, but he had nothing to do with it. The matter really turned upon the character of our client. The most reliable witnesses for him were his daughter and Kennerly. Kennerly admitted that Sir Alexander was 'difficult,' but, clearly enough for anyone to see, he intimated that the old man had his reasons. These were manifest. And obviously his distrust of Geoffrey Saring was not ill-founded, however slender may have been its reasons for existing.

"Furthermore, the entire matter rested upon one fundamental decision : Either Sir Alexander saw the things he described, or he did not. Everyone was quite willing to believe that he had not seen them, most particularly since both Ransom and Saring had reluctantly admitted they had seen nothing. I had no alternative but to act upon the assumption that Sir Alexander saw precisely what he described. Once I had formed this conviction, I had only to look for evidence. There was no lack of it. For one thing, the mysterious calling card was doubtless abstracted and replaced with a blank card in the interval between its receipt and its re-examination. For another, I detected despite some manifest attempt to eradicate it, evidence of phosphorus along the wall of the hall at the baseboard. Phosphorus had immediately suggested itself in the course of Sir Alexander's narrative. Finally, the phosphorus led to Saring's threshold and there stopped. While this was not conclusive in itself, taken in connection with two other inescapable factors, it was.

"The first of these quite clearly was the fact that both Ransom and Saring lied in denying they had seen anything. Both had seen the image quite well; each had his own reasons for denying sight of it. One because he was its author, the other because he saw no reason why he should spoil a game which would benefit him also. The second of these factors was the motive; this seemed quite manifestly to be an attempt to have Sir Alexander declared mentally incompetent, and only secondarily to bring about his death. Now, Ransom would not particularly benefit by having his brother declared mentally incompetent; he would benefit only by his death. It was he who gambled on Saring's game. It was Saring who would benefit — an actor without a stage, a young man without an occupation, a fortune-hunter, in short, whose marriage was being opposed with what must have seemed to him particularly galling baselessness; for once the old man's mind was suspect, his opposition to his daughter's marriage would be suspect, too. A diabolical plan, Parker, but it might have worked. Its mechanics were well wrought, but simple, too.

"For instance, you did not suspect Saring primarily because his manner was engaging, and because he told us so disarmingly about the way in which he had been called back upstairs by our client to witness the spectral image moving down the hall. It did not occur to you that it was quite within the bounds of possibility for Saring to have tripped his machine, tapped on Sir Alexander's door as he passed, and hurried downstairs before the baronet got to the door to open it. The plan was so simple that you would have rejected it even if I had suggested it. And you were deceived by his by-play at the gate, where instead of looking for clues to the dog's disappearance, he was examining the ground lest he had left anything for me to discover."

"Yet he was one of the most firm in suggesting that Sir Alexander call you in," I objected.

"His scheme called for as much self-confidence as my investigations". He laughed. "We have had a good day and a long day of it, Parker. An interesting matter but one which might well have been fatal. Fortunately for Sir Alexander's frightened determination, it was not. What a pity young Saring did not keep special talents for the stage!"

Usha

By MARGUERITE DARNTON

A heart-warming tale of a simple woman who learnt to conquer the darkest fear visiting upon a woman's soul at the psychological hour with the matronly help and guidance of another understanding woman, and face life squarely.

IT was a beautiful evening, and Gopal Babu stood on the veranda drinking in the splendour of the sunset. This was the time that he loved best of all, when, the day's duties over, his hunger satisfied with a meal that would spell perfection to even the most exacting appetite, he revelled in the feeling that his life was successful in every aspect. His business was flourishing, he had a most devoted wife whose skill in running his household was unsurpassed, and he had two handsome sons whose careers were successfully settled. His daughter, Lalita, a gentle and lovely girl, was the very young matron of the new maternity hospital.

This hospital was the pride of the district, and it was through his own daughter's hard work that sufficient funds had been donated to found it. For six months it had been organised by its enthusiastic founder, and already two hundred and fifty babies had been brought into the world in much happier circumstances than they would have done without the hospital.

Yes, he was a happy man, and he fully appreciated his good fortune.

The soft warm air, the fragrance of beautiful blossoms, the happy droning of busy insects, and the myriads of colours from the setting sun, filled him with a great sense of well-being. He moved slowly down the steps into the garden, unhurried, and loving the rapidly darkening world.

Many minutes passed in thoughtful speculation, and when he reached the gate he opened it almost without knowing that he did so, stepping out upon the road that led down to the river. He had taken but three steps when he stumbled against something on the ground. It was resistant but soft, and suspiciously like a crumpled human being. He knelt down, putting out his hand to feel what it was, and one hand touched a head of long soft hair. A girl!

With the swift motion of one whose mind worked clearly and instinctively in an emergency, he gathered up the small light body which felt so frail and thin in his arms. There was no sign of consciousness in the girl but she was certainly breathing, and in a few moments he had her in the house and laid her carefully down upon a couch. His wife had immediately come at his urgent call and her heart was at once filled with the pity that can only be felt by a woman who is a mother. The girl, who looked beautiful although obviously ill, could hardly be more than eighteen. The small features could have been carefully carved from ivory, so pale and still were they, and the hands, now so inactive — were small and delicate. Her pale blue sari looked as though it had been worn unchanged for several weeks, and her feet had apparently done much walking over rough ground recently.

Soon the girl was covered with blankets and a messenger was despatched to the hospital to fetch Lalita.

Lalita arrived with astonishing speed, and with an even more astonishing efficiency she soon had the poor girl back to consciousness and made comfortable in bed.

When the stranger's eyes had opened Gopal Babu and his family thought that they had never

efore seen eyes which betrayed such sorrow or such isappointment at opening upon the world again.

On awakening, Reba, — for that was her ame — realised that she was in the hands of trangers and she was terrified, but Lalita took he thin little hands in hers so tenderly that all ear subsided, leaving a feeling of peace and re- ef. The beautiful Child of The Night sank back nto the pillows completely exhausted.

Lalita was prepared for this moment, and by he bedside was a neat tray holding a glass of warm- d milk. She passed one arm round Reba's shoul- ers, and, raising her gently lifted the glass to er lips, murmuring, "Drink some of this little ne, and you will feel a little better."

Reba drank slowly, and then Lalita drew her o her own heart, holding her there for a short vhile with sisterly affection, then laid her back to est.

Gopal Babu and his wife watched the touching cene and were glad that their daughter showed this greatest of all human quali- ies — compassion. They knew that her work at the nospital required compassion, but they had not seen it like his before, and as they left he room there were tears of oth pity and joy glistening n their eyes.

After a night of anxious watching Lalita realised that he little one needed great care if she was to recover from such desperate exhaus- tion. No questions were asked, and the good family only showed that they want- ed to see the girl restored to health.

For a week Reba's pro- gress was very slow, but under Lalita's pa- tient and loving care she began to respond more quickly, and after two weeks she was able to leave her room to sit on the veranda in the sun. Her pale ivory-like face began to glow and to take on the typical beauty which is the heritage of an Indian girl. Her steps became less faltering, until she could walk unaided in the lovely garden.

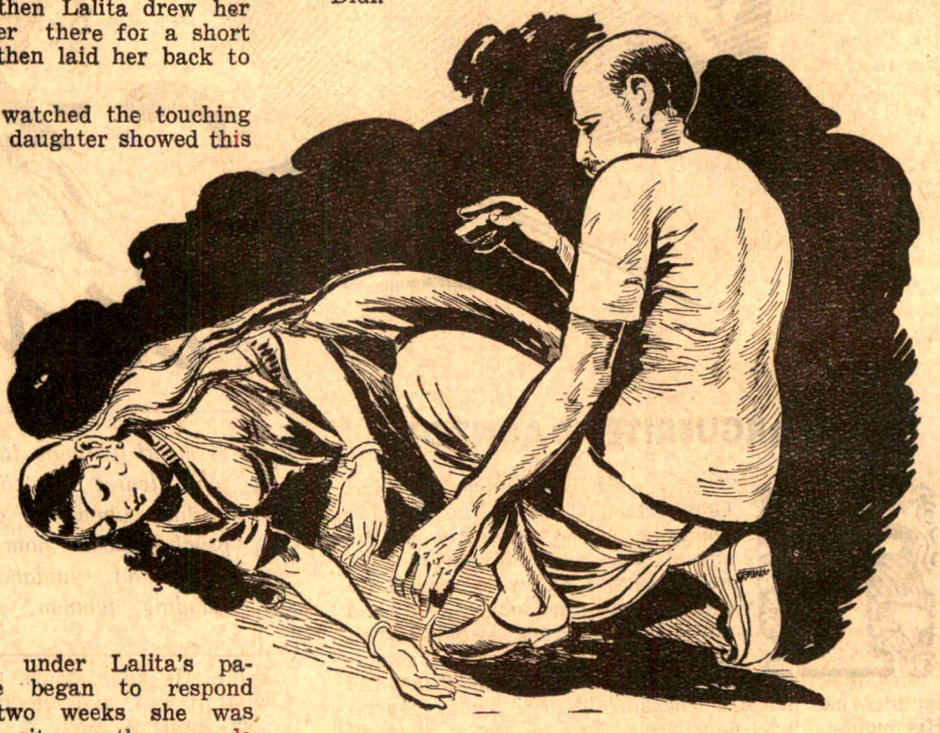
One evening, on just such a night as she had been found by Gopal Babu, she was sitting with Lalita. She watched her Didi's face as she con- centrated on some sewing that she was doing.

"Didi! ..... no one could ever be so kind as you have been, and although my heart has been so full of gratitude yet I have been unable to speak until this moment. You must have wondered often who I am and why I am here....." Reba blushed as she stammered out these words, and it was obvious that she still found it difficult to speak about herself, but Lalita bent towards her, and putting a hand on her arm, gently said — "Little Sister, I have noticed all the time you have been with me that you have some great sorrow. Do not worry if you cannot speak of this, but if it will help you to share it with a sister who has learnt to love you well then do so. Only do it when your heart tells you that you must. Until then my father and my mother accept you as their own child, sent by Providence for care and protection."

The rest of the time passed in silence, not an uneasy embarrassed silence, but the easy silence which can only exist where there are bonds of love.

A few more days passed, and then Lalita ap- proached Reba, saying, "Little Sister, would you like to come with me and help at the hospital? It is a very joyful work and it will bring you peace of mind to give help to others who need you as much as you also need a friend."

And Reba, who was feeling almost normal again, with very little to do during the day, welcomed the idea of going to the hospital with her beloved Didi.



He knelt down putting out his hand to feel what it was.

CHAPTER II

A NEW START

The following day the two girls set off together for the hospital. Lalita was happy because of Reba's readiness to take an active job, but Reba was now feeling very nervous because she had never worked with people before. However, her Didi had promised that she would only introduce her to the heart of hospital life very gradually, and she had great faith in her Didi.

It was a wonderful morning, and the hospital was not very far away from home. On arrival Reba found that the front door led into an entrance hall at one side of which was Lalita's private room and at the other side a cloakroom. Directly opposite the front entrance was a door leading into the hospital's one ward. At least six tiny babies were airing their lungs lustily, filling the whole place with their noise, while two nurses were taking in tea to the mothers.

"Come into my room, Little Sister," said Lalita. "Our hospital is not very big, but it is a real bless-

ing to the villages round here, and we are very proud of the facilities which we have. The ward, which you will see soon, has ten beds. At its far end we have a room at either side, one a labour room where the babies are born, and the other a medical room where we keep our supplies and which I use for several other purposes. We have a well of our own at the back of the hospital and quite a good sewage disposal system. I have two nurses to help me and of course we are always very busy. At the moment there are nine mothers and babies, with one empty bed, but usually we are quite full and cannot take all the cases which should have our attention. I have sometimes had to take a very urgent case into my own room".

Lalita took up the reports which were left on her desk for inspection every morning. Until now, apart from her nervousness Reba had felt only gladness that she would have something to fill her days, but as she listened to the hospital sounds around her she suddenly felt afraid. Back into her mind came flooding all the stories that the older girls of her village had told her, — stories of birth so grim that she recoiled from the memory. She had never been present at the birth of a baby, nor had she ever wanted to, and yet here she was in the very place where assisting at births was the task of every day. She would have turned and fled from that place but for the thought that Didi might be hurt at such a display of emotion.

While she was trying to calm these disturbing thoughts Lalita spoke again, and the sound of that gentle loving voice acted like a ray of sunshine to the clouded mind.

"Come along with me now into the ward and see my patients".

She took Reba's arm and led her to the door of the ward, whispering as she pushed it open, "We all feel rather scared at the first glimpse of hospital, but very soon we grow to love it when we realise the terrible need of sick people. Of course, in a maternity hospital there is not much real illness, and the joy on a mother's face when you first put her new baby into her arms is one of the loveliest things in the world."

As Lalita finished speaking Reba saw the two rows of neat beds. The mothers were feeding their babies, and the sight of them filled her with a new emotion that she had never felt before. Although she did not immediately recognise this new feeling for what it really was, Lalita, who was watching her closely and could read the expression in her eyes, knew that she was experiencing that strange longing which fills every woman's heart when she sees a newly born baby — the desire to possess her very own child.

"I shall put you in charge of the babies," said Lalita to Reba, in a sudden flash of inspiration, "you will enjoy attending to them."

This idea worked wonders, for Reba's eyes shone with delight, and her former fears melted away into the background. She was longing to pick up one of the small bundles of humanity and fondle it, and this was an undreamed-of opportunity.

They passed slowly down the ward, Lalita giving a cheerful word and a warm smile to each patient in turn. At the lower end of the ward were the two side rooms. The one on the right, which they entered first, was the labour room. It was brightly painted, with a lively sterilizer steaming in one corner, cupboards whose glass fronts displayed shining instruments, and two operating tables. Above each table was suspended a large magnificent and efficient-looking light which could be altered to different levels according to the need.

"These lights," explained Lalita, "were given to the hospital by my father who also provides the dynamo to keep them going. The sterilizer was given by the people of three villages who sacrificed a great deal to get it for us."

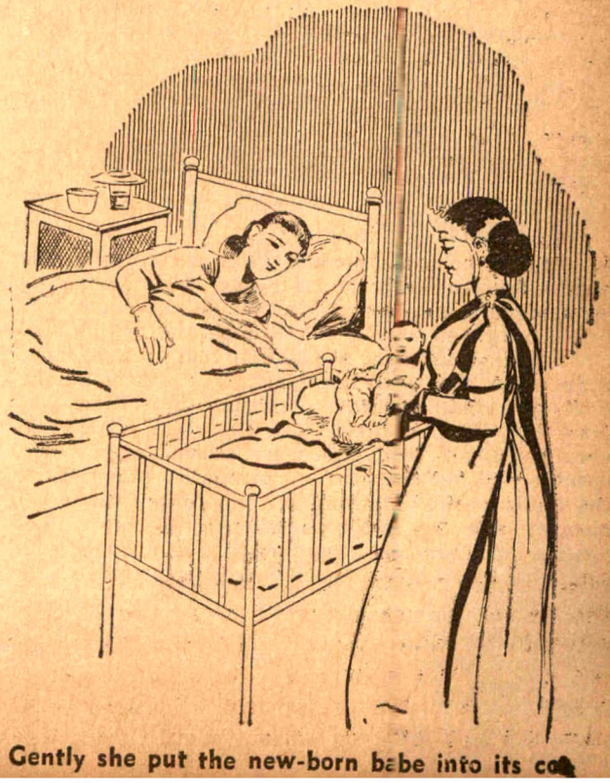
Reba felt a little afraid of this room and was relieved when Lalita took her across to the medical room. Here she had expected to see only cupboards and drawers for the hospital's medical supplies, and she was amazed to find that besides these things it contained a blackboard and several rows of forms. On the walls were many diagrams that Reba could not understand in this first glance round the room. Lalita, noticing the amazement and the questioning look, laughed, then observed, "You are wondering why we have so much seating accommodation in such a tiny hospital, and why there is a blackboard for two nurses and myself? These things you will find out very soon, but not until you know a little more about our hospital and our patients".

Once more in Lalita's room, Reba felt that she was going to be happy here in spite of her fears of childbirth.

In a short while she had changed into the white hospital uniform, and she was surprised to find that even putting on this dress, which symbolised a profession of service, made her feel somehow different.

She was a girl of great common sense and she realised how full Lalita's time must be, so, having already been told what her duties would be, she slipped shyly once more into the ward. All the babies were fed and were still with their mothers, so her first task would be, to put each baby into its cot which stood beside its mother's bed

Approaching the first bed, she carefully lifted the tiny baby from its mother's arms and held it very tenderly in her own. She was aware of the great look of pride and pleasure on the mother's face. Gently she put the baby into its cot and then made the mother comfortable, shaking her pillows and straigh-



Gently she put the new-born babe into its co

ening her bed clothes. This, her first small act of service, was to be the first small spark to start the consuming fire which would change her whole life. Eagerly she went throughout the ward until each mother and each baby had been attended to, then went back to Lalita's room excited and exhilarated. Her confidence had grown tremendously and she had resolved to learn whatever she could during this period of God-sent opportunity.

CHAPTER III

REFLECTIONS

As she sat there Reba felt, for the first time in weeks, that she could dare to open her mind and let all her suppressed thoughts try to sort themselves out into some sort of order. The feeling of being placed in her present position with Lalita's family by a friendly Providence instead of a malicious Fate was giving her courage to look at the heart-rending problems which had influenced her life.

Her thoughts went sadly and longingly back to the little village where she was born. In her early years she had been one of a very large family. There were too many small mouths to feed, so that none of them ever felt the joyous satisfaction of a good meal.

She thought of the tiny ones who had died in their first baby beauty which had promised to flower into lovely girlhood or boyhood.

She remembered her father lying ill—how ill no one knew at the time — refusing to take even milk because his wife needed it to nourish another tiny life within her.

Although it was a poor household it was bound together by love, and when her father died, leaving her mother a grief-stricken widow, a great shadow was cast over the family. Neighbours who had not enough for themselves gave each a little to the struggling mother until her confinement should be safely over.

But grief and trouble were more than her poor mother could bear. When her labour began, two months before its time, an old woman of the village who delighted in such emergencies was sent for. It seemed many hours before they were told that a sister had been born but was not strong enough to live, and that their mother was talking in such a way that no one could understand her. She did not live another whole day.

At this point Reba almost lost her control. The loss of her mother and father and the breaking up of the family were a tragedy that no one could ever feel if they had not lived through the experience themselves. The younger children had fretted for a while after kindly villagers had taken them among their own families, finally settling into their new lives, but Reba, a little older than the others and very sensitive, had become thinner and paler, spending all her time for many months sitting alone by the river-side, allowing no one to penetrate her sorrow. She also had been taken by a poor village family, and her foster mother had given her love and care which were amazing from a stranger.

During this unhappy period of her life she grew up with this other large family, sharing everything as though she were a daughter of the house, and yet she was as lonely as if she had no company.

As she sat each day watching the great river flowing peacefully down from the mountains on its way to the ocean she wondered why life could not flow like that from birth to death, why people should be born to suffer hunger, poverty, misery, and bereavement of those most dear to them.

But suddenly she put both hands over her face and sobbed as though her heart were breaking.

One day as she was wandering forlornly to her place by the river she was quite unaware that a boy was following her, as she sat down, carefully folding her feet within her sari, he too sat down upon the trunk of a fallen tree. He watched the girl attentively. She sat so still, with her eyes fixed on the water, but suddenly she put both hands over her face and sobbed as though her heart were breaking. His first instinct was to flee in bewilderment lest he should be found in an embarrassing situation, but instantly he was filled with a great pity for his young sister. Neither he, Amal, nor any other of his family, had seen Reba give way to any emotion while she was with them. Her pathetic little face had wrung pity from their hearts but nothing that they could do made her look any happier.

Amal, two years older than Reba, had tried very hard to befriend her and it was his sense of brotherly protection which had prompted him today to find out where she spent her lonely hours.

In a few seconds he was at her side, one arm round her shoulders, waiting for the torrent of grief to stop. Her whole body was shaking violently, but slowly the sobs subsided. She had never had an older brother, and Amal's natural act of comfort and affection filled her with an unexpected calm and relief.

When some time had passed he drew her to her

feet, put one arm through hers, and led her along the river path.

Slowly they walked along, just an ordinary boy and girl at the beginning of a new friendship, but drawn close together by human distress.

He took her home, and somehow home seemed different. She was more aware of the love in the faces of the rest of the family and aware also of the place that was hers in that house. She ran into the arms of her "mother" and clung to her as though she would never let her go.

From that day life was happier for all. There were no more lonely vigils by the river, for where she went so also did Amal go. Sometimes they roamed the woods together. They both loved Nature and revelled in such things as a beautiful sunset or in watching the filmy clouds sail gently over the hills.

Amal worked hard at his lessons for he was a studious and ambitious boy who wanted to take up a profession. He had a keen and lively mind which had already been discovered and appreciated by a relative in a distant village. This relative, an uncle, was not poor like Amal's parents for he had no family, and he had promised to take Amal when the time should come to educate him and fit him for a better life.

Amal found great delight in teaching Reba whom he found to be an apt pupil.

Time passed by until at last Amal was summoned to his uncle's home.

On the eve of his departure he and Reba went to their favourite beauty spot. From one side of the river was revealed a vast expanse of mountains rolling away into the distance, and nestling at the foot of the mountains was a Buddhist shrine, a symbol to them of peace and goodness.

Reba got up to look more closely at the shrine. She stood at the brink of the river, and as she did so Amal noticed for the first time, as a gentle breeze blew her sari around her, that she was no longer the slight figure of a girl but that she had developed into a beautiful and shapely young woman. A shaft of a new emotion shot through his whole being and he was filled with a strangely painful tenderness for her. The pain and tenderness became an intense longing to touch her. He rose to his feet and moved swiftly to her side, but he had to check the impulse to touch; he did not dare to give way to this new desire.

As he stood near her she turned to speak to him, but the look in his eyes, so strange and tense, produced a sympathetic throbbing in her heart. What had happened to him? — what was now happening to her?

Their eyes were held in an unwavering look. She wanted to go forward to him, to let him enclose her in his arms, to give, — give what? Within her this feeling of giving, of yielding something precious and sacred, was the strongest of all the surge of emotions that enveloped her being.

Until now they had been boy and girl. Now they were man and woman, and they were quite unprepared for the strange experience. They were standing upon the threshold of an entirely new world and were shaken to the foundations of their souls.

She looked away, and her eyes fell upon the distant shrine. His eyes followed hers, and to those two young people came a benevolent peace to calm the turbulence within them, as though thoughts from the Great Buddha were radiating kindly understanding and wise guidance.

They walked silently homewards hand in hand.

News from Amal did not come very often, but it was always good news. He was making excellent progress and had decided that he would become a teacher. His parents were a little disappointed at this decision because they wanted him to use his ability in a more remunerative way, but they realised that he did not make decisions lightly and therefore he must feel this to be his duty.

Three years went by and Reba and Amal did not meet, but one morning Amal's mother asked Reba to speak with her in private. She had had word from Amal who asked his mother's permission to marry Reba. After several days of serious consideration she had decided in favour of the marriage, and therefore merely wanted Reba's consent to press forward with the arrangements.

Reba was taken by surprise because the idea that this should happen had never occurred to her. She knew that it was her duty to agree, and she also knew that her heart held something much greater than duty for Amal.

Simply and shyly she gave her consent, telling Amal's mother that this event would bestow a great honour upon her in making her more truly a daughter to her and her husband.

Soon she had a letter from Amal herself saying how happy he was in looking forward to a future in which they would be together in the most intimate and most blessed of all relationships. He said also that the days were going too slowly for his impatient desire to be home again after such a long exile.

This letter she placed close to her heart which glowed again with the warmth of feeling that had begun three years ago at the river's edge. The paper itself seemed to be alive with the soft touch of the beloved person who had written on it.

As the weeks went by she became accustomed to the thought that soon she would be married, but whereas a girl of better means would only look forward with nervous anticipation of the event and realise that when the initiation was over she would soon settle to the new life, Reba began to fear it.

The fear was born of her tragic experiences, and of the knowledge that marriage may mean bringing more children into the world than a small salary could adequately provide for. She knew with certainty that she loved Amal, that she yearned for him with body and soul, but she was desparately afraid that her great anxiety would prevent her from giving herself to him unhesitatingly and joyfully. This inner struggle would surely be felt by him, he would feel unloved and hurt. The idea of hurting him was the worst fear of all.

Week after week she worried about these things until she became victim of a ghastly nightmare. When sleep came to her she dreamt of millions of unborn children stretching out their hands for life and health and all things beautiful. An angel-like figure beckoned them along a valley called Birth and showed them fair visions where the valley opened out into the world. When they emerged into that world the angel figure transformed into an evil-looking monster, large thunder clouds gathered in the sky, the sun was hidden behind a dense cloud of

locusts which descended upon the land stripping it of all goodness. The children turned, screaming, to go back along the valley, but rocks had fallen in the entrance. Some children already lay crushed and dead, the others lay down moaning, to await the tortures of hunger in a barren land.

Reba would awaken here, tossing from side to side in anguish, feeling feverish and exhausted, not daring to go to sleep again. There seemed to be no escape from this dream, it tormented her sleep and it filled her waking hours with dread. The peace of mind was completely gone and she did not know where to turn for comfort.

Each day brought Amal's return and her marriage nearer, and each day her mind became more clouded with fears. She had to feign an interest in the plans that his parents were making, but the pretence added greater strain to her already demented condition.

When the family were all settled down one night she could not sleep, in fact she dared not sleep, and she felt that she could bear things no longer. She could not now think clearly but was filled with wild and desperate thoughts. She must leave the house before preparations for the marriage went any further. Perhaps she could reach one of the large cities in a day or two and somehow manage to make her own living, for she had been well taught by Amal and had learnt much. Amal would be very hurt when he learnt that she had left home, but at least he would not know of her miseries and would perhaps quickly recover from the shock.

So thinking she crept quietly from the room, gathered up a little food to take with her, and slipped out of the house. Soon the village was left behind her. She could not remember very clearly what had happened between then and her awakening after Gopal Babu had found her, but she did feel that there had been fear, hunger, fatigue, loneliness. It is strange, she thought, how the human mind occasionally blots out the memory of some extreme suffering, and that was indeed what her own had done during those days of wandering.

From all these memories she suddenly realised that she was still sitting in Lalita's room, but she also realised that she was seeing everything in better perspective. Didi's care and company had restored her sanity and much of her power of control. Perhaps the rest of her life was destined to be spent here at the hospital, although no one could yet forecast that.

One thing that she could not yet do was to think of Amal. He would be at home now, wondering.... .....but here she had to check herself for she was beginning to tremble, a lump had grown suddenly in her throat, and her eyes had filled with tears,

She stood up, grasped the edge of the table hard, and waited for a few seconds until she had collected herself together again. Then slowly and with determination, she walked to the door of the ward, where she knew there was plenty to occupy her mind, opened it and went in. The first battle had been won.

CHAPTER IV

REVELATION

The whole of that first day was a busy one. Reba found that when her first shyness had disappeared and she could go among the patients freely, attending to their many needs, she was filled with a strange contentment that she had never felt before. The patients did not know that she had no experience of nursing, that she had never even been in a hospital until today, and they accepted her as a trusted friend and helper. It was this acceptance, this trust, which made her feel the joy and the obligations of her position. When she picked up a small baby to wash it and change it the mother regarded her as a sort of guardian angel, with no doubts about her doing the job properly.

Lalita moved forward to welcome them.

There was no time to think of her own problems again here where service to other people was the whole aim of life.

In the late afternoon she was sharing a few well-earned minutes of rest and a pot of tea with Lalita and the other two nurses, Anu and Mira, when they heard the approaching sound of wheels. A bullock cart was coming in the direction of the hospital. Of course it might just be passing that way, but Lalita was ever ready for an emergency and she moved to the window to see if the cart would turn onto the hospital path. It did.

"A new patient is arriving," she observed to her companions, "Anu will work with me and Mira will see that everything is ready in the ward."

The two girls left the room, and Lalita, turning to Reba, smiled and said, "I shall have much to do now and may not be able to accompany you home, so I would like you to go now while it is still light. for you have not yet done the journey alone. Mira will do your duties in the ward."

She looked happy as she spoke, and as they walked together to the door Reba thought that she herself could feel a little of this happiness. It must be wonderful to feel that one could face this very human task with knowledge and confidence.

On reaching the door they found that the cart had already stopped outside. An elderly woman was helping a young girl down from the cart, and Lalita moved forward to welcome them with such an ease

that Reba would love to have. The girl looked almost too young to be a mother as she moved forward slowly and clumsily, supporting herself on the arms of her companion and Lalita.

Reba stepped to one side with her sweet shy smile whilst these three entered the hospital. Lalita had suggested that she should go home now, but somehow she did not wish to leave the place which had given her a new strength, new hope and new longings, offering her a completely new life.

The arrival of a new patient stirred in her again those fears of childbirth, those memories of hungry children who had been better if they had never been born, but there also lurked a healthy desire to know what really happened when a baby was born. And ruling all these thoughts was a greater one—that if she was to learn what would help her, and perhaps others through her, she must have courage, she must steel herself to any situation. This was the time to face it all, while the excitement and the joy of this strange day were still at work in her mind.

Slipping back into Lalita's room she put on once more her uniform. Lalita came in at this point to write out a record card for the new patient. She was surprised to see Reba, but before she could speak Reba said very earnestly, "Didi, I would like to help if you would let me". These simple words touched Lalita's heart, for she guessed that they had needed great courage. "Of course, Little Sister," she replied, "I shall be pleased to have your help. Come with me to the labour room. The baby will be born soon, and Anu already has the mother prepared for the birth. Anu is a gentle and efficient nurse who needs no orders but knows instinctively what to do."

Quickly Lalita wrote down the necessary details and then beckoned Reba to accompany her to the labour room. At the door of this room Reba's knees began to feel weak and shaky, her steps faltered, and for a few seconds she actually felt sick, but she overcame it and managed to force herself into the room, appearing as calm as she could.

The young mother was lying on one of the tables, covered with a light blanket, and Anu setting out various things on a trolley.

Lalita took Reba over to the patient and said, "This is Lily's first baby and she will soon have it safely in her arms, she knew early this morning that it would be born today but her village is three miles away and her mother-in-law had difficulty in getting the cart to bring her here".

Reba noticed that every few minutes Lily's features became drawn together and she clenched her small hands tightly as though in pain, but each time this happened Lalita placed a hand on her forhead and spoke to her in a gentle soothing tone, telling her to relax completely and imagine that she was going to sleep at any moment. This had a miraculous effect on the girl, and gradually the tension on her face became less and less, the only sign that the strong contractions were still taking place was a rather intense look in her eyes.

Reba still felt shaky, but she was calmer now. She had followed Lalita's directions and scrubbed her hands and arms with disinfectant, for, as Lalita had told her, absolute cleanliness was the most important thing for anyone helping at the birth of a baby. Nothing should come near the mother which had not been boiled or disinfected.

Soon Lily said that the contractions had changed, that they were now much stronger, and each time they happened she seemed rather frightened.

"You can now help the baby to be born quickly," said Lalita to Lily. "As soon as you feel the pain starting take a very deep breath, hold it, and then push down hard."

The moment that Reba dreaded most of all had come. Lalita removed the blanket that covered Lily. Reba felt so embarrassed both for herself and Lily that she wanted to turn away, but that quality of determination which she had now gained helped her to remain unflinchingly where she was.

Anu came immediately to the table and washed the mother with fresh swabs of cotton wool, soaked in disinfectant, throwing each one away as it was used.

Reba was really afraid now, but in a few minutes she was so interested that every vestige of fear was chased away. A tiny fragment of black head had appeared, and she was quite lost in the mystery of what would happen next.

Bit by bit more of the head appeared, and then Lalita's voice brought her back to earth again.

"It is at this stage that a careful nurse can help the head to be born without tearing the muscles round the opening of the birth passage."

As she said this she placed her hand gently but firmly over the muscles behind the appearing head, holding it there steadily each time the head was born a little further. The most wonderful thing was about to happen.

Lalita had told Lily that with the next pain she must not push down at all. Instead of taking a deep breath she must take very small quick breaths so that there would not be any pushing. Patiently, and with the utmost care, Lalita eased the stretched muscles until the baby's head was completely born.

Again Anu was ready. Now she wiped each of the baby's eyes with a piece of cotton wool soaked in boracic lotion.

After the birth of the head the rest of the body seemed to be born very quickly, Lalita's deft fingers easing first one shoulder and then the other.

The baby was placed on a clean towel. By this time fear fled so far away that Reba was able to observe every detail. The cord which was fastened to the baby's navel was still fastened within the mother at this other end and it was beating like a pulse.

The baby's first cry pierced the silent room, and it cried healthily and lustily as its lungs drew in the unaccustomed air.

Gradually the pulsing cord became still. Anu tied two pieces of something that looked like fine string tightly round the cord and then with a pair of sharp scissors cut it right through between these two pieces.

Lalita asked Reba to wrap the baby in its towel and put it into the cot which had been made ready for it. She and Anu still had to deliver the afterbirth.

Reba wrapped the towel round the tiny shining slippery baby, put it into the cot to rest for a while, and stood watching this small creature whose birth had been a thrilling experience. Having witnessed this greatest of all Nature's achievements, and having seen what birth was really like when in careful hands she felt relieved and elated. It was nothing to be afraid of and she realised that one of the greatest things that could be done for women would be to

teach them before marriage all about the birth of a baby.

While she stood thinking about these things time slipped by unnoticed and she suddenly realised that Lalita, Anu, and Mira had moved Lily into her bed in the ward.

Then Anu came to give the baby its first bath. Reba automatically followed to watch this. She wanted to see every step so that she could manage it herself if she had to.

Baby clothes and two clean towels were arranged neatly on a small clothes-horse. The bath was ready and a low stool stood near it.

Reba realised as she watched Anu skilfully washing the baby that here was something that she also would like to do, and she was quite thrilled when Anu handed the newly washed baby to her and asked her to take it to Lily.

Because Reba had been present at its birth she felt a special bond of affection for the baby, and when she put it into Lily's arms the miracle and the joy of motherhood again overwhelmed her. With her whole heart she prayed that she may be allowed to stay for some time as part of the life and work of the hospital.

In the evening when the two girls walked home together Reba could hardly believe that only twelve hours ago she had first walked that road. Since then she seemed to have been in the hospital for aeons of time, as though these few hours had linked up her present existence with a knowledge and experience far back in the mists of memory which was struggling to reach consciousness and tell her that now she had found part of her real self which had been hidden by material circumstances.

She slept well, and the next morning she awoke with a joyful anticipation of the day ahead.

CHAPTER V

CONFIDENCES

Lalita knew as the days went by that Reba was very happy in the hospital. Patients came and also went away, and always Reba took her place in the labour room, patiently watching Lalita and Anu delivering babies, learning all she could, and awaiting the time when she would dare to do it herself. The mothers loved this lovely girl who tended their babies so well.

One morning on arrival at the hospital Lalita and Reba found that there were not only two new patients but a very distressed woman who begged Lalita to go back with her to her village, Sunapur, about a mile from the hospital, where her daughter had been in labour all through the night and was unfit to travel to the hospital.

Although Lalita appeared calm Reba knew that those three cases together must be a terrible problem. The poor woman's account of her daughter's labour showed that help was very necessary there, but both Lalita and Anu would be needed at the hospital. Lalita said that perhaps with Reba's help she could manage at the hospital and let Anu go to Sunapur.

Almost without thinking Reba broke in upon Lalita's words—"Didi,—I will go. These village people are like my own people, I would love to help them and I know that I can do it." And in her mind was

Soon they arrived at a poor hut where a young girl was lying upon a mattress.

an exultant feeling that she could help a young mother who may have been left to the mercy of any ignorant woman if she had not lived so near to the hospital. She also thought of her own mother.....

Lalita was astonished, but she knew Reba very well and was certain that she would not have spoken unless she was sure of herself.

"Go then, Little Sister, and may good fortune attend your work. I shall follow as soon as I can if you do not return."

Very quickly a basket was packed and Reba was ready to go. Lalita pressed her hand as she was passing through the main door and said, "You have a great heart." These words seemed to Reba like fresh rainfall on the parched earth.

She walked rapidly along with her companion and the excitement of the occasion made the mile seem quite short.

Soon they arrived at a poor hut where a young girl lay upon a mattress. She was moaning and clasping the hands of her sister, who sat by her side on the floor. Her eyes were wide with terror and they rested on Reba, in her white sari, dumbly appealing for help and relief.

Reba's observant glance had noticed that there was plenty of boiling water ready and that the hut although very poor was very clean.

She moved over to the bed and had soon examined her patient. There was no sign of the baby and she saw that every muscle in the poor girl's body was tense. Lalita had explained to her that this muscular tenseness, which occurred in a woman who was frightened because she did not know what was happening to her, could delay the birth of the baby for

many hours and cause almost unbearable pain. So the first thing to do would be to relax all the muscles.

Quietly she gave instructions to the mother and sister showing them the things in her basket, and turned once more to her patient, Aruna, speaking slowly and gently to her. "My little friend, your baby can be here very soon if you will trust me and help me. You are frightened because you feel something that you could never imagine before, because part of your body which has never worked is now very active. There is no need to fear these things. Your baby has been safely kept within a wall of muscle and this muscle is now pushing it to its new life outside. If you can imagine that you are going to sleep, to a deep peaceful sleep, every muscle in your body will go soft and relaxed, and this very important one can do its work quickly and easily."

Her soft low voice went on, telling Aruna to "sleep, ...sleep....sleep peacefully. All pain will go way, and your baby will be born as naturally as your heart is beating. Sleep on, knowing that you will soon hear your own baby's first cry, telling you that it is now here for you to love and care for...."

And as she spoke Reba saw that miracle take place which she had now so often seen under Lalita's patient care. Aruna's young body gradually relaxed, the frightened gasps quietened, the spasms of pain on her face ceased, as she gazed trustingly into Reba's confident and friendly eyes.

Soon now Reba would be able to deliver the baby. Mother and sister followed her instructions with anxious care, and at last the moment came when they saw a new boy born into their family.

Their thanks and admiration were nearly too much for Reba and she knew that if she were alone she would have cried after the strain of this first big responsibility, but fortunately there was much to keep her busy.

On the way back to the hospital she felt proud of her achievement and excited at the knowledge that she really could help other people in a way that was so urgent. This realisation made her heart beat more quickly. She wanted so much to know whether her life was sorting itself out into some happy order.

She was greeted with congratulations by everyone, but it was Lalita's praise which meant more than anything else in the world, for in a short time Lalita seemed to have become her guiding star.

They finished work early that evening, and after dinner, sitting in the light of the rising moon, under sweet scented trees, Reba suddenly felt that she must tell Lalita all about herself. She began hesitantly, but soon the words came pouring out to her sympathetic listener. It was a relief to talk to someone who loved her and would understand the workings of her mind.

Lalita put an arm round her in the same compassionate way that she had done on that first night which now seemed so far away.

"My poor Little Sister, my heart aches for you and I would like to help you. I feel so sad that all these things should have happened to you, but at least I can be happy that Providence should overtake you at my door.

"Little Sister, you have told me much from your secret heart, and I shall tell you things from mine.

"For three years now I have cherished an ambition to work for the women of our beloved India. Gradually our statesmen and all our great thinkers are raising our poor country from the dust. There is a great awakening in the East. After many years of slavery and tribulation we are free to design our own destiny. But there is still too much for these leaders to do if they are to put us quickly onto a road where we are economically safe and where all our people shall have enough to eat and to live decently. As the standard of living increases people will live more happily and more freely, and there will be more children, until after some time there will again be too many people to look after.

"But in my studies I have learnt that there are ways in which men and women can live full and happy married lives together and yet only have as many children as they can afford to bring up well. Millions of our people do not know of these things and even if they did they may be suspicious of them. Social workers are going out into the villages to try to teach the people there such things. Even this is not enough.

"I have a plan, a dream, whereby with the help of our Government or some charitable donor I could reach out to all the corners of India in a fairly short time.

"You have noticed my charts and diagrams at the hospital but you do not yet know what they are for.

"Every month I gather all the young girls from some village or other and there in the medical room I tell them all about themselves, about the special parts inside that are made for the growth and birth of babies, about what happens when man and wife love one another, how babies are born, how to help other people's babies to be born in an emergency, and also how to prevent babies from being conceived if they are not wanted.

"Many of these girls come back to the hospital to have their babies — and what a difference all this knowledge makes at such a time! Oh!—I wish that every woman could have the happiness and confidence that such knowledge gives! What a difference it would also make to her husband and to all her family!

"If only I could have a large house of my own, in some city instead of a village, where I could give public lectures regularly but where also every State could send women to take a residential training so that they could go back to work among their own people, then I would really be able to reach those far corners of India! Perhaps it will happen some day, but I hope that it will materialise while I am still young and active. This is a task which should be done for women by women and I am certain that there are hundreds of them in India who would take up this task with them if I could only have the chance to train them."

So saying, Lalita sank into a deep reverie, and Reba was lost in the thoughts that had just been disclosed to her. Here she was, not only at the doorway to knowledge that would help her alone, but right on the threshold of something which, if developed, could help the whole of India, perhaps even the whole of Asia.

Lalita's words reminded her of many things that Amal had told her, - of how he believed that the East was waking from an age-long sleep, was throbbing with a new kind of life that would grow and revolutionise the whole world. He had told her how their own country, as well as their other peace-loving neighbours, had been fully exploited by military strength, but that their very sufferings had brought out a tremendous fighting power. This was a different kind of fighting, though, it was a fight not to subjugate peoples less fortunate than themselves but a fight for right against wrong, a fight to bring weaker peoples level with their stronger brethren, to use aright for health and happiness all that this world can offer. Many times he had spoken of spiritual things, saying that this great awakening power would be stronger than the new atomic science because the Eastern peoples held an even balance between the spiritual and the material worlds.

Amal was an idealist and a dreamer, but his

judgement was always sound. He had an unshakable faith in his own people and the success of their efforts to revitalise and equip the whole country. He knew their ability for hard work and for seeing life in correct perspective instead of in the light of selfish gain.

Amal wanted to do something worthy in this life, something to better other lives in India, and something towards earning the respect for India which was gradually dawning on the rest of the world.

If people like their own great leaders, and others like Lalita and Amal, had all the opportunities which they desired, then a nation of happy well-balanced people would soon take an even quicker lead in world affairs and bring the much needed light to an ever-darkening world.

Reba knew that Amal was right in believing that only a nation which was built on such foundations would make its way to the head of the human march towards happiness and fulfilment.

The two girls sat long into the evening rapt in thought, the one with a certainty of her destiny to lift the burdens of women, the other dedicating herself to work for all the things that she had learnt from the two people whom she loved so dearly.

In a few weeks Reba had become mature in every way and again she was overcome by the thought — was it only chance that had forced her along this road ? — or was there something else, some *'karma'* that her soul had collected in its succession of lives and must now fulfil ?

The next few weeks proved Reba's ability as a nurse and her aptitude as a pupil. She took a fully active part in the labour ward and was a real credit to her teacher. She no longer showed hesitation or nervousness and no task was too difficult for her. Lalita had taught her all that she needed to know about the most fascinating aspect of human existing — creation.

Not only was she glad to know these things for herself but she realised how necessary it was for all men and women to know equally as much as she did.

The more she thought of Lalita's ambition the more sure was she that it could be done with support from the right people. It would be a very happy country where the sizes of families were perfectly controlled and where both men and women understood one another perfectly.

On several occasions she coped with a birth herself, and always she had the same triumphant feeling that she had when she safely delivered Aruna's baby.

One day Lalita called her, saying, "Little Sister, I must leave the hospital for a few days, but I know that while I am gone it will be in capable hands. You, Anu, and Mira are a wonderful team. The work will be heavier for you all because even one pair of hands makes a great difference, but it will not be for long."

Reba could hardly imagine the hospital without Lalita, even for a few days, for she was the backbone of its whole system, but she knew that such things must inevitably happen. Not even Lalita could work without an occasional break.

When Lalita had gone Reba missed her companionship terribly. During the long hours of work in the hospital there was too much to do to be very troubled, but at night the world seemed very empty.

However, the kindness of Lalita's mother and father did much to alleviate her sadness and the days went very quickly.

The day of Lalita's homecoming was an unusually long one. Four babies were born at the hospital, and it was a very tired Reba who much later than usual made her way home. In spite of her tiredness her feet seemed winged for she knew that Lalita would be there. The nearer she got to

She ran into his outstretched arms & stayed enfolded there.

the house the quicker she walked, and finally she broke into a run until she reached the gate.

She slipped open the catch and hurried along the path. In spite of her haste she slackened her pace a little to admire the beauty of the garden.

As she passed by a group of tamarisk bushes she was suddenly startled to a standstill, and her heart gave a great leap, for in the silent night she imagined that she heard her name spoken softly but clearly by a voice that she had not heard for a long time. Her imagination was playing tricks, she must be more tired than she thought.

Then again it came—"Reba . . ."

"Oh, Amal ! Is it a voice from the dead?", cried Reba, and as she spoke she saw a figure just emerging from behind the tamarisk bushes. It seemed to be really Amal !

Reba dared not move lest the beloved phantom should vanish as a wisp of mist. She stood staring at it as it approached and she suddenly knew that this was no phantom but Amal himself.

Reba's thoughts raced on and in an instant she knew that Lalita had brought him, and that therefore he would know everything.

Never before had they embraced one another, but this reunion was so wonderful that she ran into his outstretched arms and stayed enfolded there for she knew not how long. She felt safe there and hap-

INDIA of their DREAMS

By Dr. KRISHNA LAL SHRIDHARANI

EACH one of us has his dreams. Each one of us has his vision of what he should be, of what he should become. Little men have little dreams and great men have great dreams. Little men dream, perhaps, about themselves and their friends and their relatives. Great men dream of their country and of the world.

What is India today is to a great extent the result of the dreams that the great sons of Mother India dreamt about their country's future. It is in the visions of the makers of modern India that we find the seeds of India after independence. This is the day and the hour to remember the dreams of those who gave their all to make us what we are today. These dreams are the yardsticks by which we can measure our progress. We can ask ourselves: Have we fulfilled the dreams of our great leaders and teachers of the past? Is the present-day India the reflection of the images that the makers of modern India had conceived of their motherland?

In the threshold of the modern period in India's history stands the towering figure of Raja Ram Mohan Roy. He is described by many people in many ways. Some have called him the Father of the Indian Renaissance; some have called him the Father of Modern India; others have described him as the Father of the Free Press in India.

IMPACT OF EAST AND WEST

What was the condition of India during Raja Ram Mohan Roy's life, between 1772 and 1833? What was the state of India's hoary civilization? The Westerners had not only invaded India but established themselves as the strong rulers of this vast continent. Children of the Industrial Revolution that they were, they brought with them Western science and Western ideas of administration. The culture of India was reeling under their strong impact. Many thinking Indians were being drawn to the conclusion that there was something wrong with their own culture, and unless and until India imitated the ways of the West she had no future.

It was at this psychological moment that Raja Ram Mohan Roy rose to restore the self-confidence of his countrymen. While emphasising the necessity of learning Western science and arts, he made his countrymen aware of their own unsurpassed achievements of the past. He saw India rising like a giant after a long slumber. Here is his confident invocation:

> *"Methinks I see in my mind a noble and puissant nation rousing itself like a strong man after sleep, and shaking its invincible locks. Methinks I see it as an eagle muing its mighty youth and kindling its undazzled eyes at the full midday beam, purging and unscaling its long-abused sight at the fountain itself of heavenly radiance."*

The world has wondered about India's ability to graduate so rapidly from the school of rabid

nationalism to the University of Internationalism. f India's struggle for freedom was never conducted on too narrow a line, that too was largely due to he fountainhead of our inspiration, Raja Ram Mohan Roy. It is the birthmark that he gave to our nationalism that has enabled us to become international ists on the morrow of Independence. It was ne who pleaded for free exchange of ideas and nformation between nations. Free India's enthusiastic participation in the United Nations was, so to say, forecast by him. He said :

" It is now generally admitted that not only religion, but unbiassed common-sense, as well as the accurate deductions of scientific research, lead to the conclusion that all mankind is one great family, of which the numerous nations and tribes existing are only various branches. Hence enlightened men in all countries must feel a wish to encourage and facilitate human intercourse in every manner, by removing as far as possible all impediments to it, in order to promote the reciprocal advantage and enjoyment of the whole human race."

RAJA'S REFORMS AND IDEAS

The proud inheritor of India's hoary heritage hat he was, he was none the less a stout-hearted reformer. His name has been associated with the abolition of *Sati*. He was the first great Indian to ight against the encroachments on freedom of the Press made by the British rulers. If we have today n India the freest Press in Asia, it is largely due o the traditions established by Raja Ram Mohan Roy. It was he who said :

" That 'the more a people are kept in darkness, their rulers will derive the greater advantage from them'....is but a short-sighted policy. Whereas a people naturally disposed to peace and ease, when placed under a good government from which they experience just and liberal treatment, must become more attached to it."

INDIA PUT ON WORLD MAP

From the Father of Indian Recovery we pass on to the Father of Indian Resurgence. From the nan who mapped Indian Nationalism we go to the nan who put India on the world map. Swami Vivekananda not only inspired his countrymen at home, but he took India's message across the seas. If Columbus discovered America for Europe, it was Swami Vivekananda who discovered America for India. Conversely, the New World discovered India through Swami Vivekananda. What became Free India's ambassadorial and diplomatic traditions were initiated by Swami Vivekananda. He wanted to break India's psychological shell of isolation, so that her sons and daughters can reach out to the wide world. If Raja Ram Mohan Roy spoke as an awakener, Swami Vivekananda spoke as a spiritual conqueror. Here is his clarion call issued from Madras around 1897 :

" There have been great conquering races in the world. We also have been great conquerors. The story of our conquest has been described by that noble Emperor of India, Asoka, as the conquest of religion and of spirituality. Once more the world must be conquered by India. This is the dream of my life, and I wish that each one of you, who hear me to-day will have the same dream in your minds, and stop not till you have realised the dream. They will tell you every day that we had better look to our own homes first, and then go to work outside. But I will tell you in plain language that you work best when you work for others. The best work that you ever did for yourselves was when you worked for others, trying to disseminate your ideas in foreign languages, beyond the seas. One-fourth of the effect that has been produced in this country by my going to England and America would not have been brought about had I confined my ideas only to India. This is the great ideal before us, and everyone must be ready for,—the conquest of the whole world by India,—nothing less than that, and we must all get ready for it, strain every nerve for it. Let foreigners come and flood the land with their armies, never mind. Up, India, and conquer the world with your spirituality! Aye, as has been declared on this soil first, love must conquer hatred, hatred cannot conquer itself. Materialism and all its miseries can never be conquered by materialism. Armies when they attempt to conquer armies only multiply and make brutes of humanity. Spirituality must conquer the West. Slowly they are finding out that what they want is spirituality to preserve them as nations. They are waiting for it, they are eager for it. Where is the supply to come from? Where are the men ready to go out to every country in the world with the messages of the great sages of India? Where are the men who are ready to sacrifice everything so that this message shall reach every corner of the world ?"

BENGAL THE VANGUARD

Bengal was the vanguard of the Indian renaissance. Bengal has given a glittering array of poets and patriots who have brightened the pages of the history of modern India. The rebirth of India was many sided, and so no well-defined frontiers were observed between different aspects of life. The exuberance of the hearts of great politicians spilt over into poetry, and the intuition and the visions of great poets cascaded themselves into politics. The most inspired and eloquent image of free India has come from Poet Rabindranath Tagore. What should be the mind of Free India ? Here are the immortal words of Poet Rabindranath Tagore :

" Where the mind is without fear and the head is held high;
Where knowledge is free;
Where the world has not been broken up into fragments by narrow domestic walls;
Where words come out from the depth of truth;
Where tireless striving stretches its arms towards perfection;
Where the clear stream of reason has not lost its way into the dreary desert sand of dead habit;
Where the mind is led forward by thee into ever-widening thought and action;
Into that heaven of freedom, my Father, let my country awake."

Tagore was not content with merely describing the mind of a Free India. He was interested in describing the frontiers of a Free India's mind. His dream of a Free India's mind was that it should have no frontiers. If Pandit Jawaharlal Nehru exhorts India today to leave "a puppet's world" and to operate on the vast canvass of the world, if he preaches to the world today freedom from fear, he acts and speaks like a spiritual heir of Poet Rabindranath Tagore, who sang :

"Freedom from fear is the freedom I claim for you, my Motherland!—fear, the phantom demon, shaped by your own distorted dreams;
Freedom from the burden of ages, bending your head, breaking your back, blinding your eyes to the beckoning call of the future;
Freedom from shackles of slumber wherewith you fasten yourself to night's stillness, mistrusting the star that speaks of truth's adventurous path;
Freedom from the anarchy of a destiny, whose sails are weakly yielded to blind uncertain winds, and the helm to a hand ever rigid and cold as Death;
Freedom from the insult of dwelling in a puppet's world, where movements are started through brainless wires, repeated through mindless habits; where figures wait with patient obedience for a master of show to be stirred into a moment's mimicry of life."

FLOWER-OFFERING TO MOTHER

Dwijendra Lal Roy, the eminent dramatist of Bengal, drew upon the exploits of Rajasthani heroes and heroines to saturate the country with pure nationalism. Dwijendra Lal's picture of India is graphic, bold and is as spiritual as that of the picture drawn by the Poet of Bande Mataram. As an example of pure adulation of the past, natural to nationalist poets all over the world, here is a flower-offering from Dwijendra Lal Roy to Mother India :

My India, my India, where men first saw the light
Those art the birth place of glory, Mother,
Where Asia comes on pilgrimage.
Mother of the Earth, who didst teach the Upanishads and philosophy,
Knowledge those gavest and art, love of Labour and Religion's lore.

My India, my India, who dares pity thee?
From thee was born the call of action.
Thou didst cherish Faith and Thought.
Art not there the India where sages sang
The timeless Vedic hymns profound
Are not we their kin?

FATHER OF THE NATION

And now we come to the greatest son of Mother India since the Buddha. Mahatma Gandhi is universally hailed as the Father of the Nation. Other great men have been hailed as the Fathers of particular aspects of the Indian resurgence. Gandhiji, on the other hand, is the National Father. The man who moulded the free Indian nation much more powerfully than anybody else, the man who died so that India may live, was an artist of discernment in the line of Rama. He was a practical idealist. The most uncompromising man with respect to morality and principles, he was an artist of life who believed in a step by step evolution. He was second to none in his internationalism; in fact he was a moment in eternal verities. And yet he knew that there are several stepping-stones to internationalism, and nationalism is one such stepping-stones to internationalism. He had an instinct for Asia's moods and temper. He knew that the type of nationalism that he was preaching could never be malignant and isolationist. Here are his inspired utterances :

"You want co-operation between nations for the salvaging of civilization. I want it too, but co-operation pre-supposes free nations worthy of co-operation. If I am to help in creating or restoring peace and goodwill and resist disturbances thereof, I must have the ability to do so and I cannot do so unless my country has come to its own. At the present moment, the very movement for freedom in India is India's contribution to peace. For so long as India is a subject nation, not only is she a danger to peace, but also England which exploits India. Other nations may tolerate to-day England's imperialist policy and her exploitation of other nations, but they certainly do not appreciate it; and they would gladly help in the prevention of England becoming a greater and greater menace every day. Of course you will say that India free can become a menace herself. But let us

assume that she will behave herself with her doctrine of non-violence, if she achieves her freedom through it and for all her bitter experiences of being a victim of exploitation."

COMMON MAN'S PLACE

One of the characteristics of the Indian civilization is that it has thrown up exceptionally great men, unsurpassed in their lustre, from time to time, although the quality of the average man it has bred has been of a low order. Indian civilization has been illumined by a string of towering personalities, its grass-roots have remained weak. If this is a characteristic of India's ancient civilization, the very opposite is the characteristic of the culture of modern India. A quest for the common man started with Raja Ram Mohan Roy, with the beginning of the Indian Renaissance. On the onward march of modern India, the cult of personality is gradually being submerged by the search for high averages. It is of 'Daridra-Narayan' that Gandhiji spoke all the time. It is for the little man, for the Harijan that he spent his life. To him India was villages; to him India meant the poor man; to him India meant the Harijan. Here is Gandhiji's dream of India:

"The Swaraj of my dream is the poor man's Swaraj. The necessaries of life should be enjoyed by you in common with those enjoyed by the princes and the monied men. But that does not mean that you should have palaces like theirs. They are not necessary for happiness. You or I would be lost in them. But, you ought to get all the ordinary amenities of life that a rich man enjoys. I have not the slightest doubt that Swaraj is not "Purna" Swaraj until these amenities are guaranteed to you under it."

SWARAJYA IDEA CONCEIVED

Gandhiji and Lokmanya Tilak were complementary. If Gandhiji awakened the masses of India his task was made easier by Lokmanya Tilak, who awakened the middle-classes of India. The redoubtable scholar was also a great strategist. To him freedom for India meant the freedom to industrialise India and to strengthen India. He said that "our life and our Dharma are in vain in the absence of Swarajya." He was the coiner of the word 'Swarajya' or self-rule. He was the man who knew the value of power, because power enables people to do good things. He said:

"If we do not get Swarajya, there will be no industrial progress, if we do not get Swarajya there will be no possibility of having any kind of education useful to the nation, either primary or higher. If we do get Swarajya it is not merely to advance female education or to secure industrial reform or social reform. All these are parts of Swarajya. Power is wanted first."

PAST TO SERVE PRESENT

The thread of reviving ancient Indian culture runs through the entire national movement. Yet no great maker of Modern India has ever preached the retention of the dead with the living, of the dated with that which is of current value. Great spiritual teachers like Shri Aurobindo Ghosh have advocated the revaluation of ancient values in the terms of modern times. The past has no meaning unless it can serve the present and illumine the future. Nationalist movements can become reactionary, can take the form of revivalism, unless there are teachers who know the past but who value the future. Here is the message of Shri Aurobindo:

"Aggressive defence implies a new creation from this inner and commanding vision and while it demands a bringing of what we have to a more expressive force of form, it must allow also an effective assimilation of whatever is useful to our new life and can be made harmonious with our spirit. Battle, shock and struggle themselves are no vain destruction; they are a violent cover for Time's great interchanges. Even the most successful victor receives much from the vanquished and if sometimes he appropriates it, as often it takes him prisoner. The Western attack is not confined to a breaking down of the forms of Eastern culture; there is at the same time a large, subtle and silent appropriation of much that is valuable in the East for the enrichment of Occidental culture. Therefore to bring forward the glories of our past and scatter on Europe and America as much of its treasures as they will receive, will not save us. That liberality will enrich and strengthen our cultural assailants, but for us it will only serve to give a self-confidence which will be useless and even misleading if it is not made a force of will for a greater creation. What we have to do is to front the attack with new and more powerful formations which will not only throw it back, but even, where that is possible and helpful to the race, carry the war into the assailant's country. At the same time we must take by a strong creative assimilation whatever answers to our own needs and responds to the Indian spirit. Imitation, a rough and haphazard borrowing of the assailant's engines and methods may be temporarily useful, but by itself it is only another way of submitting to conquest. A stark appropriation is not sufficient; successful assimilation to the Indian spirit is the needed movement. A mastering and helpful assimilation of new stuff into an eternal body has always been in the past a peculiar power of the genius of India."

SOUTH'S MESSAGE

The kite-shaped India is one, from Kashmir to Cape Comorin, from Assam to Saurashtra. The con-

VARDDHAMANA MAHAVIRA AND HIS RELIGION

By Dr. B. C. LAW,

M.A., LL.B., Ph.D., D.Litt., Hony. F.R.A.S., F.R.A.S.B., etc.

AMONG the twenty-four *Tirthankaras* (1) Mahavira was the last. He was called *Varddhamana* or 'prosperous one', because with his birth the wealth, fame and merit of the family increased. He was the son of Kshatriya Siddhartha otherwise named as Sreyamsa and Yasamsa and Kshatriyani Trisala also known as Videhadatta and Priyakarini of the Vasistha gotra. His mother was a sister to Cetaka of Videha. His parents, who belonged to the Jnatri Kshatriyas, were lay worshipper's of Parsva.

Mahavira was born in the town of Kundanagara, a suburb of Vaisali and an important seat of the Jnatrikas. He was therefore called Vesalie or *Vaisalika*, a citizen of Vaisali. He was senior in age to the Buddha; the former predeceased the latter by a few years. The greater part of his life coincides with that of the Buddha. He was known as *Jnatriputra* or the scion of the Jnatri clan, and *Sasananayaka* or the head of the order. He is described in Jain literature as a supreme personality who was acknowledged as a great Brahmana, a great guardian, a great guide, a great preacher, a great pilot, and a great recluse. He was undoubtedly a supremely gifted Kshatriya teacher and leader of thought, who gathered unto him many men and women and was honoured and worshipped by innumerable lay disciples. He was the head of an order, of a following, the teacher of a school, well-known and of repute as a sophist, revered by the people, a man of experience who had long been a recluse, old and well-stricken in years. He lived restrained as regards all water, restrained as regards all evils, all evils he washed away, and he lived suffused with a sense of evil held at bay.

HIS WAY OF LIFE

In his thirteenth year Mahavira married Yasoda, a Kshatriya lady, who belonged to the Kaundinya gotra and had by her a daughter named Anavadya (Anojja) or Priyadarsana. Anavadya was married to

Mahavira, the last Tirthankara of the Jains.

Yamali, a Kshatriya. In his thirtieth year Mahavira lost his parents. Afterwards with the permission of his elder brother he fulfilled his promise of going out to establish a universal religion of love and amity. After 12 years of penance and meditation he attained omniscience at the age of forty-two and lived thereafter for thirty years to preach his religion in Northern India. For a year and a month since he renounced the world Mahavira did not leave off his robe. Then he gave up his robe and became unclothed. Even while he used robe he used it only in winter. More than four months many living beings gathered on his body, crawled about it and caused pain. He shunned the company of female sex and all householders. He wandered about disregarding all sights, not being attracted by any worldly amusement. For more than a couple of years he went without using cold water. He realised singleness, guarded his body, obtained intuition and became calm. He carefully avoided doing injury to the meanest form of life. He used to eat only clean food. He did not use another man's robe, nor did he eat out of another man's vessel. He observed moderation in eating and drinking. He meditated day and night, undisturbed, unperturbed, exerting himself strenuously. He never cared for sleep for the sake of pleasure. He slept only a little, free from cares and desires.

He calmly endured all hardships. Well-controlled he bore all dreadful calamities and different kinds of feeling and he wandered about speaking but little. In his journey he paid no heed to the abusive language of the rustics, being perfectly enlightened. Whether wounded or not he did not desire medical treatment. In the cold season he meditated in the

(1) They were the preparers of the right path, also called the "Jinas", who possessed perfect knowledge or "kevalajnana" and proclaimed anew the religion which sank into corruption. They were sophists, revered by the people, men of experience. They may be called prophets or founders of schools. Cf. "Dialogues of the Buddha," II, 66.

shade. In summer he exposed himself to the heat. He lived on rough food. He sustained himself eight months using three kinds of food : rice, pounded jujube and jujube (Zizyphess jujuba, lamk). Sometimes he did not drink half a month or even for a month. Sometimes he ate stale food. He committed no sin himself nor did he induce others to do so nor did he consent to the sin of others. He meditated persevering in some posture without the smallest motion. He meditated in mental concentration on the things, above, below, and beside. He meditated free from sin and desire, being unattached to sounds and colours, and never acted carelessly. Like a hero at the head of a battle he proceeded on the road to deliverance. Understanding the truth and restraining the impulses for the purification of the soul he finally liberated himself from the bondage of this world.

"KEVALA" ACQUIRED

He acquired the highest knowledge and intuition called *Kevala* (Pali *aparisesa*) which is Infinite, supreme, unobstructed, unimpeded, complete, and full. He was then lost in deep meditation in a squatting position with joined heels, exposing himself to the heat of the sun after fasting two days and a half even without drinking water. At the age of forty-two Mahavira became a *Jina* (conqueror) and *Arhat* (saint), a *Kevalin*, omniscient, all seeing, and all knowing. He knew and saw all conditions of the worlds of gods, men and demons.

During thirty years of his career as a teacher he spent four rainy seasons in Vaisali and Vanijagrama (1), fourteen in Rajagriha and Nalanda, six in Mithila, two in Bhadrika (2), one in Alabhika (3), one in Pranitabhumi (4), one in Sravasti (5) and one in the town of Pava (6) which was his last rainy season. The *Kalpasutra* mentions the places where he spent 42 rainy seasons since he renounced the life of a householder. At Pava in King Hastipala's office of the writers Mahavira died, went off, quitted the world cutting asunder the ties of birth, decay, and death.

Mahavira in his lifetime had an excellent community of 14,000 recluses with Indrabhuti at their head, 36,000 female recluses with Candana at their head, many lay disciples with Sankhasataka at their head, and innumerable female disciples with Sulasa and Revati at their head. Among the immediate followers of Mahavira eleven became distinguished as *ganadharas* (apostles having large followers) guiding and instructing nine separate groups of Jain recluses placed under them.

Mahavira made no distinction between men and men or between men and women. He had not enjoined one set of rules for male recluses and another for female, one set of rules for male lay disciples and another for female. In his wanderings he was accompanied by male and female recluses.

He encouraged his followers to study the *Purvas* or the sacred books and to develop their power of reasoning and arguing. He lived 30 years as a householder, more than full 12 years in a state inferior to perfection, something less than 30 years as a *Kevalin* having unlimited knowledge and vision, 42 years as a recluse, and 72 years on the whole. He died at the age of seventy-two.

The Jains place the event of Mahavira's *nirvana* in B.C. 527. Mahavira predeceased the Buddha by five or six, seven or eight, or even fourteen or fifteen years and he passed as a *Jina* (conqueror) before the Buddha. Accepting 527 B.C. as the date of Mahavira's *Kevalship* one has to compute the date of his birth as B.C. 570 and that of his death as B.C. 498 or B.C. 500.

GREAT TEACHER

Mahavira was one of the greatest teachers of mankind. He was one of those teachers through whom the problem of the perfection of men came to be recognized as the highest problem before progressive humanity. He did not preach to others what he had not practised himself. The goal set before mankind was the blissfulness of the entire being. This happy state is to be attained through patience, forbearance, self-denial, forgiveness, humanity, compassion, and consideration, in short, sufferings and sacrifice, love and kindness. Mahavira's great message to mankind is that birth is nothing, that caste is nothing and that *karma* is everything and on the destruction of *karma* the future happiness depends.

Ahimsa or non-harming is the first principle of higher life, which Mahavira inculcated in his disciples and followers. Its visible effect was sought to be shown how even such brute creation as the beasts and birds, reptiles and fishes, happily responded to the non-harming and compassionate attitude of men.

"KARMA" ANALYSED

In Jainism *Karma* may be worked off by austerity, service rendered to ascetics, to the poor, the helpless and the suffering by giving them food, water, shelter, or clothing. *Karma* is nothing but a complexity of a very subtle matter which is super-sensuous and which pervades the whole world. The Jains believe it to be the result of actions arising out of four sources—(1) The first source of *Karma* is attachment to wordly things such as food, raiment, dwelling place, and women, etc.; (2) *Karma* is produced by uniting

(1) Vanijagrama, a suberb of Vaisali (modern Besarh in the Muzaffarpur Dist.)

(2) Bhadrika, an important place in the kingdom of Anga (Bhagalpur Dist. probably including Monghyr)

(3) Alabhika, same as Alavi, identified with Nawal in Unao Dist. U.P.

(4) Pranitabhumi — a place in Vajrabhumi, a division of Radha.

(5) Sravasti — Sahet Mahet on the south bank of the river Rapti.

(6) Pava — a halting station on the high road from Vaisali to Kusinara (Kasia village in the Gorakhpur Dist.) and Kapilavastu (ancient Lumbini garden, the traditional scene of Sakyamuni's birth. Vide Law, "Historical Geography of Ancient India", pp. 89-90 as regards its location).

one's own body, mind, and speech, to worldly things: (3) *Karma* is engendered by giving the rein to anger, pride, deceit or greed; and (4) false belief is a fruitful source of *Karma*. The Jains divide *Karma* according to its nature, duration, essence, and content. It is intimately bound up with the soul. The Jains have eight kinds of *Karma*:—The first kind hides knowledge from us; the second kind prevents us from seeing the true faith; the third kind causes us to experience either the sweetness of happiness or bitterness of misery; the fourth kind bemuses all the human faculties. It results from worldly attachments and indulgence of the passions. The fifth kind determines the length of time which a living being must spend in the form with which his *karma* has endowed him; the sixth *karma* decides which of the four states or conditions shall be our particular *gati*. The seventh kind is *gotra karma* which determines a man's life, his occupation, his abode, his marriage, his religious observances, and even his food. The eighth and last kind of *karma* always stands as an obstacle.

According to Mahavira the doctrine of action is distinguished from the doctrine of non-action, scepticism and formalism, precisely in the words of the Buddha. To arrive at a correct understanding of the doctrinal significance of *karma* in Jainism it is necessary not only to see how it has been distinguished from non-action, scepticism and formalism, but also from other types of *karma*. *Karma* is the deed of the soul. It is a material forming a subtle bond of extremely refined *karmic* matter which keeps the soul confined to its place of origin or the natural abode of full knowledge and everlasting peace. According to Mahavira the painful condition of the self is brought about by one's own action; pleasure and pain are also brought about by one's own action. Individually a man is born, individually he dies, individually he falls, and individually he rises. Passions, consciousness, intellect, perceptions and impressions belong to the individual exclusively. All living beings owe their present form of existence to their own *Karma*. The sinners cannot annihilate works by new works, the pious annihilate their works by abstention from works. *Karma* consists of acts, intentional and unintentional, that produce effects on the nature of soul which is susceptible to the influences of *Karma*. The categories of merit and demerit comprehend all acts which keep the soul bound to the circle of births and deaths. *Nirjara* consists in the wearing out of accumulated effects of Karma on the soul by the practice of austerities.

There are four kinds of destructive *Karma* which retain the soul in mundane existence e.g., knowledge-obscuring *karma*, faith-obscuring *karma*, *karma* obstructing the progress of the soul, and *karma* deluding the soul. *Karma* plays an important part in Jain Metaphysics. Jainism as a practical religion teaches us to purge ourselves of impurities arising from *karma*.

SOUL IN JAINISM

In Jainism everybody has an individual soul. This soul exists as long as the body exists, but after death the soul and the body are no more. There are no souls which are born again. The souls and substances do not undergo any change. They are liable to changes due to changes in circumstances. The plurality of soul is a point in Jainism which is the same as in the Samkhya system. Both the systems necessitate a careful consideration of the cosmical, biological, embryological, physical mental and moral positions of the living individuals of the world as a whole. These constitute the scientific background of the two systems of thought. These also constitute the scientific background of Vedanta and Buddhism. The Jain belief is a belief in the transmigration of soul, a point in which it differs from the Buddhist conception of rebirth without any transmigration of soul from embodiment to embodiment. The soul in Jainism as in most of the Indian systems, is the factor which polarizes the field of matter and brings about the organic combination of the elements of existence. The Jains do not deny the existence of soul as an external substance with consciousness as its fundamental attribute. The soul is eternal by its very nature. It is one of the six substances. It is susceptible to the influence of *karma* which consists of acts that produce effect on the nature of soul.

Knowledge, faith, and virtue signify the comprehensiveness of Jainism as taught by Mahavira. Knowledge means right knowledge; faith, right faith; and virtue, right conduct. These three constitute the path to *moksa* or salvation. Knowledge as represented in the Jaina canon is rather religious vision, intuition or wisdom than knowledge in a metaphysical sense.

KNOWLEDGE—FIVE KINDS

In Jainism there are five kinds of knowledge. Of them *Kevala* is the highest or unlimited knowledge. The right faith consists in an insight into the meaning of truths as proclaimed and taught, a mental perception of the existence of the system as propounded, a personal conviction as to the greatness and goodness of the teacher and a ready acceptance of certain articles of faith for one's own guidance.

A man of knowledge is a man of faith and a man of faith is a man of action. Virtue consists in right conduct, but there is no right conduct without right belief, and no right belief without the right perception of truth. Right knowledge, faith, and conduct constitute the path of Jainism leading to the destruction of *karma* and to the attainment of perfection. Faith is produced by nature, instruction, command, study of the *sutras*, suggestion, comprehension of the meaning of the sacred lore, complete course of study, religious exercise, brief exposition and reality. According to the Buddhists faith is nothing but trust in the Buddha, Doctrine *(Dharma)* and Order *(Sangha)*.

The knowledge, which is co-extensive with the object rather than knowledge which is supernatural, is known in Jainism as *Avadhi* knowledge. *Avadhi* means that which is limited by the object, that which is sufficient to survey the field of observation. It is the knowledge of the distant non-sensible in time or space possessed by divine and internal souls. The Buddhist *Antavantajnana* is evidently the same term as Jain *Avadhijnana*.

PEACE ULTIMATE OBJECT

The ultimate object of Jainism is *nirvana* which consists in peace. *Nirvana* is another name of *moksa* or liberation, *mukti* or deliverance. Liberation can be realised by a man in the highest condition of aloofness and transcendentality of himself. *Nirvana* means freedom from pain or perfection; it is the

safe, happy and quiet place which the great sages reach. It is the eternal place but it is difficult of approach. It is liberation from old age, disease, and death in short, all that constitutes a painful existence for the self. *Moksa,* which is a pleasant thing, is arrived at through a comfortable life.

In Jainism *parinirvana* is the last fruit or final consummation of the highest perfection attained by man or attainable in human life. It is the same term as *nirvana* or *moksa* meaning final liberation that comes to pass on the complete waning out or exhaustion of the accumulated strength or force of *Karma. Moksa* is the essential point in the teachings of Mahavira, which is generally understood as emancipation. It may also mean final deliverance or liberation from the fetters of worldly life and total annihilation or extinction of human passion.

Merit and demerit (*punya* and *papa*) are equally reprehensible for the aspirant after the highest stage of saintship and *nirvana.*

Samvara is the principle of self-control by which the influx of sins is checked. The category of *samvara* comprehends the whole sphere of right conduct. It is an aspect of *tapa* or austerity. Some hold that it is the gradual cessation of the influx into the soul along with the development of knowledge.

Lesya is a term signifying colour in Jainism. It is said to be that by means of which the soul is tinted with merit and demerit. It arises from the vibrations due to the activity of body, mind, speech or passions. The *lesyas* are different conditions produced in the soul by the influence of different *karma.* They are dependent on the *karma* which influences the soul. They are named in the following order: Black, blue, grey, red, yellow and white. The Buddhist idea of contamination of mind by the influx of impurities from outside illustrated by the simile of a piece of cloth dyed blue, red, yellow or the like would seem to have some bearing on the Jain doctrine of the six *lesyas* or soul types.

Kayotsarga is an ascetic mode of atoning for the excess in sinful indulgences. It implies the idea of particular bodily postures to be adopted in keeping oneself unmoved on a suitable spot. It is a Jain mode of *dhyana* practice. He who practises this mode is required to keep his body, mind, and speech, under perfect restraint.

The first great vow of the Jains is abstinence from life-slaughter. The second great vow is the avoidance of falsehood. The third great vow is the avoidance of theft. The next great vow is the avoidance of sensual pleasures and the last great vow is the freedom from possessions. These great moral vows of the Jains are also found in Buddhism.

MEANS OF SELF-CONTROL

There are five *Samitis* and three *Guptis* in Jainism which constitute the eight means of self-control. They are also known as eight articles of Jain creed. The *Samitis* are the following :—(1) Going by paths trodden by men, carts, etc. and looking carefully so as not to cause death to living beings; (2) Using sweet, gentle and righteous speech; (3) receiving alms in a manner to avoid 42 faults; (4) receiving and keeping things necessary for religious exercises; and (5) performing the operation of nature in an unfrequented place.

Gupti means protection, defence, guard, watchfulness. There are three *guptis* in Jainism: (1) preventing mind from sensual pleasure by engaging it in contemplation, study, etc; (2) preventing the tongue from saying bad things by taking the vow of silence; and (3) putting the body in an immovable posture.

Syadvada in Jainism consists of certain *nayas,* which are points of view or principles, with reference to which certain judgements are arrived at or arrangements made. The number of *nayas* came to be finally fixed as seven. The *syad* mode was the real way of escape from the position of the dogmatist and that of the sceptic from both of which Mahavira recoiled.

FETTERS & HATRED CAST ASIDE

A Jain monk should cast aside all fetters and all hatred. He should not commit sins in thoughts, words, and acts. A true monk is one who does not care for his life, who abandons every delusion, who always practises austerities, and avoids contact with wicked men and women. He practises self-discipline, meditates on his soul, and does not hurt anybody. He is wise, hardy and calm. He should be steadfast, righteous, content, restrained and attentive to his duties. He should be impartial towards all beings in this world and should be careful to speak truth. He should keep the severe vow of chastity and practise mental and bodily penances. An ascetic will by means of simplicity enter the path of *nirvana.*

Jainism has many distinctive features of its own, and historically it occupies a place midway between Brahmanism on the one hand and Buddhism on the other. It cherishes a theory of soul as an active principle in contradistinction to the Vedanta or Samkhya doctrine of soul as a passive principle. Buddhism repudiates it. The Jain notion of *karma* is rather physical while the Buddhist idea of the same is psycho-ethical. In Jainism rebirth takes place by way of transmigration of soul. Buddhism rejects the theory of transmigration. In Jainism as in Buddhism the bodily functions cease in the process of *yoga* after the vocal, and the mental after the physical. The different kinds of knowledge attained through *yoga* are substantially the same in both the religions. Like the Samkhya doctrine Jainism stands for a dualistic conception of soul and matter and in this respect it differs from the Vedantic pantheism. The Jain dualism may be interpreted as a pluralistic doctrine like the realism of Vaisesika system by which it was influenced. Jainism maintains a hylozoistic notion of nature in which all compound things are different forms of life in varying stages of evolution. The Jain mode of life is ascetic or stoic. The path to happiness and progress lies through self-denial, self-abnegation, and self-mortification. All the rules of conduct and religious practices are therefore designed to that very end.

INDIA OF THEIR DREAMS

Continued from Page 90

tribution of South India to the national struggle, to the administration of free India, is indeed admirable. Its intellectual contribution is even greater. But along with great intellectuals, the South has produced poets who knew the pulse of the people. Here is a poem from Bharati, who is as eloquent as Gandhiji's prose. The subject is such as Gandhiji himself would have chosen; it is the meaning of freedom to the poor, to the Pariah.

"Freedom, freedom, freedom !
To the Pariahs, to the Tiyas, to the Pulayas, freedom!
To the Paravas, to the Kuravas, to the Maravas, freedom!
Come, let us labour all,
Sparing naught and hurting none,
Walking in the way of Truth and Light.
There shall be none of low degree,
and none shall be oppressed.
Born in India, all are of noble birth.
Wealth and learning—may they flourish,
With joy of mind, let us live.
Perish ignorance,
In man and woman, alike,
No more of subordination.
In every walk of life equality.
Man and woman shall equal be
In this land of ours.
Freedom, freedom, freedom!
To the Pariahs, to the Tiyas, to the Pulayas, freedom,
To the Paravas, the Kuravas, the Maravas, freedom."

PRESENT LEADERSHIP

The stalwarts that we have invoked so far are all gone. The mighty oaks have fallen. But Mother India's capacity to give birth to gifted sons still continues even as the standard of her less fortunate children is rising. In any galaxy of the makers of modern India, the name of Pandit Jawaharlal Nehru would shine. He is not only a translator of the dreams of the modern masters who preceded him; he is a dreamer himself and a maker of India. His vision of India, of Bharat Mata, is painted in the primary colours and on a continental canvas :

"Often as I wandered from meeting to meeting, I spoke to my audience of this India of ours, of Hindustan and of Bharata, the old Sanskrit name derived from the mythical founder of the race. I seldom did so in the cities, for there the audiences were more sophisticated and wanted stronger fare. But to the peasant, with his limited outlook, I spoke of this great country for whose freedom we were struggling, of how each part differed from the other and yet was India, of common problems of the peasants from north to south and east to west, of the Swaraj, the self-rule that could only be for all and every part and not for some. I told them of my journeying from the Khyber Pass in the far north-west to Kanya Kumari or Cape Comorin in the distant south, and how everywhere the peasants put me identical questions, for their troubles were the same—poverty, debt, vested interests, landlord, moneylender, heavy rents and taxes, police harassment, and all these wrapped up in the structure that the foreign government had imposed upon us— and relief must also come for all. I tried to make them think of India as a whole, and even to some little extent of this wide world of which we were a part. I brought in the struggle in China, in Spain, in Abyssinia, in central Europe, in Egypt and the countries of western Asia. I told them of the wonderful changes in the Soviet Union and of the great progress made in America. The task was not easy; yet it was not so difficult as I had imagined, for our ancient epics and myth and legend, which they knew so well, had made them familiar with the conception of their country, and some there were always who had travelled far and wide to the great places of pilgrimage situated at the four corners of India. Or there were old soldiers who had served in foreign parts in World War I or other expeditions. Even my references to foreign countries were brought home to them by the consequences of the great depression of the thirties.

Sometimes as I reached a gathering, a great roar of welcome would greet me : Bharat Mata ki Jai — Victory to Mother India ! I would ask them unexpectedly what they meant by that cry, who was this Bharat Mata, Mother India, whose victory they wanted ? My question would amuse them and surprise them, and then, not knowing exactly what to answer, they would look at each other and at me. I persisted in my questioning. At last a vigorous Jat, wedded to the soil from immemorial generations, would say that it was the dharti, the good earth of India, that they meant. What earth ? Their particular village patch, or all the patches in the district or province or in the whole of India ? And so question and answer went on, till they would ask me impatiently to tell them all about it. I would endeavour to do so and explain that India was all this that they had thought, but it was much more. The mountains and the rivers of India, and the forests and the broad fields, which gave us food, were all dear to us, but what counted ultimately were the people of India, people like them and me, who were spread out all over this vast land. Bharat Mata, Mother India, was essentially these millions of people,

(Continued From Previous Page)

and victory to her meant victory to the people. You are parts of this Bharat Mata, I told them, you are in a manner yourselves Bharat Mata, and as this idea slowly soaked into their brains, their eyes would light up as if they had made a great discovery".

POET'S MAJESTIC DREAM

We end as we began. We began with the start of the Indian renaissance in Bengal, and we round-up with it. Bankim Chandra gave an immortal novel of national struggle, 'Ananda Math'. In it was a song, Vande Mataram, which has thrilled and inspired India ever since. In this song, one of our two national anthems, is the poet's geography of India. In this song also is the poet's majestic dream of India. Let us recite together.

I bow to thee, Mother,
richly-watered, richly-fruited,
cool with the winds of the south,
dark with the crops of the harvests,
the Mother !

Her nights rejoicing in the glory of
the moonlight,
her lands clothed beautifully with
her trees in flowering bloom,
sweet of laughter, sweet of speech,
the Mother, giver of boons, giver of bliss !

Terrible with the clamorous shout of
seventy million throats,
and the sharpness of swords raised
in twice seventy million hands,

Who sayeth to thee, Mother, that
thou art weak
Holder of multitudinous strength,
I bow to her who saves,
to her who drives from her the
armies of her foemen,
the Mother !

Thou art knowledge, thou art conduct,
thou our heart, thou our soul,
for thou art the life in our body.

In the arm thou art might, O Mother,
in the heart, O Mother, thou art love and faith,
it is thy image we raise in every temple.
For thou art Durga holding her ten
weapons of war,
Kamala at play in the lotuses
and Speech, the goddess, giver of all lore,
to thee I bow !

I bow to thee, goddess of wealth,
pure and peerless,
richly-watered, richly-fruited,
the Mother !

I bow to thee, Mother,
dark-hued, candid,
sweetly smiling, jewelled and adorned,
the holder of wealth, the lady of plenty,
the Mother !

USHA

Continued from Page 86

py — and oh ! how her own love was beating in her breast !

Neither of them spoke during this exquisite ecstasy, and then Amal was first to speak. "My dearest one ! — these weeks since you disappeared have been agonising, especially as I knew that you had nothing and had no one to go to. I hoped every day that you would return to us, and I would have hoped that all my life if good fortune had not brought Didi to me."

"Do not try to explain anything, for I know all, and I do not wish you to relieve one instant of all that you have endured. My most sincere wish is to compensate in every way that a human being can do for all your terrible experiences."

Reba was grateful that she did not have to speak, and slowly she became calm and peaceful.

Amal's firm hold relaxed and they walked together to the house. There Lalita's mother had prepared a meal of celebration, that at last their little foundling was happy again, and the whole family wished great joy to Reba and Amal.

Reba looked radiant in her happiness, and in her heart was an ever greater warmth and love for Lalita who had so graciously guided her to this moment.

After dinner it was suggested that Reba should take Amal round the garden. This she did, and told him all that had happened to her in this home. She told him of Lalita's ambition and of her own desire to help Didi in her great work.

Amal was very enthusiastic in his praise of Lalita and his gratitude to her, and when he heard what she wanted to do he drew Reba close to him and whispered —

"We shall be able to give her her heart's desire as a token of our gratitude for all that she has done for us."

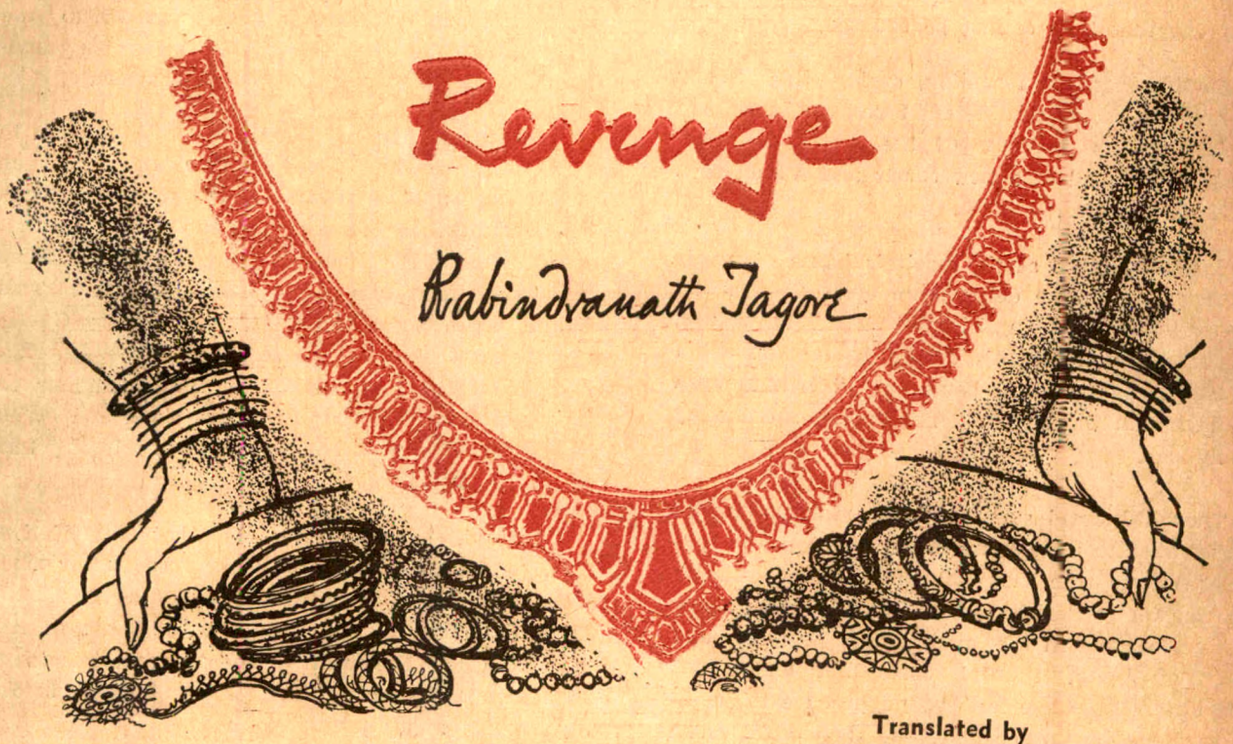
Reba gasped, and wondered what was coming next. He went on, "My uncle is a very old man and he has handed over to me all his property in the city and most of his wealth. We shall care for him. He is a man who dearly loves to serve his country in any way that he can and if through him Didi can start her instruction centre he will be a very happy man."

This news thrilled Reba. She could now see all the threads joining up together. Didi would have her instruction centre and India would be served in a wonderful way, an old and lonely man would be the happy donor and would have someone to care for him, Anu would run the hospital and would love doing it. Reba and Amal would have each other, and Reba would be able to help Lalita with her work.

"Amal, this is a wonderful evening for all of us. Let us go and tell Didi now. Tomorrow we shall go back to Gobindapur and see your parents. After that — we all start a new life."

Revenge

Rabindranath Tagore



Translated by
SHEILA CHATTERJEE

INDRANI, granddaughter of the previous Dewan of Mukunda Babu's family, and wife of their present manager, was present at an inauspicious moment in the house of the Babus on the occasion of their grandson's wedding reception.

This will become clearer if the history of events previous to that is told in brief.

Mukunda Babu was then dead and so was his Dewan Gaurikanto. Following the call of time neither of them was then physically present in their old places. But when they were alive, the tie between them was very strong. When the orphan Gaurikanto had no other means of livelihood Mukundalal gave him the charge of looking after his small estate trusting him by the look of his face only. In time it was proved that Mukundalal had made no mistake. As ants build up ant-hills, as one desirous of heaven gradually collects merit, likewise with tireless care Gaurikanto began to increase Mukundalal's properties little by little and day by day. At last when he cleverly bought the Taraf Bankagari at an amazinigly low price and added it to Mukundalal's estates, from then Mukunda Babu's family became established in the honoured class of top-ranking zamindars. With the advancement of the master the servant's condition also improved. Little by little his brick-built house, landed properties and the ceremonial worship of deities began to expand. And he too who at one time had belonged to the class of mere Tahsildars came to be known to the public as Dewanji.

It is this which is the past history. At present there was an adopted son of Mukunda Babu, his name being Binode Bihari. And Gaurikanto's well educated grandson-in-law, Ambikacharan, worked as their manager. Dewanji did not trust his own son Ramakanto. Therefore when he retired on account of old age he appointed the grandson-in-law, Ambikacharan, to his own post, bypassing his son.

The work of management continued quite well. Things were going on almost as in previous times. Only in one respect a little difference had taken place — the relationship between employer and employee was now that of business only, not of the heart. In olden times money had been cheap and hearts too were rather cheap. Now by general consent wastage of the contents of the heart had almost come to a stop. There was scarcity even in the share of close relations. From where would outsiders get any?

In the mean time Dewanji's grand-daughter, Indrani, arrived in the house of the Babus at the invitation to the feast in connection with the grandson's marriage reception.

The world is the chemical laboratory of the inquisitive god of fate. Here by placing together a

number of human beings of different temperaments and by their permutations and combinations so many colourful unheard of histories are created every day that they cannot be counted.

At this marriage reception, during this happy occasion two people of different types met, and soon in the tireless weaving of the net of life there appeared a thread of a new colour and a knot of a new kind was tied.

Indrani arrived at the master's house towards afternoon after some delay when everyone else had finished eating. When Binode's wife, Nayantara, asked the reason for this delay, Indrani offered a few explanations such as being busy with housework and ill health but they did not appear satisfactory to any one.

Though Indrani suppressed the real reason still no one failed to understand it. The reason was that though it was true that Mukunda Babu's family were masters and rich people, Gaurikanto was far superior to them in the matter of pedigree and purity of blood. Indrani could not forget that superiority. Therefore lest she might have to eat at the master's house, she had gone there after much delay. Her intention being understood, a lot of pressure was put on her to eat but Indrani was not a girl to be defeated, she could not be persuaded by any means to eat.

Once there was a bigger commotion than this over pride of aristocracy when Gaurikanto and Mukunda Babu were alive. That incident may be mentioned here.

Indrani was very beautiful. In our language the comparison of a beautiful woman with stationary lightning is famous. That comparison does not apply in most cases, but it did in respect of Indrani. By her natural strength Indrani seemed to have kept easily shackled within her a strong force and fierce radiance with a seriousness which nothing could ruffle. Lightning seemed to stand still for ever in her eyes and face and all over her. Its natural restlessness was forbidden here.

Seeing this beautiful girl Mukunda Babu had proposed to Gaurikanto her marriage with his adopted son. Gaurikanto yielded to no one in his devotion to his master. He could sacrifice his life for his master. And no matter how much his condition had improved and however much indulgence the head of the house showed him, treating him as a friend, he never forgot the respect due to his master even by mistake, even in his dreams. In the presence of his master or even when he was only mentioned, he seemed to bend down in respect, but nothing could make him agree to this proposal of marriage. He used to pay back the debt due to his master's affection down to the fraction of a coin but why should he give up what was due to the aristocracy of his birth? He could not give his granddaughter in marrigae to Mukundalal's son.

Mukundalal had not liked this pride of birth in his servant. He had hoped that by this proposal, recognition would be shown to his devoted employee. When Gaurikanto did not take the matter in that light, Mukundalal stopped speaking to him for some days and caused him much mental suffering. This unkind behaviour of his master drove into Gaurikanto's heart like a sharp death-dealing stake. Yet in spite of that he married his granddaughter to a poor orphan Kulin boy of purest blood and began to educate him with his own money, bringing him up in his home.

Indrani, granddaughter of that grandfather proud of his lineage, did not take food at her master's house. It is needless to say that sweet friendliness did not well up at this in the heart of her master's wife, Nayantara. Then several imaginary slights on Indrani's part began to appear before Nayantara's angry prejudiced eyes.

Firstly Indrani had come extremely well dressed wearing many ornaments. What necessity was there for her to show herself on the same level with her masters by so much display of wealth in the master's house?

Secondly there was Indrani's pride of her beauty. There was no doubt that Indrani had beauty, and it might be needless and even improper for one in a low position to have such excessive beauty, but her pride was wholly imagined by Nayantara. No one can be blamed for beauty. So if beauty is to be decried then one is forced to bring in the question of pride.

Thirdly Indrani's arrogance, which is colloquially known as snobbery. Indrani had a natural seriousness. She could not be friendly except with those who were very dear or well known to her. Besides, it was also not in her nature to talk noisily in a familiar way on her own initiative, or to go forward to have her finger in every pie.

Nayantara began gradually to get incensed on account of many causes like this, with or without basis. And on unnecessary pretexts she began to introduce or address Indrani again and again as "Our manager's wife" or "Our Dewan's granddaughter". She gave instructions to one of her favourite cheeky maids, who accordingly nestled against Indrani and in the manner of a friend

began to comment on her ornaments handling them. Praising her collar and armlets she asked, "Are these of gilt, dear?"

With a very serious face Indrani said, "No, they are of brass".

Addressing Indrani, Nayantara said, "Oh you there, what are you doing standing there alone? Take these foodstuffs to the palanquin from Hatkhola". A maid of the house was present nearby.

Indrani looked only for a moment at Nayantara's face with the wide open gaze of her eyes darkened by the shadow of immense eye-lashes, and next moment silently picking up the earthen containers of sweetmeats she went downstairs to the palanquin from Hatkhola.

The person who had received this gift of sweetmeats became much embarrassed and said, "Why do you take the trouble, dear? Why not hand them over to that maid?"

Indrani did not agree to it and said, "What trouble is there in this? "

The other one said, "Then please let me carry them".

Indrani said, "No, I will take these along".

Saying this, as Annapurna, the goddess of plenty, with a benign serene face might have in overflowing affection distributed food with her own hands to her devotees, — with the same immovable serene sweetness she went and placed the sweetmeats within the palanquin. And at that meeting of two minutes the rich housewife of Hatkhola became extremely eager to establish a lifelong friendship with this scant spoken softly smiling Indrani.

In this manner however many arrows of insult Nayantara showered on Indrani with the skilled cruelty of her feminine nature, Indrani did not allow any of them to pierce her body. Striking against the hard armour of her untarnished natural strength all of them broke to pieces of themselves. Seeing her unruffled seriousness Nayantara's anger began to rise still higher. And realising this, at one time Indrani slipped away unseen by others and went home without taking leave of any body.

II

Those who bear calmly are hurt more deeply. Though Indrani had repulsed the blows of insult with extreme indifference still they had gone and struck her heart.

As there had been a proposal of marriage between Indrani and Binode Bihari, so at one time there was talk of Nayantara's marriage with a distantly related impoverished cousin of Indrani's, called Bamacharan. That Bamacharan was now a petty employee in Binode's office. Indrani could still remember that in her childhood one day Nayantara's father came to their house with Nayan and entreated Gaurikanto very much for the marriage of his daughter to Bamacharan. On that occasion all the women of Gaurikanto's house were astonished and

Praising her collar a maid asked, "Are these of gilt, dear?" With a very serious face Indrani said, "No, they are of brass."

amused at the extraordinary talkativeness of the little girl, Nayantara, and before that precocious worldliness of hers, shy scant spoken Indrani had thought herself to be entirely helpless and ignorant. Gaurikanto was very pleased by the non-stop talking of this girl and by her appearance. But as there was a slight defect in the purity of her pedigree he did not agree to her marriage with Bamacharan. In the end it was due to his choice and endeavour that Nayantara was married to Binode who was not a Kulin.

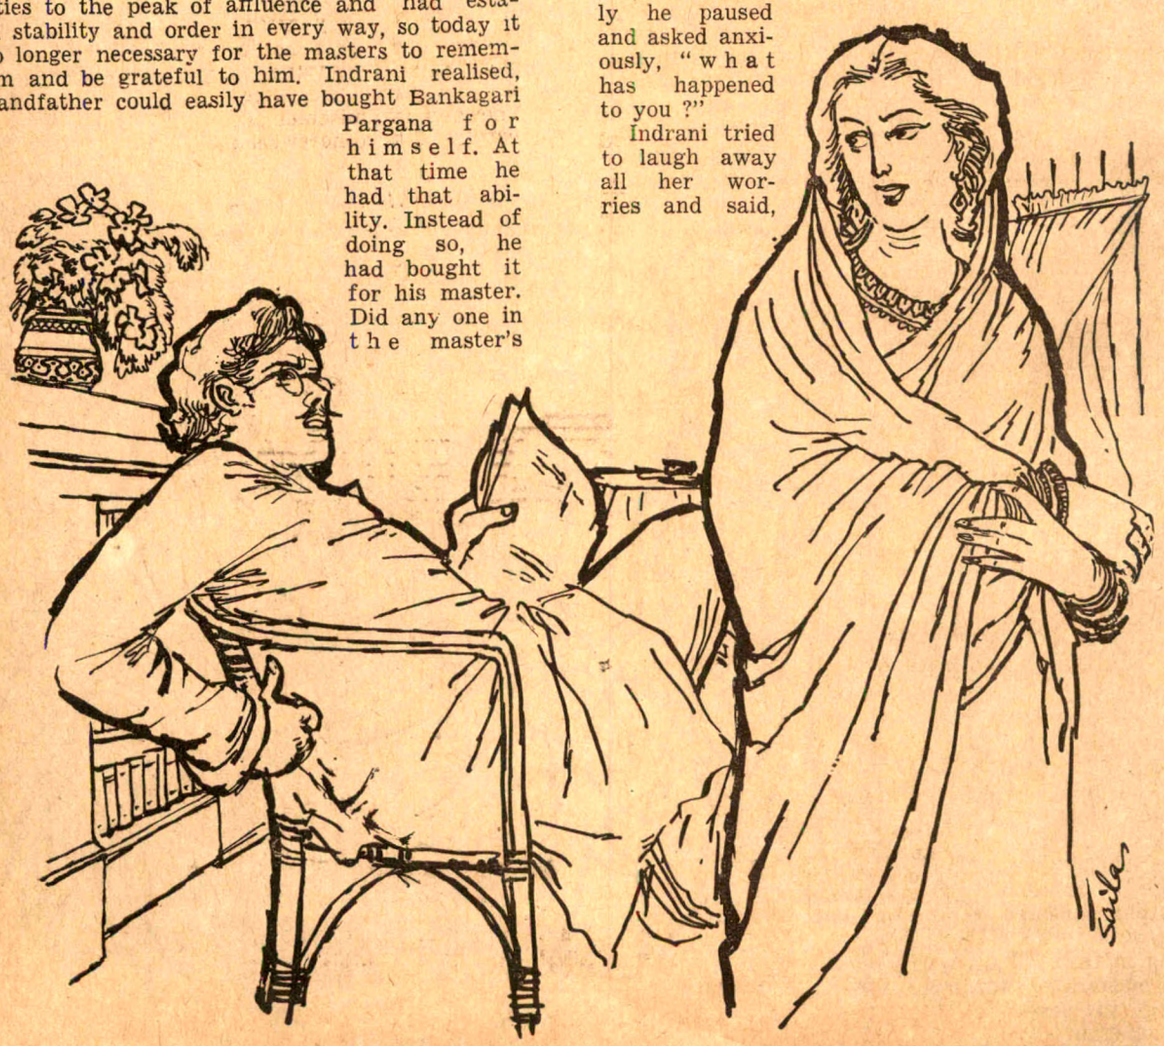
Indrani found no consolation from recalling all this. On the contrary her insults began to hurt all the more. She remembered the story of Sukracharya's daughter, Devayani, and Sarmistha described in the epic Mahabharata. The right thing would be only if Indrani could do as Devayani had crushed the pride of her master's daughter and made her into her slave. There was a time when her grandfather, Gaurikanto, was essential to Mukunda Babu's family as Sukracharya, the preceptor of the Daityas had been to the Daityas. If he had then so wished he could have humbled Mukunda Babu. But as it was he who had raised Mukundalal's properties to the peak of affluence and had established stability and order in every way, so today it was no longer necessary for the masters to remember him and be grateful to him. Indrani realised, her grandfather could easily have bought Bankagari Pargana for himself. At that time he had that ability. Instead of doing so, he had bought it for his master. Did any one in the master's family remember that this was a sort of gift? "You have today acquired the right to insult us through that pride of wealth and position which we have given you." Indrani's heart became bitter at this thought.

Returning home she found that having attended the invitation at his master's house and afterwards finishing his work in the zamindari office her husband was reading a newspaper in seclusion, resting in a chair in his bedroom.

Many believe that often the natures of husbands and wives are alike. The reason for it is this that if by chance we see anywhere a likeness in the natures of a husband and his wife we think it so fit and proper that we expect this rule to hold in most cases. However in the present case there actually was a certain similarity on one or two points between Ambikacharan and Indrani. Ambikacharan was not a good mixer. He went out only to work. On returning home after completing his own work and having made others work to the full he seemed to enter into an invincible fort to protect himself from the attack of unrelated persons. Outside there existed he and his work, within his home there were he and his Indrani. In this way was his whole life arranged.

When spreading the brilliance of her glittering attire, well dressed Indrani entered within the room, Ambikacharan was about to say something in jest to her, but suddenly he paused and asked anxiously, "what has happened to you ?"

Indrani tried to laugh away all her worries and said,



"What has happened to you?" Indrani tried to laugh away her worries and said, "What should happen? Recently I have met my jewel of a husband."

"What should happen ? Recently I have met my jewel of a husband".

Throwing the newspaper down on the floor Ambika said, "That is not news to me. What happened before that?"

Taking off her ornaments one by one Indrani said, "Before that I received a welcome from the mistress".

Ambika asked, "Of what sort was the welcome?"

Coming near her husband Indrani sat down on the arm of his chair and encircling his neck replied, "Not exactly like what I receive from you".

Then Indrani related everything one by one. She had thought that she would not mention these unpleasant matters to her husband, but that resolution could not be kept, and Indrani had never been able to keep other similar vows either. However restrained and reserved Indrani was before outsiders, when with her husband in like degree she cast off the natural checks of her nature. There she could not hide a trace even of herself.

Hearing everything Ambikacharan became furiously angry. He said, "I will resign from work at once". Immediately he was about to write a strong letter to Binode Babu.

Indrani then got down from the arm of the chair and sitting at her husband's feet on the mat-covered floor, she placed her arms in his lap and said, "There is no need for such hurry. Let the letter be put off for today. Decide tomorrow morning whatever is to be done".

Becoming excited Ambika said, "No, it is not right to delay it at all".

Indrani had blossomed like a single lotus from the lotus stalk of her grandfather's heart. As she had drawn the juice of affection from his heart so had she unconsciously accepted many thoughts stored in her grandfather's heart. Though she had not entirely inherited the reverence and unshakable regard which Gaurikanto had for his master's family, still the idea had become deep-rooted in her mind that it was their duty to lay down their lives for the good of their master's family. Her well educated husband could have, if he had so desired, practised law or accepted some other honourable work, but following the strong tradition of his wife's heart he looked contentedly after Binode's estates with undivided attention. Though hurt by insult, Indrani could not reconcile herself by any means to the idea that her husband would give up working for Binode Bihari.

Then taking recourse to logic Indrani said in a soft sweet voice, "But Binode Babu is not guilty in any way. He does not know anything of this. Why should you hurry to quarrel with him because you are angry with his wife ?"

Hearing this, Ambika Babu laughed out aloud. His own resolution appeared very amusing to him. He said, "There is something in that. But whether they are masters or not I am never going to send you to their house again".

This slight wind blew away the clouds for that day, the home became cheerful and Indrani forgot all the insults of the world outside at the special endearments of her husband.

III

Placing the entire charge of the zamindari administration on Ambikacharan, Binode Bihari did not supervise it at all. As some husband looks on the wife at home with an eye of neglect on account of extreme security and entire dependence, Binode had a disregard like that for his own zamindari. The income of the zamindari was so definite, so fixed, that it did not seem to be an income at all. One was accustomed to it. So it had no attraction.

Binode had the wish to go by a short underground passage within one night into the store house of Midas. Therefore on the advice of various people he tried his hand secretly at many dubious business ventures. Sometimes it would be decided that he would take a lease of all the Babla trees in the country and manufacture bullock cart wheels; sometimes he considered extracting honey from all the honeycombs of the Sunderbans; again sometimes it was proposed to send a man to the western provinces and take a lease of the forests there in order to get a monopoly of the trade in myrobalan. Binode knew in his mind that if any one heard of all this, one would laugh. So he did not want to mention anything to any one. He was somewhat specially shy of Ambikacharan. He shrank in his heart in fear that Ambika might think he was about to waste so much money. He behaved before Ambika as if Ambika was the zamindar and he only got a little yearly salary for sitting idle.

From the day after the invitation Nayantara began to din into her husband's ears, "You don't look after anything yourself. Whatever little Ambika gives, you accept gratefully and no one knows what mischief is meanwhile taking place within. I have never seen with my eyes since coming

Nayantara began to din into her husband's ears, "You don't look after anything yourself. Whatever little Ambika gives, you accept gratefully".

to your home such ornaments as your manager's wife came wearing. From where does she get all this jewellery? And on the strength of what has her pride increased so much?" etc. etc. Nayantara went on describing the ornaments with much exaggeration. And she fabricated liberally also of what Indrani had said to her maid.

Binode was a weak-minded man. On one hand he could not exist without depending on others, on the other he believed whatever suspicions were whispered by any one in his ears. In a moment he became firmly convinced in his mind that his manager was dishonest. Specially as he himself did not see to the administration, he began to be haunted by many sorts of imaginary fears. Yet he did not know how to detect the manager's theft. He had not the courage to say anything to him openly. He was much perplexed.

All the other officers were jealous at Ambikacharan's sole domination. Specially jealous, more than all others, towards Ambika was Bamacharan, that distantly related nephew of Gaurikanto, whom he had given employment. Due to relationship etc. he thought himself to be Ambikacharan's equal and firmly believed that in spite of being his relation Ambika did not give him a high post out of sheer jealousy. It was his opinion that if one got a job the ability to perform it would come of itself. He considered especially the manager's duties to be very light. He used to say, 'Nowadays the position of the manager of an office is similar to that of the flag which used in old days to fly on top of a chariot. The poor horse works itself to death and Mr. Banner only sways proudly with the chariot'.

Before this Binode did not keep himself informed about the work of administration. Only when in connextion with his business activities a lot of money was suddenly required, he used to send for the treasurer in secret and ask him how much money there was then in the office treasury. When the treasurer mentioned the amount, he used after a bit of hesitation to ask for that money, as if it was some one else's. The treasurer would give him the money after taking his signature. After that for some days Binode remained embarrassed before Ambika Babu. He felt at ease only if he did not have to meet him at all.

Ambikacharan was sometimes in trouble on account of this, because after giving the zamindar his share, land revenue payable at the headquarters or money for payment of the salaries of the clerical staff was often kept in deposit in the treasury. If that money was improperly spent much difficulty had to be experienced. But after taking the money Binode went about hiding in such a manner like a thief that no chance was found to talk to him about it. It was no use writing to him either, because the man had only a thin veneer of surface shame of meeting a person face to face, he had no other sense of shame. For this he feared only physical meetings with one.

Gradually when Binode went exceeding all limits Ambikacharan became disgusted and kept the key of the iron safe with himself. Binode's taking money secretly was entirely stopped. Yet the man was of such a weak nature that though he was the master he could not openly exert his power in any way in the matter. But Ambikacharan's efforts were useless. The money of one who is befriended by the goddess of misfortune cannot be kept locked by the key of an iron safe. On the contrary the result was harm instead of good. But all that will be said later on.

At the stern rule of Ambikacharan, Binode had become very much annoyed at heart. When at this time Nayantara generated suspicions in his mind he became somewhat happy. Secretly he called for the lowest employees one by one and began to make enquiries. Then Bamacharan became his chief spy.

In Gaurikanto's time Dewanji did not hesitate to lay hands on the lands of neighbouring zamindars by force. He had robbed many people of much land like this. But Ambikacharan never acted that way. And when a litigation was about to begin he tried his best to come to a settlement by arbitration. It was to this that Bamacharan drew his master's attention. He explained clearly that Ambikacharan must have taken bribes from the other side to settle cases out of court, causing loss to his master. Bamacharan himself believed likewise. He would rather die than believe that anyone who had power in his hands could remain without taking bribes.

In this way, secretly blown on by many mouths, the flame of Binode's suspicions began to rise higher and higher but he did not dare adopt any open measures. Firstly there was his surface shame, secondly there was the fear lest Ambikacharan who knew all about his affairs might harm him in some way.

At last burning with disgust at this cowardice of her husband, Nayantara sent for Ambika one day without Binode's knowledge and from behind the curtains she said, "You will not be employed any more. Hand over charge to Bamacharan and go away."

Ambikacharan had already understood from signs that a movement had been started against him before Binode. So he was not much surprised at Nayantara's words. At once he went to Binode Bihari and asked, "Do you wish to relieve me from my work?"

Becoming much agitated Binode said, "No, certainly not."

Ambikacharan again asked, "Have you had any reason to doubt me?""

Binode said extremely embarrassed, "No, not at all."

Without mentioning the incident with Nayantara at all Ambikacharan came away to office. At home too he did not tell Indrani anything. Some time went on in this way.

Then Ambikacharan went down with influenza. The illness was not serious but on account of weakness he could not go to office for several days.

The payment of land revenue at the district headquarters was due at that time and there was much pressure of other work besides. So one morning leaving his sick bed Ambikacharan suddenly appeared in his office. That day no one had been expecting him and all began to say, "Please go home. Do not work in such a weak state of health."

Ambikacharan airily dismissed the subject of his own illness and sat down at his desk. The clerks all seemed to become a little agitated and suddenly applied themselves to their own work with excessive concentration.

Ambikacharan opened his desk and saw that there was not a single paper within. He asked

every one. "What is this?" Every one seemed to have fallen from the skies. No one could decide whether they had been taken away by a thief or a ghost.

Bamacharan said, "Well sirs, give up this pretence. You all know that the master himself called for the papers and took them away."

White with suppressed anger, Ambika asked, "Why?"

While writing on his papers Bamacharan said, "How can we say that?"

Taking advantage of Ambikacharan's absence Binode had a new key made at Bamacharan's instigation and opening the manager's private desk had taken away all his papers to examine them.

Cunning Bamacharan did not conceal that. The idea that being insulted Ambikacharan might resign from his post was not unwelcome to him.

Turning the key in his desk Ambikacharan went with trembling body in search of Binode. Binode sent word that he had a headache. Going home from there he suddenly lay down in bed through weakness. Indrani hurriedly ran to him and seemed to hold him covered up with her entire heart. Gradually Indrani heard everything.

The motionless lightning did not remain stationary anymore. Her bosom began to swell. Open forked lightning began to radiate intense fierce bitterness from the corners of her dilated eyes dark like clouds. Such an insult to such a husband! This the reward of such faithfulness!

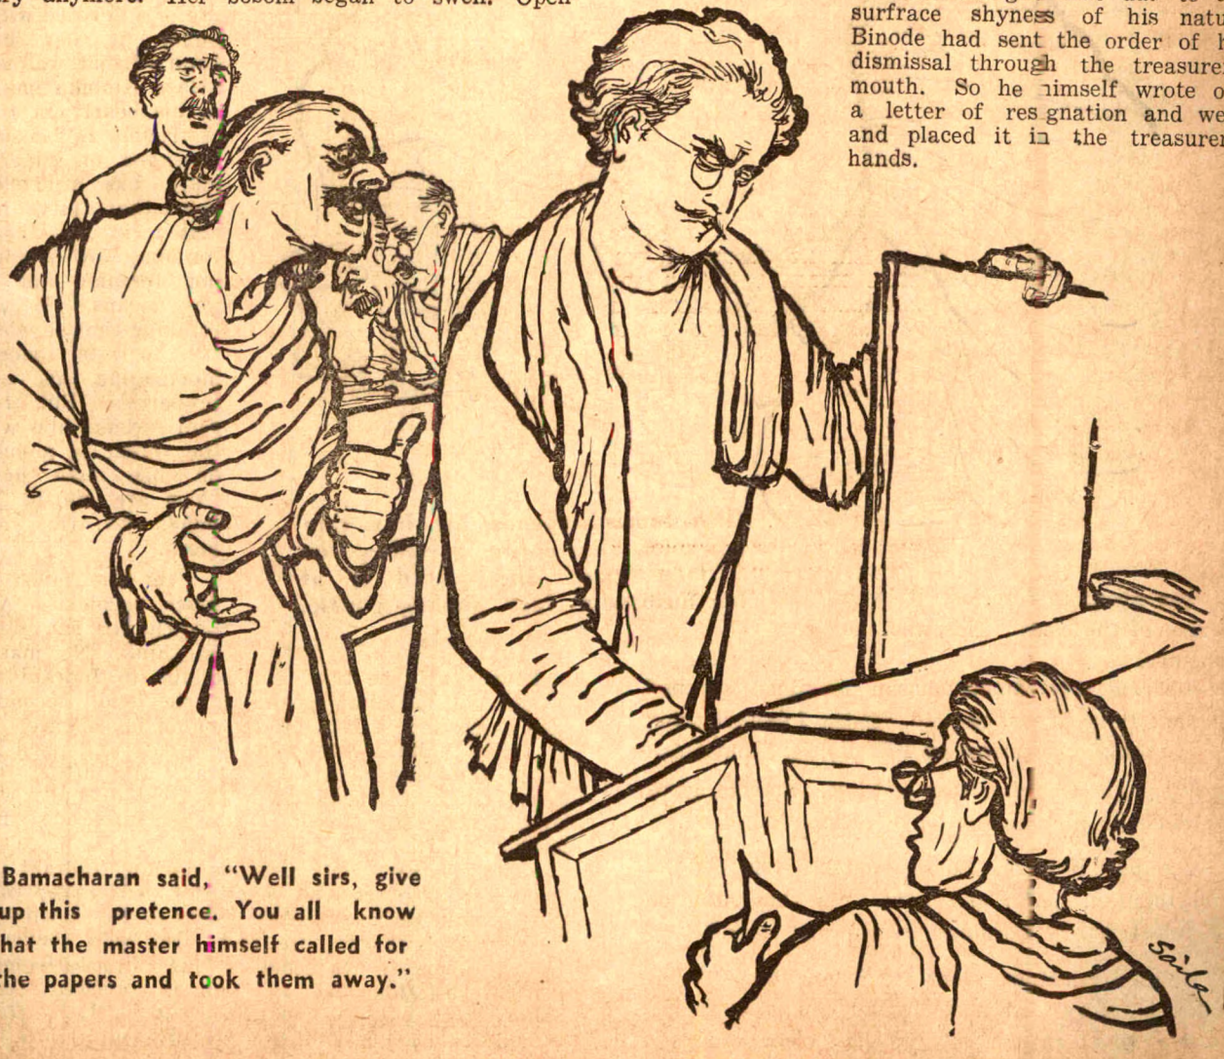
Seeing the intense silent heat of Indrani's anger Ambika's temper cooled down. He held her hand and said as if protecting a sinner from the wrath of the gods, "Binode is weak-minded. His heart has been turned through listening to the words of various people."

Then encircling her husband's neck with both arms, Indrani drew him close to her breast with emotion and suddenly tears began to shower down dimming her angry burning eyes. Away from the entire injustice of the world, from all its insult, drawing him close in her arms she seemed to wish to instal the god of her heart within the temple of her own heart.

It was decided that Ambikacharan would resign at once. That day no one objected anymore to it. But Indrani's heart did not find any consolation at this insignificant revenge. When the suspicious master was himself about to dismiss Ambika, what punishment would he inflict by giving up his work? As soon as he decided to resign Ambika's anger left him. But in the midst of all her duties and leisure Indrani's anger went on blazing within her heart.

APPENDIX

At this time the servant came and announced that the treasurer of the Babu's house had come. Ambika thought that due to the surfrace shyness of his nature Binode had sent the order of his dismissal through the treasurer's mouth. So he himself wrote out a letter of resignation and went and placed it in the treasurer's hands.



Bamacharan said, "Well sirs, give up this pretence. You all know that the master himself called for the papers and took them away."

Without asking anything about it the treasurer said, "Everything is lost."

Ambika asked, "What has happened?"

In reply to that he heard that from the time when due to Ambikacharan's carefulness Binode could not get money out of the treasury, he had begun to borrow secretly large sums of money from many places. As after launching one business after another he lost and was cheated, his determination increased all the more. He tried to make good his losses by newer and newer impossible means and in the end had sunk into his neck in debt. When Ambikacharan was ill, utilizing that opportunity Binode had drawn all the money from the treasury. The Bankagari Pargana had been mortgaged to a neighbouring zamindar from a long time past; up till now he had not made any demands for money and allowed a large sum of interest to accumulate. Now finding an opportune moment he was about to foreclose it by a degree of the court. This was the calamity.

Then Indrani opened her iron safe and piled her entire jewellery on a large tray. She placed it at her husband's feet smiling a little.

Hearing this, Ambikacharan remained stunned for some time. At last he said, "Today I cannot think out anything. Tomorrow we will discuss about this."

When the treasurer rose to leave, Ambika asked for and took back his letter of resignation.

Coming within the house Ambika told Indrani everything in detail and said, "In this situation of Binode surely I cannot give up my work."

Indrani remained silent for a long time like a statue of stone. At last forcibly suppressing the warring doubts of her heart she sighed and said, "No, now you cannot give it up."

Then began the search, "Where is money?", "Where is money?" Money in sufficient quantities could not be had from anywhere. Ambika advised Binode to collect the ornaments from within his house. Binode had made the attempt before this for the needs of his business ventures but had never been successful. Now with much entreaty, much weeping and humbling of himself, he begged for the ornaments. Nayantara was adamant and did not give them. She thought that everything was about to crumble down from all around her, these jewels were now her last refuge. And to these she clung with extreme anxiety, staking her life for them if need be.

When money could not be had from any source, a radiance of intense happiness descended on Indrani's frown of revenge. Pressing her husband's hands she said, "You have done your duty. Now give in, let what is to happen take place."

Seeing that the fire of a devoted wife's anger at her husband's insult was still ablaze Ambika smiled in his heart. In time of trouble Binode had depended on him so much like a helpless boy that pity had arisen in his heart for him. Now he could not forsake him by any means. He was thinking that he would try to raise money mortgaging his own properties. But Indrani forbade him with the threat of a curse on her own head, "You are not to lay hands on this any more."

In the midst of much perplexity Ambikacharan sat down to think. No matter how gently he tried to explain to Indrani she would not let him speak. In the end, becoming depressed and serious he sat on in his silence.

Then Indrani opened her iron safe and piled her entire jewellery on a large tray and lifting that heavy laden tray somehow with great difficulty with both hands, she placed it at her husband's feet smiling a little.

Grandfather's only precious darling, Indrani had from her birth received year after year many valuable ornaments as presents. Most of the savings of her frugal husband's life had also been converted into jewellery in the store of this childless woman. Bringing all this gold as well as precious stones before her husband, Indrani said, "With these ornaments of mine I will save the gift my grandfather

(Continued on Page 106)

CONSTRUCTION INDUSTRY IN SECOND FIVE-YEAR PLAN

By A. N. KERR

HERE are no statistics about construction activity in India. Excepting highways and cement industries, we do not get any employment figures in the construction industry in our country. The only reason appears to be that, unlike other advanced countries of the world, this industry is denied due status as compared to engineers, doctors, lawyers and other businessmen in our country.

It may be noted that since the last war, this industry has been taken up as a career by young engineers including even those who have foreign training and experience. They are very sure about the treatment they have received from their brother engineers and other citizens.

Until a few years ago construction industry belonged to some few rich persons only who engaged competent *mistries* and did many large works. Now this industry has developed and advanced considerably on modern progressive lines, and this is as it should be. It is a pity that we have no statistics about construction industry activities in India. Yet I can affirm that this industry employs 1.1 million persons per day in India and taking an average rate per person of Rs. 2|8|- per day, a sum of about two and a half million rupees is spent per day as daily wages. It is now proposed to spend double this amount per day in our Second Five-Year Plan.

ITS VITAL ROLE

Our Government has declared that the aim of its policy is to create a "socialistic pattern of society." This phrase is really very difficult to define. It means that society shall have equal opportunities for all and there shall be no gap between the rich and the poor.

Our present Government has before it three main issues, viz. food, shelter, and clothing for every one. If we consider these three big branches of development, we have to agree that in every one of them the construction industry has to play a vital role. Let us take, for instance, the item of "food". It is to start from more water, and more water means building of dams, canals, fertilizers, etc. These have to be executed solely by the construction industry. If you consider shelter, here again it means large housing schemes throughout India, and, if we consider clothing, it means more factories and therefore more power, and power has to start from multi-purpose dams etc. Hence we can see that the construction industry plays and also has to play the vital part in the execution of the Second Five-Year Plan.

Our Government successfully completed the First Five-Year Plan costing 1,500 million pounds, and 50 per cent of which was spent on the construction industry. This industry has played the most important part in the execution of our last Five-Year Plan.

The Second Five-Year Plan is about to start. It will cost about 3,000 million pounds, and likely to spend half of this on the construction industry.

HOUSING PROGRAMME

In the matter of housing, our Welfare State is paying special attention to provicing houses for the low-income groups. There are 54 million houses in rural areas, of which a large number require reconditioning. In urban areas 3,400 units have been completed by the Central Government, though it is a small beginning indeed. Loans are freely given to Housing Societies to provide 40,000 units. The Second Five-Year Plan will spend about 120 million rupees on Housing and the balance will be spent in other projects.

My information on the Second Five-Year Plan, as far as housing is concerned, shows that as against a total provision of Rs. 38.5 crores in the First Five-Year Plan, the Second Five-Year Plan has allotted Rs. 120 crores to be distributed as follows :—

(1)	Subsidised Industrial Housing.	— 45 crores.
(2)	Low-Income Group Housing.	— 40 „
(3)	Rural Housing.	— 10 „
(4)	Slum clearance and Sweeper's House.	— 20 „
(5)	Middle-Income Group Housing.	— 3 „
(6)	Plantation Housing.	— 2 „
	Total :	120 Crores.

In addition to the above, there are housing schemes for workers in coal and mica industries.

During the First Five-Year Plan about 103 million urban houses are estimated to have been constructed —600,000 units in the private sector and the remaining through various Governments and public authorities. The corresponding estimate for the Second Five-Year Plan is 1.0 million units of which 800,000 units may be constructed by the private sector. This report expresses profound dissatisfaction at the fact that employers had considerably failed to utilise the subsidised industrial housing scheme for their workers. The plan now proposes that private employers, Government authorities and local bodies should all make the fullest use of the scheme, not only for building houses, but also for developing land for building purposes as the scheme has been recently modified at the conference held at Simla in June, 1955. It is hoped that as a result of this modification, the scheme will become more popular and that private employers and co-operative societies of industrial

workers will take greater advantage of it than what they have done in the past.

A correct picture of the scheme, the sanction issued during the current year (till 31st July, 1956), the number of tenements sanctioned for construction by different authorities, and the loans and subsidies involved are given below:—

	Number of tenements.	Subsidies of amount in lakhs.	Amount of Loans in lakhs.
State Government	66,520	9,74	1027
Employers	10,921	73	98
Co-operative Societies	1,318	9	17
	78,759	10,56	11,42

Of the 78,759 tenements sanctioned, over 35,000 have been completed the remaining being under construction.

I think, the Government's attention should be drawn to the question of agreement between the Government and the party praying for loan. It is very doubtful that the employers, private authorities, and local bodies will avail themselves of this opportunity during the Second Five-Year Plan. The only reason for the failure of the First Five-Year Plan is that the rules regarding the agreement form and the mortgage deeds etc. were too rigid for securing loan and subsidy. Further liberalisation of the rules framed under the provision of the agreement with regard to interest, payment of subsidy, repayment of loan, mode of payment, and other inequitable bindings is necessary in order to make the scheme successful in the Second Five-Year Plan.

In order to recruit the technical hands in the country, our Government has started technical training course in the construction industry all over India, to meet the personnel requirements for the Second Five-Year Plan. All this must take time. What could not be achieved in 200 years, cannot be achieved in one or two Five-Year Plans.

STABILISATION QUESTION

This industry has maintained good men as permanent hands and they are taken from place to place, but for unskilled temporary men it is impossible to absorb them after the work is over. In India the employer himself in this industry is not stable. Therefore, what can they do with the employees after the job is completed ? Moreover, most of the labourers leave the employer without notice. They themselves do not wish to be stable as they have to work on their own farm land for certain period of the year.

Today the Government has become the biggest purchaser in the construction industry. The industry has been greatly handicapped by one-sided conditions of Government contracts. The employers in the industry want them to be fair and equitable to both sides. Our Government is now trying to meet their point of view at joint meetings and discussions, but the action taken is slow, halting and wanting. This has resulted in the cost of construction being higher than otherwise and for which they are obliged to pay high rates of income-tax.

This industry also suffers for shortage of steel and cement, as well as of machinery and technical personnel. In spite of huge development programmes—in our country, the transport is still the bottleneck of this industry.

According to my estimation the Second Five-Year Plan will have to face a big deficit budget and I strongly feel that it will strain the resources of the country to the utmost and we cannot possibly have a Third Five-Year Plan. So what will happen to this industry and all these highly-trained technical hands at the end of Second Five-Year Plan ?

Though the industry will provide 2.2 million persons per day and take up 50% of the work under the Second Five-Year Plan, i.e. the major portion of our National Programme, yet the question remains how long this industry will suffer on its way to stabilization in our country. Why should not the Government take immediate action to stabilise the construction industry, as in other progressive countries, in their Second Five-Year Plan ?

"REVENGE"

(Continued from Page 104)

made, and again make a gift of it to the master's family."

Saying this she closed her eyes wet with tears and imagined that the shiningly fair old grandfather of hers with his sparse white hair, straightforward handsome face and serene gentle affectionate smile ablaze with intelligence, was present here at this moment and placing his cool loving hand on her bowed head was reciting benedication in silence.

Bankagari Pargana was bought over again. Then breaking her vow Indrani bereft of ornaments went again to Nayantara's inner house on invitations; there remained no longer any pain of insult in her heart.

Dewan—Chief administrative officer of a big zamindari estate.

Babu—Originally a title of honour conferred on Hindu noblemen. Later, a squire, the chief landed proprietor in a district or portion of a district. Hence a person belonging to the landed gentry. (The meaning has further deteriorated of late).

Taraf—Part or whole of a Pargana, which is a tract of country comprising many villages. Generally named after the chief village or the person who first brings the area under proper management.

Tahsildar—(In Bengal) a petty officer who goes from house to house collecting rents from the tenants of a landed estate.

Dewanji—Dewan-ji (an honorific suffix).

Kulin—Belonging to an unmixed line originally noted for the character, education etc. of its members. Now it is purely arbitrary, having been fixed in the twelfth century by King Ballala Sen for all time.

Sukracharya—Preceptor of the Daityas, who was invaluable to them because of his ability to revive the dead. The Daityas were perpetually fighting the Devas who killed large number of members of the former. Sukracharya promptly brought them back to life. He was much higher by birth than his employer, the King of the Daityas, and his daughter Devayani who was of a jealous nature made the fullest use of her privileged position by insisting on Sarmistha, daughter of the King, accompanying her as a slave girl when she married Yayati, King of India.

Daityas—An order of semi-celestial beings who were descended from the same ancestor as the Devas, the gods who lived in paradise and perpetually at war with them.

Pargana—See "Taraf" above.

Zamindari—Landed estate paying revenue directly into the Collectorate.

Babla—Thorny tree producing very tough timber used in making ploughs and cartwheels. (Acacia arabica.)

Sundarbans—The vast marshy forest tract at the head of the Bay of Bengal.

CHARU CHANDRA DUTTA, I.C.S.

By BIRENDRA KISHORE ROY CHOUDHURY

LATE Charu Chandra Dutt was one of the most illustrious sons of Bengal whose personality and genius were of manifold character and who had a highly developed soul. His father, the late Kalikadas Dutt, was the Dewan of Cooch Behar State. He was responsible for marvellous improvement of the State. He was very particular about the education of his worthy son, Charu Chandra. After graduating from the Presidency College Charu Chandra proceeded to England to compete for the Civil Service examination. His university career here in Calcutta was brilliant for which he was elected to the States Scholarship to enable him to prosecute his studies in England. As a brilliant student of his college he could attract some of his class-fellows round about him who were equally brilliant. They all won name and fame. Mention may be made of some of them, all of whom are now departed, viz., Justice Dwarka Nath Mitter, Justice Charu Chandra Ghose, Sir Brojendra Lal Mitter, Prof. Bhandarkar and Prof. Jnan Saran Chakrabarti. They were all Charu Chandra's very intimate friends. The exceptional qualities of his head and heart attracted to him friends of the highest type.

Having been admitted in the Indian Civil Service he was posted in the Presidency of Bombay. He had not served long when a new era dawned in Bengal. The historic Swadeshi movement was initiated in Bengal to raise the nation against the then partition of the province. A born patriot as Charu Chandra was, the movement evoked in his heart a strong urge for the freedom of the country and he jumped into it though with extreme tact. Although a member of the coveted Civil Service, Charu Chandra's love for his motherland inspired him at this momentous occasion to serve her in his own way.

In this patriotic movement, my father Sri Brojendra Kishore Roy Choudhury, late Raja Subodh Chandra Mullick and late Maharaja Surjya Kanta Acharyya and other land holders played distinguished parts. Charu Chandra married a sister of Raja Subodh Chandra and in this connection an intimate friendship developed between him and my father, who had also a very cordial and brotherly relation with Raja.

SWADESHI AND BENGALEES

As a result of the Swadeshi movement when the Bengalees were thinking of educating their children on purely national lines there was established a National University with the monetary support of Raja Subodh Chandra and the Maharaja of Mymensingh and my father Sri Brojendra Kishore R Choudhury. A very happy augury it was that just this moment Sri Aurobindo came to Calcutta straig from Baroda with a view to play his part in th mighty movement for liberation. The builders of t University, men of keen insight as they were, to no time to recognise in Sri Aurobindo, the lead and seer of the time. They made him the Princi of the National College already established and in talled him as the head of that great institutio From this time Charu Chandra began to take act part in the movement though his approach to th was of a peculiar character which was unavoidab considering the position he held as a member of t Civil Service.

Sri Aurobindo at this time as the head of t National University inspired the young Bengal know their Swadharma, but at the same time he w giving lead to a movement of liberation of India constitutional agitation as well as revolutiona means. The juvenile heroes of his time imbued wi the spirit of supreme self-sacrifice used to take the baptism of fire in the sanctuary of Bhawani Mand with the ardent devotion for the Divine Mother m nifested as the Mother-country. Sri Aurobindo hi self initiated this movement. The scene of the in tiation ceremonies and the secret vows of sel sacrifice taken by the patriotic youth attract Charu Chandra to Sri Aurobindo. When youngm like Barindra Kumar Ghosh, Profulla Chaki, Khud ram Bose, Kanailal Dutt and a host of othe touched the feet of Sri Aurobindo and took vows liberating their motherland from the bondage of a alien ruler, Charu Chandra used to watch the whol ceremony in secret and at last took the same vo as others did.

When the national upheaval was at its to most height how many days Charu Chandra a my father had passed in private conferences wi Sri Aurobindo at the princely residence of Raja S bodh Mullick! In those conferences Sri Aurobin was the central figure. But he attended the mee ings almost as a silent spectator absorbed in de thoughts. At the time of taking any decision his op nion counted supreme.

ALIPORE JAIL LIFE : NEW PHENOMENON

Next came the episode of Alipore Bomb Ca trial at the close of which curtain dropped on th then revolutionary movement. After the end of th case Sri Aurobindo was freed from the sanctuary the jail as he called it. Charu Chandra, who ha all along been under police vigilance now got free from it.

In the jail life of Sri Aurobindo a new phen

menon took place. In the prison-cell of the Alipore Jail Sri Aurobindo saw Purushottama face to face. The result of this communion was that Sri Aurobindo isolated himself to some extent from politics in response to a mandate from the Supreme Divine to devote himself to the resurgence of the spiritual truth lying hidden for aeons and aeons in the heart of India. From this time he delved himself to the Sadhana of the Supreme Divine and completely surrendered himself to the Purushottama and the Divine Mother. Meanwhile Charu Chandra went back to his original post under the Government in Western India.

When the curtain dropped on the revolutionary age the old chapter of the life of Bengal came to a close and with it the political activities of the then leading men went underground. Charu Chandra, too, had to turn over a new leaf. He was now a changed man, a dutiful, honest and upright familyman, a single-minded devotee for a better world. He abjured politics to create an opportunity to gain mastery of Eastern and Western Culture. He read scriptures of almost all kinds and in his leisure he dived deep into the study of music, painting etc. to gain first hand knowledge of these subjects. In the revolutionary period those who accepted Sri Aurobindo as their preceptor, friend and leader were all physically separated from him. Among his followers there were men who could not understand the meaning of his migration to Pondicherry and absorption to the deep Sadhana in seclusion.

But a faith was deep-rooted in the mind of the seer that the independence of India was decreed by the Providence and that no other force would be able to resist it. But how India would be able to make the best use of that independence was to him an anathema still. What position India would occupy in the world in post-independent days was a thought poignant in his mind. He arrived at the decision that real solution of this problem will only come through Sadhana and nothing else. That is why Sri Aurobindo immersed himself in the Sadhana to reach the goal. As a result of that deep Sadhana in seclusion his own countrymen and the world at large saw the production of his immortal "Savitri," the "Life Divine," the "Synthesis of Yoga" and the "Essays on the Gita" enough to satisfy the souls of the intellectuals as well as those who had spiritual aspirations. "The Ideal of Human Unity" and "The Human Cycle" showed his ideals for the future humanity. "Future Poetry" and the "Collected Poems" were meant for litterateurs and the artists. His seclusion, was, in a sense, a boon for the country and the humanity.

ASSOCIATION WITH TAGORE

When Deshabandhu Chittaranjan Das returned after having a *'darshan'* of Sri Aurobindo his impression was that Sri Aurobindo was a living image of Buddha immersed in meditation. Meanwhile, in spite of his official duties, Charu Chandra was pursuing the path of knowledge and culture. So long he was in Bombay he made the best use of his time by acquiring masterly knowledge of various languages, oriental and occidental. His knowledge of science, philosophy and theosophy and also in fine arts were well known. When in 1930 he came back to Calcutta, pensioned off, his literary and philosophical persuits never left him. His literary production known as "Sekaler Katha" was a very interesting piece of his literary efforts. Kabiguru Rabindranath Tagore had a genuine affection for him and out of regard for his gifts in various departments of learning he installed him to the position of the Vice-Presidentship of the Visva-Vharati. His intimate connection with the great Poet continued for many years.

During his stay in Western India he began to keep much more company with the saintly people than before. The late Hirendra Nath Dutt, brother-in-law of late Raja Subodh Mullick was his close relation and a colleague of his Sadhana also. Hirendra Nath was the life and soul of the Bengal Theosophical Society, a man of profound learning with extra-ordinary occult knowledge, a leading man of the country and a bright jewel in the galaxy of wise men.

With the advancement of years, Charu Chandra had decisive progress in the path of Sadhana and he felt a strong urge to be nearer to Sri Aurobindo, the prince of the Yogis, the friend of his early manhood and the presiding deity of his heart. Nevertheless he used to complain about the disappearance of Sri Aurobindo from his homeland and exclusively devoting himself to Yoga. But his views underwent a change after his stay for some time in the Prabartak Asram. There he perceived that Sri Aurobindo did not mean Sadhana to be only a meditation of God, it enjoined Karma too in the service of the Divine and hence it is both static and dynamic. This system in which the Prabartak Sangha is run gave him much satisfaction. The Sangha-Guru, Sri Motilal Roy, told him, "Charu Babu, how far Sri Aurobindo may be away from us physically ? Everything here that you see is surcharged with his spiritual inspiration and influences." Charu Chandra's next movement was to have a 'darshan' of Sri Aurobindo. He reached Pondicherry and was face to face with Sri Ma and Sri Aurobindo. He marked halos of light round their faces which gave expressions of their Divine influences.

INITIATION & MARCH TOWARDS GOAL

After his initiation to Sri Aurobindo's yoga of self-surrender he came back to Calcutta. But his frequent visits to Pondicherry for the first few years after his initiation made him feel that he was making a headlong march towards the goal.

From 1940 Charu Chandra completely accepted the Sadhana of Sri Aurobindo and the Mother. In 1941 Sri Anil Baran Roy of Sri Aurobindo Asram, with a view to popularise the philosophy and culture of Sri Aurobindo, to give proper publicity to the interpretations of Sri Aurobindo's English works in Bengali and also to give facilities to the public to be acquainted with the writings of Sri Aurobindo suggested the opening of a library in Calcutta. The idea was much appreciated by Charu Chandra. He gave a plan of starting of a library and reading room. When it was made known to Sri Aurobindo and the Mother they gave permission to open it with their blessings.

Thus Sri Aurobindo Pathamandir was started, Charu Chandra was made the permanent president of it. Sri Kshitish Chandra Dutt and myself were appointed Secretary and Treasurer respectively. On the day of the opening ceremony Justice Manmatha Nath Mukherjee took the presidential chair and Charu Chandra read Sri Aurobindo's Uttarpara speech for the occasion. Later on, he summarised in plain and lucid Bengali Sri Aurobindo's "Life Divine" and the "Human Cycle" to make them intelli-

(Continued on Page 111)

WOMANHOOD—THAT WAS INDIAN

By TUSHAR KANTI GHOSH, W.B.C.S.

THE cynic Schopenhauer and the master Aristotle have given judgment on women; but judgments sometimes are declared false, even though delivered by redoubtable persons. Women are not today proved to be unfinished men, as was expected by Aristotle. Nor are they the last thing civilised by man, as was said by Meredith. And, who believes Schopenhauer today if he says: "Instead of calling them beautiful there would be more warrant for describing women as the unaesthetic sex....The most distinguished intellects among the whole sex have never given to the world any work of permanent value in any sphere"? ("Essays on Women," p. 79).

We have, however, tried to think otherwise—for in this part of the world where women have lived through some five thousand years, we have discovered a different story. True, our history, like others, has many contrived corridors; but still it is what Croche says the past-that-is-present-Womanhood that was Indian is still in the blood of the Indian women—it is as fresh as a wound in our life.

I shall take a rapid view of our history from the early ages upto the beginning of that neo-Vedantic revival in Ramakrishna-Sarada Devi. This period is more obscure in our history and a perusal of this period will reveal the nature of the womanhood that was Indian.

"The position of women in any society," said Dr. Radhakrishnan, "is a true index of its cultural and spiritual level." Our cultural and spiritual life can be evaluated from this standpoint. If we refer to history we shall discover a galaxy of women shining over the religious life of India—beginning from that hoary past of the Vedic period when human beings in some other parts of the world were still quadrupeds.

VEDIC REPRESENTATIVES

Our starting point is the Vedic period. Naturally, the account we possess about the period is meagre. But that little account enables us to understand the essence of Indian Womanhood in the context of religious life. In the Rig-Veda, we come across the names of several women seers, such as Apala, Ghosha, Godha, Lopamudra, Shashwati, Romasha etc. They have composed hymns, which give a true picture of their minds. We learn that most of them either suffer from some ugly diseases or are forsaken by their husbands. Apala suffered from skin disease which made her skin hairless; Ghosha had white leprosy. Lopamudra pined for the company for her ascetic husband, Agastya. Those suffering from diseases pray to the gods that they may be cured and accepted by their husbands. They are subsequently cured off, and find the fulfilment of womanhood in the company of their husbands. In one verse, we find Shashwati expressing extreme joy when her husband recovered his lo manhood. Lopamudra served her husband for lon but is disappointed at his unworldly indifference an makes an impassioned appeal for his love and com pany : thus says Lopamudra —

The ancient sages who attained truth
And talked of truth with the very Gods,
They did beget children, but did not break
their penance;
Therefore, should the wives be approached
By their husbands.

It appears that in this period, the ideal of womanhood consisted in serving the husband untiringly and faithfully, and finally, in having children as a mark of benediction from the husband. Women in this period shared the religious life of their husbands only as a secondary counterpart of their husbands, and we know of no contribution of women in this period (i.e. as expressed in the Vedas) apart from their capacity as wives primarily.

A perfect development of the mind of the women in the wider aspects of human life and beyond it can be found in the Upanishadic era. The names of Maitreyi and Gargi stand out in bold relief. They are a class by themselves. The philosophical discourses between Yajnavalkya and Gargi are not only a unique contribution to the spiritual realisation of the deeper meanings of the values of life; they are particularly interesting in the context of the opinions expressed by the great philosophers including Aristotle and Schopenhauer about women. Maitreyi's answer to her husband Yajnavalkya when asked by him to accept his bequeathed property,—that if by a thing one cannot be immortal there is no necessity of it—has been the quintessence of Indian attitude to philosophy and religion and to everything else on this universe.

EAGERNESS TO KNOW TRUTH

Thus, as between the Vedic and the Upanishadic literature women of the latter show a greater awareness of the life divine, and a more sincere eagerness to know the truth. The Vedic women are only the parts of the life of their husbands, and attain significance only because of their husbands. Thus speaking of the Vedic women, Dr. S. K. De says: "There is no trace of any great women in the desert of desolate theological speculation of the extensive Brahmana literature." (in "Great Women of India" ed. Swami Madhavananda and Dr. R. C. Majumder, 1953, p. 137.)

At this stage, we are in a position to answer the question. What is the contributions of the Vedic and Upanishadic women to the religious life of India? The Vedic literature teaches that the con-

mmation of womanhood lies in unstinted devotion, d unquestioning faithfulness to the husband and in ning the love of the husband to beautify woman's e. The Upanishadic women teach us to seek after ith, and to leave out all the things that would not ake for immortality. The contributions of these o types of women are, of course, not contradic- ry, nor inconsistent, when allowance is made for e differences that would occur in different stages development.

TA, DRAUPADI & GANDHARI

We must now refer to the Ramayana at least, if ot to other epics and the Puranas. In the Rama- na, we find as if there is a sum total of the ideals id ideas practised by typically Indian men and omen. Particularly regarding the women, we find Sita the epitome of Indian womanhood. Her story as been the main-spring of inspirations to Indian omen throughout these ages. "As Mary the Madon- a to the women of Christendom, so is Sita, Queen Ayodhya, to them of Hinduism. Hers is indeed a alm beyond the aspirations of merely earthly so- reigns. For she is the ideal of womanhood itself, id she wields undisputed sway, in millions of earts over the kingdoms of love and sorrow, and ainless womanly honour and pride. Though beauti- l and a queen, she never chose ease. To her the mple lives of saints and scholars were more joy- us than all the luxuries of courts. Such was Sita, ueen of Ayodhya, crown of love, veiled in sorrow, nd peerless amongst women." (Sister Nivedita : Cradle Tales of Hinduism"—introduction to the Cycle of the Ramayana.")

We have also the great Mahabharata, where e meet Draupadi and Gandhari. We have also the uranas; though they are myths, still we have ere Madalasa, Sati, Uma, Shaibya. We shall do etter not to throw all these into oblivion on the core of their being legends. Goethe once condemned hose who said that the ancient legends of Rome, f Lucretia, for example, were spurious and false. nything that was essentially false and spurious ould only be absurd and never beautiful and ins- piring.

GREAT DEVOTEES OF BUDDHA

Next we come to the Jaina-Buddhistic age. In he literature we find frequent references to great vomen in this period (circa 500 B.C. to 500 A.D.). ut no great recorded contribution of them has eached us. Only one selection has been published oncerning women namely, the 'Therigatha' (Songs f the Sisters), which tells us of some of the great levotees of Buddha.

The Therigatha records the life-stories of Maha- ajapati Gotami, Isidasi, Ambapali, Kshema, etc., mong others. Gotami was the sister of Mahamaya, he mother of Gautama. Her greatest contribution o Buddhism was to secure Buddha's consent for he formation of the order of nuns in the Buddhist ystem, and it was at her instance that several rules were framed for the disciplinary guidance of nuns, known as "Bhikshuni-pratimoksha-sutra." In the songs that go by her name in the Therigatha, she xpresses her admiration for Buddha, and pays ho- nage to him for quenching her thirst for knowledge nd pointing out to her the source of all miseries. n the gathas attributed to Kshema in the Theriga- ha she also sings the glory of the Lord Buddha. Kshema was once enticed by a handsome youth; but she replied to him that physical body had no signi- ficance to her, which was only an unbearable store- house of various diseases. Only by following in the footsteps of the Enlightened Lord can the way to consummation be found out.

The Therigatha contains not a large number of verses. But all the gathas are inspiringly written by sincere followers of Buddha. These gathas have not only diffused the teachings of Buddha; the theris or nuns are even today continuing their spiri- tual career in different parts of the Buddhist world.

'UPASAKA'S — THE LAY DISCIPLES

Besides these, there were also other women, mostly lay disciples or 'Upasaka's of Buddha, some of whom, e.g. Samavati, Khujjuttara, have become famous. Samavati was the wife of King Udayana; she persuaded her husband to accept a lay disciple- ship of Buddha. Because of her earnest desire, a monk would come to the palace daily to deliver discourses. For her earnestness, Buddha gave her the foremost place among his lay disciples. The contribu- tion of these lay disciples was particularly impor- tant in view of the fact that, being women, and wives of non-Buddhist kings and others, they were able to enlighten their respective lands by the Light of Asia.

Like the Buddhist women, we have also the accounts of some great Jaina women on record. Be- sides diffusing Jainism to the best of their capacity, they have also left behind exemplary instances of chastity and purity. To take an example, Kannaki is worshipped even today amongst the Tamils. She is adored as Pattini Devi in Ceylon. Her greatest claim to fame is that she was chastity incarnate. The Tamil classic, "Shilappadikaram" embalms her life story Similarly, we have the instance of Raji- mati. This woman is a glaring example of the un- wavering devotion of a woman to her husband. For, her husband, Neminatha, went away just before the finishing of his marriage ceremony with her. Raji- mati also followed her legal husband and was true to him till the last.

CONDITION IN ASOKAN PERIOD

About the women in the next age, i.e. in the Maurya-Scythian era, we know something from Greek writers and contemporary epigraphs. We are told that some of them pursued philosophy, but married women were denied the privilege of sharing with their husbands a knowledge of the sacred lore. Asoka refers to women as devoted to trivial and worthless ceremonies. But the record of the benefactions of Karuvaki, the second queen of Asoka, shows that the wife took prominent share in the religious activities. The Nasik record refers to Gautami Balasri, showing the way of life led by a pious widow devoted to plain living and high thinking. One great name in the subsequent period is that of Rajyasri, the sister of king Harshavardhana,—a picture of love and detach- ment. These instances are important in view of the fact that during this period, because of foreign im- pact, there had been some amount of dislocation in Indian social life, and law-givers consequently tight- ened their hold on women lest they should drive a nail in the coffin of the traditional Indian Society. But, even in such circumstances, noble women con- tinued to radiate their pure influence on the religious life of India. Historians tell us that "the custom of burning widows on the funeral pyre of their hus- bands was coming into general use, at least among the ruling class." (Advanced History of India, Mac- Millian, p. 197). We must not fail to note that this system of 'sati,' however objectionable, marks the culmination of the traditional requirement that the

wife should be singularly devoted to her husband, and also to note that this system continued to influence the religious life of the Hindus for a great many number of years.

BHAKTI-CULT — MIRA BAI & LALLA

In the philosophical sphere, India was then under the powerful sway of Sankara and his followers, and the religious minds of the more enlightened Indians were imbued with Sankara's absolutist ideas. But to the common man, with simple understanding, Sankara's philosophy still remained a far cry, unattended to. As a necessary counter-poise, India saw the emergence of the 'bhakti'-cult, with its emphasis on a personal, loving God. This 'bhakti'-cult had its happy culmination in the period under the Turko-Afghans. The beneficial effect of the impact of Islam on the existing Hinduism of India made itself felt in this 'bhakti'-cult which sought to meet the challenge of the egalitarian Islam by offering to regard all human beings irrespective of castes and creeds as equal and preaching the fundamental equality of all religions and the unity of Godhead. The quintessence of this new-religious turn was that to the common man, God cannot be realised through the impersonal philosophy of Sankara but only through absolute surrender and loving devotion.

The heralds of this new, soothing religion to the bereaved souls of thousands of vanquished Indians were Ramanuja, Ramananda, Vallabhacharya, Kabir, Nanak etc. But women also contributed their mite to this new faith. Two names stand out most prominently. Lalla, the ascetic and composer of hymns of Kashmir, and the magnificent devotee of Krishna, the nightingale of Rajasthan, Mira Bai. Throughout Northern India both of them deeply impressed the common men with their devotion. They are remembered even today, not only for their hymns charged with divine beauty, but also for their unreserved devotion to God. Of the two, Mira stands out more prominently. Her death-defying inspiration, transcending all the ordinary bounds of temptation in family and society and soaring high above where only her Giridhara, and no one else, exists to accept the fragrant sacrifice of her heart-felt devotion, have made her one of the most successful exponents of the 'bhakti'-cult. The frequent changes and unrest in the political sphere had its direct impact on traditional Hinduism giving vent to an air of escapism and finding consolation for the bereaved soul in 'bhakti'—and to this North Indian trend of religious thought—the contribution of Mira Bai is great.

ILLICIT GENERALISATION

With Mira Bai we come to the end of a series. From Mira Bai to the modern age, there is a long gap. It seems that women recede in the background in the new political atmosphere of the country. During the Mughal domination we trace no distinguishing woman in the field of religion. In the beginning of the 19th Century we have noticed the rapid pace of Westernisation in all aspects of our traditional life. With the onrush of British culture and its impact on the traditional beliefs of India, the ideal of our womanhood which glowed with white radiance in our chequered past seemed to be cast into oblivion.

At this stage there was the advent of Sarada Devi—the Holy Mother. But that is another story.

From this short review of the long period, we may be able to get a glimpse of the Indian women and their aspirations and the history they build up. History is indeed, the biography of its great persons and the lives of these noble souls make up the history of Indian womanhood. Our women were not simply a means to an end—they were an end in themselves. They were not simply the means to satisfy men's lust,—they were instrumental in remoulding men. They were not an unaesthetic, nor a stupid sex. They were not required to be civilised by men nor were they dwarfed or inferior in comparison with men. The cynic Schopenhauer and the master Aristotle, thus made an illicit generalisation about that sex. What they tried to prove has been disproved by the progress of time and, especially, by the ideal and contribution of womanhood that was Indian.

CHARU CHANDRA DUTTA, I.C.S.

(Continued from Page 108)

gible to all. Among those who have successfully attempted to render Sri Aurobindo's philosophical, spiritual and cultural writings in Bengali, Charu Chandra stands by himself.

HIS DAY AT PONDICHERRY

After about two or three years of the establishment of the Pathamandir, Charu Chandra shifted to Pondicherry to live there permanently. Occasionally he was wont to come to Calcutta to give us opportunities to hear from him the new developments of the Yoga of Sri Aurobindo. During his stay in Calcutta he used to hold conversations at our and also his own residence. My late wife Indira Devi was a recipient of his warm affections. My wife also on her part had great reverence for Sri Aurobindo and was blessed to receive his affectionate benedictions. Charu Chandra was gratified to see that in our house Sri Aurobindo's portrait painted by Indira, was being regularly worshipped. He was also much pleased to see my wife's skill in the art of painting for which she got much encouragement from him. Charu Chandra used to tell us that Sri Aurobindo was convinced that India is destined to be the spiritual guide of the whole world. India's task, according to Sri Aurobindo, would be to spiritualise the West, whereas the West would impart scientific truths to the East. This is the key note of a synthesis which is now approaching. He was not in favour of conflict between India and the rest of the world nor between nationalism and universalism. During the Swadeshi days when Sri Aurobindo was involved in a fight with the obscurantism of the West to accept India's claim for freedom, even then, he was of opinion that the freedom for India was essentially necessary not for India alone, but for the world at large and especially for the deliverance of the West from the iron grip of materialism and thus a new avenue will be in sight for the propagation of the Sanatan Dharma or an Universal religion in which lurks the way to everlasting peace.

The later days of Charu Chandra were spent at Pondicherry Sri Aurobindo Asram where he and his wife, who had all along been a true partner of his spiritual life, had a very peaceful time passed in a luminous atmosphere.

At Sri Aurobindo's unexpected withdrawal from the scenes of this world Charu Chandra felt a vacuum within himself too deep for others to realise. But the subtle realisation of the vast consciousness of his Gurudev coupled with the consolations given to him by the Mother restored peace in his bereaved soul.

Yet he did not survive for long after the departure of his blessed Guru and idol of India, Sri Aurobindo and he breathed his last in profound peace within a year of that event.

A VISION OF TRUTH

(Continued from Page 63)

away. Someday he will have to pull down that awful snob Noren to this level. His next thought was of tea. He shouldn't have bathed so early.

The dog had ceased to follow him.

Ram Talukdar assured Noren. "Don't you worry. We will catch him, comrade."

"No comrading me please", snapped Noren. "I consider it a term of disgrace. Know what a loss it means? She was worth at least Rs. 3000|-. There ain't 4 such pedigreed dogs in the country. The litter alone would have fetched Rs. 2000|- a year, let alone medals and prizes."

Ram paid no heed to that. As he rose to go he asked, "Could I have the money today?"

"Whatever for?"

"Forgotten already? Didn't you want a strike in your jute mill?".

"For how long?"

"A month".

"Make it three months. They will anyway haggle a month's pay at the end. Will a hundred do?"

"Well, er, how can I manage....."

"Wouldn't a hundred rupees a day do?" asked irate Noren.

"My thousand and Rahman's 500 ?"

"I will deduct the price of that dog from your share. You brought that dog-stealing president to this house". Noren's brows were knit.

"You are lucky to have got off with a diseased cur. No local leader would stir an inch for less than Rs. 2000|- chips.

Noren enquired, "Will everything be O. K.?"

"Yes, If you pay cash"'.

Everything was planned. Work was slack. The labour was restive for a raise. A 12-week strike meant saving 2 months' wages even after paying a month's.

Ram Talukdar shook hands with Noren as he left, "Au revoir, Comrade".

"Workers of the world must unite", replied Noren with glee.

platform on the Machada Local line. He did not seem to hear me. Once more I asked, "Have you any amazing Jolpan?"

"Yes." Roy seemed to hear.

He opened the tattered suitcase and took out a packet. I put a couple of pice into his hand.

"Don't you recognise me, Roy Mahasaya?"

Roy's eyes did not change nor did he blink. I stared at him too. Something about him seemed unnatural in the stillness of the platform background. He was mumbling something. The look in his eyes was aimless, wild.

Roy turned his eyes in another direction and demanded, "Do you know a good lawyer? A good lawyer?"

Without waiting for an answer he set off in the opposite direction. And then it happened.

Men with lanterns and lathis appeared. "Here he is!" one of them called, "Uncle is here."

"I've told you again and again,"' another spoke up, "to keep him chained. Why don't you listen to me?"

When I got on the Calcutta-bound train I took the Jolpan out of my pocket. I had not remembered it until then. It was wrapped in newspaper. There was no sal leaf inside. And when I opened it out, I found to my surprise, nothing. There were no peanuts, no fried dhal, no stick smeared with spice. A little dust and a few pebbles! That was all.

An amazing Jolpan!

As I looked at them the dust and pebbles seemed to me to be the past, present and future of the life of Ganga Govind Roy.

TAJ-MAHAL

(Continued from Page 47)

execrable and all-powerful fate overwhelmed and enervated the old man completely. ... He felt as helpless as a worm in a nest of hungry birds, and stood crushed before the enormity of the odds he was up against.

"Please, hujoor", he could no longer shut his eyes to the sinister forebodings of the inevitable and impending catastrophe, and asked with tears in his voice, "is there the least hope of her ever coming round....the slenderest....the remotest ?"

Words of false hope or hollow consolation stuck in my throat.

"None at all, I'm afraid," I replied truthfully, though bluntly.

With his head sunk low on his breast, the old man stood without a word, bowing meekly to the Will that be.

Next morning there was no sign of man and wife visible under the tree ... They had left during the night.

* * * *

It was some days later that I saw the old man again in the heart of a vast, open field. On this occasion too, as on the first, I was returning home from a visit to my private patients.

It was then midday, and the blazing furnace in the cloudless sky was raining liquid fire on the earth below.

Seated on his haunches on the ground in the scorching rays of the burning sun, the man, as I found him, was engaged in doing something with his hands ... Lest he should be badly stranded in this God-forsaken infurno with the dying Begum on his hands, I was curious to learn the exact nature of his occupation.

I went up to him.

The poor wretch was deeply engrossed in raising some sort of a mean and humble structure with broken bricks and clay for mortar, and completely oblivious of what was going on around him.

"What's it you are about, my man?" I broke in on him and enquired politely.

The man was instantly on his legs, bowing low to me respectfully.

"Building a tomb on my Begum's grave,," he informed me gravely with alacrity.

"What, your Begum's grave!" I was rather taken aback, and repeated after him lamely.

Apparently I had trodden on his toes.

"Yes, my lord". ... He was calm and composed as ever.

Rude reality struck me dumb.

After a few moments, more to change the sore topic of conversation and to end the awkward silence following, I asked him where and how he lived.

"I live on alms in the outskirts of the city."

"But you don't seem to be a familiar figure to me.....What, by the way, is your name?"

"I am generally known as Faquir Shah Jehan", he replied innocently.

"FAQUIR SHAH JEHAN !....Goodness gracious !"

I was stunned.

THE INCREDIBLE INK

A thrilling mystery story,—how a drop of ink provided a clue to the discovery of the murderer !

By HOWARD BROWNE

COLONEL Marcus B. O'Connell jabbed a button on the edge of his desk. A moment later the door opened and the office boy looked in.

"See if Peddie has come in," O'Connell directed.

The boy said, "He's here, sir. At his desk."

"Tell him I want him."

"Yes, sir." The boy eyed O'Connell's feminine visitor approvingly, then disappeared.

Through the thin walls of the private office came the steady clatter of the Tinsley Department Store's credit department. Typewriters staccatoed like a stick against a picket fence, pneumatic tubes hissed and clicked, telephone bells jangled continuously. It was the Colonel's duty, as Credit Manager, to keep that clatter at a steady tempo each weekday from nine until five-thirty.

The Colonel eyed his visitor thoughtfully through the lenses of the blackribboned pince-nez that straddled his long, bony face.

"Peddie's our skip-tracer," he explained. "A little, meek, mild-mannered man whom no one ever gives a second glance. But he's clever, Eve. Cleared up a couple of murders for the police, and recovered a very valuable diamond belonging to the store. He's qualified to handle this problem of yours."

His visitor, a slender, very pretty young woman, shifted nervously in her chair and smoothed the folds of her street dress over lovely knees.

She said, "I certainly hope you know what you're doing, Marc. If what I've told you ever gets out.....Well, it might lead to something that could ruin father."

The Colonel silenced her with a wave of his hand. "Now you listen to me, Eve Logan," he said, with affectionate rudeness. "I've known your dad since we were officers together in France. And I've known you for twenty-two years—in fact, since the day I held you on my lap for two minutes and had to borrow a pair of your father's trousers while mine dried ! Do you think I'd chance anything that might hurt either of you ?

"When Wilbur Peddie comes in here, I want you to tell him exactly what you've told me. If that man can be found, Peddie'll find him. That's a skip-tracer's business, Eve. And you can trust him as you've trusted me. I'll stake—"

A hesitant knock at the door interrupted O'Connell.

"Come in," he called.

The door was cautiously opened, revealing a small, middle-aged man in a neatly pressed suit of blue serge. He had thin, graying brown hair and completely common-place features Rimless glasses shielded faded blue eyes. In one hand he clutched an old-fashioned black derby hat.

Eve Logan was conscious of a sharp pang of disappointment. Certainly there was nothing in the appearance of this man to inspire confidence !

"Well, don't just stand there, Peddie," O'Connell said brusquely to his subordinate "Shut the door and come over here. I want you to meet Eve Logan, John Draper Logan's daughter."

The little man approached her, bowed with shy courtliness and said, "How do you do, Miss Logan ?"

The Colonel pointed to a chair. "Sit down,

Peddie. Miss Logan has come to me for help. Her problem turns out to be one that will require your type of service. I needn't warn you, of course, that all this is highly confidential, since you know who John Logan is."

Wilbur knew. Logan was wealthy and socially prominent; he was his party's nominee for governor in the coming election.

The skip-tracer sat down on the edge of the designated chair and placed his derby carefully on his lap.

"Yes, sir," he said quietly.

O'Connell nodded to the girl. "Go ahead and tell him, Eve. Exactly as you told it to me."

Eve Logan seemed uncertain as to just how to begin the second account. She bridged the silence by tucking tendrils of her soft blonde hair, worn in a long bob, behind her ears; then took a cigarette from her bag and accepted O'Connell's proffered light.

She lifted her eyes to meet Wilbur's, then. "I can't tell you much," she began slowly. "You see, I know so little. Just enough to prove—it concerns father. He's in some sort of trouble, I think. Last evening, while I was upstairs, dressing, father had a visitor. A man. They were in the library for almost an hour. I had just come out of my room and was at the head of the stairs when the library door slammed open and the man came out."

Eve heard him clearly: I'll give you 24 hours to make up your mind.....after that....."

She paused to take a deep draught at her cigarette, exhaled, and dropped the butt into an ashtray. The two men watched her, their faces intent.

"He stopped in the lower hall," she continued evenly, "to take his hat and top-coat from the closet. I saw him clearly then. Just seeing such a man in our house scared me. He looked so awful. Like something from under a stone. His face was thin and mean and the colour of ashes.

"Father remained standing in the library doorway, watching him. I could see that he was very angry. He seemed almost ill—sick with rage and—fear. I never before saw him look afraid.

"The man took his time about getting into his coat and hat. I could see his deliberateness was meant to be insolent. Then he said, 'I'll give you twenty-four hours to make up your mind, Logan. After that, Bonelli will get his chance at it. You know what that will mean to you.' "

Wilbur said, "Pardon me, Miss Logan. You are sure he said Bonelli ?"

She nodded soberly, "Yes; I heard him clearly."

Does the name mean anything to you ?"

Eve Logan took a deep breath. "I read the papers, of course. He's some sort of gangster, isn't he ? Father said once that if he were to go into politics it would be to rid the state of men like Bonelli."

Peddie drummed his fingers softly on the chair-arm. He said, "Did you say anything to your father about his visitor and what you had overheard ?"

"Oh, no !" There was quick alarm in her voice. "He would have refused to explain, and would only have been upset to learn that I knew about the incident. He mustn't find out I have talked to you and Colonel O'Connell."

Wilbur nodded. "Of course....What happened next, Miss Logan ?"

"When the man had gone," Eve Logan said, "I tiptoed back to my room to think things over. I realized father was in serious trouble of some

side street off Atlantic Road. He turned up the collar of his suit coat against the thin, penetrating rain that had begun to fall two hours before, and walked rapidly to the night club.

Within, he politely refused the head waiter's suggestion of a table and moved directly to the dimly lighted bar.

One end of the mahogany counter was free of customers. Wilbur climbed aboard a vacant stool and ordered a glass of buttermilk from one of the barkeeps, a round-faced man in a tan mess jacket.

The little skip-tracer took several swallows of the beverage, put down the glass and said, "This is very good buttermilk."

The barman was not impressed. "So I hear," he said.

Wilbur looked around the large, shadowed room. A five-piece orchestra played softly while a few couples revolved about the postage stamp dance floor.

"Nice place you have here," he remarked conversationally.

"Yeah." The barman moved away.

Wilbur finished his drink leisurely and called the man back. "Another one, please," he said, pointing to the glass. While accepting his change, he said, idly: "I don't suppose Miss LaRue has come in yet?"

The round-faced attendant looked at him stonily. "I don't know any Miss LaRue."

Wilbur's expression held just the right amounts of surprise and bewilderment. "That's strange," he said. "I had the impression she was employed here as an entertainer of some sort. When she left my office yesterday she mentioned I could usually find her here around midnight."

The barman asked the logical question Wilbur had steered him toward. "What does she look like?"

"Her hair," Wilbur said promptly, "is red; it's the most striking thing about her. Tall, but of rather, er—buxom build. Has a trick of throwing her head back when she laughs."

The attendant put both hands on the bar and regarded Peddie with cold, level eyes. "Copper?"

"I beg parcon?"

"Skip it. What d'ya want of her?"

"Oh. My name is Larkin," Wilbur told him unblushingly. "I'm her attorney. At least, she retained me yesterday to....well, to get some information for her.

"Here—" He took an old-fashioned card case from his pocket, extracted a bit of paste-board and placed it in front of the man, "—this will identify me."

The barkeeps read the print slowly in the faint light. It told him that Mr. R. Larkin represented Woodbury, Selwyn, Todhunter and Craig—Attorneys-at-Law. A stately combination of names—and strictly a product of Wilbur's fertile imagination.

"I managed to obtain the facts she wanted," Wilbur continued. "And since she seemed to want them quickly, I came directly here."

"Why not call her at the hotel under the name she gave you?"

Wilbur's smile indicated embarrassment. "I've forgotten where she's staying. You see, all that information is at the office and I didn't take the time to return there to get it. Nothing else to do, I suppose, but wait here until she shows up."

He paused and added, "In some circumstances women are—ah, deceptive about their names."

The barman reflected about that. His eyes shifted to the half-empty buttermilk glass and back to the inoffensive-looking little man under the derby hat.

"I guess you're O.K., Mr. Larkin," he decided. "This business of throwing her head back when she laughs sounds like Peggy Mitchell. She's a redhead. Used to be a stripper in the show here before she took up with....some guy. LaRue's probably one of her professional names. Try her at the Chelshore Apartments."

R. Larkin picked up his glass and drained its contents. He put it back on the bar with something of a flourish, patted his lips with the handkerchief from his breast pocket, said, "Thank you, sir," to the barkeep, and left the club.

The Chelshore was a small apartment hotel on Grosnevor Street, five or six blocks from the Parrot Pub. Entering the small foyer, Wilbur scanned the row of bells until he found one under a card reading *Mitchell*. He held the button down for a polite interval, released it and waited.

A woman's voice came down the wire.

"Who is it?"

"My name," Wilbur told the tube, "is Larkin. I'd like to speak with you."

"What about?" the voice asked suspiciously.

"It's personal and confidential."

"That isn't telling me anything."

Peddie put his mouth closer to the tube. He said, "Madam, I'm an attorney. There are two people standing in this hall within range of my voice. If you want them to overhear—"

A gasp interrupted him. "You can come up," the voice said. The lock on the inner hall door buzzed immediately.

Apartment 2B was at the head of the first flight of stairs. Its door was slightly ajar—and on a chain. A young woman with a cloud of red hair and wearing a frilly negligee was peering through the opening.

Wilbur Peddie removed his derby and bowed with courtly dignity. The woman's eyes widened a bit.

"Good evening, Miss Mitchell. May I come in?"

Her sharp, rather hard blue eyes went over him carefully. The old guy certainly looked harmless, she decided. "O.K.," she said, and released the door chain.

The living-room was the drab image of that of every other third-rate apartment hotel. Through a half-open door, Wilbur caught a glimpse of an unmade bed, a litter of feminine wearing apparel, and filled ashtrays.

At the woman's invitation, Wilbur dropped into an overstuffed chair and placed his hat beside him on the threadbare rug. His hostess sank onto the davenport opposite him, pulled two well-filled silk stockings under her and reached for a cigarette box.

She opened the conversation. "What's on your

sort, but couldn't decide what should be done about it. Had I known his visitor's name—anything at all about him—I might have been able to work out some plan to get at the truth. And then, several hours later, I saw the man again."

"'Again ?' You mean he came back ?" Peddie asked.

The girl shook her head. "No, Mr. Peddie. The second meeting—if you can call it that—was accidental. Milly Beckett had called me earlier in the day, asking if Steve and I would go nightclubbing with Tod Renault and her that same evening. I got in touch with Steve—he's Stephan Kilmer, Judge Kilmer's son—and made the date. He picked me up about ten-thirty last night; we stopped off for Milly and Tod and started out.

"Along about one-thirty this morning, the four of us took a table at the Parrot Pub—a night club out on Atlantic Road. We were having something to eat and watching the floor show, when I happened to glance across to the bar."

She raised her eyes to those of the little skip-tracer. "It was he, Mr. Peddie. He was at the bar, talking to a stunning red-head in a green chiffon gown.

"I didn't know what to do. I wanted to get up and go over to him and say, 'Pardon me, I'm Eve Logan and I want to talk with you.' But I didn't have the courage. I just sat there, staring at him, trying to think of something.

"Very soon afterward, a waiter went up to the man and said something to him. The man gulped down his drink in a hurry, passed some remark to the girl and they practically ran out of the place."

"What," Wilbur asked quietly, "did you do, then ?"

"What *could* I do ?" Eve Logan asked helplessly. "I thought of following them, but I didn't know how to go about it. Later, I asked the bartender who the man with the red-haired girl had been. He just looked blank, and said, 'Sorry, lady, I don't pay attention to customers' names'. I would have asked the waiter who had spoken to him, but I wasn't sure which one it was. I couldn't very well be conspicuous about it, you know."

Colonel O'Connell removed his pince-nez and thoughtfully rubbed the bridge of his nose. The girl, as though to signify that she had finished her story, reached for a cigarette and the desk lighter.

"What's your opinion of all this, Peddie ?" asked the Colonel, after a moment.

The skip-tracer drew a speculative finger over the crown of his derby. "The simplest course," he remarked, "would be to ask Mr. Logan for details. There may be some perfectly harmless reason for what Miss Logan overheard."

Panic flooded the girl's face. "No ! You mustn't do that. Father'd only resent it. I'd much rather forget the matter than let him know what I'm doing. If this man could be located, so I could talk to him myself...." Her voice trailed off.

"Even if we manage to find him, Eve," O'Connell pointed out, "he might refuse to discuss anything with you."

"I don't think so," Eve said. "My impression was that he wanted money from father as payment for keeping something under cover. If it *is* some sort of blackmail, you can bet that father would never pay a cent—even if it meant the end of all he hopes for.

"But I'm not that proud, Marc. He's my father and I love him. Mother left me a lot of money, and I'd pay every dollar I own if it would save him from being hurt."

CHAPTER—II

COLONEL O'Connell smiled. "All right, young lady, we'll see what can be done....What about it, Peddie ? Any ideas on how to go about finding this mysterious visitor ?"

"I'd like to ask Miss Logan a few more questions," Wilbur said.

The girl nodded. "Of course."

"When you saw this man at the club," Wilbur said, "did you get the impression that he was well known there ? By the night club personnel, I mean."

The girl frowned thoughtfully. "N-o. Not especially. Although the waiter seemed to....They seemed to know the woman he was with, though."

Peddie showed his interest. "What gave you that impression ?"

"Why, you could *see* it. The barkeeps exchanged conversation with her in free moments; you know they don't usually talk to customers, particularly to women customers, unless they know them. The manager nodded familiarly to her as she left; several of the customers greeted her."

"I see." Wilbur looked down at the hat he was slowly revolving. "How would you describe her ?"

"First of all, her hair is red—a rather striking red. She's an inch or two taller than I. Her figure is....well, curvaceous would fit. I wouldn't guess she was a person of any upbringing; she laughed a lot—loudly, with her head back."

"Would you say she was young ?"

"Ye-s. I think so. At least, in years."

Wilbur Peddie understood what she meant by that.

The middle-aged little man rose from his chair. "I'll see what I can do, Miss Logan. If I succeed in learning the man's identity, how shall I get the information to you ?"

"You can make your report to me, Peddie," O'Connell interjected. "I'll see that it reaches Miss Logan."

The girl tamped out her cigarette and stood up.

"No, Marc. You've already done enough," She scribbled a brief notation on a card from her purse and handed it to Wilbur. "You can reach me at this number. If I go out, I'll leave word when to expect me. Call the moment you have information—regardless of the hour."

No one could ever pass the Parrot night club without realizing it was there. A huge outline of a parrot in brilliant green neon above a brightly lighted marquee commanded attention.

Shortly after midnight, Wilbur Peddie found parking space for his secondhand Chevrolet in a

mind, Mister ?" Her eyes and expression were openly hostile, ineffectively masking alarm.

Wilbur smiled reassuringly. "The name is LarkinR. Larkin. You are Peggy Mitchell ?"

"What about it ?" she responded, harshly.

Wilbur leaned forward. "Please understand me, Miss Mitchell. I'm here to help you. A very close friend of yours—a man—is going to find himself in trouble. The client I represent has every reason to believe that you know all the facts.

"Now, we want to know if you are willing to come in on our side. My client is ready to make it worth your while, lavishly."

While Peddie was speaking, the colour had slowly drained from the girl's rather plump face, leaving two rouge spots standing out grotesquely. She wet her lips, said, "Who do you mean ? What friend of mine ?"

Wilbur patiently shook his head. "Please, Miss Mitchell, I'm not here to do any fencing. You know the man I mean. And I know that you know. What I want is the complete story. But I am not going to give you a single cue. To do so would give you a lead on what we already know. In that way you might leave out part of the story on the assumption that it wouldn't aid us. We must have all the facts."

"A very close friend of yours.....a man .....is going to find himself in trouble".

She regarded him steadily, her eyes narrowed in appraisal. "If you mean that Kenyon rap," she said slowly, "you're wasting your time. Frank had nothing to do with it. The Grand Jury refused to indica, uh—him."

Again the little skip-tracer shook his head. "I'm not talking about the Kenyon case. Try again."

CHAPTER—III

PEGGY Mitchell wriggled into a more comfortable position on the couch, the movement causing her negligee to gap widely. Wilbur, a confirmed bachelor, looked hastily down at his hands.

"Look, Mister," Peggy Mitchell said, "I really don't know who you're talking about, see ? Give me the name of someone mixed up in the case you mean. I'm willing to pick up some money any old time, but I want to know what this is all about."

Wilbur hesitated. He had sought out this girl on the slender chance that she might drop a clue to the identity of John Logan's visitor. It was quite possible that the man had told Peggy Mitchell nothing of his activities.

"I've told you all I should," he said.

The girl started to say something, then stopped. A scowl twisted her face and her feet plunked to the floor.

"Wait a minute, you !" she snapped. "What *is* this ? You come busting in here, give me a name I never heard before, shoot me a line that's just a bunch of words; then expect me to open up with everything I know.

"Now, you'll either come out from behind your tree, or by God you'll get out of here ! Make up your mind—and fast !"

"You," Wilbur said stiffly, "are making a mistake."

"I've made 'em before ! So how about it ?"

"No."

"Then—beat it !"

"Certainly." Peddie picked up his hat, sighed, and got to his feet. "I'm sorry, Miss Mitchell, that

you refuse to see things my way. A lovely young woman, such as you, has no place in prison, and—"

"Scram !" She was standing now, pointing imperiously.

Wilbur shrugged, said no more. He wheeled and strode with dignity to the apartment door.

A phone booth in the lobby caught his eye. He looked up a number, entered, deposited a coin and dialed.

A man's voice said, *"Daily Record."*

"City desk," Wilbur requested.

Click-click. "City; Burke speaking."

Wilbur said, 'I should like some information, Mr. Burke."

"All right."

"I'd like to find out," Wilbur said, "about a case involving someone named Kenyon in which the Grand Jury refused to indict. I believe one of the principals was a Peggy Mitchell."

"Hold on a minute."

It was nearly three minutes before the unseen Mr. Burke came back on the wire. He said, "I think I have what you want. Who are you ?"

"My name is Dorset," Wilbur replied without hesitation. "You know, the private investigator," he added persuasively.

"What's your interest in the case ?"

"I'm not at liberty to tell you that, just now." There was deep regret in Wilbur's tone.

"If there's a story in it," Burke said, "we want it."

"I think I can promise that."

"Well, don't forget it if you ever want any more help. All right, here are the facts : Last fall, Robert Kenyon, only son of Forrest Kenyon, the wholesale grocer, got mixed up with an entertainer in one of the local hot spots. He put her up in a swank apartment over on Murray Hill, spent a lot of dough on her. A couple months later, some fast-talking guy called on Bob's dad, claimed to be the girl's husband and told the old man he wanted twenty grand or he'd sue the kid for alienation of affections, and publicize the whole mess.

"Maybe you don't know it, but Forrest Kenyon is a mean proposition to fool around with. Anyway, he told this guy to come back in a few days and he'd pay the bill. When the guy does come back, the old man hands him the twenty G's in marked bills, touches a buzzer, and the cops walk in and collar the guy.

"Well, it looks open and shut. They haul the guy and the gal before the Grand Jury, but for some reason no one can dope out, there's no true bill voted. That's all."

Wilbur said, "Do you have the names and addresses of the man and woman ?"

"Sure. The gal was Lois Mitchell, 1817 Sheridan Drive—that's on Murray Hill; the guy's name was Frank Lauth, 4712 Wilmot Avenue."

The skip-tracer wrote the information on the back of an envelope, thanked the newspaper man, and replaced the receiver.

The Wilmot Avenue address proved to be a four-story walk-up just around the corner from a bus line. Wilbur parked his car and entered the foyer.

There was no lock on the inner door. He debated on ringing the bell under Lauth's name, decided against it; and softly mounted the stairs to the third floor.

Outside Lauth's door, he hesitated. For a moment he thought he had caught the murmur of voices from beyond the panels. He was almost sure that Lauth and John Logan's visitor were one and

For a moment Wilbur thought he had caught the murmur of voices from behind the panels.

the same. Still, it would be better to make certain.

He rapped gently on the wood. There were sounds of feet, and a moment later the door swung back.

A short, stocky man with buck teeth and cold, unfriendly eyes stood in the opening. "Well, I'll be damned ! If it ain't our old friend, Wilbur Peddie !" the man cried.

There was a long moment of silence, broken when a voice from behind the man in the doorway said, "Who is it, Kirby ?"

Kirby turned his head. "It's papa's little helper again, Lieutenant ! Your pal, Wilbur Peddie."

"The devil !" A tall, capable-appearing man, along whose narrow face a thin white scar stretched from the corner of one eye almost to his chin, came up beside Kirby.

He said, "I'd like to know what it is that guides you to these things, Peddie. The first time it was an accident; the second, a coincidence. *This* makes it a habit ! What are you doing here, anyway ?"

Wilbur had recovered from the initial shock of finding the two members of the Homicide Department in Lauth's apartment.

"I," he explained glibly, "am looking for a Mr. Mooney."

Kirby eyed him skeptically. "Don't tell us, Wilbur, that you do skip-tracing *at one o'clock in the morning.*"

Wilbur Peddie met the officer's cold eyes with no hint of perturbation. "Only when necessary," he

explained calmly. "It seems that Mr.—er—Mooney is preparing to move again, and I wanted to contact him first. Is he in ?"

The two men from Homicide exchanged glances.

"No," Barton said. "Matter of fact, no one named Mooney lives here."

There followed a brief silence. The little skip-tracer put his derby back on his head, said, "If you will excuse me, I'll be getting on," and turned to go.

"Wait a minute, Peddie," Barton said.

Wilbur turned back. "Yes, sir ?"

"Come in here for a moment. Maybe you can help us."

Wilbur Peddie took a deep breath. He had been afraid of that. There could be only one reason for these two men to be in Lauth's apartment.

Obediently, he followed Barton and Kirby into a rather small living-room. Seated on the couch, near the windows, was the fourth occupant of the room.

Her face pale but composed, Eve Logan met Wilbur's astonished gaze with faintly quizzical eyes!

Barton said, "Sit down, Mr. Peddie. We've been here only a few minutes—that is, Kirby and I have. This young lady arrived some time before us. We were just preparing to question her."

Wilbur appeared mildly interested. "Question her?" He repeated vaguely, as he dropped into a chair.

"That's right. About the death of Frank Lauth!"

" 'Death' !" The little man's face paled noticeably. "Good Heavens, Lieutenant; not *another* murder ?"

The officer nodded grimly. "Uh-huh. And this is one time murder meets my approval. Frank Lauth was a rat—the blackmailing species. Earlier tonight, we received a tip that he was mixed up in the killing of a man named Burke a few days ago. Burke had a long record—burglary, mostly—and at the time of his death was wanted for looting the home of a former District Attorney named Rudmire, who retired from office ten or fifteen years ago."

"I see," said Wilbur, who didn't see at all.

"Anyway," Barton resumed, "Sergeant Kirby and I came here to talk to Lauth. We came up without being announced, pushed open the door and walked in. And here was this young lady standing in the middle of the living-room."

A door in the opposite wall opened, and three men came out of an inner room.

One of them, a chunky, bald man in a baggy gray suit, put the bag he was carrying on an end table and mopped his forehead with a soiled handkerchief.

"That paper-knife did it, Lieutenant," he growled. "Got the jugular neat as you please."

"How long ago?" Barton asked.

"Not over two hours; maybe half an hour."

"I expected that....Any prints, Joe ?" Barton asked of one of the others.

"None on the knife. A lot of Lauth's on nearly everything in the room."

"Get your pictures, Paul?" Barton said to the third.

"Yeah."

The man in the gray suit said, "They'll be out for him pretty soon. I called on the desk phone in there."

Barton nodded. "O.K., boys; you can go ahead."

After the three filed out, Barton drew a chair into position directly in front of Eve Logan, and sat down.

"Now, Miss," he said, "I'd like answers to a few questions. To begin with, suppose we have your name."

"Of course. I'm Eve Logan, and my address is 1217 Milldale."

"All right. Now, if you—"

Barton stopped there, his mouth open. "Wait a minute ! You said, *Eve* Logan ?"

"Yes, Lieutenant."

Barton appeared definitely uncomfortable. He said gruffly, "I *thought* I'd seen you before. Aren't you John Draper Logan's girl ?"

"Yes, Lieutenant."

"Well, now." Barton seemed at a loss for words. "I don't understand this, Miss Logan. Your being mixed up with a man like Lauth—and a murder. How come ?"

Eve Logan wondered with a sinking feeling how on earth she could explain having come to this apartment without bringing her father's name into the case. It could be dynamite in his political campaign. The knots in her stomach tightened as she realized that anyway there'd be headlines; Gubernatorial Candidate's Daughter Questioned in Murder Case.

CHAPTER—IV

JOHN LOGAN'S daughter took a cigarette from her handbag and accepted the light proffered by the police officer.

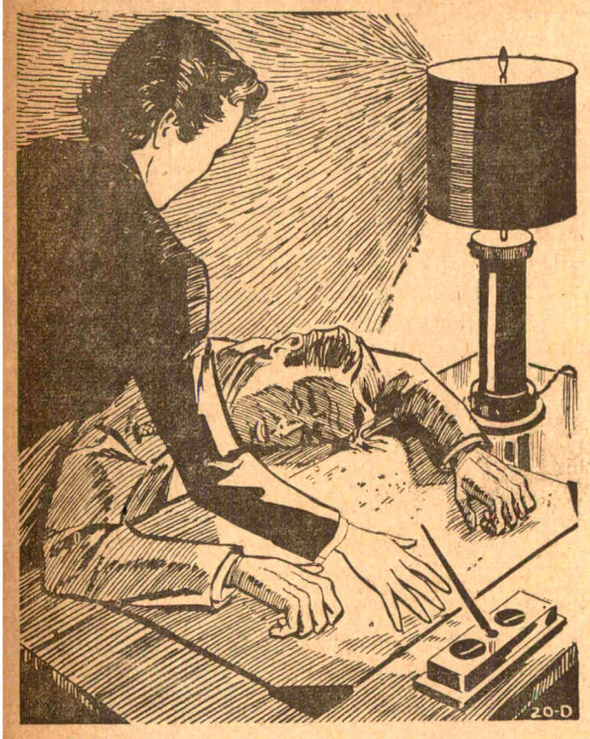
Eve said, "I assure you, Lieutenant, that I had nothing whatever to do with this man's — Mr. Lauth's death. He was just as you saw him when I arrived."

Barton said casually, "How long had you been here before Kirby and I came in, Miss Logan ?"

"Not more than two or three minutes."

"Since you say he was dead when you got here, how were you able to get in?"

Her reply to this question came smoothly, without hesitation. "When there was no answer to my ring from downstairs, I decided the bell was out of order. Since Mr. Lauth was expecting me, I was confident he was in. I came up, found the apartment door slightly ajar and the living room light burning."



Lauth was slumped across his desk, arms outthrust. A knife protruded from his neck.

I knocked once or twice, then getting no response, I pushed open the door and walked in."

Her voice faltered slightly, and she stopped there.

"Go on," Barton prompted softly.

She took a long pull at her cigarette. "The study door was open, I could see him clearly from this room. He was slumped across his desk, his arms outthrust. His face was turned toward the door, the knife protruding from his throat. I knew at once that he was dead".

She shuddered violently, then, and bowed her head. The rays from a floor lamp behind the couch made an aura of light about her blonde head.

"And then?" Barton prodded.

She made a helpless gesture. "I was too shocked to do anything. My first reaction was to turn and run — to get away from so horrible a sight. His eyes were open and staring right at me and —" She could go no further.

"What did you do, then?"

"Nothing. The next thing I knew, you and the other officer were in the room."

Peddie noted that Barton did not press the girl for an explanation of *why* she had come to see Lauth. Gallantry? Or because Barton was mindful of John Logan's political position?

Barton stood up. "All right. I'm going to have another look around Lauth's study. Kirby will keep you company, Miss Logan. Come along, Wilbur."

The body of a man of perhaps forty lay sprawled across a wide topped desk in the centre of the room. The handle of a cheap, metal paper-knife stood out from his throat below a thin, vicious, gray-skinned face, the dark, sullen eyes set in a fixed stare.

There was a great deal of blood on the desk pad beneath the body. Wilbur shuddered and turned away.

"There it is, Peddie," Barton said, waving one arm in a broad sweep. "Frank Lauth had this coming to him for a long time. But the law says—Hey, watch where you're going! You'll step in that ink stain!"

Wilbur halted in mid-stride and looked down at an up-ended inkwell on the carpet. Some of the puddle of purple ink had soaked into the material.

"Knocked off the desk when Lauth fell forward." Barton explained. "He must have plumped over like a rocket to send it that far. And the inkwell must have been full, there's so much of the ink on the floor."

Peddie nodded appreciatively at the lieutenant's observations.

The mild-mannered little skip-tracer, hands clasped behind him, wandered thoughtfully about the room, his light blue eyes noting other details. He paused for a long moment at the room's single window, fingering the catch absently. Finally, he came back to the desk and, overcoming a visible reluctance, opened and closed the drawers, glancing hurriedly into each.

Barton, watching, smiled. He knew from experience how keen the mind behind that commonplace countenance.

"How about it Wilbur?" he asked.

Wilbur sighed. "It seems rather obvious. The man who murdered Lauth did not come here to kill him. He came to get something from Lauth; was prepared to pay for it. For some reason the two men quarrelled. The murderer struck Lauth down and began a search for what he had come to buy. He was interrupted; possibly by the arrival of Miss Logan. Anyway, he left by the window, descending the fire escape."

The lieutenant was staring at him, a strange expression on his face. He said, "Wait a minute, Peddie. Why do you say a *man* killed Lauth?"

"Is there any reason to think otherwise?"

Barton's shoulders lifted and fell. "That," he said, "depends on the answer Eve Logan gives me to a question. I'm going to ask it now."

They went back into the living-room.

The lieutenant straddled the chair in front of the girl. "Miss Logan, what time would you say it was when you arrived here?"

It was not the question Peddie had expected Barton to ask — not the first question he would have asked if he had been in the lieutenant's position.

Eve Logan thought for a moment. "Well, father got home around midnight. I went out immediately afterward. I came here by taxi; which means about twenty minutes ..... I'd say around twelve-thirty".

Barton pursed his lips. "All right. Now you say Lauth was dead when you came in. You say you remained in this room from the moment you arrived until Kirby and I showed up. Is that correct ?"

"Yes, sir."

"Do you want to qualify that answer in any way?"

She met his eyes steadily. "Certainly not!"

Barton seemed suddenly very tired. He said, "When Lauth was stabbed, he fell across his desk, knocking an inkwell containing purple ink onto the carpet."

There were puzzled lines in the girl's forehead. She said, "Yes?" uncertainly.

The officer hesitated. "I shall ask you again, Miss Logan: Were you at any time, and for any reason, in Lauth's study tonight?"

Anger edged into her voice. "I've told you I was not!"

"Then," Barton snapped, suddenly savage, *"how did that purple ink get on the skirt of your coat ?"*

Eve Logan's eyes widened in abrupt horror and she glanced quickly down at the folds of her light spring coat. There, weak and washed-out appearing from the rain-dampened cloth, were several small but distinct splotches of purple ink!

Slowly she raised a stricken face to the waiting officer. "I — don't know," she whispered shakily. "It's — it's incredible! I wasn't in that room".

"Stop it!" Barton rasped. "You're lying and we both know it. I'll tell you what happened here tonight, Miss Logan.

"I can guess why you came here tonight. Blackmail was Lauth's business; and he knew how to get a hold on persons — particularly women who slipped up. He probably had something on you. You pleaded with him to give up his hold on you. Lauth refused; perhaps said something so insulting that you lost your temper. In desperation you grabbed his paper-knife and stabbed him. He was rising from his chair as you struck; when he slumped forward the ink-well upset and some of the flying drops fell on your coat.

"Then you started through his desk, hunting for the evidence you had come to get. But when the sergeant and I arrived, you were trapped. So you did the only thing possible: returned quickly to the living-room, then claimed you had arrived just ahead of us. But those ink-stains tripped you up".

His voice, harsh and compelling, softened abruptly. "It's no use, girl. You killed him. And he got only what he deserved. You may as well tell us about it. Under the circumstances no jury or court would convict you".

Peddie understood Barton better now. He spoke up. "It might be best, Miss Logan, if you didn't make any more statements until you have the advice of a lawyer."

Barton scowled at him.

Dazedly, Eve Logan shook her head. "But I didn't kill him," she said stubbornly.

Barton was on the point of replying when a knock sounded at the hall door. Two men in white came in, a stretcher between them.

Kirby jerked a thumb toward the study door and the pair went in. They came out almost immediately, the stretcher weighted under the sheet-covered figure of Frank Lauth.

After they had gone, Barton broke the silence. "You'll have to come along with us, Miss Logan. I suppose you'll want to get in touch with your father?"

"If you please, Lieutenant." The girl's voice was very low but perfectly controlled.

"Of course. You can call him from—uh—my office."

Wilbur Peddie cleared his throat. Barton's head came around quickly. He said, "Something, Wilbur?"

The others looked at the little man expectantly. Hope lightened the girl's eyes.

Wilbur said thoughtfully, "If I could have a glass of water ....."

Quick interest showed in Barton's expression. "What for, Peddie?"

The skip-tracer looked faintly surprised. "Why—to drink. I'm thirsty."

Barton flushed, scowled, said, "Try the kitchen", shortly, and pointed to one of the doors leading off the living room.

When Wilbur came back from the kitchen, the others were ready to leave. Eve Logan, a grimness about her mouth, was standing between the two officers. There was nothing of the fragile, helpless, bewildered child about her. She seemed, instead, self-possessed and resolute.

They went into the hall, waited until Kirby made sure the door's spring lock was in operation, and descended the stairs — all without a word being said.

As Eve Logan stepped into the back of the police car, Wilbur said, "Will you need me any more tonight, Mr. Barton?"

The lieutenant shook his head briefly, smiling at the word 'need.' "No, Peddie. I'm sorry you didn't get a chance to use your talents this time. But then not all murders are mysteries. Goodnight."

Wilbur doffed his hat to them as the car pulled away from the curb. The misting rain clouded his glasses so that he could not see their faces clearly.

"Goodnight", he said cheerfully, glad that Barton had not left a policeman to guard the murdered man's apartment.

CHAPTER—V

EXCEPT for a dim bulb on each landing, the rear stairway of 4712 Wilmot Avenue was in complete darkness. Wilbur Peddie paused on the third level, quite aware of the consequences of being discovered on some tenant's porch at two in the morning.

But he heard and saw nothing alarming; and seconds later he was opening the door into the kitchen of the late Frank Lauth.

He reset the bolt he had drawn while in the kitchen on the pretext of quenching his thirst, a few minutes earlier, then felt his way into the living-room.

Entering the study, he tiptoed across the room to draw the single window shade, then turned on the desk light.

The wide, ugly red stain still gleamed wetly under the soft yellow rays. The inkwell, black and squat, still lay on the taupe rug near the deep purple blotch of spilled ink.

He slid squeamishly into the dead man's chair and carefully drew open the desk's centre drawer. A heavy-caliber automatic pistol lay exposed there, with something efficiently ominous in its chill perfection.

Gingerly, Wilbur withdrew the gun and placed it on the desk. Removing his derby, he set it carefully over the weapon. Then he tackled the job of thoroughly examining every scrap of paper in the drawers.

He was in the act of combing through the bottom drawer, a few minutes later, when the interruption came.

"Get your hands up — quick!"

Wilbur's fingers came out of the drawer's interior as though its contents were white-hot.

A broad-bodied man in a gray trench-coat stood in the doorway. A soft-brimmed hat came well down over his dark-skinned, round face. Black, lusterless eyes were slitted in cold appraisal. A shiny revolver with a black tube fitted around its barrel was trained squarely on the skip-tracer.

Wilbur Peddie could feel a sudden dampness on the crawling skin of his forehead.

"Where," said trench-coat tonelessly, "is Lauth?"

And then, instantly, many things were clear to Wilbur Peddie,

He said, "He's out, Mr. Bonelli."

The man in the trench-coat did not change expression; but Wilbur caught the involuntary start.

"I don't know *you*," he said. The remark was a tacit admission of his own identity.

Wilbur said nothing.

"When will he—" Bonelli broke off sharply, with a hissing intake of breath. His eyes were fixed on the red stain in the centre of the desk blotter.

"It is not necesary," Wilbur said calmly, "to go through all this on my account."

The gun in Bonelli's hand did not waver. "Meaning what?"

Matters were clearing so rapidly for Wilbur that he quite forgot to exercise caution.

He said, "You had to come back. You didn't have time to finish your search the first time."

The man in the trench-coat came a few steps nearer the desk, his gun still covering the little skip-tracer. There was a puzzled expression around his dark eyes.

"You're doing a hell of a lot of talking, grandpa", he said mildly, "but it doesn't mean anything. Make it clear."

Wilbur Peddie said, "You were here earlier tonight, Mr. Bonelli. You had an appointment with Lauth, he was to sell you something that would enable you to keep from the governor's chair a man who hated you.

"But for some reason Lauth would not sell. You saw your only chance to stay in power slipping away. With Logan in office you were through.

"And so you murdered Lauth, Mr. Bonelli. Killed him with his own paper-knife. Then, while in the act of rifling his desk, you heard someone at the hall door.

"It could have been the police. You had to get away. The only avenue open was the fire-escape outside the window of this room. And that's the route you took.

"From some point you watched the police arrive. That told you Lauth's body had been found. When you saw them leave it, it seemed safe for you to come back and take up your search."

"Lauth knocked off!"

A grayish pallor had overspread Bonelli's face. He said hoarsely, "You're nuts! I didn't even know Lauth was dead."

Something glittering in the dark eyes suddenly awakened Wilbur Peddie to the danger of his own position. Certainly it was no aid to longevity to accuse an armed man of murder!

He reached an unsteady hand for his hat. "Then somebody else must have done it," he said weakly. "Now if you'll excuse me, I'll be getting along."

"Wait a minute, grandpa."

In one simultaneous motion Wilbur flipped aside his derby, picked up Lauth's gun and fired.....

The gun in Bonelli's hand came forward with determination.

"Yes, sir?" Wilbur's voice had developed a squeak.

"Where—" The threat in Bonelli's tone was as evident as a naked blade —" did you get all the dope about Logan's confession and my interest in it?"

"I—uh—" Wilbur could go no further.

"I'm sorry, grandpa." The regret in Bonelli's voice might have been sincere. "But you know things you shouldn't".

That which followed seemed mostly a series of blurs. Bonelli's gun hand lifted slighty, the trigger finger beginning to tighten. In one simultaneous movement, Wilbur Peddie flipped aside his derby, snatched up Lauth's gun and fired at the other's chest. The sound of exploding powder filled the room. Through a blue haze, Wilbur watched Bonelli topple forward, a neat blackened hole in the exact centre of his forehead.

Wilbur stood up slowly, swallowing mightily to keep his stomach under control. He reached for the

phone. used both hands to steady the receiver, said, "Police" with the second attempt; then he slumped forward in a dead faint.

There were, in addition to Wilbur Peddie, four men and a woman in the modernly furnished office of Malcolm Paine, the district attorney.

Paine, fleshy and florid-faced, with a frugal manner of speech, leaned back in his swivel chair and neatly displaced his cigar ash in a streamlined chrome ashtray at his elbow.

He said, "I'm satisfied. Bonelli killed Lauth; you killed Bonelli. Good work, Peddie. Both you and Miss Logan are at liberty to go. We'd like both of you to be at the inquests, however."

Lieutenant Barton cleared his throat uncomfortably. He said, "I'd like you to know, Miss Logan, that I'm both happy and relieved that things worked out this way. The police are just as happy to clear an innocent person of murder as to find a guilty one. I'm glad that this break came before your happening to be in the apartment got into the papers. Please understand that what I said when questioning you was necessary under the circumstances."

The girl smiled wearily. "You did your duty, of course." . . . .

John Draper Logan stood up abruptly and reached for his hat. A dark suit of excellent cut emphasized the military erectness of his bearing.

He said, "Since you've no objections, Paine, I'm going to take Eve home. She's had a trying time of it."

"Certainly," the district attorney said heartily. "I'll have one of the boys drive you there".

"That won't be necessary," Logan said. "My own car is waiting." He placed the Homburg on his closely-cropped iron-gray hair and turned to his daughter. "Come, Eve."

The girl rose from her chair but made no move to follow her father. Instead, she turned to the little skip-tracer.

"Mr. Peddie," she said.

Wilbur looked up. "Yes, Miss Logan ?"

"How will you get home?"

He looked at her, surprised. "My car is still parked over on Wilmot Avenue. I'll take a cab there, and drive home."

"Come home with us," the girl urged. "It's too late to go through all that. Besides, father and I haven't thanked you properly."

John Logan said, warmly, "By all means. We insist on it, Mr. Peddie."

"Well, I — I thank you," Wilbur said, and together the three of them walked out.

Sergeant Kirby watched the door close behind the two men and Eve Logan. Then he went over and sat down on the edge of Malcolm Paine's desk.

"There's just one thing I'd like an answer to," he said flatly.

Barton and the district attorney stared at him. Finally Paine said, "Well?"

"Look," Kirby said. "Bonelli goes to see Lauth. He can't get whatever it is he wants from the rat. So he knifes him. Right?"

"He seems to have admitted as much to Peddie," Barton said.

"Fine. Then the Logan dame shows up and scares Bonelli away before he can find what he wants. He takes a powder by way of the fire-escape; lays low until everybody leaves; then goes back, jimmies the front door and goes in — to find Peddie ahead of him. Peddie calls the turn on him; Bonelli admits he killed Lauth. then goes for his gun to erase Peddie. Right?"

The question was rhetorical, and drew no answer.

"Then," Kirby concluded, *"how did Eve Logan get purple ink on her coat?* And why was she there in the first place?"

Paine's florid cheeks darkened. "Don't be a damned fool, Kirby !" he snapped. "Could have got there a hundred ways. This case is closed; understand?"

Yeah," Kirby said, "yeah, I understand." But he wasn't satisfied. Intuition, shaped and sharpened by years of police work, told him that somebody could be getting away with murder.

CHAPTER—VI

THE Logan home was a square, three-storied residence of brown stone, set back among well-kept lawns. John Logan unlocked the front door and entered first.

"The servants are asleep," he explained, smiling. "Good thing, too; can't let them see the hours we keep !"

Eve shrugged out of her light coat and swung back the door of a hall closet.

"If you two will excuse me", she said, draping the garment about a hanger and thrusting it into place on the crowded rod, "I'm going to get some sleep. It isn't every night a gal gets herself accused of murder!"

Wilbur Peddie turned his derby self-consciously in his small hands. "You're sure I'm not putting you out?" he asked timidly.

The girl reached out impulsively and squeezed his fingers. "Of course not, Wilbur. You mustn't be so formal with us. What you have done for me tonight is something I can never make up to you. All I can say is. I'll love you forever !"

Before the astounded little man could realize what was happening, she had bent swiftly and kissed his cheek. Then she was gone, running lightly up the staircase to her room.

John Logan chuckled. "She means it too, Peddie .....Come along; we'll have a drink before I show you your room."

Still under the influence of his first such kiss in thirty years, Wilbur Peddie allowed himself to be led into a large low-ceilinged room, its walls lined with books. He dropped into a leather lounge chair, at Logan's invitation, and closed his eyes. For a moment he was conscious of being very tired.

Logan's voice roused him. "A drink, Mr. Peddie?"

Wilbur opened his eyes. "No, thank you".

Something was nagging at him from the back of his mind; something that had tried to come out into the open since Eve Logan had opened that hall closet .....

He stood up abruptly. "Excuse me for a moment sir," he said rapidly. "I forgot to put my hat away."

Logan, in the act of taking a squat bottle from a portable bar, looked up in mild surprise. Before he could offer comment, Wilbur, hat in hand, had disappeared into the hall.

When he returned, John Logan, in shirt sleeves and loosened collar, said, "Sit down, man, and relax. Sure you won't have a drink?"

Wilbur resumed his chair, shaking his head poli-

ely to the question. For a moment or two, both men vere silent.

At last the little skip-tracer shifted his position nd, as Logan glanced at him, said, "It's really none f my business. Mr. Logan...."

A tiny vertical line appeared between the other's yes. "Yes?" he prompted, wonderingly.

"Did you get back your confession," Wilbur sked clearly, *"after you killed Lauth ?"*

Deliberately, John Draper Logan bent forward o place his glass on the table. When he straighten-ed, there was no particular expression on his face. Except for a trace of heightened colour in his cheeks, he might not have heard the little man's words.

He said, "Do you realize what you're saying?"

There was regret in Wilbur Peddie's expression, ut nothing of indecision. "Yes, sir," he said simply.

A smile managed to find a hold on Logan's stiff ips. "I'd like to hear about it."

Wilbur nodded gravely. "I didn't know the truth, nyself," he admitted, "until just a moment ago. You ee, everything pointed to Bonelli as the killer except or one item which none of us could explain. And ince there seemed to be no explanation, I made the nistake of disregarding its importance."

"What item do you mean?"

"The ink stains on your daughter's coat."

Logan nodded. "Yes; Lieutenant Barton told me, t Paine's office, what those stains implied. But vhen your call came through, and we heard about our story later, nothing more was said about them".

"Can *you* account for them?" Peddie asked.

"No".

"Very well," Peddie said, "let's go back over the night's events.

"You were at Lauth's apartment shortly before midnight, having gone there to buy a confession of ome kind that implicated you in some way. Lauth efused to sell, and you killed him with the first veapon you could lay your hands on.

"It's my belief that you found the confession almost at once; for only two drawers of the desk had been ransacked, and no one interrupted you.

"With it in your possession, you returned home at once. Miss Logan, having located Lauth's address n some way, waited until you returned; then she went out on the same mission from which you had ust returned. Of course, she did not know you had been to see Lauth a few minutes earlier."

"You haven't given a thing to show I had been here," Logan observed mildly.

I'm coming to that".

Logan smiled. "Pardon me."

"When I heard Miss Logan's story," Wilbur continued, "and saw the ink on her coat, I reluctantly concluded that she had killed Lauth. Also, I realized she had failed to get the confession. The police would need it to show an adequate motive for her slaying of Lauth, I hoped, all during the time the two officers were there, that they would postpone an examination of the dead man's papers.

"When I saw they were ready to leave without going over Lauth's effects, I arranged to go back to hunt for the confession."

"Why?" Logan demanded bluntly.

"Because, guilty or not, your daughter did not deserve to suffer for Lauth's death", Wilbur said equably. "He was not a good man, Mr. Logan; the police admitted as much."

John Draper Logan could find no answer to that.

"When Bonelli surprised me," Peddie went on, "I immediately jumped to several obvious conclusions. Some were correct; but I went beyond the truth, nearly losing my life as a result . . . .

"With Bonelli dead, and with what purported to be an admission that he had killed Lauth, the police were satisfied. The case was closed. Everything dovetailed together perfectly."

John Logan reached for his glass and the decanter. "I'll say this for you. Peddie," he observed lightly, "you can certainly put together a convincing story."

Wilbur shook his head. "The stains on Miss Logan's coat had not been accounted for. Unconsciously, I suppose, I was still trying to find just where they fitted into the puzzle. A few minutes ago I found the answer."

"Well?"

"They came from your own coat!"

"What!"

"Yes. When Lauth's body upset that inkwell, several drops lodged on your topcoat. Because the material was dampened with rain, the ink did not dry.

"When you returned home, you hung the coat in the hall closet, *next to that of your daughter.*

"As a result, some of the ink was transferred to her coat. When Barton pointed out the marks, I wondered at their faintness, but reasoned the damp condition of the material had blurred the ink.

"It was not until I saw Miss Logan place her coat in the closet that I saw the light. When I put away my hat a moment ago, I examined your coat. The original stains were there."

John Draper Logan tossed up his hands.

"You're right, of course," he admitted. "Everything worked out exactly as you say. Although I

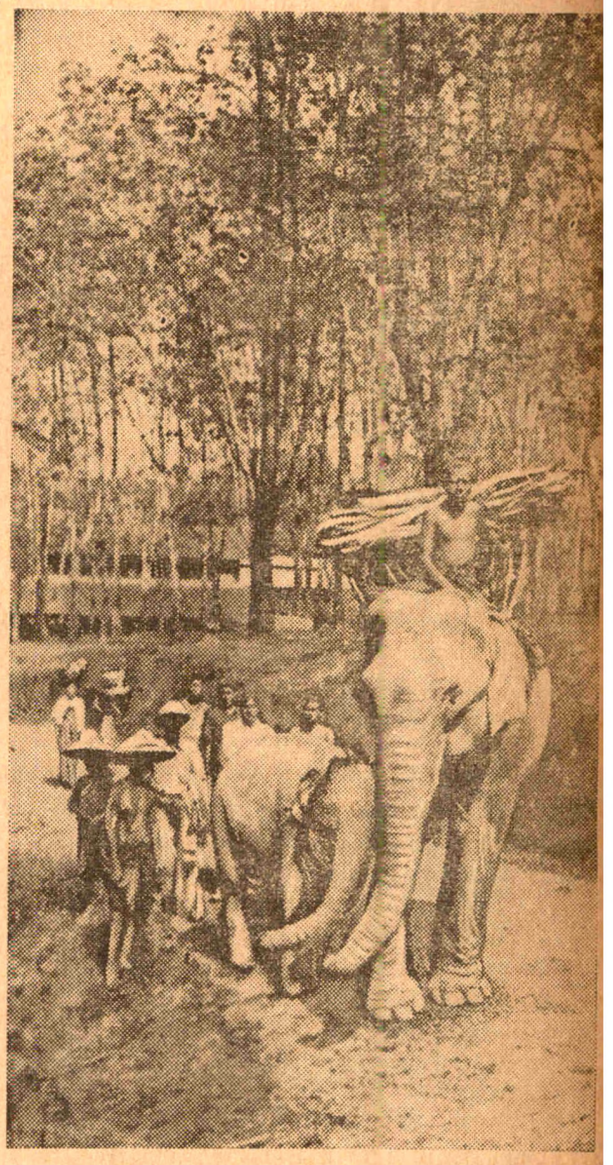
(Continued on Page 128)

A BOTANIST'S ADVENTURE IN SOUTH BURMA

By Dr. K. BISWAS

ONE day twenty-eight years ago my boss asked me, "Look here, Biswas, you should better come along to the Burma Cinchona Plantation. There you will learn what is real field Botany."

Passage was booked and one early morning of March, I embarked the Rangoon mail boat with heavy heart. She reached Rangoon in the forenoon after two and a half days. I stopped at Rangoon with my relation overnight and boarded the Mergui boat "s|s Sir Harvey Adamson." After twelve hours of pitching and rolling over rough sea the boat reached the town of Mergui. The steamer stopped at a distance as this portion of the back water of the sea was too shallow. A shampan, curiously shaped and manned by means of a couple of oars by a single person took us safely to the shore. It was an exciting experience this shampan trip as it was found to be very unstable, and though at every turn it was almost swept away by the rushing breakers, the tiny boat manoeuvred dexterously and managed to glide over the surfs. Thus dodging the waves in the shark infested sea, we reached the pretty Mergui jetty. Here I stopped for a couple of hours in the wooden rest house of the Cinchona Department and after lunch boarded the Cinchona boat. This country boat fitted with a small motor drove speedily along the meandering course of the narrow tidal muddy Tenasserim river. Thus passing through the picturesque forest clad low hills I reached in the late afternoon the flourishing township of Tenasserim situated on the bank of the river and inhabited by many rich rice merchants. The name of the town owes its origin to many a legend. There is a story that it is called after the name of a beautiful young Burmese married lady, who met a tragic death. The spot where she was buried is still marked by a monument of granite pillar, which is visited annually by the Burmese girls with offerings of flowers. In olden times Tenasserim used to serve as an important port of Burma and Siam for the Far East.



AN EXCITING EXPERIENCE

On reaching the Cinchona Plantation in the evening and after settling up the details, I left next morning with a party of ten sturdy Nepalis for exploring the unchartered forests. We had to cut our way with scraches all over our bodies through the cane and bamboo brakes forming a lower storey of almost impenetrable thorny thicket overtopped by the canopy of giant trees. I had one guard with a rifle and also my own gun and some ammunition. It was really a thrilling and exciting experience for me as I never, even in my imagination, pictured such a dense and luxuriant tropical vegetation and such a virgin rain-forest, infested with wild ele-

phants, rhinoceros, bisons, wild buffaloes, tigers, leopards, sloth bears, wild boars in hundreds, many types of snakes—cobras, king cobras, vipers, huge pythons—one of which was seen swallowing a calf and was hammered to death—the harmless sacred ant-eating tapirs, sombur, spotted deer, barking deer and many other animals. Once the manager was attacked by a 15 ft. long king cobra. The serpent which he noticed was rushing towards him at a lightning speed. Though frightened, with extra-ordinary presence of mind he opened out a lady's sunshade, which he was carrying in his hand. The snake stood up on its tail half inclined, hissing and foaming with rage and fully spreading out its hood. The deadly snake charged the manager, but fortunately the fang struck on the central knob of the umbrella. The hood pierced through it when the venomous snake was shot dead by the guard, who was accompanying the manager with a rifle.

VARIOUS BEAUTIFUL BIRDS

There were in the forests various types of beautiful birds including large and small hornbills with black and white streaks on their coat. They were often found here and there peeping out of their nests in the hollows of the large trunks of trees. Peacocks now and then were seen resting on the branches of trees or dancing on the ground before a female stretching out their gorgeous plumes and screaming from time to time with their shrill note. Green pigeons, whistling birds and colourful parrots were seen in hundreds cooing, whistling and chirping all the time and moved about camouflaged with the vegetation. Cicadas rent the air with their continuously ringing tune. Of the monkeys, a type of long-armed black and brown ape was found to be common in these forests. They were always seen moving about in pairs, and sometimes walking in a somewhat erect posture. They are, however, loving creatures although they make a lot of noise at daytime. Once I fired a blank cartridge just to scare away a couple. One of the pairs fled leaving behind the mate alone. This poor creature wept and cried in a very mournful way almost like a human being throughout the night near my camp and stopped only at daybreak when the mate joined. These timid gibbons behave in a very peculiar manner. A female one was kept and tamed in a spacious cage as a pet in the plantation. When men approached her she behaved in a docile and loving manner. She also liked to be fondled by men; but if a female came near her, as I once noticed when the manager's wife came close to the cage, she flew into a rage and attempted to bite and scratch her stretching out her arms out of the iron bars of the cage.

CRIMINALS & SMUGGLERS

My camp was established by the side of a hill stream for obvious reasons. The improvised aerial camp consisted of two platforms, one above the other ingeniously and securely tied with the branches of adjoining tall trees. I used to stay on the top and my men below. Green bamboos were cut into small pieces with nodes and internodes intact, and piled up in small heaps around the camp. These when set fire to, burst with loud explosions like crackers. It proved to be an easy and effective means for driving away the wild animals, particularly at night, when wild elephants moved about in herds. Led by one giant tusker they used to be two to three young females and one or two calves.

The greatest danger in this area was, however, as I was told, not so much the wild animals, but criminals and smugglers, who sometimes found their way into the forest from across the frontiers of neighbouring countries. The nomadic criminals were generally armed with bows and poisoned arrows. They would not hesitate to kill anyone entering the forest and particularly those who possessed fire-arms and ammunition just to rob. Once two opium smugglers, while attempting to cross the border, were pierced through by an arrow. No human being was, however, seen by me during my three trips in the forests.

RICH PLANT LIFE

The forests in this part of the world are typical rain-forests which are predominantly Malayan in composition and character. Tall Depterocarpus sp., Dellenia pentagyna, Salmalia, Tetrameles mudiflora, Lagerstroemia, Stereospermum and others form an overhead canopy with bamboo and cane brokes in the middle followed by usually small arboreous and shrubby association. Tall herbaceous association composed of low Palms, Cycas and Scetamenaceous species form in moist areas under the shade of taller trees a typical ground flora. Elephants are particularly fond of these large leafy banana-like plants. They opened up a different route when they saw we encroached upon their old beautiful shady avenue leading to the river where they used to come for drinking water. Once a tiger was met by Tajib, the plant collector, when during very early hours of the morning he went out to shoot a jungle fowl. He described it as a huge animal, but good tempered. Its fur was reddish brown with the usual black stripes and unlike the ordinary tiger. This might be due to their residing in shady forests. After meeting the tiger almost face to face Tajib was so much frightened that he could not utter a single word during the night, and told about his experience only next morning.

On the border of Siam an area, locally known as "Nam-Sap", was discovered. This spot, I called the rendezvous of big games particularly bisons, elephants and rhinoceros. Here in a corner of the large open clean flat piece of land without even a

blade of grass covering it, was found a badly smelling pool. This corner was obviously used by these large animals for rest. Along the base of the hills here and there, were found many large round stone balls with which the elephants played. Large cavities in the rocky hill-sides were noticed where salt deposit attracted the elephants. We watched a herd of bisons grazing leisurely along the shady hill-sides across the "Nam-Sap" on the Siam side, but soon retreated our steps to a place of safety in case these animals spotted us and chased us. The tops of the surrounding hill forest here appeared as if in flames with the spring bloom of a tall climber (Butea suberosa).

LITTLE WASP SAVES LIFE

Several incidents occurred here in these forests. Some of these are worth-relating here. Once during my search for the interesting Gymnospermous climbing plant, *Gnetum scandens* whose young leaves are edible and liked by the Burmese, I was stung by a wasp. I stepped aside and was thus prevented from proceeding further, and as I cast a glance on the ground, I found to my great horror near my feet a poisonous green viper coiling round a piece of bamboo lying across the path with its vermilion coloured fangs opened out as if watching and waiting to catch a prey. My next step would have been on the head of this beautiful serpent. The little wasp was thus instrumental in saving my life. An interesting parasitic orchid found growing as a root parasite on the roots of trees with its tall profusely flowering spikes appeared to be rather common in this part of the forest. When I wanted to collect the specimen a Burmese warned me saying that he who would collect this orchid would surely have a quarrel with his wife, and such a quarrel might even lead to divorce. The specimen was, however, collected. My wife is still with me, thank God ! One night when I just finished developing my plates in a dark corner of a thatched hut, an improvised "dark room" in the plantation, Tajib flashed the torch and took me aside. He then pointed out to me the bamboo raft over my head. There was a six inches long dark brown scorpion with its black hooked sting at the tip of its beaded tail raised in a striking position. It was collected by a pair of long forceps and kept in the museum as one of the largest scorpions met with so far.

VERITABLE VOLLEY OF DEATH

One day we walked and walked after what seemed to be a mirage. The rustling of the bamboo leaves sounded like the bubbling of a hill stream nearby. Such a sound in the hill forest attracted us continually as we ran after the stream to quench our thirst. But from morning 8 o'clock to 4 o'clock in the afternoon, we all walked but failed to locate the brook. Our way back to the camp was lost in the forest. Exhausted, we sat down when the Sirdar (the headman) cut his toe while clearing the jungle. The most frightful thought of our being devoured alive by tiger, and worse still by giant deadly spiders, beetles, moths and flies completely unnerved us. When all hopes of finding out our camp almost vanished, I told my men that if I fell down unconscious and they happened to find the way by any chance, they should then first take me, if of course, they still found me alive, by the river side and pour water down in my mouth as I felt almost dying of thirst. The smell of rotting vegetation and fungus all round made me sick too. As I stood up and proceeded a few steps, my feet got entangled with the thread of rattan (a long cane). My followers just then shouted with great joy, saying, "Sahib, we have found our way." The long rattan was made into a thread by one of my men who left it behind when he got tired of carrying it any longer. This cane rope lay along the path leading to the camp. Reaching down the bank of the river an improvised drinking glass was made of an internode of bamboo. It was filled with cool crystal clear water of the hill stream and poured down into my mouth. I was refreshed. My cook was found weeping and beating a canaster with a stick and shouting at the top of his voice to attract our notice. But it was of no avail. Even our blank fire was not heard of in such a deadly wilderness.

One wonders how the Allied Army had to fight with the Japanese during the last World War here in these dense forests, a veritable volley of death, exposed to the attack of dysentery and the deadly Typhus fever and other dangers. The infection of this disease passes from the rodent to man after completing a phase of its life-cycle through a particular type of vegetation in these forests. It is no wonder that I used to get sick and take quinine and other drugs and my stomach was so seriously affected that my health broke down.

THE LUMINOUS FUNGI

Some interesting biological phenomena observed in this part of the world, are also worth mentioning. It is here that I discovered for the first time the Luminous Fungi. One dark night while resting in the *machan* half-dosing and getting scared by the screaching of owl and crashing noise of an old falling tree, I was awakened by a hot discussion among my men. Some remarked, "It is certainly a ghost." Others were so frightened that they even could not utter a word. They simply pointed out to me an old stump of a tree at a little distance which from time to time was seen in flames. A flash of pale bluish light flared up with every gust of wind. It struck me that it might be the luminous fungus about which the world famous botanist, the late Hans Molisch of Vienna told me when he visited India and worked in the Sir J. C. Bose's Laboratory in Calcutta. The forest paths strewn with decomposed leaves were also found emanating flickering light like the glow-worms with the breeze. It was an amazing sight indeed which I would never forget in my life. Such phosphorescent light is composed mainly of two substances, lucerin and luceferin, which are also present in the glow-worms and the Noctiluca. The latter is a phosphorescent marine flagellated organism. There flagellales floating *en-masse* produced magnificent phenomenon when the rolling breakers of the sea stretching as far as the eye can reach got luminous with the breeze in a dark night. Such a sight was enjoyed on the night I spent sitting in the verandah of the Mergui Dak Bungalow facing the sea.

These trips to South Burma proved to be a training ground for me as rightly stressed by my much esteemed predecessor. On my way back I stopped at Rangoon for a day and offered flowers at the feet of the Lord Buddha in the famous Shwedagon Pagoda. I rang also the huge bell three times. Curiously enough, as the belief goes, I had to come to Burma three times to collect botanical treasures and on my return paid my homage to the Lord of the Sacred Pagoda.

THE INCREDIBLE INK

(Continued from Page 124)

didn't understand how that ink could have gotten on Eve's coat. You see, I didn't know my own had been spotted.

"It all started long ago, Peddie. When I was a young man, the brother of the girl I later married accidentally killed a man while driving my car. To protect him I confessed to being behind the wheel. The whole thing was the result of criminal negligence and should have meant a charge of manslaughter.

"The official who took my statement, at the time, was an assistant district attorney named Rudmire—a close friend of my father. He shelved the statement at my father's request and the incident blew over.

"A few weeks ago, Rudmire—now retired from office—was the victim of a burglary, in which my confession, among other papers, was stolen. The police were given a tip that a burglar named Burke had pulled the job. But he was murdered before they could find him.

"Two evenings ago, this man Lauth came to me with an offer to sell my own confession to me. He admitted he had also approached Bonelli.

"The rest follows your reconstruction almost to the letter. I killed Lauth when the argument over his fantastic price became so bitter that he went for a gun.

"I found the confession, came directly home and hung my coat in the hall closet without realizing it was ink-stained. I burned that damned paper without further delay."

Wilbur nodded. "One other point," he said." Your daughter engaged me to locate Lauth. How, then, was she able to go directly to his apartment tonight?"

"She told me about that at Paine's office," Logan replied. "While I was out last evening, she went through my desk, hunting for some clue to my visitor's identity. She found the slip that Lauth had given me, on which was written his name, address and phone number. She immediately recognized the name as that of the man who had tried to blackmail a very good friend of ours: Forrest Kenyon. Reason told her it was the information she wanted."

"And that," Wilbur said quietly, "seems to complete matters"

To protect the young man, brother of my wife, I confessed to being behind the wheel, said Logan.

Logan put down his glass and rose to his feet with an air of finality. "No reason," he said, "why we both shouldn't get some sleep. I'm going to need a clear head when I go back over this thing with Malcolm Pathe, this afternoon."

Peddie was startled. "You're going to tell him you killed Lauth?"

It was John Logan's turn to show surprise. "Naturally. I'd rather do that than put you in the position of an informer."

Wilbur Peddie solemnly shook his head. "I think it would be very foolish of you to stir matters up again. Certainly I have no intention of doing so. The police and the district attorney are satisfied, and the case is completely closed. Everyone agree Lauth deserved to die."

Silently, John Draper Logan proffered his hand, and, as silently, Wilbur Peddie grasped it.

"I think," Wilbur said, to pass off his embarrassment, "that I'll have that drink, after all."

"Good!" Logan turned to the portable bar. "What will it be ? Scotch ? Bourbon ? Brandy ?"

"Buttermilk", said Wilbur Peddie firmly.

Well-carved figures of innumerable forepart of elephants standing in row, of the size of full grown huge actual elephants, on the four sides of the monument of RUVANVALISAYA.

ART TREASURES OF CEYLON

By PROJESH BANERJI

TEMPLES and monasteries are profusely scattered over Ceylon and every temple is an art treasure. These monasteries and temples are objects of interest not merely to Buddhists but even to students of art, who will find in them examples of exquisite carving and elaborate architecture.

As it is said that India is the country of Ajanta and Ellora, the same kind of metaphor can be attributed to Ceylon as well by stating that the island is of Sigiriya. Its paintings in the rocks of a fortress in the sky constitute a subject matter for a separate article. Suffice it to say here that Ceylon may lose its importance in the eye of the nations, but Sigiriya paintings will be ever new and will always be ranked in the first line in the list of art treasures of the world.

Coming to the place of next importance is the town of Anuradhapura, the most famous of Ceylon's ruined cities. It is here that remains of religious buildings stand out most prominently to our day. Naturally, however, it was in the name of religion that the most enduring monuments were reared and it is no surprise that giant "dagabas" tower over all else of ancient time. A "dagaba" is a familiar feature of a Buddhist temple and is one of the spots at which worship is offered by the devotees. In order

to propitiate and invoke the deity artists have made the place beautiful by carvings and paintings.

History tells us that Anuradhapura continued to be the centre of the island's cultural activity. This activity was in no way retarded by the fortunes of war. On the contrary, archaeological work has proved that some of the finest works of art can be dated to the final years of Anuradhapura's period as capital.

3 PARTS OF BUDDHIST TEMPLE

It is worthwhile mentioning here that in a Buddhist temple there are three constituent parts at which worship is offered. One is the "dagaba" where the faithful hold corporeal relics of Buddha to be enshrined; the second is the "Vihara" where the likeness is portrayed in paint or more solid medium, and the third is the Bo tree ("ficus religiosa"). It was under a Bo that Siddhartha Gautama attained Supreme Wisdom ("Bodhi") which entitled him to be called Buddha. The three places of worship treasure works of art.

The giant monument of Ruvanvalisaya, the work of Dutthagamani, is reached passing through the remains of two ancient entrance houses. One comes to a courtyard which encloses a retaining wall ornamented on all sides by huge and well carved figures of innumerable forepart of elephants standing in a row. They make as if to hold up the terrace on which the "dagaba" was constructed. At each cardinal point is built an ornamental screen. In front is an altar for laying the offerings of flowers. The screen served the artist who could here display his skill which the dome itself denied him.

The visitor notices some sculptures of large size, on the eastern side as he ascends the terrace of the "dagaba". Four of the most interesting are housed in the verandah. The three Buddhas have been attributed to an early period. The fourth is the figure of Mettiyya, the Buddha to come. Another very pleasing figure is that popularly known as the likeness of king Dutthagamani. It is by the steps. It probably represents Boddhisattva or a God.

Near it there is a dainty bell-shaped "dagaba" ringed by rows of stone pillars with ornate capitals. This is the Thuparama Dagaba, the earliest historical construction of the kind. Thuparama Dagaba, says the Mahavamsa, enshrines the right collarbone of the Buddha and is held in great reverence by pilgrims. Its graceful beauty is enhanced by the monoliths around it.

Between Thuparama and Ruvanvali there is a monastery, the balustrades for the steps of which are carved. Among reliefs are temple facades, lions, forest and cave scenes, jungle men and women, bears, deer, monkeys, peacock, mongoose, cobra and other wild animal life which does not fail to amuse the art connoisseurs. The Jetavana Dagaba is an impressive structure with vaulted roof and in the "sanctum" there is a colossal Buddha image. Fragments of the lotus-shaped pedestal may be seen. The doorway is high and is so constructed as to permit a full view of the image within. Traces of paintings which decorated portions of the "Vahalkadas" yet cling to the fragments of plaster on the stonework in these ruined structures.

FINEST BATHING POOLS

Abhyagiri provides the largest as well as the finest examples of bathing pools used by the ancient monks; the stonework, steps, balustrades show Sin- both by the chasteness of work on them and their size.

Near Abhyagiri there is a stone statue of the Buddha. It is in the Meditation Pose (Dhyani Mudra) with hands on lap and folded legs. This is a noble piece of sculpture and is at least 1,600 years old. Abhayagiri formed an important centre of worship of the "Tooth Relic," and according to Fa Hien, the gorgeous procession wended on sacred days on a road which had been sprinkled with perfume and decked with flowers.

Here there are two interesting monuments, one of which, the so-called Queen's Pavilion, contains probably the finest example of moonstone. The moonstone is a carved stone of a semi-circular shape placed at the bottom of a flight of steps. In the example here, a frieze of four animals, lion, bull, elephant and horse (animals connected with the north, west, east and south respectively) are grouped in spirited procession between a band of petals and another of a foliaged scroll. Next to this last, is a procession of swans and on other bands narrowing to the central half-lotus are other scroll or lotus petal designs. The carving has been done with great delicacy and the stone still bears a superb polish.

There is another structure near it marked by massive monoliths. Its moonstone is simple but on one side is an unrivalled janitor stone, one of the finest works of the sculptor. Animals and human beings may be made out issuing from the mouth of "Makara" framing the cobra-hooded head. The figure itself is that of a cobra-king in the form of human being.

Examples of the finest screen work and spirited reliefs depicting groups of elephants deporting themselves in lotus pools, are in abundance in baths and ancient structures. In Isurumuni Vihara can be seen low relief of elephants. There is a relief of a dignified personage seated in the Royal Pose (Maharaja Lila). The head of a horse is visible above his right shoulder. Between the shrine by its side and the other lower down is an area walled in with stones collected at random. Some of these contain reliefs and among them is a slab in fairly high relief showing a woman seated on the left leg of a man. This is known widely as the "Lovers." The man's face is delicate and the group and its execution are of unquestioned beauty.

One of the Vessagiri caves contains some remnants of ancient paintings which can be classed as masterpieces in art. At Pankuliya there is a unique Buddha of granite of undoubtedly the early centuries. It is the only instance so far known in Ceylon of a seated figure having the hands in the gesture called "Abhaya", that is freedom from fear.

IMPRESSIVE ARCHITECTURE

Among the numerous sites of archaeological interest in which Ceylon is so rich, there is perhaps none better than Polonnaruva, where one can see impressive examples of architecture and sculpture dating from one of the most glorious periods in the island's long history of over two thousand years. An artistic painting has recently been revealed from the northern temple here. The ruined building of Prakramabahu, round the base of which runs a frieze of elephants in bas-relief, is carved wonderfully true to life, and of which the pillars are adorned with chaste designs. To the north-east of Thuparama is the Vatadage. There is a small 'Stupa' with four Buddha images facing the four entrances. A profusely carved stone railing encompasses the whole

shrine. The stone work is effectively decorated with floral designs and figures of dwarfs and animals.

It seems that on an average at every yard there is a Buddha image skilfully carved. Apart from the aesthetic qualities of these images, the colossal size as well as the picturesque background against which they are seen tend to make them extremely impressive.

The Tivanka Image-house is noteworthy for its wall paintings, depicting scenes from the sacred stories of the Buddhists. The Buddha image in the sanctum of this shrine, now headless, is of an unusual type, showing bends at the knees, at the waist and at the shoulders. The shrine itself is named Tivanka (probably Tribhanga) after the image.

The Potgul Vehera of Polonnaruva possesses a colossal rock sculpture. The image is more than life-size, and is carved on the face of a boulder of moderate dimensions. The subject is represented as holding, or rather balancing in the two hands an object like a palm-leaf book. The sculpture, which is a remarkable work of art, does not conform to any known iconographic standards of Indian religions, and also, somewhat unique in Indian art, it does not represent an idealised type. The artist, definitely, has made an attempt to bring out individual character in the physiognomy.

FRIEZES OF "GANAS"

The "Vahalkadas" of the Kantaka Cetiya of Mihintale are more profusely ornamented than those found at Anuradhapura. On the cornice below the topmost one is a frieze of "ganas" (dwarfs), and on the one further below is a frieze of "Hamsas" (geese). The brickwork above the facing contains arched niches between pilasters. In each of these niches there appears to have been the image of a deity made of stucco of terra-cotta, fragments of some of these figures being still in position. The heads of some were picked up in debris and among them are two of terra-cotta, which are of considerable artistic merit. These images as well as the whole structure of the "Vahalkadas," were originally painted in diverse colours, traces of which are still visible.

The friezes of "ganas" mentioned above are full of interest. Many of these dwarfish beings are portrayed in various lively attitudes—some playing musical instruments, one sporting with a cobra, another standing on his head and so on. Some are animal-headed. We have one with the head of a horse, another with that of a bear, and yet another with that of a monkey. Particularly interesting is an elephant-headed "gana", apparently with one tusk, attended by other "ganas" holding various objects. It is possible to conjecture that this is a prototype of Ganapati, the various attributes of the deity being held in the hands of the attendants as the figure is provided with only two hands, unlike the later images which have four.

EARLIEST PLASTIC ART

The sculptures on the stelae flanking the "Frontispieces" are among the earliest examples of the plastic art of the ancient Sinhalese. They are mostly of a decorative nature, and some of the motifs employed are reminiscent of the decorative sculptures on the pillars of the gateways of Sanchi. The commonest motif is a foliage design springing up from a vase and crowned by a Buddhist emblem or a "Naga" figure and, in one case, a goddess seated on a lotus. In one example, the foliaged scroll

Statue of Buddha in Asokaramya Temple.

is so designed as to form five circular spaces, on above the other, in which are, respectively, th figures of a cock, a lion, a bull, a man and an ele phant. In another are pairs of men and animals stan ding back-to-back on either side of the stem. Thes decorative designs resemble those on stelae alread found at the Anuradhapura stupas, but the stelae o the eastern frontispiece are decorated in a manne quite different from anything yet found elsewher in Ceylon.

The whole surface of the broader side of th stelae is provided into four rectangular panels which starting from the bottom, are occupied by foliage pattern, an elephant, a second foliage pat tern, a peacock with young, and a decorated vas from which spring leaves and flowers with bird sporting among them. The narrow sides of th stelae are decorated with a tapering stem springing from a vase, with conventionally treated leaves spreading on either side. Besides these, "Naga" figures in human form are found in some of the stelae. The style of the sculptures is very archaic.

At Mihintale is the famous "Lion Bath." The striking "tout ensemble" combination of the delightful moulded lines of the whole structure, the quaintly carved reliefs of its dado, and the life-like rampant lion guarding the bath, cannot fail to win unalloyed admiration for this masterpiece of sculpture, as boldly designed as it is perfectly executed. THE TALE OF 1857: ITS SAD AND CRUEL ASPECT

By Dr. R. C. MAJUMDAR, M.A., Ph.D.

The great revolutionary movement of 1857 has been treated one-sidedly by historians. The author makes here an objective study of the misdeeds on both sides.

NEXT year India will celebrate, with due solemnity, the centenary of the great revolutionary movement that convulsed the whole of North India from one end to the other. Apart from the many stirring incidents that marked it throughout its course, it also recalls to our mind many side-issues which are of great interest and no less important for the study of human nature and human civilisation. I propose, in this paper, to deal with one of these, *viz.* the atrocities committed on both sides. These were of so horrible a nature that some have expressed a desire that a veil should be drawn over them. But with a few honourable exceptions, English writers, and following them others, have drawn the veil over the excesses of the English, but not over those of the Indians. Historical truth demands that the veil should be drawn aside, and an objective study made of the atrocities on both sides.

In describing these, it is necessary to state, at the very outset, that we are dependent for our information almost exclusively upon British writers, who are likely to exaggerate the crime of the Indians.

The first acts of cruelty were those perpetrated at Meerut on May 10, which saw the beginning of the Mutiny of Sepoys. There was an indiscriminate massacre of Europeans, and "Hindus and Muslims were stirred by one impulse to slaughter the Feringhees, man, woman, child." Helpless women were butchered without mercy, and children were slaughtered under the very eyes of their mothers. But all this was done not merely by the sepoys but also by the criminals released from prison by them, and by the usual goonda elements of the town who never fail to reap full advantage of the absence of law and order.

The scene was repeated at Delhi. A number of European men and women were done to death by the sepoys in cold blood, and their example was followed by the scum of the population who joined them. "Every house occupied by European or Eurasian was attacked and every Christian upon whom hands could be laid was killed. There was no mercy and there were no quarters".

Similar acts of cruelty were perpetrated by the Indians in many other places. A tragedy of a

The festive mood

Let this season of festivity inspire us to work hard to make a truly prosperous and glorious

BETTER BENGAL

Issued by the Government of West Bengal

ghastly character in Allahabad is thus described in a letter from Banaras, dated June 16, 1857 : "A gang of upwards of two dozen sepoys....cut into two an infant boy of two or three years of age, while playing about his mother; next they hacked into pieces the lady; and while she was crying out of agonising pains for safety.....felled, most shockingly and horridly, the husband".

THE TERRIBLE RETRIBUTIO N

Then came the terrible retribution. General Neill, who proceeded from Calcutta, in May, 1857, with a regiment towards Banaras and Allahabad, gave written instructions to his officer Major Reinaud "to attack and destroy all places en route close to the road occupied by the enemy." "Certain guilty villages were marked out for destruction and all the men inhabiting them were to be slaughtered." Reinaud faithfully carried out his chief's order, as would appear from the following passage in Russell's Diary : "An officer who was attached to Reinaud's column told me that the executions of natives were indiscriminate to the last degree.....In two days forty-two men were hanged on the road-side, and a batch of twelve men were executed because their faces were 'turned the wrong way' when they were met on the march. All the villages in his front were burnt when he halted, and mothers, wives and children fell miserable victims to the first swoop of English vengeance." Sherer has described a similar scene along the line of Havelock's march. "Many of the villages had been burnt by the way-side, and human beings there were none to be seen. ....the occasional taint in the air from suspended bodies upon which before our very eyes the loath-some pig of the country was engaged in feasting."

Even before the Martial Law was passed on June 9, English "military officers were hunting down the criminals of all kinds, and hanging them up with as little compunction as though they had been parish dogs, or jackals, or vermin of a baser kind....some young boys, who, seemingly in mere sport, had flaunted rebel colours and gone about beating tomtoms, were tried and sentenced to death....Volunteer hanging parties went out into the districts and amateur executioners were not wanting to the occasion. One gentleman boasted of the numbers he had finished off quite 'in an artistic manner', with mango trees for gibbets and elephants for drops, the victims of this wild justice being strung up, as though for pastime, in 'the form of a figure of eight'....Officers, as they went to sit on courts-martial, swore that they would hang their prisoners, guilty or innocent....Prisoners, condemned to death after a hasty trial, were mocked at and tortured by ignorant privates before their execution, while educated officers looked on and approved....Old men who had done us no harm, and helpless women with sucking infants at their breasts felt the weight of our vengeance, no less than the vilest malefactors."

NORMAL WAY OF PUNIS HMENT

One of the normal punishments of the sepoys was to blow them from the mouth of a gun Forty sepoys were thus blown up on June 10, at Peshawar, in the presence of the whole garrison and thousands of outsiders. Lord Roberts wrote afterwards that it was a horrible sight, but had to be done "to show these rascally Mussalmans that, with God's help Englishmen will still be the masters of India." A clergyman's widow thus describes another such incident. "One gun was overcharged, and the poor on being covered with blood and fragment of flesh; the head of one poor wretch fell upon a bystander and hurt him."

The sepoy mutineers at Kanpur mostly belonged to the localities where these cruelties were perpetrated. So we pass on to the next scene where the provoked sepoys went one stage further and improved upon what the English soldiers did. The violent deeds of Nana Sahib and his sepoys are well known even to the school boys, but must be mentioned in fairness to the other side.

An agreement was reached between Nana Sahib and General Wheeler, the commander of the besieged British forces at Kanpur, that they should be allowed to go by river from Kanpur to Allahabad But as soon as they boarded the forty boats kept ready for them, "a murderous fire of grapeshot and musket balls was opened upon the wretched passengers from both banks of the river; and presently the thatch of the boats burst into a blaze". Many particularly the sick and wounded, were burnt to death, while the rest, including some women with children in arms, took to the river. Many of these were killed and a number of them were made captives. Only a single boat escaped, but it was later seized, and only four of its occupants fled with their lives to tell the tale of this grave tragedy.

NANA'S REVENGE : BIBIGHAR STORY

Whether Nana Sahib was personally responsible for this tragic episode, will perhaps never be known with certainty. But other incidents are reported which show that his thirst for the blood of Englishman was not a whit less than Neill's for that of Indian. An old gentleman, supposed to be a merchant, his wife and two children, both in their teens, were brought before him, and he caused them to be shot on the spot. Later, on June 10, an English lady travelling with her four children from N. W. P. to Calcutta, while passing through Kanpur, was taken before Nana, and they were all shot. The same fate was dealt out to another lady under similar circumstances on the day following. On the 12th a number of European fugitives from Fategarh, mostly women and children, numbering 126 (according to Malleson, 169), were coming down in boats to seek refuge in the British cantonment at Kanpur. They were seized and carried to Nana. All the men, with the exception of three, were killed in his presence, and the women and children, along with the other English prisoners, who were taken from the riverside, were kept in a small house known as Bibighar.

But Nana's cruelties reached their climax in his treatment of these prisoners. As soon as he heard that Havelock's relieving army had reached the neighbourhood of Kanpur, he issued orders for the massacre of the women and children in the Bibighar. There were four or five men among the captives, these were brought forth and killed in the presence of Nana. Then a party of sepoys was sent to shoot the women and children. But the sepoys were more humane than their master and fired at the ceiling. Then some butchers were called. They went in with swords or long knives, and slashed the women and children to death. And there the bodies lay, some only half dead, all through the night. Next morning the dead and the dying were brought out and thrown into an adjacent well. Some of the children were alive, almost unhurt; but they were also thrown into the well.

cruelties emanated from hostile sources. But they have been repeated by several witnesses. Even allowing for exaggerations, normal in such cases, it is difficult to deny the fact that Nana's fiendish cruelty has for ever tarnished the fair name of India, which rightly boasts of an age-long humane culture.

NEILL'S COUNTER VENGEANCE

When Neill reached Kanpur shortly after this ghastly scene was enacted, he took a terrible vengeance which can better be imagined than described. To the indiscriminate hanging of the guilty and the innocent alike,—virtually amounting to a mass massacare, — he added two refinements which he has himself described with great glee. He made the ringleaders "first clean up a certain portion of the pool of blood, still two inches deep, in the shed where the fearful murder and mutilation of women and children took place." He did this for he knew that "to touch blood is most abhorrent to the high-caste natives; they think by doing so, they doom their souls to perdition." The first man, a high-caste Brahmana and an ex-Subedar, refused to clean up the blood; but, Neill continues, "a few lashes soon made the miscreant accomplish his task". The other refined cruelty, invented by Neill, was to *bury* all the Brahmanas and to *burn* all the Mussalmans after they were hanged or otherwise killed. The object was the same—to punish the cursed miscreants both in this world as well as in the next.

COOPER'S ACHIEVEMENTS

History does not record whether Neill had any one in the opposite camp to match him in his refined cruelty and far-sighted vision to extend the punishment beyond this transient life to eternity. But Nana Sahib had undoubtedly his white counterpart in Frederick Cooper, the Deputy-Commissioner of Amritsar, who emulated Nana as far as his limited opportunities enabled him to do so.

Fortunately for the historian, he has himself described his own exploits, so that there can be no doubt or uncertainty about them. The story concerns the 26th N. I. who had mutinied at Lahore and fled for their lives. Weakened and famished after forty miles' flight, they tried to cross the Ravi; but 150 were shot by the villagers assembled, and drowned. The main body took refuge in an island of the river, and Cooper pursued them in armed boats. "The doomed men with joined palms crowded down to the shore on the approach of the boats, one side of which bristled with about sixty muskets, besides sundry revolvers and pistols....In utter despair forty or fifty dashed into the stream; and the sowars being on the point of taking pot shots at the heads of the swimmers, orders were given not to fire".

The sepoys, simple and un-sophisticated country folk as they were, thought that they would be tried in a regular manner. But nothing was further from Cooper's mind. He continues : "They evidently were possessed of a sudden and insane idea that they were going to be tried by a court-martial, after some luxurious refreshment. In consequence of which, thirty-six stalwart sepoys submitted to be bound by a single man, and stocked like slaves into a hold in one of the two boats emptied for the purpose". Two hundred and twenty-eight prisoners, thus secured, were put in a bastion at the police station. Next morning, August, 1, 1857, the prisoners were pinioned tied together, and brought out thus, in batches of ten, to be shot. They were filled with astonishment and rage when they learned their fate, but Cooper went on with his task. He himself describes the scene as follows :

"About 150 having been thus executed, one of the executioners swooned away, and a little respite was allowed. Then, proceeding, the number had arrived at 237; when the district officer was informed that the remainder refused to come out of the bastion, where they had been imprisoned temporarily, a few hours before....The doors were opened, and, behold ! Unconsciously the tragedy of Holwell's Black Hole had been reenacted....Forty-five bodies, dead from fright, exhaustion, fatigue, heat, and partial suffocation, were dragged into light."

These, dead and dying, along with their murdered comrades, were thrown into a well. Cooper exultingly remarks : "There is a well at Cawnpore; but there is also one at Ujnalla." This short sentence expresses a great truth which no one, particularly no Englishman, should ever forget. Thompson, one of the few English writers who had the courage and fairness to describe the British atrocities, justly observes : "I see no reason why Cooper should be denied the immortality he craved so earnestly. Let his name be remembered with Nana Sahib's".

It is a moot point to decide whether the originality of the idea of throwing the dead and the dying into a well belongs to Nana alone or also to Cooper. Perhaps the credit should be given to both, for it is very doubtful if Cooper had heard of the incidents that happened at Kanpur on July 15, when he unconsciously imitated them on August 1.

HORRORS OF SACK OF DELHI

The fall of Delhi (September, 20, 1857) was followed by indiscriminate murder and plunder on a massive scale. According to official report, "there was not a house that had not been ransacked and plundered, friends and foes of the Government suffering to an equal extent." The trial was a mere mockery. "The judges were in no mood to show mercy. Almost all who were tried were condemned; and almost all who were condemned were sentenced to death." An English lady heard reports that the soldiers bribed the executioners to keep the sepoys a long time hanging, as they liked to see the criminals dance a 'Pandies' hornpipe, as they termed the dying struggles of the wretches. "The English officers used to sit by, puffing at their cigars, and look on at the convulsive struggles of the victims."

The horrors of the sack of Delhi were fully kept alive even in the next generation. According to the information supplied to Blunt on the spot in 1883, "the English soldiers slew and destroyed some thousands of innocent men in revenge for the death of about one hundred. The old Loharo chief assures us that 26,000 persons were killed by the soldiers or hanged or shot or blown up during the eight months following the capture of the city. The city was deserted, and whole quarters and suburbs razed to the ground."

Details of this type might fill a volume. But enough has been said to indicate the nature of barbarous and inhuman cruelties that were perpetrated during the outbreak of 1857. Indeed it seems to have been "a contest between two savage races, capable of no thought but that regardless of all justice or mercy, their enemies should be exterminated".

The centenary of 1857 necessarily recalls also its blackest spot. Many would perhaps fain draw a veil over it, but it is necessary, in the interest

"Crocodile's Head Study Showing the Deadly Jaws" : The creature's jaws are provided with a terrible array of sharp, conical teeth planted in sockets and the function of this formidable armoury is to seize and hold its prey. The brute rends and mangles its victim, tearing it to pieces with sudden jerks and lateral movements of its head and the fore part of its body.

WEAPONS IN NATURE'S ARMOURY

By U. C. CHOPRA

Almost any part of an animal may be converted into a weapon. Horns and hoofs, teeth and claws are among the more obvious weapons in Nature's armoury, and in tracing their development it is interesting to note that, just as in the story of human warfare, each succeeding instrument of death brought into being the means for its repulsion or evasion.

LIFE worth living always means some struggle or endeavour. The plant has least of it. It does not thrust against unfriendly influences, but it parries. Deep in the heart of the living creature there is the power of answering back effectively, so that its life is preserved. Among animals this is much more marked; they thrust as well as parry.

One does not suppose that the heat of the sun, the frost of winter, the breakers on the shore, the sandstorm in the desert, and so on, are unfriendly to animals. That is a word that doesn't fit. But animals have to struggle against them, and when we come to discuss animals in their homes from Pole to Pole we shall see how interesting that kind of struggle is, and how intense — as Tennyson saw so clearly :—

"For life is not as idle ore,
But iron dug from central gloom,

And heated hot with burning tears,
And dipt in baths of hissing tears,

And battered by the shocks of doom
To shape and use."

The chief reasons for the struggle of living creatures are four in number :—

In the first place organisms or living creatures tend to multiply so rapidly that there is no room or food for them all.

In the second place, the plan of Nature is a chain of reincarnations, the higher forms eat the lower, and the lower forms (among animals) often struggle against being eaten.

In the third place, a vigorous organism is self-assertive, a bit of a hustler, sticking out its elbows in the crowd.

In the fourth place, outside conditions are often changeful, and living creatures must struggle to keep their foothold.

WEAPONS OF EARLY MAN

In early days man had to struggle with wild beasts, and for a long time he must have found "discretion the better part of valour", for he was

LIFE BEGINS AT ZERO

By Dr. SIVATOSH MOOKERJEE, M.Sc., Ph.D. (Edin), F.R.M.S.

INCOMPARABLY, the most intricate phenomenon in the life of an individual is the miracle of procreation. The process of fertilization becomes an inevitable means of reproduction in higher animals. This is not anything like airy-nothing affair, but it works in a very implict manner to bring bout the special reproductive units from the father nd the mother together. To achieve the union of spe-ially endowed reproductive cells, a sexual congress ecomes a necessity and the wedlock works for a ender trap for it in disguise. From time immemorial, this has been the process by which a new life s formed out of the union of pre-existing sex cells nd thus transcending the organic limit of a generaion. The phenomenon continues for ever, so that he life never extinguishes. The entire range of ertilization process is charged with so much of subtlety and naivete, so time-specified and remarkably elaborate, that often unscientific predilections are brought to bear upon the subject to diffuse the true tale of fertilization. However, such attitude is unwanted, because, now, more accurate observations have been made with better experimental techniques with no little exactitude at the crucial point when life begins. The moment of fertilization is a moment of destiny; what is to become a human being is a tiny bead of substance, smaller than a full stop, impregnated with an inherent quality to divide and develop into an adult being.

SELF-PERPETUATING UNITS

Nature is almost prodigal in arrangement towards the formation of the reproductive units inside the body. Both sexes contain special glands where the self-perpetuating units originate and pass through the various stages of ripening. These glands are testis and ovary. Inside them, complex specializations leading to the formation of spermatozoa and ovum take place. The biological process of manufacturing the sperms is called Spermatogenesis and Oogenesis for the egg-production. In spite of their difference in details, both are comparable in their essential respects. The production of reproductive units or gametes as they are called, is under hormonal control of the pituitary gland of the brain which stirs up and sets in the reproductive mechanism. Both processes undergo through three essential phases of multiplication for increase of number of cells; growth for increase in size and maturation for the reduction of chromosome numbers. Each of these stages render complexities necessary for a generative cell. The essential factor in the self-perpetuating units is t manifest a way to half the nuclear elements—a intricate phenomenon to suit the future union of tw cells and to restore the basic number of chromo somes. All sperms, produced in course of sperma togenesis, are functional. However, n a set of four only one is functional in case of Oogenesis. Othe three degenerate ova have nothing to do with th actual process of fertilization.

ASTRONOMICAL FIGURES

Not until puberty, can individuals produc functional reproductive cells. In human males, th production of spermatozoa begins with puberty an lasts till late in life. In woman folks, on the othe hand, the egg-producton commences with the puberty till menopause. It has been calculated that a woma is capable of producing about 400 eggs during he whole life time; producing normally one egg pe month, 12 eggs annually till the end of her fecundity period. Though in some exceptional cases, there may be more than one egg being produced monthly In contrast to this, a normal human male is capable of producing at the rate of 50 million sperms a day and about 500 billion sperms during an average normal life. In a single seminal discharge for a healthy man, there are some 200,000,000 to 500,000,000 spermatozoa liberated. This may seem like a terrible wastage of sperms when only one sperm fertilizes, but release of less than 80 million sperms in a single sexual act, has little chance of begetting children. Failure to produce adequate number of sperms is a frequent cause of human infertility. Unlike the astronomical figures of spermatozoa, the single human ovum is shed between the 12th and 21st day of a menstrual cycle, counting from the first day of uterine discharge, the 15th day has been the centre of incidence. Normally one ovum is shed in each cycle, there may be two or even more. A significant point in this connection is that the ovary has been seen to contain a few thousand immature eggs of which a few only will mature. However, the rate of egg-production in some animals like fish is extraordinary, there may be about 10,000,000 eggs and in some sea-urchin the number may go upto 20,000,000. The mechanism of reproduction is different in human beings; one egg against millions of sperms is sufficient for the purpose.

The relative structure, size, shape, volume of eggs and sperms are worth comparing. The ovum is almost pherical whereas a spermatozoon is more or less elongated having a head, a middle piece and a long flagellated tail. Ripe human ovum has a diameter of about 0.2 m.m. and the total length of a sperm is about 0.05 m.m. or it is about 1/500th of an inch. It has been estimated that about 100,000

sperms could find place inside an egg. Out of the entire length of each sperm, the tail comprises nine tenth of the length.

In older days, there has been a serious misconception about the structure of a sperm. Many erroneously thought that inside a sperm there is a miniature human being awaiting growth. This unborn tiny creature, they called a — 'Manikin'. However, recent studies have completely dispelled this fantastic notion and have proved beyond any doubt that the head of a sperm contains the vital element of nucleus and no miniature human-being is to be found there. Of late many excellent electronmicroscope photographs of sperms have been taken. The nucleus of the sperm unites with the nucleus of the egg and there begins a new series of biological change. There is nothing performed in development; differentiation ushers new changes.

Manikin — erroneous 17th Century idea of sperm, assuming that a miniature human being sits inside it.

ACTIVATION OF THE EGG

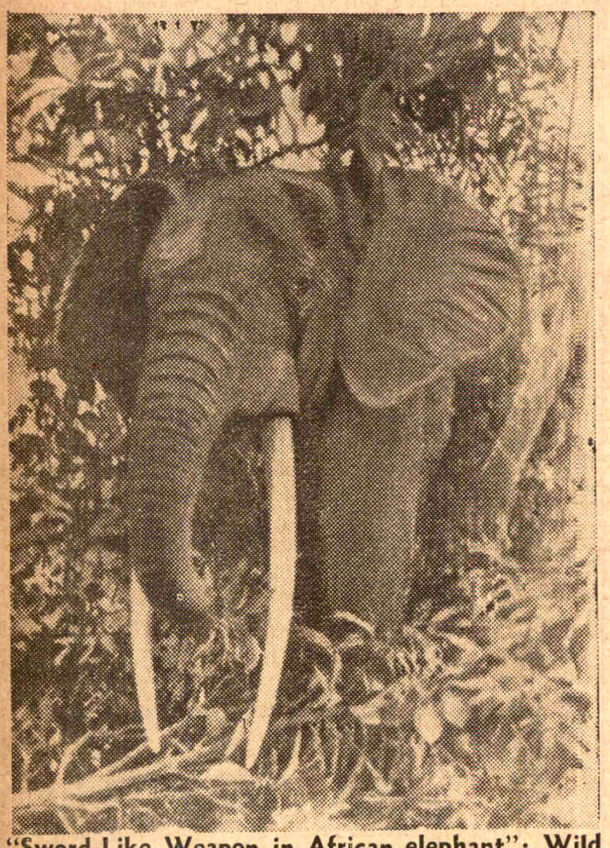
The ovum waits upon the oviduct for the sperm to come and activate its development. One of the essential prerequisites in the process of fertilization is that both sex cells must be in the proper state of ripeness. The sperms make an entry into the female generative tract through coitus near the opening of the uterus and make their way up the female tract. The total time required by human sperms to reach the egg is not known but it cannot be more than a few hours at most. The forward progress of sperms is at the rate of about 1.5 m.m. a minute and they have to go a distance of about 5 inches. It has been previously thought that the active transport of sperms inside the oviduct is mainly due to some chemical attraction from the ovum. But this idea of chemotaxysis of sperms is gradually losing ground and their transport seems to be a phenomenon of their own lashing movements of the tail. There are some animals, unlike human beings, where the sperm does not fertilize the egg immediately after coitus but lie dormant in the female generative tract for some time. In some bats, the coitus takes place in autumn and fertilization does not take place until the next spring. In rabbit, sperms are viable for sixty days inside the female reproductive system. In common fowl, the sperms may be stored for two to three weeks and normal fertilization results by these sperms. The transit of sperms in dogs and in mouse is rather quick and active spermatozoa are often found near about the ovary after half an hour or so of the coitus. In human beings, there are doubtful records of sperms for two or more weeks in the oviduct after coitus; there is no good reason to believe that sperms can fertilise after a day or two. Similarly, the ovum is also fertilizable for at most 48 hours. When this eventuality of fertilization becomes a living reality, it is the beginning of a new life. The role of ovum in fertilization is more of a quiescent nature and not until the sperm comes and activates, does it show a new series of changes in the form of cell division, cell growth and cell organization to reach the adult condition. However, all these changes in egg are only possible if it has been activated by a sperm, otherwise all the promises of future development in an egg will remain unfulfilled.

The process of fertilization is now understood as an outcome of a series of chemical interactions between the two different substances liberated by the sperms and ovum. The substances of the ovum are called 'Fertilizin' and that of the sperms are 'Antigertilizin'. As their names suggest, the substances are antagonistic in their property to each other. Only at the time of fertilization, these substances unite and form a neutral compound, conducive to fertilization.

The sperm itself is a wonderful mechanism but it is surprisingly short-lived. Perhaps for this reason, the sperms store their energy and show no sign of movement inside the testis. As soon as they are introduced into the female generative tract, they begin their tad-pole-like movements. It is now advanced that the keeping down of their activity is by means of producing their own substance — 'Antifertilizin'. However, the initiation and acceleration of their movement, after reaching the female reproductive system, are responsible by another substance liberated from the egg — 'Fertilizin'. This shows the antagonistic properties of the sperm substance and egg substance. There are other chemical reactions which take place at the actual time of fertilization. Contrary to the first series of reactions the other properties of 'Fertilizin' has been tested and found to agglutinate the moving sperms. Agglutination is a condition of semiparalysis which may be reversible and sperms generally produce some other 'Antifertilizin' to revitalise their ownself for a successful fertilization. It is to be understood in this context that both 'Fertilizin' and 'Antifertilizin' in fact include a number of opposing chemical reactions taking place at different time levels from the entry of sperms in oviduct to actual fertilization. These mutual antagonistic reactions work for a variety of functions including a check mechanism to hybrid fertilization. But, above all, the minuteness with which the 'Fertilizin' and 'Antifertilizin' reactions

(Continued on Page 146)

WEAPONS IN NATURE'S ARMOURY



"Sword-Like Weapon in African elephant": Wild tusker's way of dealing with a charging beast is first to pin down with his tusks and then to kick it away to its eternal doom.

(Continued From Page 139)

not strong compared with a lion, or swift compared with a panther. His only weapons, to begin with, were sticks and stones, and he had no armour save a skin shield. His safety was in his wits.

It is likely that he would pick up some ideas from watching his rivals, for he might notice that some beasts of prey lay in ambush, that others posted sentinels, and that others found strength in union. It is also very probable that he got hints from animals in regard to weapons, and that he imitated horns and claws, teeth and stings. In fact we know that early man used parts of animals in fashioning some of his weapons. Thus the story goes that Ulysses was killed by a fish-bone, and when we inquire further into the matter we find that this was a sharp-toothed spine that one of the Sting-rays bears near the end of its tail. The Sting-ray is a near relative of the skate, and when it lashes out with its tail it can give a terrible wound. The Sting-ray's spine would obviously make a very formidable spear-head. It would be an interesting exercise to make a long comparison between man's weapons and those of animals. Some very strange things would be discovered.

Some fish are actually poisonous, others are capable of giving an alarming electric shock, and in these cases the coloration and appearance of the fish serves as a warning. In other cases where the males and females are of markedly different appearance, the males are the more ferocious-looking and this serves more than one useful purpose.

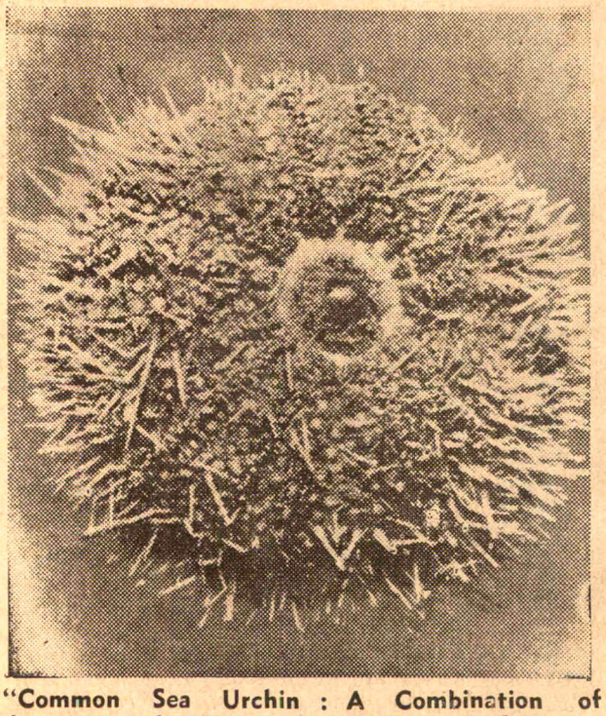
Compared with human beings, fish are short-sighted. The lens of the eye is spherical or globular, and the range of perfect vision cannot be more than a few feet. Consequently, in order to escape from its enemies all a fish has to do is to make a short and swift dash out of its enemies' sight. In the great majority of cases this is sufficient, and the muscular arrangement of the fish's body secures this sudden dart out of sight. When it is not so, it is difficult to see how such defenceless fish as mackerel or herring could survive, in spite of their enormous fecundity. The effect of the monstrous or horrible appearance of a large number of species of fish is, therefore, unquestionably in use to frighten away or warn off other species.

MONSTROUS AND DEADLY FISH

Take, for instance, the horrid sea-scorpions, the family to which they belong comprises the ugliest collection of sea-monsters available. The general appearance of this disagreeable fish, especially of the head, can only be described as monstrous and thus trespassers are warned off, since these fish are provided with poisoned dorsal spines. These spines are in their terminal portions provided with a deep groove on either side at the lower end, in which is a pear-shaped gland containing a milky poisonous fluid. The wounds made by these fish are often deadly.

A few fishes are provided with poison glands, similar in function to those possessed by poisonous snakes, and if these fishes are handled incautiously when alive, they are capable of inflicting a wound which in extreme cases may be fatal to a human being, and in any case produces partial paralysis which may last for months.

These poison glands are not associated with the teeth or fangs of the fish, but with spines which are



"Common Sea Urchin : A Combination of Armour and Weapons" : This wonderful creature of the sea is literally a starfish covered with strange appendages — spines, sheers, pincers and grapnels. The mouth is furnished with five teeth and near the tip of spines are located the little poison bags that prove fatal to victims.

situated either in the back fin, as in the Weevers; or in the tail as in the Sting-rays. These poisonous fish have a very unattractive appearance and are doubtless repellent in respect to other fishes.

There are some other fishes that give poisonous wounds as the Weever does, and in an American Toad-Fish, the apparatus is more perfect, for each of the spines has a central canal up which the poison flows. Even with the doctor's help the wound is sometimes slow to heal.

The Sting-rays or devil fish have a formidable barbed spine behind the fin.

FISH WITH WATER GUN

Malayan Archer fish has evolved the water gun, but rather as a legitimate means of livelihood than as a weapon pure and simple. The little fish squirts a jet of water from its spout-shaped lips at any chance fly perching on water-side vegetation, and the insect, fairly struck, is quickly engulfed as it falls upon the surface of the water. Rarely does the Archer fish fail to hit the target.

The muscular system in some fish is modified in a peculiar fashion so that electric organs have evolved out of the muscular substance. The so-called Eel of Brazilian waters has the tail muscles—which constitute four-fifths of the body—converted into powerful batteries. A six-foot Eel being able to give a shock of several hundred volts, the power being chiefly utilized to kill or stun the prey. Horses and men have been drowned by this fish.

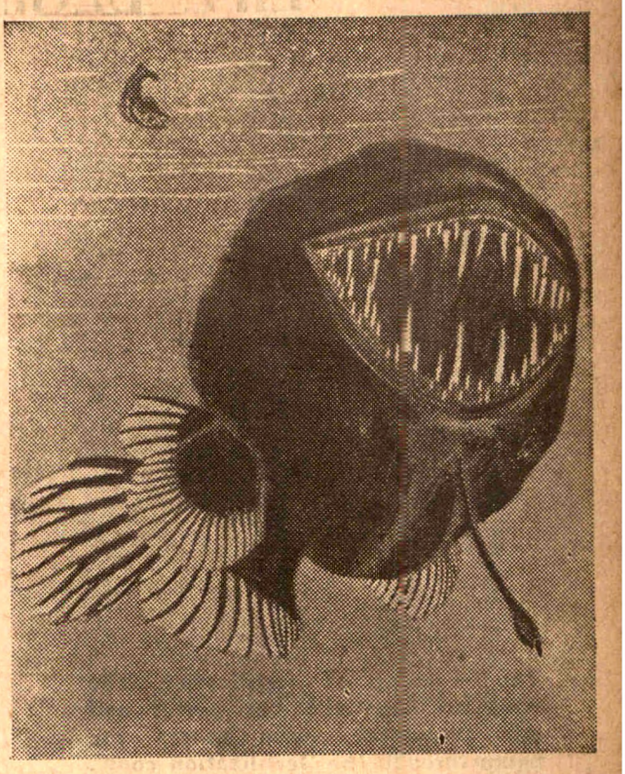
The Catfish of Arabia has the entire body wall converted into an electric organ, the fish being invested with one big battery as with a garment. It uses this weapon, not like most electric fish to stun its prey but to shock other fishes into disgorging their meals, which it appropriates.

MASSAGE BY ELECTRIC RAY

The electric rays or a torpedo ray, are common in all warm seas and notify their presence to anyone treading on them as they lie buried in sand in a very dramatic manner. A big electric ray or torpedo ray can give a shock of about thirty volts, the batteries being arranged in the form of hexagonal cylinders laid out vertically in two groups, one on either side of the body. Like the electric Eel it has been used in aquarium to light electric bulbs, ring bells, and otherwise turn its batteries to account.

In olden times this fish supplied a crude form of vibro-massage for rheumatic sufferers. The patient stood on the fish for as long as the physician ordered or for his own powers of endurance decreed.

Octopus, the gigantic creature of the seas, is not really a fish, but a mollusc. It has been known from time immemorial, as it is frequently carved on Greek objects of art such as vases, gems, coins and ornaments. The Octopus has eight long tentacles or arms provided with suckers. Some of the tribe have ten arms, and are quite capable of attacking the largest sea creatures. Even whales are not exempt from their attacks, as frequently whales, killed by whaling ships, have their bodies scarred off all over with saucer-shaped ulcerated depressions marking the grip of the octopus.

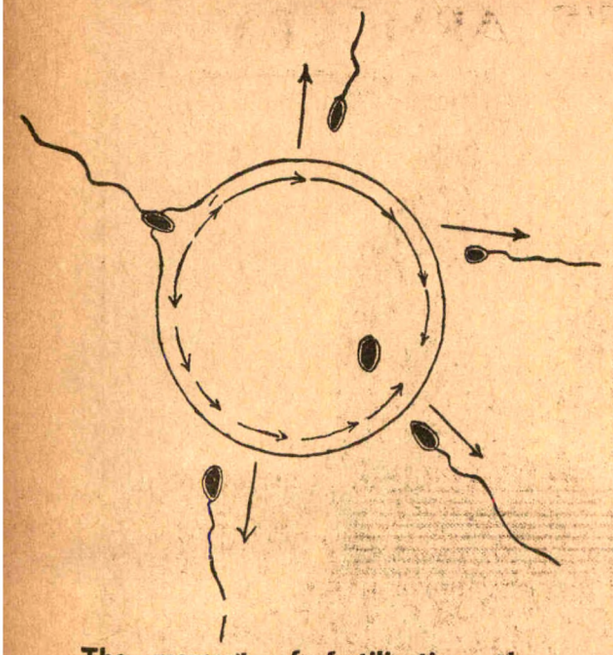


"Teeth As Weapons": This Angler Fish is known as the Sea-devil and is famous for its dreadful teeth. It gives a murderous bite and the sharp teeth are pierced into the victim's body.

It is often about the size of a large orange and among the spines it looks like a hedgehog. The shell is covered with regularly arranged sharp spines, moving on ball and socket joints, and helping the little creature in locomotion. Among the large spines there are many minute spines with three snapping blades on the end of a stalk. At the base of each blade in some of these snapping spines there is a poison bag, and the poison exudes near the tip. Some kinds of sea-urchins have a little poison-bag near the tip of their ordinary spines. If the sharp tip enters the skin of man and breaks off, some of the poison gets in, and the result is a painful wound,

(Continued on Page 147)

LIFE BEGINS AT ZERO



The moment of fertilization, the wave of negativity has passes and the successful sperm enters the ovum through the 'fertilization cone'.

(Continued From Page 143)

are translated may seem extraordinary and defy the imagination. However to a microscopist, it is a hard fact of reality.

HEREDITARY SUBSTANCES

In all mammalian fertilization, before the actual entry of the spermatozoon, the covering of the egg is broken down to enable it to go into the fold of ovum. The biochemical analysis has already brought to notice that the covering of the egg (Corono radiata) is made up of hyalorunic acid coating which tends to block the enzymes of the egg. That is why the hyalorunic-acid-covering has got to be removed in order to activate the ovum. The sperms, in addition to chemicals so far discussed, also contain an enzyme—the hyalorunidase—to disperse the hyalorunic acid covering of the egg.

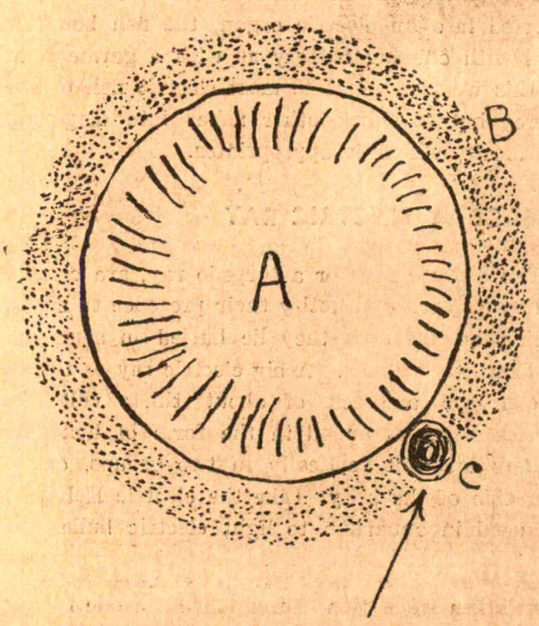
The real implication of the hyalorunic acid and the hyalorunidase reaction is to permit the sperm nucleus to enter the ovum. The extraordinary fact remains that only one sperm is passable into the egg though in some forms polyopermy may be the regular case. In such cases, others soon degenerate after the entry, leaving one to function.

Even today, there is no adequate explanation to offer why only one sperm enters and not thousands of them in mammals. However, quite a detail has been worked on the point when a sperm actually enters the egg. It is believed in some quarters that as soon as the first sperm has touched the surface of the egg, a wave of negativity passes on quickly all round the egg, thereby denying the entry to other sperms. The lucky one is then engulfed by a fine projection (fertilization cone) from the egg surface which literally drags the sperm into its fold. A contrary behaviour, at this critical moment, is shown by the egg itself when it cannot be said to be entirely inactive but it is full of mechanical dynamicity to ensure fertilization. In human fertilization, it is believed that the entire sperm is taken into the egg including the long tail which soon degenerates after entry. But in other animals, only the head and the middle piece find the entry, the tail is left behind. The entry of sperm nucleus brings the message of a new life. The hereditary transactions of the paternal and maternal elements, resident in two nuclei then intermingle with one another so that the chromosome-numbers in the newly created individual may be conveniently again brought back to the normal number, as it were before the reductive division has taken place.

THE GOLDEN THRESHOLD

In the true prospective of organic evolution, the process of fertilization should be viewed as a golden threshold in the initiation of a new life, originating out of the union of two specially endowed cells. As long as they are not united, sperms and ovum are a part of the father and the mother respectively, but no sooner they are united than it marks the beginning of a new generation which strives to achieve the adult dimension of the race to which it belongs. After the fertilization has been accomplished, the new development is heralded in the fertilized egg at the time when it loses much of its cell contents which come out through the surface of the egg. The entire volume of the newly constituted cell thus falls appreciably. The sperm nucleus and the egg nucleus immediately after fertilization resolve into distinct chromosomes which divide equatorially and two daughter cells receive the equal number of paternal and maternal chromosomes. The first division in the fertilized egg is followed by many more divisions, differentiation and organization of cells which set in the condition for the ultimate emergence of an adult being. This marks the triumphant end of fertilization. In fact it is the gateway through which the stream of life always passes on. It affords the bringing about of the endless variety of maternal and paternal hereditary-stuff; thereby it is at work to enlarge the

(Continued on Page 159)



The biochemical reactions during the fertilization, sperm brings hyalorunidase (C) to destroy the covering of the hyalorunic acid (B) so that the egg substance (A) may be activated.

WEAPONS IN NATURE'S ARMOURY

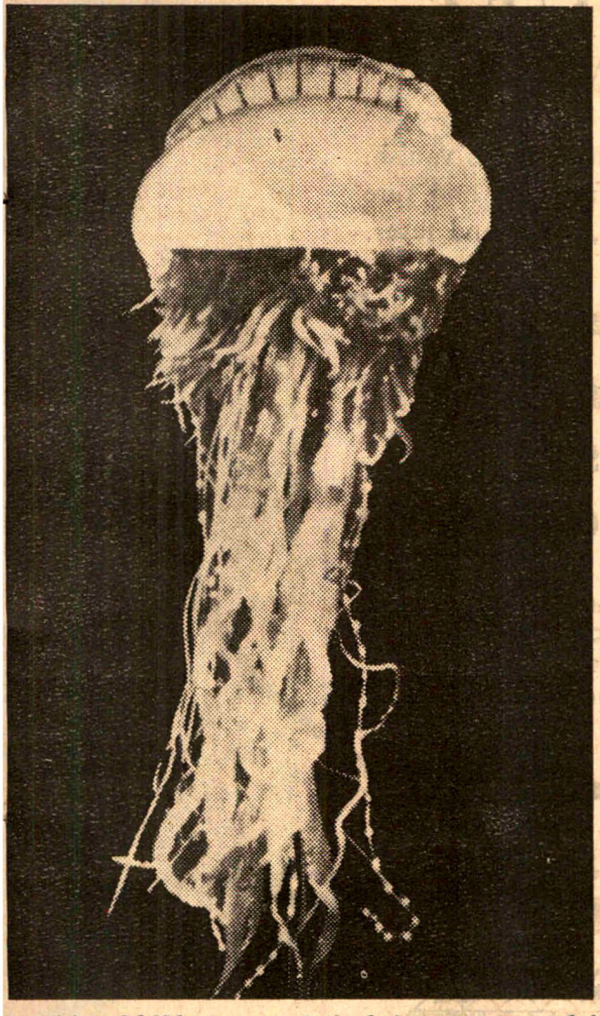
(Continued From Page 145)

often slow to heal. Thus the sea-urchin is well equipped with a combination of armour and weapons.

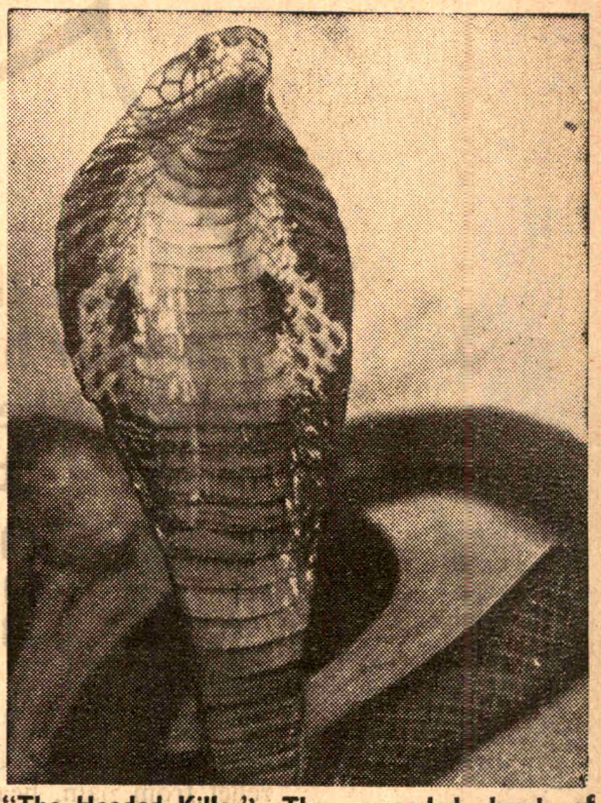
HOW BIG JELLY-FISH STING

A typical creature of the surface waters of the seas is about two feet or more across. A high-power microscope reveals each sting as a barbed dart, with sharp flukes, folded close to a shaft to which is attached a neatly coiled line. Contact with a foe touches off the whole apparatus by means of a hair-trigger, and the barbed dart, suddenly expanded, plunges into living tissue. Shaft and line are dragged after it, and when hundreds of such darts find their way into a bather's blood stream, as when he collides with a big jelly-fish, it is small wonder he later suffers from irritant blisters.

With few exceptions the amphibians of today are naked-skinned. But they make up for the absence of armour by the presence of abundant poison-glands in the skin. The common Toad is doubtless an unpopular creature, credited with the habit of spitting of which it is not guilty. It is not poisonous, but it has, as a means of defence, a dirty, whitish secretion in the pores of the skin which has an irritant effect. When excited the Toad puffs itself out and exudes beads of this secretion. Experiments with birds have shown that if the bird has tried a young Toad once or twice, it will not touch it again, even if it has had no food for a considerable time.



A "Man-Of-War" : A Jelly-fish is a beautiful colony consisting of a float from which are suspended numerous individuals, some nutritive, some locomotor, some tactile, and some reproductive. There is a poison-bag attached to the snapping spines. When bathing in the sea people are sometimes badly stung by coming into its contact.



"The Hooded Killer" The expanded hood of the Cobra which is a temporary dilation of the skin of the neck gives a warning.

The poison of a small tree-frog, which ranges from Panama to the Amazons, is used for making arrowheads deadly, and also, in a curious way, for faking the colours of parrot's feathers.

SNAKES CAUSE HUMAN TRAGEDY

It is common among snakes, that glands which are in ordinary cases quite harmless become venomous. This gives us a glimpse of one of Nature's ways of working, if we may so say — making a new thing out of something very old. In snakes the poison-glands are made out of transformed upper-lip glands or out of a pair of salivary glands, which are known in other animals as parotids. The saliva in ordinary cases contains a ferment which changes starch into sugar; in certain snakes this is replaced by a poison. This acts on the nervous system in the cobras and their relatives, on the blood-vessels and blood in the rattle-snakes and vipers.

Always the poison is injected through a hollow teeth in the upper jaw, usually by a lightning stroke or a chewing action. A few snakes actually squirt the venom from their fangs, a notorious example being that of the deadly South African spitting cobra or ring-hals. Its venom invariably causes blindness if it enters the eyes, and should it penetrate a cut, death follows in an hour or two.

"Gaping Jaws and Saw-Like Teeth": The Jaw Lizard or Beaded Dragon has very sharp teeth situated along the jaw, like the teeth of a saw. The photograph enables us to see the wide-gaping jaws of a creature which is ready and willing to inflict a terrible bite upon a man or animal that attacks it. The skin is covered with bony beads.

dred odd species of snakes now living are poisonous in varying degree. The viper, found in Great Britain, inflicts no more than half a dozen "stings" on human beings perhaps in the course of a year. In contrast to this, the kraits and cobras of India alone account for some twenty thousand human lives annually.

VENOMOUS LIZARD OF MEXICO

It is remarkable that there should be in the large order of lizards one case of poisonousness. This is the "Gila Monster" or Heloderma of Mexico and Arizona, a lizard about two feet long, very thick tailed, covered with a bead-work of bony tubercles. Its colours are dark brown mingled with orange or yellow, and in the tail region there are alternate dark and light rings.

This strange creature is sluggish during the day, but crawls about in the evening in search of worms, centipedes, frogs and the eggs of other lizards. It possesses glands and fangs like those of a snake, but rarely if ever causes human fatalities.

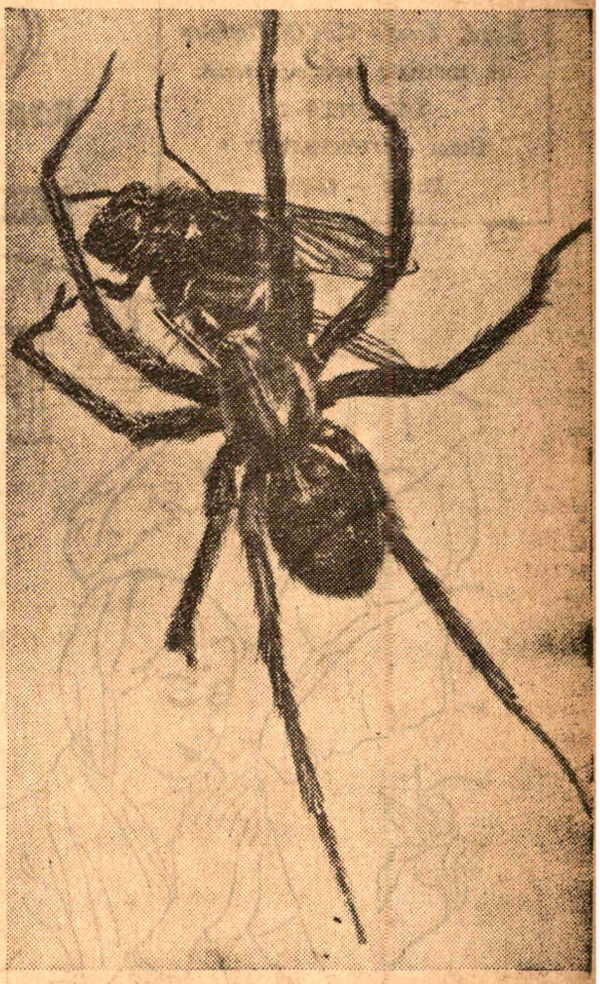
VARIOUS POISONOUS INSECTS

Some animals and birds are able to tackle venomous snakes with great success, being very dexterous in avoiding the bite. The mongoose and the Secretary Bird are two good examples. It seems, however, that some of the creatures that deal with snakes are more than dexterous. They have a mysterious inborn power of resistance — called immunity — so that if they are bitten the venom has no effect. In the same way, if one cobra bites another cobra there is no poisoning.

The Secretary Bird possesses very long legs and stands about four feet in height. It is found throughout South Africa, as well as in parts of East and West Africa. The bird has for long been famed as an eater of snakes, both venomous and non-venomous. Because of the benefits it thus renders to mankind it is protected by law in many districts.

Many of us have had first-hand experience of insect poisons such as those of the ant, which consists largely of formic acid, or of the mosquito, bee and wasp. In the last mentioned the poison is conveyed from two glands, one containing an alkaline, the other an acid fluid. The consequences of the sting are so severe that one is led to suspect that the entrance of the instrument was accompanied with the introduction of some disease-germs. This is true of the bites of some insects. It is not the bite itself that matters, it is the introduction of

(Continued on Page 154)



"House Spider Dealing with a Blue-Bottle": Leg are armed with spurs and mouth with terrible jaws. It pounces on the luckless prey and disables it with its fangs. It then proceeds to suck the juices of its capture until only a shrivelled skin is left. Some species have poison fangs.

THEY WANTED TO BUILD ANOTHER TAJ MAHAL

By K. R. N. SWAMY

PROBABLY more encomiums have been showered on the Taj Mahal than on any other handiwork of man. Often, it has been argued as to whether anyone can build another edifice more magnificent than the Taj.

So far, this challenge has remained unanswered, although many noteworthy attempts have been made to build a monument equalling, if not excelling the Grand mausoleum at Agra.

Strangely enough, the first attempt was made by no other person than the Emperor Shah Jahan, whose love for his Empress, Arjmand-Banu-Begum, resulted in the creation of the Taj Mahal. After having built the Taj Mahal, the Emperor felt that it would be befitting to have another mausoleum, the exact replica of the Taj Mahal, but in black marble, constructed on the other bank of the Jamuna, so as to house his mortal remains.

He further decided to have a marble bridge across the Jamuna to connect these two mausoleums, so that as in life, in death also he and his beloved would remain united.

On completion of the Taj, he ordered the master builder to start work on the Black Taj Mahal. But it is doubtful as to whether, Shah Jahan, the Grand Moghul as he was called, could have financed the building of the Black Taj Mahal.

Even in the building of the Taj Mahal, History reveals that the Moghul treasury shouldered only one third of the expenses, the rest being borne by contributions from Maharajahs and Nawabs. Further the price of the superior Caucasian Black marble, used in the Taj, was five times the price of the pure white marble.

The expense of building the Black Taj Mahal would have been at least 160 million rupees, when compared to the 32 million rupees spent on the Taj Mahal.

Tradition avers, that even while building the Taj Mahal, Ustad Isa, the master architect, ran short of black marble and was forced to use white marble soaked in correct chemicals for years, till it acquired the proper black colour.

Anyhow, the fratricidal wars that ravaged the Empire of Shah Jahan, during his last years put an end to this Grand Scheme.

Today, on the bank of the Jamuna, opposite to the Taj Mahal, one can see the foundations of a vast red sandstone platform that was to house this mausoleum.

Aurangazeb, Shah Jahan's successor was not interested in completing the monument and when Shah Jahan died his remains were placed in the same crypt where lay the remains of Mumtaj Mahal. "The mortal remains of my parents should lie buried side by side, as they loved each other so strongly," Aurangazeb decided, "but to build another such monument would be wasteful and ridiculous excess."

AURANGAZEB'S ATTEMPTS

It seems a little ironical that the second attempt to build another Taj Mahal was made by the Emperor Aurangazeb himself. This time, it was in memory of his wife, Dilras Banu, surnamed Rabia-ud-durani and better known as Durani Begum.

She died in Aurangabad and the edifice known as the Bibi-ka-Muqbara in Aurangabad is the mausoleum Aurangazeb erected in her memory. The mausoleum cost him seven lakhs of rupees and took seven years to build.

Chronicles mention that the marble had to be brought from the North Indian quarries and that the master architects, Ataulla and Haibat Rai, designed the monument.

But to any observer, it becomes apparent that this monument, (built within seven years of the completion of the immortal Taj) while following in outline the basic features of the Agra edifice is no equal to it.

According to the well known historian Percy Browne, the Bibi-ka-Muqbara falls far short of the Taj in that the symmetry and simplicity are absent in it.

The mausoleum is approached by a paved avenue having a broad pond, with 13 fountains in the centre. At the end of the avenue, within a spacious area stands the monument. The total height of the monument is 110 feet above the ground.

Up to a height of five feet from the terrace, the building is of pure marble and above this height the superstructure is of stone stucco. On the top the huge dome is again of white marble.

The decline of the Moghul Empire and the distance the Bibi-ka-Muqbara was from the imperial capital of Delhi, caused the edifice to fall into disrepair and Aurangazeb's son, Prince Azam rebuilt it again.

The centuries that followed had spelt ruin for this monument and the costly treasures inside it and at the beginning of the 20th century, Lord Curzon ordered the cataloguing and conservation of old China, copperware and carpets that had been lying neglected in the Muqbara. Since then, the Nizam's Government has spent a lot of money in the upkeep of the monument.

Lord Curzon took a keen interest in the architectural heritage of India and the Indian Archaeological Department owes its present status to this illustrious Viceroy. It was Lord Curzon, who made a positive attempt to find the fate of the Peacock

Throne and thanks to his efforts, the historic monuments of Agra have been saved from the ravages of time.

"TWENTIETH CENTURY TAJ"

But this Viceroy had a greater ambition to fulfil. This was to build in India, an edifice to perpetuate the memory of Queen Victoria, just like the Taj Mahal was meant to keep immortal the memory of the Queen of Shah Jahan.

The third attempt to raise an edifice to equal the Taj was thus made by Lord Curzon, who had resuscitated the Bibi-ka-Muqbara, and this has resulted in the building of the Victoria Memorial known as the 'Twentieth Century Taj,' in Calcutta.

When the news of the death of Queen Victoria reached him, a committee was set up to build up a 'stately building, which in its shimmering beauty is a worthy rival to the Taj in Agra.'

'I want a magnificent shell', Curzon wrote to the architect, Sir William Emerson, "pure and severe in its simplicity with various galleries and corridors radiating around its centre space which will be dedicated to the Queen." As it happened, the architect chose the Italian Renaissance style for the Victoria Memorial Hall.

The project prospered and the appeal for funds met with a magnificent response. In spite of the fact that Curzon refused to accept the huge offers from some of the Indian Princes, feeling as he said, that the memorial ought to be erected by the contributions of the thousands rather than that of the few, he received within the short space of three months nearly 30 lakhs of rupees.

He was able to say, when he left India three years later, that the amount had increased to 52 lakhs of rupees.

The foundation stone was laid by King George V, when he was the Prince of Wales, in 1906 and was declared open by his son, now the Duke of Windsor, during his visit to India in 1921. But the final cost of the monument was 72 lakhs of rupees.

Today the 183-foot high Victoria Memorial is one of the most magnificent buildings in India, and houses a priceless collection of paintings and antiques including one by the Russian artist Verestagin, and reputed to be the second biggest painting in the world.

ANOTHER RIVAL IN MAKING

The fourth attempt to build an edifice equalling the Taj, is still going on. Four miles from the city of Agra, the Radhaswami sect of Hindus are building a monument to their first Guru and in the words of one of the architects "when completed, the memorial will rival the Taj."

The work has been in progress for the past 50 years at an expense of over 20 lakhs of rupees and according to the Chief Engineer in charge, Mr. G. S. Bhatnagar, only a fraction of the edifice has been built so far.

The monument is to be completed by the end of the present century and a model of the building as it will appear when completed, is displayed in the halls of the Radhaswamy Memorial Society.

The proposed building has an oriental setting, but different styles have been beautifully combined. The original estimate of the expense was 50 lakhs of rupees. but it is opined by the builders that when completed, the cost may be as high as one crore of rupees. The total height of the Memorial will be 193 feet, 27 feet less than the height of the Taj Mahal.

On ascending to the top of the uncompleted second floor, one can see the Taj resplendant in the far-off horizon. The Radhaswamy Memorial Hall may not equal the Taj Mahal in beauty, but will cer-

THE TALE OF 1857

(Continued From Page 137)

of historical truth, that it should be widely known and its full significance fully realised. Besides, it has a great lesson for humanity, as it scathingly exposes how the much-vaunted human culture is but skin-deep, whether that skin is black or white, or belongs to the spiritual East or materialistic West. The periodic recurrence of such exhibitions of primitive animal instincts in man serves as a counterpoise to our complacent view of the progress of humanity. To many a contemporary the sack of Delhi by the British troops recalled the atrocities of Nadir Shah. Many an Indian today would find parallel to the atrocities of 1857 in the recent communal frenzy in Bengal and the Punjab, and look upon it as the centenary of 1857 in its bloody aspect, though anticipated by ten years.

So it goes on, from Tamerlane (1398 A.D.) to Nadir Shah (1739), and then with gradually diminishing intervals to 1857, and 1946-7. What is the use of blinking at the glaring, though bitterly unpleasant, truth? Our national motto is "Truth triumphs" (*satyameva jayate*), and we must have the courage to face the truth. You cannot wipe off an evil deed by simply ignoring or forgetting its existence, hiding your head in the sands like an ostrich. So let us know this world as it is, with all that is good and all that is bad; and this applies not only to the big world outside, but also to the little world in which we live. Constant reminder of an evil is perhaps more salutary than deliberately drawing a veil over it. The Hiroshima Day, recently celebrated even in India, is perhaps more instructive to humanity than the anniversary of Independence Day in U.S.A. This is why I have raked up the past and laid bare the darkest aspect of the Outbreak of 1857 on the eve of its Centenary,—LEST WE FORGET.

WEAPONS IN NATURE'S ARMOURY

(Continued From Page 149)

microbes. It is from the bite of an infected insect that man becomes infected by such terrible diseases as malaria, sleeping sickness and the plague.

There are certain soldier white ants or termites that squirt fluid at a foe, the said fluid hardening in contact with the air so that a luckless spider thus sprayed is literally petrified.

All spiders kill their prey by means of poisons injected through their hollow fangs, but only the venom of a few large tropical species affects human beings.

Explosives would appear to be the secret of one class of creatures only, a family of small and obscure beetles that have earned the title of bombardiers. Several species are native to Great Britain, and if disturbed, as by upturning a stone beneath which they may be hiding, answer back to molestation the obtruder by expelling from their body an irritant substance, which explodes in the air with a distinct report — thus coming very near the horrible modern device of poison gas.

Even today we see animal weapons turned against their possessors. The deer's antlers are exceedingly tough and springy, and when two bucks meet in conflict the horns easily become so interlocked that death by starvation or at the teeth and claws of wandering carnivores overtakes both

JAINA ANTIQUITIES IN MANBHUM

By P. C. ROY CHAUDHURY, M.A., B.L.

IT is now almost forgotten that the district of Manbhum in Chotanagpur Division of Bihar had once been a great centre of Jainism. Probably in no other district in India could be found more ancient Jaina antiquities lying in neglect than in Manbhum. Manbhum was the district through which one had to pass while going from Bengal or Bihar to Utkal or Orissa.

It will be remembered that Jainism as a creed had once a very great hold on Orissa. The antiquities in Khandagiri Caves in Orissa are unique specimens of Jaina antiquities. The famous Jaina King Kharavela of Utkal or Orissa came upto Barabar Hills in Gaya where he had left his impress. Manbhum was the via media through which the contacts between Bihar and Orissa were maintained. This may be one of the reasons why there are so many Jaina antiquities scattered all over the district of Manbhum.

Hiuen Tsang, the Chinese traveller in India in the 7th Century A. D., mentions that he came across a province which he called "Safa". General Cunningham mentioned that Bara Bazar of the Barabhum Fargana was the headquarters of this "Safa" province. Mr. Hibert, however, identifies Dalmi, which is near Patkum as the capital of "Safa" province. There are some ancient remains which are clearly of Jaina origin at Dalmi hills. Srawakas or lay Jainas in this part of the district were a great factor at one time. The Srawakas occupied important areas in Manbhum district and were predecessors to the Bhumij population in Manbhum. They were mostly engaged in some sort of trade. The district of Manbhum was very important for the inter-district and inter-province trade routes connecting Benaras, Jagarnathpuri and Tamralipta, an important port in Bengal. Even now there are a large number of Jainas scattered all over the district of Manbhum. For our purposes we have included the present sub-district of Dhanbad as a part of Manbhum. There is no doubt that Dhanbad will very soon attain the status of a full district.

PREACHING OF CULT BY MAHAVIRA

Tradition ascribes to Lord Mahavira having visited the province of "Safa" when he was on tour for the spread of his cult. It is said that the aboriginals who were in an overwhelming majority in the "Safa" province were not very keen to listen to or follow Mahavira and that he was even molested by them. But undaunted, Lord Mahavira went about preachnig his cult and ultimately his sense of sobriety and

saintliness touched the heart of the tribal population and many were converted to Jainaism.

Balrampur commonly known as Palma Balrampur, a village about four miles from Purulia is on the bank of river Kasai. There is a temple at Balrampur in which there are a number of Jaina images some of which are clearly of the Jaina Tirthankars. Some of the images have the Jaina *Chinhas* and are apparently quite old. An inscription on a stone fixed to a pillar was found at this village. The inscription was removed several years back by an agency commonly ascribed to be a Settlement Officer and now could be seen fixed by the road side within the Court compound.

At Boram, a big village situated four miles south from Jaipur railway station, there are three temples in ruin which are said to be constructed by the Srawakas or the lay Jainas. These three temples are identical in design. These temples have Jaina images and were originally Jaina shrines. To the south about a mile away from Boram there is a shrine where there are images in nudity. This by itself is a clear proof that the images are Jaina in origin. The shrine is now taken to be a Hindu temple.

COLLECTION IN ATNA MUSEUM

Chandankiari, another village a few miles away from Purulia, the headquarters of Manbhum district, is the place where a large number of Jaina antiquities were accidentally found. The collection in Patna Museum of the images of the Jaina Tirthankars that were found in Chandankiari makes one of the finest collections of Jaina antiquities in India. Most of these images have been identified by the clear *Chinhas* or special emblems of the Tirthankars. Some of the figures are exquisite from the artistic point of view. The worksmanship is delicate and superb. They are all of the 11th Century A. D. There are two other villages within five miles of Chandankiari, namely, Kumhri and Kumardagga, where also there are some old Jaina images. At both these villages inscriptions have been found one of which has been removed by a local gentleman.

Among the other old Jaina remains in Manbhum district, particular mention need be made about the Jaina temples and sculptures at the small village of Pakbira, twenty miles north-east of Bara Bazar or 32 miles by Purulia-Puncha Road in Manbhum (Purulia) district. They had attracted the attention of the Archaeological Department. J. D. Beglar in the Archaeological Survey of India, Vol. VIII, mentioned about the remains at Pakbira.

IMAGE OF SHRI BAHUBALJI

A mela is held at Pakbira in the month of Chaitra where animal sacrifices used to be held. Since the last few years animal sacrifices are not being offered owing to persuasion by the Jainas. An attempt is being made by some of the leading Jainas of Purulia and Ranchi to build a temple at Pakbira and to preserve the Jaina antiquities. There are now three temples in ruins and about 20 images lying collected at three places. The temples are buried and the *Shikhars* (tops) of the temples are to be seen. A number of images are also lying half-buried. One of the images is 5 cubits high and of Shri Bahubalji. Unfortunately this image of Shri Bahubalji has developed a crack. This image is worshipped at present by the villagers as Bhaironath. There are arrangements to give a bath to the image of Shri Bahubalji.

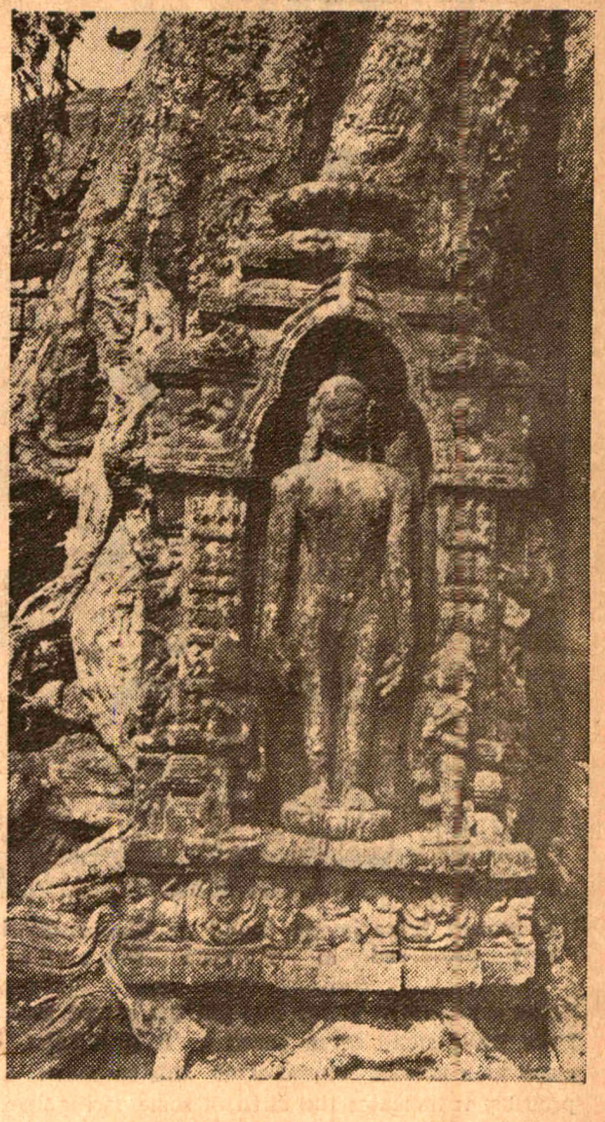

Image of a Jaina Tirthankar in village Palma Balrampur (Copyright Archaeological Dept.)

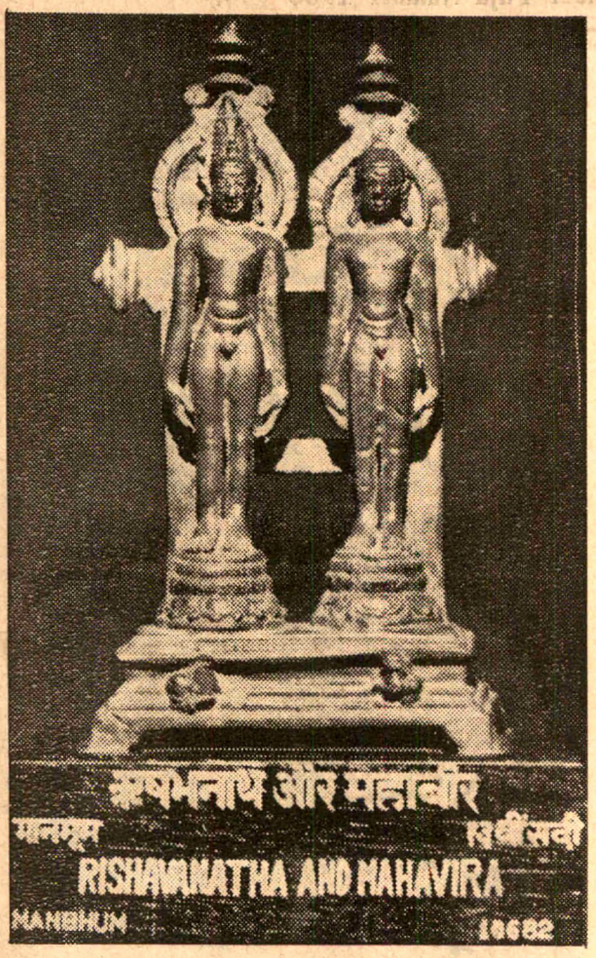
The image is now well besmeared with oil and vermilion owing to the worship by the Hindus as Bhaironath. A number of the images lying scattered are in *Khargasan* pose. The images also include Parswanath Mahavirji, Padmavati and Rishavdev. The images are apparently ancient and an opinion has been hazarded that they may be 2000 years old. Carvings are superb and most of the images are still intact.

FIGURES OF FATHER AND MOTHER

Apparently Pakbira was a very important place at one time. Several smaller villages nearabout Pakbira although they have separate names are commonly grouped under the name of Pakbira. At some of these smaller villages there are exquisitely carved stoor door jambs or pillars. In the neighbouring village of Pankha there are four images which have been damaged. One of them is that of Shri Rishavdev with 24 Tirthankars on the sides. There is another rare specimen at this village. On a stone slab a tree of the height of 2 cubits has been carved with a child sitting at the top of the tree. Under the tree there are figures indicating father and mother and the mother is with a baby. The



A bronze Jaina image found at Chandankiari, now preserved in Patna Museum.

figure depicting a father has got the sacred thread. Near them stand seven persons. It is difficult to come to a correct appraisal of this specimen but probably it indicates the birth of some Tirthankar.

In the neighbouring village of Budhpur there are a number of images which are worshipped once annually. Some of these images are Jaina specimens. All the images have been removed by individuals.

The next important group of Jaina shrines in ruins are found at Dulmi, twentyfive miles west of Bara Bazar. Dulmi is a small village on the banks of Subernarekha river. There are numerous mounds, some of stone and others of bricks. The Jaina temples are all exclusively at the extreme north end of what was probably the old city according to Beglar. Dulmi is an ancient place.

THE OLD TEMPLES AT DEOLI

A few miles from Dulmi is the small village of Deoli. There is a group of old temples at Deoli and they all appear to have been Jaina. In the sanctum of the largest temple there is in situ a Jaina figure known as Arhanath. Hindu electicism has claimed the figure as one of the Hindu pantheon and the figure is now worshipped by the Hindus as well. The statue is three feet high and on a pedestal. The figure of an antelope sculptured on the pedestal and two rows of three naked figures each over the head cut on each side make out their clear Jaina origin. The main temple which is now in ruins consists of a sanctum, antarala, and a *mahamandapa*. There are a number of small temples by the side of the main temple. Under a tree within the distance of half a mile there is a Jaina figure in nudity with the serpent-hood above the head. Research and exploration in this area are bound to bring out more relics.

It is also to be noted that a large number of inscriptions are lying scattered in different parts of the district of Manbhum. It is recently that a concerted attempt is being made through a historical society at Purulia to collect these inscriptions and to have them properly deciphered. There are inscriptions found at villages Karcha, Bhawanipur, Palma, Anai, Bauridih, Kumhri, Kumardaga, Chaliana, Simagunda and Jaida, all in Manbhum Sadar. Some of these insciptions particularly at villages Karcha, Bhawanipur, Palma, Anai and Bauridih have probably references to Jainism as there are many Jaina antiquities found at the places where inscriptions were detected. The largest inscription is at Simgunda near Nimidih Railway Station and contains six lines.

MARKS OF LOT OF VANDALISM

There are several other villages which were noticed by Beglar but which evidently had exclusive Jaina images when Beglar travelled through the district. Some of these Jaina antiquities are still to be seen although there has been a lot of vandalism on them. One of the most important of such villages is Karcha about six miles from Purulia. There are a large number of Jaina statues and five ancient mounds, the excavation of which is likely to yield fruitful results. At Bhawanipur which is about one mile to the east of Karcha village an inscription has been found on the pedestal of an undoubtedly Jaina Tirthankar Rishavnath.

This village Bhawanipur, about 8 miles east of Purulia was apparently a centre of Jainism in the past. The clear image of Rishavnath has 24 Tirthankars engraved on the sides and there are also the usual figures of *Chamaris, Incensors* and *Yakshis*. By the side of this image under a tree the writer also saw another small image of Chakreshwari Devi. Under another tree nearby in the same village of Bhawanipur there is a Jaina figure of a person on an animal which looks like a *Makar* (crocodile). The seated person has a sword in one hand and a bell in the other. The animal in this figure is taken by some as a dog but there is no place of a *Kukurbahan* image (where the dog is the mode of conveyance). Under the same tree there is also an image of Padmavati and Dhanendra. Apparently the image has been torn from its environments.

Another such village is Anai about three miles from Karcha on the river Kasai. Near about Anai village there are other ruins of brick built old temples some with broken images and some without any. Many of the images that had been observed in these Jaina temples 30 years back have disappeared by now. The village of Bauridih near Ladurka is on Purulia-Hura Road at a distance of 11 miles. It has recently yielded to the efforts of a Purulia historical society five Jaina images three of which are Rishavnath, Chandraprabhu and Parswanath respectively as made out from the *Chinhas*. The two other images are of the 24th Tirthankar Mahavira. Peculiarly enough in this village an inscription on a piece of stone has been used in the masonry work within the ring of a well. This clearly shows that the stone slabs con-

JAINA ANTIQUITIES IN MANBHUM

taining images and inscriptions were open to free vandalism in the hands of unscrupulous public.

A RICH FIELD FOR RESEARCH

Strangely enough Manbhum is a district where there are Jaina antiquities in abundance lying exposed and neglected. The more one enquires the more relics come to one's knowledge. The little known village Pabanpur in Barabhum Pargana was obviously an important Jaina centre in olden times. There are a number of ruined temples and broken antiquities. Some of these temples have exquisite carvings. On all sides of the temple there are damaged images of the Tirthankars. Another small village, Par, at a distance of four miles from Anara Railway Station has also certain Jaina antiquities but there has not been any exploration of the area. Some of the antiquities of this area had been sent to Calcutta Museum and are preserved there. One of them is a 2 ft. high image of Shanti Nathji in *Khargasan*. This is slightly damaged.

Probably because the Jaina images, many of which are still unbroken, are lying exposed under trees or on sites which were once temples, very little attention has been paid to them. The cluster of images that the writer saw at various parts of the district in neglected spots remind one as to what a commotion would have been made had they been discovered as a result of a digging. As no State protection has been given they have been freely utilised on the walls of private houses or temples. Manbhum offers a rich field for research into the evolution of Jainism in this area, its relationship with orthodox Hinduism, Saivism and Vaishnavism. A number of inscriptions on the pedestals of some of the images have been found. They have not yet been properly deciphered or studied. A proper study of the inscriptions and the images supported by some excavations in well-identified area of Jaina culture will no doubt throw a good deal of light on the history of culture in this part of the country extending over two thousand years.

ART TREASURES OF CEYLON

(Continued From Page 131)

says, "There is probably no more handsome specimen of bold artistic work of its kind in granite to be found in Ceylon than this finely conceived bit of sculpture." Among the ruins of Mihintale the graceful columns of the Ambasthale Dagaba stands pre-eminent as the "tour de force" of the stone mason.

TEMPLE OF THE TOOTH

There are other stupas and "dagabas" in galore and everywhere there is some specimen of beautiful art or other. In Kandy town one of the chief objects of interest is the Dalada Maligawa or Temple of the Tooth. This is the heart of Kandy, and the Tooth of the Buddha is the heart of it. The relic came from India sixteen centuries ago, and moved from capital to capital always with the king. The temple is enclosed by an ornamental stone wall with a moat. The most striking features that attract one's attention are the unusual carvings, brightly coloured frescoes representing torments for various classes of sinners and many images of the Buddha.

Next door to the Tooth Temple is the Audience Hall where the Kandyan kings held court with all

(Continued From Previous Col.)

pomp and ceremony. The rich carvings on the pillars and the wall plates are excellent examples of Kandyan architecture.

Good pieces of sculpture and painting and artisitc specimens of stone carving and architecture will be found in every Vihara and "dagaba" which are in plenty in this island, and special mention should be made of Natha Devale, Gangarama Temple, Mahavishnu Devale, Gadaladeniya Temple and

LIFE BEGINS AT ZERO

(Continued From Page 146)

scope of variation which becomes important for selection and evolutionary impacts.

VIRGIN BIRTH

Another important phenomenon in this connection is the artificial activation of eggs. It has been found that in some animals the matured egg can be made to develop in laboratory without the intervention of any spermatozoa. This phenomenon of activation of eggs minus the sperms is known as parthenogenesis and if these eggs complete their development it is often said this is as a result of virgin birth. There are a number of records to show that the frog's egg can be made to develop by pricking it by a needle dipped in blood. Some other physical and chemical treatments like heat and cold exposures, treatment with acids, may also produce artificial activation in some eggs. In nature there are regular instances of egg-development of wasps, bees and ants by parthenogenetic means in case there is no chance to meet a sperm. Experts now believe that the egg is a wonderful apparatus by itself which is ready to undergo tremendous changes, only needs little stimulation to initiate the process either by sperm or by parthenogenetic agents. Once stimulated, it will try to carry out its auto-mechanism.

There has been innumerable attempts to control the process of fertilization more precisely and human ingenuity in this respect is not lacking behind. Direct work on the fertilizability and longevity of sperms is opening up new possibilities which were undreamt of before. Regular process of artificial insemination in farm animals has now been recognised and samples of sperms are flown across country for making controlled mating experiments. It is now possible to successfully inseminate more than one cow from the yield of sperms from a single bull. The application of such experimental technique is full of value to human sphere of life. For fertilization is a constant source of rendering variations to the offsprings and all variations may not be useful. It will gradually become a necessity to exercise choice of selecting the 'good-sperms' and 'bad-sperms' for the sake of genetical security even in defiance of all law of Nature so that the precarious equilibrium of human population may not be broken as quite undreamt of and unguessed. Life begins at Zero and always strives for the infinity.

HOW I BECAME A MAN-EATER

A remarkable "autobiography" of a tiger acquainting us with its ways of life and its exploits — written by a skilled Shikari.

By AUGUSTUS SOMERVILLE

THERE is a range of hills that rise steeply from vast forests, known to the Jungle Folk as Sat Pahar, the Seven Hills. Here on the summit of the highest and steepest lies a large cave, deep and warm, where on a cold December night I was born.

Of those days I remember little, except the sanctuary of my mother's strong arms, the warmth of the fur around her neck and the roughness of her tongue as she licked my unruly hair into shape. Of my father I remember less.

As the days sped I grew from a helpless, woolly mite, into a strong active cub, with a will and a temper of my own. Often in the early dawn I would nestle down beside my mother and watch the great red ball of the sun creep up over the hill-tops and flood the forest with its golden light. Far below us were fields and meadows, with here and there

small village in which lived those strange, two-legged animals called Men. It was at such times that my mother taught me of the ways of the Sambur and the Cheetul, but always she cautioned me never to leave the cave but to hide in its inner-most recesses till she returned.

I GOT THE GREAT SURPRISE

As I grew older and stronger a great restlessness possessed me and one moonlit night, when mother had left me earlier than usual, I crept down the hill, following in her steps, till I found myself deep in the forest. Here, in the shadow of a large bush, I stopped, being afraid to venture further, yet unwilling to return. As I watched the trail that led deeper into the forest, I saw in the dim moonlight a large black form advancing

y concluded that it was my mother returning and I determined to give her a great surprise. Waiting till she was opposite me, I sprang upon her back. But it was I, who got the great surprise. In an instant the form had sprung upright and as I slid to the ground, a huge paw gave me a cuff that sent me sprawling and whimpering back into the bush. Here I lay trembling with fear and moaning softly, for that stroke had been a hard one and I was still little more than a cub. Then a great shaggy head was bending over me and a long grey snout sniffed me suspiciously. "Bah!" said a deep voice, "it is

Waiting till she was opposite me I sprang upon her back. But it was I who got the great surprise.

the Cub of the Striped One and he would eat his great grandfather," and I realized that it was not my mother on whom I had sprung, but Bhalu, the Wise One of the Woods.

"Come along, Young Un," he growled, and as I still did not move a heavy paw swept me off the ground and back on to the path, where a gentle push sent me running on ahead.

Thus accompanied I was soon back at the cave, but as we neared the entrance, Bhalu held back. "Go on in" he grumbled, "and see if your father

cave empty, rushed out to tell him so, but found him a long way down the path, hurrying off on some business of his own.

'BEWARE CUB OF STRANGER'

"Bhalu," I called, "wait for me," and he stood still till I had gained his side.

"What now! Do you wish to go wandering again? It is lucky for you that you sprang on my back. Had it been the Spotted One, he would have killed and eaten you in a minute Never trust the Spotted One. He is man and cowardly and will never strike from the front." So I sat on the path and as the night was young, Bhlu told me all about the forest, of where the Sambur hid during the day and the water holes to which the timid Cheetul came to drink at dawn. "All these I leave alone, Son, for it is not in my nature to kill and eat the flesh of any living animal. I prefer the nthives and the beautiful, golden honey that the bees hide in the hollow of the trees, but best of all I love the Mowah flower," and here he licked his huge chops. "Where the Mowah Flower fall, there you will find me and all my tribe, so remember this if you need my advice any day," and with that he rose to go.

"Bhalu", I asked as he moved away, "why did you not kill me when I jumped on your back?" He looked at me in silence for awhile. "Son" he replied, "there is a law in the Jungle that is never forgotten. It says, 'Beware the Cub of the Stranger.' Remember this and you will grow to a ripe old age and also avoid Man as you would the Red Dog and the mad Jackal. Remember, of all the Killers in the forest, Man is the worst. He kills, not only for food but also for the joy of killing and it is because of him that your people and mine have almost gone," and then he left me. I returned to the cave and when at dawn, mother returned bringing with her a fine juicy Kakur, I said nothing

MOTHER AND I GO HUNTING

About a month later and when the moon was at its full, mother said to me, "Come along, Son. It is time you learned to feed yourself. Tonight we will go hunting together."

I was thrilled and trotted at her side, filled with excitement, till we came to a sandy stream and here mother raised her voice in a peculiar husky cry. Almost immediately another voice answered and I saw my father stalking towards us. Ignoring me, he came up to mother giving her a playful cuff that would have knocked me senseless and then trotted on ahead of us.

Travelling in single file we hurried along the bed of the stream, the soft sand sinking deep between our paws, till we came to a pile of huge black rocks that stood out sharply from the sand and I immediately caught the scent of cool water. I would have rushed ahead to slake my thirst, but mother, with a deep growl, bade me wait. Father now went ahead swiftly and as he approached the

pool, he moved as silently as a shadow. After a while he reappeared, walking along the edge of the rocks and I knew that he had discovered no game. Then with a deep growl he disappeared into the forest.

Mother now hastened ahead and as we entered the rocks, she cast around till we discovered a shallow depression between two boulders, and here on the soft, dried grass that filled the hollow we laid down and waited.

I was young and impatient and could not lie still, but mother lay motionless through that long night, till towards dawn, when half asleep from exhaustion I had nestled against her warm side. I felt her suddenly stir. Cautiously she raised her head, then lay back, every muscle taut and only the tip of her tail quivering. Curious to see what had awakened her, I peeped over the rocks and saw, standing in the moonlight, the tips of his massive horns gleaming, a magnificent Sambur. Although evidently eager to drink, he stood motionless, sniffing the air delicately, restless and afraid. That he sensed our presence I knew, but he was uncertain, deceived by the absolute stillness of the night. After awhile he moved cautiously towards the water, stepping wearily over the dead leaves and fallen twigs, so that his approach was so silent that I did not know he had come till I heard him sucking up the water greedily.

THE SAMBUR — MY FIRST KILL

I was now to see my parent in action and can never forget the pride I felt for her. Where the Sambur stood, legs well apart and heal bent down, could not have been more than ten feet from where we lay. The height of the rocks gave us an advantage and as my mother prepared to spring, I felt her superb muscles rippling along her side. For a moment she crouched, her whole body quivering, then with a roar she sprang. That split second's warning had been enough for the Sambur. Even as mother leapt, the Sambur swung up his massive horns and I saw my mother go hurtling through the air as his antlers caught her full in the chest. But Sambur had reckoned without me! Although young and inexperienced, I was almost full grown and voicing my excitement in a childish roar I sprang a second after my mother, landing full on his back. Here, I clung on with teeth and claws while that huge beast tried its utmost to shake me from my hold. I saw my mother spring again, but this time she made no mistake. Landing on the shoulders of the Sambur, she buried her teeth in its neck. Then with one paw fixed firmly in its muzzle, she swung herself to the ground, so that her weight twisted the Sambur's head round and I distinctly heard his spine crack as he crashed to the ground.

ultation of my first kill. Springing on the body, I voiced again and again the savage call of my tribe, announcing my kill. A moment later I heard an answering roar from the forest and my father came bounding across the sand, eager to share the feast.

WOUNDED MOTHER LIES ON SAND

It was now that I noticed mother lying on the sand besides the Sambur. One of the horns had pierced her side, inflicting a nasty wound and she was bleeding freely. Rushing to her side I endeavoured to console her, licking her wound gently, but father thrust me roughly aside and laying a chunk of meat he had torn from the Sambur's side near her, he returned to his own feast. A moment later I joined him and the taste of the warm blood and the fresh meat was sweet in my mouth. After awhile I noticed that mother had started eating and when she finished the portion father had given her, she crept towards the carcass and started tearing away long strips of meat which she devoured with relish. How long we had been at this glorious feast I do not know, but suddenly we heard the thin long wail of a jackal on the prowl. He had scented the blood and true to his kind was summoning his tribe. Dad growled deeply, but later, as we heard the mellow notes of the cow-bells as the cattle came from the village to feed in the forest, he stirred restlessly. The dawn

Her old body quivering, then with a roar she sprang. ....the sambur swung up his massive horns.....

mainder of the feast to the humbler folk of the jungles, we moved away reluctantly.

Mother was sore and weak from her wound but she kept on determinedly beside us, but every now and then she stumbled and fell and when she coughed I saw the red blood on her tongue. Now I was truly afraid. Mother was the only creature who loved and protected me and if I lost her, I would be lost indeed. Dad had paused once or twice watching us, then with a strange indifference he hastened off, leaving us to whatever fate had in store.

That return journey was a nightmare experience. Mother was rapidly growing weaker and each time she fell, the struggle to get up caused the blood to gush from her side. At length when the sun was well overhead, we came to the entrance of our cave and here she collapsed entirely. Patiently I watched by her side and when, in the cool of the evening, she stirred, I helped her into the cave where she fell upon her old bed of grass and leaves and lay still.

LEAVE CAVE & FIND A MATE

A day later mother died and I, distracted with grief and fear, fled from the cave never to return till many months later.

I now took to hunting alone. As I grew in size and strength, my experience increased, till I roamed those vast forests, truly a King in my own domain. And now a wonderful experience befell me. I remember it was a fiery, summer night. The very sand at my feet was so hot that it all but blistered my pads. Panting with the heat and too exhausted to hunt, I sought instinctively the water-hole where I had made my first kill. As I approached this well-remembered spot, I slunk through the shadows for mayhap some small animal had come down to drink, and then I stopped in amazement. As the breeze from the water-hole blew gently towards me, it brought a scent that was so strange and yet so tantalizing that I felt my whole body trembling with excitement. For a moment I sniffed the air and as a species of madness came over me I rushed towards the water and then stopped in amazement. In the midst of the pool, lying contented and relaxed, was the most entrancing vision I had ever seen. As I approached her she raised her head indolently and gazed at me softly. At that moment I must have gone mad. Without considering I plunged into the water and attempted to seize her. It was then I learned my first lesson in courtship—never be too precipitate. That female may have been entrancing to look at but she carried a punch in her right paw, that when it connected landed me almost senseless in the water at her side. However, I will not prolong the scene needlessly. A punch such as I had received was something no self-respecting tiger would take from any female however beautiful and I was soon giving her back as much as I received. Anyone hearing us would have thought a murder was in progress. No one would have believed we were only having a little love tussle.

However, the Lady was willing and after a while she followed daintily in my wake and so I returned, after many months, to my mother's cave, a married man.

I may have been happy, I don't remember now, but I know that after a few months my wife presented me with a snarling, vicious lump of mischief, which she announced proudly was my son. I was now burdened with all the responsibilities of paternity having to protect and feed this useless creature and as the days went by I conceived a deep sympathy for my dad. However, in the fullness of time my wife taught my son to hunt and fend for himself, just as my mother had taught me, and gradually I returned to my old ways of life.

DAYS OF SCARCITY & HUNGER

But now a great change had come over our domain. On every side of the cave the forest was rapidly disappearing, cut down and burnt. Parties of hunters, armed with every conceivable type of weapon, marched through the forests, beating drums and shouting and slowly the Sambur and other Deer fled or were ruthlessly slaughtered, till the forests were left desolate.

Now the days of scarcity and want were on me and all my kind. Food was impossible to obtain and many a night I roamed the forest faint with hunger and all I could obtain was an occasional Hare or miserable Jungli-murgi that did nothing to stay the pangs of starvation.

Gradually I grew desperate. Often in the early hours of the morning as I lay in wait by the fields near the villages, I watched the fat buffaloes being driven out to graze and my mouth watered, but a strange fear of these two-legged creatures that accompanied them restrained me, so I let them pass, till one day a young calf came skipping by the bush behind which I lay. The temptation was too great and without a sound I sprang, sinking my teeth into its tender flesh.

That was my first domestic kill and thereafter I would hunt no other game, but morning and evening would lie in wait for the cattle leaving or returning to the villages and many a victim fell to my skill.

However, things were not so easy as all that. The villagers banded together and drove me out of the forest so that I was compelled to range far and wide. Soon there came a time when even this killing of cattle was impossible. The villagers no longer permitted their buffaloes to wander in the forest, but tied them a few yards from their huts so that I was afraid to go after them.

THE FIRST MEAL IN MONTHS

Now in truth did a great fear and desperation seize me. All wild game had long since disappeared. Even the Hare and wild fowl had been trapped and slaughtered, so that I was faced with starvation. One evening as I lay on the hill-side, I noticed the villagers driving their cattle into a pen erected on the edge of the village, where they were confined for the night. As I watched, a daring scheme entered my mind. Waiting till night came, and all sounds of movement had ceased, I crept down to the pen. The animals smelt me and started to grow restless and fearing the noise would awaken the villagers, I determined to strike at once. With a single bound I landed on the top of the stockade, built of strong sal posts. Here, I paused a moment watching the terrified animals below; then selecting a young calf, I sprang on its back, killing it instantly. Now I was in a difficulty. How was I to get the carcass out ? Even a half-grown buffalo is far too heavy for a tiger to seize in its teeth and jump an eight-foot palisade. Swiftly I acted. Dragging the animal to the foot of the stockade, I

sprang on top of the wall. Here, I wedged my hind claws in the sal posts and leaning down grasped the carcass with my teeth and fore-paws, drawing it up to the top of the palisade, then tipped it over on the opposite side. In a moment I was down beside the body and half-dragging, half-carrying, made my way swiftly to a nearby nullah where I enjoyed my first meal in months.

Dawn surprised me and hiding the remains beneath a thorn bush, where it would be safe from vultures, I returned to the cave and slept far into the next night.

When I awoke my first thought was the "kill." Swiftly I sped downhill and casting round in the vicinity of the village came across the drag down which I had pulled my kill the previous evening and so found the the carcass. Tigers, I must explain, have very poor eyesight, tracking mostly by scent and hearing.

As I approached the bush beneath which the body lay, I crouched down, surveying the site intently. I immediately noticed that the body had been dragged from beneath the bush and left on the open sand. This in itself would have been sufficient to warn me off, but I was still faint and weak with hunger and the sight and smell of the carcass was too much for me. Ignoring the danger I walked boldly on to the kill and settled down for another feed.

The night was dark and only the faint starlight lit up the ravine in which the body lay. Swiftly I seized the carcass in my paws and started to tear away the flesh, savouring each mouthful of the still fresh meat; when suddenly the entire scene was bathed in a blinding white light. Bewildered I turned to see from where this sudden illumination had come, when from a tree overhanging the ravine, came a flash and a deafening report. The same instant a heavy missile struck my paw, smashing the bone and lacerating the flesh. With a roar of rage and fear I bounded up the bank and in spite of my bleeding paw and the pain that racked me, fled swiftly back to the cave.

All that night I lay in the cave licking my wound and restless with agony and when dawn came and I saw the extent of the injury, I realized with a pang of horror that I would never use that foot again.

I BECOME A MAN EATER

There now started for me a period of terrible suffering. As the wound smelled and festered, maggots formed in the flesh and my whole body trembled and shook with a raging fever. Without food and water it seemed as if my end had come, but I was strong and young and after awhile the swellings subsided and the wound gradually healed, till one night when the fever had left me, I dragged myself to the old water-hole to drink and wallow in its cool depths. And here at last the Fates were

The blow unfortunately landed on my crippled paw.....maddened by pain I sprang straight at him.....

kind. As I lay in the water a Hare crept down timidly to drink, but when it saw me, terror so robbed it of all movement that I had only to stretch out my unwounded paw to drag it unresisting towards me.

The food provided by that Hare did a little towards restoring my strength, but I soon realized I was no match for a healthy buffalo or cow. Hunger and my incapacity to kill any of the large animals drove me to the ignominy of contesting with the jackals and dogs for the offal thrown out of the villages. Daily I became weaker and as hunger drove me to desperation, I returned to the vicinity of the villages during the day in the hope of waylaying some small calf.

One day as I crouched in the thick undergrowth I noticed a young lad driving a flock of goats towards the forest. One of them, a mere kid, came bounding towards my hideout and without a moment's hesitation I struck at it. In its dying struggle it set up the usual shrill bleating of its kind and the lad hurrying to find out the cause of its distress, came suddenly upon me. I would have slunk away, for the fear of humans was still strong in me, but the lad, probably half crazed with fear at the sight of me, lashed out wildly with his staff. The blow unfortunately landed on my crippled paw

and maddened by pain I sprang straight at him, burying my fangs in his throat.

That lad died without a struggle and appalled at my act, I fled back to the cave. Reaching here my mate came out to greet me but no sooner did she smell the human blood on my claws, than with a fierce snarl she backed away and bounded into the forest. I never saw her again.

That one accidental killing was the undoing of me. The members of my own tribe avoided me. I was shunned and deserted but the taste of human blood created a species of madness in me so that I must kill again and again to satisfy that craving.

Now, strange to say, I lost all fear of man. My name grew to be a terror in that district. People deserted their homes and fled to the larger villages. I followed relentlessly and came one night to a lone village nestling at the foot of a high mountain. Here I crouched beside a narrow road that led from this village to the town on the main road. In the early hours of the morning I saw, staggering along this path, a party of three men, who, by the way they swayed and sang, I knew to be drunk, for they acted just as Bhalu did when he returned to his cave after a night in the Mowah groves. I waited till they came abreast and then sprang. The first, a mere stripling went down before me without a sound. The other attempted to strike at me with his stick and him I killed with a single blow from my uninjured paw. The third man fled back screaming towards the town and him I disdained to follow. A short while after, a body of men armed with sticks and carrying lanterns, came towards me so that I was forced to abandon my kill and return to the forest.

NEMESIS

(As Told By The Hunter)

AS I drove my car into the Dak Bungalow compound at Bagoda, I was conscious of an unusual and suppressed excitement. Everywhere small groups of people were discussing some topic and as I finally parked the car and strolled on to the verandah, there was a general rush towards me.

Led by the village Chowkidar, about twenty villagers assembled on the steps, all talking and gesticulating together and the burden of their conversation was the oft repeated words, "Bagh mara" (The Tiger has killed).

Barum Deo, the Chowkidar, was an old friend. "What is it Barum ?", I questioned and in answer he seized one of the villagers and thrust him forward, saying, "Tell the Sahib what happened and speak the truth."

The man indicated I could see was gloriously drunk. Proud of the sudden importance thrust on him, he puffed out his chest and began a highly dramatic account of how he was proceeding down the road with his two companions when a huge tiger suddenly sprang on them. Without a moment's hesitation he seized the animal by the throat and dashed it to the ground,—and here a fist sent him sprawling to the ground himself. "Fool," the Chowkidar roared, "did I not tell you to speak the truth ?" Picking himself up the man looked round fearfully, but what he saw on the faces of the crowd decided him.

"Sahib", he said humbly, "I was going with two companions back to our village, when suddenly a tiger sprang on us. I,—I did not wait to see what happened but ran all the way back here."

"Good", I thought, "at last the truth. Now we can get some action."

"Barum Deo", I ordered, "get four men and a few lanterns. We are going to view the site of the kill."

MOTHER—AN AVENGING ANGEL

There was a tremendous lack of enthusiasm, but Barum Deo is an old martinet and in a short while he had rounded up the necessary men and the lanterns and assembled them at the entrance to the Dak Bungalow.

Taking up a blanket and my Mauser-423, I loaded the magazine and joined the waiting men. In a moment we moved off taking the road that led from Bagoda Town to the village of Atka.

We had not proceeded more than a few hundred yards down this road when we were confronted by a truly alarming spectacle. Standing in the middle of the moonlit road, a formidable spear clutched in her bony hand, was an old woman, the very embodiment of an avenging angel.

I looked at Barum Deo in amazement. "It is the mother of one of the victims, Sahib," he whispered, "better let her come along." I nodded and off we went, the old lady in the van.

We had proceeded thus for about a mile, when suddenly the old woman started wailing and rushing forward, flung herself down on the road. We hurried to her side and found her clasping the body of a young man in her frail arms, her whole form convulsed with her weeping.

"It is her son, Sahib," Barum Deo informed me, "the other one is her husband."

"Poor, old lady," I muttered, "deprived in one fell stroke of both son and husband." I turned to Barum Deo and whispered, "tell her I am here to avenge the death of her son but she must leave the bodies alone. If she removes them all chance of the tiger returning is gone."

SHE YIELDS TO ENTREATIES

Barum Deo did his best to persuade her, but to all our entreaties she was adamant. "Leave my son," she wailed, "never ! Let the tiger come, I will sit here and die with my loved ones."

"Look Mother," I pleaded with her, "you have lost a son. If this tiger does not die tonight, then tomorrow some other poor mother will break her heart over the loss of her son, for surely this tiger will kill again."

Now to my entreaties were added those of the men we had brought with us. At last she yielded, but only as far as her husband's body was concerned. Her son she would take with her. Husbands were, of course, expendable.

I was glad to agree as every minute we delayed lessened our chances of the tiger returning. Hurrying her away, with her son's body lashed to a pole

(Continued On Page 176)

'SHIKAR'

failures in retrospect

By BIMAL GUPTA

THE magnificent specimens of shikar trophies that adorn the drawing rooms are eloquent proofs of unique marksmanship no doubt. But if those that have been fired at point blank range and quite cleanly missed could ever turn up to tell that sordid story of a grand miss, the reputation of the most confirmed sportsmen would surely be at stake. It may sound just a bit blunt but is a naked truth which all honest sportsmen have to admit.

On going through my shikar diaries of last ten years I find that I have missed twice the number of animals I have bagged. May be I am quite a bad shot but I am not ashamed of calling a spade a spade. As I have already said, my failures are many and it is rather difficult to pick out the glaring ones from the less so, whether the subject fired at and missed was a docile Samber stag or snarling tiger. But from the point of view of real thrill and adventure I would like to narrate two episodes which still make my heart miss a beat whenever I come to think of them.

The first incident occurred long many years ago when I was just a greenhorn and it taught me one of the basic lessons of big game shooting, viz that a bear is an animal with whom taking liberties is to be avoided as far as practicable. He may have been depicted as "Baloo, the wise old brown beast of Sconi jungles" by Kipling in his "Mowgli Stories" but in reality he is undoubtedly a nasty customer to deal with.

I had gone out for a shoot with a friend equally inexperienced and we both belonged to that age group which makes one think that anything from a snippet to an elephant could be bowled over with a twelve bore. The efficacy of this particular weapon had undoubtedly been proved to us on the shoots before this when one Samber hind, two chital stags and a pig had fallen victim to our shots. With t above bag to our credit we went out for the Panc jungles all set for rolling over any dangerous gar that came our way.

Our host, Thakur Bhulai Singh, a sturdy old ma above sixty, at whose place we had been putting during this particular Christmas shoot, was a shika of some repute having shot scores of leopards, bea and even a couple of tigers with his mutinymak vicious looking "blunderbuss."

Over the camp fire on the evening of our arriva when the *chilam* of his *hukka* had thrice bee changed, the old veteran to our great joy announce a grand general beat next morning in his Zaminda jungles holding out big promises.

Making an early start the next morning we mad a six-mile march through hilly tract and arrived a the base of a fairly high hill strewn with big bou ders and clothed in thick shrubby jungle where th beat was to take place.

While we had been waiting for the beaters t collect, some of whom had already arrived, Thaku Saheb informed us in his casual fashion that he wa expecting bears to come out in the beat and it woul be sheer bad luck if one failed to turn up. He the gave us a vivid account of a previous beat of thi hill which took place a year back when hi honoured guests, the Collector Saheb of Banda an his Memsahib showed their fine marksmanship i bringing down two bears clean shot through th heart. Of course the Sahib and the Memsahi shot from a *machan*, as being *Saheblog* they could not sit on the ground and spoil their dress. My friend was however quick to ask Thakur Saheb if similar arrangements had been made for our beat, to which came a curt reply that he knew we were not so fastidious about our dress. This particular news wa not quite pleasing to us, but a great diplomat tha he was, my friend eased the situation by expressing

great relief at having been spared the botheration climbing a cumbersome *machan*.

By this time all the beaters had collected and e head beater informed us that they were ready start the beat as soon as we took our position. He structed one of his assistants who took us by a cuitous route to drop us at our allotted places ere the beat was to terminate. The line of sit- was along the track leading to a precipitous hill erlooking the sloping valley below. Thakur Saheb cted to sit at the first position from where the ck started its gradual rise. My friend occupied e second place half way up the track where a deep vine joined it with the valley. I was taken to the ird and the last position of the sit-up, a further ndred yards up the track on the last lap of a esome climb and was told that it was the most ght after spot of this beat. With a hasty struction as to the direction of the beat the man ampered off noiselessly to join the beaters. The ack at this place was very narrow and there was no nvenient tree nearby behind which I could take ver. The place was however littered with big ulders and I selected one jutting out near the ack to sit on. It was a perpendicular type of rock out seven feet in height on top of which I crambled up. It was not at all comfortable to sit on it hardly accommodated a space covering three et by two feet, but I still selected this just because gave a good view of the valley below as well as of e track.

I had been sitting on my precarious perch with y legs dangling and was beginning to get bored hen I heard the faint noise of shouting of the aters in the valley below. The beaters had to ver a distance of nearly half a mile to be level th us but nevertheless I was on the alert. A gene- al beat, as is known, is an uncertain affair as no one n vouch for a given place from where an animal ill pass. But it still gives quite an exciting time to e men waiting behind their guns even if nothing aterialised.

The gun I was using was a hammered one with vo and a half inch chamber, but throwing all the structions of the makers to the winds, I had queezed into both the barrels three-inch contrac- le cartridges supplied by my illustrious friend, a lf-styled expert in ballistics who assured me of eir tremendous knocking power. I had half a ind for changing them at the last moment with a roper size spherical ball and a buckshot, but I had o give up the idea as I could not open the jammed reech however I might try. This made me all the ore nervous and I only hoped the cartridges would ot let me down if the need arose. The beaters ere now visible in the valley below and they were radually closing in. Presently I saw just a glimpse f a dark object nearly a hundred yards to my right the valley and from the sound of its footsteps I ould make out it was coming straight to the track ver which I was sitting. The beaters were unaware f the presence of the animal in my front and they ept on their allotted line of advance. I pulled up oth the hammers to my gun and covered the direc- tion from where I anticipated the animal would reak cover and appear on the track. The steady "tap tap" of footsteps was quite close by now and made me wonder if I had mistaken one of the beaters for an imaginary animal because I could see some of them further down approaching from the same direction.

I was not kept on tenterhooks for long and presently I saw a huge bear dash out from the undergrowth and advance with its peculiar lumber- ng gait towards my position. I was careful enough not to let it come too close and pressing my dang- ing legs on to the sides of the rock I fired when it was about ten yards from me. The report and the recoil was so terrific that I was almost thrown off my perch and had it not been for my sideways grip of the rock with my legs I would have fallen flat on the ground. It took me a second or two to collect my wits and before I could gauge the result of my shot I had the maddened bear charge on to my rock hysterical with rage. He missed my dangling legs by a fraction of a second by which I jerked up on the rock just at the nick of the moment. Having thus failed to pull me down the gruesome beast stood up on its hind legs and tried to reach me with its monstrous fore-paws cursing me all along in his ursine vocabulary which beggars description. I sat still in the posture of the meditating Buddha on my sheltering rock which was shaking with the impact of the seven hundred pound body weight of the monster and wondered if it would stand the onslaught. It would be quite pertinent to ask why I did not fire the second shot and I very much regret to reveal that this course was out of question as both the barrels had fired with the shock of the recoil. I was quick enough in discovering this calamity from my meditating position and kept on to this process without even batting an eyelid. The beaters witnessed my feat of endurance from tree tops which they were quick to climb up and their combined shouting and clapping at long last made the bully beast withdraw from the scene whimpering dejectedly at his failure to give me a lesson.

It was not before the beaters had come near me that I got down from the faithful boulder. On examining the ground I found that my shot or shots had failed to connect and what enraged the beast was the kick it received from the splinter of a boulder whose top had been blown off by a pair of contractile bullets. There was absolutely no reason why I should have missed a pot shot except that it was bad shooting possibly due to nervousness, but all the same it was a big failure which very nearly cost my life.

The next incident took place quite recently at Maldhan in Jaspur block of Terai forests while shooting with another friend. It was the last day of the shoot and our hearts were heavy with the grim thought of breaking the camp next morning. There was no news of any fresh kill of tiger and hence my friend decided to sit over the remains of the last kill which he had sat over the previous evening without any result.

When my friend had left in the afternoon to keep an appointment, I thought I might as well take a last look at the virgin forests of Kumayun as also the grandeur of sunset over the distant snows of the mighty Himalayas before returning to the old, humdrum existence. Slinging my loaded 3.75 mannlicher rifle over the shoulder I took the motor road leading to Amangarh block which runs through heavy sal forest interlocked with patchers of ele- phant grass and Jantana bushes providing an ideal dwelling place for the denizens of the jungle. Nearly half a mile from the forest bungalow a big nala crossed the motor road on both sides of which were open glades where I came across hundreds of spotted deer everytime I came to this side during our stay. I decided to enter the glade to the right of the motor road to shoot a stag if I could get one with good horns after leaving the motor road. I got down into the nala which ran crisscrossing through the glade I selected. The nala bed was thick with Jantana and other indigenous creepers due to which going was, of necessity, slow.

I heard the deer calling when I left the motor road and following the sound I slowly edged my way to reach a vantage position for inspecting the flock without being seen. When I felt I had come fairly

The Hunted Hunter

By SRI DHIRENDRA NARAYAN ROY, (Lalgola Raj)

A 'Shikar' story ending with a great romance for the young 'Shikari'. The girl who broke his celibacy-vow was a skilled rifle-user.

RAMEN was twenty-five — a full-grown youth of strong build, about six feet in height. He wrote poems, stories and earned a name as a successful novelist but was no less inclined to hunting pursuits. Nothing could escape his sharp eyes. He was a good marksman and whenever he would hear any talk of hunting he would stir out. He was mad about it, so to say. On the other hand he hummed songs in melodious tunes and composed songs with perfect ease. In such moments he seemed completely lost in himself. He was good at Pakhoaj and at the strokes of the skilful hand, the instrument would give out sombre sound as of the clouds.

He was the only child of his father. His classfellows were all gradually married — he was the only exception. His parents tried to get him married but to no effect. His attitude was that in everything else he was ready to obey his parents but if anybody would press him in matters of marriage, he would have no other alternative but to run away. His friends also made unsuccessful attempts. He was determined to live a free life unfettered by any tie of marriage. And was it not a wonder therefore that this Ramen had a romantic wedding! The free man was now chained up in the neck.

Ramen was awfully busy today. A distant relative had written to him that tigers were creating a havoc in a near-by village in the district of Maldah. Ramen at once made up his mind to go and reached there with his followers.

The master of the house, well advanced in age, greeted him at the gate. His name was Surendranath. Ramen said, "Your letter gave me no respite — so I hurried up. I must make the most of it".

"But then you should have sent me a wire so that a car might be sent at the station. We are setting out for a hunting excursion tomorrow. And look, as many as seven elephants have been kept ready. Amiya takes a lot of interest in hunting. She has a good aim — she is also accompanying us."

"Amiya, your daughter? Well, how old is she now? She was just a child when I saw her."

"Sixteen or seventeen. In the meantime she has managed to bag a few boars, stags and even crocodiles. I take her along with me to these expeditions. Though an old man, the hobby has not left me."

How the little child became so daring a girl! Ramen was thinking within himself. Any way, let him wait to see it for himself.

Perhaps a sign of disbelief was noticeable on Ramen's face. So Suren Babu hastened to assure Ramen that it was no exaggeration. Being a seasoned hunter himself Ramen would be simply delighted to see her performance when the time for it came.

Ramen's surprise knew no bounds. He said, "It is strange, I am not sure if any other girl of our country at this tender age has taken to hunting. She must be the first, I think, in Bengal, at any rate."

"But what's the good in having one or two? We shall have to train up a few more." Ramen showed much interest in the discourse and replied,

"Where is that man to be found?"

Suren Babu seemed flattered and spoke with determination:

"We will have to train up such persons in every home. Those who have the ability and resources, should devote their whole-hearted attention to this. It is imperative to impart lessons in lathis and swords to the girls of our country at least for the sake of self-protection. Don't you read in newspapers the horrible stories of atrocity and crime of which women are victims? Are not these diabolical acts on the increase? These considerations influenced Amiya

in handling the gun — and now it has been a hobby with her".

He stopped abruptly and remarked that whenever there was a talk of hunting he forgot everything else. Suren Babu called his servants to attend to Ramen and arranged for him an enjoyable stay at his guest house. Ramen was highly impressed by the cordiality of the reception and even to this day he speaks eloquently about it to his friends.

Next day. It was a fine morning of the first day of Falgoon. Suren Babu roused Ramen from his sleep and asked him to be ready quickly. Ramen did not lose a minute. Dressing himself in Khaki he had just started sipping from a cup of tea. On the branch of a near-by-tree, a *Bou Katha Kao* bird was warbling "Bride, speak to me". Ramen finished his cup and with a smile reflected within himself: there was the tiger they will soon have to encounter and here is the sweet bird imploring the bride to speak! Ahead, was the call of death and behind, the beckoning of life trying to hold him back. Was it the play of destiny or anything else? Hang it. Why this useless thought?

"Well, we are all ready, will you hurry up"? Suren Babu made his appearance in a jolly mood. "I am also ready", came the reply from Ramen no less inspired.

All except Suren Babu had seated themselves on top of elephants. His daughter, Amiya in breeches, was seated in a very elegant style, holding her rifle on the back of the elephant. The rays of the crimson morning sun fell upon the rosy complexion of Amiya adding more charm and grace to it.

Surendranath told Ramen, "Well, you better ascend this elephant."

Waking up from a reverie Ramen climbed the elephant and took his seat.

Suren Babu also got on top of his favourite animal and put a turban on his head closely covering his ears.

Ramen looked at him askance.

Suren Babu started smoking a cheroot and said, "You see, I am almost bald-headed, the turban will save me from the sun; further it will shut out all noise and confusion of the shooting campaign. Moreover, you know, tigers always aim at the head first."

He ordered the mahouts to march the elephants on, to the Nal Jungle.

The gigantic animals moved on trumpeting now and then and breaking way-side tree branches for use as fodder. The mahouts using their 'code' which only the animals could follow, and uttering words of vigilance and caution created an atmosphere of suppressed animation. On one elephant was seated Ramnath, the faithful servant, with all necessary food and drink, quite alive to his duties he may be called upon at any time to perform.

Surendranath was a hunting expert and no less an adept in arranging palatable food. He would brook no slackness in anything.

Ramen's eyes were fixed upon Amiya. As they met with hers, he lowered his face. She too was equally curious and off and on cast glances at Ramen. This exchange of looks — this hide-and-seek went on between them. Just by the side of Ramen's elephant was another on which was seated a friend of Surendranath, named Upendranath.

Some of the party went ahead, others fell behind. While trampling through tall straws no one was visible to the other. The elephants along with the men seemed engulfed in the jungle. As it thinned up, Ramen found Amiya just by his side.

He spoke out as if to himself — "Oh, how sharp is the straw — its pricks are unbearable."

"Hunting in these places is always attended by such hardships which one must endure. There's no way out. I am sorry that you have had to suffer so much."

Ramen was simply charmed by Amiya's free way of talking. He just managed to say, "Oh no, not so much. These are so common to these expeditions. But do you remember, you broke an air-gun of mine when you were very young? How old were you then? Six or seven, I think!"

"Quite perfectly — how can I forget it when for this offence you took me to task! Now you see, I have really started this play with a real gun."

"I have heard that from your father."

Amiya turned round and spread her feet along the body of the elephant and seated herself face to face with Ramen.

"I like your hunting tales so much. There is life in them — isn't it?"

"My play is with the lives of the forests and so life is most potent there".

"So much of life? A dictionary of life indeed!"

With this chitchat they proceeded on. Behind, a little away was coming Upen Babu. He ordered his mahout to drive the elephant quickly and covering the distance, as he drew near, he made a signal as that of a guardian —

"Your gun? What make? *My has* a loading gun".

Upen Babu pulled out an instrument and fixing it to his ear waited eagerly to hear Ramen's reply.

Ramen was amused to hear Upen Babu's English and smilingly replied:

"What do you say, a loading gun or a donkey gun?"

Amiya began to laugh heartily.

"Ah, silly girl, what makes you laugh so much? I see, you are amused to hear me speaking English— but do you know, that the District Magistrate presented me with the gun on hearing my beautiful harangue. Poor me, I can not use it — that's the trouble."

"That is quite true — there's none in this locality to excel you in English conversation."

Amiya addressed Ramen:

"Why are you silent? Is there anything to write upon?"

"Yes, just a bit — it will be better depicted in a story."

Surendranath looked back and took no time to understand what was going on there — surely Upendranath was giving a bright display of his knowledge in English. He shouted calling them,

"Come up, we have reached the vital point. Line up with me, now the jungle will be lashed out."

It was a jungle of Nal. A narrow rivulet flowed through it in a zigzag course. There were sand deposits here and there — the stream was somehow eking out its existence. Its pulse beat might still be felt though threatening every moment to stop. Now dogs and jackals could cross it most defiantly but this river, in the rainy season overflows and bursts its banks and becomes furious and turbulent. On reaching the specific spot, the three elephants carrying Ramen, Suren Babu and Amiya, stopped together. Suren Babu gave a few lessons to Amiya and then turned to Ramen. "We shall all see that you get the game — now try your luck. But if the animal comes within our range we shall not spare it".

Previously informed, a good number of Santals had gathered there. At Suren Babu's bidding they

began to whisk the jungle. Amiya was in the centre, on one side was Suren Babu and Ramen on the other. The remaining elephants and the Santals raised a great noise and began to beat up the jungle from the opposite direction.

What Surendra Nath had desired came out to be true. Whether it was sheer luck or not for Ramen, the tiger came out near him, about twentyfive yards off, and as it attempted to cross the rivulet, Ramen shot at it. Surendranath cheered up and cried out, "Well done Ramen, well done."

But a deep gloom settled on Ramen's countenance. He failed in his attempt and he could hardly utter—

The tiger came out near him and as it attempted to cross the rivulet, Ramen shot at it.

"Oh, no, no, the tiger is unhurt, I have missed it. Such a failure has never occurred in my life."

Ramen felt greatly ashamed. He had a good name in hunting. But today's disappointment specially in the presence of Amiya was unbearable. To add to his discomfiture, Surendranath came forward with words of consolation.

Amiya looked at him straight for a while. Was there surprise in her look, or was there doubt in it as to his ability or was it anything else? Ramen turned his face. Surendranath turned towards Ramen and said, "Let us stop here today — do you agree? Let us have our meals and then return home. Tomorrow we shall take another chance. Ramen thought for a while and then clearing his throat muttered:

"No, that cannot be. I must take another chance today and see what happens. I am not going to be so easily beaten."

Suren Babu's reply was as straight and simple:

"O. K. Have some food and then you may go to the nearby jungle of Nilkuthi. Tigers chased from here generally take shelter in that jungle." In the meantime other elephants and Upen Babu had arrived. Tauntingly Upen Babu said: *"The tiger in the air? Not death? Very very bad. Who fire?"*

Suren Babu retorted, "Would you stop? Rather ask for food to be brought here immediately. It's about 1 o'clock".

No time was lost in carrying out his order. Everybody finished meals on elephant-back. Only Ramen found it too difficult to eat anything.

Suren Babu asked him why he was not taking any food.

"I have not the appetite today since the morning. Moreover....."

Amiya intervened: "Then you should not — we would better take the tiffin-carrier with us."

Suren Babu enquired if she also was going.

"Yes, father, if you please."

"Well, you two then go, we shall be waiting for you under the banyan tree, myself and Upen. Well, Upi, come to my side."

One could hear almost the neighing of a horse in the throat of Upen Babu. Like a pony, he uttered 'hi hi hi hi' which suddenly came to a close. He seemed intensely pleased having been able to sit by the millionaire Suren Babu. With folded palms, in extreme modesty he bent his head so low that he was about to topple down from the elephant. Surendranath was used to this sort of things and so taking no notice of Upen Babu's gesticulations addressed Ramen: "Well, why don't you take Amiya on your elephant? But, beware. Though my daughter is a tried hand at hunting yet caution has its own value".

As the two elephants stood side by side, Ramen

held Amiya's hand to help her come over to his. Before starting, Amiya requested her father to give his good wishes —

"Father, bless us that we may return with a tiger".

Surendranath closed his eyes and showered benedictions with upraised hands. He gave instructions to the mahouts, "You will enter the jungle from the east

Like a shaft the tiger came out and Amiya's gun went off immediately.

and you, Ramen and Amiya, will wait with your elephant in the open space just on the western side. I am coming after taking some rest."

As instructed, the mahouts drove the elephants much in advance. From afar Suren Babu could see Ramen and Amiya moving on like waves with the swinging march of the elephant. Nilkuthi jungle was only two and a half miles away. The two riders now came very near each other as they were settling the details of hunting.

All on a sudden Ramen broke forth with an accusation:

"You are responsible for my missing the tiger."

Amiya was startled: "How's that. Was your gun's trigger held in my hand?"

"Certainly, though not the trigger of the gun, but surely of my mind. I cannot be expected to be the Sabyasachi of this Kaliyuga".

"Poetry is not allowed in the realm of hunting".

"When a living poetry is before me, how can I ignore it?"

"I shall make you my flatterer, then".

Ramen gave a *Kurnis* before her and spoke dramatically. "Please excuse me, your servant is always ready but I don't like to be an Upen Babu".

Amiya burst into a hearty laughter. As advised by Suren Babu, 'beating' the jungle started from the eastern side.

Amiya unhesitatingly requested Ramen, "I have never killed a tiger — if you won't object, I may try this time. Moreover, you are by my side — I have no fear".

Ramen gave a bowing nod: "As your highness pleases".

It was about four o'clock. From within the jungle, a tumultuous noise was heard — there's the tiger, there's the tiger; Amiya flashed like a lightning—her eyes glittered, there was determination in her face. She firmly gripped the gun. Like a shaft, the tiger came out and Amiya's gun went off immediately. There was a thundering noise that echoed in the jungle of Nilkuthi. The tiger gave its last roar and sprang to drop dead next moment with a heavy thud.

Ramen patted Amiya on her back and warmly congratulated her,

"Marvellous, bravo Amiya. Your father did not make the slightest exaggeration. It is a great delight to take part in an expedition like this."

"The game is yours — I am only an intruder."

"Right to a thing has to be earned — it cannot be received from others, do you follow?"

"Still it is your tiger and I have killed it. Really there is no joy in it."

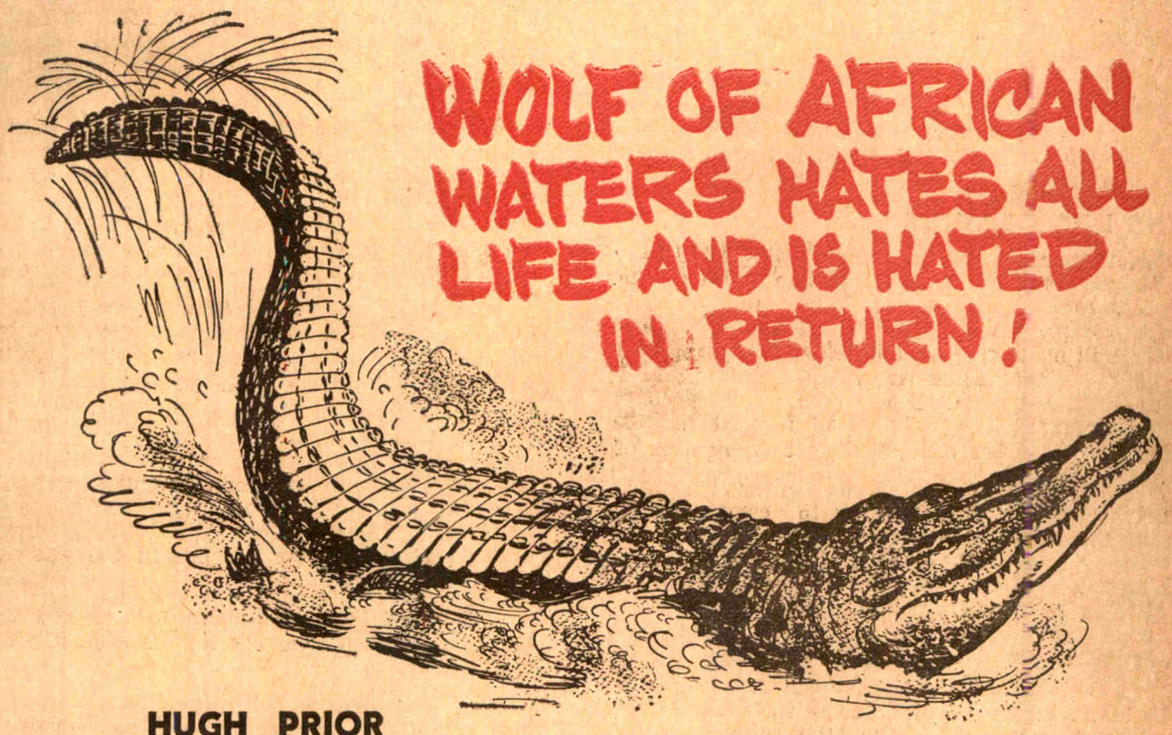
Suddenly flashed in Ramen's mind the experience of the day when he had shot dead the first tiger. What enthusiasm! What an exuberance of his heart's effusions! He could not sleep a whole night. But how different it was with Amiya! This attitude of indifference even at the brilliant success of her hunting life, this self-restraint on her part charmed Ramen. She had taken away the honour which was due to him and this made her unhappy. Ramen was deeply moved. An indefinable feeling overwhelmed him. Both of them got down from the elephant and going up to the place where the dead beast was lying was glad to find that the tiger was fairly big and that the bullet had pierced its bosom.

Ramen was excited. He held Amiya's hand and murmured :

"Such a lovely hand — I wish I could place a prize upon it".

Amiya's cheeks were suffused with crimson. She

(Continued On Page 175)



WOLF OF AFRICAN WATERS HATES ALL LIFE AND IS HATED IN RETURN!

HUGH PRIOR

The crocodile looked plenty menacing when the author's well-placed shot saved his marooned partner in Kenya.

SINCE shooting of the crocodile is invariably done at close quarters, there is little excuse for muffing a shot. But I still think it was a lucky shot that enabled me to save my partner.

We had been prowling along the banks of the Tana river in Kenya looking for hippo, and were following a well-beaten path down a wide, sweeping hollow, when we came to a long, wide sand pit stretching out into the river. At its end lay a big, dead tree, its trunk submerged, its great, shaggy mass of intertwining roots facing the bank. Between the sandpit and the bank was a 12-foot channel, filled with branches swept into the space and forming a kind of woven, sagging bridge.

There were no hippos in sight, so we returned to our camp site. While I superintended the erection of our tent my companion went back for another look over the river. Foolishly, he left without his rifle.

While the raucous voices of the boys were temporarily stilled, I thought I heard a faint shout from the river. I held up my hand for silence, and in a few seconds the boys told me that the other "bwana" was in trouble and calling for help. The hearing of natives is almost magically acute.

Grabbing my rifle, I rushed down the little valley. From the edge of the high river bank I looked down on an extraordinary sight. Out at the end of the sandpit, at the very top of the miniature jungle of tree roots, was perched my partner. And 20 or 30 feet from him lazily sprawled an immense crocodile, quite motionless, tail and rear half in the water, front half up on the sand. The terribly long jaws were slightly open; the yellow, evil eyes fixed unwaveringly on the figure up on the roots out of reach.

I knew, roughly, the vulnerable spot of the ugly water beast. But the position in which he lay gave me only one shot, the armpit and I was far from sure of that. To get in line for it I had to get down from my 12-foot elevation on the river's brink. I slithered down to the edge of the narrow branch-bridge — the safe side — and there I squatted for my shot, Boer-fashion with elbows braced on knees.

Almost with the crack of my rifle, the saurian jumped with electrical speed, so quickly that my eye could hardly follow his convulsive backward move. As he cut into the water he turned sideway. There was a flash of a yellow-white belly, a faint movement of a short foreleg, a quick-up-and-down movement, and the brown waters of the Tana closed over the carcase of one of Africa's most repulsive living things.

My scared partner wriggled down through the tree roots with breathless explanations. The crocodile had caught him as he made his way down from the top of the tree trunk, which he had mounted to get a better view of the reed flats. He had raced for the bank, but the crocodile was at the narrow branch bridge long before him. He had room to chance the bridge, but its sagging structure meant slow progress, and the movements of his pursuer were anything but slow. He turned and hared it back for the tree trunk, but again the crocodile had easily beaten him to it.

The see-saw race was repeated several times, with the crocodile always yards ahead at the finish. My partner knew enough to keep out of reach of the long, deadly tail which, with a lightning flip, could have swept him into the water. Finally, by a desperate curve toward the other side of the split,

he got ahead of the crocodile and reached the top of the dank old smother of roots and began to yell for help.

He had put up a good show. Still, it was the crocodile's reliance on age-old strategy that saved him — the use of its tail to gather in its prey from the water's edge. The big saurian could easily have climbed up on the sand and got him — for crocodiles are very swift on land — if it had not been so sure of its victim.

RHINO IN CROCODILE'S JAW

When hungry, the crocodile will tackle any living thing that comes down to the water's edge. Often big animals, too, as this story, told by F. C. Selous, one of the greatest of African big game hunters, will make clear. Selous was wandering about the banks of that same river, the Tana, mostly a broad, sluggish stream. It was just after the long, rainy season, and the waters had receded for 100 yards or so on either bank, leaving a slimy area of mud.

Selous was on his way back to camp, when suddenly, a couple of hundred yards from where he stood, he saw a rhino making his difficult way down to the river to drink. The big beast could not see him, for a rhino's vision is limited to less than 100 yards, so the hunter did not have to move from his favourable position.

Curious to see what might happen, Selous watched the lumbering beast slither down the muddy slope and dip his great muzzle into the brown water. Finally, the rhino turned to climb back up the slippery slope, and retire to his jungle.

As the big beast turned, Selous saw a foamy swirl behind him, and then the jaws of a crocodile fasten on a hind leg of the rhino. There was an angry snort, a sharp turn of the big, shapeless head, and the rhino's huge feet began stamping in the mud. But, for all his three-ton weight, Kifaru could not get a purchase. His snorts became louder; when a rhino is really angry his snorts sound like blasts from a shunting locomotive. And that enraged beast was thoroughly angry.

Up in his grandstand position Selous looked down on a battle such as few men have been privileged to see, a life-and-death struggle between a crocodile and a rhinoceros. For nearly two hours the strange tug-of-war went on. Neither powerful beast would yield. The rhino dared not, and the crocodile apparently was willing to fight long, and hard for at least a couple of weeks' succulent provender.

At each pounding plunge of his free feet the rhino dug a hole, which immediately filled with water, and when leverage was applied became slippery mud again. Inch by hardfought inch he was drawn into the river. Finally his three feet were under water and all but useless for braking or propelling purposes. The water rose along his heaving body, until at last his thick, short legs were beating the brown Tana into swirling foam that was to be his shroud. The broad snout, blowing little cascades of spray, was the last of Kifaru that Selous saw.

EYE-JABBING TECHNIQUE

Less than a week after my friend's escape on the sandpit, while we still followed the course of the Tana, I saw a Kikuyu boy act with extraordinary alertness and courage.

Near a small native settlement we ran into an excited crowd of men, women and children. They were trying to haul ashore the floating carcase of a hippo, shot somewhere upstream by a hunter. hulk to the surface, and presented them with the material for three-day feast.

Suddenly frenzied yells turned all eyes to one side. At the water's edge lay a screaming native, his arms clamped around a small sapling leaning over the water, the jaws of a crocodile fastened on one of his legs.

Before we could move, a squat, semi-naked Kikuyu had raced down the steep bank. There seemed to be no sense in his mad move, and we shouted to him to get out of our line of fire as we hurried after him. He took no notice, and in a matter of seconds was bending over the crocodile's head, cutting off the target for our two rifles.

One after another his brown arms rose and fell, and at each fall we saw a thumb dig into an eye of the crocodile. At each jab the visible part of the reptile jerked and quivered, but the jaws held their grip.

We stood spellbound, and when we finally spread out, to get a line on the head on either side of the boy's shoulders, we saw the craggy jaws snap open. A roll of water arose above the swirl made by the submerged tail, and the head cut back into the water, leaving scarcely a ripple in the wake of the roll.

The eye-jabbing technique, I found out later, is known to most natives but few have enough courage to apply it.

The crocodile is evil personified — in appearance and habits as well as in disposition. He seems to hate everything that lives, even his own kind. His fighting is confined to combat with his own species, for all other beasts he attacks are simply prey, not antagonists.

"ABODE OF EVIL SPIRITS"

When the great ugly saurians decide to fight, often over some mass of carrion, they lie parallel to each other, on a sandpit or perhaps the ground bordering a river. They fight in reversed position, the head of one at the tail of the other. Thus ranged, by mutual consent, each smashes at the head of the other with his massive and immensely powerful tail. The heavy, slapping thuds of the lashing tails can be heard for long distances in the African silence.

In the shooting of a crocodile there are two main spots in which an accurately placed bullet will invariably prove fatal. One is directly through the middle of the shoulder, the other just at the back of the eye. The shoulder shot will effectively cripple the beast and tear into his lungs. The eye shot will reach the brain which, it should be remembered, is very small.

If you are shooting from above, which you so often have to do on the deeply banked African rivers, and you aim at the exact middle of the back, close to the head, you will get the spine. Then the water-wolf will wallow at your mercy, and you can photograph him — about the only chance you may have for a good close-up—and study him at close quarters.

The crocodile often grows to a length of 20 feet; a hunter killed one which he reported was 24 feet long. His life span is generally believed to be over 150 years.

I have never heard of a white man eating the flesh of a crocodile. Some natives do, but they are few. Most of them regard the ugly beast as the abode of evil spirits, a belief by no means hard to

THE HUNTED HUNTER

(Continued From Page 172)

unclasped her hand and admonished him: "Don't be too greedy. Look, they are all coming."

Ramen was not so easily to give way. He placed a solid demand:

"Then, present me with the gun with which you have snatched away my game — I may rightfully claim it."

Amiya blushed. "Why should it be so? The gun belongs to my father."

Ramen put his hand around Amiya's shoulder in great confidence and remarked, "Certainly. But my right extends not only to the gun but also to its present owner".

In sweet bashfulness, Amiya tried to ward him off saying "Ah me. Don't be too bold. Father is so near, don't you see?"

Her words poured honey into Ramen's ears. They sounded like the quivering strain from an Esraj—the most melodious note of Raga Iman.

Suren Babu from the elephant back congratulated Ramen, "After all, Ramen, you have succeeded in bagging the game.

Upendra was no less enthusiastic. He craned his neck and extended an ovation. He shouted. "Excellent. *Who tiger kill?*"

Amiya hung her head down, Ramen pointed to her.

You have been successful, and doubly so as you have bagged two at a time— one dead and another half-dead.

Suren Babu's bosom swelled with pride. He glanced round once towards Upen, then to Ramen and then perhaps towards himself signifying thereby : Look here, how I have trained up my daughter.

He immediately got down from the elephant and examined the tiger and then ordered it to be tied up and carried on one of the elephants. Suren Babu was delighted beyond measure. He told Ramen, "You proceed. I have to give *baksheesh* to these people. I shall follow. But one thing, you have not eaten anything so long, why don't you finish it now?"

Ramen begged of him to be excused: "It would be better to do it after having washes at home."

The evening sun was bidding goodbye to the earth. A red gleam fell upon Amiya's face and added a special attraction. A gentle breeze was blowing— Ramen's voice bespoke a tender affection for her. "You wanted blessings from your father so that you might return with the tiger. You have been successful, and doubly so as you have bagged two at a time— one dead and another half-dead."

Amiya's eyes widened with awe: "Are you a tiger?"

"What else? Many wanted to hurt me — but couldn't — it is you who have succeeded."

Suddenly she became frivolous. Snatching the handkerchief from Ramen, she wanted to turn the course of their conversation— "How — sweet is the scent — tell me, what is it ?"

"Scandal scent—I like it very much."

"What a peculiar name!"

"Not only peculiar but it has been very appropriate".

"Why not ? Didn't you see what scandal was today's affair)?"

A loud laughter filled the silent jungle.

On their way back the 'Bou Katha Kao' bird chirping 'bride, speak a word' was ceaselessly pouring a melody. Ramen turned round in ecstasy and sweetly whispered in her ears,

"Do you hear — the bird is so naughty — it also demands, *Bou Katha Kao*".

An ineffable dream descended on Amiya's eyes. Love glowed on her face !

* * * *

The first night of their union. Like Gouri, shining with austere penance, Amiya bore on her limbs a radiance of tranquillity. Her eyes bespoke deep devotion. She put a garland round Ramen's neck and then playfully remarked:

— "The bullet no doubt struck the heart of the tiger."

"Oh, what a stroke it was, else how could a hunter, after so many escapes, be so beautifully hunted?"

SHIKAR

(Continued From Page 168)

close I climbed the steep bank with the support of an over-hanging branch of a tree and saw a part of a scattered flock in which there was no warrantable stag. Keeping still leaning over the trunk of the tree under which I stood I heard the calling of the other members of the herd some distance away and not visible from my angle of vision. It was evident that the deer had been disturbed due to some reason, but it was obviously not due to me as the ones nearest to me were not looking in my direction. From the call of the unseen members of the herd I could make out that they were on the other side of the nala which had taken an abrupt bend towards left, a little distance from the spot I climbed up.

To go after them directly meant retracing my steps back to the nala which I wanted to avoid due to the tiresome going involved. So risking my exposure to the deer visible to me I slowly advanced along the bank some twenty yards and stopped at a spot from where it was impossible to proceed without being seen. I had now come to a point directly opposite the main band of the flock on the other side of the nala but still not visible to me. Here the nala had sufficiently narrowed down, but the Jantana creepers covered both the banks in the form of canopy making it almost impossible to see the sandy bottom. I had no alternative but to cross it to get a view of the flock standing close by. No overhanging branch of a tree was near at hand by the support of which I could get down. There was not much time to lose as light had started to fade.

ANOTHER BIG MISS

Putting on the safety catch of the rifle and holding it firmly with both the hands I jumped down the bank hoping for a safe landing. The landing was indeed a perfect one, but what I saw immediately after made my hairs stand on end. Not even ten feet from where I stood lay a massive tiger hunched up in doglike fashion, his mouth slightly agape with astonishment which clearly depicted the expression "What the hell do you mean"? For nearly half a minute, which seemed ages, I stood there like a statue gazing at it as if under a hypnotic spell. Then all of a sudden my fagged brain revived functioning which made me go back a few paces purely by reflex action. This sudden movement instantly brought the tiger in a crouching position and lashing its tail from side to side it gave vent to vicious coughing growls. It will be futile for me to express in words the feeling I had at that moment and I feel only those who have had the experience of a close proximity with an annoyed tiger can adequately realise the nerve-splitting situation I had fallen in. A tiger, except the rare man-eater, attacks only when provoked and the one now faced had every reason for attacking due to my uncalled-for intrusion on his privacy. I had lifted my rifle in firing position the moment I started moving backwards and decided not to shoot if I could help it. But as bad luck would have it, I could not move more than a few paces as a thick set cluster of thorny bushes blocked my backward passage. My forced halt further enraged the beast and from its looks I felt I was in for a headlong charge if I did not take immediate action. Although reluctant, I had no other choice than to shoot, if for nothing else, at least to ward off an imminent charge in trying to save my own skin. Throwing off the safety catch of the rifle already shakily held in firing position I pressed the trigger. The bang of the rifle, the thud of the bullet hitting the ground going off the mark and the loud

A MAN-EATER

(Continued From Page 166)

and carried by the men, we set to work find place for me to spend the night. There we suitable trees and the only solution was two rocks on the side of the road and about t feet from the kill. Between these I laid the bl and drawing some twigs and dried grass int entrance, I settled down and directed Barum to return to the town, taking the lantern with

Every shikari knows the uncanniness of s over a human kill. My exposed position an fact that I could be attacked from behind, me thoroughly uncomfortable, but I determin sit it out.

THE MAN EATER IS DEAD AT LAST

Fortunately, I had not long to wait. F an hour had elapsed since Barum Deo had lef when I noticed an animal coming down the of the road. At first I was puzzled. A ti knew, approached its kill, especially a human with extreme caution. This animal was c visible in the brilliant moonlight and it seem be progressing in a series of spasmodic jump watched it intently and when it finally stood v a few feet of the corpse, I realized the cause extraordinary method of progress. Its right paw was withered and dead, hanging useless the side of its body.

The sight of that withered limb filled me a burning fury and I cursed the miserable cc who had fired that crippling shot and had then too cowardly or too indifferent to follow the trail and put an end to the animal. At his I laid the burden of death and suffering that followed in the wake of that wounded and inca tated animal, a trail that ended here where the of his latest victim lay.

Cautiously I raised my rifle and sighted the barrel. The massive head offered a spl target but I was taking no chances and as the a crouched down to begin its ghastly feast I s lifted the sights till the head rested on the de sion between its shoulder blades, and pressed trigger. As the crash of the explosion died a the animal's body quivered, then rolled over g and lay still.

The Man Eater was dead.

"whoof" of the tiger scrambling up the bank o nala in one big bound were so co-ordinated tha appeared as if all those actions took place at and the same time with a clocklike precision.

A danger when threatening life is kind en to paralyse the nerves which enable one to bra somehow, but as soon as it is over, the tremer strain is sickeningly felt when the nervous sy starts functioning once again. The disappe tiger, no less frightened, crashed through the j causing a stampede in the herd of the spotted I was after, but try as I would to convince m that I was now out of harm's way, I could not an inch for a long time and stood where I was ing extremely weak at my knees. Only when I sufficiently recovered from this peculiar physical ability, did I venture to creep up the memorable and rejoin the forest road.

Here again the cause of my missing the was the same as that made me miss the bear alr described. But supposing that even in spite of perfect aiming the bullet had failed to kill it right, would not the story have been thorou different?

Modernism in Indian Art and Art Criticism

By ASIT K. HALDAR

INDIA is now being rapidly drawn towards revolutionary changes in every phase of her activities. But in the cultural field, alas! our modern art can only be compared to an orphan whom anyone standing by can patronise or criticise. Naturally, any unsuccessful journalist can nurture it as his own pet and flourish his pen without the least hesitation. They do not also feel like putting up some efforts to learn the peculiar ideologies and philosophical meanings underlying the art of the different countries. They, on the otherhand, measure the art of different countries in the same breath and outlook and write about it in a confused and indifferent manner. Sometimes critics deliberately use such philosophical terms and jargons as, perhaps, they themselves do not understand. We can give here a concrete example of a typical journalist-cum-art-critic examining an art object—a sandal wood carving. He at once takes the small object in hand, and begins turning the reverse side and declares it to be a most unworthy and unfinished art-work he has ever seen. Evidently, such a critic is indeed at a loss to understand how a young artist of our country could still produce such a remarkable thing of beauty; and, apparently, just to please his own vanity (as an art-critic), made such an irresponsible remark. Moreover, the critic wants to show his highly strung nervous system, specially cultivated to adjudge the aesthetic value of fine art. For this he had nothing to bother about, and the only thing that is required of him is to walk down into a book sellers' shop and find out some modern literature on European art by European authors. He can then sit comfortably at his table and write essays on Indian art imposing the same kind of critical analysis which could apparently please his own whims.

INDIAN ART CRITIC'S DUTY

An art-critic of our country, nevertheless, has a most responsible profession to follow. He has got to have a long-term objective and a catholic outlook to view his own country's art. For this he should stand on his own soil and study, first of all, *Shilpa Shastras* such as *Vishnudharmottara Shastra, Mahomath Shastras* along with the philosophical interpretation of image worship of our country which baffles the Christian minds of the West. Otherwise, mimetic ways and means would lead our art nowhere.

Ideologically, Western art has nothing in common with our art, as tradition finds no meaning to western mind. Realistic rendering has become possible with the invention of photography and life-like art-form has lost its meaning. Moreover, just as the metaphysical aspects of the Upanishads can never be understood by the West owing to different religious traditions, so, self-realisation through art, attained by our traditional *sadhana*, can never be realized by them. A good Christian cannot see the soul permeating the animal world except in a man who too must be a Christian like him. But the soul, *atma*, for a Hindu, pervades not only humanity but the universe also. Beyond *atma*, only *Paramatma* can be metaphysically conceived and cannot be touched by the five senses.

ART IN EAST AND WEST

Finalism is, at present, on the other hand, sought by the Western scholars. A philosophical interpretation of life's processes in terms of their end or purpose and their sense is carried over into the psy-

hology of analytical schools. They, therefore, find he seed is the essence of a tree and a child mind is he seed mind of a man, whereas Indian art stands pon the fertility of imagination, *Dhyana*. Accordg to tradition, imagination in Indian art is always reative and not imitative. It is intuition that is equired to be developed in Indian art. Such imagiation can be developed to re-create from the past erpetual experiences, and also self-initiated and selfrganised ways and means.

Our Indian art-critics misconstrue art criticism nd they unwittingly cultivate a taste for western rt instead of knowing about the principle of true aluation and essence of creative art of all countries nd appreciate them, they become desparate faultinders. Therefore, unknowingly they decry their wn country's work of art. The famous fight beween Ruskin and Turner need not be repeated here.)bviously, Piccasso could not have brought his surealistic type of scribblings to the fore-front in this cience-invaded, materialistic world unless the cholar critics with aesthetic-cum-psychological anaysis could initiate people into the mysteries of his nfamiliar and unimaginative child-like drawings. The new doctrine preached by the art-critics has almost captured the imagination of the present journalists and artists of the world. In Europe Christian radition of the medieval days does no longer exist but has been turned into a secular aesthetic speculation. In other words, emotionless patterns have become the ultimate objectives of the artist and the fundamental difference between a picture and a pattern does not exist anymore.

INDIAN FOLK ART

Such problem in India never arose. Folk art has been continuing since long before the advent of the European surrealistic or primitive art in India, and, if compared even to-day, it will appear astonishingly 'modern' according to the critics of the West. So much so that an Indian student who went to learn modernism of the West in Paris was, I am told, turned out by the surrealist master artist Piccasso, who asked his prospective student to return home to find out such primitive novelties from the hearth and home of the villages. Surrealistic art has, of course, a commercial value and quaint and curious primitive motifs and forms are the only criteria; and only as such surrealistic art differs greatly from the higher phases of art cultivated in India continuously for over three thousand years.

In India, a great seer is called *Paramahamsa*, which literally means a great swan. As a swan leaves out the dirt and takes the pure water through his beak so the saint takes the essence of the best of this world of misery and purifies his soul. The artist of India has got the same task to accomplish. An Indian artist is far from being a 'Bohemian' and should have the intuition of a 'Yogi' and know the same metaphysical secret of acquiring the best from the worst happenings of this mortal world.

HAVELL AND COOMARASWAMY

True interpretation of their work is only possible when we really sympathetically understand the inner meaning of Indian art. It was men like Coomaraswamy and Havell, two pioneer critics who opened up to us the true significance of our art form. Too much traditional refinement and sophistication of Indian art hardly found favour in the hands of modern art-critics in India and abroad and any attempt to revive such interest is misunderstood and misconstrued by them. The general appeal for primitiveness in art by the European aesthetic-minded art-critics is new. They no more decry primitive art as barbarous. Even Indian sculptures to the Western scholar critics like Westmicot or Birdwood in the 19th century were of "debased quality, deprived of all interest as a phase of fine art, devoid of proportion and acuteness in execution". And critics of the same country after the First World War began to please themselves in chaotic, unsophisticated, *tamasic* art for the sake of aesthetic speculation. Christian concept of art as a form of devotion became a history of the medieval past. Herbert Reed while studying Negro Bushman's art, said; *"We are led to an understanding of art in its most elementary form, and the elementary is always vital." Now this kind of vitality which he points out in primitive art can be challenged and we can boldly assert that the same type—perhaps better type—of metaphysical, perennial vitality exists in the highly sophisticated art of India specially in Nataraj as well as in the conception of Buddha.*

THE DANCE OF SIVA

From the works of Havell and Coomaraswamy and also some of the modern European art-critics like Rowland, Shaldon Chainy we come to know that Siva's Dance of destruction is "the personification of all the vital forces and powers of the cosmic system in operation, the movement of energy within the universe. In Him they have their dayspring and in Him their death." Similarly, highly sophisticated image of the Buddha which was once decried by Birdwood as a 'lump of pudding' has been re-valued by the above-mentioned critics, in the following terms:

"While Western art sought to make an aesthetically beautiful form by portraying human figures which are models of physical perfection and athletic vigour, in Indian art human form is idealised and no anatomical muscular aspect is emphasised. Indian art started with abstract spiritual concepts which had to be translated into physical shape. A proper likeness of the Buddha had to show his achievement of the final Yoga state of serenity and complete mental equilibrium and in addition to it had to incorporate all the 'Lakshana' or 32 major signs of super-human perfection distinguishing the body of a Buddha from those of ordinary mortals." If the early critics found in it any primitive incompleteness and brutal forces unattainable by them the present day critic of the world could at the same time find deeply inspiring religious ideas and spiritual experiences and entirely unselfconscious creation of the artist.

"PRIMITIVE" VS. "MODERN"

Art is never a static phase in the creation in the cultural field. In every period and in every kind of art of different countries some primitive trend will exist. Egyptian, Babylonian, Assyrian and Byzantine art is called typical primitive art. The Art of the Italian Renaissance is also called primitive by the critics of the West. Our critics will do well to understand the significance of such pet words "primitive" and "modern" before he starts to criticise art of our country. In several countries we actually find a variety of cultures developed from really primitive types of the highly developed sophisticated art. Cultural development of all countries cannot always have a gradual course and for that reason cannot always be brushed aside even if it developed into a sophisticated dogmatic art. The landscape of China, the realistic art of Europe, and the idealised form of Indian art are entirely different from one another and reflects the ideology and widely distin-

DAMODAR

By SUDHANSU MOHAN BANERJEE

IT was the hour after the sunset. The evening darkness was just deepening into a mellowy dream. Sailani was resting in her favourite deck chair. The day's toil was over. On the teapoy in front, rested a cup of hot tea as yet untouched by her lovely lips. She was feeling at ease, happy with herself and the world. She was actually humming a soft tune when the telephone bell rang.

Her maidservant came running. What a nuisance that some one should be wanting her on the telephone at this time! She got up a little upset by this intrusion and went to the telephone — Hallo, what number do you want, Yes, Miss Sailani speaking — Yes, who are you please? What's the name?— Can't exactly follow — what is it you say? — Yes, I know Bhanumati Devi of Bankura — She belongs to village Bakultala — Yes, I call her grandma, not exactly my own—but she is more than that, but who are you please? — Engineer Parimal Ganguly of DVC — I see, wasn't your picture in the papers the other day — just returned from the Tennesse Valley —I see.

She now became interested as well as respectful also — What — what do you say — Bhanumati Devi has met with a serious accident — hovering between life and death ? Oh, it may not be as bad as that. Her tone definitely betrayed anxiety. The telephone on the other side went on saying — Yes, while coming last night over the new canal road, my car suddenly misbehaved and I had to stop. While I was looking into the car and setting it right, I heard some commotion. People came running and informed me that there has been an accident. An old lady had fallen down the embankment and had been seriously injured. I went there at once and I was told that she used to come every day to the river side. She would sit there on the bank, vacantly look at the river and curse her. This was her daily routine — Now that the river was being trained and tamed she would in glee address her — How now, how do you like this bondage? I took her in my car and admitted her into the hospital.

Sailani was getting impatient over this long recital and cried — Please, tell me, how is she now?

Parimal did not reply directly. He said — You know, she is old, nearing eighty and anything at this age might turn critical. But she is having lucid intervals — moments of returning consciousness. I asked the people there whether she had any relations. Nobody could say anything but one of the village women said that she had an adopted grandchild in Calcutta — no real relation, but —

Big tears were rolling Sailani's cheeks by then on the other side of the phone. She thought — Yes, blood might be thicker than water, but love and affection are greater bonds.

Parimal continued — The woman brought me a small box and told me that the old lady used to keep her valuable possessions there. I might find there some letter or address or indication. I found there a photo and an address with a telephone number. The photo was that of an exquisitely pret-

would envy a calligraphist. I asked her whose address it was but she could not throw much light but suggested that it might be of the daughter of her adopted child. I thought as I was coming to Calcutta I might try the address or the telephone number to find out if anybody related to the old lady was there so that I could pass on the information of the accident.

Miss Sailani, the redoubtable professor, the heroine of a hundred platforms, a most admired lady speaker in all social functions, felt choked and silent. Only two sentences continued to ring in her ears — an exquisitely pretty girl and she had a nice handwriting. She unconsciously stared at the reflection in the mirror in front. She also scribbled a few lines with her fountain pen. But the telephone was not dead. It rang up again — Hallo, Yes —— Probably they had jammed the line and the connection was cut; well, what do you say — you may be returning tonight. I could come with you if I liked — Well let me see — No, I am not worried about fetishes or convention. I have no such prejudice. All right; thanks so much, I will be ready in an hour.

Though she did not express so, even an up-to-date modern girl like her was somewhat electrified. In her thirtytwo years of perfect maidenhood she had not an occasion to feel any rift in the lute.

In an hour there was a car driving up the hostel gate and at the wheel sat a nice well-groomed young man not more than thirtyfive years of age. Sailani came down and by way of introducing herself said — I take it you are Mr. Ganguly — I am so grateful — I hope I have not upset your plan.

Parimal smiled and said — Why not postpone this thanksgiving for the present? Let us wait till we reach there and then you can thank me to your heart's content and if you like with interest added to it. Well, in any case I could not have stayed beyond early tomorrow morning. I am cutting it by a few hours only. Hope we would be there by 2 O'clock.

They looked at each other and for a second their eyes met full in the face. Sailani felt a little embarrassed and made herself busy to get into the car and sat in the front seat by his side. Parimal pressed the accelerator rather absent-mindedly.

In a few minutes they crossed the Bally bridge and by that time they had settled down to a normal drive. The night was pleasant, the atmosphere quiet and the road deserted. There was, however, a touch of monsoon in the air — the car was speeding to its destination over the polished macadam. Occasionally a few lorries and trucks passed, their headlights staring others in the face with their glare. The star-lit sky above silhoutted a picture of white coloured bulbs. Sirius, Horus and a million others looked at the poor earth.

They talked. It centred mainly on the old lady. Sailani was the speaker. Parimal listened.

Bhanumati Devi was not a Brahmin. She belonged to a good 'Kaibarta' family and in her younger days was a girl of some beauty. The whole locality felt proud of her and she was the cynosure of her father's eyes. Considering those days she was married at a very late age. Her father Mati Patni did not want to give her away except to a really deserving boy. He spurned many offers which others considered good. Ultimately the marriage was fixed with Mani Samanta's only son Sumanta. They be- [illegible] the Damodar and the match was by all means a deserving one. Sumanta was the very embodiment of youth, strong, supple erect. His father was also a man of means. There was no doubt that Bhanumati and Sumanta made an adorable pair and it was a case of love at first sight. People said that they matched just like Radha and Shyam. But the heavens were falling. An unseen thunder was hurled. There was a small difference of opinion between the fathers. It deepened into a squabble and then a quarrel. Men were not wanting to fan it and it spread like wild fire. Sumanta's father refused to take the bride home because his full demand had not been met. Mati Patni thought that this was nothing but extortion and refused to yield. Mediation failed. The bridegroom left without the bride.

Days passed, months elapsed, a year was out. Another monsoon had set in. The river was in full spate. There was no sign of reconciliation yet. Two young hearts awaited on two sides of the river with bated breath. Sumanta often strolled on the river side. His whole frame quivered with a tension and an expectancy which he had never felt. He wanted something to be pressed against his breast. He wanted somebody. On the other side Bhanumati was also feeling the pangs of a new sensation. Her heartbeats rose. She would go to the river side and look wistfully across. Her friends and companions would laugh. They were wives, they were mothers.

Some one would sympathise: — "My God, what justice is this that a woman like you should suffer like this? Ah! are you becoming a recluse".

Others would curse — Two old fools.

Another would say — But what of that young fellow; Is he a real man or an incompetent fool? Does he not appreciate; does he not feel?

Bhanumati would only listen with tears in her eyes and a pang in her heart. Her auntie (she did lose her mother in childhood) used to scold her — Why do you spend so much time on the river side? Don't be silly and don't forget that you are a young woman and a girl like you should not be moving about so freely particularly after dark. That day that old hag was saying — She stopped and did not finish her say.

Bhanumati felt a little taken aback and hurt. After all it was not her fault. What had she or he had done. Nothing; yet there stood between them a big gulf not only in the shape of a quarrel between the parents but an untamed river as well.

But even that river was no bar to love's triumphant march. It was evening, the red glow of a vanishing sun was throwing its last embers over the deepening gloom. There was a shadow and a footfall. Bhanumati looked and blushed. A full blooded man's inviting arms had been thrown around her. She felt dazed as if collapsing but whispered — Don't don't — Are you mad, what would others say if they see us thus.....

Sumanta said nothing, loosened his grip but looked straight at her. He had a determined look put only one question — Do you still sleep with your auntie under her fostering care?

She did not reply but nodded negatively with a provoking smile.

Both Mati Patni and Mani Samanta used to be away from their homes on Saturday nights. That was the day when they would take their goods to Calcutta. So many such Saturdays had come and [illegible] and nothing unusual had happened but on the

next Saturday after their meeting Bhanumati was feeling restless. It was full moon night. Over the wide expanse of the river the queen moon presided. Sand beds shone like glittering silver, white 'kash' flowers bedecked the intervening space. Water courses were not swollen. Giant trees on the bank were moving as if in response to a signal. They were almost beckoning and reckoning. Bhanumati was sitting outside almost moonstruck. She was reminded of her old playmate — Lachmi — the pointsman's daughter. She used to sing such lovely 'Kajri' songs in such lovely nights. Where is she now? Nobody knows where. She had left without notice with a sweetheart — in a sense had eloped. Everybody had cursed her including herself but today she felt sympathetic towards her. Suddenly she felt fiery arms encircling her in a rich hot, passionate embrace. It was so sweet, so charming, so soothing and so possessive.

Yes, me, would you have been happier still if it were some one else?

Everything in her succumbed in that tumult of senses, in that riot of right. Her only expression was — You?

Yes, me, would not have been happier still if it were some one else?

She nestled round his breast, put two fingers on his lips and replied 'Hush'.

She lay there in perfect collapse in that happy consciousness as if her whole existence was ebbing, moving and throbbing.

She whispered — Why do you come like a thief in this surreptitious way? Can't you come boldly?

Love has to overcome shyness, hate and fear—He said.

But supposing somebody spies — What will they think, come.

She took him inside. That was the night of nights and her only night. In such a night as this, she lived and loved and loved and lived.

In the morning her auntie found her asleep in the verandah. She had a fairly pungent tongue and she was wild. She started at her hard and cried — What had happened to you? Which devil did possess you? What an audacity that you, a young girl should sleep in the open while people were moving about!

The whole day she looked at her from time to time and tried to assess the situation.

As soon as her brother returned, she ran to him and said — You are a thrice blessed fool, a blind man, can't you see that she is growing — she is now a ripe woman; shouldn't she now go to her father in law's, live with her husband? At least invite the son-in-law?

Mati Patni was adamant—No, nothing doing. Mani Samanta is the devil's own creation, otherwise now could a man refuse such a nice girl just for the sake of a few rupees. Let him come himself or send his son and take away Bhanu — won't go or send her. That scoundrel of a miser!

Bhanumati heard everything. Each word was a bloody stab for her. Tears rolled down her cheeks.

Another Saturday came and Mati Patni was again away. It was raining hard. The river was rising. There was an atmosphere of tense suspense. This was just the time when in the hills above, rains splash down the catchment area.

There were heavy showers throughout the day with gusty winds. Bhanumati was off and on looking at the sky — would not this cursed rain stop? Would not the gods take pity on a lovelorn girl? The gods laughed and the heavens thundered.

Auntie was talking and spinning She remarked — Well, Bhanu, it looks as if we are getting a high flood; a bad omen.

Bhanumati sat quiet as if thunderstruck. Auntie's words did not reach her. She continued — You fool, don't you see it was knee-deep water in the morning, now it is waist deep. God be thanked that your father has not to cross the river. He goes by the light railway.

Bhanumati sat still — she was looking at the

dark pall of the still darker night — if she could tear away the veil and set everything right.

Water rose and rose and by midnight it had broken its banks and entered the village. Bhanumati lay awake but a complete black-out seemed to engulf her senses. Even the rumbling sound of rushing water was lost to her. But by the morning the news was out. The swollen and drunken river had receded but not without taking her toll and the main price was none but Mati Samanta's young son. Apparently the young man was crossing the river and had been swept away. None but a fool or a lunatic would attempt that on such a night as this. What was he after? After all he was not coming to his father-in-law's and were they on good terms? No.—The body was entwined in the roots of the big banyan tree by the side of which Bhanumati used to stop and look out into the river.

Auntie fainted. The two fathers and their host of relatives came running and weeping. Oh Sumanta, Sumanta, my son .... Bhanumati sat as if crucified. There was not a drop of tears in her eyes. Reconciliation came when it was of no value. In the midst of life came death.

Time is a great healer. Days passed on — Memories faded. People began to talk, particularly the women folk. They spread the rumour first with a suggestive shyness. 'Sister, have you seen Bhanu lately?'

No, what is the matter?

The other would answer with a foxy smile — Oh, nothing much. Perhaps there would soon be an addition to their family.

What? Good Lord! What is the society coming to!

Sister, didn't I tell her auntie repeatedly not to allow her to go out here and there and with everybody — Now — My God.

Auntie in her turn was also worried. She often held confidential talks with her brother. One day she sent for Bhanu and declared—Bhanu we had not been to any holy places for a long time. Let us go to Nawadwip.

Her auntie was a devout Vaishnavite. There was nothing wrong in her desire to go to that place for a pilgrimage. But Bhanumati was not a silly girl. She could understand, she could reason, she could add two and two. So she decided to take into confidence Radhu Pandit the father of a girl friend of hers. He was a widower and was living alone after his daughter's marriage. He was not only the village teacher but a friend, philosopher and guide to all and sundry who cared to consult him. Moreover he was a man of deep spiritual susceptibilities and used to while away his spare time in that pursuit. The Pandit listened carefully, questioned and understood. His advice was specific and pointed. She should not go to Nawadwip or elsewhere. She had not done any thing wrong. To be a mother is a great privilege. The whole centre of gravity of creation rotated round it. It is the course of the Eternal Whose desire always is to multiply. That is how the One becomes many—She was bound to succeed—She has the Promethean fire. Let her not worry,—everything will come alright.

He talked to her father and aunt and wrote a letter to her father-in-law — 'The scion of your family is coming. Your son is being reborn. A new dawn is being heralded. Take care of her'.

The father-in-law was half agreeable but the mother-in-law vetoed it. She could not forget that her son had staked his life for a woman and that woman was not she. She was another and in distress. She hurled her choicest billingsgate on her, even throwing slur on her character.

Pandit Mahasay when he heard this did not speak but took his string instrument and was humming a tune when Bhanumati came and fell flat on his feet. Oh, Sire.....

He simply drew her close and said soothingly— My daughter.

From that day onwards the Pandit became Bhanumati's adopted father and she his daughter. She spent most of her time in the Pandit's hut. She took up without asking all his household work; used to listen to his readings, looked at his puja and prayers. She used to go everyday to the river side where the dead body of Sumanta was discovered by the side of the big banyan tree. People saw her throwing stones at the river. That was the one eccentricity which she had developed. One day she was found lying there in an unconscious state. She was brought home, but Nature took back her gift. Her motherhood was prematurely ended. Everybody was happy: A ticklish social problem was solved.

One day the Pandit was reading to her from Mahabharata. She was listening intently to Karna-Kunti episode when suddenly she heard the rumbling noise of the rushing water in the river. She was at once wild — she was muttering nonsense.

What was the matter, the Pandit asked.

Oh, Father, is there no means of taming this shrew. She has taken my husband, she has taken my child. I hate her. I curse her, she is my enemy number one. If I am a devoted and chaste woman, true and honest, that river yonder would be controlled and I won't die before it is done. Can't anything be done, father?

He replied — My dear, I have heard that in other countries such rivers are tamed and controlled by big dams. With capacity for destruction curtailed and her water resources scientifically harnessed, there could be programmes for prosperity, not only flood control, but schemes of irrigation to bring life-giving water to aid barren land, generation of hydro power for rural electrification and other multipurpose developments. She could not follow entirely; canals and reservoirs she could understand but electricity was a thing unheard of yet. She was definitely enthused however, her eyes shone, she answered — Can't this be done in our country, father?

Pandit Mahasay became absorbed in his own reverie — Yes, perhaps not now but in the far future a new hope may arise, a new faith, a new creative urge. A new temple of eternity will arise in human breast.

Bhanumati looked at that sunlit face as if he was looking at the beyond. She fell at his feet — Oh, my father, if I had a son, I would give him for doing this work. The devil of a river like this must be controlled. She has taken my all.

Her prayer was heard and fulfilled in another way. A son came to her by the grace of God. There was a cholera epidemic; her girlhood friend, the Pandit Mahasay's daughter, became seriously ill and died leaving a new born babe. The son-in-law follow-

A Woman & a Serpent

An intriguing love-affair of a cripple, his wife and a she-snake and the tragic climax of the jealousy of the "co-wives".

By
TARASANKAR BANDOPADHYYA

SHEIKH, the cripple, was pulling out bricks from the kiln. His real name nobody knew, probably he himself didn't remember it. He had been known as the cripple since he had broken his left leg in his long lost childhood. Not only was his leg broken, his nose too had been eaten away by vile diseases grown out of youthful excesses. A gruesome hollow had now taken its place. Afterwards he got pox and the marks left by it gave his ugly face a savage look.

He was working intently.

A little away, Adai alias Owahed Sheikh was driving up his cart. Wrenching the bullocks' tails he burst into a song — a vulgar one. But it slipped out of tune abruptly. All on a sudden the bullocks stopped startled. Shaken with a jolt, Adai interrupted his musical rapture and burst up — 'Bloody beasts, you need some beating....'

Enraged to a degree, he raised the staff to punish the animals who were restless and breathing heavily. But hit he could not, instead he cried out — 'Snake, snake !'

Right in front of his cart a young serpent was mildly swinging its expanded hood. Adai jumped down and lifted a brick.

From the other side the cripple rushed on limping, 'Don't, don't kill it,' he pleaded, 'let me come.'

The brick in Adai's hand remained as it was; he exclaimed, 'Lo, what a beautiful snake ! The mouth bright-red as vermilion. And how wonderful is its hood-ring ! But — it's fleeing, running away, come sharp !'

The reptile was now escaping speedily. But it was actually heading towards the cripple. Anxious to run away from Adai, it did not notice the other man.

'Just throw me that whip of yours, Adai,' the cripple shouted....'Oh, it's gone into the kiln. Udainag, that's the kind; a rare find, that snake. Could I catch it, I'd've earned something.'

The cripple was a snake-catcher by profession. Not a catcher alone, he played the snakes as well. In every nook of his hut were always found large tight-mouthed earthen pots hanging from the thatch. All his snakes were confined within these pots. When seized with age, they were set free in a distant field. Many died too. When he had a stock of snakes, he wouldn't care to work as a labourer. Those days he would be going about with a drum and a flute to show snake-play. And small won't be his earnings. But then his ration of hemp and opium went up as well. Sometimes he indulged in liquor too. All this luxury invariably resulted in his coming out again with the day-labourer's equipment soon as the stock of snakes had emptied. He would then knock well-to-do houses and ask, jutting out part of his beastly face, 'Want labour?'

When he laughed — and it was always a sycophantish laugh — his loathsome odious face grew all the more loathsome, all the more odious. He worked hard at a job if he chanced to get one; there he would deceive none. The day he got no work, he begged, the basket on his shoulder, ofcourse. With whatever he could collect he bought some hemp and opium; and if a few coins were still left, he bought himself some fermented liquor and poured them through his gullet. Back home, he would shed copious tears, holding Zubeda's feet, ''cause you married me, there's no end to your misery, dear,' he bewailed. 'I'm starving you to death.'

Zubeda would laughingly caress her husband's head and say, 'Come, come — don't you rave, set me free — let me see if I can procure some rice.'

This would worsen the situation. Snivelling

lavishly, he now clung an arm round her neck and sobbed, 'Couldn't ever give you a new piece of cloth. Old rags — that's what you've always worn.'

However, that's a different story. Early next morning the cripple appeared before the brick-stack, a small stick in hand, a small basket under arm. A reddish splendour had just begun dyeing the eastern horizon. Perched on the thick of trees, the birds were chirping ceaselessly. The sound of gongs and conchshells was drifting along from a temple in the village. Sitting on a raised mound, the cripple spied all around with sharp vigilant eyes.

The scarlet hue on the eastern skyline was gradually growing deeper and stretching its circumference. The brilliance of that colour turned the burnt bricks in the stack redder. Even the cripple's dirty wear seized the reddish tinge.

'There, ain't it there ?' He rose to his feet.

A little away in the broad field, a young serpent — possibly that very one — was playing on all alone, swinging its hood, raising its face up to the eastern sky. Bathed in crimson radiance of the morning sun, its complexion looked crimson. Against that deep-red background the deep-black ring on the hood looked magnificent. It was as fascinating as the black designs on red wings of a butterfly. The snake-catcher became spellbound. 'Excellent'. His soft-toned exclamation was spontaneous.

Then he stepped forward stealthily. The young snake was enrapt in felicitating the young sun — so much so that even the sound of his steps did not interrupt its play. But hardly had the cripple come too close when it turned back startled. The next moment it snapped with a sharp hiss. But the hood it could not raise again. The quick-handed cripple had, ere it could bite, pressed down its head with the stick in his left hand, and holding its tail with the right, he gave it a jerk or two; then examining it closely, he observed, 'It's a she-snake !'

Six months later. Returning from the hemp shop, the cripple told Zubeda, 'See what I've brought.'

'What ?' she asked, sweeping the courtyard.

Unknotting an end of his cloth, he brought out a very small glittering thing and placing it on his palm held it before his wife. A minute drop — a trinket for the nose.

'What will you do with such a tiny nose-drop ?' Zubeda enquired.

'I'll deck Bibi,' he replied with a grin.

Zubeda was astonished, but the cripple merrily went into the room. Soon he came out with a snake coiled round his neck. That very snake. She had by the time grown somewhat bigger — but had lost her erstwhile spirit. Slightly raising the mouth, she was slowly moving about the cripple's shoulders — subdued, spiteless.

'Don't do that, I say,' Zubeda warned. 'How very tamed she might be, one can't be too sure of their kind.'

'One can't be too sure of their fang,' he answered with a smile, 'otherwise, they also love, Zubeda. True, she hasn't her venom-tooth, but has the others alright; but me she doesn't bite, you know ! See how like a good girl my Bibi is moving about!' So saying, he pressed the serpent's lips together and gave her a kiss.

This act did not take his wife by surprise, for it was nothing new to her. But she sang out indignantly, 'Pshaw, for shame ! Have you lost all your sense of distaste ? I've so many times forbidden you, haven't I ?'

'Don't do that I say', Zubeda warned, 'How very tamed she might be, one can't be too sure of their kind'.

The cripple turned a deaf ear to all this. 'Look and see,' he exclaimed, 'how she's coiled round my hand ! D'you know when a he-snake and a she-snake mate, they wind round each other just in this fashion ? Have you ever seen that ? Ah, what a lovely sight, that sport, marry !'

'I've no business to see that, you've seen and that'll do. But your sport too this devil of a snake will put an end to, I tell you !'

The cripple had meantime busied himself in piercing the snake's nose with a needle. He pressed her tail under his toe and gripped her mouth in his left palm. Holding a needle in his right hand, he pierced her nose and released her after the nose-drop had been fixed. Raging with pain, Bibi bit him again and again, hissing furiously. Shielding himself with the lid of the basket. he resisted her persistent attacks and tried to coax her 'Don't get annoyed, darling, don't. Just see for once how beautiful you look ? Please, Zubeda, hand the mirror and let her have a look of her own face.'

'I won't.' Zubeda refused flatly.

'Please, please, I beg of you, hand it for once. Let's see what she does seeing her own face.'

Zubeda could not ignore this entreaty of her husband. She went inside to fetch a looking-glass.

'An' bring some vermilion also', he added.

'Why, what for ?' she asked from within.

'That you'll see presently,' he laughed merrily. 'I'mn't going to tell that beforehand.'

Zubeda brought a mirror and some vermilion and placed them at a distance. The cripple very skilfully caught hold of the reptile and taking some vermilion on the tip of a stick drew a red line on her head. Then he announced with a loud laugh, 'I've married her. Zubeda, she's become your co-wife.'

He now addressed the snake, 'Lo, Bibi, how handsome you look, just see !' Releasing the snake, he held the mirror before her. Then he began to sing in his shrill nasal voice, beating a drum.

A few months later.

One day in mid-monsoon it was raining in showers. The cripple had gone somewhere and could not return owing to the inclement weather. Zubeda felt the room was emitting a strange odour — an odour that was mild but sweet and of a variety not experienced before.

'Lo, lo,' he exclaimed, 'how she's coiled round my arm !'
